Theodore, bishop of Cyrnhus († 457), was a disciple of Theodore, and played an important part in the Christological controversies of his time, in which he exercised a mediating influence between the Antiochene and of Arian, Nestorian, and Alexandrian theologies. He exhibits, alike in his theological and Biblical works, the Antiochene tradition. But he modified in several respects the teaching of his master. As a commentator he exalted truth and avoided tautology and verbosity, though he is inferior in originality to Theodore and Chrysostom.

On the later history and influence of the school of Antioch, see below, III.

With the Antiochenes the Scriptures of the Old and New Testaments held a foremost place as the source of Christian doctrine. In their Canon of Scripture they followed the tradition of the church of Jerusalem. It was also represented in the Syriac and Vulgate versions, and did not include in the NT the Apocalypse, 2 Peter, 2 and 3 John, or Jude. Theodore, on subjective grounds, also rejected the Epistle of St. James. In dealing with the OT books, Theodore recognized degrees of inspiration, and submitted them to a rigorous subjective criticism. The Book of Job he regarded as the production of a pagan Edomite and a work of dramatic invention, which in higher inspiration. Similarly, he denied inspiration in the higher sense to Proverbs and Ecclesiastes. The Song of Songs was merely the marriage-song of Pharaoh's daughter, and lacked the authority both of the synagogue and of the Church.

He assigned little value to Chronicles, Ezra, Nehemiah, and Esther, partly owing to doubts as to their acceptance in the Jewish Canon, and partly because they seemed to lack the prophetic insight which marked the other historical books. (Loofs, however, thinks that the only books which Theodore rejected from the OT Canon were Esther and the Apocryphal books. See PRE, xix. p. 604). He also rejected the inscriptions of the Psalms, and assigned a late date to the composition of many of the Psalms, placing some in the period of Hezekiah, others in that of Zerubbabel, and others again in Maccabean times. These views, however, were rejected by Chrysostom and Theodore, who adhered to the general sentiment of the Church.

The Antiochenes held the LXX in the highest reverence, and appear to have used Lucian's recension of its text. 'But Theodore and Chrysostom were unacquainted with Hebrew, and none of the teachers of the later school took up Lucian's textual labour or interested themselves in such studies (see, however, Chase, Chrysostom, p. 82 f.).

In their treatment of the inspiration of the Scriptures, while recognizing a real influence of the Holy Spirit upon the writers, the Antiochenes held to the literal interpretation of the text. In their exegesis of the Apocrypha they rejected the Apocryphal books because they were not written under the immediate inspiration of the Holy Spirit, because they were not, or were not clearly indicated by their writers, in the original Hebrew, and because they were not originally written in chiasm.

The Antiochene school was thus characterized by three general characteristics: (1) the literal interpretation of the text; (2) the rejection of the Apocrypha; (3) the subjective criticism of the OT, which recognized varying degrees of inspiration.

The Antiochene exegesis is characterized by two general principles: (1) the literal interpretation of the text; (2) the subjective criticism of the OT, which recognized varying degrees of inspiration. The Antiochene school was thus characterized by three general characteristics: (1) the literal interpretation of the text; (2) the rejection of the Apocrypha; (3) the subjective criticism of the OT, which recognized varying degrees of inspiration.

The Antiochene school was thus characterized by three general characteristics: (1) the literal interpretation of the text; (2) the rejection of the Apocrypha; (3) the subjective criticism of the OT, which recognized varying degrees of inspiration. The Antiochene school was thus characterized by three general characteristics: (1) the literal interpretation of the text; (2) the rejection of the Apocrypha; (3) the subjective criticism of the OT, which recognized varying degrees of inspiration.
e.g. Theodore recognized only four Psalms (2, 8, 45, 110) as directly Messianic. (2) Prophesies which have a primary reference to OT events, and refer only typically to the NT, i.e. such prophesies as are quoted in the NT. (3) Prophesies which have no Messianic reference, but refer only to the OT (e.g. Mic 4:2, Zec 11:12, Hag 2:9, Mal 1:12, 3:24). See B. B. M. vn. Mops., p. 143.

Theodore has a profound realization of the significance of the idea of the Kingdom of God as set forth in the OT. The whole course of OT history was intended to prepare the way for the Messiah. Christ. His doctrine, and by critical methods to the OT, though often arbitrary and vitiated by his ignorance of Hebrew, exhibits at times an acumen and insight which were far in advance of his age. In his subjective criticism of the OT books he found no successors, but, through the later Antiochenes—Chrysostom and Theodoret, who followed in the main his methods, while modifying his conclusions—the science of exact and literal exegesis gained a foothold in the Church, and exercised a far-reaching influence both in the East and the West. See Chrys., of Migne, lxvi. 634.

3. The Creation of Man.—The chief representative of Antiochene teaching, Theodore of Mopsuestia, exhibits a fully thought-out conception of human nature in its constitution and development. In this respect he is superior to the Alexandrian theologians, and shows a deeper interest than they in questions affecting the origins and history of man. Theodore's treatment of the Trinity, as in the case of his exegesis of Scripture, is empirical, and rests upon the observed facts of human nature.

2. Doctrine of God and of the Trinity.—The Antiochenes exhibit little interest in metaphysical speculation upon the Being of God or the proofs of His existence. Plotinus, however (Bibl. Cod. 223, see esp. p. 269; Migne, PG citi. p. 533), gives an account of his Deity and its work (Against Fate, in which the latter propounds the cosmological argument for the existence of God. The world, Diodorus maintains, is subject to change. But change itself is a condition which implies a beginning, and requires us to assume something constant behind it. Moreover, the variety of existing things and the wisdom displayed in the very process of change, point to an underlying unity of origin, and suggest a Creator and a Providence. Both Chrysostom and Theodoret wrote works upon the providence of God, in which they endeavoured to show that this providence extends to particulars.

Diodorus and Theodoret were staunch supporters of the Nicene theology. Accepting its conclusions, Theodore set forth the doctrine of the Trinity by the help of careful exegesis of Scripture, rather than by speculative arguments. From the baptismal formula in Mt 28:19 we may learn that Father, Son, and Holy Ghost are three self-sufficient Persons, and equally belong to the Divine nature and its origin. In the OT, however, the Persons was not yet revealed (in Hag. 2:4). But when the OT speaks of the Divine nature, its language may be applied not only to the Father, but to the Son also, by reason of their community of nature (see Heb. 3:9-12). The Holy Spirit is a Person (σώμα) of the Trinity, and has its subsistence (διακονία) from the 'being' of the Father (in Matt. 18). Chrysostom's treatment is similar to that of Theodore. Careful exposition of the language of Scripture shows that the subordination of the last Person upon the Trinity. Theodoret expounds in his Erast. (Dial. i. p. 33 f.), Migne) Basil's distinction between the terms 'being' (ζωή) and 'person' (σώμα), but, like Theodore and Chrysostom, he contributes little to the subject.

In one respect, however, Theodore and Theodoret occupy an important place in the history of the doctrine of the Trinity. Theodore's teaching upon the Holy Spirit exhibits a clear conception of the essential Procession of the Holy Spirit from the Father. In his treatment of the OT record of the Holy Spirit's 'going forth' (ἐξορρόζωσιν) was no mere external mission, but 'a natural procession' (οὐσικὴ πρόδρομος). But in the Creed put forth by him (Hahn, Bibliothek der Symbole, p. 302) he denies that the Holy Spirit received His subsistence through the Son (σώμα διὰ κατὰ γενέσιν τῆς ὑπομολογίας εὐθύμου).

This position was attacked by Cyril of Alexandria in the ninth of his anathemas against Nestorius, and the Spirit was declared to be the 'very own' (ἐμοῖς) Spirit of Christ. Theodoret, in his reply to Cyril (Josephus, Anathemata, 9), re-asserted the contention of Theodore, and pronounced the opposite position to be blasphemy. Possibly the motive underlying the denial of the Procession through the Son may have been the fear of introducing the heresy of the Pneumatomachi (so Swete, DCB, art. 'Holy Ghost').
beginning of this second stage in the Incarnation of His Son (in Jon., Migne, lxvi. 317), but it was His purpose that man should first pass through the earlier stage, in which He is subject to conflict, temptation, and mortality. In thus creating man mortal, however, there was a beneficent purpose, from the deliverance which was intended to train man’s will by exercising his power of choice between good and evil (in Gal. 2.16). (b) In view of man’s fall, which He fore-saw, God attached the penalty of actual death (as distinguished from the liability to death) to disobedience, in order to deter men from sin. (c) Man’s mortal condition rendered it possible for ‘the body of sin’ to be destroyed along with the dissolution of his body. Had man sinned, being immortal, his fall would have been irreparable (in Genes. 3); there is a somewhat similar treatment in Methodius and Gregory of Nyssa). Hence the purpose of the command to Adam, and later on, of the Law, was to call forth the knowledge of good and evil, to provoke sin, and to show man his inability to attain perfection by his own efforts. It was only through the struggle and the conflict of this mutable life that man could learn his need of the Divine principle of life revealed in Christ, in order that he might attain his true end (in Rom. 7, in Gal. 3.19, in Rom. 11.18).

4. The Fall.—Theodore taught that by man’s disobedience the liability to mortality became an actual fact, for God had not said, when He threatened man with death as the penalty of disobedience, ‘I shall put death unto you’ (Genes. 3.18 but (Mercator, ed. Baluze, p. 340). Death came by sin, and the result of death was the separation of soul and body in man. Thus, too, the bond of the Universe, which had held together the visible and invisible, was broken. Sin gained an entrance into the world, and in Adam’s descendants the same experience was repeated. As each of them sinned in turn, he became subject, like Adam, to death (so Theodore interpreted Ro 5.12). A further result of the actual mortality which resulted from sin was that it increased the tendency to sin, by fixing man’s thoughts upon the present order of things and by ministering to his passions (in Rom. 5.17, in Gal. 5.17).

5. Original Sin.—The summary which has been given above of Theodore’s teaching shows that he allowed no place for the idea of inherited sin. Even the ‘death which passed unto all men’ is regarded as the result of man’s own transgressions, not of Adam’s sin, a fragment of Theodore’s work, Against the Defenders of Original Sin, preserved by Marius Mercator (ed. Baluze, p. 3401.), his attitude towards the standpoint of Jerome and Augustine is clearly shown. He affirms that Adam was created mortal, and he repudiates the idea that Noah, Abraham, David, Moses, and other righteous men should be subject to punishment for Adam’s sin. Such a view he regards as inconsistent with the Apostle’s words (Ro 5), that God will render to every man according to his deeds. Thus, too, in speaking of baptism, he distinguishes between the forgiveness of the sins of the individual, and the sinless state which will be fully revealed only at the general restitution of all things, and he maintains that in the case of infants the former cannot be taken into account. Such teaching made Theodore a valuable ally to the Pelagian leaders, and in 415 Julian of Eclanum and his companions sought refuge with him after their banishment from the West. The points in which his teaching of Pelagians are: his insistence that man was created mortal, his emphasis on free-will, his denial of inherited sin, and his treatment of man’s growth in knowledge and obedience through the discipline of the commandments and the law of God. On the other hand, his idea of redemption is different from that of Pelagius. For, according to Theodore’s teaching, the original constitution of man as mortal and mutable rendered it impossible for him to attain the goal of his existence apart from the deliverance which could come by Christ. Again, as we have seen, Theodore’s conception of free-will is more profound than that of Pelagius, with whom freedom is simply the indifference of the will to good or evil (see above, § 3).

6. Christology.—The Christology of the Antiochens, which was closely connected with their doctrine of human nature, constitutes their chief importance for the history of doctrine. Their
teaching has links of connexion with the teaching current in earlier periods at Antioch (cf. above, I.); and, as Harnack has observed (Hist. of Dogma, vol. iv. p. 166, n. 1), there is an essential unity in scientific method between Paul of Samosata, Lucian, Eusebius of Emesa, Eustathius, Diodorus, Theodore, Chrysostom, and Theodoret. The features to this treatment are: (1) the rejection of metaphysical speculation (cf. above, I.); (2) the attention paid to the historical portrait of Christ in the Gospels; (3) the ethical interest, which leads them to assert a true moral development in the teaching of the Logos. Another basis of their conception of θεότης, which was taken by them to denote a particular individual being (Harnack, Hist. of Dogma, iii. p. 46; Bethune-Baker, Intro. to Early Hist. of Christian Doc. pp. 112, 235). This rendered it difficult for them to conceive of a complete nature which was not personal.

But, while there is a general resemblance in the method of treatment exhibited by all these writers, there are considerable divergences in their theological standpoint. Lucian, for instance, from the teaching of Paul of Samosata, departed from him in affirming (with Origen) the personal and pre-existent character of the Logos, who was united with the man Jesus. The later Antiochene school, which began with Diodorus, was further under the influence of Lucian by the acceptance of the full Nicene teaching upon the consubstantiality of the Son with the Father (in place of the subordinate created Logos of Lucian; cf. above, I.). In other respects, however, this later school, represented by Diodorus, Theodore of Mopsuestia, Chrysostom, and Theodoret, still retained the essential characteristics of the earlier Antiochenes.

Diodorus and Theodore represent the more fully developed form of this teaching. Chrysostom is more practical and less scientific, though in his cases, too, the underlying conceptions show the influence of his Antiochene training. Theodoret, in his criticism of Cyril's anathemas, exhibits the Antiochene standpoint, though later on he expressed himself more nearly in accord with the position of Alexandria.

The Christological language of the Antiochenes was influenced partly by their desire to avoid the suggestion of a confusion of nature by the traditional usage derived from the developed theology of an earlier period. It has, however, been thought to show an 'Adorianism' bias. Thus (1) they commonly spoke of the teaching in Christ (as 'God', 'Theotokos', 'Son of God', 'Theodoret, Nestorius, Theodore'). Such language, however, finds occasional parallels in Athanasian and the Cappodocians (see art. CappodociAN THEOLOGY, v. vi.). (4) Side by side with these phrases, however, they use impersonal expressions to denote the human nature (δι' ἀνθρώπου, ἀνθρώπως ἀνθρώπινος, δί' ἀνθρώπου, δί' ἀνθρώπου, δί' ἀνθρώπου; 50 Eustath., Did., Theodore, Nestorius, Theodore). Such language, however, finds occasional parallels in Athanasian and the Cappodocians (see art. CappodociAN THEOLOGY, v. vi.). (5) They approach more nearly to the language of Athanasian and Cyril when they speak of the Divine personal subject as 'assuming' (ἐπιλαμβάνει, ἐπιθέλεται, Eustath., Did., Theodore, Nestorius) man (or human nature), as 'bearing' (χαράγηται, Eustath., Nest.) man, or, lastly, as 'becoming man' (ἐπιλαμβάνει, Did., Theodore). These expressions, however, do not denote 'human deum ferae,' quoted from Eustathius by Gelasius (Hist. PG xviii. 694), are probably due to a misunderstanding of the original διήθεσθαι (for ἐπιλαμβάνει). If διήθεσθαι were the original, the phrases would be parallel to the language quoted above (ἐπιλαμβάνει, διήθεσθαι). See Bethune-Baker, Capp., p. 797 (1). On the state of Christological speculation before the rise of Apollinarism, see Athanasian, Ep. ad Epirutum.

Against the influences of their training, the Antiochenes were largely affected by the controversy with Apollinarism, which led them to affirm the reality and completeness of the human nature assumed by Christ, to emphasize especially His possession of free-will, and to guard against any idea of the confusion of the two natures or of a transformation of the human nature into the Divine nature.

Our chief sources of information about the Christology of Diodorus and Theodore are the fragments of his work against Apollinaris (cf. above, n. 3), found in Athanasian, and in Leontius of Byzantium, c. Nest. et Eutych. (iii. 43). For Theodore we have the fragments of his works, de Incarnatione, contra Apollinaris, collection of the Acts of the Fifth General Council, the works of Paulus and Leontius, and the Syriac MSS translated into Latin by Sachau. The works are: Migne, PG lxvi.; Swete, Theodore of Mops., on the Epp. of St. Paul, vol. ii.; Appendix; Sachau, Theodore Mops., fragmenta Syriaca. Of special value is Theodore’s confession of the faith contained in the Acts of the Council of Ephesus in a Latin form in Marius Mercator (see Hahn, Bibliothek der Symbolen, i. 181).

The teaching of Diodorus and Theodore may be summarized as follows:—

(1) Against Apollinaris, Theodore asserted the completeness of the manhood of Christ and His possession of a reasonable soul as well as human flesh (see ‘Credo’ in Hahn, p. 302f., and Sachau, p. 38). Especially important is his insistence on the freedom of the human will in Christ (on his conception of freedom, cf. above, § 3). As freedom cannot, according to his view, be ready-made, it involves a process of spiritual development, which, the former life, is a ‘work’ of Christ, the latter, ‘being born again’ (νωπότροπος, or ‘moral advance’ of Paul of Samosata). Further, in accordance with Theodore’s conception of two stages in the history of created intelligent beings (cf. above, § 3), it was necessary that Christ should assume humanity in its mutable state, subject to bodily weakness and the passions of the soul. Christ submitted to the assaults of the Tempter, and underwent the moral struggle between the higher and lower impulses (Migne, PG lxvi. 720, 999, 981). By this struggle He manifested sin in His flesh and tamed its lusts (68, 720). Theodore further admitted a real ignorance in Christ, and an advance in human knowledge (ib. 977, 981). Similarly, Diodorus asserts that the Godhead did not impart to the manhood of Christ all wisdom at the moment of birth, but bestowed it gradually (Marius Mercator, ed. Baluze, p. 349). Cf. CAPPODOCIAN THEOLOGY, vi. (2).

(2) But it is in their conception of the relations of the human and Divine natures that the teaching of Diodorus and Theodore exhibited a tendency of which finds its extreme expression in Nestorianism. It is here, too, that the traditional ‘Adorianism’ of Antiochene teaching appears. Both Diodorus and Theodore drew a sharp distinction between the human and Divine elements in Christ, and thus exposed the danger of their teaching the existence of two persons in Christ. Thus Diodorus distinguished (Leontius, c. Nest. et Eutych. iii. 43) in Christ two sons: one by nature, God the Word; the other by grace, the man who was born of Mary. God the Word is not to be supposed the son of Mary. He may, however, be called καταρχησις, ‘Son of David,’ because of the shrine of God the Word which came from David, just as he who was the seed of David may be called ‘Son of God’ by grace, not by nature. Similarly, Theodore denied the human nature of Mary (Migne, p. 997); though elsewhere he asserts that Mary may be called both θεοτόκος and ἀνθρώπωσις (‘God-bearing’ and ‘man-bearing’), the latter in a natural sense, the former because God was in Him who was born (Migne, PG 62, c. Nestorius in Loofs’ Nestorius contra Eutych. p. 167, 301). When it is said that ‘the Word became flesh,’ this must be understood of appearance only, for the Word was not changed into flesh (Migne, 981). The object of both writers in these statements is jealously to guard against any idea that the ‘two persons’ of the two natures. But, apart from this negative aim, both Diodorus and Theodore exhibit a positive tendency to regard the human nature as possessed of an independent personality. This led them to conceive of the union of the two natures as a moral
union of grace (whereas Cyril started from the conception of One Divine Person, who has become incarnate, and maintained a hypostatic [καθ οὐσίαν] union).

The nature of the union is discussed most fully by Theodore in the De Incarnationes (Migne, p. 979 f.). He distinguishes three possible modes of the Divine indwelling. The first is by 'essence' or 'being' (ἐστία). But in Scripture the Divine indwelling is spoken of as a special privilege of the saints (Rev 2:12; 3:21). This excludes therefore an 'essential' indwelling since the ἐστία of a 'being' of God is not circumscribed by place. A second mode of indwelling is by the operation or energy (ἐνέργεια) of God. But this is common to all created things. Accordingly the only remaining mode in which the Divine indwelling is possible is by the Divine approval or complacency (ἐκκυρία), the moral union by which God dwells in those who are pleasing to Him. How then did the union of God with the man Christ differ from His union with His saints? The answer is that He dwelt in Christ as in a Son (Migne, p. 976). Christ received the whole grace of the Spirit, whereas in other men the participation in the Spirit was partial (ib. p. 980; cf. Diodorus ap. Marius Mercator, ed. Baluze, p. 390). This indwelling of Christ began with His formation in the womb of the Virgin, and was a result of the Divine foreknowledge of what Christ would be (Migne, pp. 974, 980, 984). At His baptism Christ further exhibited a much greater degree of grace (ib. p. 982). He was preserved by the Spirit from the baptismal charge of His supernatural birth, His inseparable union with the Word, and His union by the Holy Spirit, with His holy body, His humanity, and His grace. He thus proved Himself worthy of the union, and became our example and way, until after the Ascension. He exhibited the union with the Word in its final completeness (ib. 977).

(3) in its treatment of the unity of Christ's Person, the teaching of Diodorus and Theodore evinces a lack of precision. As we have seen, they tended to view the two natures apart, and to conceive of their union as a moral union of grace. Moreover, their idea of a complete human nature involved the notion of a human person with human properties. Thus, while 'we distinguish the natures,' says Theodore, 'we maintain that the nature of God the Word is perfect, perfect too the person (φύσις) — for it is not possible to speak of a distinct existence (ὑπόστασις) which is impersonal (ἀφύσις) — perfect too the nature of the man, and the person (φύσις) likewise. But when we look to the conjunction of the two, then we say that there is one person (φύσις)' (Migne, p. 981). The nature of what is thus 'person' and 'union' is compared by Theodore to that of marriage. As the Lord said of the man and the woman, 'They are no longer twain, but one flesh' (Mt 19), so it may be said of the union that there are no longer two persons (φύσεως) but one, the natures, of course, being kept distinct (Migne, p. 981). Elsewhere he compares the unity to that of the rational soul and flesh in man (ἀπὸ ἀποστ. a. Facund. i. 3; 4). Theodore employs the terms θυσία ('union') and συνόμωσις ('conjunction') to denote the union of the natures. In his interpretation of this union he uses phrases which imply that it consisted in the harmonious relation of the human and Divine wills in Christ (cf. the phrase ὁ θυσιών ἀνήκου ἐνεμποδίζον τῇ σχέσει τῆς γνώμης; Migne, p. 989). Theodore, however, was conscious that the charge of teaching two sons might be brought against him, and he repudiated it. 'The Son,' he says, 'is rightly confided to be one, since the distinction ought of necessity to remain, and the unity of person (ὁμοσύναξις) ought to be guarded without interruption' (Migne, p. 985; see the 'Credo' in Hahn, op. cit. p. 305; cf. Nestorius, Loofs, p. 218). For Theodore, the charge of teaching two sons by saying that he neither affirms that there are two sons of David, nor that there are two sons of God according to substance, but that the Word of God dwelt in Him who came from the seed of David (Marius Mercator, ed. Baluze, p. 350).

For a fuller discussion of the question, see Dorner, Person of Christ, n. i. 471. Theodore has points of contact with the mystical theology when he emphasizes love as the source of which brings the humanity of Christ into harmony with the Word. 'The thought and volition of the man Jesus were, in point of contents, the thought and volition of the Logos.' The 'form in which the mind of Jesus actually expressed itself was determined by the Logos; though, in consonance with his theory of freedom, he represented this determination as a mere influence of the Logos' (Dorner, Le.).

(4) Both Diodorus and Theodore assert the unique character and privileges of the sonship acquired by the man Christ. They both apply the words spoken at the baptism, 'This is my beloved Son, in whom I am well pleased,' to Christ and not to the Word (ib. p. 350; Theodore, in Mt iii, ed. de Incarn., Migne, p. 980). The title Son is applied both to God the Word and to the nature assumed by Him, by reason of its union with Him (Theodore, de Incarn., p. 985; Migne, p. 991 f.; Nestorius, Loofs, p. 362). This teaching of Diodorus and Theodore, which was expressed in their own language, attained public notoriety through Nestorius, the patriarch of Constantinople. Nestorius merely popularized the teaching of his master, Theodore, without exhibiting the same fundamental depth of insight into the nature of the Person of Nestorianism as a system of Christology is Theodore. See, further, art. NESTORIANISM.

The Christology of three other representatives of the school of Antioch calls for notice here. Theodoretus of Antioch is an important link between the earlier and later stages of the school. His works exhibit some of the characteristic Antiochene features. He sacrifices to Christ a true human development, and speaks of the human nature as the temple of the Deity. The Divine nature is dissociated from the experiences of the human nature. 'Was the latter alone which was anointed and glorified. He further implies that Christ acquired the Divine nature and grace and glory of the Word (Person of Christ, i. ii. 250) says that with Him, as with the later Antiochenes, 'the deity and humanity remain separate and distinct, and do not constitute a living unity, which affirms the closeness of the union between the humanity of Christ and the Logos (Migne, xviii. p. 599, συνωσμός τῆς φύσεως τοῦ Χριστοῦ τῆς Ἰησοῦ Χριστοῦ τῆς τοῦ Υἱοῦ τοῦ Θεοῦ τῆς ἔνωσις). Yet he has become man of a woman, even He who was formed in the womb of the Virgin' (Migne, xxxii. p. 90; cf. fragments mena collection in Galland, Bibliotheca apoc. xiv. p. 47, ed. Mercator, script. vet. Nova col. 1332 vi. 339; 340; Callender, S. Basilii in Lateran Hym., Apolog. i. 4. fragment. 9.

Chrysostom approaches Christological questions from the practical rather than from the speculative side. Like all the Antiochenes, he endows the union of Christ, Christ shared our mortal nature, but without sin, and is subject to the physical needs, human emotions, and the sufferings of our humanity. He exhibits the characteristic Antiochene spirit when he asserts that Christ did all that He did in a human manner, not only to teach the reality of His human nature, but as a pattern or ideal of human virtue. But the idea of Theodore, that the human nature was gradually moulded by the
influence of the Word finds no place in his teaching. Chrysostom further shows signs of Antiochene influence in dealing with the union of the two natures. He repudiates the idea that the Incarnation was a descent into the flesh of Christ. He interprets the humiliation of Christ (Phil 2) as a humiliation of mind. Again, he distinguishes, after the manner of the Antiochenes, the essence of the humanity from those of the Godhead, and, like Eutychian, ascribes to Him humanity, and not the Godhead, which was annointed and exalted. Lastly, he speaks of the humanity as the temple of the Word. On the other hand, he does not give the two natures, but explains the passages which suggest Christ's dependence on the Father as the language of accommodation (anבלעאש). But nowhere clearly defines the union of the two natures, and much of the language quoted above suggests a merely static and a dynamical relationship rather than a full personal union.

The Antiochene Christology, in fact, exhibits a undeveloped character. He is content to put side by side the affirmation of the two natures and the assertion of their union. Though he shares to some extent the Antiochene point of view, the more fully developed conclusions of the school were, in his case, held in check by his position upon other forms of Church teaching. See, further, Förster, Chrysostomus in seinem Verhältnis zur antiochenischen Schule, p. 101 ff.

Theodore occupies a mediating position in the Christological controversy of his time. On the appearance of Cyril, the adversaries of Nestorius, he published a refutation in which he charged Cyril with Apollinarism. (The Reprehensio Antioch. AD 500 in Pseudo-Mahe's edition of Theodore, p. 119.) In this work he exhibits the same tendency to accentuate the distinction of the two natures which characterized Theodore and Diodorus, and the same inability to conceive of a complete nature. He denies that God the Word was naturally (φύσις) conceived of the Virgin and prefers to say that 'He fashioned for Himself a temple in the Virgin's womb, and being formed in the likeness of man.' Similarly, he maintains that the weakness of the humanity cannot be attributed to God the Word. Lastly, it was not the Christ (i.e. the Word) who suffered, but the man who was God, He maintains, however, that 'the form of the servant' was confessed to be God on account of the 'form of God' united to it. The Formula of Concord (Art. 128), by which the differences of Cyril and the Antiochenes were reconciled, was largely modelled on Theodore, and represents a compromise between the two points of view. In place of Cyril's phrase, 'one incarnate nature of God the Word' (μία φύσις τοῦ θεοῦ υπὸ έναν), he speaks of the unified or unconfused union of the two natures (μία φύσις Φωτούς κοινώς). At the same time it admits the term φύσις, while carefully explaining it (Hahn, Hist. der Symbolik, p. 218). In the Brromata (Bals. II., Migne, xxxiii. p. 145.), written in A.D. 447, he states the idea of a communicatio idiomata in a way which is quite in accord with the later theology of the Church. Though we may not attribute to one nature what belongs to the other, we may attribute to one Person the unity of the other. Theodore nowhere goes so far as Theodore in affirming that the human natures were a moral union (πνευματική). He maintains that in Christ there was one undivided Person (ενί άνθρωπω), though he does not anywhere acknowledge (έν άνθρωπω), or employ Cyril's phrase, or even φύσις κοινώς ("hypostatic union"). Finally, at the Council of Chalcedon, Theodore made an orthodox confession.

The Antiochene controversy is based on the doctrine of a mutable (πρόνοια) human nature, which was subject to human passions, though it was kept free from sin. He experienced the temptations arising from the natural, human, but not the sinful, nature to which they commonly give rise (Repr. Anthanom, 10), he maintains that Christ attained perfection by efforts of virtue, and learnt obedience by experience, 'though before His experience He was ignorant of it.' In these elements we see the true Antiochene spirit, though Theodore is far removed from the more extreme continuum. For a fuller account of Theodore's Christology, see Bertram, Theodore Ep. 'Cyprianae Doctrinae Christologicæ'; J. Mahé in Revue d'histoire ecclésiastique, viii. (1898). Theodore speaks of Saint Cyril of Alexandria as one of the exégeses or exégetes du patriarchat d'Antioche.'

The Christology of the Antiochenes was the outcome partly of their training, and partly of their opposition to Apollinarism. The historical study of Scripture, and the high conception entertained by them (esp. Theodore) of the dignity and destiny of humanity, led them to emphasize to the fullest extent the humanity of the Lord. Their ideas of free-will and the moral development of man impelled them to oppose any teaching which impaired the reality of our Lord's human experiences, or tended (like Apollinarism) towards a docetic view of His humanity. The Alexandrian school, on the other hand, started from the Divine aspect of Christ's Person. It was the truth that God Himself was revealed in Christ which from the days of Athanasius had been emphasized in Alexandrian teaching. Hence Cyril of Alexandria was led to lay stress upon the unity of the Word Incarnate. The humanity of Christ does not belong to Him merely in so far as it is the humanity of an individual and independent mind, but as the Word. The human element was subordinated to the Divine. The Word has taken human nature into the unity of His Divine Person, which remains one and the same after as well as before the Incarnation. The Antiochenes emphasized the problem as it presented itself to Cyril. They had affirmed the integrity of the two natures, and they had asserted their ineffable union. But the nature of this union and the exact relations of the two natures had not been considered by them. Hence arise the apparently inconsistent statements of Theodore that the humanity is personal (φύσις), yet Christ is one Person (πρόνοια). Much of the misunderstanding between Cyril and the Antiochenes arose out of the undeveloped stage of doctrine at the time, and the absence of any clear definitions of the words πρόνοια ("person"), ιδιότης ("individuality"), and φύσις ("nature") Nor had the union of the natures been clearly defined. The terms "mixture," "blending," "connection" (ανάλογος, κοινωνία), which was formed and begun by Cyril, were used indifferently by earlier writers to denote this union (see art. CAPPADECIAN THEOLOGY, § vi. (3)). The Antiochenes, from traditional habit, attributed to each of the natures that which befitted it, when regarded as independent. Cyril, on the other hand, referred everything to the personal subject, who is the Word. When brought face to face, both schools of thought admitted the unity of Person, and both asserted the integrity and distinction of the two natures. The difference between them was exaggerated by misunderstanding and controversy. The unguarded language of Diodorus, Theodore, and Nestorius was, doubtless, largely responsible for this, but the Formula of Concord agreed in regarding Cyril and the Antiochenes exhibits the fundamental agreement in retaining the two Christologies. The Antiochenes accepted and explained the word ιδιότης, the unity of the two natures was affirmed, and Cyril's misunderstanding of expressions, φωτόν κόσμου, έν άνθρωπω, πρόνοια, etc., was correctly interpreted as Cyril's "personal union," 'one incarnate nature of God the Word'), were dropped. See, further, Mahé in Revue d'histoire ecclésiastique, referred to above; for Nestorius see Toul, Nestoriana (1908), and Bethune-Baker, J.A.S. viii. p. 119f.

While Cyril affirmed a truth of vital importance to Catholic theology,—the truth that He who assumed human nature was personally God, and took human nature into vital union with Himself, we are justified in attaching the importance of the stand made by the Antiochenes in defence of the reality and completeness of Christ's human experiences. It was a valuable protest against an almost docetic tendency which had already appeared in Apollinarism, which was latent in Alexandrian theology (even in Athanasius), and which reappeared in Monophysitism. If the Church was finally enabled to overcome the latter, it was largely due to what it had learnt from the teaching of the Antiochenes.
than the restitution of humanity. Christ is the new creation, who exhibits God's plan in its final completeness. In Him there is set forth that image of God which man was meant to attain, but which he failed to attain. The work of Christ was not only to restore the broken order of the universe and man's fallen nature, but as the new Adam, to inaugurate that new stage (νεωτέρος; cf. above, § 3) in the life of man, in which he should be free from the mutability and mortality of his present state. As a result of His struggle and victory, according to the exhortation of His free-will and through the union with the Word, Christ overcame the mutability of human nature, which was crucified with Him and rose with Him (in Rom. 6). The deliverances which He has won for men is already potentially theirs, though it is only in the future that it fully takes effect.

The omissions in this presentation are significant. The concepts of guilt and responsibility, and the close connection of the atonement with the future, are absent. Death is but a necessary stage, through which Christ passes to the Resurrection and inaugurates the higher and final stage of man's development. The necessity of the Incarnation is thus seen in the light of the fallen, not of the new, conception of the Divine purpose for man, which required that he should be delivered from his present state of mortality. There are points of contact in this teaching with the teaching of Irenaeus, Athanasius, and the Cappadocians, especially in the emphasis laid upon death and mortality. But we miss in Theodore the strong interest in the redemptive side of Christ's work which characterizes Athanasius, and the deeper teaching upon death and the Fathers. Theodore, again, Theodore's emphasis on man's free-will led him to assert, as Dornert says (Person of Christ, II. i. 51), not so much "the thorough reality of the incarnation of God," as "the reality of the freedom of the human aspect of Christ's Person." The purpose of Christ's work was to exhibit the development of human nature in its completeness. And in this development the thought of the forgiveness of sins and the work of grace is subordinate to that of the new moral order. See further, Dornert, I.c.; cf. above, § 5, and below § 5.

Chrysostom and Theodore are much nearer to the general tradition of the Church in their teaching upon Christ's work. The doctrine of Christ as the "first-fruits" (ἐρήμως) of human nature, which is consecrated in Him, was suggested to them, as to Theodore, by their exegesis of Scripture. But it was not peculiar to the Antiochene. More characteristic of Antiochene teaching is Chrysostom's picture of Christ as the original pattern or ideal of human virtue, to exhibit which was the purpose of His human life and experiences (in Joh. hom. 43). In their conception of the Atonement, Chrysostom and Theodore echo much of the current teaching of their time (e.g. the deception of Satan, Christ's contest with him and overthrow of his dominion over mankind), but they exhibit nothing characteristic of the Antiochene standpoint. The same is true of the idea found in Theodoret (de Præsidentia, Or. x, Migne, xxxvii. pp. 763, 764). The Christ of Chrysostom and Theodore is thus transformed and endued the chastised Adam and his fallen nature, and penalty due to us for our sins. Chrysostom, though he emphasizes the importance of the Resurrection, does not, like Theodoret, stress the idea that Christ is the "first-fruits" of human nature. He appeals to the language of St. John (6th) and St. Paul (1 Co 1120), and urges that it is the "flesh," and not the Godhead, which is spoken of as "eaten." He says, "This is my body," not "This is my Godhead." St. Paul speaks of that which is eaten as "bread," and, adds Nestorius, it is bread "of which the body is the antitype." The Antiochene, in his emphasis upon the Church as the body of Christ, and the Eucharist as the body of Christ, is perhaps related to the Apollinarian confusion of the two natures. He appeals to the language of St. John (6th) and St. Paul (1 Cor. 1120), and urges that it is the "flesh," and not the Godhead, which is spoken of as "eaten." He says, "This is my body," not "This is my Godhead." St. Paul speaks of that which is eaten as "bread," and, adds Nestorius, it is bread "of which the body is the antitype." The Church is the "memorial" of the death of the Lord, i.e. of the Son of Man (not the Word). See passages in 1 Peter, 4th, Nestorius, Rom. 12, 19-20, c. Nest. 35. 202. Moreover, the faith of which he speaks is different in character from that of St. Paul, being directed rather to the future resurrection life, which man shares at present, through his incorporation in Christ, only potentially (cf. 2 Cor. 5). Chrysostom's teaching is practical. In some passages he emphasizes the act of will by which man turns from evil and inclines to good, and in others he maintains the importance of faith, and attributes all to grace. But the two ideas are not clearly brought into relation with one another (see Förster, Chrysostomus, p. 162 f.).

(3) From what has been said above, it will appear that the Antiochene attitude towards the question of the relation of grace and free-will resembles that of the Semi-Felagians (on the relations of Theodore and Julian of Eclanum, cf. above, § 5). In the teaching of both Theodore and Chrysostom the initiative lies with the individual, will, and free-will (Chrys. in Joh. hom. 17, in Rom. hom. 18, 19; Theodore, in Marc. 49, n., in 1 Cor. 114, in Heb. 4-7).

9. The Sacraments.—There is no formal treatment of the Sacraments in the Antiochene Fathers. They accept the traditional Church teaching and practice, and assign a real value to the Sacraments in the furtherance of the spiritual life (Theodore, in Cor. 114, in 1 Tim. 3). In Baptism, according to Theodore, man receives the gift of union with Christ through the Eucharist, and the pledge of the immortality which he is destined to share hereafter with Christ (in Eph. 172). In speaking of the Eucharist, Theodore and Chrysostom use the current language of their time. Thus Theodore, in commenting on Mt 26,20 speaks of the words of institution in terms which recall the language of Cyril of Jerusalem, and says that Christ teaches us that we are not to regard the nature of that which lies before us, but to consider that, by the thanksgiving pronounced over it, it is changed into flesh and blood (Theodore in Mt 10,2. However, he speaks of the change as spiritual. Chrysostom uses the emotional and rhetorical language of popular devotion, and goes much further in asserting a conversion of the elements (see His. Eclesiast. 2, 5, 6; dogmat 2, 15. 5, 1, 4; dogmatologie positive, 2éme série, p. 268 f.). But the two most characteristic contributions to the doctrine of the Eucharist from the Antiochene standpoint are to be found in the writings of Nestorius and Theodore. Both writers approach the subject in connexion with the Christological disputes. In reply to Cyril of Alexandria, who had affirmed that the flesh of Christ given in the Eucharist is the "bread," and not the Godhead, which is spoken of as "eaten." Theodore, in commenting on the words, "This is my body," adds: "This is my Godhead." St. Paul speaks of that which is eaten as "bread," and, adds Nestorius, it is bread "of which the body is the antitype." The Eucharist is the "memorial" of the death of the Lord, i.e. of the Son of Man (not the Word). See passages in 1 Peter, 4th, Nestorius, Rom. 12, 19-20, c. Nest. 35. 202. Moreover, the faith of which he speaks is different in character from that of St. Paul, being directed rather to the future resurrection life, which man shares at present, through his incorporation in Christ, only potentially (cf. 2 Cor. 5). Chrysostom's teaching is practical. In some passages he emphasizes the act of will by which man turns from evil and inclines to good, and in others he maintains the importance of faith, and attributes all to grace. But the two ideas are not clearly brought into relation with one another (see Förster, Chrysostomus, p. 162 f.).
But probably the real difference between Cyril and Nestorius as to the nature and efficacy of the Sacrament was less than Cyril allows, and was due rather to the difference in their Christological theories. There is a fine recognition of the religious value of the Eucharist in Nestorius' sermon on Heb. 5 (Loc. cit. Nestoriana, p. 244 f.).

592 ANTIOCHENE THEOLOGY

In the Eironiates (Dial. i. p. 56, Migne; Dial. ii. p. 165 f., ib.), where he is arguing with a Monophysite opponent, he introduces an analogy from the Eucharist to show that the two natures in Christ are both present in His body. He has a scene of the appellation of the elements as 'types' or 'symbols' of the body of Christ, the orthodox disputation maintains that Christ still possesses a real body. The Monophysite opponent rejoins by a counter-assertion that just as the elements after the invocation undergo a change, so the Lord's body after the union with the Divinity is changed into the Divine substance. This the orthodox speaker denies. 'Even after the consecration the mystical symbols are not deprived of their own nature; they remain in the vessels, Ibas and form; they are visible and tangible as they were before. But they are regarded as what they have become, and believed so to be, and are worshipped as what they are believed to be.' And again he says (Dial. i. p. 66): 'Christ has handed the visible symbols by the appellation of body and blood not because He had changed their nature, but because He had added grace to their nature.' In this presentation (which resembles that of Pope Gelasius in the de Duabus Naturis) Theodoret exhibits a view of the Eucharist which has been called 'monophysitic' (Batiffol), and which, while preserving the reality of the outward and inward parts of the Sacrament, guards against those theories of a conversion of the elements which, from the 4th cent. onwards, gained ground in the Eastern Church. The change, according to Theodoret, is in the region of grace (xarà χαρα), not in the natural sphere. See, further, art. Eucharist.

10. Eschatology.—The Antiochene conception of man's history and of the world as a whole culminates, as we have seen, in the hope of Immortality. Hence the Antiochenes were profoundly interested in eschatology. From Eph 1st Theodore drew the conclusion that all men and all rational creatures will finally look to Christ and attain perfect harmony with Him. Theodore had always been a friend of Diodorus, and Theodore is one of the few points of agreement between them and Origen (see also Cappadocian Theology, 8 x. (3)). Both Diodorus and Theodore express, like Origen, the hope that, though the wicked will suffer just punishment for their sins, this punishment will not be everlasting. Diodorus protests against the idea that the punishment of the wicked will be unending, on the ground that it would render useless the immortality promised to those who look to God beyond their deserts. So, too, the extent of His mercy exceeds the debt of punishment which the wicked have to pay (Assemani, Bibl. Orient. III. i. p. 332 f.). Similarly, Theodore asks what would be the benefit of the resurrection to the wicked, if their punishment were unending (Marius Mercator, ed. Baluze, p. 346). When the wicked have been led through punishment to see the evil of sin and to fear God, they will at length enjoy His bounty. So he sees in Mt 5: 45, and Mk 12: 36, and Lk 17: 37; and 18: 25-27, the hope that the whole of punishment may be paid, and the wicked finally delivered (Assemani, l.c.).

III. LATER HISTORY OF THE SCHOOL OF ANTIOCH

The condemnation of Nestorianism by the Church in A.D. 451 was fatal to the development of the school of Antioch and to the reputation of its great representatives. Marius Mercator about 431 maintained that Theodore was the real author of Pelagianism, and later on called attention to the Nestorian tendency of his teaching. The use made by the Nestorians of Theodore's writings further increased this animosity. Rabbanus, bishop of Edessa, and later on Cyril of Alexandria, condemned the teaching of the 'great preacher' of Theodore's school, and condemned the whole of his predecessor Diodorus. In the 6th cent., amid the Monophysite controversy, the Emperor Justinian issued the edict of the Three Chapters (564), in which the writings of Theodore, the treatises of Cyril and the letters of Ibas to Maris were condemned; and this condemnation was repeated by the Fifth General Council in 553, which by an irony of fate also condemned the works of Origen, the representative of the rival school of Alexandria. The same Council likewise condemned Theodore's methods of Biblical interpretation. But, while the proscription of Nestorianism was fatal to the school of Antioch and led to its decline, its teaching was carried on under Nestorian influence in the schools of Edessa and Syrian Antioch. Theodore himself (546), translated the works of Diodorus and Theodore into Syriac, and when finally the school at Edessa was broken up in 489 through the proscription of Nestorianism by the Emperor Zeno, the refugees found a home in the school of Nisibis, which was founded by Barsamius. Here, by the Biblical studies to which the Antiochenes had given so great an impetus were renewed, Theodore's memory was held in the highest reverence, and he came to be regarded as 'the Interpreter of the excellence among East Syrian Christians.' In these schools the study of Theodore's, also inherited from the school of Antioch, was carried on and transmitted by the East Syrian Church in later times to the Muhammadians, by whom it was brought back to Europe in the days of Muslim civilization. Lastly, these East Syrian Christians became a centre for a wide field of missionary activity in the far East, extending as far as India and China.

In the Greek Empire, though the fame of Diodorus and Theodore became obscured through the controversies which gathered around their memories, the exegesis of the Antiochenes continued to exercise a wide influence through the works of Chrysostom, whose orthodoxy was not exposed to the attacks which the school of Theodore had paid to the members of the school. Isidore, Nilus, and Victor of Antioch took Chrysostom as their guide in the commentaries which they wrote, while a long line of Greek catenists and commentators from the 6th to the 11th cent. show the greatness of their debt to the Antiochene expositors. Even in the West their influence was not unrecognized. Jerome had points of contact with the school and was influenced by its exegesis (Kihm, Die Bedeutung der antioch. Schule, pp. 88, 194; Hergenröther, Die antioch. Schule, p. 89). Cassian, who sometimes follows Chrysostom, carried on the teaching of his master in the Church of Southern Gaul. The controversies about the Three Chapters aroused interest in the writings of Theodore, and it is probable that to this period that we owe the Latin translation of some at least of Theodore's commentaries on St. Paul, which, passing into currency under the name of St. Ambrose, secured a place in the works of the later Western compilers (Swete, Theodore of Mops. in the Minor Epp. of St. Paul, i. pp. xlv., lxxvii.). Two other famous works produced in the West show the influence of Theodore's teaching. The first is the Institutia regularia of Junilius Africanus (c. 550), an introduction to the study of the Scriptures, which, if the author tells us, was derived from Paul of Nisibis, and which reproduces all the
ANTIPATHY—ANTI-SEMITISM

essential features of Theodore's principles of Biblical interpretation as well as of his doctrinal teaching. This work of Junilius, whom later ages transformed into a bishop, was widely popular in the West. The de Institutionibus divinarum literarum of a few years later shows a similar connexion with the East Syrian schools, and exhibits the influence of methods and principles which had been derived from the Antiochenes (Kihn, Theodor v. Mops. und Julianus Afric. s., pp. 210 ff.; 215 f.).

Nor was the West wholly uninfluenced by the doctrinal teaching of the Antiochenes. As has already been indicated (see II. 5), Theodore was brought into contact in his later years with several of the Pelagian leaders. Julian of Eclanum, one of the most prominent of these, was an admirer of Theodore's writings, while another, the deacon Anianus, has been claimed as the translator of some of Chrysostom's homilies, his object being to uphold, by appealing to Chrysostom, the cause of man's free-will (Swete, op. cit., vol. ii. p. 311.). The Christological teaching of Leporis, a monk in the monastery of Marseilles, who is spoken of by Cassian as a Pelagian, shows clear points of contact with that of Theodore. In North Africa, during the later controversy upon the Two Chapters, the works of Theodore found many defenders, and the language of Facundus of Hermiane has been thought to suggest that they had already been translated into Latin. Finally, the Spanish Adoptionist edition of the New Testament, when translated into Spanish, presented Theodore's teachings to a new public. The Christological teaching of Theodore, and Neander has suggested that Felix of Urgel was indebted to the writings of Theodore, possibly through a Latin translation made in Africa (Swete, op. cit., vol. i. pp. 111 ff.; Neander, Hist. v. Dogma, v. 281 f.).

IV. GENERAL SUMMARY.—The permanent service of the Antiochene school lies in its effort to correct a one-sided view of the factors and methods of revelation. To the emotional, mystical religion, which tended to lose the human element in the Divine, whether in inspiration, or the Person of Christ, or the relations of grace and free-will, it opposed conceptions which endeavoured to do justice to the dignity and worth of human nature. While the Alexandria theology started from the Divine side, and deduced all its conclusions from that as its source, the Antiochenes followed the inductive and rationalistic method, which consisted in deducing conceptions from the examination of human nature and experience. The philosophical basis of the one was Platonist, while that of the other was Aristotelian. In Christology the school of Antioch centred attention upon the historical Christ; in its doctrine of inspiration it affirmed the immediate and historical reference of Scripture; in anthropo-

logy it insisted upon the reality of human freedom. It regarded the purpose of the Incarnation as the accomplishment of man's destiny rather than as the salvation of humanity as a sin. The struggle and conflict provoked by the commandment became a means of educating man to realize his freedom of choice and his weakness, and so of raising him out of the stage of subjection to the passions and mortality into the higher life of immorality and sinlessness which has been won for him by Christ. The two standpoints, the Alexandrian and the Antiochenes, represent complementary aspects of Christian theology. If the Alexandrian and mystical standpoint has found full play in the later development of Christendom, the problems of modern thought, and the evolutionary view of the Universe, have once more called attention to the point of view which underlies the teaching of the Antiochenes.

(1890); also Harnack, "Paul und Modern Thought" in Ch. v. Theod. (1876); on Chrysostom see a. Forster, Chrysostomus in seinem Verhältnis zur antioch. Schule (1890); on Theodore see Bertram, Theodoredoctrina christologia (1893); J. Maleh, art. "Les anathématiques de Theodore" in Revue d'histoire ecclésiastique, v. 44 (1903).

ANTIPATHY.—Antipathy is a state of mind or feeling expressing some sort of dislike or hatred of an object or person. Its proper reference is to persons, and it is often a milder or more polite term for hostility. Its analogue is found in the repulsion which exists between states of human condition; and, as sympathy has its analogue in attraction or affinity between them, an aesthetic man may have an antipathy or aversion towards an unesthetic or vulgar person; and an unbeliever may have an antipathy towards a religious believer. Anything that excites our dislike creates antipathy. It is a state of mind quite consistent with morality, and may actually be essential to it in certain stages of development; but it does not imply anything more than a rather moral or sentimental repugnance to or disapproval of mind making certain moralities effective. Anger and hatred are closely associated with ethical implications, but antipathy has no such associations, but rather connotes the fact of mental or emotional antagonism without regard to ethical considerations.

JAMES H. BYELOP.

ANTI-SEMITISM.—I. Historical.—The expression 'Anti-Semitism,' which was coined about thirty years ago, signifies no opposition to Semites in general, but in the literal and technical meaning of the word, a disposition on the part of Aryans towards Jews, both socially and commercially.

The expression 'Semitic languages' was used for the first time in the year 1781 (contemporaneously by the two Gottingen professors, August Ludvig
ANTI-SEMITISM

von Schlözer and Johann Gottfried Eichhorn) as a comprehensive designation for those related languages which were spoken by peoples brought into connexion with Sem, in the table of peoples in G 10. The Bonn professor, Christian Lassen, was the first to give expression to the view that these peoples, the 'Semites,' were in many respects different from Aryans and other races. (Indische Alterthumskunde, vol. i. pp. 414–417, Bonn, 1847.)

Lassen ascribes to the Indo-Germanic race a 'higher and more complete mental endowment.' Of the Semites he speaks of 'language and character.' The Indo-German race is subjective and egoistic; its poetry is lyrical, and therefore subjective. In his religion he is self-seeking and exclusive. The characteristic features of the Semitic Disposition, the obstinate will, the firm belief in their exclusive rights, in fact the whole 'egoistic trend of mind, must have in the highest degree fitted them for the conquest of the world. A bold spirit of enterprise, an energetic and persevering courage, great skill, and a fine discernment how to take advantage of favourable circumstances, are the means of helping strangers, characterising first the Phoenicians, and later the Arabs. As soldiers, sailors, and merchants they are not only able to place themselves in a par with Indo-German peoples, but they have to some extent excelled their contemporaries of this race and been their predecessors.'

Ernest Renan has expressed himself in similar terms in Hist. gén. des lang., sém. i, Paris, 1855, and in Études d'hist. relig., 1857. The Anti-Semites extracted from Renan many catch-words and epithets, although his intention did not lie in this direction. What he had said about Semites in general, they applied specially to the Jews. The influence of Renan's judgment of the Semites comes clearly to the front, e.g., in an article which received much notice in its time, published, but written by the very well-known ethnologist Friedrich von Hellwald, 'Zur Charakteristik des jüdischen Volkes' in Das Ausland, 1872 (Stuttgart), Nos. 38 and 40. We shall quote a few sentences here.

'In the case of the Jews, we have to do with an entirely different ethnic group. . . . This people, scattered and settled in various countries, is partly separate, partly independent in a national sense, but in point of view, the Jew who lives in our midst stands quite as far apart from us as the Arab; and the emphatic contrast between the two, usually insisted on by the opposites, Christian and Jew, is for the most part exactly the same as the existing opposition between Asians and Semitists. The European feels, so to speak, in the Jew, the foreigner who has immigrated from Asia. . . . From the time of Constantine the Jews have to boast of the almost exclusive national type, which has persisted with remarkable purity to the present day. . . . A further specific feature of Judaism is its extraordinary biological extent, and its remarkable power of adaptation. . . . All over the world, in all climates, Jews live in content and prosperity, in spite of harsh treatment and very hard civil and social pressure. . . . In the east of Europe the Jew is sharply distinguished from the other elements of the population; he is an object of hate, but still an almost indispensable component of social life. Quasi as rough and ignorant as the non-Jewish peasant, but in character 'rigible and mean, while possessed of that cunning which is a natural endowment of the Semitic race, the Jew has understood how to make himself in economic relations master of the Christian population, which stands far below him in keenness of intellect, and whose hate he repays by heering them in every conceivable direction. The Jews, like most of the Semites, possess a spirit of the very beginning of a cunning exceedingly valuable for all purposes of trade, a cunning which has been increased by further development from the oppression to which they were subjected. . . . We cannot do otherwise than designate the Jews the very banker from which the foundations of Eastern Europe are supported. No means (propositions) are too violent, for everything for which personal courage is demanded is opposed in general to the Semitic, and especially to the Jewish, character) are too violent. In order to secure a material advantage, . . . In the civilized world there were few kings who, when they wished to massacre the Jews from his Aryan or Semitic enemies, were not it that nature has inscribed with indelible characters his certificate of birth on his countenance. . . . The difference of the Jewish race, thanks to the free development which was possible, has been still more clearly emphasized by their economic conditions, comes, too, from their excessive zeal for learning. Dark spots in the Jewish racial character are a consciousness of their own merits, often ridiculously exaggerated, a boundless egotism, from which they take a liberty of country are conceptions foreign to the Jewish mind. The Jew everywhere feels himself a cosmopolit. . . . The extreme efficiency of Jewish effort can be expressed in one word, 'exploitation.' Thanks to this method, instinctively and naturally applied, the Jews have actually managed to set up an engine which enables them to control the rest of the population. . . . They have succeeded in concentrating in their hands an enormous wealth. . . . Recognising the fact, teachers of the people, accessible to every influence which suggests possibilities of gain, they have found a focus of corruption more devastating than can well be imagined.'

These extracts from F. v. Hellwald, although they contain many false along with some correct opinions, are given here because many 'Anti-Semites' of the present day express themselves in exactly similar terms. He was one of the first to bring to clear expression what many at that time felt only in a vague way, and consequently his writing made so deep an impression and exerted so great an influence.

The expression 'Anti-Semite,' as will be clear from what has been said, is, so far as the present writer is aware, scarcely three decades old. In the year 1880, W. Marr published, as Semniten, under the general title 'Judenfrage,' a series of essays, 'Der Judenkrieg,' 'Offenheit die Augen, ihr deutschen Zeitungsausleger,' and 'Goldene Ratten und rothe Mausse.'

Anti-Semitism, however, is more than two thousand years old. Cf. Est 3:8 And Haman said unto king Ahasuerus. There is a certain people scattered abroad and dispersed among the people of all the provinces of thy kingdom; and their laws are diverse from all people; neither keep they the king's laws; therefore it is not for the king's profit to suffer them.'

But, leaving this passage out of account, we may regard Egypt, and especially Alexandria, as the seat of Anti-Semitism.

As early as the times of the first Ptolemys many Jews resided in Alexandria. Their number increased especially during the time of the persecution of the Jewish religion by Antiochus Epiphanes. This persecution was becoming more exclusive than ever in relation to adherents of other religions. Hateful accusations and bitter taunts, both to a large extent resting on ignorance, formed the answer of the heathen. Unfortunately the work of Pseudo-Josephus, Against Apion, is almost the only source of information we have. The earliest 'Anti-Semitic' author was the Egyptian priest Manetho (b.c. 270–250). Apion the grammarian (a contemporary of Christ) is best known to us from the still extant work of Josephus just referred to. In addition to them we may mention Tacitus (Hist. v. 2 ff.) and the poets Horace, Juvenal, and Martial. The mockery of these writers was directed against circumcision, against abstinence from swine's flesh, and against the celebration of the Sabbath. The chief accusations brought against the Jews (apart from the assertion that the Jewish race was of late origin and had done nothing for culture) were: firstly, ἀδορώματος, i.e. that the Jews rejected all Divine worship but their own, and consequently, secondly, ἄνδραμνοι, i.e. the social exclusiveness connected with the laws of food and the Levitical laws of purity, which was interpreted for the Jews as 'adversus omnes aliis hostis odio liberum' (Tacitus, Hist. v. 8).

After Christianity obtained the supremacy over
heathenism in the Roman Empire, the Emperors (at a later date the Churches) of the separate lands, and many rulers regarded it as their duty to oppose Jewish influence, in order that the heathen, who had been newly won to Christianity, should remain Christians, and that the number of adherents might be more easily increased (cf. e.g. Fried. Wiegand, Agobard von Lyon and die Judenfrage, Erlangen and Leipzig, 1901). At a later date the wealth of many of the Jews, acquired for the most part by money-lending, attracted the cupidity of Christians. This was the case, e.g., at the first Crusade (1096), and at the expulsion of the Jews from France by Philip IV. the Fair (1306). Religious motives were operative in the Jewish persecutions in the beginning of the second Crusade (1148; Abbot Peter of Cluny in France, the monk Rudolph of Mainz in Germany), as well as in the exclusion of the Jews from Spain in 1492 and from Portugal in 1497. In England, as early as the 12th cent. the maxim 'ipsi Judaei et omnia sua regis sunt' held as law (Hovenden's Annales, ed. Stubbs, ii. 231). The Jews were regarded as the milk cow of kings; and as enormous sums of money were repeatedly demanded from them, they were almost compelled to procure them by usury or by the sale of a 'Christian way'. This was called down the hate of the people upon themselves. Stories, some true, many fabricated, of acts of vengeance on the part of the Jews (murder or crucifixion of Christian children at the time of the Easter Festival) were spread, and were actually used, to rouse this hatred to uncontrollable passion. It was in the 13th cent. that the 'blood accusation' first came to the front in its latest and most objectionable form, viz. that the Jews regaled Jesus with a meal of animals forbidden to Christians (cf. H. Strack, Das Blut*, pp. 126, 194). In the same century attacks on the Talmud became very violent (cf. H. Strack, Einleit. in den Talmud*, p. 68). The charge that Jews poisoned wells occurs probably for the first time in the 12th cent. in Bohemia; often in the 14th cent., in Switzerland and France, but especially in Germany. In the whole history of the Jews we find all too frequent proofs of hostile disposition and outbreaks of hatred, occasioned by persecution and prejudice.

The French Revolution forms an important epoch in the history of the Jews. On the 27th of September 1791, the National Assembly declared the repeal of all exclusive measures directed against the Jews; and of the year II (1793) recognized the Jews as possessing equal rights. The following legislation, as well as the Restoration, brought the Jews some restrictions, but these were set aside by the Revolution of July 1830. The Jews of Alsace, however, obtained this emancipation later, by means of the exertions of Adolphe Crémieux.

The course of events in France was not without influence in Germany. From 1799 onwards a great number of Jews, mostly of moderate or of the lower class, and some against them, made their appearance.

H. E. von Paulus, the well-known representative of rationalism, demanded that the Jews should give up their ritual law as the condition of obtaining equal political rights (Jidische Nationalabänderung); a similar view was maintained by Carl Streckfuss in his Uber das Verhältniss der Juden zu den christlichen Staaten, Halle, 1833 (a second pamphlet with the same title appeared in Berlin, 1843). The Rostock Orientalist, Anton Theodor Hartmann, who was well read in the Jewish literature, demanded that the Jews should expressly renounce the principles of injustice to the non-Jews in the Talmud and the Shulhān Ārabī (i.e. those principles which, in the view of Hartmann and many others, allowed injustice against non-Jews or were otherwise opposed to morality). He demanded, further, that they should refrain themselves from all disparaging statements with regard to Jesus and those who were not Jews.

His writings on this subject are the following: Joh. Andr. Blumenmesser, Parchim, 1834; Der erste Gottlieb Georg Christian in staatlichen Rechten sämtlicher Juden schon jetzt bewilligt werden! in the Archives für die neuzeitige Gesetzgebung des christlichen und des israelitischen Staats, Minden, 1843; and Grundsatze des orthodoxen Judentums, Rostock, 1835 (a reply to Salomon's former letter). Hartmann's views were keenly and in many respects cleverly attacked in two pamphlets by the Jewish preacher of Hamburg, Gotthold Salomon: Brief an Herrn Anton Theodor Hartmann, Altona, 1836; and Anhang zu Theodor Hartmann's neueste Schrif! Grundsatze des orthodoxen Judentums' in ihrem wahren Lichte dargestellt, Altona, 1886.

The commencement of the reign of the Prussian king Frederick William IV., who cherished the nationalistic views of the Zeitgeist, led to the following writings on the Jewish question. Among those who opposed the granting of equal civil rights to the Jews we have the following writers: H. E. Marcard, Über die Monarchie der Juden in Deutschland, Berlin, 1836, and Die Magdeburger und die christlich-germanischen Staat. Minden, 1843; and the well-known radical theologian, Bruno Bauer (died 1882), Die Judenfrage, Brunswick, 1843. By the law of 3rd July 1859, absolute religious equality was granted within the North German Confederation, and so far as the law was extended to the whole of the German Empire. Modern Anti-Semitism arose in Germany in the eighth decade of last century (cf. J. de la Roë, Geschichten, i. pp. 258-272; A. Leroy-Beaulieu, Israel et la France, Paris, 1888). An important external cause was the daring attack made by many newspapers, possessed or edited by Jews, and appearing for the most part in Berlin, on many Christian topics (faith, constitution, recent events, ecclesiastical and patriotic), connected with these; e.g., F. Deltitsch, Christentum und judische Presse, Erlangen, 1882. As reasons for the rise and speedy spread of the Anti-Semitic movement, we may further mention, Secondly, the great bulk of the Jews, who had acquired public opinion in public affairs—to a large extent, of course, owing to the carelessness of the Christians. Thirdly, in newspaper writings, in the theatre, in some branches of art (music, e.g., cf. Rich. Wagner, Das Judenthum in der Musik, Leipzig, 1869), in trade, and in several branches of industry (e.g. manufacture of ready-made articles of dress), the influence of the Jews appeared to many unreasonably great. Fourthly, the proud and numerous portion of the middle class in Germany, who had acquired sudden wealth by speculation on the Stock Exchange, excited hatred. The same effect was produced, Fifthly, by the economic dependence on the Jews into which many districts and occupations had fallen; e.g. a portion of the peasant population of the Hanseatic League dependent on cattle- and grain-merchants, while dress-makers and needlewomen were in the power of Jewish merchants; Sixthly, by the support given to the Social Democratic party by Jewish leaders and Jewish money; and, Seventhly, by the numerous Jews of the whole world, e.g. Alliance Israelite Universelle; and Eightly, by the exaggerated sensibility to every criticism and exposure of weaknesses on the part of Jews. Ninthly, there was a wide-spread feeling that the Jews were foreigners.
among the Germans: the stricter Jews not only rejected intermarriage with Christians, but they also kept themselves socially separate from them, e.g. on account of the laws of food. Many Jews, particularly the Zionists, openly avow Palestine as their real fatherland, although for the time being it is beyond their reach.

Further, how exactly far these reasons, taken individually, justify opposition to the Jews, seeing that the conditions are widely different in the many lands where the Jews are numerous. An unprejudiced mind, examining the matter directly, will, in England and in France, feel justified to recognize on the one hand that there are reasons for opposition, and on the other hand that jealousy of the wealth amassed by some Jews has enormous influence with great numbers.

A very great influence was exerted by two speeches delivered before the Christian Social Labor Party by Adolf Stocker in Berlin in Sept. 1879: 'What do we demand from modern Judaism?' and 'Defence against modern Judaism' (both are printed together in the above-mentioned pamphlet on modern Judaism). In them Stocker demands three things: a little more modesty, a little more tolerance, and a little more equality.' Hein. von Treitschke is the author of the phrases, frequently used since then, 'trousers-peddling young Poles' (hoseverkaufende polnische Junglinge), and 'the Jews are our misfortune,' as well as the sentences: 'We do not wish that on the thousands of years of Teutonic civilization there should follow an age of a mixed German-Jewish culture,' and: 'We Germans are a Christian people, and the Jewish question in Germany will not be settled till our fellow-citizens of the Jewish race are persuaded that we are and will remain a Christian people.' An equally decided attitude has been taken, as is well-known, by Catholics in Germany, Austria, France, and Italy (cf. Deutsch in JB I. 643).

The irritation increased, and the conditions were made worse owing to the enormous emigration of Jews from the lands of Eastern Europe to the West, especially since 1881, from Russia and Roumania, at first to Germany and then to America and England. The prejudices used on the part of the German Government were: firstly, restriction, and later almost entire refusal, of naturalization to Jews coming from the East; secondly, regulations by means of which a rapid passage of the migrating Jews through Germany was assured; thirdly, the appointment of special local police for the temporary sojourn of emigrants at the great centres of commerce on the route (Ruhleben near Berlin, Hamburg, Bremen, etc.); thirdly, turning out by the police authorities of persons without means or the appointment of special local police, for the temporary sojourn of emigrants at the great centres of commerce on the route (Ruhleben near Berlin, Hamburg, Bremen, etc.).

The first measure of prevention adopted in England was the Aliens Bill. In the United States every immigrant is not required to show a small sum of money, in order to prevent the immigration of persons entirely destitute of means of support.

Only a few years later than in Germany, the flame of Anti-Semitism was kindled in Austria and in Hungary, by Istöeci in the Hungarian Parliament, and by Georg von Schonerer in the Austrian Imperial Assembly in Vienna (1882). In France a loud and successful agitator was found in the person of Ed. Drumont, whose book, La France juive (1st ed., Paris, 1889), has more than 100 editions. Since 1892 he has edited the Anti-Semitic journal La libre Parole. The case of Albert Dreyfus was long used, from 1894 onwards, as a means of rousing the passion of the Anti-Semitic parties, especially of the federation in the year 1906 with the rehabilitation of Dreyfus and with his reappointment as Major in the French army. At the Berlin Congress of 1878 a resolution was passed that in Roumania all citizens, without distinction of religious belief, should enjoy equal rights. The Roumanian Government, however, supported by the Anti-Semitic majority in Parliament, devised a means of rendering this provision worthless. The Constitution declared that no one should be prevented by his religion from possessing civil and political rights. Roumania immediately declared that the Jews were foreigners, and not Roumanians—a breach of trust unworthy of a government and a people professing to be Christian. Besides, good school education and admission to public hospitals were made almost impossible for Jews, and the latter was, by means of a series of new laws, regulations, and police restrictions, to make it unbearable for Jews to remain in Roumania.

For the Jews of the Russian Empire, the death of Alexander II. in 1881 was fraught with grave significance. Soon after the accession of Alexander III., fearful persecutions of the Jews (pogrom, pl. pogromy) were begun, and by the laws passed in May, 1882, the freedom of movement of the Jews in the 18 provinces of the territory for settlement, already small enough, was still further limited. The chief attacks on the Jews took place in the years 1903 (at Easter in Kishenev; see H. Strack's remarks in his periodical Nathanael, 1903, pp. 78-80, and 1904, pp. 62-64; L. Erero, Les Roumasses de Kishinef, Brussels, 1903; L. Erero, The Bar of the American People, New York, 1904; C. Adler, The Voice of America on Kishinef, Philadelphia, 1904, 1905 (in October at Odessa and many other towns), and 1906 (at Bialystok and other places). In the years 1906, the Seventh International Jewish Missionary Conference, held at Amsterdam, April 20th, 1906, carried unanimously the following motion, brought forward by the present writer and the Rev. Louis Meyer of Chicago (now of Cincinnati):

'The Seventh International Jewish Missionary Conference hereby records its deepest sympathy with the poor sufferers from the latest persecutions of the Jews in Russia. One hundred and fifty villages, towns, and cities of Russia where Jews dwell have been devastated, many hundreds of thousands of Jews have been deprived of all their possessions, and even of the possibility of maintaining a livelihood. Though there may have been incidents upon the Jewish side, no human or divine right permitted Russian officials of Government and Police to incite the lower classes against the Jewish race. In the persecution of the Jews these lower classes should forget their own sufferings, caused by bureaucratic maladministration and by refusal of liberty of thought and religion, which we condemn, because it necessarily must close the hearts of the Jews to the gospel call still more than heretofore.'

Those chiefly responsible for the anti-Jewish attacks in Kishenev were the Minister of the Interior, von Pichle, and the vice-governor, Ustrugov. The latter had refused to grant protection from plundering and murderous bands to defenceless Jews who implored his help, because he himself was an Anti-Semite, and because he was certain that his inactivity would not be cen-
sured by the Minister. The former used the Jews as a lightning-conductor, by means of which the dissatisfaction of the population with regard to the arbitrariness of the police and the organs of Government might be directed into another channel. He could do this all the more easily than before, since the Jews had to a great extent been driven away from the Russian peasants, and have thereby aroused hatred. It is true that in Jewish persecutions, and, in general, in every disturbance, the Jewish drink-shops are often the first to be plundered. That, however, is easily understood without ascribing any special guilt to the possessors of these shops.

Unfortunately, it is by no means improbable that the extension of Anti-Semitism will still continue. The repetition of such outbreaks as have taken place in Russia in recent years will, indeed, be more difficult if a Government binding itself, or bound to, a constitution actually comes into existence. It is, however, quite possible that at no distant date serious Jewish persecutions will arise in the United States, in Hungary, or in France. And in Prussia there has at least been no lack of sinister attempts to incite the population to acts of violence, since for years Count Puckler (of Klein-Tschirme, Silesia) has dared in public assemblies in Berlin and elsewhere to summon the masses to a ‘fresh joyous war’ against the ‘cursed Jewish band.’

2. Arguments of the Anti-Semites, and attempts to refute them. — The means made use of by almost all Anti-Semites to agitate popular feeling are very materialistic, and have contributed to the fact that Anti-Semitism has not only not extended to the widest circles, but has also been turned into a slanderous malignity and a wild passion for persecution (cf. M. C. Peters, *Justice to the Jew*, New York, 1890).

(a) The most dangerous of these means since the 13th cent. has been the ‘blood accusation’ mentioned above (p. 589). The most influential propagator of this accusation was the canon August Hilsner, who lived in the years 1883-1892 (vgl. Strack, *Das Blut*, pp. 109-120). Only the most important instances of modern times can be mentioned here.

On April 1st, 1892, a maid-servant, Esther Polymy, fourteen years old, was murdered in Tzen, Eschat, district of Tarnopol. The evidence of the Crown witness Moritz Scharf, who had asserted that he saw the murder of the girl through the keyhole, was by the judicial investigation to be impossible; the suspected Jew obtained a verdict of not guilty (see P. Nathan, *Der Prozess von Tzen Eschat*, Berlin, 1892; S. Bannstetter in *JE* xii. 149-150). The eight-year-old girl murdered in Korniu in the night between 11th and 12th April 1891 was not a Christian, Maria Deyala (there was no such person there at the time), but a Jewess, Rubina Sarda. The Jewish butcher Adolf Buschoff, in Xanten, in the Rhine province, was accused of murdering, on July 14th, 1891, a 41-year-old boy, Johann Raggmann. The public prosecutor, however, stated: ‘In my long experience of cases, I have never seen a clearer case, where so convincing and connected a proof was brought forward, that the accused did not commit the crime in question.’ Every suspicion that the murder was committed with a view to obtaining the blood of the victim was removed by the post-mortem examination (vgl. Der Xantener Kreisbrief vom dam Schonverdacht des verwendeten Menschen wurde, in einem Verwaltungs–untersuchung bericht, Berlin, 1893; Deutsch in *JE* xii. 674). The Jewish shoemaker Leopold Hilsner was pronounced guilty of murdering Agnes Hrusa on March 29th, 1890, in Polna, Bohemia. However, Arthur Nussbaum (of Der Polnisch-Russisches Pflanzen, Eine Untersuchung auf alterdings Grundlage, mit einem Vorwort von Franz von Lass, Berlin, 1890) has convincingly proved: (1) that the throat wound in Agnes’s body was inflicted before the actual murder, and that the amount of blood which could reasonably be expected in the circumstances was produced only for the food of the Guilt of Hilsner; (2) that it is utterly worthless, that the statements of the accusing witnesses attained to definiteness only in the course of time; (3) that the destruction of each other or incredibility of themselves; and (4) that the accused never asked whether Hilsner should murder Agnes which had even a shade of proba-

(b) Another important means of attack used by the Anti-Semites is the agitation against the killing of animals according to the Jewish rites, if the Jews are refused the exercise of the form of slaughter appointed by their religious laws in any town, permanent residence in that place is made very difficult for them. If the prohibition is extended over a whole country, life there is made almost impossible for Jews.

More detailed statements on the history of the blood-accusation is given by the present writer in *Das Blut im Glasen und Uberfluteten der Menschheit, mit besonderer Beruecksichtigung der Juden* (in: *BS*, 13, Munich, 1900; see also the work of the Roman Catholic priest Fr. Franz, *Der Anti-Semit, vor dem Justizwesen und der Gerechtigkeit, Regensburg, 1901*; *Duchesdon, Die Blutklage und sonstige midelalterliche Verordnung* the *Juden* (alias dem Russischen übersetzt), Frankfurt a-M., 1901; *JE* III. 160-267.

Among other objects of attack on the part of the Anti-Semites we may mention here (cf. above, p. 605):—

(c) The Talmud. There is no truth whatever in the assertions that the Jews seek by every conceivable means to keep the Talmud secret, that they fear lest its contents may become known, and that they declare it a crime worthy of death for a Jew to reveal its contents. The writings on the Talmud (translations, commentaries, translations of whole treatises, etc.) by Jews themselves are very numerous in all European languages. As a practical proof that Christians are not dependent for a scientific judgment regarding what a Jew may think fit to communicate, it may be mentioned that the present writer in 1887 wrote an introduction to the Talmud without having asked or received the slightest detail of information from Jews or Jewish Christians. The Talmud contains no report or statement which the expert Christian scholar cannot discover.

(d) The *Shulhan Arukh* (Ezk 220 † table prepared), the ritual code of Joseph Karo (+ 1575 in Venice, in the first time in Palestine in 1564-5. A fanatical and sanguinary attack was made by the proselyte, ‘Dr. Justus’ (pseudo-
donomy = Aaron Brimmann), in *Judenspiegel oder 100 neuenthulte, heutzutage noch geltende, den Verkehr der Juden mit den Christen beytragen*.)
Evil motives have often without proof been ascribed to opponents, who have been covered with hateful calumny. They have been scoffed at in an exaggerated way on account of single mistakes, as if thereby all other accusations and reasons were demonstrated to be false. Jewish apologists have often sought to put a favorable construction on something done by a Jew simply because a Jew did it, although the act could not be seriously defended. The non-Jewish majority has more than once been irritated by stupid aspersions (cf., to name only a single instance, P. P. Grünfeld's Der Strahl der Radikalen Sätze für A.-B.-C.-Kinder, Stuttgart, 1880).

The most important literature from the Jewish side has been mentioned above at various points. A very useful collection of materials is supplied by Josef Bloch, Antisemitismus in dem Prozesse Rolih in Bloh, Vienna, 1890; cf. also Antisemitismus-Spiegel: Die Antisemiten im Lichte des Christentums, des Rechts und der Wissenschaft, Dantzig, 1900. The most largely circulated book on the side of the Anti-Semites against antisemitic Jews, together with the learned and suggestive treatise, but coloured somewhat with polemic, and written by G. Marx (= G. Dalman), Jüdisches Fremdenrecht, antisemitische Polemik und jüdische Apologetik, Leipzig, 1886.

(c) The alleged existence of Jewish secret writings and secret sects. As early as 1800 the present writer and several other learned and highly respected scholars believed that there were no secret Jewish writings. Of course, to those who do not understand Latin, Cesar's Gallic War is a secret writing, especially if they are not acquainted with any of the numerous translations in English, German, etc. Judaism has always been tolerant of the faith and practice of the individual, but it has always persecuted sects, recognizing quite correctly that sects would be very dangerous to the existence of Judaism itself. The most important sect in Judaism is that of the Karaites, who arose in the 8th century A.D., and of which remnants, even at the present day, are to be found living in the Crimea, in Poland, and in Cairo, with a few in Jerusalem. Karaites and Talmudists have always been most bitterly opposed, and at the present day hate each other. If the Talmudist Jews, either as a whole or in sections, had a 'blood-rite' or other ordinance, which Christians would regard as abominable or destructive of the common good, the Karaites would not have failed to point expressly to it; and it is just as little likely that the Talmudist Jews would have kept silent if it had been possible for them to accuse the Karaites of observing a 'blood-rite' or other repulsive law.

(f) The condon formula kol nidre, 'all vows,' by means of which the Jews on the eve of the Great Day of Atonement in the synagogue declare all vows which they may make in the next year to be non-binding, does not refer to oaths which are made to others, but only to obligations which one lays upon oneself. It is absurd to suppose that this custom was cast doubt on the good faith of the Jews in taking oaths in general (cf. the present writer's art. 'Kol Nidre' in PREP x. 649-653; M. Schlossinger in JEV iv. 529-540).

(g) A very distasteful, but in Western Germany and Bavaria, widely credited accusation is that the Jews, before selling meat to non-Jews, must defile it (Lit. 'mingers') in the most loathsome manner (see the present writer's article 'Sind die Juden Verbrecher von Religionswegen?' Leipzig, 1900).

The assertion is often made that a comparatively large percentage of Jews are punished as criminals (see, e.g., W. Giese, Die Juden und die deutsche Kriminalstatistik, Leipzig, 1923). On the other hand, the Berlin Committee for answering Anti-Semitic attacks has published Die Kriminalität der Juden in Deutschland, Berlin, 1896. For a criticism of both writings by F. Nonnenmann cf. Nathanael, 1896, pp. 44-78 (cf. also H. Lux, Die Juden als Verbrecher, Munich, 1894; Deutsch in JEV iv. 362 f.).

(i) A publication by the same Committee, Die Juden als Soldaten, Berlin, 1896, with copious statistical tables, has in a thoroughly honest manner sought to meet the assertion which is frequently made, that the Jews are cowards (cf. also S. Wolf, The American Jew as Patriot, Soldier, and Citizen, Washington, 1894; M. C. Peters, The Jew as a Patriot, New York, 1901).

Conclusion. The Jews have undoubtedly suffered great and just wrongs. On the other hand, justice must recognize that Jewish apologists have frequently failed to observe due moderation.
violence and exclusive legislation will not lead to
the removal of such evil conditions, but will simply
replace them by still greater evils. But every non-
Jew who is convinced that the Jews in any place
exist too great an influence on their non-Jewish
surroundings, must with double faithfulness per-
fuse a subject to their own state (e.g. to the Briton or as German) and as citizen (e.g. in London
or in Berlin), and stimulate other non-Jews to a
like faithful fulfilment of their duty. Here also
the maxin holds: if we are dissatisfied with our
environment, we must first ask what our fault is.
Let us become better ourselves, and the state of
affairs will improve.

HERMANN L. STRACK.

ANURADHAPURA.—Anuradhapura was the
capital of Ceylon for nearly 1500 years. It was
founded, according to the tradition handed down
in the earliest sources, *by a chieftain named
Anurádha (so called after the constellation Anu-
rádha) in the 6th cent. B.C. on the bank of the
Kadantha River. Nearly a century afterwards
king Panâkâbîhaa removed the capital, which
had been at Upatissa, to Anuradhapura; and
there it remained down to the reign of Aggabodhi
IV. in the 5th cent. A.D. It was again the capital
112 of the country in the 11th cent., and was then finally deserted.
The name Anurádha as the name of a man fell out of use;
and we find in a work of the 10th cent. (Mahâvamsa, p. 37), it was explained as 'the city of the
happy people' from Anurádha, 'satisfaction.' The Sinhalese
peasantry of the present day habitually pronounce the name
Anurâru-pura, and explain it as 'the city of the ninety kings,'
anu meaning 'ninety, and râja meaning 'king.' The ancient
interpretation of the name—Anurâdha's city—is the only correct one.
The second is little more than a play upon words, and the
third is a Võkertyoomejoi founded on a mistake. English
writers on Ceylon often spell the name Ana-viâ-pura, or Anna-
rapùra.
The exact site of Anurádha's original settlement has not been re-discovered. Panâkâbîhaa con-
structed a magnificent artificial lake, the Vîhan Lake, Jaya Vâpi, more usually called, after
the king's own name (Abhâya, 'sans peur'), the Abhâya Vâpi. It still exists, but in a half-runded
state, about two miles in circuit. Its southern shore is rather less than a mile north of the Bodhi
Tree. It was on the shores of this lake that the king laid out his city, with its four suburbs, its
cemetery, its special villages for huntsmen and scavengers, its temples to various pagan deities the,
its residences for Jotiyas (the emperor's engineer) and the other officials. There were
also abodes for devotees of various sects—Jains, Ajivikas, and others. North of all lay another
artificial lake, the Gâmiî Lake, also still existing, and now called the Vîhan Lake. Apart from the
two lakes, nothing has been discovered of the remains of what must have been even then, to
judge from the description in the 10th chapter of the Great Chronicle, a considerable city.

But the foundations of the fame and beauty of the place were laid by king Tissa (so called after
the constellation Tissa), who flourished in the middle of the 3rd cent. B.C., and was therefore
contemporary with the Buddhist emperor of India,
Aşoka the Great. The friendship of these two
monarchs, who never met, had momentous conse-
quences. Tissa, with his nobles and people,
embraced the Buddhist faith; and, no doubt in
imitation of Aşoka, erected many beautiful build-
ings in support of his new religion. Those at Anu-
râdha are described ten, the most famous of them being the Thûparâma, still, even in ruins, a
beautiful and striking object. It is a solid dome,
70 feet high, rising from a decorated plinth in the
centre of a square terrace, and surrounded by a
number of beautiful granite pillars in two rows.
It is not known what these pillars were intended

* Dipavâriyana, ix. 35; and Mahâvamsa, pp. 59, 60, 62.
to support. It would seem to appear from Mahâ-
vamsa, ch. xxxvi. (p. 222, ed. Turnour), that they
supported a canopy over the top; but it is difficult
to see how that can have been done. Perhaps
each of them had, as its capital, some symbol of
the faith. Such pillars, surmounted by symbols, was put up by Aşoka in various parts of India, still
survive. But in that case they are always soli-
dary pillars. Bold flights of steps led up to the
terrace from the park-like enclosure in which it
stood; and the dome was supposed to contain
the relics of the Buddha. It was, in fact, a magni-
cent, highly decorated, and finely placed burial
mound.

Another still existing building of this time is the
Issara Muni Vihara, a hermitage constructed
by king Tissa on the side of a granite hill, for
those of his nobles (isara) who entered the
Buddhist Order. Naturally only the stonework
has survived; but this includes caves cut in the
solid rock, bas-reliefs on the face of the granite,
and terraces (one half-way up, one on the top
of the rock), a small but beautiful artificial tank,
and a small dâgaba. It is a beautiful spot, and
must have been a charming residence in the days of its

Of the rest of the ten buildings no remains have
been found; and it is very doubtful whether any
of Tissa's enclosure round the Bodhi Tree has
survived. The tree itself, now nearly 2200 years old,
still survives. The soil has been heaped up round
its base whenever it showed any signs of decay.
Planted originally on a terrace raised but little
above the level of the ground, it now springs up in
deep detached branches from the summit of a
mound that has reached to the dimensions of a small hill. The tree planted on the basis of the
original Bodhi Tree at Gâya in India was sent as a
present by the Emperor Aşoka the Great.

The auspicious event was celebrated in two bas-reliefs
on the eastern gateway of the Sânti Tree,* probably
put up by Aşoka himself.

The capital was taken by the Tamils not long
after Tissa's death, and was re-captured, about a
century afterwards, by Dushâ Gâmiî Abhayâ, the
hero of the Great Chronicle. He occupies in
Ceylon tradition very much the place occupied in
English history and legend by King Arthur,
and have information about the buildings he erected in
his capital. Undoubtedly the most splendid was the
so-called Bronze Palace. This was built on a
square platform supported by a thousand granite
pillars, which still remain, and from which the
square was 150 feet long. On the platform
were erected nine storeys, each square in form and
less than the one beneath it, and the total height
from the platform was 150 feet. The general
effect was therefore pyramidal, the greatest possible
contrast to the dome-shaped dâgabas in the vicinity,
just as the bronze tiles which covered it contrasted
with the dazzling white of the polished chunam
which formed the covering of the domes. The building
was almost certainly made of wood throughout, and its cost is given in the Chronicle
as 30 kotis, equivalent in our money to about
£300,000.

The other great work of this king was the
Dâgaba of the Golden Sand; but this he did not
live to complete. According to the Chronicle
(ed. Turnour, p. 195), it cost one thousand kotis,
equivalent to a million sterling. It is still one of
the monuments most revered by all Buddhists;
and even in ruin it stood, in 1830, 189 feet above
the platform on which it rested. It is a

tion and meaning of the Wisdom-Tree conception will be more
appropriately treated.
† Mahâvamsa, ch. xxvii
usually simply Mahā Thūpa, 'Great Tope,' the name given above being a rendering of its distinctive title Hemavati in Pali, Rūvan Wati Dāgaba in Sinhalese. Five chapters in the Great Chronicle (ch. xxviii.-xxxii.) are devoted to a detailed account of the construction and dedication of this tope; and of the artistic embellishment of its central cell. In the Thevetium, never, it is believed, been disturbed; and as the exterior has, quite recently, been restored, there is now little chance of the historical secrets there buried being revealed.

Five generations after these great events the city enjoyed peace. But in B.C. 100 the Tamils, with their vastly superior numbers, again broke in, and took Anurādhapura. It was not till B.C. 89 that the Sinhalese were able to issue from their fastnesses in the mountains, and drive the Tamils out. Their victorious leader, Waṭṭa Ḍāmīni, celebrated the recovery of the capital by the erection of a still greater tope than all the former ones—the Abbaya Giri Dāgaba. This immense dome-shaped pile was 405 feet high from ground to summit, except the relic chamber, of solid brick. Its ruin is still one of the landmarks of all the country round. The Vihāra attached to this tope, and built on the site of the garden residences given by Pandukabhaya to the Jains, obtained a curious circumstance. The principal of the college, though appointed by, and a great favourite of, the king, incurred censure at an ecclesiastical court composed mainly of residents at the older Vihāra, the Great Minster, close to the Bodhi Tree. There ensued a long-continued rivalry between the two establishments, usually confined to personal questions, but occasionally branching off into matters of doctrine. For five centuries and more this rivalry had an important influence on the civil and religious history of the island.

With the completion of these buildings, the city assumed very much the appearance which it preserved throughout its long history. The Chronicle records how subsequent kings repaired, added to, and beautified the existing monuments. It tells us also how they and their nobles built palaces for themselves and residences for the clergy. These have all completely vanished. The only new building of importance that still survives is the Vāravaiya, another huge dome-shaped pile, built about two miles due north of the Bodhi Tree at the beginning of the 4th cent. A.D.

It is at the beginning of the next century that we have the earliest mention of Anurādhapura from outside sources. Fa Hian, the Buddhist pilgrim from China, stayed there for the two years A.D. 411-412. He gives a glowing account of its beauty, the grandeur of the public buildings and private residences, the magnificence of the processions, the culture of the Bhikshus, and the piety of the kings and nobles. The reason for Fa Hian's long stay in the city was his desire to study and to obtain copies, on palm leaf, of the books studied. For Anurādhapura was at that time the seat of a great university rivalling in the South the fame, in the North of India, of the University of Nalanda. Books were kept on the banks of the Ganges. Among the laity, law, medicine, astrology, irrigation, poetry, and literature were the main subjects. The Bhikshus handed down from teacher to pupil the words of the sacred books in Pali, and in the Bihār language, a dead language, and the substance of the commentaries upon them, exegetical, historical, and philological, preserved in their own tongue. They had handbooks and classes for the study of the grammar and lexicography of Pali; of the ethics, psychology, and philosophy of their sacred books; and of the problems in canon law arising out of the interpretation of the Rules of the Order. And they found time to take a considerable interest in folklore and popular and ballad literature, much of which has been preserved to us by their indefatigable and self-denying industry. All this involved not only method, but much intellectual effort. Students flocked to the great centre of learning, not only from all parts of the island, but from South India, and occasionally from the far North. Of the latter the most famous was the great commentator, Buddhaghosa (q.v.), who came from Gayā, in Behar, to get the information he could not obtain in the North.

* For there, in that beautiful land, the most fruitful of any in India or its confines in continuous and successful literary work and effort, there have never been wanting, from Boowa's time to our own, the requisite number of earnest and devoted teachers and students to keep alive, and to hand down to their successors and to us, that invaluable literature which has taught us so much of the history of religion, not only in Ceylon, but also in India itself."

The Chroniclers were not, therefore, very far wrong in emphasizing this side of the life of Anurādhapura. To it the city owed the most magnificent and the most abiding of its monuments, surpassed in historical value only by its intellectual achievements.

When Buddhaghosa was in Ceylon, the water supply of the city was being re-organized. The artificial lakes in the vicinity, which added so much to its beauty, were found insufficient; and King Dhātu Sena, in A.D. 290, 50 miles away, the great reservoir called the Black Lake (Kāla Viḍā). The giant arms of its embankment still stretch for 14 miles through the forest. It was 50 miles in circumference; and the canals for irrigation on the route, and for conducting the water to the capital, are still in fair preservation. A breach in the bank has lately been restored at great expense. This reservoir was, no doubt, at the time of its construction, the most stupendous irrigation scheme in the world.

This was the last great work undertaken at Anurādhapura. There ensued a series of dynamic intrigues and civil wars of a character similar to the Wars of the Roses in England. Each party fell into the habit of appointing chiefs to rule the Tamils on the mainland, whether the defeated were wont to flee for refuge. The northern part of the island, in which Anurādhapura lay, became more and more overruled with Tamil freebooters and free lances, more and more difficult to defend. Finally, in A.D. 700, it was abandoned as a residence, and an important fort in the south (Kala Viḍā) was built on the island, from 50 miles north to 50 miles south of Anurādhapura, became a kind of no man's land, and relapsed rapidly into jungle. Neither the Tamil kings of Jaffna in the north, nor the Sinhalese kings in the south, were able to exercise any real sovereignty over it. The once beautiful and populous city dwindled away to a few huts round the Bodhi Tree, now left in the charge of two or three solitary monks. The earliest notice of the ruins received in Europe was in Knox's Historical Relation of the Island of Ceylon (1881), p. 10. Held a captive for twenty years in the mountains, Knox escaped in 1679 through the jungle near Anurādhapura, and his naïve words vividly portray the utter desolation of the place.
Here is a world of hewn stone pillars, standing upright, and other hewn stones, which I suppose formerly... of dryness and the to oste, or water-bottle. As the baskets are built on coils, and sewn with willow and other splints.

The English Government has now made good roads, and a railway has been opened through to Jaffna. Several officials are resident at the station, and a settlement is growing up. Some distance to the east of this settlement the undergrowth has been cut away, and there is now grass and growing under growth trees. The ruins are being cleared, and some of them preserved from further injury; and some excavation has been carried out.

**APACHES**

The Apaches are the southernmost group of the American Indians, who originally covered the territory from the Arctic Coast to New Mexico, and from the Pacific to Hudson Bay, their kinship being plainly traceable through their language. However, the name Apache is a misnomer, apparently from the Zuñi apache, 'enemy', and not found in their vocabulary, as they are known among themselves, not as 'Apaches', but as 'Inde' (N'da, Diné, Timde), or 'People'.

The Jicarilla Apaches, who live adjacent to the Zuñi, are a major group among the Apache tribes. They live in the northwestern part of New Mexico, west of the Rio Grande, and are known for their distinctive culture and traditions.

**The Apaches**, by T. W. Rhys Davids, published in 1900, provides a detailed account of the Apache culture and way of life.

**Literature**

**T. W. RHYS DAVIDS.**

Among Apache games are tossing arrows or darts at an arrow or dart already on the ground, so that they cross; the hoop and pole game (the primitive version of which has the hoop hurled through the rolling hoop; 'hide the button' (jicarilla); 'that's cradle' (White Mountain), fastened to the women's game (Culin, *R.E.B.W.* pp. 385, 449-457, 846, 762, 805, 80-91). The hoop and pole game, in which, amongst the White Mountain Apaches, the red pole is worn by the male, yellow is male, has an esoteric religious meaning, which is jealously guarded by the male pole ("medic-men"). It is said to have been taught first by one of the minor deities called Ghona; but the Jicarilla custom describes it as having been made by Khazatzin, the White-bead woman, who received it from her of the Sun and the Moon. She told him not to roll the wheel toward the north. They played for three days, when the Sun's son rolled them under the east, south, and west. The old man then persuaded him to roll it toward the north. An adventure with an owl followed, and the two boys were sent to perform a succession of dangerous feats, which they had to do. When they went to live in the western ocean." (Culin, op. cit. p. 449).

The *principal Apache handicrafts*, in the course of time, there are several forms, the conical shape for carrying gourds, the bowl shape, and the oars, or water-bottle. All the baskets are built on coils, and sewn with willow and other splints.
woven in geometric or figured designs of black, and made from the pod of a species of Martynia.

A close study and intimate knowledge of the various Apache tribes reveal no religious organization, but there are many forms of worship, not as the white man recognizes worship, but in the form of sacrifice, prayers, fasts, and physical penance, for the appeasement of the evil spirits. Perhaps the nearest approach to one of the classified forms of worship of the Apaches is the elemental, or nature-worship, though there are traces of animism as well as of animal-worship in their religion. The elderly, bearing a yew root, less snake, etc., through which they offer the sacrifice of hoddentin (see below).

The number four is sacred, as among the American Indians generally; and so is eight, though to a minor degree. As far back as the 16th and 17th centuries, the Jesuits and Franciscans formed missions, and worked with their accustomed zeal, but with little success. After years of toil and sacrifice, the field was wholly abandoned, and, apart from the various signs of the cross and sacred cords that might be traced to the rosary, no influence has been on account of these earlier teachings. And as these symbols were so common among the aborigines, it is doubtful whether even these are relics of former Christian influence. The belief in spirits both good and bad, and in the necessity of their worship, is preserved, as will be seen by their offering of hoddentin to appease every known spirit on every occasion.

To be properly understood, however, the beliefs and superstitions of the Apaches must be studied through their medicine-men and women, who wield a most wonderful influence in curing them on their belief in the occult, an influence little understood or appreciated by the civil authorities. Through this lack of understanding, the Apache Indians have been much maltreated and injured, in the present has arisen through not taking into consideration their superstitions and methods of reasoning. Great freedom exists as to the selection of the shaman or medicine-man. Any man, woman, or child who seems to be endowed with spiritual or occult powers and able to interpret omens, is free to follow his own inclinations and invent his own symbols. It is customary, however, for them to place themselves as assistants to some medicine-man who has gained power and influence, paying him liberally for his tuition, a year or more being the usual length of time given to study.

The Apache believes that all ills of the body are caused by evil spirits, which must be expelled or subdued. When any one is sick, he sends for his favourite medicine-man. If the patient is wealthy, the medicine-man will have the assistance of several others, often bringing his family along with him, and camping near the patient. The family and friends of the sick supply the medicine-man and his helpers with food and bedding. When the medicine-man arrives, the sick one's family generally prepares as many cans of tis win as they can afford; and when he arrives, a corner of the camp is reserved for his use, the best blankets are given for him to rest on, and the choicest food is placed before him. When he has finished his rest, large cans of tis win are placed before him, and he drinks and calls from among his friends those whom he wishes to drink with him.

Working on, the medicine-man begins to bargain his service; and if everything is satisfactory, he proceeds to arrange a programme for his patient's care. If there is but one person sick in the camp, the exercises consist of singing, chanting, and drumming; but if there are more sick, or an epidemic is raging in the settlement, dancing takes place, prayers are recited, the women and children joining in the weird and monotonous cadence. Hoddentin is sprinkled round the concs of the sick, and applied to his forehead, tongue, and, in the form of a cross, to his breast, the medicine-men placing this same powder on their own tongues to give strength and divination. The singing and dancing are often continued till the sun sets. All the while they mutter a sort of gibberish that they claim to be understood only by themselves, and to possess the magic that is a part of their individual power.

The Apache materia medica consists mainly of a vegetable and medicinal nature, with the application of hoddentin. Hoddentin is the pollen of the fuls, a species of cat-tail rush, and is gathered without any special ceremony. A small bag of it is carried by every man, woman, and child, even the infant in its cradle having a small bag attached to it. No undertaking, compact, or agreement is entered into without the sacrifice of some of this powder; a small portion of it is blown into the air at dawn and darkness; it is blown toward the sun to appease its heat and to bring the winds. Every part of the Apaches is surrounded by superstition and magic, over which the medicine-men have control. Like the fraternity of physicians of more scientific learning, they specialize, one being a sun-worshiper, another a rain, and one recovers stolen property, another for sickness, etc.

In addition to this sacrificial powder, there are many other sacred emblems that are much relied on by the Apaches. The izze-kloth, or sacred cord, which is worn by leaders as well as by the medicine-men, the bull-roarer, the medicine-hat, and the medicine-shirt are all firmly believed to possess certain special properties. The bull-roarer is an oblong piece of wood, about 12 in. wide and 9 in. long, made with a round head through which a cord is passed, while on the main body are irregular furrows. It is usually of pine or fir, and if obtained from the mountain heights, and previously struck by lightning, it possesses special qualities in controlling the elements. This bull-roarer the medicine-man twirls easily, it makes the sound of a sudden rush of wind, and exerts a compelling influence on the bringing of rain to the crops. The izze-kloth, used by leaders and liaite alike, is the most sacred emblem the Apache possesses, so much so that it must be hidden from sight and protected from the rain. The izze-kloth and the medicine-hat losing their efficacy when in any way handled by an unbeliever.

The Apaches worship and sacrifice to the sun, moon, and other planets, as well as to the lightning, wind, etc.; and hold various dances, such as spirit-, ghost-, sun-, and snake-dances, though the snake-dances are not so common or so regular as among the Hopis and other neighboring tribes.

Regarding the success of the medicine-men, it is with them in the main a twirl easy. If it may lose too many patients; but when unsuccessful, they generally claim that there is some other influence at work overcoming or counteracting their own. The present writer has seen numerous instances where the medicine-man managed to shift the responsibility to another, knowing that the relatives of the deceased were dissatisfied with his work. While the body was still warm, the medicine-man drew from his medicine-bag a flake of flint, with which he made an incision in the side of the deceased where he had suffered most, the blood from the incision and began to moan, and in a short time turned around and spat on the ground a mouthful of blood, and with it a small stone, which he claimed had been fired into the deceased by an old woman living forty miles away. That night a large party went to the old woman's camp and killed her.
as a witch. The individual interpretation given to each one's beliefs and imaginations precludes any set form of worship; but in a general way they all centre round those symbolic influences and superstitions that debar progress and hold them effectively to the faith of their fathers.

The characteristic Apache burial is in natural rock shelters in cliffs and crevices, either on the rocky sides of mountains or in the earth and talus at the base of the hills. Nooks in small unfrequented coves are also utilized. After the removal of the earth and talus, the body is laid on the resulting platform and covered with a frame of poles and brush, over which rocks are heaped, the mound being from 4 to 10 ft. broad, 6 to 15 ft. long, and 2 to 4 ft. high. No coffin is used, but the corpse is clothed and well wrapped up. A shroud (and sometimes an axe, or, in the case of a woman, a carrying basket), is frequently left on the grave, of which no subsequent care is taken. Among the White Mountain Apaches tree-burying occurs.

The Apadana—The name of one of the books in the Pali Canon. It contains 550 biographies of members of the tribe, and 40 biographies of female members of the Buddhist Order in the time of the Buddha. The book is therefore a Buddhist Vita Sanctorum. It has not yet been edited, but copious extracts from the 40 biographies are given in Edward Muller's edition of the commentary on the Theragatha (PTS, 1893). One of these extracts (p. 135) mentions the Kâthâ Vattu, and apparently refers to the book so named, which was composed by Tissa about the middle of the 3rd century B.C. If this was the case, the Apadana may be looked upon as the very latest books in the Canon. Other considerations point to a similar conclusion. Thus the number of Buddhavas previous to the historical Buddha is given in the Digha Nikaya as six; in later books, such as the Mahavastu, the number is nine. Of course, the Apadana (see Ed. Müller's article, 'Les Apadânas du Sud', in THE PROCEEDINGS OF THE ORIENTAL CONGRESS AT GENOA (1894), p. 167) mentions eleven more, bringing the number up to thirty-five. It is very probable that the different legends contained in this collection are of different dates; but the above facts tend to show that they were brought together as we now have them after the date of the composition of most of the other books in the Canon.

There exists a commentary on the Apadana called the Visuddha-jana-vilâsini. In two passages of the Gandhi Varisâ (JPTS, 1886), pp. 59, 69, the authorship of this commentary is ascribed to Buddhaghosa.

According to the Sumangala Vilasini, p. 15 (cf. p. 23), the repeaters of the Digha maintained that the Apadana had been included in the Abhidhamma Pitaka, while the repeaters of the Majjhima said it was included in the Suttanta Pitaka. This doubt as to its place in the Canon has been raised again by the Suttanta Pitaka. This doubt as to its place in the Canon has been raised again by the

The word Apadana means 'pure action,' 'heroic action;' and each of the Apadanas gives us first the life of its hero or heroine in one or more previous births, with especial reference to the good actions that were the cause of his or her distinguished position among the early Buddhists. There then follows the account of his or her life now. An Apadana therefore, like a Jataka, has both a 'story of the past' and a 'story of the present,' but it differs from a Jataka in that it does not deal always to the past life of a Buddha, whereas an Apadana deals usually, not always, with that of an Arhat (q.v.).

When the Buddhists, in the first century of our era, began to write in Sanskrit, these stories lost some of their popularity. The name was Sanskritized into Avadana; and several collections of Avadanas are extant in Sanskrit, or in Tibetan or Chinese translations. Of these the best known are the Avadana-Sataka, or The Century of Avadanas,' edited (in part only as yet) by J. S. Speyer, and translated by Léon Feer; and the Divyavadana, edited by Cowell and Neil, not yet translated. As a general rule, these later books do not reproduce the stories in the older Apadanas. They write new ones, more in accordance, in spirit and implication, with the later doctrines than prevalent. Most of these Avadanas are on the lives of Arhats. But the main subject of the longest of all the Avadana books, the Mahâvastu-avadana, is a series of the previous lives of the Buddha, that of the Buddha, that includes a few of the old Apadana in new versions.

T. W. RHYS DAVIDS.

APATHY.—The Greek doctrine of apathy (ἀθετος) is usually regarded as a leading characteristic of the Stoic School, but it undoubtedly belongs to an earlier date. This is the view of the anonymous commentator on Aristotle's Ethics (Comment. in Aristot. et greco pa. 128, 5: ἄθετον δὲ θετικά καὶ νόμιμον συνεχεῖ, ὑπὸ δίδα καὶ αἴρεσιν). There are certainly marked tendencies towards it in the Cynic School, with its doctrine of renunciation of all pleasure and its glorification of work. If it is the case that Aristotle's Nic. Eth. ii. 2, 1104b, 24 (δῆ καὶ φόρμα τα ἀγαθά ἀθανάτων ταῦτα καὶ ἀρεταῖς) alludes to the Cynics, the latter must already have made use of the expression 'ἀθετος' in its Stoic sense. In recent years, Prof. E. Bury has demonstrated that the Stoics referred the expression to the Megarian, who found happiness in the animus imparatus (Seneca, Epist. i. i.), and seems to have used the word ἀθανάτως (Alex. de Anim. 150, 34, Bruns). Zeno, the founder of the School, however, was influenced by the Megarian as well as by the Cynic philosophy.

On the other hand, Democritus described ἀθανάτως, the human happiness consisting in μετρητήν τεθνός καὶ θεών ζωποιαγον (frag. 191, Diels), in the same way as apos means. In this apathy is described later, as it has been in Latin, to have used the term ἀθανάτως, which appears again among later Sceptics. His doctrine, through the medium of Anaxarchus of Abdera (Diog. Laert. i. 60), surnamed ἀθανασιακός and celebrated especially on account of his ἀθανάτως, had an influence on Pyrrho, the founder of Scepticism, who taught ἀδιάκριτη, probably even under this name (Cic. Acad. ii. 130; Plut. de Prof. in Virt. ii. 128 f.). His disciple Timon praises his constant cheerfulness (ταυχὴν, frag. 66, Diels) and his freedom from ὄνειρον (frag. 66, Diels). On the other passage of this character (Diog. Laert. i. 66, 68), which results from the withholding of judgment (ἐπικεφαλέα) on all the events incident to human life: he who ventures no opinion about the worth of a thing may regard it as either good or evil, and so his tranquillity of mind cannot
be disturbed thereby. It is true that Epicurus did not advocate the extermination of the emotions (φθάνον), yet he occasionally depicts the imperturbable tranquility of mind of the wise man in such colours that he approaches the Stoic standpoint.

Of the statement from the third epistle (Euripides, ed. Vetter, p. 252) which occurs in the passages cited above, commenting, "Μετὰ τε τῶν ἀνθρώπων ἀναγκαῖον μὲν τὰ μάτη τοῖς μετὰ τοῦ ἤτοι, ὡς ἁμαρτόλοι ἀναπτύξαι ταύτα τῶν ἀνθρώπων, ὡς ἄσημα τοῖς ἢ ἐπί τοῦ ἠμέραν γενόμενα, ἐνεπλείων τούτων τού πολλοῦ, οὕτως οὖν ἀναμέρειν." Thus for the effect of Epicurus on the Stoics, and the sources of Epicurus, see also Farnell, *CulXi of the Greek Statu*, Oxford, 1896, ii. 619 ff. For an examination of this question of origin, consult Farnell's *CulXi of the Greek Statu*, Oxford, 1896, ii. 619 ff.

Such ideas are in accordance with the general feeling of the Hellenistic period, which was quite willing to recognize the happiness of the individual in a kind of quietism.

Entire freedom from the emotions was now demanded of the Stoic sage (Frag. 207, Arnim) by Zeno, who, however, made to the healthy human intellect the concession that even the sage, although unaware of the emotions themselves, is nevertheless conscious of a shadow of them (Frag. 215). This doctrine was more clearly expounded by his pupil Dionysius in his separate treatise *Peri dikaion animon* (Diog. laert. vii. 186), and more especially by Chrysippus (e.g. in peri dikaion animou kai peri dromou), whose fragments on this subject are collected in Arnim, *Stoic. vet. Fragm.* iii. 443-455. The emotions belong to the irrational and immoderate (πλατέων) class of impulses (σήμα), which, however, with the wise man, is the mind of nature, and, as the wise man is the soul, and therein consists his happiness (Diog. laert. vii. 117; *Cic. Tusci. iv. 37*).

It was inevitable that against this extreme doctrine lively opposition should arise. Plato had already asked *whether* the *soul* is of the body (φτάνει), pp. 21 D, 60 E, 65 E: ἄλλα δὲ την ἁγίαν αἱρέσιν καὶ καθάρτη εἶναι, σχεδόν ολικες ὁμοίαν εἴρημι, καὶ πάντα διατείς ταμ μοῦ ὄργανα καὶ τοῦ σώματος, and his disciples had, therefore, taken up their position almost on the standpoint of Aristotle and the Peripatetics, who strove after *meteores* τοῦ τοῦ σώματος (Nicom. Eth. ii. 1108 a, 30; the later writers call it *meteores*), and could not approve of apathy. No more could Epicurus, whose ἰδιωτικὸς was actually regarded by the Stoics as one of the chief passions (Stob. ii. 41). Cassius summed up this contradiction in his successful attack upon the Stoic exaggerations. He started from the fact that man is not only soul, but also body; that, consequently, certain bodily impulses are inevitable, among which the first place is taken by the *soul* since it cannot be an evil, apathy is impossible (Gell. xii. 5, 7). This opposition resulted in the yielding of the Middle Stoas (Schmelck, *Philos. mittl. Stoas*, p. 364); Fananius after the fashion of the Peripatetics views nature in the avoidance of extremes, and allows the ἰδιωτικὸ as legitimate in themselves. For him bodily pleasure is something natural, and therefore not to be exterminated; grief, on the other hand, is contrary to human nature, therefore human nature is justified in avoiding it. Posidonius laid stress on the contrast between body and soul, and held that only the soul, so far as it remains pure, can be ἰδιωτικὸ, but not the body; he admitted, besides, a *καταρακτικὸ μὲν* τῆς *ψυχῆς* (Plut. de Virt. Mor. 3, p. 411; *Galen. de Hipp. et Plat. plac.* p. 408 M). He thus abandoned the old Stoic attitude on principle, although in some single statements he approached very near (e.g. *Cic. Tusc. ii. 61*). The later philosophers are strongly influenced by this more worldly and practical attitude. Epicetus is the only one who returns to the old rigorism; his wise man must again be ἰδιωτικὸ καὶ ἀναπάθεια, δίχα ἁρπαξάμενος καὶ εκκλίνομαι, and he fought expressly against *μετεορίζεσθαι* (iv. 1, 175; cf. Fh. des. Sch., Ethik des Epicurus, p. 113; Bonhoffer, *Ethik des Epicurus*, p. 118 ff.); he also opposes it in one of his writings (Epsit. 85), but otherwise he assumes Posidonius’ point of view. This view occasionally persists in the later philosophy, and Neo-Platonism, with its withdrawal from this world and its mortification of the flesh, is decidedly in its favour. Thus Philo resolutely demands apathy (Zeller, v. 4, p. 449), and so also with Porphyry it appears as the highest stage of contemplation, while metriopthesis receives a lower place (op. cit. p. 711).

W. KROLL.

APHRODISIA (Ἀφροδίσια).—The general name of festivals in honour of Aphrodite. The cult of Aphrodisia may be regarded as having been universal in one form or another in the Mediterranean lands. In all the great centres of Hellenic life it occupied an important place, prevailing from Naucratis in Egypt to Phanagoria in the Black Sea, and from the Troad to Italy and Sicily (see the long list, with the evidence, in Pauly-Wissowa, art. *Aphrodite*). The Αἴγεια islands were among its most famous centres, notably Cythera, Crete, and Cyprus. There is, however, no real ground for regarding the cult, in its later specialized form as the cult of a goddess of physical beauty, as having been aboriginal in Greek lands. Probably Aphrodisia was originally an Oriental nature-dvination, and she retained many Oriental traits in her local cult as a specialized divinity in Greece.† The more refined cult of the goddess as the personage of married life is probably a general development, for this aspect of her is either altogether lacking or at least is not prominent in its Eastern forms. Contrary to a very general but erroneous conception, originating in Plato’s well-known distinction between Garian Aphrodisia who personifies the intellectual love of the soul, and Aphrodisia Pandemos who personifies the sensual love of the body (Plat. *Symposium*, 180 D), it is precisely this title of Ὀφρακία, ‘Heavenly,’ that is the clearest sign of her Eastern origin: the Platonic distinction was not recognized in the State religion, and the moral and spiritual meaning of the title is of late growth (Farnell, op. cit. 629 ff., 659 ff.). In the same way, that aspect of Aphrodisia under which she was worshipped at Athens and elsewhere as Pandemos, ‘Goddess of the body politic,’ was not an independent Hellenic development, but a survival and development of an Oriental conception (Farnell, p. 663).

With regard to the nature of the cult, ethnically considered, it is to be observed that much of the modern conception is based upon a radically false notion, and the unguarded application to Hellenic practice of ill-understood Oriental phenomena.

*A as a ‘departmental goddess, having for her sphere one human passion’ (J. K. Harrison, *Prolegomena for the Study of Greek Religion*, p. 800) she is depicted in the Homeric Hymn.

† For an examination of this question of origin, consult Farnell’s *Cults of the Greek States*, Oxford, 1896, ii. 191 ff.*
Until the decline of Greek civilization, the cult of Aphrodite, so far as we know it from our literary or monumental sources, was indistinguishable in point of purity and austerity from that of Zeus or Athena, and was in this respect, in fact, on a higher plane than that of Artemis. Rules of chastity, for example, were in some cases imposed upon her priestesses (Paus. ii. 10. 4). It was at Corinth alone in Greece, and there in connexion with the worship of the 'Heavenly' Aphrodite, that impure practices were found established as part and parcel of the ritual of worship. The fact is that a careful distinction must be drawn between Greek religion and ritual, which is upon the whole pure, and the mythological stories, which are often the reverse, and are, moreover, conveyed to us largely through the impure medium of degenerate poetry. De-generacy did indeed exist itself in the cultus, as in other domains of Greek life and practice—a symptom of the loosening of the moral bonds in the Hellenistic period,—and later in the erection of altars and temples, and the conduct of festivals under the name of Aphrodite to the mistresses of the successors of Alexander and others (Atheneaus, 253, 556).

Probably the festival of Paphos was the most celebrated of these, and held in honour of the goddess, and there also in all probability many features that had no parallel in Greece, save perhaps at Corinth, to be seen. Great crowds assembled at the temple from all parts (Strabo, 683 : καὶ παντογράφως διὰ τοῦτο ταύτα πρός τοῦτο ἐβρέθη ἡμῖν σωματικός καὶ τῶν θαλάσσων πλῆθος). The title Ἀγίωρος borne by the high priest at Paphos would probably indicate his conduct of the vast sacrifice. Sacrifices of blood were not offered, the law of purity preventing even the thought of such a course of divination: or there may have been two altars, one for incense, the other for sacrifice (cf. Tac. Hist. ii. 3: 'Hostiae, ut quique voluit, sed mares delegatur: certissima fides hadorum fribus. Sanguinem are obliterantur: praeciscus et quo puro alicia adeuntem'). A ritual bath and mimetic dance probably formed part of certain mysteries which were celebrated (Harrison, op. cit. pp. 283, 312; cf. Farnell, op. cit. p. 561: 'In Cyprus, in some regions, a certain solemn scene, some sort of a rite of the Adonis, perhaps the image of the dead goddess was exposed, and then after due performance of certain rites she was supposed to be restored to life'). Those who desired to be initiated in ἐν τῷ τέγμα μετωπώτου, on entering the temple, washed themselves in a lave and a lump of salt, and gave a piece of money to the temple treasury. *

Most Oriental in character of all the Greek cities was Corinth. Euripides celebrates Aecorecrathos as the holy hill of Aphrodite (Pind. in Strabo, 372: ἢκα πέρικλεον προστάτου 'Ἀκροερεθοπόν, ἵππος δορικά, πόλιν Ἀφροδίτα), al. Alciph. iii. 60). The most unhellenic of the elements of the Aphrodite cult was the practice of religious prostitution (Strabo, 375), however. But under the influence of the Adonis, perhaps, the image of the dead goddess was exposed, and then after due performance of certain rites she was supposed to be restored to life. Those who desired to be initiated in ἐν τῷ τέγμα μετωπώτου, on entering the temple, washed themselves in a lave and a lump of salt, and gave a piece of money to the temple treasury.

APOLLINARISM.—Apollinaris, the younger, of Laodicea (+ c. 390), was the founder of a heresy which forms the connecting link between Arianism in the 4th and Nestorianism and Monophysitism in the 5th century.

1. Life of Apollinaris.—Of the events of his life not very much is known. His father, who was also named Apollinaris, was a grammarian from Alexandria who came to Berytus (Beirut). Apollinaris, the younger, of Laodicea (in Phoenicia) in Asia Minor, was born there.

He married and had a son, Apollinaris the younger, the future heretic (Socrates, H.E. ii. 46). Socrates says that the father was the best friend of Gregory the Sophist, the younger, who was named Epiphanius, and that he distinguished the carnal from the spiritual man (1 Co 2: 14, cf. 3: 15; 1 St 3: 19; in Co 2: 19). Socrates says that he was excommunicated with his son, the younger Apollinaris, together with his father by the bishop, he must have been more than a child before that bishop died (355). Socrates says that he was excommunicated, not because of his teaching, but because he had been a teacher of rhetoric (H.E. ii. 46). All his contemporaries speak of his great learning, and the connection from the Orthodox Fathers he still wrote of him with much more respect than they usually give to heretics, and even with a certain affection. He was known in science (Phil. xviii.); 'skilled in all knowledge and learning, a man of manifold erudition and accomplishments' (Socr. v. 18). Epiphanius says that he himself, as well as St. Gregory the Sophist, loved the 'illustrious, venerable old man, Apollinaris of Laodicea,' and that when they first met he said they could not believe that so great a man had fallen into such an error (I.E.E. ii. 2).

In this first period, before he had proclaimed his heresy, when he was with the bishops of Asia, and was known to some of the Greek and Latin scholars, his teaching is 'always dear' (I.E.E. ii. 2). St. Basil says that he had once corresponded freely with him (Ep. cxxxii.); years afterwards, when he had written on all questions with the heretic, he still wrote in regard of the man 'whom we had expected always to find our all' (Ep. ep. octav. 14), and he still doubts whether all the harm that is told of him by his friend can be true (Ep. cxxxii. 8). Apollinaris at first distinguished himself as a defender of the faith of Nicea, a Manichaean, and a Nestorian with his semi-Arianism. It was only possible for him that he had been excommunicated by his bishop. And then, according to Sozomen, he, having asked in vain to be received back into communion, being conquered by his grief, began to disturb the Church with his new doctrine (H.E. ii. 25). It seems true that he first conceived his theory as a defence of Homousianism.

We hear of him next as bishop, apparently of Laodicea. It is true that neither St. Basil, Gregory of Nazianzus, Epiphanius, Sozomen, nor other historians mention him as a bishop, and that Lactantius of Sardis speaks of him only as 'Apollinaris the presbyter of Africa' (In Sem. xxiv. 10). And Philostratus doubts whether he had been bishop in (ep. Phil. xviii. 15). On the other hand, St. Athanasius makes of certain monks who had been sent to Alexandria by Apollinaris the bishop of Laodicea (Tom. ad Antioch. ix.), Philostorgius relates the fact as having been 'told by some people' (H.E. viii. 14). Theodore says that he generally lived at Laodicea (I.E.E. iv. 4), and St. Jerome, who had known him well, calls him 'Bishop of Laodicea in Syria' (Ep. lxi. 1). The Paellogi, however, call him a bishop of the same city about the year 383 (Lequein, Or. Christ. ii. 794), so that Athanasius does not mention him because he was excommunicated and had joined the heretics. It must have been about 380 that he began to be commonly known as the teacher of Apollinaris of Alexandria (Soz. iii. 25), who was known and rejected his idea. It 'confessed that the Saviour did not assume an immanent or insensible body. . . . Not only is the human soul invisible, but also the man who receives salvation from the Word of God is not so (Ath. Tom. ad Ant. 7). But it does not mention his name. In the year 378 all the Orthodox Fathers speak of him as a heretic. St. Basil makes of him the year 378: 'I have no communion with Apollinaris' (Ep. cxxi. 2, etc.). He denounces him to the 'Westerners' (Ep. cxxii. 4), and rejoices later that they have condemned him (Ep. cxxvi. 2). This condemnation is that of the Roman Synod in 374 (Mansi, iii. 470). Apollinaris is not mentioned in any of its ten canons, but they are plainly drawn up as condemnations of his theory. The Synod of Antioch, held in 358 under Melitians, anathematized the word of God dwelling in human flesh in the place of a human soul and a divine body (Mansi, iii. 495). The first canon of the Synod of Constantinople in 381 condemned him as a heretic, of whom the last are the 'Apollinarists.' Its seventh canon states that if Apollinaris and his adherents publicly deny the faith of Nicea and Athanasius, whereas the bishop was a semi-Arian (65).

2. The Apollinaris heresy.—Apollinaris began as a zealous defender of the doctrine of the Arians. Sooner or later the question was bound to arise: How could the Logos be joined to a human nature? It was around this question that the later Nestorian and Monophysite disputes turned. Apollinaris' solution, in which his heresy consisted, was to become a teaching of Christ's Person at the expense of His human nature.

In this way he was a sort of forerunner of Eutyches. He is certain that God Himself became man in Christ. He is also certain that the whole Divine nature cannot be joined to the whole nature of a man. He maintains this by the same arguments as were afterwards used by the Monophysites. Two perfect natures always remain two separate persons; 'two perfect beings cannot become one.' This axiom, quoted by Athanasius as one of his 'sophisms' (contra Apoll. i. 2), was the starting-point of his system. It illustrates it by various examples. We may not adore a man, we must adore God. So it would follow that Christ must be both adored and not adored. Moreover, a perfect man is necessarily sinful; where there is a perfect man, there is sin (ib.); but Christ could not become sinful. And He would be neither really God nor really man, but a man-God (μορφον νεωτερον), a monstrous and impossible hybrid of two incompatible natures, a nature of taints, dragons, and other mythological absurdities (Greg. Nyss. Antir. 49). He goes on to argue that he would certainly not be a man, for all men consist essentially of three parts, body, soul, and spirit, whereas He would have four parts, adding to these His Divinity. In short, 'a person, being one, cannot be combined of two' (ib.). He finds the solution of the difficulty in the application of a general principle of philosophy. The Neo-Platonic school taught that human nature is the composition of three elements: body, soul, and spirit. The body is a soul that actuates and informs the body (to use the later mediaval term), thus making us living beings, and the mind, or spirit, that makes us reasonable beings, which spirit is the special characteristic of Christ, the Saviour of the world.

Apollinaris thinks that the doctrine of the three elements of man, body, soul, and spirit (σαρκος, ψυχη, πνευμα or νοος), is confirmed by Scripture. He quotes the text: 'Bless the Lord, O ye spirits and souls of the just' (Ps. 104: 4). He compares them to the Thessalians: 'Gospeled' (Greg. Nyss. Antir. 48). We are told to serve God in spirit and to adore Him in spirit and truth (Ro 15; Antir. 49); St. Paul prays that the Thessalonians may be sanctified in spirit, soul, and body (1 Th 5: 23); and he distinguishes the carnal (ψυχος) from the spiritual (πνευματικος) man (1 Co 2: 14, cf. 3: 15).
APOLLINARISM

Antir. 49). Of these three elements the body and the soul make up the 'natural' (φυσικὸς) being (the machine, Plato would have said), which is ruled and guided by the mind.

But the guiding principle in man is changeable, fallible, sinful. It cannot be so in Christ. Therefore in Christ the Divinity, the Logos, takes the place of a human mind. He is a natural man (i.e. body and soul) made up of three elements: the body, the soul, and the spirit. That is, in the Logos, the human, the natural, is not human but Divine. That is at any rate the eventual and fully developed form of Apollinarianism. It has been suggested (Lietzmann), and some answers of his opponents seem to suppose, that its author did not at first trouble about a subtle distinction between soul and spirit, but simply said that the Logos instead of a human soul was joined to Christ's body. However, the stress of controversy soon made him adopt the Neo-Platonic theory as the basis of his theology, and he and his school then made so much of it that all through the Middle Ages the psychology of the three elements was associated with one name only, that of Apollinaris. He thinks that he has found texts to prove his own theory of the hypostatic union by the absence of a human soul, or, later, of a spirit in Christ. St. Paul, for instance, says that the first Adam was made a living soul, the second a life-giving (therefore Divine, not human) spirit; the first was 'sinful' (παραπόνοος), the second is joined to the Logos. The incarnation is described as the Logos, not of a whole man but of a physical body only. It is the 'mystery that appeared in the flesh' (σάρα ἐκ τοῦ σωμάτος), not man, but flesh (Jn 14; Antir. 16, etc.).

The contemporary orthodox Fathers who reject this theory are not much concerned about the truth or falsehood of the statement that human nature is comprised of three elements: the body, the soul, and the spirit. But the first proponents of Apollinarism are offended chiefly by the assertion that Christ lacked an element of complete human nature. They quote against it the texts in which He is said to be like us in everything except sin (He 4:14, to be really and completely man), to be free from the sin of all soul but also a spirit (Lk 22:47; Antir. 17, Jn 11:8; Athan. contra Apoll. i 15, Jn 19:36, ii 16). They also undertake to refute Apollinaris' arguments. If the quotation I Co 10:28 proved anything in this question, it would follow that Adam had no spirit at all (Antir. 12), and that the word 'flesh' in Jn 14, as elsewhere, stands for the whole human nature (Antir. 27); and they insist on the conclusion which Apollinaris himself would not admit, namely, that if the Logos had become one of the elements of Christ's human nature, the Logos too would have suffered and died (Antir. 30, etc.).

3. The Apollinarist sect.—In spite of the opposition of a long list of Fathers (Athanasius, Basil, the two Gregories, and many others), Apollinarism outlived its author for many years. He had set up a hiersy all over Syria, and his sect existed and carried on his teaching till it seems to have been gradually absorbed by the far more important Monophysite movement. Vitalis was Apollinarist Bishop of Antioch. We hear of one Timothy of Beirut, who wrote a History of the Church, and who 'had no other object in so great a work but to commend Apollinaris, inasmuch as from him and to him an endless number of letters were written and written back' (Leontius Byz. c. Nestor, et Evagri, iii 40, PG lxxxvi, who proceeds to point out that a man's greatness is not to be measured by the size of his correspondence). A certain Valentine wrote a defence of Apollinarism, called 'Against those who accuse us of saying that the body is of the same substance as God' (adv. Fraudes Apollinaristarum, among the works of Leontius Byz. PG lxxxvi. ii. 1947-1976; some passages from both Timothy and Valentine are quoted in this treatise). It seems that the unknown interpolator of St. Ignatius' letters (a Syrian in the beginning of the 5th cent.) was an Apollinarist. He twice (Philipp. v 2 and Philad. vi. 6) expressly denies that Christ had a human mind.

Although the movement gradually disappears as its place is taken by Syrian Monophysitism, one still occasionally hears of Apollinarism in the ever-growing list of heresies; and as late as 691 the Quinisextum Synod in its first canon does not forget to condemn Spiritual Apollinaris, a heresy of weak-mindedness, who impiously declared that the Lord did not assume a body endowed with both soul and mind' (Mansi, Collectio, 1759-1798, xi. 936).

4. Writings of Apollinaris.—There is the most complete agreement that Apollinaris was a learned as well as a very prolific writer. St. Jerome says that he had written 'countless volumes about Holy Scripture,' and that his thirty books against Porphyrius were greatly esteemed (de Vir. Ill. 104). Philostorgius tells us that his arguments against Porphyrius were superior to those of Eusebius (HE viii. 14). St. Basil says that 'as he had great facility in writing on any subject, he filled the world with his books' (Ep. cclxiii.) and we even get a long list of his poems, and mentions a work 'Concerning Truth' (Τινας Ἀλήθειας), an apology against Julian and the Greek philosophers, in which 'he shewed their errors concerning God without using texts from Scripture' (HE viii. 12). The he also has a refutation of Eusebius (de Vir. Ill. 104), Philostr. HE viii. 12) and of a book against Marcellus of Ancyra (de Vir. Ill. 86). Epiphanius, too, writes with great appreciation of his learning and talents (Har. iii. 24).

Of all these works scarcely anything is left. Of the poetic versions of the Bible written either by him or by his father, one volume remains, the Paraphrase of the Psalms (PG xxxiii. 1315-1558; it includes the 151st Psalm). It cannot be described as a success; it is written in hexameters, into which the author has crowded every possible reminiscence, allusion, and idiom from the pagan classics, must obviously lose all the feeling and quality of the Bible without becoming more than a veritable imitation of the real classics. So it is not wonderful that after Julian's death, as soon as Christians were allowed to return to the real thing, Apollinaris' substitutes were soon forgotten. Socrates says that in his time these Biblical poems had disappeared as completely as if they had never been written (HE iii. 16).

There is, however, a constant tradition that after the death of Apollinaris his followers published their master's works under the names of
orthodox Fathers. Leontius of Byzantium (or whoever the real author of the treatise 'Against the Frauds of the Apollinarians' was) begins his work by saying: 'Some of the followers of Apollinaris, or Eutyches, or Dioscorus, in order to confirm their heresy, have ascribed (ἐπηγάζοντες) certain works to Gregory Thaumaturgus, or Athanasius, or Julius, in order to deceive the simple'; and the whole of this little work is a compilation of texts which the author thinks to be cases in point. Its full title is, 'Against those who offer us certain works of Apollinaris, having falsely inscribed them with the names of holy Fathers'.

So one of the chief problems concerning Apollinaris has always been the discovery of any of his writings which may be hidden under other names. In the case of some such works the matter may be said to be now definitely lost. Leontius (ib.) had already declared that the little treatise called The Partial Faith (ἡ κατὰ μέρος πίστις) among the works of Gregory Thaumaturgus (the text is published by Dräseke and Lietzmann; see below) was written by Apollinaris; this is now admitted by everyone. Other works also commonly acknowledged to be by him are: pseudo-Athanasius, Of the Incarnation of the Word of God (Περὶ τῆς σωρείας τοῦ θεοῦ λόγου, Dräseke, pp. 341-343); pseudo-Julius of Rome's Letters to Dionysius of Alexandria (Apol. xcix. 284-361), and, very probably at least, the tract, Of the union in Christ of the body to the Divinity (Περὶ τῆς ἐν Χριστῷ συμμετείχος τοῦ σώματος πρὸ τῆς θεότητος, ib. 343-347), also under the name of Julius. Lastly, there are fragments of Apollinaris' writings in various Greek Catena (cf. Krumbacher, Byzant. Literatur, Munich, 1897, pp. 206, 211) and in the quotations from him made by his adversaries (Athanasius, Gregory Naz. and Gregory Nyss.).

Dräseke (Apol. v. Laod.) pays him a number of workers, all pseudo-Justinian, including the Cohortatio ad gentes, which he thinks to be Apollinaris' book 'Concerning Truth'; the third and fourth books of St. Basil against Eunomius (which would then be his work against Eunomius mentioned by Jerome and Philagorius); the first three dialogues of Theodorus of Cyrrhus on the Trinitas; some sermons of Gregory Thaumaturgus; pseudo-Athanasian Dialogues on the Holy Trinity; as well as almost any more or less contemporary anonymous works, including the poem Christ Suffered (Χριστὸς πάθως, cf. J.P. 1844, pp. 657-704), which is really a mystery play of the 11th or 12th cent. (Krumbacher, Byzant. Litt. pp. 748-749). These identifications are now generally considered to have been premature and mistaken (Bardenhewer, Patrologie, 1894, pp. 224-225; Krüger in P.R.E., art. 'Apol. v. Laod.'; Harnack, Lehrb. der Dogmengesch., 1895, pp. 309-321). Lietzmann (Apol. Laod.) suggests a more reasonable list.

**LITERATURE.—**The first sources for a knowledge of Apollinaris and his life and ideas, after the fragments of his own works and those of his earliest opponents. These are: Athanasius (but there is some doubt about the authorship). Two books concerning the Incarnation of our Lord and the Holy Trinity have been ascribed to Athanasius (Περὶ σωρείων τοῦ κυρίου ὁμογενῶς ἔσχατος Χριστοῦ καὶ τῆς θεότητος τῶν ἱερών [ib. 390-1110], Gregory of Nyssa, A.D. aE. 1001). The texts of the things said by Apollinaris are attested by a fragment of a letter of Gregory, of Alexandria, PG xiv. 1123-1209 and his Letter to Theophilus of Alexandria, 1966-1977. Theodore of Monemusa wrote a work against Apollinaris, of which fragments remain (PG IX. 935-936). All these contain quotations from his writings, and some of them even contain whole sections from his works. He speaks of him also in his homilies in several letters (cf. ib., to Cleidom, PG XXII. 294, and, to Maximus of Constantinople, ib. 939-933). St. Basil's letter (PG xxiv. 168) contains passages from Apollinaris (by mistake or from some reference, and Leontius of Byzantium in the beginning of the 7th cent. (or another writer of that time) says that Basil was a people) is doubted) wrote the treatise, Against the Frauds of the Apollinaris (PG xli. 303-156). (Modern literature: G. Caspari, Arbeit und neue Quellen, etc. (Christiania, 1879, pp. 65-148); A. Ludwisch, Apollinaris Metaphysiæ parnassii, 1-111 (Königshof, 1880); J. Dräseke, Apollinaris von Laodicca, sein Leben und seine Schriften, Appendix: Apollinaris. Laod. Quaerentur dogmatica (Leipzig, 1885, in Gebhardt and Harnack's Texte u. Untersuchungen; 4th ed. Laod. v. Laod. Schrift wider Eunomius; ('Ztschr. für Ichonographie, 1899, 22-31); E. Friede, 'Apollinaris'in den ersten zwei Jahrhunderten, H. Lietzmann, 'Apollinaris' in der Geschichte und seinen Schriften, Thucydid. Sto. 1891, 20-45 published; J. F. Bethune-Baker, Intrud. to Early Hist. of Christ. Doctrine (London, 1893), p. 239 f. ADRONIUS. ARIEL.
every ninth year. At Delphi there was a feast on his birthday on the 7th of Busios, the first spring-month, and this seems to have been identical with the Thesophania (Herod. i. 61; Plut. Quest. Grac. 9, p. 292 F; BCH, 1885, p. 11).

The more purely agrarian festivals may be distinguished those in which the artistic character is more prominent. The former are festivals of first-fruits, or harvest-festivals, presenting many analogies to the peasant festivals of other lands. Examples of this type are the Karneia of Laconia, falling on the tenth of the month Karneios = Attic Metaateignion (Aug.), and the Byakhntia celebrated in May-June at Sparta (Paus. iii. 10. 3; Wide, Lokomische Kulte [Leipzig, 1895], 259 ff.; Xen. Hell. iv. 5. 11).† Above all, the Thargelia of Athens, falling in the latter end of May, a harvest-festival, for that at Delos the first cereals and fruits are ripe.† The Thargelia is a combination of a primitive harvest-festival with a rite of purification (the curious ceremony of the Pharmacos) which may have been enged originally to the Earth-goddesses and was afterwards appropriated to Apollo. The Attic Pyanopis or Pyanepis, the only recorded Apolline festival that fell in late autumn, was also an agrarian festival—perhaps to the music of flutes, and the sacred laurel they brought served to fashion the crowns for the Pythian victors (see Farnell, op. cit. 293 ff.). This festival is closely connected with the cathartic or purificatory function of Apollo, a function which more and more received fuller public sanction in Athens, especially in connexion with homicide. Such cathartic ceremonies were, however, probably a late development of Apolline ritual.

**APOLLONIUS OF TYANA**

J. W. J. WOODHOUSE.

APOLLONIUS OF TYANA in Cosmopon, is in several respects a notable figure in the history of religion. Apart from the fact that he was a religious reformer of no little fame, he gave rise, as early as the time of Eusebius of Cesarea, to a considerable discovery which is to this day still of present day. The details of his life are to be found in a work by Philostratus the elder (3rd cent.), which was written at the request of Julia Domna († 217), 'the patroness of every art, and the friend of every man of genius' (Gibbon). Septimius Severus was a passionate student of magic and divination, and had chosen Julia Domna as his second wife on account of her 'royal nativity.' Philostratus' patroness, who was also a collector of books, had been made acquainted with some of his discourses already, and he left in her possession before his death a manuscript of them.† These were not well written, and Philostratus was requested to copy them, improve the style, and in fact to compile as complete a biography as possible. He tells us himself that several Lives of Apollonius were in circulation, and that to some of them—those of Maximus of Egget and Marraenes—he had access. He also used letters of Apollonius.† Moreover, he himself travelled into most parts of the known world, and everywhere heard the 'inspired sayings' of Apollonius. The biography, however, which Philostratus composed is of a romantic character.§ It is clear that the story of Apollonius, though much of it may be regarded as more or less true, has been greatly embellished. Many of the embellishments are of

* Gibbon, Decline and Fall of the Roman Empire, Duddy's ed. vol. i. p. 136.

† Philost. i. 8. 'Damis the Assyrian' has been regarded as purely a literary device by P. C. Baur and Fr. Dibelius. But although his character seems to have been intentionally drawn in such a way as to illustrate the moral and intellectual superiority of his master, there is no reason to doubt his existence. Boswell, with whom he has been compared, has made his own character appear so absurd, op. cit. that his connexion with Apollonius and Damis has also been compared with Don Quixote and Sancho Panza. See A. Réville, p. 52; G. B. S. Mead, p. 112.

§ The so-called 'Letters of Apollonius, which have come down to us are generally regarded as spurious. See Hercher, in Epitolaogia Graecia, Paris, 1878.

† It has been described as a 'Tendrermön' or 'Märchenbuch.' F. Ueberweg (Hist. of Philos., London, 1875, vol. i. p. 239) speaks of it as 'a philosophico-religious romance.' Julius Jessen thinks the work was composed with the help of a Greek romance. See also Rohde, pp. 438-442.

**Letters of Apollonius**

G. B. S. MEAD.
such a nature as to suggest that they were made to the taste of Julia Domna, which was, of course, well known to Philostratus. Besides this, the compiler of the biography, in the manner of ancient writers, has added in the text many notes or glosses of his own without distinguishing them from the information derived from his original sources. He has composed a number of speeches and put them in the mouth of his hero; and it has been noted by F. C. Baur and others that the Babylon of Apollonius is identical with that of Herodotus.

Apollonius, whose parents seem to have been wealthy, was born near Gaza. The country people said he was a son of Zeus, but he called himself the son of Apollonius. At an early age his father, the king of Babylon, gave him a manhood and a great power of application. He was also very beautiful. When he was 14, his father took him to Tarsus to study rhetoric with Euthydikes, and to determine to follow his strictest teaching (i. 7). He was not yet 16 when he became a scholar of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen. At this period he spent much of his time in travels, and was also led to see the cures which were wrought there (i. 8). We are told that through him the temple became a Lyceum and Academy. When of his return to Tyana, he was still a youth; he gave his brother, who was a spendthrift, half his own inheritance, and devoted himself to learning. He acquired a great reputation among those of his relatives who needed money, and for his own part determined never to marry (i. 12). His father, Philostratus, when he was 72, said to him, 'I am going to the Nile, and will spend the rest of my days in silence, spending the time partly in Pamphylia and partly in Sicilia, and making himself understood by signs, or, when necessary, by words. These things, in their wisdom, have observed (i. 14.)' Afterwards he went to Antioch, where he visited various temples and suggested reforms in religious practice.

Philostratus now decided to go to the East, particularly to India, for they were still far off. He was modelled on the young pupils of the temple of Asclepius, and determined to follow his strictest teaching (i. 20). He was not yet 16 when he became a scholar of the earth as pure, refused to touch wine, went barefoot, let his hair grow long, and wore only linen. At this period he spent much of his time in travels, and was also led to see the cures which were wrought there (i. 8). We are told that through him the temple became a Lyceum and Academy. These things, in their wisdom, have observed (i. 14.)' Afterwards he went to Antioch, where he visited various temples and suggested reforms in religious practice.
he stayed two years (vill. 24). Here he insisted on visiting the care of Trophonius* at Lebadea in ... 30 f.; and J. M. Robertson, p. 285. Baltzer, writing in 1883, wondered that modern spiritualists had not claimed him.

VOLTAIRE 1906, regarded of (Hypnotism Lapponi T&e invisible. Lapponi, Christ. those however, have rightly maintained that there is no trace of any direct connexion between the two stories. In Philostratus the whole narrative bears a Greek stamp;† and his model for the life of Apollonius, if he had one, was Pythagoras.‡ As Julius Jensen further points out (p. 12), if Philostratus' work had had a polemical purpose, certain important miracles of healing would have been ascribed to Apollonius rather than to the Indians. Nor is it remarkable that two religious reformers should have lived about the same time and had somewhat similar experiences (cf. Ed. Baltzer, p. 388). It should be mentioned, in conclusion, that the newest view about Apollonius is that he was a kind of spiritualist.§ He is held by A. P. Sinnett, and to some extent by G. R. S. Mead. Mr. Sinnett, writing in 1898, says that "until the occult revival of the last twenty years, no modern students of philosophy were in possession of any clue by which it would have been possible for them to have understood Apollonius" (p. 4; cf. G. R. S. Mead, p. 116).

ACPOLOGETICS.—

A. HISTORICAL INTRODUCTION.

1. Outline of a progressive Apology.

II. Methods of Apology and modern needs.

III. Arguments arranged according to the sphere in which they lie.

1. THE PHYSICAL REALM.

1. The evidence of nature.
2. The argument from matter, life, and mind.
3. The argument from design in nature.
4. The problems of nature.
5. Miracles.
7. Monism, true, and false.
8. Suffering.

* Baur and Réville (p. 64) also contend that Apollonius 'combines in his own person many of the characteristics of the Apostles.'

† So Petersch, p. 22; Max Wundt, p. 221. Baur's most important point is that the Greek and Roman literatures of the time are not familiar with the idea of the arising out of demoniacal possession as found in the story of Apollonius. But, as J. Robertson says (p. 280), this is 'so to make the idea possible that the superitions of Syria could enter the West only by Judaic or Christian channels.'

† Baltzer, writing in 1888, wondered that modern spiritualists had not claimed him.

Joseph Lapponi, Hypnotism and Spiritism, p. 131. A. P. Sinnett thinks it impossible for Apollonius to have made himself invisible. He would then have been able 'immediately afterwards to levitate himself and pass out, over the heads of the people assembled, from such a building as a Roman court, open to the view of many directions' (p. 26, cf. p. 5). The truth is, no doubt, that this is one of the touches introduced to suit the taste of Julia Domna.

* P. C. Baur compares this with the descent of Christ to Hell.

† The story is also told by Dio Cassius (xxvii. 18). Joseph Lapponi (Hypnotism and Spiritism, p. 132) refers to this as one of the early instances of clairvoyance or telepathy.

‡ He protected against gladiatorial shows, and against every form of cruelty by the care of his companions, regarded as part of his philosophic community (v. 4). Cf. Jean Réville, p. 2124.

§ He has been more particularly considered as a denotable apologist.

In 1898, Charles Blondt published, with a polemical purpose, Extracts of part of a work, with notes which have been attributed to Lord Herbert of Cherbury. Voltaire and others made a similar use of Apollonius.
612 APOLOGETICS

01.) The psychical realm.

1. Historical arguments.
(a) The Jews and OT prophecy.
(b) The historical Christ.
(d) The Resurrection of Christ.
(d) The history of Christianity and of the Church.

2. Apologetic arguments.
(a) The changed life of the disciples, and the conversion of St. Paul.
(b) The witness of Christian custom and institutions.
(c) The success of Christianity.
(d) The abiding unity of faith.
(e) The argument from the psychological nature of religion.

EXCURSION:—The general superiority of Christianity to other religions.

(a) The argument from intelligence, will, and conscience.
(b) The argument from consciousness.
(c) The argument from the idea of God.
(d) The Cosmological or Ontological argument.

EXCURSION:—The anthropological attack.

02.) The moral realm.

1. Arguments for theistic belief from the moral realm of thought.
(a) The universal idea of God and cultivation of religion.
(b) The moral sense in man, the conscience and the sense of sin.
(c) The moral course of the world's history.

2. Arguments for Christians from the moral realm of fact.
(a) The Christian Scriptures.
(b) The morality of Christianity.
(c) The Person of Christ, the moral ideal.

3. Arguments for non-Christians.
(a) The testimony of the spiritual faculty.
(b) The testimony to Christianity of the spiritual yearnings of men.
(c) The testimony of holy lives.
(d) The personal experience of the Christian.

A. HISTORICAL INTRODUCTION.—We define the term 'Apologetics' as the Christian defence against an attack by non-Christians. Facing outwards as it does, therefore need not include reference to the doctrine and theology which lie behind it. We may further limit this wide subject, in order to reduce it to the scope of an article by omitting its history altogether. As different ages have had to face different attacks, this would be altogether impossible, were it not that the results of centuries of assault and defence have in our own age been collected in an academic form, so as to be the basis of a science of Apologetics, as a regular branch of Christian literature and activity.

The need and use of Christian apologetics have existed from the beginning. All early Christian literature is in a sense an apologia, as is shown even in the first words of the first sermon onwards (Ac 2:14). With regard to the recognized 'Apologists' of the succeeding age, we shall note only two features. On the one hand, they found themselves called on to defend not so much the beliefs of Christianity as the behaviour of Christians; and, on the other hand, they developed the offensive as well as the defensive method of answer. Among the chief names are those of Justin Martyr, Aristides, Melito of Sardis, Minucius Felix, Tatian, and Tertullian.

From the 3rd cent. attacks became less personal and more doctrinal, and in the hands of such enemies as Celsus, the more hostile Neo-Platonists, and Julian, the Scriptures had become an object of ridicule. The later apologists are therefore of a somewhat provincial stamp, and we can only refer to such varied writers as Origen (against Celsus), Arnobius, Lactantius, Cyril of Alexandria (against Julian), Macarius Magnes, and Augustine (de Christo Dei). Gradually the need for such works ceased, and we pass to the later centuries. We find that apologists deal no longer with the faith generally, but with special problems in connexion with it. It is the philosophic aspect that the Middle Ages give us, and the works of chief importance are the Monologion and Prosligion of Anselm, the Dialogue Inter Philosophum Judaeum et Christianum of Abelard, and the Summa Theologiae contra Gentiles of Thomas Aquinas.

The work of Anselm is of the most abiding interest, for it was he who first formulated the famous a priori proof of the being of God known as the Ontological argument. A new era began with the rise of Deism in the 18th cent., when the effort was made to set up a 'religion of nature' in place of Christianity. In England the chief answer came from Bishop Butler, who saw that the deistical admissions as to the existence and supremacy of God, the sins of men, and the reality of judgment, were valuable premises on which to base an argument for the acceptance of the whole of the faith. Starting with natural religion, he showed in his Analogy, by an argument which will always remain a famous Christian apologia, that re-vealed religion is, if anything, more difficult and more incredible.

The next attack, as represented by David Hume, was upon the credibility of miracles, and Paley's Evidences of Christianity, in answer, remains a classic in the history of English apologetics. The 19th cent. saw a more determined assault on the supernatural, and the growth of Positivism, Agnosticism, and Scepticism has been such that it must still be reckoned with in discussing the apologetics of the present day, and count has still to be taken of the greater number of men as well as of Haeckel, in setting forth, as we now proceed to do, the present state of the problem.

See J. Donaldson, 'The Apologists' (cols. ii. and iii. of Hist. of Crit., 1884); J. Patrick, The Reason of the Christian, ed. to Cuthbert, 1890; C. M. Riggs, A. St. Anselm of Canterbury, 1890; J. Cairns, Unbelief in the 19th Century, 1880; W. A. Spooner, Bishop Butler, 1901.

B. APOLOGETICS OF TO-DAY.—Instead of giving the outline of any one present-day apologetic work, an attempt is made below to state in general terms the chief arguments that are being used to-day to defend the Christian faith. Naturally they will be given by way of statement and not by way of argument, and will be placed in an order which is meant to be scientific, rather than such as will make the most forcible appeal to readers.

First, it will be well to indicate the limitations in his arguments which the wise apologist is ready to concede. He does not claim that they afford irrefragable proof of his beliefs. To assert that Christianity can be conclusively demonstrated by merely intellectual proof is to stuffify the nature of a true revelation. If an essential of true religion be the exercise of faith, and if God has revealed Himself by appealing to a faculty in men which is not their reason, it will be impossible to make a man a Christian by mere argument. The final appeal is to the heart; the appeal to the mind must content itself with proving without a shadow of doubt that Christianity is rational, credible, and probable. This is specially true of the arguments for the being of God. None of them amounts to positive proof, and yet it must be forgotten that there are many of them, and that their cumulative force would enormously to their weight.

I. Outline of a progressive Apology.—We now proceed to give an outline of the successive stages by which the argument leads up from simple Theism to the Christian creed.

(a) NATURAL RELIGION.—God exists, and may be known apart from revelation. This is proved
by—(1) The argument from General Consent. That which is merely subjective when applied to the spiritual experience of the individual, and is therefore viewed with suspicion by opponents, becomes objective when it shows a 'consensus gentium' to belief in a God. (2) The Cosmological or 'Teleological' argument, which suggests the universe as an effect which must have a cause. (3) The Teleological or Design argument, which suggests that the order of nature implies a First Cause who is intelligent and free. (4) The Ontological argument, which points to God as the highest imaginable object of thought, and the ground of thought itself. (5) The Moral argument, which takes man's conscience as implying a lawgiver who inspires him without being identified with him. (6) The Historical argument, which points to the sense of purpose and design running through human history.

(5) Revealed Religion.—(1) Natural religion leads us to expect something further, and suggests a Deity who would be sure to make Himself known. (2) This further step necessarily involves the supernatural. The objections to a supernatural revelation must be faced, viz. (a) such inadequate theistic theories as Pantheism, Deism, and Modern Theism, (b) the old anti-theistic arguments of Atheism, Agnosticism, and Materialism. Miracle must be discussed in its relation to natural law and to the purpose of revelation. (3) The Christian revelation must be shown to be intrinsically superior to the rival religions—Polytheism, Buddhism, and Muhammadanism—and to be the successor and higher fulfilment of Judaism. (4) The argument is led to that around which all centres—the Person of Christ. The Christ of the Gospels and Epistles is to us the living Christ, to whom the power of the resurrection makes all other miracles possible, and Christ remains the moral miracle of the world. (5) This is naturally followed by the history and influence of Christianity, as educating and regenerating the world, and showing a superhuman power of recuperation and continued existence. (6) This leads to the dispensation of the Holy Spirit and the work of the Church. Christian institutions, such as the ministry, the Sacraments, and the Christian year, are seen to be witnesses both to Christ and Christianity.

II. Methods of Apology and modern needs.—The bitter attack upon miracles in the 19th cent. has caused recent apologists to seek some line of proof that should be independent of this confidant argument. It is stated that the chief stress is now laid. And the subject is no longer divided according to the old divisions of Natural and Revealed Religion. In the attempt to use every line of defence, it is preferable to marshal the evidence in accordance with the successive spheres in which they lie.

(1) Lowest stands the physical realm, but it is the arguments of science with which it is filled. The development of physical science during last century, and in particular, the connection between evolution in nature and the attacks of Huxley and of Herbert Spencer, and yet more recently of Haeckel, make this an important part of modern Apologetics. The question of miracles lies only partly within it, for Christian still adopts the attitude of Paley towards Hume, and refuses to admit that any Christian miracle is a merely physical occurrence. But the arguments in favour of a theistic religion, which, in the face of modern Materialism and Agnosticism, still stand the basis of a defence of Christianity, are many of them physical and physiological in form. Besides actual arguments found in the physical sphere, there are many problems connected with nature which need disamina.
yet it is of but little use in Apologetics. For a spiritual religion must be spiritually understood, and it is only to the spiritual that it can make its final appeal.

It may therefore be said that the moral argument from the Person of Christ forms the chief line of defence, and the separation of these higher realms of evidence from the physical is in itself a reply to those opponents who try to confine the entire issue to the latter.

III. Arguments arranged according to the sphere in which they lie.—(i) The Physical Realm.—The physical, as we have seen, is the foundation of life, mind, and matter. —We begin with the mystery of 'Being,' and a study of the objects of sense reveals that matter is the basis of them. But material substances are of different kinds, and some of them are marked off from the rest as self-acting, i.e., living. These are compound substances, capable of reduction to the same elementary substances as the rest, but possessed of the faculties of feeding, growing, and reproducing. But the life which they possess is far more than the sum-total of the substances of which they are composed; it is a mystery, with no explanation of its origin. And there is a further mystery, for connected with some of these living material beings is mind, which is not demonstrably derivable from life, and yet the life is thought of, which is the expression of mind, appears to be far more than simply a movement of matter. But there is an attribute of all being, known as force, which is an important factor throughout. As mental force, and as vital force, it must necessarily be conceived of as inherent in mind and life. But as physical force, in the lowest of the three stages, it has to be regarded, as Newton insisted, as exterior to matter, and acting upon it. Thus far, physical science can speak plainly. But what answer is to be given when the question is pushed a stage further back? How did these things come to be thus? How did matter originate? How is the gulf to be bridged that separates life from matter and mind from life? And whence comes the force that acts on us and upon them all?

Materialism and Agnosticism have their answer; but are they as reasonable as is the following Christian explanation? Force is derived from an eternal force. Matter has not always existed, but was created at the fiat of His will. This implies a personal Creator, a First Cause who is both single, as shown by the unity of nature, and supernatural, because all the laws and forces of nature do not contain Him, but show His work. This by no means denies the Atomic Theory, but explains how the 'favourable circumstances' for the new formations of atoms came about; and the theory of Evolution seen to be the method of His working, while there is no need of lame attempts to bridge the chasm between matter, life, and thought, and to make an argument to make certain preconceived ideas about religion fit in with science; rather is it the most reasonable induction from the facts of the physical realm. It lays no blame on science for getting no further back than matter and force; for it holds a true agnosticism which denies that it is the province of science to go further. Merely weighed by probabilities, it can claim to be the most rational and the least difficult explanation of the problem of being.

(ii) The Moral Realm.—This evidence, so keen a weapon in the days of Paley's Natural Theology, is said by opponents to have become blunted by the theories of modern science. The Romanes claimed that the place of supernatural design has been taken by natural selection, basing his claim upon the fact that all species of plants and animals were slowly evolved, and not separately and suddenly created. But creation by a God need not depend on the natural processes of evolution as so many examples of His method of working. Perhaps it is sufficient to insist that evolution is a process, not a cause. It serves only to push the evidence of design further back, and not to stop it. The popular objection is that the evidence of design lies in pointing to 'nature red in tooth and claw.' This opens the question of the problem of pain, which, as far as it relates to man, requires separate treatment. With regard to the sufferings of the animal world, some exaggregation of them seems to be made in these days, by attempting to lower creatures our own standard of sensibility. This is a department in which the apologist must be careful not to ignore the discoveries of modern Biology.

See Biology, Suffering.

2. The problems of nature.—(a) Miracles.—The apologist refuses to limit the discussion of miracles to the physical realm, claiming their explanation to be found in the history of man. But it is on the material side that the attack has come. The modern instinct revolts from miracles, and echoes Hume's assertion that no amount of testimony can render them credible. In our defence of them we must be careful where to begin. To one who does not believe in a God they are indeed incredible. He exalts certain so-called 'natural laws' into the supreme place, and rules out all that does not seem to agree with them. But if it be assumed that the world had a Creator not according to the foregoing arguments from nature, and those suggested by other lines of thought, miracles at once become possible. For a miracle may be defined as 'an act of God which visibly deviates from the ordinary working of His power, designed, while capable of serving other uses, to authenticate a Divine message.' If we begin with this assumption, we may still argue, as Paley did, that miracles have the same degree of probability as God's revelation of Himself to men.

Therefore, if we begin with the objection 'Miracles are impossible,' we must task the objector a stage further back, and discuss with him the belief in a God. But miracles are not always discredited by such reference to the main issue. The following are some of the objections levelled against them:—

(a) Miracles are inconsistent with the order of
nature. This argument not only ignores the working of a God who still has control over His creation, but also gives a rigid uniformity to certain so-called 'natural laws,' which after all are based only on the imperfect induction and limited experience of the human mind. If modern science has arrived at these laws by induction from a study of the universe, and not by the arbitrary assumption that these laws are uniform, all evidence must be taken into account. And as miracles lay claim to evidence, science must needs take them into consideration, or it will be distorting its own methods. Such evidence, however, lifts the question out of the physical realm.

(2) It is further objected that the admission of miracles implies a lax or unscientific conception of the course of nature. And it is, indeed, true that Christians sometimes speak as if only miracles were the signs of God's working, and as if they interfered with the course of nature by subverting its laws. But we must insist that in speaking of miracles as 'supernatural,' we do not refer them to any other agency than that of so-called 'natural' events. We claim only that, if both historical and moral reasons demand it, it is both credible and reasonable that God should occasionally do what is outside man's ordinary experience of the world. We do not pretend that a miracle would interrupt the ordinary course of nature, he must certainly expect that God will do the same.

(3) Perhaps the favourite attack on miracles today is the rationalizing of Biblical miracles one by one. It is claimed that such miracles may after all be brought into harmony with nature, for they are really to be referred to 'natural' causes. To have exalted them into more is the result of mistake or fraud. We reply that only a master in the science of this world can make use of the evidence. We have taken at once out of the physical realm into that of psychology and history.

(4) Attempts are continually made to discredit all miracles by pointing to those that Christians themselves do not accept. But we may confine the issue to those Biblical miracles which have their climax in the Resurrection. We are not called on to explain the work of Pharaoh's magicians, the many marvels of the Middle Ages, or the like. The real test is, are we justified in believing that such miracles actually happened, as an attestation of a Divine revelation?

See Mozley, Miracles (Hampton Lectures for 1886); Lord Grinthaorphs, Review of Ivan and Dixey on Miracles, 1883; A. B. Bruce, The Miraculous Element in the Gospels, 1886.

(b) Evolution.—The modern theory of Evolution touches the faith at many points. The sceptic uses it to discredit the design argument (see above), and to show that there is no room for the existence or working of a God; to explain the life of the one Perfect Man as due simply to natural causes in the evolutionary progress of the race; and to point to the origin and development of Christianity as an evolution from natural causes and previous sources. The agnostic refuses to hand over Evolution to be a mere weapon in the enemy's hand. He claims that it is also his own. He sees in it the visible processes (or rather, the theories about them which the human mind has tried to express) whereby God works. The evolution of Christ and Christianity he refuses to discuss merely in the physical realm, but applies the historical method to both, and finds that they can be shown to be evolved from natural causes only by appeal to divine pre-existing principles. The evolution of Evolution itself. But the Christian apostologist is not content merely to apply the theory of Evolution in the same sphere as his opponent. He claims that the principle may be extended more widely to embrace the moral world in the present as well as the physical world in the past, to strengthen the conviction and hope of the Christian with regard to the future. The following words will illustrate such a position (J. M. Wilson, Evolution and the Holy Scriptures [1893], p. 18):

'Most of those truths that we have grasped only in words, the Unity of Nature, the Divine Plan, the Omnipotence and Omnipresence of God. . . . It is, moreover, a marvellous help to faith and patient endurance, to believe that there has been an evolution in nature in the past, so there is such a process in man and in the moral world now going on.'

(c) Monism, true and pretended. The tendency of modern science has been to discover a closer unity in all things than had been imagined. Upon this the opponents of Christianity have not been slow to seize. They have never been able satisfactorily to bridge the gulf between matter and spirit. But if they have succeeded in raising a wall, their Monism has been discredited by recent research, and that all phenomena, whether material or spiritual, must be explained as essentially one, and that therefore the only rational theory of the universe is some form of Monism. But the wise apologist does not meet with this a denial. He is ready to listen to science as long as science retains its proper sphere; and if monistic belief seems the most rational, he does not reject it because it has been tried to controvert Christianity, but he applies it to matter, and then reconsiders his theistic position in the light of his conclusion. Therefore, the first question to be asked is what is meant by Monism, and the second what is its bearing on Christian belief.

(a) Monism is a word which is growing in popularity, but it certainly does not always mean the same thing. There is a naturalistic, or scientific, and there is a spiritual Monism. The case is like that of Evolution. To-day one aspect of the theory is said to overthrow Christianity, but another side is claimed as supporting it. There is no doubt that the Monism which makes itself most heard is that of the naturalistic kind, such as is identified with the name of Haeckel. But it does, in fact, turn out to be materialistic, and recognizes spirit as well as matter; but it refuses to allow a dualistic distinction between God and the world, and regards Force and Matter as only two sides of one reality or Substance, which does everything and is everything. There is an invariable 'Law of Substance' whereby this Substance is in a process of evolution which causes eternal motion throughout the Universe. Such evolution is succeeded in turn by dissolution, and thus new worlds are constantly being born and reborn. There is no place left for God, freedom, or immortality. The one single Substance operates of necessity and without ceasing, through all things, so that everything is determined by what has gone before; and when each individual has a claim upon the next, it gives way to another, and disappears. But there are modifications of such Monism which are not necessarily anti-theistic. Some allow that there is an underlying Source of all things, of which Force and Matter represent principles, and all phenomena,' and even the name of God may be admitted if 'stripped of its theological and anthropomorphic associations, and not opposed to or set above the principle of the unity of nature.'
But there is quite a different kind of Monism which the Christian may fearlessly accept and assert, and that is Spiritual Monism. The term has been explained (W. L. Walker, Christian Theism and a Spiritual Monism, 1906, p. 202) as 'adopted in order to set forth both agreement with Science in acceptance of its facts, and difference from the interpretation which some, or even most, of Science give to these facts. It acknowledges the two-sidedness that is everywhere manifested, and sees everything and every being in the world to be the result of the working or unfolding, or development in its form, of ideas or forces which are equally real, as both material and spiritual. But, instead of giving the predominance to the material side, or equal value merely to the two sides, or leaving them both unexplained, it regards the spiritual side as that which is logically first and deepest, the core of which the material side only expresses and serves—that which manifests its supremacy in our own consciousness.' And the claim that this form of Monism makes is this: 'So far as we are able to understand ourselves, and to look out upon the universe, the Monistic idea can be tolerated which does not both do us justice and transcend us. And certainly a monism which treats the world of phenomena as real, whilst regarding illusion, or as ultimately mechanical, the outer person, as sufficiently extraordinary, is a Spiritualistic Monism not likely of the latter, nor can it be denied that it fairly fulfils the former' (F. Ballard, Theismonism True, 1906, p. 378).

Before passing to our other question, we note the impossibility of trying to confine the issue to the merely physical realm.

(b) The bearing of Monism upon Christian belief can only be briefly indicated, and may perhaps be best expressed in the outline of the argument as given in the last-named work (pp. 380-400). (i.) There is no contradiction, or even collision, between Spiritual Monism and Theism. (ii.) It causes no weakening of preceding reasons for Theism. (iii.) It leads up to Divine Personality. (iv.) It renders, with Theism, the name of an automaton. (v.) It demands, however, the purification and enlargement of theistic phraseology. (vi.) A twofold development is involved, namely, a fuller recognition of Divine Immanence, and a blending of the Transcendence. It is in such directions as this that the greatest change is coming over Apologetics at the present moment.

(d) Suffering.—This is a problem which has perplexed mankind in every age. It has to be faced in relation to every system, and it has often been used in the attempt to discredit Christianity. The weakness of this is shown when it is argued that there is not a God who looks after the world as a Father, and the sufferings of the rest of creation are said to point to a 'nature red in tooth and claw' such as no beneficent Creator would allow. We have to admit that the problem still remains for us a perplexing one, but at the same time we claim that Christianity is the only system under which it may be viewed in a satisfactory and hopeful light. Taking physical pain as the simplest form of suffering, we may see in it a useful and benign purpose, as formal or 'danger signals' without which far more harm would follow. And then we may apply this to suffering of a more complex kind. In arguing with any but the mere hedonist, we may assume that the purpose of life is something other than enjoyment. If it be 'the growing development of our faculties through the discipline of life,' then it is easy to see how it is helped by suffering. And we may recognize in it a twofold use, partly for the education of the individual, and partly for the well-being of the race even at the cost of the suffering of the individual.

But what is the bearing of Christianity on the problem? (a) The belief in a re-adjustment of moral order implies that there is a basis of suffering in the present world. (b) The Fatherhood of God teaches that He is in sympathy with the sufferings of His creation, and the realization of such a sympathy has already proved 'the secret of endurance in the sufferings of others.' (c) The Cross of Christ, as not merely an isolated act of vicarious suffering, but the manifestation of the abiding union of the Divine in suffering, proves that the Divine sympathy is real. The deeds of Christ are inseparably linked with His words. His example with His precept, and the sufferer sees the problem wrapped in a new glory in the light of such echoes as 'Not my will but thine be done,' and 'He that loseth his life shall find it.' (d) Not only does Christianity throw light on the problem in the case of the sufferer, but the monistic faith is beneficent, and can be tolerated which does not both do us justice and transcend us. And certainly a monism which treats the world of phenomena as real, whilst regarding illusion, or as ultimately mechanical, the outer person, as sufficiently extraordinary, is a Spiritualistic Monism not likely of the latter, nor can it be denied that it fairly fulfils the former.' (F. Ballard, Theismonism True, 1906, p. 378).
must, therefore, be content to mention them, and
to refer to books where they are discussed.

(1) The authenticity of the four Gospels; the
claim that either they record facts, or else nothing
whatever can be said about Jesus of Nazareth;
the arbitrariness and unscientific nature of the attempt
to offer any objective history that of the Gospels;
the mutual relation of the Synoptic Gospels; the
strengthening of the evidence through their various
lines of testimony; the witness of the Fourth
Gospel in relation to them.

See B. Weiss, Intro. to the NT (tr. Davidson, 1897-4); Gore,
The Incarnation (Bampton Lectures, 1911); Westcott, St.
John, 1882; Bultmann, The Gospel according to St.
Mark, 1926; Sanday, The Life of Jesus in recent
Research, 1907; J. Orr, The Incarnation and recent
Criticism, 1907.

(2) The historical accuracy of Acts; the impossi-
bility that it is a sequel to anything but the history
of the Gospels; its witness to the historical Person
of Christ.

See Ramsay, St. Paul the Traveller (1896); Harnack, Luke
the Physician (tr. Wilkinson, 1897), etc.

The Epistles: the earliest witness to the life of
Christ in the value of their incidental allusions;
the basis afforded by the four uncontroversial
Epistles of St. Paul.

See R. J. Knowling, The Witness of the Epistles, 1892,
and other works.

(3) The Resurrection of Christ.—This, of course,
is included in the proof of His historical Person
on the line indicated above. But from the beginning
it formed the central evidence of Christianity,
and, at the same time, as the supreme miracle
of revelation, it has been the centre of attack. It
must, therefore, receive separate treatment, owing
to its profound importance; for it is the very
centre of the Christian position. With it there
stand or fall both the claim of Christ to be
Divine and the Christian's hope in his own resur-
rection. At the same time, as the supreme miracle
of the Christian revelation, it will bear the weight
of all the other Gospel miracles. To have proved
it to be historic is to have routed the attack on
miracles, while isolated assaults on minor won-
ders must be brought to face this main issue. The
evidence for the Resurrection has been summed up
under the following heads:

(a) The evidence of St. Paul. Not only is the
risen Christ the mainspring of his changed life,
but he asserts that he, as well as certain others
whom he specifies, has seen Him with his own
eyes. This is the earliest written testimony we
have.

(b) The evidence of the other Apostles and NT
writers. Not only is this found all through their
writings, but it forms the text and centre of the
sermons recorded in Acts.

(c) The indirect evidence contained in the records,
which establishes the fact that the appearances
were under varied circumstances, to those in
different frames of mind, in the same country and
generation as they are said to have happened, and
the absence of a changed life to believers and of
bitter opposition from their enemies. The sudden
change from sorrow to joy in the first disciples is
incapable of any other explanation.*

(d) The evidence of the empty grave. Had
Christ's enemies in the city, or any other place,
produced it; had His followers possessed it,
Christianity would have been consciously founded

* See below, under Psychological arguments, (a) concerning
its changed life.

on a gigantic fraud. This view is now held by no
one.

(e) The evidence of Christ's life before the Crucifixion.
The records show that He fully expected this sequel, though His disciples were quite unable to
grasp it or to realize it when it had actually
happened.

(f) The evidence of the Church. Not only has the
Resurrection been the central belief of the
Church from those days until these, but such in-
situtions as Sunday and the Eucharist, and
the rite that is contained in them, cannot be explained
by any other means.

Such evidence is far stronger than that which
supports most of the accepted history of the ancient
world. Such objections as the absence of eye-
witnesses and the inconsistency of the accounts
would never have been raised, but for the stupendous
issue depending on the historic truth of the Resur-
rection.

Opponents are powerless to deny that the evi-
dence was sufficient, from their own point of view,
to enable every Christian absolutely to accept the
fact, and make it the centre of his belief and con-
duct.

(3) The History of the Resurrection.

1. The thief theory.—The disciples stole Christ's body, as
perhaps He had told them to, in order to make men believe in
the resurrection. Such a theory is not only historically
unfounded, but was universally discredited.

2. The swoon theory.—Christ did not really die, but revived,
escaped, and pretended to have risen. This view of Paulus
and Schiermacher has been refuted even by Strauss as inconsistent
with the character of such a moral reformer, while its practical
difficulties are insurmountable.

3. The vision theory.—Renan and Strauss assert that the
belief arose from the hallucination of several disciples, the first to sug-
pect it being Mary Magdalene, an excitable woman who had once
been possessed. But this directly negates the idea of the only
existing records, which show that excited expectation
was entirely absent. Nor is it possible to think, if the Resur-
rection was only subjective, that these visions suddenly gave
place after six weeks to the calm strength of the early Church.

4. The theory of objective visions, or telegram hypothesis.—This
is Keim's attempted compromise. The appearances were not
purely subjective, but the objective cause was not a risen body
of Christ, but His glorified Spirit comforting them by 'sending
telegrams from heaven.' But such a theory, without avoiding
the supernatural, does not free the disciples from hallucination,
for they certainly thought their Master was there in the flesh,
and not in heaven.

5. The mythical theory.—There were no appearances at all;
but the strong wish of the disciples to vindicate their crucified Master was misunderstood by the Apostolic Church. Hence arose the myth, which was later embodied in the legendary accounts contained in the
Gospels. Thus Weisszicker and Martineau would say that the
Church is accounted for as an evolution from the visionary
flash upon the disciples in their sorrow that 'Heroes die not,' and
after all their Master was not dead. The craving for something
more objective led to the invention of legendary
Christianities. We can only answer here, that there is no
time for the growth of a myth that would charge the human
Jesus into the Divine Christ of our Gospels, that it even demands
that such a change of belief should have taken place before Pente-
cost, and that such an explanation of the experience of the first
disciples cannot be made to fit with the only records we have
of their words and conduct. We thus turn back to the Chris-
tian theory as the only rational and historical explanation of the
facts. Any further discussion of the nature of the glorified body belongs to the province of theology. It is in vain to try to have assurance that the supreme miracle on which Christianity
is based is a historic fact.

See Bruce, Basle, pp. 333-398; W. Milligan, The Resurrection
of our Lord, 1851; H. Latham, The Risen Master, 1901;
Sparrow Simpson, Our Lord's Resurrection, 1905, and
S. Baur, W. Milligan, The Risen Master, 1901, in
DOG, 'Resurrection in DCG.'

(d) The history of Christianity and of the
Church.—Here, again, is involved, in the first
place, a study of Acts and the Epistles. Their early
development must be proved. Christianity is not
the creation of St. Paul. The early Church did not
develop as Baur suggested, but as indicated by
the early Fathers. The primitive existence of
Church order witnesses to the same effect.

* However, the theory must not be entirely discounted which
accepts the evidence of b, e, and y, as additions to a. See K.
Lake, The Historical Evidence for the Resur-
rection, 1907.
2. Psychological arguments. — We must explain that this term is used for convenience to denote that class of argument which is not strictly historical, but which deals with the desires and wishes of individuals, or with the inferences which may be drawn from Christian practices, or the relation of Christianity to other systems. The following are given as examples of such arguments:

(a) The Disciples, and the conversion of St. Paul. — Up to the death of Christ the disciples had shown themselves timid in their behaviour and earthly in their expectations. They suddenly became full of boldness and joy and a new spiritual force which nothing could resist. The psychological difficulty of such a change is enormous. It is overcome only by the explanation that their Master rose again, spiritualized their ideas, and gave them an abiding gift of the Holy Spirit. And even if these unlettered Galileans had failed, it is impossible that they could have in their turn deceived a cultured and expert Jewish Rabbi. The conversion and apostleship of St. Paul alone, duly considered, was of itself a demonstration sufficient to prove Christianity to be true revelation.

(b) The witness of Christian customs and institutions. — Allusion has already been made to these in the special relation to the Resurrection. But there are other evidential uses to which may be put such recognized parts of Christianity as the Ministry, the Sacraments, and the Christian Year. They satisfy the cravings of human nature, its needs, tendencies, and aspirations, in a way that no other religion does. The ministry is founded on the theory that man is social, and needs organization, continuity, and authority in the guidance of life. The sacramental system takes into account the composite nature of man, using and welding into one both the material and the spiritual elements, and at the same time conveying in a definite form that communication of Divine grace which we should naturally expect to be the climax of any revelation which God makes of Himself to the individual. The Christian Year links us with the first centuries. Easter and the Lord's Day were already observed in NT times, the observance of Friday as the day of the Crucifixion is of early origin; and so the list might be continued. Not only do these things witness to the historicity of the facts which they commemorate, but, viewed from the sphere which is psychical rather than historical, they bring the whole question of Apologetics out of the past, into the present, and enable us to postulate the real life of those roots of Christianity which are hidden in the past, when we examine carefully those living and growing branches which are visible in the present.

(c) The success of Christianity. — Aside from the moral aspect of the question, an estimate of facts and their relation to mere human possibilities of explanation, suggests an evidence of the Divine origin of Christianity, and of the work of the Holy Spirit in the history of the Church. At the same time it has to be remembered that other religions may make the same claim, so that the claim of Christianity must be shown to be unique. The following are the chief points in the argument:

1. The early, wide, and, within certain limits, irresistible diffusion of Christianity. It required an enormous power to kill polytheism for ever, and to leave not a shrine of a heathen god behind; but this was what Christianity did.

2. Its power of revival and restoration after every declension and decay. This may be traced throughout history, through the Middle Ages, the Reformation, and more modern revivals, and Christianity may be shown to possess elements which Muhammadanism cannot claim.

3. The resistance which it has been able to offer to successive assaults. From the days of the earliest martyrs persecution has been powerless to crush it. All the forces of the ancient world were arrayed against it, but the only result was the decay and fall of Rome itself. And it has faced all objections of later days, and can point to a confusion among its opponents which makes one school of anti-Christian thought contradict another.

4. It is specially armed with means and motives for self-propagation. Its work of proselytizing, founded on the pure motives of the missionary spirit, is on a different plane from Buddhism and Muhammadanism. The rule of faith expressed in its creeds, the universal application of its sacred writings, the fact that they could be in their turn deceived a cultured and expert Jewish Rabbi. The conversion and apostleship of St. Paul alone, duly considered, was of itself a demonstration sufficient to prove Christianity to be true revelation.

See J. Cairns, The Success of Christianity and modern Explanations of it (Pres. Day Trac.).

(d) The abiding unity of faith. — In the face of the divisions of Christendom, and the misunderstandings which separate branches of the Catholic Church, it may seem bold to found an argument on the unity of Christendom. But when a wider view is taken, and Christianity is compared with other religions, a strong argument for the Divine origin and preservation of the Faith is found to lie in its continued acceptance. The Creeds themselves, handed on intact from age to age, present a remarkable phenomenon. Their silence on non-essentials combines with their insistence on fundamentals to prevent their ever being out of date. No other religion can point to so broad a unity. The unity of Muhammadanism or Buddhism is either local or at least Oriental, and can make no such appeal to the whole world. And the fundamentals upon which Christian belief has been based, quod semper, ubique, et ab omnibus, are just those truths which are not shared by any people outside Christendom. Such are the spirituality and Fatherhood of God, the moral condition of man and the blackness of his sin, the possibilities of universal salvation by redemption through One Person, in whom a human and a Divine nature are combined, so that the claim of Christianity must be shown to be unique. The following are the chief points in the argument:

1. The early, wide, and, within certain limits, irresistible diffusion of Christianity. It required an enormous power to kill polytheism for ever,
resurrection of the body influences men in the present.

And this unity of faith is also manifested in the present.

It is a profound marvel that the Churches in different localities in the first days did not soon begin to show some cleavage of faith and the practices that result from it.

It is a still greater marvel that in recent generations the multiplication of sects, the revolt against authority, and the rise of free speculation within the Church, have not made more impression on the fundamental unity of the Faith. The most difficult explanation of such phenomena lies in the Divine origin and preservation of Christianity.

(e) The argument from the psychological nature of religion.—This is the result of a study of religion which is of comparatively recent growth.

Kant began the investigation of religion not merely by reflection on what was positive and objective, but by taking it as an internal and mental fact. Consciousness proves that religion is both subjective or mental state; but consciousness itself must be analyzed, in order to analyze religion. In this way a threefold division of mental phenomena has been established—into cognitions, emotions, and will.

Religion might be a state of intellect, sensibility, or will, or some combination of two or all of these factors. Hegel identified religion and thought. Yet no mere intellectual act constitutes religion, though the exercise of reason is an essential part of it. If religion has no rational foundation, it has no real foundation. Others resolve religion into feeling or sentiment. But every feeling requires an explanation, which can be found only in an exercise of intellect.

Hume traces religion to fear. Feuerbach to desire, Schleiermacher to a feeling of dependence, to which Mansel adds the conviction of moral obligation. Strauss combines all these. Kant identifies religion with morality. But it is not simply these things in religion, but it includes faith also.

(2) Buddhism.—This deserves a word of separate treatment, as its moral code is profoundly attractive, and it counts among almost as many adherents as Christianity. But really it is not so much a religion as a philosophy, an inherently atheistic system which does not offer a real Deity for worship, and suggests no hope for an after life.

The very fact that its followers have instinctively demanded an object for worship, has caused it to become corrupted and obscured by the introduction of pure pantheism.

See C. F. Alken, The Dhamma of Gotama the Buddha and the Gospel of Jesus the Christ, 1900.

(3) Muhammadanism.—Here it is its success which forms the chief recommendation of the religion; but this has been largely disturbed by the forebears of means of propagation which have been required. Its pure monotheism brings it into relation with Judaism and Christianity, but its God is as distant as He is sublime, and its theological outcome is simply awe and submission, not loving intercourse.' The lowness of its moral standard prevents it from having a civilizing influence, and the moral state of society under it may be judged by the painfully degraded position of women. In all the realms of science, art, and life but on a book, checks its powers of expansion and adaptation, and has reduced it to a code which is the enemy of all real progress.

(4) Judaism.—This is the one pure religion of the ancient world which seems to be a state of theism if the latter were obliged to treat it as false. But, on the contrary, it claims for itself all that is best and purest and most permanent in Judaism. Historically, the one religion grew out of the other; theology, however, to the germ of Christian doctrine is to be found in the OT doctrines of God and man, its progressive revelation, and its Messianic hope.

There is no desire to belittle the one pure religion of the ancient world, but there is much in it that is incomplete. Christianity simply claims to fulfill it, to answer its problems, and to carry it forward to finality.

The question of the position of the OT is here involved.

It must be noted that the general superiority of Christianity to these religions includes the fact that it sums up all that is best in them. We do not stigmatize them as utterly false, but we recognize them as a feeling truth. To embrace the Christianity claims to be the final expression (see Excursus at the end of the 'Psychical Realm', p. 620).

For the whole subject, see Fiiill, Theism, Lii. ii. (Baird Lectures, 1870); A. Bruce, Ancient Mysteries and Their Teachers, 1872; T. W. Best, The Introd. to Rhet. of Religion, 1859; LeRoy, Mahomedanism: its Strength and Weakness; Lidstone, Essays and Addresses, 1892, ps. 1-60; Eliot Howard, Non-Christian Religious Systems, 1906; Westcott, The Gospel of Life, 1891, esp. ch. v.; Marcus Dodd, Mohammed, Buddha, and Christ, 1877; Pan-Anglo-American Papers, i. 1908; J. E. Cadell, The Distinctive Missive of the Old Religions, 1892.

3. Metaphysical arguments.—(a) The argument from intelligence, will, and conscience, commonly called the Ontological argument.—In nature, because we are thinkers ourselves, we realize that what is before us is the result of thought. We grasp by our intelligence that intelligence is exhibited in all work in which there are parts which bear an ordered relation to each other, and in which the whole is something more than the mere sum of the individual parts. Therefore we infer that what the mind decides, mind has produced, and the causative intelligence underlies order in morality, the sense of a moral law, and the demand for ethical perfection, in the voluntary fulfillment of such non-natural requirements as the dictates of duty, imply a standard, a superhuman will, a Holy One, such as has been revealed to the world in Christ. In the realm of conscience, there
lies in the human mind an instinct which expresses itself in the conviction of a survival after death and of future retribution and reward. In the face of all ilks and miseries, man has continued to exist, and anticipates a re-adjusting of the balance which will not terminate until the full development of that moral law, of which conscience is the representative and antithesis has been met in full. The intelligence, the will, and the conscience thus combine in a threefold suggestion of an Intelligence which creates, of a Lawgiver who imposes a superhuman will, and a Judge who re-adjusts the balance. But in the personality of the universe, nature, and the unity with it of our human nature, that which lies behind all nature, and which the various parts of our human nature suggest, will in itself be One. We therefore arrive at a Personal God, as He has been revealed in Christ.

(b) The argument from consciousness.—We cannot stay to discuss that part of Herbert Spencer's philosophy which deals with the consciousness (see J. E. Bough, The Philosophy of Mr. Herbert Spencer, examined (Rel. Tract Soc.)). But human consciousness or personality affords an argument which is indeed kindred to the foregoing, but has been put in a form of which the following is an outline.

From the consciousness of direct experience man discovers that he is possessed of a Permanent Personality, endowed with will, intelligence, moral and spiritual affections. 2. Through consciousness further developed by reflection on himself and the universe, he attains the conviction that over all is a Supreme Personality, endowed with omnipotent Will, infinite Intelligence, perfect Righteousness, and Love. It is contended that these results of consciousness rest on the same basis, and stand or fall together. The consciousness of a human soul is denied, all the rest vanish with it. On the other hand, if it is accepted, it carries all the rest in its train. Thus it is from the knowle of himself that man rises to the knowledge of God. Heism is the fruit of belief in man's real humanity; agnosticism the denial of this humanity.

See Brownlow Maitland, Theism or Agnosticism, 1878.

(c) The argument from the idea of God.—Whence does the idea of God come to us? It is not originated by any of the arguments we use, whether ontological, cosmological, or teleological. They help to verify it, but they postulate it as already existent in the mind. It cannot be traced to man's conscience, heart, or reason, though these faculties may verify and develop it. There is no place where the idea of God has not existed. Therefore God exists. Kant overthrew the original ontological argument by asserting that any cognition of things is impossible where there is no empirical matter to work upon. But we refuse to allow that God is merely known. Agnosticism really asserts not only that man cannot know God, but that God cannot make Himself known. And to say this is to deny His existence. But a flat denial of God's existence is possible only for the man who has passed through every sphere in his search for Him. In short, in order to be able to assert authoritatively that no God exists, a man must be omniscient and omnipresent, i.e. he must himself be God, and himself give the lie to himself.

The Cosmological or Aristotelian argument.—We have the idea of causality inherent in us. We attribute everything to some cause, but even though we feel ourselves on a higher level of causality than ordinary nature, we do not feel ourselves as a cause. Our notions fall back to a First Cause, which is the final cause of all, and itself uncaused itself. The study of the universe suggests that this cause must be, not mechanical, but full of order and intelligence, and the study of our own personality leads us further to think of this Cause as a personal God.

See, for the metaphysical and philosophic aspect, Caldecott, The Believing in God in the Light of Philosophy (Camb. Theol. Soc. Tracts); E. J. Ellsworth, Personality Human or Divine, 19th, and Reason and Revelation, 1908; and, for the influence of modern knowledge on the main theistic arguments, Ballard, Thesmomeon True, 1906, pp. 38-346.

EXCURSUS.—The anthropological attack.—The analogies between Christian beliefs and practices and those of some of the other great religions of the world, have long formed the basis of an attack upon the faith. In recent years the study of more primitive religions, and of anthropology generally, has suggested further analogies, and given rise to a fresh attack which has been met in full. The arguments and their refutation have been brought in full in the anthropological parallels afforded by recent discoveries. The facts collected in such books as Frazer's Golden Bough or Crawley's Mystic Rose or Robertson's Pagan Christ. must rather be claimed and used for the Christian argument. As illustrations of the hostile use of them we may mention the theory that Christ is to be connected with Eastern Sun-worship, the twelve Apostles being the signs of the zodiac, and that the Sacrament of Communion is merely an adaptation of the wide-spread primitive belief, with its degrading accompaniments, to particularities which inherit its virtues. And strange elaborations have followed, such as Frazer's theory of the Crucifixion, which suggests that the Jews had transferred to the feast of Purim the customs of a strange kind of Saturnalia, wherein a mock king was first pummeled and then killed, and that God in His only met 'the fate that annually befall the malefactor who played Haman' (see J. G. Frazer, The Golden Bough, iii. 190 ff.).

The Christian answer to which we would briefly point is that all religion is one, and that its primary function is to affirm and consecrate life (Ernest Crawley, The Tree of Life, 1905, p. 270). If Christianity is God's final answer to human needs, we shall expect to see those needs manifesting themselves elsewhere. 'We can see a deeper meaning in the parallelism which forms so remarkable a bond between Christianity and the lower religions. These analogies from savage culture show that religion, everywhere and always, is a direct outcome of elemental human nature, and that this elemental human nature remains practically unchanged. This it must continue to be so long as we are built up of flesh and blood. For instance, if a savage eats the flesh of a strong man or divine person, and a modern Christian partakes sacramentally of Christ's body and blood under the forms of bread and wine, there is evidently a human need behind both acts which prompts them and is satisfied by them, and is responsible for their similarity. . . . Christianity is no survival from primitive religion, but a higher development from the same permanent sources' (E. Crawley, The Tree of Life, 1905, p. 261 f. See also J. R. Illingworth, Divine Immanence, 1898, ch. iv.).

(iii.) The moral realm.—It has been said that the moral element in our nature is as much higher than the mental as the mental is higher than the physical. The weight of moral arguments is therefore greater, and perhaps for this reason this sphere has been chosen by recent apologists for their main line of defence. It has already been mentioned that Christ Himself in His moral aspect is the supreme apologoetic of to-day; but there are other lines of moral argument which are placed first, owing to their priority in the sequence of thought.

1. Arguments for theistic belief from the moral realm of thought.—(a) The universal idea of God and cultivation of religion.—This argument is sometimes called 'the evidence of general consent.' Cicero witnessed long ago: 'There was never any nation so barbarous, or any people in the world so savage, as to be without some notion of
The belief in some form, and the expression of it in worship, are found in every system of ancient and modern religions. To ascribe this instinct to accident is to raise a moral difficulty which cannot easily be surmounted.

(b) The moral sense in man, the conscience and the sense of sin.—Kant, while rejecting other arguments, placed the whole weight of proof on this one. There is in our nature a sense of moral responsibility, a feeling of what we ought to do, regardless of our present wishes and the advantage or disadvantage that may result from our own actions or the will of the community, against the opinion of which it sometimes acts. The only explanation of its working is that in the existence of a perfect Being, independent of ourselves, a perfect Law giver and Judge, to whom conscience feels itself responsible. It is here that we are brought closest to the vast problem of evil and of sin. A discussion of it belongs to theology rather than to apologetics. But we may quote the saying of Leibniz, that ‘human nature consists in imperfection, physical in suffering, moral in sin.’ As we trace the development of the race, we find that just where the sense of individual personality comes to the front, a conflict begins to be realized between the claims of others and those of self. Man is unique as placed in a position from which he may either rise higher or fall lower. He has a consciousness of something higher; if he willfully chooses that which is lower, it is sin. But since he realizes the choice, struggling upward to the higher, in spite of the certainty that he will never fully reach it, and filled with humiliation when he has failed in the struggle and acquiesced in the sin, we are pointed to a perfect moral sense as a change to sin, and to whom the moral sense in man knows itself to be responsible.

(c) The moral course of the world’s history.—The tangled skein of human history is found, when unravelled, to exhibit a continual progress towards a more and more perfect exhibition of righteousness and goodness. There is a purpose running through history, indicating a moral governance. This may be studied in the development of the various sides of human institutions, as the life of nations, science, art, law, and religion. But such a moral government of the world, and such an education of the human race, imply a moral Government and Educator; for it is impossible that such tendencies should be unconscious and impersonal.

2. Arguments for Christianity from the moral realm of fact.—(a) The Christian Scriptures.—As the study of nature suggests an intelligence behind, and a study of history suggests a moral Governor, so the study of the Bible suggests a power higher than that of the men who contributed to this great literature which contains so many varied elements. Stress must be laid on (1) its organic unity, manifested in an OT and a NT fitting into each other exactly in spite of the changes of time and thought, in its claims of others and the growth of the two, and in the advancing moral character which may be traced in their pages; (2) its authority, the moral force and power of conviction that its writers possess in an absolutely unique degree, its tone of certainty and genuine ring as the authoritative voice of God; and (3) its exact correspondence with the deepest instincts of human nature, so that conscience welcomes its words as the highest expression of morality and religion.
the Gospel portrait. The only explanation of their works lies in there having been an original to be painted.

(2) May we, then, retain the moral part of the portrait, and take it out of its miraculous surroundings? It will be found that the two are so interwoven that separation is impossible. Take away the supernatural, and nothing but a shadow is left. For the miracles are not interspersed amid the various indications of the character; they are the outward manifestation of it. They are not wrought, except on rare occasions, with an evident purpose, but simply as the natural acts of so exalted a character.

(2) And what of the Divine claim of Christ? Is it possible to regard it either as interwoven in the tale by His mistaken followers, or as an individual mistake owing to a wrong estimate of His own Person? Both alternatives seem incredible, in view of the fact that this claim is the only key to His life, His words, and His work. Take such a public declaration as 'I am the light of the world; he that followeth me shall not walk in darkness, but shall have the light of life' (Jn. 8:12). If anything in the record is true, surely that solemn utterance, in the presence of His enemies and before the multitudes who had thronged to the feast, is not a figment of after years. And if He made the solemn assumption that He could have not only from a Galilean carpenter, but from the holiest of men, what must we say if it were not true? That He was either an impostor or a deluded enthusiast. No one nowadays dare assert the former, and to do so would only make it a greater miracle how the highest moral ideals of humanity have for eighteen centuries been linked with such a man. And if the latter alternative be chosen, it is absolutely impossible to reconcile the self-sacrificing devotion and utter humility of His whole life and work with a distorted moral obliquity and infatuated self-assertion which could make so preposterous a claim. The familiar dilemma, 'Art Deus aut homo non bonus,' has not yet been avoided by those who would hold such views. If the moral ideal which His Person presents forbids the latter, the former is the only rational explanation which remains.

(3) But is not Evolution to be allowed to enter and explain? Is it not simply that in Christ the unsearched reached its climax, and in Him we see the moral sense of the highest race reach its perfection? But it is the reverse of true that such a character can be explained by its antecedents and environment. The arguments of Paley are still true of 'the originality of Christ's character.' He assumed a part which in many ways is the direct opposite of the Messiah of popular expectation. And the one Catholic Man, whose teaching is adapted to all nations and all ages, sprang from the narrowest and most bigoted nation of antiquity. And those who deny His Divinity change the virgin birth into an illegitimate one. They rob themselves of the argument that He was only evolved as the purer son of a pure virgin. They assert in effect that 'the most marked and mighty incident of the past towards all that is purest, worthiest, loftiest, in the evolution of human nature, emanated spontaneously from the untutored, peasant-bred son of an adulteress' (Ballard, Miracles of Unbelief, p. 275). Such things are a denial of the first principles of evolution, and constitute a moral and supernatural fact more difficult to accept than that a pure virgin 'was found with child of the Holy Ghost.' This line of defence is thus seen to lead to a direct attack on the enemy's position.

(iv.) The Spiritual Realm.—We here reach the highest form of Christian evidences, and the most difficult to convince, for this kind is brought within the range of personal experience. But, at the same time, they are useless in arguing with an opponent. We can do no more than point out to him that it is wholly rational that spiritual things should be spiritually discerned, and that in a spiritual religion like Christianity there must be a spiritual one, while the cumulative arguments that lead up to it do not in themselves amount to absolute proof, but are as high as an outsider is capable of rising. It is true that God leaves not Himself without witness in the natural sphere, and that there is abundant testimony in the mental and ethical realms; but man approaches Him most closely in that which is least material, and therefore the spiritual faculty of faith is not to be mocked as contrary to reason, but accepted as transcending it. We must therefore take into account—

(a) The testimony of the spiritual faculty.—The spiritual faculty mentioned above may be simply spoken of as 'faith,' and we claim that it is distinct from the other organs of knowledge. It must be added to the senses and reason in order to complete our cognitive being. Often the testimony of the senses is contradicted by reason, and in the case of such a word as 'finite' it is positive and real to reason, though wholly imperceptible to the senses. And in the same way faith may sometimes contradict the conclusions which have been arrived at by the reason. To reason the word 'Infinite' is purely negative, but to faith it is entirely real and positive. So we claim that faith is that faculty or organ of knowledge whereby we know the Infinite. Other religions may contain the knowledge of the presence of the Infinite, but Christianity is unique in not only telling men that their duty is to know God, but in giving them the successive steps whereby they may do so. Though he has arrived at his conclusion neither by the senses nor by the reason, the Christian has arrived at a real and legitimate form of human knowledge when he can say, 'I know whom I have believed.'

See Miller, The Idea of God, in Topics of the Times (S.P.G.K., 1900).

(b) The testimony to Christianity of the spiritual yearnings of men.—Perhaps the two plainest of these yearnings are friendship and the hope of immortality, both of which are practically universal. The former opens the whole question of prayer, and the latter the wide subject of eschatology. Neither can be discussed here, but the argument must lead on to the fact that both are satisfied in a unique degree by the practice and belief of Christianity.

See F. Ballard, Miracles of Unbelief, pp. 280-310.

(c) The testimony of holy lives.—It has always been realised, from the days of the early Apologists, that one of the most telling of evidences lies in the spiritual life of Christians. Few men are argued into a belief in Christianity. They may verify their acceptance of it by its appeal to reason and the senses, but the real motive power consists in a touching of their hearts. And this is done by the words, but by the life of Christians. Apologists may be exalted into a science, but the work of turning men is but little due to the professed apologist. Every Christ-like life is in itself a powerful apologetic, and often succeeds where all else fails.

(d) The personal experience of the Christian.—This can be the only final proof. The Christian can test all he has been told, in the sphere of his own spirit, and its relation to God as revealed in Christ. And this experience has been multiplying
APOSTASY (Jewish and Christian) 623

in the lives of millions for nearly 2000 years. If we are charged with undue bias, it can be answered that 'initial unbelief is a prepossession as much as faith.' Thus do we pass upwards out of the region of Apologetics. We must be content to add the various arguments together, and claim that their sum-total raises so great a probability in favour of the Christian religion that there are far greater difficulties about any other explanation of the facts of the case. And the nature of our faith is such that the rest must be done in the region of the Spirit, wherein alone the possibility can pass upward into certainty.

T. W. CAPEL.

APOSTASY (Jewish and Christian).—The deliberate abandonment of one religion for another, e.g. Judaism for Christianity or vice versa, made voluntarily or under compulsion. The word ἀπόστασις is used in classical Greek of a revolt or desertion, as of a nation's breach of the LXX, Plutarch, and Dionysius of Halicarnassus. In the LXX these words, with their kindred forms, ἀνισότης, ἀνισοτερία, ἀνισοτέρία, ἀνισοτέρωσις, ἀνισοτερίωσις, ἀνισοτερεία, ἀνισοτέρεια, are employed to translate the Hebrew word חזרה (Ch 293:9); and in 1 K 21:2 'men of Belial' is rendered ἀγάλματος ἀνισότηται. In 1 Mac. the word ἀνισότης is applied to a modern sensus (2:7 ἀνισοτέρωσαν ἀγάλματα τὴν ἁγιασμόν) and ἀνίσοτερον is used by a foreigner of ἀγάλματα τῆς ἁγιασμοῦ. In the NT, St. Paul is accused of teaching 'an apostasy from Moses' (10:31), and he speaks in 2 Th 2:3 of the great apostasy at the end of all things, before the revelation of the Man of Sin (see below). Augustine calls the 'Fall of Man' the apostasy of the human race from God (c. Jul. lib. iii. 1), and he uses this term because the absolute freedom of our first parents, unhindered by original sin, to choose between obedience and rebellion, made there a voluntary defection (Conf. iv. 20, 21; De libero arbitrio, ii. 148 E.). St. Thomas Aquinas (Q 12, Art. 1. says of disobedience: 'apostasiam videtur omni peccato praeeminere.'

1. Although there are many examples of national apostasy in the OT, instances of individual departure from the religion of Israel are rare; but in the Deuteronomist the provisions against those who try to persuade the people to 'serve other gods' are naturally severe (Dt 13:1-11). In Ezekiel we have examples of the latter sort of defection, practised in the very temple of Jehovah (Ezk 8:17). On the whole, however, it may be said that, with the exception of the great apostasy in the days of Ahab and Elijah, the infidelity of Israel towards Jehovah was a rule, as such attempts to combine this worship with that of the local divinities, or to serve Him with rites similar to those practised in the worship of the gods of Canaan.

We first meet with distinct acts of apostasy from Judaism during the persecution under Antiochus Epiphanes, when Jews either voluntarily or under compulsion renounced the worship of God for that of the deities of Greece. The degree of apostasy varied between a total abandonment of all punishment and the adoption of certain Greek customs like the practice of athletics and the wearing of the petaso, or broad-brimmed Greek hat, which the more rigid Jews regarded as an act of disloyalty to Jehovah.

Antiochus Epiphanes (≈ 175-164) did not cause the tendency of the Jews to Hellenism which manifested themselves early in his reign. The inhabitants of Jerusalem, especially the temple priests, were much influenced by the Greek dress and adopted the petaso (2 Mac 4:10-16). Jason the high priest even sent presents for the sacrifices to Hercules at Tyre, though his mission employed others, and he had handed it over to the royal navy (2 Mac 4:16-19). When the persecution began in 166 B.C., and the Jews were compelled to sacrifice to eat swine's flesh, many of them apostatised (1 Mac 14:15); and it was the slaying of one of these by Mattathias, the father of the famous Maccabees, that gave the signal for the revolt (1 Mac 24). The Hellenizing Jews held the citadel of Acra in Jerusalem with the Syrians (1 Mac 146), and were not dispossessed till 2 B.C. 162.

Apostasy of a different kind is mentioned in the Book of Wisdom. The Alexandrian Jews adopted in some cases the philosophy of Greece, especially Epicureanism (Wis 2:24). In theanthem the term Epicureanism is applied to it.

2. Examples of apostasy among Christians are to be found in the NT; but in many cases the falling away of the convert was not strictly apostasy, but a lapse into Judaism or Christianity or even heresy. Still Jesus Christ foretold that in the days of trial many would fall away; and in the Epistle to the Hebrews (if we may still believe this Epistle to be addressed to Jewish Christians) there are indications that many of them were forsaking the Church for the synagogues, when the choice between the one and the other became imperative. We have only hints of newly converted Christians becoming idolaters.

Mt 24:9 (Greek text omits καὶ οἱ διδάσκαλοι). The expression sword in the mouth is an epitome of the bitterness of the apostates towards their former friends; and (v.10) "perdition will come upon their souls." How? for /Gr., which speaks of the impossibility of renewing unto repentance those who fall away (ἐπατριμοί) after enlightenment, and crucify (ἀυξανοῦντες) to themselves the Son of God, seems to allow the apostates to Judaism. The warnings against apostasy in this Epistle are frequent (cf. esp. ch. 10). Though in the Epistle to the Galatians the language is less grave, there is still no complete surrender of Christianity, but he himself evidently regards it as a practical apostasy, for "if that apostasy was not known may be found in the letters to the Churches in the Apocalypse and in the Pastoral Epistles.

In conformity with our Lord's warnings, the early Christians looked for a great falling away before His Second Coming. In 2 Th 2:2, St. Paul tells his converts not to be perturbed because they know that there can be no Parousia έν μείῳ Θεῷ ᾧ ἀποστασία προτέρου whatever the exact nature of the apostasy in the passage, whether it means the fall of apostates, or at least a religious apostasy, and one, moreover, as the use of the definite article proves, regarding which the Apostle's readers were already fully informed. From the Biblical use of the word ἀποστασία it would appear that there is an allusion to a falling away from God; but it has been maintained that the coming revolt of the Jews against the Imperial power of Rome was in the mind of St. Paul. (See also 'Man of Sin' in Hastings' Dictionary of the NT, St. Paul. G. Milligan, Thesalonicans (1868), Not. J, p. 169 ff., gives a catalogue of the explanations of this passage.)

In the primitive church, the fact of apostates forsaking the communion of the Church and relapsing into idolatry. Some of those accused of Christianity before Pliny admitted that they had left the Church for many years, and had no hesitation in complying with the procurator's request: 'Hi quoque omnes et imaginum divinarum simulacra venerati sunt et Christo male disserunt' (Pliny, Ep. x. 98). Ammonius Saccas, the founder of the Neo-Platonic school, is said to have been a Christian originally, and to have apostatized (Euseb. Hist. vi. 19); and there is a tradition that Aquila, the translator of the Heb. Scriptures, was an apostate to Judaism. Apostasy to heathenism was considered the gravest crime of which a Christian could be guilty, and even if it was due to fear of torture or imprisonment, no pardon or conciliation could be extended to the guilty person. It was not till the time of St. Cyprian (A.D. 252) that the idea of restoring an apostate to communion was even so much as entertained, and then only owing to the importance of the case for those who confessed the faith during the persecution of Decius.

With apostasy was, of course, an inexpressible offence, and ranked with murder and incest; but the only one in the time of Cyprian even involuntary apostasy excluded a person for ever from the visible Church. Hermas has been thought that there is a hint in the fifth simile, which is only by special revelation that he learns from the Angel of the repentance that will be allowed for the apostates, who are accepted (Hermas, Mand. iv. 4). Tertullian, in his earlier work, On Martyrs (ch. 1), says that those who could not find peace with the Church sought it from confessors awaiting martyrdom;
APOSTASY (Jewish and Christian)

but it does not appear from the context that this means that they could restore an apostate to communion. In his treatise de Pudicitia, written in his Montanist days, the same writer, while denouncing Zephyrinus (9), Bishop of Rome, for allowing penalties to those guilty of carnal sins, enforces his argument by showing that these offences are in the same category as idolatry—unpunishable in a Christian. It is surely fairly certain that the re-admission of the lapsi was a novelty in the days of Cyril. 8 Evidence, says Abp. Benson, 'the question which to some was presenting itself was not when, or upon what terms, the lapsi should be re-admitted, but whether it was possible for the Church to remit such guilt.' (Cyprian, 197, p. 108).

The law of the early Church in regard to apostasy was very severe. The offence consisted not merely in the deliberate defection of the Church, but in the compliance with paganism, i.e., a man was not permitted to continue a member of the Church who was engaged in any trade ministering to idolatry, superstition, or licentiousness; nor was he allowed to conform to custom by offering sacrifice in an official capacity.

When the days of persecution ceased, the severity of the canons was considerably modified, and apostates were re-admitted to communion after due penitence. The strictness of primitive Christianity is shown by the canons of the Council of Elvira (Iliberis) in Spain, held during the persecution of Diocletian (A.D. 303). Apostasy to Judaism was much feared, especially in Spain and Gaul, and Christians were forbidden to attend Jewish banquets, or to have any intimate dealings with Jews. After the conversion of Constantine, apostasy became a civil offence punishable by law. Apostates to Judaism were liable to confiscation of property, and lost the right of making wills.

Repentence was of no avail as regards the civil penalties incurred by apostasy, which included dismission from all posts of dignity. 'Perditis, hoc est sacrum Baptismum profanatibus, nullo remedio penitentiae, (quem solet alius criminibus prodesse) succurratur,' (Codex Theod. xvi. 7–5).

On the other side, the Empress Eudoxia (A.D. 393) 'had no hope whatever was extended to apostates. Even if they were slain for the name, they cannot be admitted to the peace of the Church.' (Cyp. Ep. iv.). This is confirmed by the legislation of the Council of Elvira, which refuses to admit communion to adults who have deliberately sacrificed (can. 1), to Christians holding heretical opinions who have performed the duties of clerics (can. 2), and to informers who have caused the death of a Christian (lxxi.). At the Council of Elvira (306) the Council of Milan (314) the worst class of apostates to be received back to the Church after a due penance extending over ten years (can. 9); and the Council of Nicea (A.D. 325) allows such apostates to be admitted to communion after twelve years in the ranks of the penitents (can. 11). In 397 the Council of Carthage actually imposed upon them the exclusion from the Church. 'Apostate' conversus vel reversus ad Dominum gratia vel remissioni non negetur. (Codex Theod. xvi. 12; Smith, DCX. art. 'Apostacy'; Dale, Synod. of Eleous; Hele, Consenti congessicht, vol. i. 264)

The name 'Apostate' has been specially applied to the Emperor Julian, whose defection from Christianity threatened to undo the work of the conversion of Constantine. There is no absolute proof that Julian was ever baptized, though, as he held the office of a reader in his youth, it is, to say the least, highly probable. The Christianity he professes, moreover, must have been of an Arian type. The religion which he embraced after his 'apostasy' was a description of Neo-Platonism, which endeavoured to give a spiritual interpretation to the riddles of antiquity. He oppressed the Church by every means in his power short of actual persecution; but nothing caused so much consternation or gave such serious offence as his edict forbidding Christians to teach the classics and the sciences of the Empire (Ep. 42).

The main events of his life are as follows: Born in A.D. 331, the son of Julius Constantinus, brother of the great Constantine, he was the messenger of the Imperial family in 337, and educated by his cousin Constantius. In 351 he began to show a disposition towards heathenism, but fear of Constantius compelled him to become a Christian. He was Caesar in Gaul from a.D. 353 to 360, when the army of the province declared him Augustus. He was sole emperor from the death of Constantius, Nov. 3, 361. He was killed in a battle with the Persians, whose territory he had invaded on June 38, 363, and a Christian was immediately elected emperor by the army in the person of Jovian. An interesting study of the character of Julian is to be found in Debus' 'Teologia.'

3. In the Talmud much is naturally said about apostates from Judaism. Four different kinds are mentioned: Minim, Meshummadin, Masōrōth, and Epigrūrōsin. The Meshummadin are those who wilfully transgress part of the ceremonial law; the Masōrōth are delators or political betrayers; the Epigrūrōsin freethinkers.

The Minim demand more special attention. It is an open question whether they were Jewish Christians or a Gnostic sect in Judaism. At any rate they were heretics desiring to keep their place in the community of Israel, who had to be detected and cast out. Thus the famous R. Eliezer was arrested on a charge of Minuṭḥah, but acquitted. In his sorrow for having been suspected he was consoled by the great R. Agiba. The Minim are also spoken of in the Talmud as a separate sect, but at the same time they regarded themselves as being so little different from Jews that they could ask for, and obtain, a Jewish Rabbi of unimpeachable orthodoxy to be their teacher. A Gentile is never called a Minim. The most famous of the Minim was Elisha ben-Abuyah, known also as Apher, 'the changed one.'

See R. T. Herford, Christianity in Talmud and Midrash, 1903, who devotes the greater part of his valuable work to the discussions between the Talmud and the Church. It is, however, true that his Dor vorchristliche jüdische Gnosiszikummaus shows that the Minim were Gnostics of the Ophite school. The passage mentioned above is, in enumerating the different classes of apostates destined for Gehinnom in Sanh. xliii. 4: 'The Minim and the apostates and the betrayers and the Epigrūrōsin, and those who have lied concerning the Torah, and those who depart from the ways of the congregation, and those who have lied concerning the Resurrection of the dead, and everyone who has eaten of four kinds of meat in their own house, and has been a lapso of Minim; and no one has been a Minim of the day of the deathbed of the Rabbis.' See also Deutsch in JB i. 683 f.; Kohler and Gesenius, ii. 15–18; Brody, viii. 594 f.

4. In the Middle Ages apostasy and heresy were punished with the utmost severity, but it is scarcely possible to conceive of the open abandonment of Christianity where the jurisdiction of the Church was all-powerful. We have, however, a curious example of a deacon in England embracing Judaism in order to marry a Jewess, and being buried at Oxford, on 17th April, A.D. 1278. The deacon, after his conversion, was excommunicated and deprived of his clerical office. This is one of the few cases of the execution of a heretic in England before A.D. 1401; and it seems that the Sheriff of Oxfordshire was blamed for his undue severity in so unimportant a case, as the deacon was only a clerk. In Spain also, under Alfonso X. (the Wise), A.D. 1250, conversion of a Christian to Judaism was made a capital crime; the influence of the Jewish race in that country being especially feared from the earliest times.

For the execution of the deacon see Maitland, Canon Law in the Church of England, ch. vi., 'The Deacon and the Jewess.'

The destruction of the Order of the Knights Templar by Philip the Fair and his accomplice Pope Clement v. may be mentioned as an example of the charge of apostasy by the Inquisition for a political purpose. The Order, which in 1119 consisted of nine knights devoted to the pious task of keeping the roads to Jerusalem clear of robbers, in the 13th century, became one of the wealthiest monastic bodies in Christendom, and a military force of the most formidable description. With the fall of Acre in A.D. 1291 the Templars had ceased their activity in the Holy Land, and in 1307 Philip the Fair conceived the idea of embroiling them with the Church, in order to procure the abolition of the Order and the confiscation of their immense wealth. The profound secrecy which enveloped the meetings and even the religious services of the Order gave their enemies the requisite handle to bring charges of the foulest immorality and apostasy against them.
APOSTASY (Muhammadan)

Templars were accused of making every candidate for admission to their body apostatize by thrice renouncing Christ and spitting upon the crucifix. Torture was freely employed to extort confessions, but upon the whole the evidence obtained was of the most absurd and contradictory character, and the majority of those put to death perished in the innocence of the Order; and though the processes went on simultaneously throughout Europe and the Levant, no seriously incriminating evidence seems to have been obtained except in France. The cruelties were repeated by death sentences culminated in the burning of the Grand Master Du Molay and his companion on the Île des Juifs on the Seine, 19th March 1314.

Lea, History of the Inquisition, vol. iii. pp. 229-234; Milman, Latin Christianity, bk. xii. ch. 1. Hallam, Middle Ages, vol. i. p. 137, is inclined to credit the charges against the Templars on account of the publication of Count Hammer Purgeot's Lettres de l'Orient (1813), charging the Templars with apostasy to the Pope, Ophite Gnosticism. The subject is discussed by Castle in The Transactions of the Quatuor Coronati Lodge, vol. xix. pt. 3.

The Spanish Inquisition originated for the purpose of suppressing heresy but apostacy. The maranos, or Jewish converts, were suspected of practising their ancestral religion in secret, though outwardly conforming to Catholicism. It was to root out this crypto-Judaism that the tremendous munificence of the Holy Office was devoted and the sufferers under Torquemada were those who had relapsed to Judaism.

5. There have been many examples of Christians among the Turks and Moors abandoning their faith in order to enjoy the privileges reserved for Muhammadans; and the renegade often enjoyed high official positions in Turkey. Naturally such persons abandoned their nationality with their religion. Apostasy from Christianity to Judaism is considered, as the Jews themselves do not encourage the reception of proselytes. One notable example of such apostasy is that of the fanatical and unfortunate Lord George Gordon, who was the chief of the famous No Popery riots in 1780. In 1788, after he had been found guilty of a libel on Marie Antoinette, he fled to Amsterdam, whence he was expelled, and on his return to England he made a public profession of Judaism. He was imprisoned in Newgate in the following year, and in consequence of the occurrence, he is in all respects to the ceremonies of his new religion.

In recent times there have been cases of Europeans and Americans of Christian parentage embracing Muhammadanism and Buddhism, and converting to the pracitces of these religions. In France it has been asserted that Diabolism is practised as a religion, of course involving a distinct apostasy; but the evidence of such persons as Leo Taxil, who declared that a church existed in France for the worship of Satan, seems to have been discredited by his subsequent disavowals, and Satanism (q.v.) seems to be little more than the revival of some of the follies of the Black Art of the Middle Ages. F. J. FOAKES-JACKSON.

APOSTASY (Muhammadan).—He that adopts any other religion shall be put to death.' Such, according to the sacred Muslim tradition, was the command of the Prophet; and on this basis all Muslim jurists are unanimous in deciding that apostasy from Islam (Arab. tāridād) must be punished by death. The Zahrīrites, who, as is well known, adhere as far as possible to the outward meaning (Arab. šāhir) of the sacred texts, are even of opinion that the apostate (Arab. murādād) must not die until he is put to death without initiating any inquiry as to whether he might possibly be converted to Islam again, because the words of the Prophet present no indication of any delay. This was also the view held by Mu'ādh ibn Jabal, Muhammad's governor of Yaman. According to a well-known tradition, this official came to Abū Masā'ib, whom he found engaged in questioning a prisoner. On hearing that this man had apostatized from Islam, Mu'ādh refused to take a seat until the apostate had been put to death. In reply, the companion thus put to death: 'Such was the decision of Allah and his Apostle.'

But, according to the opinion of the majority of jurists, it is desirable (according to others, even a duty) before proceeding to carry out the punishment of death to make an effort to bring the apostate to repentance (Arab. tawbah). If such a one declares that he turns again to Islam, then the inquirers are to be satisfied with the response and let him go away in peace. If, on the contrary, he refuses to return to Islam, they are bound, according to many, to allow him a delay of three days (according to others, even longer) as a period for reflection. He is still retained in prison and may within this interval go back upon his error. In support of this practical reference is made to the example of the Khalīf 'Omar. When he learned that a man of the troops of Abū Māsā'ib during the siege of Tustar, in the year 17, had been put to death on account of apostasy from Islam, he was extremely indignant at the deed. 'Why,' he inquired, 'did you put him in prison for three days and deal with him in order to bring him to repentance?' And all the companions of the Prophet who were present showed by their silence that they agreed with him.

The Ḥanafites are inclined to think that the punishment of death on account of apostasy is applicable only to men. According to them, women are only to be kept in prison until they repent, because the Prophet had forbidden the putting to death of unbelieving women. According to others, this prohibition has reference only to the killing of the wives of unbelievers in the Holy War. A similar difference of opinion exists with regard to the punishment of apostates while yet in their minority. These, according to some lawyers, may be put to death immediately, according to others only after attaining their majority. The punishment by death is to be carried into execution only by the sword. From the sacred sources of tradition, it is in all respects to the ceremonies of his new religion.

APOSTASY (Muhammadan).—He that adopts any other religion shall be put to death.' Such, according to the sacred Muslim tradition, was the command of the Prophet; and on this basis all Muslim jurists are unanimous in deciding that apostasy from Islam (Arab. tāridād) must be punished by death. The Zahrīrites, who, as is well known, adhere as far as possible to the outward meaning (Arab. šāhir) of the sacred texts, are even of opinion that the apostate (Arab. murādād) must not die until he is put to death without initiating any inquiry as to whether he might possibly be converted to Islam again, because the words of the Prophet present no indication of any delay. This was also the view held by Mu'ādh ibn Jabal, Muhammad's governor of Yaman. According to a well-known tradition, this official came to Abū Masā'ib, whom he found engaged in questioning a prisoner. On hearing that this man had apostatized from Islam, Mu'ādh refused to take a seat until the apostate had been put to death. In reply, the companion thus put to death: 'Such was the decision of Allah and his Apostle.'

But, according to the opinion of the majority of jurists, it is desirable (according to others, even a duty) before proceeding to carry out the punishment of death to make an effort to bring the apostate to repentance (Arab. tawbah). If such a one declares that he turns again to Islam, then the inquirers are to be satisfied with the response and let him go away in peace. If, on the contrary, he refuses to return to Islam, they are bound, according to many, to allow him a delay of three days (according to others, even longer) as a period for reflection. He is still retained in prison and may within this interval go back upon his error. In support of this practical reference is made to the example of the Khalīf 'Omar. When he learned that a man of the troops of Abū Māsā'ib during the siege of Tustar, in the year 17, had been put to death on account of apostasy from Islam, he was extremely indignant at the deed. 'Why,' he inquired, 'did you put him in prison for three days and deal with him in order to bring him to repentance?' And all the companions of the Prophet who were present showed by their silence that they agreed with him.

The Ḥanafites are inclined to think that the punishment of death on account of apostasy is applicable only to men. According to them, women are only to be kept in prison until they repent, because the Prophet had forbidden the putting to death of unbelieving women. According to others, this prohibition has reference only to the killing of the wives of unbelievers in the Holy War. A similar difference of opinion exists with regard to the punishment of apostates while yet in their minority. These, according to some lawyers, may be put to death immediately, according to others only after attaining their majority. The punishment by death is to be carried into execution only by the sword. From the sacred sources of tradition, it is in all respects to the ceremonies of his new religion.
token of unbelief. In like manner this is so, if, at any time, a Muslim worships the sun or the stars or idols, or declares the Prophet to be a liar, or makes the existence of Allah a matter of doubt.

According to the view of the Shāfiʿites, it is not only apostasy from Islam that is to be punished with death, but also this class of other religions, whenever this is not accompanied by conversion to Islam. A Jew who becomes a Christian will thus have to be put to death, according to the Shāfiʿites, because the Prophet has commanded in general that every one shall be put to death who adopts and transgresses another religion.

APOTHESES' CREED. — See CREEDS (Eccumenical).

APOTHESES AGE. — 1. Chronological limits. The phrase is commonly used for the period in the history of the Church extending from the death of Christ to the end of the 1st cent., when, according to ancient tradition, John, the last of the twelve Apostles, passed away. The term 'apostles' were taken in the broader sense in which it was commonly used in the early days, the Apostolic age might be regarded as extending well on into the 2nd cent., when there were still many travelling missionaries bearing the name 'apostles' (see Didache, 11). But the term soon came to be applied exclusively to the Twelve and Paul, and has been used in this sense ever since. It is true that no sharp line of demarcation can be drawn between the late 1st and early 2nd centuries; and even assuming that John lived to the time of Trajan, which is by no means certain, his death had no special significance for the history of the Church. As a consequence, some hold that the Apostolic age ended with the destruction of Jerusalem in a.p. 70, or with the death of Paul. But to give such an emphasis to the former is to overestimate the importance of the Christian Church in the 1st cent., and to make Paul's death the close of the Apostolic age is to imply that he was the only apostle, when as a matter of fact there were others before he came upon the scene, and after he had passed away; for Peter himself, to say nothing of John, very strongly outlined him by hailing him as the leader of the Apostles (p. 592). If the designation is to be retained at all, it is better, then, to use it in the traditional sense for the period from c. 29 to c. 130 a.d.

2. Sources. — Our sources for a knowledge of the Apostolic age are meagre, and yet on the whole more satisfactory than for the generation immediately following. Of the most important are the Epistles of Paul, which are very rich in historical material. The Book of Acts is also indispensable, based as it is in considerable part upon older sources, and containing a great deal of information not to be found elsewhere. But, like any other historical work written by one not himself an eye-witness of the events recorded, it has to be used with caution.

Into the question of the authorship and sources of the Book of Acts is not further to enter here (see the general studies by Sorof, Die Entstehung der Apostelgeschichte, 1890; Feist, 'Die geschichtliche Uberlieferung des Lobak in Evangel. und Apostelgeschicht. 1881; Spitta, Die Apostelgeschichte, ihre Quellen und deren geschichtl. Werth, 1891; Clemens, Die Chron. der Paul. Briefe im Sinne des histor. Geschichtswiss. in Th. Stud. und Krit. 1897, and J. Weiss in Th. Stud. und Krit. 1899, 1900; Jünger, Die Quellen der Apostelgeschicht. 1896; Hilgenfeld in Zeitschr. für Theol. 1890 and 1891; and in Moeller, Gesch. des histor. New Testament, 1891, 565 f.). In a recent work entitled 'Die apostolische Zeit' (1899), Harnack maintains, in opposition to the prevalent critical opinion, that Luke (the beloved physician, mentioned by Paul in Col 4:14; 2 Tim 1:5, Philm. 24) was the author of the whole of the New Testament, including the 'We passages' and, as Harnack himself admits, the author was probably an eye-witness only as far as they extend, and was dependent upon others for his information in other parts of his book, where his acquaintance with Paul by no means guarantees his historic accuracy (see Schürer's review of Harnack's book in Theol. Zentralh., 1898, p. 435 f., and Harnack's reply, p. 490 ff.). In any case, whoever the author may have been, his book must be controlled, and at many points corrected, by the Epistles of Paul.

In addition, we have the Gospels, which reflect in part the conditions of the time—specially the Gospels of the Apocalypse, Clement's Epistle to the Corinthians, the three Johannine Epistles, and James and Jude. Other writings, such as the Didache, Barnabas, and the Epistles of Ignatius, and the Apocalypse, throw light back upon the background of the times. The writings of Papias and Hegesippus give us some information; and passing references occur in certain non-Christian writers, e.g. Tacitus and Suetonius.

3. Outline of the history. — The age falls into three periods; pre-Pauline, Pauline, and post-Pauline.

(a) Pre-Pauline period. — Of this period we have an idealized picture in the early chapters of the Book of Acts; but those chapters contain also some trustworthy information drawn from older documents, and perhaps from current tradition; and the Epistles of Paul reflect the conditions of reflection, these light together, and trace the course of events, at least in a general way.

The centre of interest during the period was Jerusalem. Here the disciples who had been scattered at the time of Jesus' death gathered again, when convinced of His resurrection and glorification, to carry on the work which they believed He had entrusted to them, and to prepare their countrymen for the eternal Kingdom which was to take place upon His return. They continued to live as Jews, and apparently had no thought of breaking with the traditions or customs of their people. Christianity meant simply the belief that Jesus was the promised Messiah, who was soon to return to inaugurate the Messianic Kingdom. The benefits of this Kingdom they believed, as devoutly as any of their contemporaries, were to be enjoyed by Jews alone, native or proselyte; and the promise that He would be a substitute for their accustomed religious life in temple and synagogue. In the strict sense, we cannot speak of a Christian Church at this time in Jerusalem. The Christians all belonged to the one Jewish Church, and knew no other.

The early disciples felt themselves to be citizens of their future Messianic Kingdom, and their interest centered rather there than in the present. As a consequence, they were not in any sense social reformers. The community of goods, of which we have an account in Acts 2:42-45, 49, was simply an expression of the feeling of brotherhood which prevailed within the little Messianic circle, and of an indifference to the goods of the present world entirely natural in men who expected its speedy displacement by a new and more glorious order of things. There was nothing
in Christianity as understood by them to necessitate a break with existing Judaism. In their zeal for the new faith, and in their efforts to win others to it, they created disturbances, and so came into conflict with the authorities (Acts 4 and 5). Such conflicts were of little significance; but the attack upon Stephen, and the persecution which followed, were a different matter, being due to the fear that the new faith threatened the stability of Jewish institutions,—a fear which the Christians themselves did not at all share (see McGiffert, p. 84 ff.). The trouble which arose at this time seems to have been only temporary. But it was impossible for non-Christian Judaism to regard the growing Christian sect with friendly eyes. The Christians, in fact, had to endure the steadily increasing hatred of their countrymen; and their flight from Jerusalem shortly before the siege of 70 A.D., and their refusal to take part in the Bar Cocheba rebellion in 132 A.D., only served to make the break complete and permanent. Though hated and repudiated by their countrymen, they clung to their ancestral law and custom, and lived for the most part in isolation from the rest of the Christian Church, being known commonly as Ebonites or Nazarenes. Finally, after some centuries, Jewish Christianity entailed. The consciousness was not with Gentiles but with another form of Christianity altogether, of which the Apostle Paul was the greatest champion.

(5) Pauline period.—For this period our sources are Paul's own Epistles and the Book of Acts. The account in the latter is fuller and more trustworthy than for the earlier period. The author's information, however, was not always accurate and adequate even here, and his account has to be used with caution, and corrected at their ancestral law and custom, and lived for the most part in isolation from the rest of the Christian Church, being known commonly as Ebonites or Nazarenes. Finally, after some centuries, Jewish Christianity entailed. The consciousness was not with Gentiles but with another form of Christianity altogether, of which the Apostle Paul was the greatest champion.

The second period is distinguished from the first by a change of leaders, of scene, and of principles. In place of personal disciples of Jesus, a new figure came to the front who had never known Him; in place of Palestine, the Roman empire at large was now the scene of activity; and instead of a mere form of Judaism, Christianity became a new and independent religion.

The conversion of Paul has always been recognized as an epochal event in the history of the Church. To him it was chiefly due that Christianity became a factor of importance in the life of the Roman empire in the world at large. It is true that even before his Christian activity began, the new faith had been carried beyond Palestine and had made converts among the Gentiles,—he was not the first and not the only Apostle to the heathen,—but it was he who gave permanence and stability to the work, and thus became the real founder of the world-Church. Under his leadership Jewish propaganda became Christian propaganda, and the influence of Judaism in the world at large was made to promote the spread of a faith which became its worst foe. No wonder that Paul the Christian was hated by so many of his countrymen both within and without the Christian circle. It was he who made Jewish propaganda ineffective, by substituting for it a propaganda which conserved all its attractive features with none of its limitations. Paul was himself a strict Jew, zealous for the traditions of the fathers; but he was also a Christian who was not afraid to break the Mosaic law, and who did not believe in the uniqueness of the Jewish religion, but saw in the heart of a Greek civilization to which Judaism meant little or nothing. It was inevitable that he should be interested in the spread of Judaism in the world at large, and that, when he became a Christian, the relation of the new faith to the life of the Roman empire should occupy his thought. But it was out of his religious experience before and after his conversion that there was born the principle which revolutionized Christianity and made it an independent religion. His conversion to Christianity was not the mere result of the conviction that Jesus was the Messiah, making of him simply another Messianic believer. It was the fruit rather of a moral struggle of peculiar intensity, out of which he emerged victorious only because he discovered in Christ a liberator from the bondage of law, and the creator of a new life of moral liberty. His moral struggle was not the effect of his conversion, but an antecedent of it, and his Christianity was simply the answer to the moral need. In it, therefore, there was a universality quite foreign to the Christianity of the early Jewish disciples. To them it had meaning only as a Jewish thing; it was the realization of the national Messianic hope. But to Paul it was the solution of a universal moral problem and the answer to a universal moral need. Wherever there was the desire for righteousness and the consciousness of sin, the Christian Church was to be founded. Paul, for instance, the case of Cornelius), they believed that this was provisional only, and would lead ultimately to the full acceptance of Judaism. If Christianity, then, reached the Gentiles at all through them, it could do so only under narrow limitations and burdensome restrictions. But the gospel of Paul, proclaiming, as it did, freedom from sin through the possession of a new moral power—the spirit of Christ —could be preached with equal effectiveness to men of all races. Paul’s attitude towards the Jewish law was but an incident of his general position; but inasmuch as that law constituted the chief distinction between Jews and Gentiles in the ancient world, it was to the Jews that the sun and substance of all righteousness, his attitude toward it was of immense significance. The Jewish law, he believed, like all law, was given by God in consequence of sin. Where the spirit of holiness has control no law is needed, any more than God Himself needs law to keep Him holy. Law is for the purpose of controlling a person and preventing him from living out his natural character, and therefore is needed only where the character is not controlled. When man is freed from the dominion of sin by the possession of the spirit of Christ, he is freed also from the dominion of law; his character is holy and needs no law. Filled with the spirit of Christ, he cannot do otherwise than live in that spirit, which is the spirit of love, of purity, and of peace. Paul himself might continue to observe the precepts of the fathers, and on occasion he might even urge his converts to do the same; but on his own principles he could not insist on such an observance, and the moment it was insisted on by others it was essential, he might insist them and stand for his fundamental principle of Christian liberty. This might not have affected practical conduct in the least had Christianity been confined to the Jews, whose holiness expressed itself naturally in the observance of the Law, and
to whom its ceremonial precepts were as sacred as its moral. But when Gentiles became Christians, it was another matter. To them much of the Jewish law seemed unnecessary and quite without relation to holy living. The result was a serious crisis, much more serious than had been precipitated by the case of Cornelius. The matter was considered again, and the scribes got glibbered in Acts 15, Gal 2, and a compromise was reached which provided for the recognition of two forms of Christianity, a Jewish and a Gentile. The latter was free from the obligation to observe the Jewish law, that is to say, the Law as they interpreted it, but who Gentiles might have answered as a practical expedient had the two forms remained entirely isolated, but it was not long feasible in communities where there were both Jewish and Gentile Christians. Unless there was a schism within the Christian brotherhood itself, all must live as Jews, or all the Jews must modify, at least in part, the strictness of Jewish practice which prevented familiar intercourse with the Gentiles. Where Paul’s principles prevailed, only the latter course could be adopted. The scribes and Pharisees who were the successors of his Gentile converts to the bondage of a law from which on his own principles they were completely free, while the latter meant only a liberty for Jewish Christians which on the same principles was wholly inadequate. Ultimately, as the Gentile wing of the Church grew in the spirit of liberty, Paul’s thereby asserted in complete emancipation from Jewish ceremonial—an emancipation resisted by many stricter spirits in the Church, whom Paul calls Judaizers, but promoted by his powerful influence. The by the widening of the Roman world of liberal Judaism already largely indifferent to ceremonial and interested only in the more spiritual and ethical features of the ancient faith (cf. Schürer, G. J. iii.). Into the heritage of the older Jewish propaganda the new Pauline Christianity entered, offering the world all that and more than Judaism had offered it, in a form stripped of all its offensive features, and claiming to be not merely a modified Gentile phase of the Jewish faith, but a religion as truly Gentile as Jewish. It is no wonder that it speedily became a formidable rival of Judaism, and ultimately completely outstripped the latter in the race.

It is not necessary to trace here the Christian activity of Paul, which covered a period of nearly 25 years, from the beginning of his work in Antioch until his execution in Rome. He was the greatest Christian missionary of the period, and the only one whose apology for Christianity we have any extended knowledge. The fact that some of his Epistles have been preserved to us, and that the second half of the Book of Acts is devoted exclusively to his work, enables us to follow his career with considerable accuracy. But our meagre knowledge about others is no reason to suppose that there were not others doing similar work in different parts of the world, and even in those parts where he himself was active. Considerable districts of western Asia Minor, Cyprus, Macedonia, and Achaia seem to have been their Christianity chiefly or in the first instance to him, but Rome was evangelized independently. At his death Christianity had already entered every province bordering upon the Mediterranean from Syria to Italy, with the exception of Thrace, and had penetrated into the interior of Asia Minor as far as Galatia.

His death at the close of his two years’ imprisonment in Rome was not so much to the fact that he was a Christian, as to his implication in successive disturbances in the East, leading the authorities to regard him as a dangerous character. It was this that caused his imprisonment in Caesarea, and his execution followed his conviction before the Emperor upon the scaffold, Acts xvi. 26-34 (p. 419 f.). His conviction execution therefore did not mean an attack upon Christianity by the Imperial government, and, so far as we can learn, did not cause the exclusion of Christianity in the Empire. With the death of Paul passed away the greatest of the Apostles, and the flag of Christianity was lost for the spread of Christianity in the Roman world. To him the Christian Church of history is chiefly due.

(c) Post-Pauline period.—For this our information is less abundant than for the previous period. The Book of Acts does not carry us beyond the Roman imprisonment of Paul, though, like the Gospels, it reflects in some degree the ideas of the age when it was produced. The Epistle to the Hebrews, First Peter, the Johannine Epistles, the Apocalypse, First Clement, and probably the Pastoral and the Epistles of James and Jude, also belong to this time, and throw some light on conditions in Rome, Asia Minor, and Corinth. We have no information as to where the Christians were brought to this notice as convenient scapegoats upon whom to throw the blame for the confiscation of Rome (Tac. Ann. xvi. 44). While confined to the capital, this persecution brought them the reputation of being dangerous characters, hostile to the public weal. Under the morose and suspicious Domitian both Christians and Jews suffered, because of the Emperor’s doubts as to their loyalty. The First Epistle of Peter and the Apocalypse testify to conditions during this reign, and the Epistle to the Hebrews, and the Book of Acts with its apologetic interest, are best read in the light of these conditions. The Christians were evidently coming increasingly into conflict with the authorities, at any rate in certain quarters, and the letter of Pliny to Trajan, dating from 112, shows that already before he became governor of Bithynia the mere profession of Christianity had come to be generally regarded as a crime, though there is no evidence that any law had been passed upon the subject.

The most notable phenomenon of the period is the Johannine literature, and the existence of a Johannine school in Ephesus to which it testifies. That John the son of Zebedee was not its author is regarded by us as certain. We think it even doubtful whether he was ever in Ephesus (see Harnack’s Chronologie der altchristlichen Literatur, p. 673 f.), but the presence there of an important personality of the name of John is beyond question, and the school which gathering round that very pronounced type of its own, Pauline in its basal principles but highly developed in an original way. The Epistle to the Hebrews, with its large infusion of Philonism, is also an interesting and instructive document, illustrating, in our ignorance of its author, the puerility of our information touching the leading characters of the day. So far as our evidence goes, Christianity during this period spread no further than it had before the death of Paul, except toward the east and north in Asia Minor, where it reached to Euphrates and Bithynia (1 P 1). The Apocalypse gives us the names of some churches in Asia Minor (Smyrna, Pergamum, Sardis, Philadelphia, and Thyatira) not mentioned in Paul’s letters or the Book of Acts, and the Epistle to Titus shows that Christianity had already reached Crete. For Alexandria we have no direct evidence, but Christianity must have gone there early, in all probability long before the end of the 1st century. In general the scene of the history in this, as in the Pauline period, was the lands lying along the eastern shores of the Mediterranean from Palestine to Italy. The close of the Apostolic age saw Christianity firmly established at least in Asia Minor, Greece, and Italy, and already well started on the conquest of the Roman world. The Christians
were an object of suspicion to the State, and were widely disliked by the populace, because of their lack of patriotism, their clashlessness and exclusiveness, their hostility to prevailing religious beliefs and practices, their fanatical disregard of common worldly interests, and their puritanic denunciation of popular amusements and pastimes. They came chiefly from the lower grades of society, particularly the class of slaves and freedmen (another ground of offence against them in the opinion of many); but there were some among them of wealth and social standing (cf. Eusebius, HE iii. 18). The movement was not ostensibly a social one, and yet it had social consequences because of its recognition of the moral and religious possibilities of the lowest, and its emphasis upon Christian brotherhood and equality. The Christians were still expecting the speedy return of Christ, involving the downfall of the great Roman empire and the end of the present age; and they had a profound belief in the elect character of the Church and its final triumph. They were conscious of belonging to one great Church of Christ, and the feeling of unity between the most widely separated communities found constant expression. Their hopes and ideals were everywhere the same, and they were in possession of many of the beliefs and principles which still control Christendom. The Church at large was not yet an organized institution, but Christianity was already well started upon its historic career.

The first of the early disciples were not theologians, and did not concern themselves particularly with theological questions; but their conviction that Jesus was the Messiah led to a considerable modification of traditional beliefs, and became the starting-point in the development of a specifically Christian theology. Believing Jesus to be the Messiah, they were thrown into consternation by His untimely death, coming as it seemed while Messiah's work was still undone and the Kingdom not yet inaugurated. Their hopes in His Messiahship could not have survived had it not been for the conviction that He was alive again, which speedily took possession of them. That conviction meant the rehabilitation of their old hope in order to do Messiah's work, and if He did not at once 'restore the kingdom to Israel' (Ac 1:8)—if He were absent for a time,—it was only that Israel might be prepared by repentance and righteousness for the enjoyment of the blessings of the Kingdom which He would speedily return to establish. The supreme duty of His followers, then, was to proclaim His coming, and to prepare their countrymen for it. But their proclamation must seem absurd to those who did not believe Him to be the Messiah; and so the interpretation of the kingdom must be to convince their fellowers of His Messiahship.

Proof was found in His wonderful works, and particularly in His resurrection (Ac 2:23 ff etc.), the disciples' testimony to the latter fact being confirmed by an appeal to OT prophecy (2:25 ff). To the seemingly fatal objection that He had, after all, done nothing that the Messiah was expected to do, and that His life and death were entirely unworthy of the Messianic dignity, it was replied that He would return to do Messiah's work, that He would reappear, and that the Scripture foretold a twofold Messianic coming—the one in humility, involving suffering and death, and the other in glory, for the setting up of His Kingdom. The latter was the concern of the first disciples in preaching. In this novel assumption of a Second Coming is to be found the distinctive feature of primitive Christian theology. This is not inconsistent in showing that Jesus had already done Messiah's work; it did not involve any great modification of traditional ideas so as to change the character of that work and as to the nature of the Messianic Kingdom. It aimed only at proving that Jesus was really the Messiah, and that He might therefore be trusted yet to do all that had been expected. In their emphasis upon the second coming they lost the full significance of the first, and failed to understand Jesus' complete transformation of the world. Why, contrary to common expectation, should there be a twofold coming? Why had Jesus, being the Messiah, lived a life of humility and died upon the cross? That they found the situation foretold in the Scriptures seems to have satisfied them, though they very likely believed, as was not unusual, and as Paul's words in 1 Co 15:23ff perhaps suggest, that the first coming had its place in the preparation of repentance and righteousness, and so in the preparation of the people for the second, which could not appear until they had repented (Ac 2:38ff). But this was a subordinate matter.

The question of Jesus' origin, nature, and relation to God, which later became so important, was not raised among these early disciples. The common traditional idea of the Messiah as a man called and supernaturally endowed by God seems to have been accepted without question (Ac 2:22, 26 etc.). Nothing in Jesus' words or deeds or in the events of His life led them to modify the existing view. The one controlling belief was in the future coming, and the one imperative duty was preparation for the enjoyment of the blessings of the Kingdom then to be established.

With the conversion of Paul a new period opened in the history of Christian theology. The central truth to him was not the second coming of Christ, but the transformation of man's nature here and now by the indwelling of the Spirit, which was rooted in His religious experience. Out of that experience, interpreted in the light of contemporary Greek thought, was born a theory of redemption entirely unlike anything known to the early disciples. The theory involved the transformation of man's evil fleshly nature by the power of the Divine Spirit, Christ, with whom he is mystically united through faith. Thus united to Christ—a man dies with Him and the flesh dies with Him—rises with Him unto a new life in the Spirit, a life of holiness and freedom. Salvation is thus a present, not merely a future, reality; and the true spiritual resurrection of the Christian takes place now and here. The future resurrection will mean only the substitution for the present fleshly body, in which the Christian is compelled to dwell while on earth, of a new spiritual body fitted to the spiritual life which has already begun. Paul's theory involved also the Deity of Christ, through the mystical union with whom a man is transformed. It was in his doctrine of redemption that the historic belief in the Deity of Christ found its basis.

Into the details of Paul's thought we cannot enter further here. His system is found in all its essential features in the earliest of his extant writings—the Epistle to the Galatians—as well as in the latest (see McGiffert, ch. iii., also pp. 221 ff. and 376 ff.).

The peculiar type of thought of which Paul is the earliest representative appears also in a fragmentary way in the First Epistle of Peter; and the Fourth Gospel and First Epistle of John are dominated by it (so also the Epistles of Ignatius and Justin). The view of the early 2nd century is presented as speaking so extensively in the Fourth Gospel, it is the thought of the author rather than of Jesus Himself that appears both in Gospel and Epistle. In both we find the conception of the need of the transformation of man's nature by the indwelling of the Divine Spirit, through union with whom the transformation is effected. In spite of many divergencies between John and Paul, the general type of thought is the same, and the agreements far outweigh the differences.

In the other writings of the NT and in Clement's Epistle to the Corinthians an altogether different type of theology appears, more nearly akin to that of the early Jewish disciples. The influence of

APOSTOLIC AGE

629
Paul is hardly seen except in the common belief that the Jewish law has been abrogated, and that Christianity is open on equal terms to men of every race. To all these writers the gospel is the promise of salvation for those who keep the law of God. Salvation is a future thing, involving, in the thought of some, who retained the conception of the Jewish law, the promise of an earthly kingdom to be set up by Christ at His return and to endure for a season (Rev 20:1–6), and in the thought of all, the enjoyment of a blessed immortality in heaven. The principal condition of salvation is the faith of the God's covenant people as revealed by Jesus Christ. This must be preceded by repentance, and repentance by faith,—which means, primarily, the conviction that God will reward those who keep, and punish those who break, His law,—without which faith no one will repent and obey God's commandments. The work of Jesus Christ was to bring to men a knowledge of God's law and its sanctions, and by Him they would be judged. He was thus at once Mediator of salvation and Judge of the world, and the titles 'Saviour' and 'Judge' both come from Him. The exalted position which He occupied led Christians to think of Him as standing in a relation of peculiar intimacy with God, and in course of time to speculate about the origin and nature of that relation. Some thought it was quite natural to think that His supernatural endowment began at the time of His baptism, when He was called by God and equipped for His work by the gift of the Spirit (cf. the accounts of the baptism in the Gospels, esp. the tenth, given in Justin Martyr's Dialogue with Tryphon, 108, and also the testimony of Justin, ib. 48, and Eusebius, HE v. 28. 3). By others He was given a supernatural origin, being represented as the child of the Holy Spirit (as in the Gospels of Matthew and Luke); while still others pushed His origin even further back, and thought of Him as a pre-existent Being who had come down from heaven (thus, e.g., the Pastoral Epistles, Hebrews, Apocalypse, and Clement). Where this general type of thought prevailed, an adequate motive for assuming the Deity of Christ, such as acted upon Paul and those who felt the influence of his theory of redemption, was lacking. Endowment with the Spirit at baptism, supernatural birth, pre-existence—not of them involved Deity in the strict sense. It is not due to these Christians, but to Paul and his school, that the doctrine of the Deity of Christ finally became a part of historic Christian theology. The two types of thought that have been described developed for the most part independently of one another for some generations; but even in writings representing controllingly one or the other type, traces of the opposite tendency sometimes appear, and towards the close of the 2nd cent. the two were combined by Irenæus, bishop of Lyons, who carried the Deity of Christ, such as acted upon Paul and those who felt the influence of his theory of redemption, and union with the Divine—was permanently conserved, and became the basis of the sacramental system, which we find, as a matter of fact, already forming in 1 Co 10 and in Jn 3 and 8.

5. Ethical ideals. — To the early Jewish disciples, Christianity was primarily not an ethical but a Messianic movement. It is true that they believed, with John the Baptist and with Jesus, that righteousness was a condition of sharing in the blessings of the coming Kingdom (cf. Ac 3:28). It was because of the unrighteousness of the people that Jesus had not established it during His earthly life, and not until there was general repentance would He return (Ac 3:19). But they interpreted righteousness in the ordinary Jewish way as the keeping of the revealed Law of God in all its parts, and introduced little change in current ethical ideals. They saw in Christ the promise of an earthly kingdom of the Messianic Kingdom and their own participation in its blessings, but apparently they did not feel the need of new ethical ideals and new moral power, and they did not think of looking to Christianity for them. To Paul, as has already been seen, Christianity was an altogether different thing. He had experienced a serious moral crisis, and had passed through a severe moral struggle such as the earlier disciples had not known, and he found in Christianity, above all else, the satisfaction of his moral needs. Christianity, as he conceived it, was a religion offering to him and to every man a new moral power sufficient to transform him from an evil to a good being, from a sinner to a saint. His theory of redemption,—in fact it was commonly quite misunderstood,—but his conviction that Christianity has to do fundamentally with release from sin and with the promotion of holiness speedily became wide-spread. From him, too, came the sharp distinction between flesh and spirit which has dominated Christian thought ever since. Those who came after him were not, as a rule, so thoroughgoing as he at this point, but the idea of the Christian life as a moral conflict—the warring of two opposing principles, a fleshly and a spiritual—was common at an early date. Holiness thus came to be regarded as the principal mark of the Christian life, and sins of the flesh were esteemed the worst of all sins. Primitive Christian literature is full of exhortations to purity, and of denunciations of unchastity and lust. The lenient view taken of sexual immorality by the contemporary heathen world, and the close connexion between it and some of the religious cults of the day, doubtless had much to do with the fierce reformation of the subject in early Christian documents; but behind it all, even though seldom coming to expression, lay the Pauline contrast between flesh and spirit, and the conviction that impurity of the flesh drives away the Holy Spirit and makes His continued presence with the individual impossible. The appeal to the law of Christ—e.g., in addition to the many passages in Paul's own Epistles, He 10:26, Jude 14, and esp. the 2nd cent. writings—Hermas, Mand. v. and x., and 2 Clement 14. Paul himself was not an ascetic in any strict sense; he even opposed asceticism in matters of food and drink, when it appeared in Rome and Colosse (Ro 14 and Col 2); but hints of an ascetic tendency appear in his Epistles (Ro 8:13, 1 Co 9:22), particularly in connexion with the regulation of the relations between the sexes (cf. 1 Co 7:25). Not till the subsequent development of Catholic asceticism was already foreshadowed, though the process was still in its incipiency, in the Apostolic age (see the protest against it in 1 Ti 4:14). See ASCETICISM (Chr.).

Another controlling contrast in primitive Christian ethics, due in part to the same cause, in part to the prevailing expectation of the speedy return of Christ, was that between this world and the next,—promoting a spirit of unworldliness, or other-worldliness, which has remained a permanent feature of the Christian view ever since. It early came to regard themselves as a people called out of the midst of a corrupt generation and set apart as God's own; and to live as citizens of another world, to fix one's affections upon higher than earthly things, to be separate from this world and superior to its interests and concerns—this was
regarded as the truly Christian attitude (cf., e.g., 2 Co 6:7, Gal 6:1, Ph 3:19, Col 3:1, Ja 4:4, 1 Jn 2:6; and also the striking passage in the 2nd cent. Epistle to Diognetus, 5ff.). Not harmony with one's environment, as in classic Greek ethics, but revolt against it, and the carrying on of a life entirely detached from it—this was the Christian ideal already in the Apostolic age. And this spirit worked together with the controlling emphasis upon fleshly purity to promote asceticism, and ultimately, though not yet in the Apostolic age, its natural fruit—monasticism (cf. the prophetic remark of Paul in 1 Co 5:9).

The sharp contrast between the two worlds, and the recognition of the present world as evil, did not result in a desire to change existing conditions; no social revolution was contemplated. The division of society into rich and poor, master and slave, was treated as normal. The effort was made to introduce Christian principles into all the relations of life, but the desire to escape from the class to which one belonged to be free from was encouraged (cf. 1 Co 7:25). There is frequent emphasis in the writings of the age upon one's common duties as father, husband, wife, child, servant (Eph 5, Col 3, 1 P 2, 1 Th 6, Tit 2), and especially as citizen (cf. Acts 17, Tit 3, 1 Clement 60. 61). However evil the present world may be, the Christian is to walk in such a way as to give no just ground of offense to outsiders, is to show proper respect to all men, and to seek to conduct himself blamelessly with everyone (Ro 12:12-13, Ph 2:15, 1 P 3:9 etc.).

The ideal of social service and the desire to promote the spirit of brotherhood in the world at large had little place among the early Christians. Rather to gather out of the world a company of holy men, heirs of the promised Kingdom—this was their great aim (cf. the Eucharistic prayers in the early 2nd cent. Didache, 9, 10). It is true that love is frequently insisted upon in the writings of the Apostolic age, but it commonly takes the form of love for the Christian brethren, which is to be manifested in charity, hospitality, sympathy, concord, forbearance, tender-heartedness, forgiveness, humbleness, and in no limited way, it usually appears as only one of a number of virtues (cf. 1 Th 2:14, 2:12, 6:11, 2 Th 2:2, 3:13, Ja 1:27, 29). The place of supremacy given to it by Christ and after Him by Paul is accorded to it by no other writings of the age. The mention in 1 Clement 49ff. is hardly sufficient to justify us in making an exception of the author). But the influence of Jesus is seen nevertheless in the general emphasis—common to most of our sources—upon the virtues of gentleness, peaceableness, forbearance, and humility. Nothing is said of the duty of insisting upon one's rights and demanding proper recognition from others. Self-abnegation in one's relations with one's fellows, rather than self-seeking, is the recognized ideal.

But the contrast with the prevailing ethical sentiment of the Roman world was not confined to a difference in ideals. The Christians recognized the moral law, which was their duty to obey, as given directly by revelation from God, the revelation involving also an announcement of the future sanctions attending obedience and disobedience. There was thus a definiteness and compulsion about Christian ethics not commonly found elsewhere. Emphasis upon the hope of reward or fear of punishment of moral conduct, is very common in our sources (e.g. 1 Co 6:9-11, 15-16, 2 Co 9, Gal 5:6, Col 1, 1 P 3, He 2:10, 1 Th 6). But further motives are also frequently urged: to walk worthy of one's calling as God's elect, to please and glorify God, to be like Christ, to be true to one's opportunities and responsibilities, to help, not harm, one's brethren, to promote the good name of Christianity in the world at large (cf. 1 Co 6:9, Ph 2:15, Col 3, 1 Th 2:14, 1 P 1st 20, 21, 1 Clement 30). It means much also that the early Christians believed that Christianity was for all men, low as well as high, and that they recognized the moral possibilities even of the meanest. Christianity, indeed, supplied a new and mighty moral enthusiasm for the masses of the people, and in spite of the fact that already there is an indication of a division between two grades of morality, one for the common man and the other for the spiritual elite, was beginning to appear (cf. 1 Co 7 and Didache, 6).

So far as moral performance was concerned, it evidently left much to be desired. Of this the repeated exhortations and warnings in the Christian literature of the period are sufficient evidence, and we have direct record of some striking examples of immorality (e.g. Ac 5, 1 Co 5, 11, Jude 12). It is worthy of notice, too, that the Christians bore a bad moral reputation among their pagan neighbours, due largely, no doubt, to prejudice, but also in part well founded (cf. 1 Th 4, 2 Th 3, 1 P 2-3). It may be clear that this was not a morally clean movement, and that it involved a real moral improvement on the part of many of its adherents. The very insistence upon the matter in our sources shows that there was a sumptuous ethical ideal, and that the Christians themselves recognized its binding character; and we have abundant testimony to the effects of Christianity upon the lives of its converts (see not only the writings of the Christians themselves, but also the Christian writings of Trajan). In general, it may be said that the common notion of the Christians was that the aim of Christianity is to make men purer and better here, in order to a blessed immortality hereafter.

6. Development of organization.—In primitive Jewish Christianity no organization was needed in the beginning, for the disciples regarded themselves simply as heralds of the coming Kingdom. It might perhaps have been expected that they might have had a common language, but this they apparently did not do, and the failure to do so shows how little they regarded themselves as a distinct sect. Their desire was to convince their fellow-countrymen of Jesus' divinity Himself, and not to attract disciples, rather than to form a religious cult or society of its own. Certain Christians, particularly James the brother of Jesus, and others who had stood in relations of intimacy with Him, such as the Twelve, naturally had large influence in the Jerusalem circle, but there is no sign that this involved any official position or appointment. Some sort of an organization, however, the disciples had at an early date. As a brotherhood they felt it their duty to care for the necessities of the needy among them, and so a committee was appointed for the collection of aid (Ac 6). Beyond this we do not know that the early Jerusalem Christians went; but ultimately, after the final break with their unbelieving countrymen, the Jewish Churches were organized as independent institutions, though the exact form which the organization took is unknown to us.

In the non-Jewish world conditions were different. Here, too, the expectation of the speedy consummation of all this was clear, and so there was no need for the organization of the Christian movement. The Clientes that the Christian movement made any attempt to become a separate authority, and the conviction of the presence of the Spirit made human officials seem superfluous. The founding of churches began at an early date; and in them, although for some time leadership devolved naturally upon men specially endowed...
by the Spirit, such as apostles, prophets, and teachers. Gradually the necessities of the case led to a more formal organization, substitutes being required for the inspired men who might not always be present. Two classes of officials—bishops and their assistants, the deacons—existed in some churches before the end of the Apostolic age. They were not the threefold ministry of —bishop, presbyter, and deacon—belonging to the 2nd century.

7. Religious services. — The early Jerusalem disciples were devout Jews, and continued to observe the religious exercises and the religious services of their people. Their common religious life as Christians expressed itself not so much in formal services as in informal gatherings from house to house, where their community of feeling as disciples of Jesus and heirs of the approaching Kingdom found natural and familiar expression. Concerning the subsequent development within the Jewish Christian Churches we have no information. In the Gentile world all seems at first to have been informal; but the existence of hostility towards the religious practices and principles of the heathen world, taken by Paul and other early missionaries, made it necessary for converts to Christianity to repudiate, as a rule, their old cults, and to find their religious life wholly within the Christian Church. Thus it was inevitable that a Christian cult should early develop, to meet the need of those who were cut off from the religious exercises to which they had been accustomed. Christian worship became ultimately very elaborate and ornate, and took on many of the features of the cults which it displaced, but in the Apostolic age we discover only the beginnings of the development. Our information on the subject is almost wholly confined to the Church of Corinth, and there all was very simple and informal. The Christians met frequently for religious worship and mutual edification, and also at other times to partake of a common meal. The former occasions are referred to by Paul in 1 Co 14. At these meetings the Church first engaged in various religious exercises, prayer, praise, prophecy, teaching, speaking with tongues,—the whole service being controlled by the Pauline idea of the presence of the Holy Spirit, by whose influence the disciples were inspired to pray or prophesy or engage in other religious exercises. Paul does not express himself with corresponding freedom, and it is probable that the spirit of the Church and the need of edification were such that he was not allowed to engage in the worship. It is certain that some of those whose ranks the Spirit would take active part in the services. The freedom was not for the individual as an individual, but as a mouthpiece of the Spirit. At the time when Paul wrote, this liberty had already resulted in serious disorder, and the meetings had degenerated into scenes of confusion and discord. The ancient Church lay down two principles of far-reaching importance. The spirit of prophecy must be for the edification of those present, and all the exercises must be conducted with that end in view. Only such gifts must be employed, and only under such conditions, as will promote the good of all. But how can one refuse to utter what the Spirit imparts, even though it be unintelligible or unûntimely? In reply to this question, Paul stated a second general principle of equal importance with the first: 'The spirits of the prophets are subject to the prophets,' that is, an inspired man has the right to rebuke another in the use of his spiritual gifts, and to employ them only in such a way as to promote edification. The utterance of these two principles foreshadows the passing of the original freedom. If an individual fails to exercise discretion in the use of his gifts, he must be controlled by his brethren, and thus the way is prepared for a regular order of service, and for the appointment of certain persons to take charge of the meetings, and to see that all is done decently and in order. There is no sign that Paul himself contemplated such a result, but the stereotyping process ensued in course of time. In Rome, before the end of the 1st century, it was a matter of common law, and regularly appointed officials were in control of the services (cf. 1 Clement, 40 ff., 44); and before long the early freedom had given way almost everywhere to liturgical rules (cf. Didache, 9; Justin, Apol. 67; Ignatius, Magn. 7, Trall. 7, Smyrn. 8).

In addition to the meetings already described, the Christians at Corinth were in the habit of gathering from time to time to share in a common meal. At this meal they not only partook of food and drink for the ordinary purpose of satisfying hunger and thirst, but it was their custom, as was apparently the case among the early Jerusalem disciples, to eat bread and drink wine in commemoration of Jesus. At the time when Paul wrote, the meals had degenerated into scenes of discord and debauchery. Under these circumstances the Corinthians informed the Corinthians that the commemoration of Christ's death was the chief purpose of the meal, and not eating and drinking for their own sake; and he commanded them to satisfy their hunger at home, that they might be able to eat the body of Christ in the right spirit, and make the meal wholly a religious service (1 Co 11:23, 24). The immediate effect of Paul's attitude in this matter we do not know. The common meals continued in some quarters for generations, but ultimately they were everywhere given up, and the religious ceremony known as the Eucharist or Lord's Supper alone remained. In subsequent centuries it became the central feature of the Christian cult. A very elaborate ceremonial grew up in connexion with it, and it was regarded as the most sacred and mysterious of all religious rites (see art. AOAPE and EUCARIST).

In the Didache, 9, it is commanded that none except baptized persons be allowed to partake of the Lord's Supper. This is the earliest explicit statement of a general rule which, it may fairly be supposed, was commonly operative from the beginning; for the sacred meals of the early Christians can hardly have been shared by any not belonging to the Christian circle, and admission to it was commonly, if not generally, made by the ceremony of baptism (see art. BAPTISM).

8. Significance of the Apostolic age. — The Apostolic age is the period of Christian origins, and as such has a significance attaching to it no other in the history of the Church. It was during this period that the Church as an organization came into existence, and the foundations were laid upon which all subsequent ages built. Most of the tendencies that appear in Christian history are to be found at least in germ in the Church of the 1st century.

It is through the Apostolic age also that we get our knowledge of Jesus Christ. To it we owe not simply the written accounts of His life, but also the impression of His personality which constitutes an integral part of our picture of Him. It is true that the very change of emphasis from Christ's message about God to His personality as Messiah involved a changed interpretation of His controlling purposes, which has coloured Christian thought ever since. Nevertheless, it is through the Apostolic age that we approach Him, and from it that we get the information which enables us to understand Him in some respects better than His own disciples did. His person dominated the age, and the memory of His presence was a vivid and compelling reality. The days in which men who knew...
APOSTOLIC SUCCESSION 633

Him face to face were still alive and influential must always stand apart from other days in the regard of His followers.

On other accounts, too, the Apostolic age will always have peculiar religious value. As the period of beginnings, there is an incomparable freshness about it. Its vivid sense of the approaching consummation gives it an inspirational quality not found elsewhere; and in it were produced the classic documents of Christianity from which all Christians since have drawn religious sustenance. This fact attests enough to mark the age as one of the other ages in the history of the Church.

But another significance has been ascribed by Christian tradition to the Apostolic age. During the 2nd cent. there grew up a conception of Apostolic authority which has prevailed ever since, and has given the 1st cent. a worth and dignity to which the fact is that it is the period of Christian origins and nearest in time to Jesus Christ would not of itself entitle it. In the effort to repudiate the errors of the Marcionites and Gnostics, which were spreading rapidly in the 2nd cent., certain leaders of the Church began to insist upon the teaching of the Apostles, that is, the Twelve and Paul, as the sole standard and norm of Christian faith and practice. It was found that all the traditions of the Church had been channeled by Christ to be the founders of His Church, and had been endowed with the Spirit in such measure as to render them infallible witnesses to the will and truth of God. In the effort to define the teaching of the Apostles, as far as to show that they gave no support to the vagaries of Marcion and the Gnostics, it was claimed that they had left certain writings together constituting an authoritative Scripture canon, and had framed a creed containing essential truths of the Christian faith. Whoever would be a member of the true Church, and so an heir of salvation, must unfeignedly accept all that was taught both by canon and by creed. A sharp line of demarcation was thus drawn between the age of the Apostles and all subsequent generations. In the Apostolic age was found the standard for all time to come. The Apostles themselves came to be regarded as figures supernaturally endowed for the unique work of establishing the Church, above and beyond the ordinary frailties and limitations of humanity. Their official character was so emphasized that all sense of their individuality was lost. The differences between them were forgotten, in the conviction that as men they did not inspire; they must have been completely one. Apart from Paul, his writings militarily nothing of their several careers, of the regions where they laboured, and the work they did; and not until the 3rd cent., long after all authentic sources of information had disappeared, did tradition begin to busy itself with them as individuals—a striking illustration of the indiscernence to historic reality to which the 2nd cent. theory of Apostolicity gave rise. As a result of that theory, all that the Apostles were supposed to have taught, whether by precept or example, was assumed infallible authority; and nothing in doctrine, in polity, in ritual, or in practice could be regarded as Christian unless directly or indirectly of Apostolic origin. Development on all these lines was made possible by the belief that the Apostles had also instituted a perpetual Apostolic office for the government and guidance of the Church, the incumbents of which were endowed with the power to interpret infallibly the will and truth of God. Bible and creed were thus supplemented by the living voice of the Catholic episcopate, and the Church was enabled to conform to new conditions and to meet new needs as they arose, without ostensibly breaking away from its Apostolic foundations or giving up its theory of Apostolic authority. The Protestant reformers of the 16th cent. rejected the Catholic doctrine of an infallible episcopate, but the Catholic belief in Apostolic authority was retained, and the Bible was regarded as the complete and final expression of Apostolic teaching on all conceivable subjects.

If Revolution and inspiration were supposed to have ceased with the age of the Apostles, and the development that had taken place under the aegis of episcopal authority was repudiated, the effort was made to return to the conditions of the Apostolic age, and is in reality to conform to its principles and practices in all respects, nothing being regarded as truly Christian unless it enjoyed the authority of Apostolic precept or example. Cf. next article.

This belief still prevailed largely in connexion with doctrine, but in the matter of ritual and polity it has been generally abandoned. Moreover, the whole conception of Apostolic authority has been given up by many in modern times, and it has come to be widely held that the age of the Apostles was essentially like any other in the history of the Church, that it was confronted with its own problems and difficulties, and that the men who met and solved them were of like passions and limitations as all others.

This change of attitude has been of immense historical and religious value. A reality attaches to the Apostolic age and to the figures of the early leaders of the Church which they never possessed before. For first of all the Apostles held the period and a genuinely historical treatment of it have become possible, and from the religious experiences of the Apostles and their companions, now more clearly understood and appreciated, modern Christians are gaining new inspiration and instruction.

LITERATURE—Of older books on the Apostolic age should be mentioned: Neander, Geschichte der Pflanzung und Letzung der christlichen Kirche durch die Apostel, 1832 (Eng. tr. 1847); Bauër, Paulus der Apostel Jesu Christi, 1845 (Eng. tr. 1873 E.); Ritschl, Entstehung der altkatholischen Kirche, 1850 (2nd ed. 1857, entirely worked over) (in its second edition another epoch-making book setting forth the conception of early Christian history which was adopted by the Tubingen school in general), followed in 1858 by Das Christenthum und die christliche Kirche der ersten Jahrhunderte (Eng. tr. 1873 E.); Pjotanzung des ersten Jahrhunderts; Zeilalter, Entstehung der altkatholischen Kirche, 1856 (3rd ed. 1902; Eng. tr. 1894) (the most influential of modern works on this apostolic age); Pfeiderer, Das Urchristentum, 1887 (3rd ed. 1902), also Die Entstehung des Christenthums, 1905 (Eng. tr. 1906); McGiffert, Early Christian Church (Eng. tr. 1897 (rev. ed. 1899)); Bartlet, The Apostol Age, 1896; Wernle, Die Entstehung unserer Religion, 1901 (2nd ed. 1904; Eng. tr. 1908 E.); Deubner, Die urchristl. Gemeinden, 1902 (Eng. tr. 1904), and his brief sketch, Das apostolische Zeitalter, 1908 (in the Religiensgeschichtliche Volksbücher); Knopf, Das nach- apostol. Zeitalter, 1906; Ropes, The Apostol Age in the Light of Modern Criticism, 1908. The various standard lives of Paul, works on NT literature and theology, Church histories, and histories of doctrine, which deal more or less fully with the subject, is not necessary to specify.

APOSTOLIC SUCCESSION.—1. The principle of ministry in the NT.—That from the Apostles' time there has existed in the Christian Church a ministry exercising official functions by regular devotion of authority is a fact which few historians have disputed, if no claim had been made on its behalf by being a necessary part of the institution of Christ. But as this claim is put forward on behalf of Churches retaining the canonical orders, and also by Presbyterians, Apostolic succession becomes a significant part of the discussion, and it demands a closer and more vigorous scrutiny than would otherwise attend an investigation into the origin of the Christian Ministry. The theory is that Christ, having established a society primarily
visible and historical, gave to that society a recognizable unity and cohesion, not only by instituting in Baptism a sacrament of initiation, and in the Eucharist a sacrament of corporate life, but also by perpetuating its collective witness in a continuous and authoritative ministry.

This principle has often, and not unreasonably, been expressed in the form of a question, which - as for example - has been common to confuse the question of a true principle of ministry with that of the manner in which it has been realized in history. This has led to discussions on the Divine right of bishops as an exclusive form of Church government; and on the contrary, on the nature of a sacerdotal system and the devolving episcopal authority which the facts of early Church history, so far as we know, do not justify, and which is too formal to be adequately sacerdotal in any really sacerdotal and organic sense. Whatever the right, when, in opposing the Presbyterian theory, he contented himself with affirming that episcopacy "best agreed with the sacred Scriptures" (Exod. iv. 9, 10, see ch. vii. 11).

Or, again, the sacerdotalism of the third century has been un-warrantably introduced into the profession of faith, and whole systems of doctrine have been ascribed to it though it were a question whether Christ had set up a priestly caste, to which the mysteries of religion were entrusted, and without which spiritual life was not only hindered but impossible. These methods of thought have led to narrow and technical inquiries into the sacramental character of the Church's orders, the form and meaning of the rise by which they were conferred, and the precise conception of the various powers which from time to time the Bible has been content to convey. Such an attitude of mind, that of Bull Apostolorum Controversiae, condemning Anglican orders on the ground that the Ordinum of Episcopal Succession is the more ancient, is not the true point of view. Such excesses as the admission of the Bull that the Roman Church can ordain bishops in every part of the world, are due to the excesses in the profession of the Church by the Twelve (see below). The end of the 1st cent. witnessed a universal Church, but the doctrine of the Twelve was not questioned, but used in argument by writers like Irenaeus (ad. Haer. iii. 3, v. 40, 44, xii. 20) and Tertullian (de Pauci. b. 5, Apol. iv. 7, cf. Hefele, Geschichte der Kirche, iv. 23). In the early days of the 2nd cent. Ignatius withdraws the sacerdotal ministry 'there is no name of the church' (Tradit. 5). It is not, therefore, scientific to dismiss the doctrine of Apostolic succession because the statement of it has been inadequate or extravagant. This is true of most, if not all, Christian doctrines.

The object of the present article is to show what reasons there are, in view of the facts and principles of the NT, for believing that the great institution of the Church, and ascribing as rights to the government of Christianity. Whatever variations may have attended its transmission (as, e.g., in the case of the supposed right of the Alexandrian presbyters until the time of Bishop Hecaeus, A.D. 255), the fact surely is there that the ordinance of the Ep. 146 ad Evangeline; see Bigg, Ep. 146; Gore, Sch. and Minn., Note B; J. Wordsworth, Ministry of Grace, pp. 155, 156), the Church has preserved an unbroken continuity in all churches till the 16th century. The theory built up on this fact does not stand or fall with a sacerdotal conception of orders, but arises out of the facts of the Gospel narrative. 'We find the Church,' says Archbishop Temple, 'from the very beginning fingering the ministry of the Church, the deposition of Truro Cathedral.' Whatever may be the function of the Church, whether it be the teacher of truth or the dispenser of sacraments, the inquiry is not vitally affected. Where, as in the Western Church of the Middle Ages, great stress was laid upon the divine character of the Eucharist, Apostolic succession will appear mainly as a sacerdotal theory. Where, on the other hand, as in the age of the Gnostics, resistance to doctrinal error is the foremost consideration, the ministry will rather be held as the guardian of the Apostolic witness to evangelical truth. The two questions that are fundamentally important are: (a) Is the Church of Christ as the object of salvation prior to the individual Christian? (b) Does the Church as established by Christ present any of the features of a historical institution? It is only as these questions are answered that we can proceed to discover from history how the organic life of the society has been in fact developed.

Apostolic succession being accepted as a principle of the Church's life, we do not commit ourselves to any one theory of the reasons which led, in the evolution of the Church, to the establishment of the various orders of ministers. If the Seven of A 6 be, as is frequently supposed, the original primitive ministry, then it was only in the course of time that time by time have been engraved on the office in the course of history, the neglect of which the Hebrists have been by force of history and condition and origin. Whether a similar need for the due administration of the common purse (Hatch, B. L. 5), or the requirement of a sacerdotal system for the guidance of the Church in its community in its relations with the rest (Ramsay, Church in the Roman Empire, ch. 5, 3.), or the demand for a sacerdotalism of some sort or another to be the cause of the establishment of bishops; or whether, as is more probable, a complexity of causes, some more influential in one region than in another, produced the universal episcopate, the Church still remains a differentiated and structural body, not a promiscuous gathering of persons professing Christian discipleship and organizing themselves for the promotion of common ends. On the other hand, unless it be held that the Apostles exercised an absolute authority in the primitive Church, and that the clergy, or any one order amongst them, succeeded to all the functions of the Apostles and maintained the relation of authority to the rest, a theory of this sort is impossible. Such a theory presupposes, that a ministry regularly ordered from Apostolic times may adapt itself to democratic institutions as well as to those of Congregationalism, which, as Dr. Dale has shown, is in theory no more dependent on the popular will than any other form of government. A History of Empires its unique office, therefore, really resolves itself into this—whether Christ is merely the source of a spirit which has found for itself a body, or whether the body is pre-existing for the Spirit.}

A. IN THE Gospels.—The Gospel of Mark registers the stages by which the Christian community, with its characteristic message of forgiveness and enjoyment of the Holy Spirit, was established through the public work of the Christ (B.C. 28) to the reign of Jesus (A.D. 33), witnesses to certain facts of the Church's development which may not be ignored. The Nicene canons, A.D. 321 (No. 4), make careful allowance for the mere fact of universal custom, for the duty of the minister in all parts of the Church. In the first stage of the united episcopate, we are aware that the authority entrusted by Christ Himself to the Twelve (see below). The end of the 1st cent. witnessed a universal Church, but the doctrine of the Twelve was not questioned, but used in argument by writers like Irenaeus (ad. Haer, iii. 3, v. 40, 44, xii. 20) and Tertullian (de Pauci. b. 5, Apol. iv. 7, cf. Hefele, Geschichte der Kirche, iv. 23). In the early days of the 2nd cent. Ignatius withdraws the sacerdotal ministry 'there is no name of the church' (Tradit. 5). It is not, therefore, scientific to dismiss the doctrine of Apostolic succession because the statement of it has been inadequate or extravagant. This is true of most, if not all, Christian doctrines.

The object of the present article is to show what reasons there are, in view of the facts and principles of the NT, for believing that the great institution of the Church, and ascribing as rights to the government of Christianity. Whatever variations may have attended its transmission (as, e.g., in the case of the supposed right of the Alexandrian presbyters until the time of Bishop Hecaeus, A.D. 255), the fact surely is there that the ordinance of the Church is not questioned, but used in argument by writers like Irenaeus (ad. Haer. iii. 3, v. 40, 44, xii. 20) and Tertullian (de Pauci. b. 5, Apol. iv. 7, cf. Hefele, Geschichte der Kirche, iv. 23). In the early days of the 2nd cent. Ignatius withdraws the sacerdotal ministry 'there is no name of the church' (Tradit. 5). It is not, therefore, scientific to dismiss the doctrine of Apostolic succession because the statement of it has been inadequate or extravagant. This is true of most, if not all, Christian doctrines.

The object of the present article is to show what reasons there are, in view of the facts and principles of the NT, for believing that the great institution of the Church, and ascribing as rights to the government of Christianity. Whatever variations may have attended its transmission (as, e.g., in the case of the supposed right of the Alexandrian presbyters until the time of Bishop Hecaeus, A.D. 255), the fact surely is there that the ordinance of the Church is not questioned, but used in argument by writers like Irenaeus (ad. Haer. iii. 3, v. 40, 44, xii. 20) and Tertullian (de Pauci. b. 5, Apol. iv. 7, cf. Hefele, Geschichte der Kirche, iv. 23). In the early days of the 2nd cent. Ignatius withdraws the sacerdotal ministry 'there is no name of the church' (Tradit. 5). It is not, therefore, scientific to dismiss the doctrine of Apostolic succession because the statement of it has been inadequate or extravagant. This is true of most, if not all, Christian doctrines.

The object of the present article is to show what reasons there are, in view of the facts and principles of the NT, for believing that the great institution of the Church, and ascribing as rights to the government of Christianity. Whatever variations may have attended its transmission (as, e.g., in the case of the supposed right of the Alexandrian presbyters until the time of Bishop Hecaeus, A.D. 255), the fact surely is there that the ordinance of the Church is not questioned, but used in argument by writers like Irenaeus (ad. Haer. iii. 3, v. 40, 44, xii. 20) and Tertullian (de Pauci. b. 5, Apol. iv. 7, cf. Hefele, Geschichte der Kirche, iv. 23). In the early days of the 2nd cent. Ignatius withdraws the sacerdotal ministry 'there is no name of the church' (Tradit. 5). It is not, therefore, scientific to dismiss the doctrine of Apostolic succession because the statement of it has been inadequate or extravagant. This is true of most, if not all, Christian doctrines.
of His 'disciples,' who become a society resting upon the Lord's choice, no longer a passionate following united only by the uncertain bond of a common, though variable, devotion to one Master. Within this circle Jesus constitutes twelve (v.14); Luke adds 'whom also he named apostles' (6th). But the importance of this appointment is clearly seen by what in a narrative so concise as that of Mark cannot be without significance. He includes the list (33-37) repeated by each of the other Synoptists (Mt 10:2, Lk 6:13), and also in Acts (1:14). The words 'He made twelve apostles' (v.30) are noticeable. Christ created an office, the purpose of which was to extend His own mission by proclaiming the Kingdom and exercising authority in casting out the rival kingdom of Beelzebub (Mk 3:20-21, Lk 10:11-12). To this end those who now in a narrower sense become 'the disciples' are first to be 'with him' (38, cf. Lk 22:29), so that from this point the narrative acquires a different character, being a record, on the one hand, of growing opposition on the part of the Jews to the movement now definitely embodied in an organized society, and, on the other, of the training of the Twelve for thrones in the Kingdom which Christ has appointed to them (Lk 22:19). The call to the Twelve was preliminary, by a preparatory mission on which they sent throughout the villages of Galilee. Their commission corresponds to the stage which Christ's work has already reached. They preach repentance, cast out demons, heal the sick of the Evangelist (Mk 6:6) are worthy of attention: 'He began to send them forth' (vaeςτολαζaeπον). Just as the whole narrative is the beginning of that Gospel the history of which is still in process of its development, so here we have the beginning of the Apostolate, ultimately to become universal in its scope.

Two further preparatory stages are, however, necessary, before the Church can be built upon the Apostles (Mt 16:18; cf. Eph 2:20, Rev 21:14)—the confession of Jesus' Messiahship, and the disclosure of suffering and death as the channel through which the gospel of the Kingdom was to become the witness to a crucified and risen Saviour.

The critical conversation at Cæsarea Philippi is not referred to earlier by Mt. (16:16-20; cf. Mk 8:27-30, Lk 9:18-22). Mt. connects with the Apostolic confession the grant of the keys, and reveals the occasion as a further stage in the formation of the Church, against which the gates of Hades are not able to prevail. The authority actually committed to St. Peter was, according to Cyprian (de Unitate, 4), extended to the Twelve on the occasion recorded in Mt 18:18-20. It is, however, difficult to suppose that the Ecclesia in v.27 does not primarily refer to the local Jewish synagogue (see Hort, Christian Ecclesia, p. 9), especially in view of the words 'Gentile and publican'; and it is quite in accord with Mt.'s manner to string together utterances not originally related, therefore to interpret the Christian society, it would be quite natural to add, not only the promise of v.18, 20, but the charter of authority given in v.19, which is at least evidence that it was not regarded as applying to St. Peter only. And it is probable that the authority in question was extended to the Twelve, and that v.19, even if not originally spoken in that connexion, accurately expresses the fact. The Fourth Gospel, in recording one of the appearances of the risen Lord, represents Him as imparting the Holy Spirit to the disciples, and renewing the authority, not now in the old Hebraic form, but in language connecting the Apostolic ministry with the atoning work: 'Whosoever sins ye forgive,' etc. (Jn 20:22-23). The suggestion that Jesus here addressed not the Eleven, but a promiscuous gathering of disciples (see Westcott, Gospel acc. to St. John 22nd ed.) seems to be negatived by the whole course of the Johannine narrative. It is true that John notes the absence of Thomas (v.25). But he is specially mentioned as 'one of the Twelve,' and it is hardly to be supposed that an Evangelist who gives at great length the last discourses addressed to the Eleven only does not intend to convey the same impression to the end. Nor can the renewed commission to St. Peter recorded in 21:17-18 be regarded, in the light of the Denial, otherwise than as a specific restoration to a position that might else have seemed to be forfeited.

We find, then, in the Gospels a Christian society already in existence, within which the Apostles are an inner circle of more immediate disciples, recapitulating and intensifying the characteristics of the general body. This becomes apparent from the moment of the choice recorded in Mk 9:1, and is emphasized in the conversation at Cæsarea Philippi. Hort favours the view that the words 'whom also he named apostles' (RvM, cf. Lk 6:13) belong to the genuine text (Christian Ecclesia, p. 22). But it is clear that during the Lord's stay in Galilee the Twelve is the group selected by Christ. They are called the 'Twelve' (Mk 14:19), 'the twelve disciples' (Mt 20:24), and simply 'the disciples' (Mt 20:25). But the name 'apostles' is also given to them, and the second reason for their selection as the distinct body of the Evangelist (Mk 6:6) are worthy of attention: 'He began to send them forth' (καὶἀποστέλλειν). Just as the whole narrative is the beginning of that Gospel the history of which is still in process of its development, so here we have the beginning of the Apostolate, ultimately to become universal in its scope.

When we reach the last Passover, the importance of the narrative attains its height. From the conversation at Cæsarea, the training of the Twelve takes a course clearly differentiatating itself from others. The acknowledgment of Messiahship is not to be the complete witness of the disciples. It prepares the way for a fuller disclosure. From that time 'he began to teach them' (Mk 8:26, cf. Lk 9:6) combine and unite, and which the narrative anticipated a more spiritual glory than that of the Jewish Messiah, to be attained through the Χριστός about to be fulfilled at Jerusalem (Lk 9:22). The experience of the Last Journey had its appropriate sequel in that of the Upper Room. Mark says that 'when it was evening, he cometh with the twelve' (14:17); Mt., 'that he was sitting at meat with the twelve disciples' (26:30); Lk, significantly styles them 'apostles' (22:30); while St. John introduces the narrative. 'Then narrowed he his audience to the select company 'his own,' whom Jesus 'loved unto the end' (13). Bearing in mind the general purpose of Mk. (see above), we shall naturally regard his account of the Supper from the point of view of the establishment of the Christian community. It must be remembered that the Evangelist was everywhere celebrated in the Christian congregations as the characteristic act of Church fellowship. Regarding the events of the Upper Room, Mark confines himself, with the single exception of the indication of Judas as the betrayer, with the least possible account of the institution of this rite, as the act by which the Christian community is formally incorporated (14:23). The representative character of the Twelve is indicated by the dependence in which
the Church is thus made to stand upon them. The Eucharist became theirs in virtue of the conditions under which it was first celebrated; and only through them, and as they transmitted it, does it pass to the community. This is in accordance with the relations brought out by John. Those who are hereafter to believe are to do so through them (18). The Eucharist reaches out through the disciples, who are to bear the primary witness, to those who are meditatively chosen by Christ out of the world.

The post-Resurrection narratives do but confirm the report of incommunicableness of the Twelve which culminates in the seclusion of the Upper Room. The narrative of Mark is cut short; but the command given to the women, themselves Jesus’ disciples, to ‘tell his disciples and Peter’ (16) of the empty tomb, shows the Eleven as a distinct body. Mt. gives the commission to make disciples and to baptize as entrusted to the ‘eleven disciples’ (28-29). Lk. shows other disciples gathered at Jerusalem when the risen Christ appeared to them (24). But the Eleven are distinguished from them as a whole in the rest by a specially apposite mention of as they ‘that were with them.’ Even if, therefore, the appearance recorded in Jn 20:19-23 refer to the same occasion, the words ‘Receive ye the Holy Spirit,’ etc., must also certainly have a special bearing on the Eleven as a distinct body.

B. IN THE ACTS.—With the Acts we reach a further and a final stage in the foundation of the Christian society. The gospel of the Kingdom now becomes the organized witness to the Resurrection. The ministry of reconciliation finds its full expression in the proclamation of forgiveness through the Cross. This we find specially committed to the Apostle (12: 5-25, 101)—a term which gains a correspondingly determinate meaning. The list of the Eleven is again given in connexion with this developed function (118), and the choice of Matthias is based upon the necessity of completing the number of the official witnesses (v. 21). The phenomena of the early chapters are precisely what a study of the Gospels would suggest. The Church enters upon its career as an organized body, the Apostles being differentiated from the brethren. From the first the brotherhood continues in ‘the apostles’ teaching,’ and in ‘the fellowship’ thus established (26). That this relation did not involve some direct apostolic delegation appears in the choice of Matthias and of the Seventy. In the former case, two were ‘put forward’ (12), apparently by the whole assembly, the final decision being reserved for the unseen though present Master (v. 24). In the latter, the brethren were expressly charged by the Apostles to ‘look out’ from among themselves seven men (6), who, after prayer, were set apart with the laying-on of Apostolic hands (v. 6). All the elements of ordination are here. At the outset of ministerial appointment it would seem as though John wished to give the Church of His disciples the order of the world as God’s heritage. They do not even exercise a veto. The responsibility of supplying the need of ministrations, as the circumstances of the Christian community disclose themselves, belongs to the society itself. The laying-on of hands is the sacrament, a form of covenantated prayer (Calvin, Instit. iv. 19, § 31: ‘I admit it to be a sacrament in true and legitimate ordination’). Those set apart represent, not the Apostles, but Christ. The Seventy have been traditionally regarded as the first deacons. If this be so, it is obvious that what subsequently became the third order of the ministry was not explicitly appointed by Christ. The general impression conveyed by Acts is that of a society extending and organizing itself as opportunity offered or circumstances suggested. But the laying-on of hands in this instance represents a principle con-
charging a sort of general episcopate and including
the Twelve, whose precise relation to the wider
Apostolate is not clearly defined. Within these
communities are exercised certain spiritual gifts,
among the possessors of which the prophets seem
to approach most nearly to a regular order, but are
not necessarily so, like presbyters, lay apostolic
dele-gates. There is nothing to indicate any method
by which the organic structure was to be main-
tained after the decease of the Apostles. The
scope of the book carries us no further than what
we now see to have been but a preliminary stage
in the accomplishment of Christ's purpose and
command—that the Apostles should be His wit-
tesses to the uttermost parts of the earth. When
the writer had brought St. Paul to Rome, the
task, as his contemporaries would view it, was in
a sense fulfilled. A delay of centuries in the return
of Christ visibly to reign in the midst of His people
was not contemplated. That is the true answer
to the suggestion that the method of continuing a
Christian ministry was among the things pertain-
ing to the Acts of the Apostles. There are still
in the Church today, not as a constituent, but to
the disciples during the Forty Days. This could
not well have been without a revelation as to the
postponement of the restoration of the kingdom
to Israel, 'which it is clear the primitive community
does not recognize, but supposes the office itself beyond the lifetime of the original
witnesses was, in the nature of the case, impossible.
The terms of their appointment involved personal
witness to the facts of our Lord's life. The
question, therefore, of method of ordination did
not arise until it became probable that the Apostles
were not to tarry until Christ came.

C. IN THE EPISTLES.—The Epistles confirm,
and in some points render more explicit, the testi-
mation of the Gospels, and in their relation to the
Pauline group, where the corporate aspect of
Christianity is always prominent. But the
Epistle to the Hebrews enjoins obedience to 'them
that have the rule,' clearly implying accountability,
not to the congregation, but to that 'great shepherd
of the sheep' 1 to whom reference is immediately
made (He 13:17). And as the general tendency
of the Epistle is to isolate the eternal priest-
hood of Christ in contrast with the transitory and
temporary priestly office of the NT, it is then to
remember not only that the body of
Christian believers is here represented as a flock with many
under-shepherds, but that the same idea is defi-
nitely presented under the figure of the house, in a
more historic and antithetical manner, and the
developed view of the ministry (3:4). St. James
apparently witnesses to a part of the Apostolic
commission, viz., the healing of the sick, as vested
in the presbyterate (5:17); and St. Peter develops
the conception of the Christian congregation as a
flock entrusted to the presbyters under the Chief
Shepherd (1 P 5:4; cf. Mt 28:19, Lk 10:22, Jn 21:15-17,
Jude 24, Ps 80 etc.). And it is noticeable that,
calling himself a 'co-priest' (P), he regards the
priesthood as inherent in his own office, and you
appear in that of Christ Himself as the 'Shepherd and Bishop of souls' (2:29). The Apocalypse, being
mythical, has little to do beyond the clear fact
that the twelve Apostles of the Lamb are indi-
cated as the foundation-stones of the heavenly city (21:14). The angels of the Seven Churches are almost
certainly their mystical representatives, not their
earthly presbyters (see Swete, *Apocalypsis*, p. 21 f.).

But the conception of an ordered life and organic
unity, inseparable from the idea of a city, is here,
and not the NT. Saved.

St. Paul in his earliest Epistles recognizes the two
lines of authority, which subsequent ages have never
succeeded altogether in adjusting, and which respec-
tively represent the historical and the evangelical
elements in the Church. On the one hand, there
must be no quenching of the Spirit through con-
tempt of the free ministry of prophecy (1 T 5:21); and
on the other, Christians are to know and esteem
those that are over them in the Lord (v. 15). The
importance of the latter becomes clearer in the
Thessalonian Epistles. The Apostolic Ministry
in Philippians, pp. 264-264, are
with
the consequent reversion to Jewish, if not pagan, ideas.

The lines respectively elsewhere Jude 12, in
witnesses to a Body.

That is the true answer to the suggestion that the method of continuing a
Christian ministry was among the things pertain-
ing to the Acts of the Apostles. There are still
in the Church today, not as a constituent, but to
the disciples during the Forty Days. This could
not well have been without a revelation as to the
postponement of the restoration of the kingdom
to Israel, 'which it is clear the primitive community
does not recognize, but supposes the office itself beyond the lifetime of the original
witnesses was, in the nature of the case, impossible.
The terms of their appointment involved personal
witness to the facts of our Lord's life. The
question, therefore, of method of ordination did
not arise until it became probable that the Apostles
were not to tarry until Christ came.

C. IN THE EPISTLES.—The Epistles confirm,
and in some points render more explicit, the testi-
mation of the Gospels, and in their relation to the
Pauline group, where the corporate aspect of
Christianity is always prominent. But the
Epistle to the Hebrews enjoins obedience to 'them
that have the rule,' clearly implying accountability,
not to the congregation, but to that 'great shepherd
of the sheep' 1 to whom reference is immediately
made (He 13:17). And as the general tendency
of the Epistle is to isolate the eternal priest-
hood of Christ in contrast with the transitory and
temporary priestly office of the NT, it is then to
remember not only that the body of
Christian believers is here represented as a flock with many
under-shepherds, but that the same idea is defi-
nitely presented under the figure of the house, in a
more historic and antithetical manner, and the
developed view of the ministry (3:4). St. James
apparently witnesses to a part of the Apostolic
commission, viz., the healing of the sick, as vested
in the presbyterate (5:17); and St. Peter develops
the conception of the Christian congregation as a
flock entrusted to the presbyters under the Chief
Shepherd (1 P 5:4; cf. Mt 28:19, Lk 10:22, Jn 21:15-17,
Jude 24, Ps 80 etc.). And it is noticeable that,
calling himself a 'co-priest' (P), he regards the
priesthood as inherent in his own office, and you
appear in that of Christ Himself as the 'Shepherd and Bishop of souls' (2:29). The Apocalypse, being
mythical, has little to do beyond the clear fact
that the twelve Apostles of the Lamb are indi-
cated as the foundation-stones of the heavenly city (21:14). The angels of the Seven Churches are almost
certainly their mystical representatives, not their
earthly presbyters (see Swete, *Apocalypsis*, p. 21 f.).

But the conception of an ordered life and organic
unity, inseparable from the idea of a city, is here,
and not the NT. Saved.

St. Paul in his earliest Epistles recognizes the two
lines of authority, which subsequent ages have never
succeeded altogether in adjusting, and which respec-
tively represent the historical and the evangelical
ministry of reconciliation' ('Co 5:19) never in the NT loses its ethical character. There is nothing to suggest that the performance of any particular rite is in principle restricted to an order, or that a ceremonial investiture must precede the exercise of functions precisely defined and limited. On the other hand, it is something more than a merely moral authority, dependent upon the results, with which the ministry of the NT is seen to be clothed. It is a principle of organic life.

2. The principle as preserved in the facts of Church history. - Passing from the NT to ecclesiastical development, we observe that what were the opinions of ancient authors on the subject of the ministry, but how as a matter of fact the principles embodied in the Gospels, continued in the Acts, and attested by the Epistles, were retained in the succeeding phases of the Church life. How then, what is seen to be a structural unity preserved from degenerating into a concourse of unrelated units? The Apostolic teaching is preserved in the canon of Scripture, in the formation of which Apostolicity is a variable test. There is the corresponding mark of Apostolicity in the structure of the Christian society?

A. WRITINGS OF THE SUB-APOSTOLIC AGE. - (1) The Epistle of Clement (c. 91 A.D.), in which, as in the Didache, there is no trace of diocesan episcopal practice being still, as in the NT, apparently synonymous with περιστροφή, definitely asserts the Apostolic character of the ministry as succeeding to a pastoral authority.

The passage is xlv. 1-3: 'And our Apostles knew through our Lord Jesus Christ that there would be strifes over the name of the bishop's office. For this cause, therefore, having received communion of Him and aforesaid person (περιστροφή) and afterwards they provided a continuance, that if these should fall asleep, other approved men should succeed to their ministration.' The translation and readings are those of Lightfoot in The Apostolic Fathers. A variant, which Gore adopts, and which makes the passage more distinctly 'episcopal' in character, is the Church's and the Ministry's Order (ch. vi. 4). In either case, the writer seems to have believed the apostolic principles of the Apostles of the Apostolic Age was, as it were, sanctified by Christ. His words show that in the West, where the method of 'continuance' is less distinctly traceable than in the communities of Asia Minor, the principle of Apostolic Order was unquestioned. The facts of the Church's life are stated in terms of succession. The Apostles 'appointed their firstfruits to be bishops and deacons' (xlii. 4). 'Christ is from God, and the Apostles are from Christ' (ch. 3). What is thus handed on is a ministry of the gospel and a priesthood of offering (xlv. 1, xii. 2-5, xili. 1-4). The latter phrase, as also the comparison between the resistance of the Corinthians to their presbyters and the rejection of the Korah(?) agents by the Jews (xliii. 4), lends itself in a hierarchical atmosphere to a sacral interpretation, but for Clement himself the point of the analogy is not that the Korah(?) agents are a pre-bishops, but the 'scepter of God . . . came not in the pomp of arrogance or of power, but in the beauty of the law, the body, the soul, the life, of an organic universe (xxxi.),' and Christ embodies the will and mind of the Creator (xxxvi.). As in St. Paul, nature is the true sanction of a Christian society in its laws as a whole, as well as presbytery (xxxvii. etc.). The consent of the whole Church is as much an expression of the Spirit as Apostolic appointment (xlii. 3). Not passive obedience, but observance of the limits which his 'ordinances' impose upon him, is the duty of every member (xl. 3-5). The relations of the several ranks are moral rather than technical.

The Epistle does not suggest a rigid system by which the performance of sacred rites is the exclusive function of a mediatordial class. But it is unquestionably plain that for Clement, the Christian society is prior to the individual, and that the continuity of its vital relation to Christ depends on the persistence of facts of Church life not dependent on the choice of the several members.

The concept of Ignatius, not altogether easy to appreciate, because words and phrases are apt to be understood in the light of later developments. Unlike Clement, he nowhere explicitly states the principle of succession, but within the scope of his epistle a ministry of three orders is the type of Church government to which he assumes elsewhere, is of doubtful force in view of the statement in Trall. 3, that 'apart from these there is not even the name of a church.' Though there is little reason to doubt that monepiscopacy was established in the Churches of Asia by St. John, as Tertullian and others assert, and though the frequent association in Ignatius between obedience to the constituted ministry and observance of the Divine commands (Magn. 4, Phiilad. 4, Smyr. 5) suggests that he regards this action of the Apostle as resting upon the explicit injunction of our Lord with respect to the permanent organization of His body, we are not justified in concluding, apart from direct evidence, that any such injunction was in fact given. The same is true of the four Evangelists; but his conviction of the mystical necessity of a fourfold Gospel (adv. Her. 11) is parallel to the declaration of Ignatius, that Christ is the mind of the Father, even as the 'bishops that are settled in the farthest parts of the earth are in the mind of Jesus Christ' (Eph. 3). - A mystical inference from the facts of Church life which has no certain value for history. This vein of mysticism in Ignatius must never be forgotten in estimating the evidence of his letters. Nor is his argument emphatic assertions of apostolic succession. He asserts Ignatius appeal only to the word of Apostles, or of Christ Himself, but to the moral and spiritual results of schismatic action already apparent in the current experience of the Church.

The main idea of Ignatius is unity. 'Unity is the bond of every grace, of every apostolic letter' (Magn. 7, 13, Phiilad. 5). All things are from God and unto Him (Eph. 14, Phiilad. 9). This is realized primarily in the relation of the Father and the Son, and of God to the world. 'The purpose of Christ is not to unite men to God through Himself (Eph. 5, etc.). This result Ignatius in his own case feels to be not yet fully attained. He only begins to be a disciple (Eph. 9). Martyrdom he believes to be necessary that this union may be consummated, and that he may 'attain unto God' (Eph. 12). This rationale is thus no mere technical association through external bonds, but involves the moral elements of faith which is the bond, and love which was directly sanctioned by Christ. His experience. The Divine method by which the union with Christ is achieved is the Incarnation, expressed in the four facts of the Virginbirth, Baptism, Passion, and Resurrection of Jesus (Smyr. 1); those limitations of hard fact which alone give reality and assurance to Christ's work (Magn. 11; ἕκαστος ἕκαστος ἕκαστος ἕκαστος ἕκαστος, without which there is mere appearance (Smyr. 2: τὸ λόγον). Without this acknowledgment there is no 'assurance' (Magn. 13) in Christian life. It is they who refuse to receive these cardinal facts that are a mere 'appearance' (Trall. 10: οὕτως ὠφει ὁ λόγος ὄφθαλμοι). Here is the second appeal of the letter. The truth is that the Church combats in the Epistle to the Colossians, which appears in a yet more virulent form in the Pastoral letters, and which is uncompromising in its worship. "in the name of the disciple who saw the blood and water flow from Jesus' side, had spread like a moral pestilence throughout the Church." Yet, while the retention of the pure gospel had been guaranteed by continuance in the 'apostles' doctrine and fellowship,' so now a more faithful adherence is enjoined. The whole is still committed to the bishop (Eph. 6, Trall. 2, Phiilad. 7, Smyr. 8), with the presbyters (Eph. 4 and passion) and deacons (Magn. 13, etc.) established everywhere in the communities as constituted by the Apostles themselves, give the only pledge of that union with Christ through the Incarnation by which the believer attains to God (e.g. Trall. 7).

We must observe: (a) That acceptance of the limitations imposed by loyalty to a duly constituted Christian society follows, in the thought of Ignatius, the thought of the Apostles, and the Christian society is prior to the individual, and that the continuity of its vital relation to Christ depends on the persistence of facts of Church life not dependent on the choice of the several members. (b) Obedience to episcopal authority is represented as a moral obligation rather than as a technical condition of salvation. To follow one who makes a schism (Phiilad. 3), or to live without giving a due obedience to the Bishop of Rome (Romans 13:1) signifies to follow not the Bishop of Rome, but Ignatius, according to the principle of the Churches of Asia (Smyr. 8: εἰς ἂν ἔξω τῶν ἐκκλησιῶν τοῦ ἔθνους κ. τ. λ.), the spiritual importance of which is apparent in the case of the latter—a sacrifice of unity, — the neglect of the principle resulting in decline of faith and love. (d) Validity, i.e. assured spiritual
efficiency, admits of degrees. Disregard of the
ministry is the beginning of that spiritual de-
cision which is perfected in the denial of the
Son. ‘Invalid’ does not mean null and void.
There is nothing to show that persons baptized
‘outside the bishop’ would have been treated as
unbaptized. bishop as applied to sacraments must
be interpreted in view of the wider use of the word
and its cognates in these epistles (Magn. 4, 7, 13).
The best translation will, perhaps, be ‘regular’ or
‘standard.’ (e) While we must refrain from
fixing upon Ignatius a conception of the Church
which reduces it to a nicely adjusted hierarchical
machine, the principle of his thought warrants us
in claiming him as an undeniable witness for the
continuance into the sub-Apostolic age of a society
duly subordinated, in the facts of its exterior order
no less than of its spiritual life, to that presby-
tery which the Father’s incarnate Representative
gathered around himself in the persons of the
Apostles. Priscianic powers of association, the
alternative to structural continuity, are foreign to
his whole conception. In that sense Ignatius is an
impeachable witness to Apostolic succession in the
2nd century.

(5) Polycarp, whom his friend and pupil Irenaeus
describes as having been appointed bishop of Smyrna
by Apostles (Iren. iii. 4), writes to the Philippians,
like Clement to the Corinthians, and Ignatius to
Ephesians or Trallians, a letter addressed officially
to the whole Church, not only in his own name,
but also in that of his predecessors. This
equivocal as to the existence of a bishop at
Philippi; for, though mention is made only of
presbyters and deacons, the former are not called
bishop as in the Pauline Epistle to the same
Church (Phil. 1, 1). But Polycarp’s addressing
himself to the whole Church, not only in his own
name, but also in that of his predecessors, is
not without significance. It was the
tenacious adherence to the original conception of
the Church, of which the episcopate is the
exterior form, that constituted for Polycarp and
the Church he addressed a bond of unity.

APOSTOLIC SUCCESSION 639

The teaching of Polycarp, along with the Didache,
represents a conception of the Church in which an
unequivocal basis is laid for the administration of
the sacraments, and, in most instances, for the
higher order of the episcopate. This same
conception is also portrayed in Polycarp’s
testimony to the existence of a bishop at
Philadelphia, in the Didache (2, 1), with
Papias (Hist. Orig. vii. 37. 2), and with Justin (Apol.
14) in a form of the statement that the Church
evolent to be addressed as a whole, in its
continuity, and to be considered as a unity in
which both the powers constitute the Church.

Polycarp, who is known to have suffered
in Smyrna, was probably acquainted with the
Didache. In the Didache the bishop is
portrayed as the representative of Christ,
and the Church is described in terms
that are suggestive of the economic
conception of the Church as described
in the Didache. In the Didache the bishop is
portrayed as the representative of Christ,
and the Church is described in terms
that are suggestive of the economic
conception of the Church as described
in the Didache. The Didache, in
its economic conception of the Church,
and the bishop as representative of
Christ, is paralleled in the teaching of
Polycarp, who, according to Irenaeus,
describes himself as the successor of
Apostles and bishops.

The Didache, in its economic conception of
the Church, and the bishop as representative
of Christ, is paralleled in the teaching of

ultimately found to be departures from primitive Christianity.

(1) To describe Montanism as an innovation, in the sense of a conscious rejection of an authoritative system, is to misconceive the situation. Hitherto the inroads of Gnosticism had been met by insistence on submission to the principle of unity in the organization of the Christian society. The appeal of Ignatius was developed by Irenaeus (iii. 2, 3, 4, 40) and Tertullian (De Præscript. 30–32), who pointed to the episcopal succession as a guarantee for the preservation of Apostolic identity. Nor were they manifesting the lone in the contention. Hippolytus speaks of bishops as ‘successors of the Apostles’ and guardians of the word (Har. proem. p. 3). Hegesippus, again, after speaking of the Corinthian Church as continuing ‘in the right word’ till the episcopate of Primus, says that he had made a list of the succession (θαυματουργοῦ) up to Anicetus (ap. Euseb. iv. 22). Such evidence, together with that of the ‘Church Orders,’ which belong to the same period and in which we find careful regulations for ordination (e.g. the Canons of Hippolytus), points to the importance attached to the structural unity of the Church by men who, inheriting the spirit of the Fourth Gospel and the Pastors, regarded Christianity as a life manifested in facts (1 Jn 1), not a system of knowledge. Montanism was manifestly contrary to the nature of the position. Writers like Tertullian fell back upon what seemed to them a more sure defence of orthodoxy in the spirit of prophecy. As with Novatian in the next age, who was careful to obtain a regular consecration to the episcopate, there was no separation from the external form of the Church. It was the Church itself that condemned them. Nor was the opposition to Montanism based on the illegitimacy of prophecy when unconnected with any outward delegation of authority, but simply on the nature and circumstances of the utterances themselves, which were pronounced on their merits to be not of God. In the continuance of prophecy there were things inconsistent with the authority of the ministry, and anyone who denied the claim that Montanus might in its issues become fatal not only to a canon of Scripture, but also to the historic fabric of the Christian society, it was only the authority to absolve sinners and repress prophecy that was involved. The ‘Spirit’ was not a rival to the historic body, but rather the source of authority within it. And the immediate expectation of the Parousia, characteristic of the Montanists, absolved them from the necessity of thinking out the problem of continuity. There is no evidence of the creation of a fresh local ministry, as with the Irvingites, by the voice of the Spirit. There were Montanist bishops and presbyters, as subsequently there were Arians or Syrian clergy. But though the question was brought to a final issue, the problem was essentially the same as had been involved in Gnosticism, and it was met by the Church in the same manner. Just as there is a ‘form of doctrine,’ an Apostolic gospel, a written word, so there is a historic structure, ‘the witness and keeper of Holy Writ,’ ‘the pillar and ground of the truth.’ This was involved in the claim to ‘try the spirits’ made on behalf of the Church acting through its organization.

(2) Novatianism produced a definite theory of the facts of organized Church life in Cyprian’s De Unitate. To discuss the historical value of the distinctive claims of the episcopate put forth in that treatise does not fall within the scope of this article. It represents the facts as they were in the 3rd cent., and as in the mind of the writer they had been from Apostolic times. As a vindication of the Apostolic authority of the Church acting in a corporate capacity, it is in general agreement with Ignatius, Irenaeus, and the opponents of Montanism. Its weakness lies in the impetus given to a ministerial sacerdotalism binding the activity of the Spirit to official capacity (see Lightfoot, Phil. H. p. 268). So far as Novatianism, following in the wake of Montanus, was resistance to growing oficialism, it stood for the freedom of the gospel. The movement involved: (a) deference to the confessors, who, as martyrs, were acknowledged as the successors of the prophets had been in word; (b) supersession of such bishops and other ministers as did not manifestly fulfill certain spiritual conditions. The Roman Cornelius was accounted no bishop, because, like Callistus, he was held to be deficient in a genuinely spiritual gift. This was in effect to make the voice of the Spirit, not Apostolic succession, the decisive Church principle. Against it Cyprian elaborated his famous doctrine of the episcopate as the true centre of unity. The Apostolic authority, first entrusted to the college of Apostles, was transmitted to each bishop in turn. The bishops (de Unit. 4), was transmitted by succession from them to the other eleven Apostles (de Unit. 5). Each bishop, representing the particular Church which he ruled, possessed an undivided authority, though in practice limited by a similar jurisdiction in the care of souls. The episcopate being regarded as exercised jointly and severally (‘Episcopus unus est cuius singulis in solidum pars tenetur,’ 5).

It is not easy to see precisely how Cyprian expected this principle to work out, and difficulties arose within his own lifetime in the controversy with Stephen of Rome concerning re-baptism. But there is no uncertainty that Cyprian did not conceive of the Church as a society founded by Christ, which from the first was entrusted to the college of Apostles, which reproduces itself from age to age in the universal college of bishops. Though, however, the idea of exact constitutional limitations had not yet arrived, Cyprian does not appear to have contemplated an episcopal absolutism, for in practice he allows, and even insists upon, something in the nature of an organic exercise of authority on the part of the several dioceses, giving due recognition to presbyters, deacons, and even the laity. His synodal decisions (Ep. xlvii. 1, xxxviii. 1, liv. i, xiv. 2). The right of the laity to withdraw from the communion of a sinful bishop is recognized (Ep. lxviii. 2). To the voice of the People the bishop himself owned his position. But the tendency of this explicit theory and the character of the age which needed a discipline to be applied towards the identification of the Spirit’s work with official acts assigned to the various grades of an accredited hierarchy. If Cyprian applied a narrow human criterion to the Church, the Spirit, by refusing to recognize His presence, when such manifestations as the church of Cyprian was spiritually deprived could discern, were found to be absent; so imperfectly did Cyprian understand the limits of the principle, by which he opposed the schism, that his hard-sell conception of the Church gave rise to a new Novatianism, in that bureaucratic idea of Christian society which led him to refuse recognition to the baptism of schismatics, which denied spiritual validity outside its own borders, and which finds its latest development in what Cyprian would have vehemently resisted—Ultra Montanism and papal infallibility.

(3) The earliest form in which this exclusiveness organized itself was Donatism, appealing to the authority of Cyprian for the re-baptizing of all who had been sprinkled in Gnosticism. Cyprian, however, in one important respect, for whereas the latter inconsistently declined to break communion with bishops who, unlike himself, received Novatianists without a fresh baptism, the Donatists refused to recognize as Christians any who held the validity of what, as they viewed it, was a schismatical sacrament. It was claimed that, inasmuch as the Holy Spirit belonged to the Church, schismatics did not possess the gift, and therefore could not convey it. Against this narrow sacerdotalism Augustine, while not invalidating the principle of authority as expressed in the historic ministry, affirmed a conception of the Christian society wide as the universal purpose of Christ. The Church is catholic; no good thing can fall outside its unity. If there is no salvation outside
the Church, the Church for this purpose cannot be interpreted in a merely constitutional sense. The 'validity' of baptism depends, not on the authority of him who administers, but upon Christ's intention. How far-reaching this principle is does not at once appear.

For there means, as with Ignatius, not 'genuine' but 'regular,' is clear from the fact that Augustine did not regard the option as spiritually operative so long as the recipient adhered to Donatism. But while in Ignatius there is nothing to show whether baptism administered without episcopal sanction would be treated as valid, Augustine asserts that it may not be repeated. But the hindrance to grace is the absence of charity, which in experience is found to be in opposition to unity and love, not the formal exclusion from consecrated channels of those who create division. What Augustine failed adequately to realize, probably owing to the evident historical fact that on the whole the 'fruits of the Spirit' were conspicuously lacking among the Donatists, was that responsibility for the parish is usually divided, and that it is difficult to determine which of two contending parties is schismatic. It is this fact that makes apparent historical parallelisms seriously defective when applied to later Donatism. What is of permanent value is the recognition that schism is a moral fault, not an ecclesiastical situation; that it is to be recognized in spiritual experience and healed by the appeal to conscience, not refuted by technical argument. A third point to observe is that apparently the validity of a sacrament is not dependent on the order of the minister who dispenses it. If it be argued that, as baptism, of which a layman may be the minister (see Bingham, l.c. 4, 12), so were water-baptism (see Waterland, Letters on Baptism) alone in question, the ordained ministry is not involved, it must be that the matter is argued simply on the basis of want of jurisdiction, which applies equally to the case of the Eucharist. For Cyprian had maintained his attitude from the ground of separation of the Catholic Church, which equalized schismatic ordinations. The time had not yet arrived for the distinction between character and jurisdiction in the matter of orders (see Bingham, Ant. vii. 2. §§ 5, 6). A deposed cleric became a layman. Whether, therefore, a schismatic priest could create the Real Presence in virtue of a mystic power inherent in his ordination, would have been an unmeaning inquiry. The problem was simply the point at which a sacrament administered without authority was ab initio null and void. The reply was in the negative. In the ant-Wilfridian clerical order, as simply the normal representative of authority. Clement of Rome indeed says that the layman is bound by the layman's ordinances (cf. 5, 6), but this does not mean so much as due subordination to 'them that had the rule' in the common discharge of the universal priesthood.

Ignatius 'Do nothing without the bishop' (Philad. 7. 2), applying as it does equally to Baptism and the Eucharist together with general Church discipline, does not exclude delegation by the bishop in particular instances, of any priestly function to those who had no general authority in the matter, whatever may have been, and indeed were, the normal channels.

There are many indications that respect for the miracle of grace as that which the People of God, at first, involved the idea that the celebration of sacraments by laymen was essentially sacrilegious. The acknowledgment of lay baptism, for example, already mentioned, which, though not universal, is nevertheless general, rests upon no commission granted nor a particular sanction by consecration or upon practice; and there is no reason in the nature of things why, if occasion had arisen, a similar recognition should not have been extended to the other sacraments so ministered. It seems clear that, though in the NT presbyters tended to labour in the word and teaching (1 Tm 5. 17 etseq.), and though in the succeeding age the function of the prophet tended to devolve upon the bishop, yet the primary function of the local ministry was ruling (1 P 5. 2, 3; 1 Tim 5. 17; 2 Tim 1. 11). Hence, it appears even in the days of Ignatius (Philad. 7. 2), and was contradicted, for example, by his own earlier opinion that 'offering' is a distinctive 'munus' of the clergy. In the de Praescriptione he charges the Gnostics with carelessness in the matter of ordination and of granting even to the laity sacerdotal powers. Whatever might be done, it remains an invariable characteristic of the clergy. The difference, he says, 'between the order and the people remains on the authority of Christ' (ib.). And it was precisely this authority as Apostolic, and therefore derived from Christ, which he emphasized against the Gnostics. There can be no question that from the time of Clement and Ignatius, or rather from the days of the Apostles (Ac 24: 4), it was sincerely felt that universal consecration of worship was as vital to the continuity of the Church as stability of doctrine, and that an Apostolic ministry was the guarantee of both. But it is also true, as the present condition of Eastern Christendom testifies, that the territorial conception of one 'bishop one area,' though it may have been the ideal (see Nic. Can. 8; Bingham, Ant. ii. 13), is a development that belongs rather to the West. The point, however, is that, although normally and naturally ordained were the only appointees by 'Apostolic' authority to fulfil the various functions of both discipline and worship, the dominant conception of priesthood asserted by one early writer after another (as, e.g., by Justin, Dial. c. Tryph. 116. 3), lost the significance of the narrowly hierarchical, attached character, inherited from the OT, to the whole community. Within the society the ministry, belonging as it did to its structure, was the permanent guarantee and symbol of its Unity, and hence, in the institution both in faith and in life. When this ministry is likened to the Aaronic priesthood, the shifting manner in which the analogy is applied by various writers shows that this aspect is not essential.

It is the handling of the Donatist controversy, to have pointed out the lines along which alone Apostolic succession can be given its true place in the Christian economy. Machinery cannot be exacted at the expense of spiritual experience. Had the Eucharist, like Baptism, been a sacrament incapable of repetition in the life of the individual, it cannot be doubted that the 'validity' of 'schismatic' Eucharists would have been decided in the same way. But the same principles, if so administered, were equally regular or irregular according to the point of view. What may be called the 'channel theory' of sacraments, which regards Christian ordinances as vehicles of grace down which spiritual energy may be led, has operated disastrously, and may tend, if a succession equipped with the power of working the 'miracle of the altar.' It is not affirmed that this theory is purely medieval, and that it was not present in germinant form in the first five centuries, and possibly even in the Apostolic Church. But it is the view of succession as preserving the fulness of Apostolic authority, and as the guarantee of a gospel which is 'not of men neither by man,' i.e. as realizing the principles upon which Christ established His society, that is alike primitive and permanent.

While any theory of the ministry, which involves a denial of the personal consciousness of the Spirit in the experience of individuals or the manifestation of presence in the corporate life of any Christian communities in any age, is inconsistent with plain facts and the Christian conscience, it is yet, in the opinion of the present writer, probable that the present tendency towards reunion among Christians, with the instinct of social and corporate witness which it manifests, will inevitably, as it progresses towards yet wider amalgamations, reveal Apostolic succession as a subject of more than sentimental or antiquarian interest, and quicken inquiry into the conditions.
APOTHEOSIS—APPERCEPTION

which shall be necessary to make the fabric of
universal Church life in the future structurally
one with the Church of a continuous, though not
undivided, past.

J. G. SIMPSON.

APOTHEOSIS.—See DEFICIENCY.

APPERCEPTION.—The term ‘apperception’ was introduced into philosophy by Leibniz, being derived from the French d’appercevoir, ‘to be aware of.’ Of its use is not wholly free from obscurity even in its inventor, while it has been applied by his successors in at least two widely different senses. With Leibniz it indicates: (1) a higher degree of perception—a perception which is not absolute, vivid, relatively persistent, in contrast with perception of the immediate, lacking these qualities; affect the soul only in the mass, and which, as they do not emerge into individual consciousness, may be called unconscious.

There is at any moment an infinite number of perceptions in us, but without apperception and reflection, i.e., changes in the soul of which we are not conscious, because the impressions are either too slight, or too great in number, or too even (uniform) that they have nothing sufficiently distinguishing them from each other; but, joined to others, they do not fail to produce their effect and to make themselves felt at least confusedly in the mass. (Nouveau Essai, Pref. [Langley’s tr. p. 47].)

Leibniz’s favourite example—the noise or roar of the sea as made up of the insensible noises of the separate wavelets—does not really hold; but a modern instance may be given from Helmholtz, the over-tones which give the peculiar quality or colour to the tones of different instruments, cannot be separately noticed or ‘apperceived by the untrained ear, although in all probability they have a quite distinct and recognizable effect (Helmholtz, Tonempfindungen, p. 107 [Ellis’ tr., p. 62].)

In Leibniz also apperception becomes: (2) the basis of a distinction in kind between beings or ‘monads.’

The lowest monads, which have perception alone, are merely passive mirrors of external events, while the highest monads or ‘spirits’ rise to apperception, ‘which is consciousness, or the reflective knowledge of this inner state (perception), and which is not given to all souls nor to the same soul at all times.’ (Postscript of 1721.)

In perception proper the soul is passive; in apperception it is active, self-conscious. ‘There is not only an order of distinct perceptions which constitutes the empire of the soul, but also a mass of confused perceptions, or perceptions of a lower order, which constitutes her slavery’ (Théodote [Janet’s ed.], p. 143).

Although not incompatible, these two uses of the term in Leibniz are at least distinct. The second meaning, in which it suggests an internal sense of self-activity, and self-awareness, is that in which Wolff, and after him Kant (first in his Exposition of the term; but it was applied by the latter in a quite distinctive way (see KANT).

With Herbart, the theory of apperception enters an entirely new phase. It now means a process taking place between one presentation or idea and another idea or group of ideas (Psychol. als Wissen. ii. § 1 ch. 5). When a new sensation, perception, or memory enters the mind, it awakes or produces a number of older presentations or ideas referring to the same object. So far as these contain similar elements, it coalesces with them, and assimilates or is assimilated by them (Verschmelzung); so far as they contain opposite elements, it brings about a real conflict (Hemmung), each restricting the normal development of the other in the mind. The same process takes place also between those more complex series, masses, or systems, of ideas and thoughts, which result from combination in various degrees of the lower levels. The appropriation or absorption of an idea, from whatever source, by a more complex idea or system already present in the mind, is what Her- bart calls ‘apperception. It is external or internal, according as the idea to be appropriated is a sense-perception or a representation of any kind; but this distinction, really inconsistent with Herbart’s psychology, was afterwards rejected by Steinthal.

The characteristics of the apperceiving mass are, (1) that it succeeds the apperceived idea in time, and (2) that it is stronger, more extensive, and involves some cause, and therefore compels the other to modify in accordance with it, while it itself continues to develop according to its nature (ib. p. 194; cf. Lehrbuch zur Psych. § 41). Thus it is relatively the active, the other relatively the passive. An instance is the way in which our habitual modes of thought and action influence our apprehension of new ideas, our criticism of the conduct of others, etc. Not only how we see things, but what we shall actually see, is determined for each of us by our past experience and the use we have made of it. Psychologically, such experience is active only as a present system of ideas, according to Herbart.

Apperception does not take place in the child or in the savage, because such systems are as yet unformed; it fails also under intoxication, fatigue, passion, etc., because the existing systems are disorganized. Education, intellectual and moral alike, is the gradual formation and strengthening of the due apperceptive masses. The slow and painful beginnings of the rapid mastery and assimilation of a science, give further illustration. The modification is not wholly, on one side, however; ideas ‘act, as it were, chemically upon one another, decomposing one another and entering into new combination.’ Apperception is also the basis of reflection (Kapitalgedächtniss); nothing can be built into a series or system of ideas, forming links by which the mind may reach it and drag it forth (Psych. Untersuch. ii. [Hartmann, vi. p. 591].)

A further feature is the suppression, by the apperceiving mass, of whatever in perception or recollection conflicts with itself: in this, with the correlative raising up and isolating of the apperceived element, apperception is identical with attention (Briefe, p. 487). See ATTENTION.

In Volkmann’s law of the mixture of ideas as coalescence of a new and isolated mass of ideas with an older mass which exceeds it in the number of its constituents, and in internal adjustment or systematization (Lehrbuch der Psych. ii. 190). With this both Caullery and Steinthal consider the range of apperception is greatly extended; it becomes, indeed, coextensive with mental life. It is the creative process in mind; in it one content does not merely ‘become aware of’ another, but both are transformed, ‘melted into a higher and richer fluid.’ An idea is fixed and isolated from another by its Macht, or force, which does not imply either intensity or clear consciousness, but depends on the number of connexions which the idea has with other ideas, and the closeness of the ties by which its constituents are bound together. Steinthal recognizes four chief forms of appercep-
APPETITE

tion, which are derived from those of Logical Judgment: Identifying, Subsuming, Harmonizing (with its negative, Disharmonizing), and Creative Apperception (Kleine Schriften, i. p. 60; Einleitung in die Psychol. p. 207).

With Wundt there is a return to the theory of Logical Judgment. A presentation or idea may be in consciousness simply, or also in the focus of consciousness, which, however, is not strictly a point, but rather a limited field. There are thus two thresholds,—the outer—that of consciousness or intensity; and the inner—which we see in gift or spontaneity or clearness. The entrance of an idea into the focus of consciousness is its apperception, which may be either passive or active. Thus it is simply one side or aspect of the process of attention. Apperception is therefore identified by Wundt with will, and in this connexion acquires a strongly metaphysical colouring. This conception of apperception as a pure activity, which is yet directed or stimulated by presentations, has been criticized from different points of view by Volkmann, Hartmann, and the Associationist Psychologists, such as Ziehen, etc. In English Psychology the theory of apperception has been developed, mainly along Herbartian lines, by Dr. Stout. The following indicates his standpoint. On the other hand, apperception a presentation acquires a certain significance for thought, by connecting itself with some mental preformation as this has been organized in the course of previous experiences (Actual. Psych. p. 110).

APPETITE.—Psychological.—Appetite may be defined as a recurring sense or consciousness of want in the bodily organism, accompanied with a craving or desire for satisfaction. It does not arise at fullment, under the impulse of unreason, which may become, under certain circumstances, more or less pronounced pain. It belongs to the animal side of our being, and is primordial to the human constitution. Most of the appetites have been connected with the conservation and welfare of the individual; sex has reference to the propagation and continuance of the species.

The characteristics of these natural physical wants (over and above unreason and efforts to remove it) are:—(1) They are not permanent, but intermittent: they disappear on being satisfied, but recur at stated times or periods. (2) If pressed beyond the natural limits of satisfaction, they become a habit, and injury is done to the system. (3) They constitute our lower wants, in a distinct higher or ideal wants of our nature, such as knowledge and friendship: we do not identify them with our inner self—they are mine, but they are not me.

The appeasement in an appetite leads to action, mainly reflex and instinctive, not deliberately purposive, for the removal of it, and the gratification of the appetite brings pleasure. Hence, the original propensity to act under unreason may constitute an important factor of pleasure (as we see in the gourmand or the epicure), and what would be quite sufficient to remove the bare appetite (as in hunger) may be superceded by elaborated and refined modes of ministering to the desire, as shown in the art of cookery. It is thus that appetite may be specially effective on the will: it prompts to the acquisition and continuance of pleasure, not only to the getting rid of unreason or disquiet. These two things—the pleasure that accompanies (very) eating, and the conscious and deliberate pursuit of the means of eating—are by no means identical. On the contrary, if desire of the pleasure become the predominant fact, the original normal and healthy craving in appetite may be supplanted by an abnormal craving, such as we see in gluttony or an artificial craving. An acquired appetite, may be produced, such as we see in the craving for tobacco or for alcohol. There is here, obviously, no appetite proper, but an induced desire, under the prompting of anticipated pleasure, which, in turn, is the product of individual pleasurable experience.

Hence, we must discriminate between appetite and desire for pleasure. Appetite simply craves for its object (the means for the attainment of the object being included in the conception of the object itself), and, given the object (food, for instance, for hunger), the appetite is satisfied—satisfied, no doubt, gradually, as the object is gradually realized, but fully in the realization of the desire. Appetite, then, is a consciously representative process, idealistic in its nature, dependent on experience of pleasure (therefore, involving memory), and craving for that pleasure and, in the case of 'acquired appetites,' for the increase of means as well as for the repetition, of it.

Appetite, like instinct, is native to the human being; but it differs from instinct in the following respects:—(1) It is an organic craving, whereas instinct acts under external stimulus. (2) In an instinct, while there are means to be used for the purpose, the individual is born with ability to employ the means without requiring to be taught how (as see, for instance, in the sucking of the child)—in other words, the individual can unhesitatingly employ the means from the beginning, without, however, any consciousness of the end or deliberate purpose to achieve it. (3) In instinct there is also an untaught propensity, as well as an untaught ability, to use the act—a propensity to experience, and independent of instruction.

The pleasure that the satisfaction of an appetite gives is in general proportional to the craving. But there are cases where the strength of the craving is far greater than the pleasure of the gratification, and we have cases of the drunkard, whose passion, being persistent and whetted by successive gratifications, craves an indulgence which the object of it is incapable of adequately meeting. Here, excess has created a situation where pain has got the mastery—the craving does not disappear in its own fulfillment and periodically return, but persists and thrusts itself unreasonably upon attention: in other words, the object of desire when reached fails to appease completely, and the craving for satisfaction continues.

Although, therefore, in appetite proper, there is not involved the deliberate control of reason, nor is there any need for such, this control comes to be required when appetite would transgress its bounds. Such transgression is easy because of the pleasure associated with appetite, and because of the readiness with which abnormal conditions of the bodily system may be induced through excess. Hence, the appetites come to have a distinct and important bearing on Ethics. Although in their normal action and in their right sphere they guide us in a way that calm reason could not—prompting us effectively, for instance, to eat for the support of life at the time and to the degree
that the body requires, and not leaving the 'when' and the 'how much' to be settled by rational calculation—their pleasure-giving or 'felicitic' property has to be watched, lest it make volup-
tuaries or debauchees of us; and thus reason has its function in relation to them. This would seem to mark the distinction between man and the lower animals, in the appetite; the appetites are rationalized; in the brutes, not so.

2. **Ethical.** The appetites in themselves are neither selfish nor unselfish, neither virtuous nor vicious; they are simply a part of human nature, indispensable to the being of the whole. But inasmuch as they are intimately associated with pleasure, they may be abused, and thus become ethically significant. Not that there is anything selfish or morally wrong in accepting the pleasure that they bring—a high sign of physical health (as pain is of disease) and is to be welcomed and cherished (as the other is to be avoided or got rid of); but it may be sought for and estimated beyond its value—it may be pursued immoderately or at wrong times or in a perverted manner. In their own and all that is of this kind, by exclusion of higher good. If it is characteristic of the appetites that they have a tendency to overstep just limit, it is characteristic of them also that they grow impetuous in their demands. Eating may degenerate into a mere indulgence of appetites, and when degeneracy sets in, each becomes as a daughter of the horse-leech, crying, 'Give, give!' Hence the appetite need to be regulated and controlled: they need to be placed under rational government. If left to themselves unbridled, they would ruin the higher nature; hence asceticism is but the exaggeration of a deep spiritual truth; and self-mortification, or 'keeping under' the body, has a real justification in psychic fact. But this means that, in a rational being, the appetites become transformed; they cannot be in him what they are in a non-rational creature. A clear conception of their place and function inevitably changes their nature, and entails responsibility as to our use of them. As Spinoza puts it (Ethics, v. prop. 3), 'An affection, which is a passion ceases to be a passion as soon as we form a clear and distinct idea of it.' This is a very important truth, explaining to us many things in Ethics,—as, for example, how it is that the instinctive love of a mother for her offspring assumes quite a different aspect when we are dealing with human mothers from what it does when we are considering simply the lower animals. In both cases, there is instinct or natural affection; but, in the one case, it is rationalized (duly located in a system of thought or a scheme of values, and so lifted out of the sphere of mere instinct), in the other, not.

The situation as between the appetites and reason, or between the lower and the higher man, is still again (lingering between the flesh and the spirit), was put strikingly from the ethicist's point of view by Plato in the fable of the Charioteer and his Steeds. In *Phaedrus*, the soul is aptly represented as a charioteer, riding in his car, drawn by two winged horses of different colour, nature, and temperament, requiring different management. On the one side, there is the black and vicious horse, 'ignoble and of ignoble breed,' ever refractory and plunging through unruly desire, 'the mate of insolence and pride,' and needing to be kept back by bit and bridle, yet 'hardly yielding to whip and spur.' On the other side, there is the white decorous horse, 'noble and of noble breed,' ever responsive to 'word and admonition,' on which bit and bridle sit lightly, and for which no whip is required. Here is a significant allegory. The charioteer is reason (ς ἐφικτόν); the white steed orderly and always harmonious with reason, repre-
sents 'the moral and spiritual element in man'; and the gross and sensual tendencies of human nature find their symbol in the dark and untractable steed. But the task of the charioteer is far from easy—not every one can succeed; and some, through a meal; the taming, the restraining, the bracing, costs him many an effort, and hard work and skill. Obedience is the result of a strong hand and a determined will, and of sore punishment repeated; only 'when this has happened several times and the villain has ceased from his wanton way, is he tamed and humbled, and follows the will of the charioteer.'

The right by which reason rules the appetites, or the rational basis of the distinction between higher and lower in our nature, is found here. The appetites are non-ideal, and, consequently, individualistic. We cannot share them with any one else, neither is an appetite in itself susceptible of indefinite gratification. On the other hand, all the natural wants that we regard as higher, and which are morally good, are distinguished by this, that (a) we share them with others, and yet we ourselves are none the poorer but all the richer—they are essentially altruistic and social; and (b) they do not cease with their immediate satisfaction, but roll on to its further and higher increases with its gratification, as we see pre-
eminently in knowledge, where the more we know the more we desire to know. They aim at an ideal; and it is the ideality with which they are bound up that produces their insatiableness: no limit is placed by nature to their culture, and so satiety cannot ensue; the capacity increases with what it feeds on.

It is needless to say, further, that both human happiness and human progress depend on the rational control of the lower nature, and this control is effective only when it becomes self-
control, only when the individual acts as his own 'plegious Orphilius,' gains the mastery over himself and exercises it spontaneously. How this self-
control is acquired, through strengthening and directing the will, may be read in any good treatise on Psychology (e.g. Höfding's). Anyhow, if the individual's soul becomes, as Plato puts it, a well-
ordered State—where there are gradation of functions, harmony, and order everywhere, mutual subservience of the lower to the higher, the whole and for the realization of its highest good—then the appetites and their pleasures count for much and have their own part to play in the economy of the human being: neither will they be ignored and starved (as Stoicism would fain effect), nor will they be made supreme and culti-
vated without stint (as some forms of Hedonism would appear to countenance).

But while there is thus a ground for the rationalizing of appetites, and for the subordination of the lower to the higher, there is also another that different natural wants themselves, there is a further ground in the ethical dangers connected with the appetites. These are mainly as follows:—

(1) In the first place, an appetite, strictly speaking, is neither selfish nor unselfish; but a depraved or unrestrained appetite is essentially selfish—thus turning a neutral thing into a positive evil. Vile appetites minister to the individual's cravings, but they may be made the means of corrupting others.

(2) Depraved to be kept back by the character, and strong and check moral progress— they bring 'leanness' into the soul; for it is a law of the human mind that we cannot indulge intertemporately without lessening our moral force, just as we cannot harbour base desires without thereby shutting out noble ones, or choose false-
hood without rejecting truth. Consequently, while they vitiate the taste, they enfeeble the will—i.e., they deprive us of the power of resisting temptation and of initiating reformation; which, otherwise expressed, means that they leave us the prey to impulse, and so the end thereof, in Scripture language, 'is death.' (3) From vital appetites are a bondage: they drag us at their heels, and through them we lose our moral freedom—we are enslaved. The peculiarity is that, while we yield to them, we protest: the will is overborne, but we still retain our perception of the right and our appreciation of it. 'I see the better and approve, I pursue the worse' (Ovid, *Met.* vii. 21). In other words, our moral energy is felt not to be adequate to our moral insight; we are conscious of being coerced. This fact of the bondage of the appetites and passions is the theme of all great ethicists, from Plato downwards: it was kept before the medieval world by the *Consolation of Philosophy* of Boethius, and it is a heritage to modern philosophy from Søren Kierkegaard, the fourth part of whose *Ethics* deals with this very subject of 'Human Bondage,' and the fifth part with 'Human Liberty.' It is also a leading theme of the Christian religion, and lies at the basis of the scheme of salvation. (4) Appetite uncontrolled leaves a sting behind. 'But what shall I say of the pleasures of the body?' This—that the lust thereof is indeed full of unseasiness (anxiety), but the eating, of repentance ('Boethius, *Consol. Phil.* lib. iii. proes. 7).'

3. The distinction thus drawn between the appetites and reason, the estimation put upon it, and the conception of the soul as a well-ordered, self-governed State, were taken over by Christianity; only, it is to be observed, Christianity has not its own way of explaining the conflict between the lower and the higher in man, and it has its own means of ending the conflict. That is its peculiarity, marking it off from mere Ethics. On the one hand (using St. Paul as our guide)—more especially, as he expresses himself in Rom 7 and Gal 5), the lower and concupiscence element in man is identified with 'the flesh' (*pudic*). This unruly principle—the black horse of Plato—rebels against the human reason and overpowers the human will ('mit den prestat des Platonizens'), and causes the individual to rebel against the body, 'O wretched man that I am! who shall deliver me out of the body of this death!' The deliverance comes not from the man himself, not even from his active reason, although the natural function of active reason is to control: 'I myself,' says Paul, 'am a slave of God through Jesus Christ our Lord.' For man's impotence of will, according to Scripture, arises from a religious cause and needs a religious remedy: it arises from the fact that man is 'fallen,' is 'sold under sin,' has deliberately rebelled against God, and so has forfeited his rightful power of self-mastery; and the rectifying and conquering force must come to him from above—it must be a gift from heaven. This Divine gift, in accordance with the whole Christian dogma of regeneration and re-creation, is 'the Spirit.' And so, in order to be delivered from the hard bondage of the lower self, which is the bondage of sin, man must be raised from the 'natural' or 'psychical' plane into the 'spiritual' realm—he must himself become a temple of the Holy Ghost, and through the indwelling Spirit he will conquer. 'But, I say, walk by the Spirit, and ye shall not fulfil the lust of the flesh.' For the flesh lusteth against the Spirit and the Spirit against the flesh: for these are contrary the one to the other: that ye may not do the things that ye would. . . And they that are of Christ Jesus have crucified the flesh with the passions and the lusts thereof' (Gal 5:16-17). Thus the Christian faith incorporates Ethics, but transcends it. It is, consequently, effective on human life and practice in a way that Ethics, standing alone, cannot be.

**WILLIAM L. DAVIDSON.**

**A PRIORI.**—*A Priori* is one of those terms, by no means rare in philosophy, the meaning of which has in the course of centuries undergone divergent changes. Originally an unobjectionable expression, meaning an ordinary mental act, to which no controversy can be no controversy, it has eventually become the index of one of the most stubborn problems which set the minds of men at variance. According to Prantl,* the earliest occurrence of the phrase is in the writings of Albert of Saxony (14th cent.), who draws a contrast between *demonstratio a priori*, the proof from what is before, i.e. from the cause, and *demonstratio a posteriori*, the proof which retrocedes from the effect. The usage may be traced to Aristotle, who in the *Posterior Analytics* states that that upon which proof is based must be prior to, and better known than, that which is to be proved, and continues thus: 'The earlier and better known has a twofold meaning. That which is prior by nature is not identical with what is prior for us; nor again is that which is in itself better known the same as what is better known to us. 'The prior and better-known in relation to us' is the name I give to what lies nearer to our intense perception; what I call "the prior and better known in itself." The remotest of all is the universal; the nearest is the individual object.' The connexion of the term *A Priori* with Aristotle is thus quite evident. But while he differentiates according as the starting-point is the thing perceived or the process of perception, Albert of Saxony does not take this difference into account: with him *demonstratio a priori* signifies the proof from causes. It merely denotes a special mode of mental operation; in other words, *a priori* is a term of formal logic. The knowledge which proceeds from cause to effect, or knowledge a priori, rightly claims a higher degree of certainty than knowledge a posteriori, or from effect to cause, so long as the terms keep rigidly to the meanings assigned and so long as the limits of formal logic are not transgressed. But the problem of knowledge goes beyond the scope of formal logic. The moment any shifting takes place in the meaning of *A Priori* and *A Posteriori*, and they show a tendency to appear respectively with knowledge based upon conceptions and knowledge based upon experience, and when, further, the province of logic is relinquished for that of psychology, it is no longer possible to maintain the earlier and more certain, while the general conception is the later, and thus *A Priori* and

* Genschichte der Logik*, iv. 78.
A PRIORI

A PRIORI have simply exchanged meanings. Hence Gassendi, in his polemic against the Aristotelians, impugns the dictum that the demonstratio a priori is more certain and conclusive than that a posteriori, and demands its warrant. Since on his view the demonstratio a priori becomes the primary and general conceptions, and since the demonstratio a posteriori becomes a proof from effects and less general conceptions, he shows that he has abandoned the strictly logical usage of the terms. But in that case it is clear that there is but one answer to his question which is not better than the other, and the inevitable inference is that a priori knowledge depends upon a posteriori. Gassendi's criticism shows that the term A Priori had become ambiguous; it was so far free to assume a new meaning.

Its new content was supplied by Leibniz. It is indeed true that Leibniz did not always use the term in one and the same sense. Thus, in connection with the ontological proof of the existence of God, he argues that existence does not follow from necessary being; but that the identity of the fact signified by the conception must first of all be established. This possibility, however, may be cogitated either a priori or a posteriori: the former, if the various characteristics of the concept are manifest; the latter, if the concept itself is an object of perception. A similar usage appears in the passage where the criterion of a clear and distinct idea is said to be its capacity of yielding the knowledge of a number of truths by a priori proof. Here A Priori is really concerned with the elucidation and explanation of conceptions, and with knowledge won from conceptions by correct reasoning. It is employed in a somewhat different sense in the passage where the knowledge which proceeds from God to created things and that which proceeds from created things to God are respectively designated a priori and a posteriori. Still another usage is observable in the statement that in regard to the mysteries of the Christian faith, such as the Trinity and the Incarnation, a priori proofs on rational grounds are neither possible nor requisite, and that in this case the knowledge of the fact is sufficient, though the why remains unknown. A priori proof is here equivalent to the intuition of rational cause.

In the last part of his philosophical career, Leibniz comes to the conclusion that the faculty of simple empirical association is common to both. A dog being trained to perform a trick gets a tit-bit; a Dutchman travelling towards Asia will ask for his beer, perhaps even in a Turkish inn. The connexion between trick and tit-bit, between inn and beer, is in each case casual, not necessary; but the man differs from the animal in that he seeks for a necessary connexion. The more data of experience are not sufficient for him, nor does he rely on experiments alone; he goes beyond them a priori, by means of first principles. A Priori thus acquires an implication of necessary relation. According to Leibniz, then, knowledge a priori is founded in the following contingencies: (1) when the possibility of a fact is established by showing the self-consistency of its conception; (2) when from a clear and distinct idea further conceptions are derived; (3) when thought proceeds from God to created things; (4) when the rational grounds of an actual truth are investigated; (5) when an essential relation is established. Thus A Priori has various shades of meaning; but it may be gathered, that, as used by Leibniz, the expression tends generally to become identified with knowledge gained from pure reason. This is its meaning when he contrasts knowledge par la pure raison ou a priori with philosophie experimentale qui procede a posteriori; and when, in the Nouveaux Essais, the reason which is the basis not only of our judgment, but also of the truth itself, is lowered to the rank as a posteriori in the distinction of the a priori reason and a posteriori reason. Leibniz is thus an attribute of that species of knowledge of which every constituent is furnished by reason alone.

Lambert also is of opinion that without qualification and in the sense that the term a priori can be applied only to that in regard to which we owe nothing whatever to experience. Wolff, on the other hand, reverts to the more general sense of the term, applying it to any kind of knowledge arrived at by reasoning, even when the conceptions employed in the premises are derived from experience.

The view of Kant demands a somewhat fuller treatment, since in this as in other respects he marks the consummation of the previous development, and the development of the duality of the two types of evidence the problem indicated by the phrase a priori, according to him, stands at the very centre of thought, as it does with no philosopher before him. His great system, indeed, may be regarded as an attempt to ascend to the general foundations and criteria of judgments a priori possible? Alike in his theoretical and his practical philosophy, in his treatment of aesthetics and of religion, his aim was to discover and establish synthetic judgments a priori. He is at one with his predecessors in assuming the existence of a priori cognition, and in believing that it cannot be regarded as originating in experience. But he felt that justice had not been done to the problem involved.

If such a priori knowledge really exists, he argues, then it must be expressible in judgments which are a priori, and, indeed, synthetic. Merely analytical judgments, i.e. those which do no more than analyze and elucidate a given concept, while they render our knowledge explicit, do not augment it; only synthetic judgments, i.e. those which link a new predicate to the subject, furnish a genuine addition to knowledge. Hence the judgments a priori which are of any use at all are precisely those the predicate of which goes beyond the subject, adding something that was not contained in it. This is what he means by the phrase "a priori." It is synthetic, since the concept and the predicate it introduces form an idea of a cause; the predicate, therefore, adds something new; it is a priori, since, while mere experience, or perception, certainly enables us to know that objects are connected, it does not enable us to know that they are causally connected, still less that they are always so connected. Clearly we have a problem here. It is one, he says, of knowing how there should be a connection between subject and predicate, and how judgments a posteriori, since perception itself supplies the predicate and its connexion with the subject. When I say, e.g., that light rays are refrangible, I am merely telling what I have learned by a simple experiment. But how can I say that every event has a cause, seeing that experience cannot be my warrant? How then are synthetic judgments a priori possible? Clearly because reason itself must contain a priori elements; and one great desideratum will be a complete inventory of these elements. But the mere fact of their existence does not warrant their embodiment in judgments having a real value for knowledge; hence their applicability must be vindicated, their relevancy made good. But even this demonstration does not complete our task. For there are certain judgments which are a legitimate use of them, and we must endeavour to fix the limits of their efficiency. It was Kant's conviction that all previous investigations of the problem had been prone to fail in three ways: he felt the lack of (1) care in securing the full number of a priori elements; (2) proof of their applicability; and (3) precise definition of the limits of their action. And only in the proper discharge of these three tasks do we obtain a truly exhaustive investigation. A Critique of Pure Reason.

1. If the a priori elements are discoverable at all, they must carry marks of recognition. And such marks they certainly have, for we actually recognize, in particular conceptions, which are distinguished from all others by their universality and their necessity. Now these cannot originate in experience, for our experience can tell us only that something, not that it is always so; can say only that it is this or that, never that it must be such. The marks of universality and strict necessity. But these do not forthwith provide us with rules for the discovery of the a priori elements.
of reason. Such rules, however, will be suggested by the following reflections. In trying to discover what belongs to pure reason, we must isolate it by eliminating all alien material. Materiality and Impassibility are two aspects, namely the receptivity of perception and the activity of thought, these will necessarily meet us again in pure reason. But as the materiality, that is, that which is matter, and the impassibility, that is, that which lies outside the territory of pure reason, we may perhaps delimit this priori by what is called understanding. Such rules, however, will be suggested by the following reflections. In trying to discover what is common to all acts, we shall be led to ask, What then remains, when we make this elimination? Obviously, the universal forms of perception, namely, Space and Time. And it is in this which when we manipulate all material elements from the products of active thought, i.e. our judgments. Clearly the pure form of the judgment itself. This pure form we, on the other hand, make an object for understanding, and the sum of such forms will give us the concepts of pure understanding, i.e. concepts without functions. Now pure logic has already distinguished all the possible forms of the judgment, and has tabulated them under four heads, each having a separate title, the function. The function of the understanding, or categories, can be arranged in the same way. Thus the quantity of judgments as universal, particular, or singular, etc.; the quality of judgments as affirmative, negative, or indefinite; the categories of quality: Reality, Negation, Limitation; the relation of judgments as categorical, hypothetical, or disjunctive, provides the categories of relation: Subsumption, Cause and Effect, Community of Reciprocity. While, finally, the modality of judgments as probable, assertoric, or apodictic, gives us the categories of modality: Possibility, Necessity—Reality; Possibility—Necessity—Contingency. Thus the priori elements are the principles of pure understanding; that is, the a priori categories. They are a priori, because they are truly universal and strictly necessary; and their number is constant, since they are the very laws of pure understanding, or categories. But the first problem is therefore solved.

We are now to determine the function of these a priori elements, and the vindication of their applicability to the objects of knowledge. So far as space and time are concerned, the task is already solved. They are forms of perception, since every object of perception is presented to us in one or both of them. Moreover, we have two sciences whose validity and truth are beyond discussion, namely geometry and kinematics. Neither comes from experience, for geometry, not founded in nature, and kinematics, not founded in nature, and in the same way kinematics emulates its propositions without the slightest reference to experience; both exhibit an unchanging mind, which we can never do. Then are these sciences possible? Clearly because, on the one hand, geometry rests upon the fact that space is a priori perception of Space, while, on the other, kinematics rests upon the fact that there is an a priori perception of Time. The existence of these two sciences, then, vouches for the efficiency and validity of the a priori forms of perception. It is more difficult to demonstrate the function and competency of the categories, which are not forms of perception. What significance must we assign to them? Is it not enough that all objects of perception should manifest themselves in Space and Time, and therefore be subject to laws of universal applicability? When we add to spatial and temporal perception? But we must require something beyond the limits of space and time, for Space and Time, is not knowledge, and does not deserve the name of knowledge properly so called. Perception alone could you have the category of substance, or law of the categories, space and time, its parts, without the laws of their changes, without coherence. True knowledge, true existence, is, in fact impossible without the unity of the infinite without an orderly synthesis; and one thing that the function of the categories reveals itself, that the unity of substance is not automatic, the function, the unity of consciousness facilitates the orderly synthesis of phenomena. Knowledge, genuine experience, becomes处处 when, by means of the categories of Quantity and Totality, we come to understand, arrange, and organize phenomena as extensive and intensive magnitudes; when in virtue of the categories of relation we are able to posit something permanent (Substance) amidst the flux of phenomena, to introduce a substance, and acclive some unity of time and space, and our minds are able to a collocation to the system of perfectly interconnected parts; and when, finally, by the categories of modality, we are in a position to determine the gradation of things in respect of possibility, actuality, and necessity. Perception in itself can furnish nothing of this, as it is seen best in the category of substance, which gives us our the unity of the world, its parts, without rules in its changes, without coherence. True knowledge, true existence, is, in fact impossible without the unity of the infinite without an orderly synthesis; and one thing that the function of the categories reveals itself, that the unity of consciousness facilitates the orderly synthesis of phenomena. Knowledge, genuine experience, becomes处处 when, by means of the categories of Quantity and Totality, we come to understand, arrange, and organize phenomena as extensive and intensive magnitudes; when in virtue of the categories of relation we are able to posit something permanent (Substance) amidst the flux of phenomena, to introduce a substance, and acclive some unity of time and space, and our minds are able to a collocation to the system of perfectly interconnected parts; and when, finally, by the categories of modality, we are in a position to determine the gradation of things in respect of possibility, actuality, and necessity. Perception in itself can furnish nothing of this, as it is seen best in the category of substance, which gives us our the unity of the world, its parts, without rules in its changes, without coherence. True knowledge, true existence, is, in fact impossible without the unity of the infinite without an orderly synthesis; and one thing that the function of the categories reveals itself, that the unity of consciousness facilitates the orderly synthesis of phenomena. Knowledge, genuine experience, becomes处处 when, by means of the categories of Quantity and Totality, we come to understand, arrange, and organize phenomena as extensive and intensive magnitudes; when in virtue of the categories of relation we are able to posit something permanent (Substance) amidst the flux of phenomena, to introduce a substance, and acclive some unity of time and space, and our minds are able to a collocation to the system of perfectly interconnected parts; and when, finally, by the categories of modality, we are in a position to determine the gradation of things in respect of possibility, actuality, and necessity. Perception in itself can furnish nothing of this, as it is seen best in the category of substance, which gives us our

* World as Will and Idea, § 14.
† Hist. of Materialism, II, 36.
therefore also of something which did not previously exist, nor belonged to anything before the act. 1 Hence, if criticism has to do with the A Priori, it has, for that very reason, nothing to do with the innate.

Having thus explained the A Priori in Kant's theoretical philosophy, we proceed to deal with his assumption of a similar element in the practical activity of reason or mind. In respect of morality and religion, no less than logical thought, reason possesses something all its own, and not derived from experience, which can be expressed in synthetic a priori propositions. This is a priori, of Ideas, by which the empirically real must needs be controlled. The demands of the moral law and of the Kingdom of God must be realized in the external world. It has, indeed, been recently questioned whether we can justly speak of a practical A Priori. Thus Stange, in his Einleitung in die Ethik, holds that there is hardly any resemblance between the A Priori of the Critique of Pure Reason and that of the Critique of Practical Reason, and points out the following contrasts: (1) The A Priori of Practical Reason is a priori both of sense and understanding, viz. the pure perceptions, Space and Time, and the pure forms of judgment, viz. the Categories; the Critique of Practical Reason treats only of an A Priori of Reason. (2) According to the first Critique, the A Priori and A Posteriori follow one another; according to the second Critique, the A Priori alone must determine the will. (3) In the former work, universality and necessity are given as the characteristics of the A Priori; in the latter, these tests are not applied, but one must determine the A Priori. Thus the desire for happiness is also universal and subjectively necessary, but it is not a priori. These strictures are canvassed by Hägerström in his comprehensive exposition of Kant's Ethik.

Admitting, however, as we must, the differences between the two Critiques, we must likewise admit the propriety of applying the term A Priori in the practical sphere. There, too, we discover an endowment peculiar to the mind, and not derived from experience—a fact which is evinced by the Categorical Imperative, which reveals itself as a synthetic judgment a priori. This Imperative imposes unconditioned duties to mankind, declaring that this or that ought to be done, and paying no regard whatever to human desires, inclinations or circumstances—hence it is a priori; and, further, since the obligation to obey an unconditional command cannot be deduced from the concept 'will' by a priori reasoning, the Categorical Imperative is a synthetic judgment. In the Grundlegung zur Metaphysik der Sitten, Kant decomposes the Imperative into the following three principles: (1) the law of action to be done; (2) the law of who shall do it; (3) the law of who may lawfully command. The latter is the noumenal law which is the end of all other laws, and which is the real law of morality. It is thus the real law which Kant calls the Kingdom of Ends, and which he also calls the Categorical Imperative; and it is this which Kant calls the moral law, and which he ascribes to the A Priori. The application of the synthetic a priori to the moral law leads to the following conclusions. Kant's practical philosophy is essentially religious. Religion, too, has its synthetic judgments a priori; necessarily so, since neither God nor eternal life is an object of perception. But how are the synthetic judgments possible which assert the existence of God and the fact of immortality? We have found morality to be something actually existing, but how is it possible to be found to be perfectly adequate to its own ends, needing no further supposition in the concept of the thing itself? By a contradiction, however, that Reason cannot disregard the results of moral
action; on the contrary, it is necessarily concerned, not merely with the individual practice of morality, but with the genesis of a moral world. The proposition, 'There ought to be a moral world,' is an a priori synthetic judgment; a priori—because a moral world is not an object of experience; and synthetic, because it is being involved in the conception of morality, is not discovered analytically, but reveals itself only when to the conception of morality there is added that of an end of moral action. How, then, is it possible that it is possible? Manifestly not in virtue of human action only, since we cannot conceive how the moral action of mankind should evolve a moral world from a world subject to entirely different laws. If our position, therefore, is not to be a mere fiction, we must inevitably recognize the existence of an omnipotent Being who will secure the result aimed at in moral human morality. We can accordingly assert that there is a God—a proposition shown to be essentially fundamental, by the manner of its derivation. We must finally note that, as the realization of the moral ideal is an a priori fact, it postulates the endless existence of man. Thus we arrive at the a priori synthetic judgment: the man is immortal. Religion also, then, has an A Priori, and is indeed based on it. The religion that we actually find in the world is often but a sorry mixture, but in the process of development its a priori element is able to realize itself and to produce ever purer forms. For it does not exist in severance from empirical reality, any more than does the A Priori of the theoretical or practical sphere.

It was Kant's belief that every genuine form of human experience was a combination of a priori and a posteriori factors. The absence of either was a sure sign of sophistry; no knowledge was possible save by the corporate union of both. Without the A Priori we have nothing but empirical, and that which is empirically known is necessarily and therefore final and evanescent; without the A Posteriori, we should have but the blind play of concepts. No less in the sphere of religion and morality must the empirical data be controlled and moulded by the a priori. For the absence of the latter, we should have no morality, no religion, only the lawless flux of desires, only the figments and fabrications of superstition, while, if the empirical factor were absent, the a priori ideas, having no material to comprehend them, would be mere evanescent shadows of the under world in the Odyssey, which must first have blood in their veins ere they can come to life.

It was Kant's design in these conclusions to arbitrate between Rationalism and Empiricism. He had striven to do justice to both the contending schools, and at the same time to confine each to its proper province. To rationalism in its fancied independence of the A Posteriori, as to empiricism in its reduction of the A Priori to the employment of common sense. They were both mistaken. The A Priori and the A Posteriori are two distinct sources of knowledge, of which only one sprang from reason. They held that everything belongs to reason, since even the material element of knowledge has no other origin. So far, therefore, all is a priori. It was not, of course, the empirical consciousness of the individual, with its slow development and its gradually multiplying contents, to which they attributed this divine matter; it was rather to use a non-committal phrase, a hyper-individual spiritual something, which at once produces and comprises all that is real. From the standpoint of the merely individual consciousness, everything is a posteriori. Thus, according to Fichte, the science of knowledge is quite irrespective of perception; a priori, traces out that which, in accordance with the same, must be present in perception a posteriori. For that science, therefore, these terms apply, not to different objects, but to different objects in the same respect; they are subject to the same law, the moral law, as a clock is used a priori as pointing the hour, but a posteriori in our actual reading thereof. Schelling's view is set forth in his System der transcendentalen Idealismus. He regards not merely the a priori conceptions, but also the objective world, as beyond the empirical consciousness, adding only: 'As the Ego generates everything from itself, so everything—not merely this or that conception, or, as has been supposed, only the form of thought—all knowledge whatever, indeed, as one and indivisible, is a priori. But as we are not conscious of this generative process, there is nothing a priori for us: everything is a posteriori.'* Hegel, too, draws a distinction: a posteriori knowledge is the concern of the empirical sciences. Their function is important, but subordinate to that of philosophy, since they can only discover facts without being able to demonstrate the necessity thereof, whereas philosophy deduces all reality from one supreme principle, thus giving to the contents of the empirical sciences the form of the freedom of thought and the warrant of necessity.† Thus, while for Kant every real cognition is a product of both a priori and a posteriori elements, his successors recognize not only a pure a priori, but also a pure a posteriori knowledge. Either kind has its truth, but only the a priori is perfect, and forms the special method of philosophy. We must, however, incidentally remark that these philosophers are not perfectly at one regarding the A Priori: it is either at the command of the empirical sciences, or of the moral action; according to Schelling, it is artistic creation; according to Hegel, logical thought.

Vast as was the influence of these systems, and of the Hegelian in particular, yet their solution of the problem could not be satisfactory. Of necessity it came to be felt more and more that the attempt to resolve all existence into Pure Reason was one which, though made with signal courage and admirable ability, had in the event come to naught. The result was that the mind realized, and was adequate to such a task. True, as indicated above, it was no purely human faculty to which was assigned the work of generating and sustaining the universe; nevertheless, the human spirit was credited with the power of penetrating directly into the creative activity of the absolute spirit, and of beholding it at work. A reaction was inevitable. Philosophy was thrown aside, and the empirical sciences, notably exact physical science, made vigorous headway. With the rise of the A Priori, science had no concern; it looked for direction to experience, to perception alone. But, as might be expected, it was not possible for any length of time to ignore the fact that experience itself involves a posteriori, and it was natural that it should be recognized that perception as such does not make experience; that the mind, far from being merely passive, is very largely active, and that this activity is the truly constituent element in experience. What then are the resources which the mind brings to its work? With this question we are again face to face with the problem of the A Priori. The influence of Kant entered upon a new lease of life, the turning-point being signaled, as Fichte (1829) and Liebmann's (1865) to use modern phraseology, by Liebmann's censo, 'Back to Kant.' Once more knowledge came to be viewed as the joint product of the A Priori and the A Posteriori. From this point the theories regarding the nature of, and the shades of meaning therein assigned to, the A Priori became so numerous and varied that it is quite impossible even to distinguish them all by name.

The A Priori is frequently regarded as equivalent to consciousness in general, or the ground within consciousness, which must therefore form the logical prior to any particular constituent thereof. Just as objects in themselves are subject to the principles of pure thought, the facts of consciousness accord with its universal laws. It is impossible to abstract from consciousness. Thus Fichte points out that in everything the ego knows, it always recognizes

thing of its own. Green, again, sets forth the real universe as an all-embracing system of relations, the presupposition of which, however, is a unifying principle, a combining agency, such a thing as, individually present: this to us must be added Shadworth H. Hodgson, who, though he rejects a priori forms, holds that existence in the philosophical sense must be a fact which is evident in consciousness. By A Priori, again, has been understood the peculiar uniformity which belongs to the operations of thought. Thus Wundt: 'There exist within us constant determinable functions of logical thought, i.e. those activities of relational comparison which are embodied in the primordial idea in all, which in turn presuppose the possibility of perception as the requisite material for them to work upon.' Similarly, H. Cornelius regards thought as introducing necessity and the power of phenomena. According to Kant, the all-embracing, all-inclusive system of relations, the real universe as an all-embracing system of relations, the presupposition of which, however, it does not draw upon external reality, but manifests itself in the categories. (Kritik der reinen Erfahrung; Der menschliche Weltbegriff).

...
creative power, and is thus an additional witness to the fact that the mind has something all its own.

In *Morality*, again, everything depends upon the inner life. Morality cannot conceivably be a product of science. For in this province the mind furnishes its own laws, and frames the ideas to which the outer world must conform, e.g. the idea of justice, of brotherly love. The man who sees in morality nothing more than the rules of conduct indispensable to human intercourse, is simply blind to its essential character. It is not designed to institute some commonplace relationship amongst men, being primarily directed towards the realization of truth and purity in the individual; indeed, it may even be the most uncompromising enemy of a given social state, and, should unveracity, luxury, or baseness have become dominant therein, it must threaten the fabric with destruction, whatever outward grandeur may perish in its fall. It was thus, for instance, that early Christianity sapped the foundations of a civilization which had become a sham.

Now, it forms no reasonable objection to this theory of a productive energy in mind to say that, since these Ideas are, like all else, facts of consciousness, as is maintained by Hume and adopted by Kant, these Ideas are necessarily evolved from mere experience. If consciousness is to cover everything, then all its various "facts" would be co-ordinate and of equal value, and would all be tested by the same standard, the question of the origin of the mind. Arbitrary changes of consciousness, or even changes determined by mechanical causality, would simply follow upon one another, and no arrangement or grouping thereof would mean more than any other. Amid such a world of Ideas, it is not even so much as ask for the truth. Now, in point of fact, all distinctively mental creations claim to have judicial authority; judgments purport to be more than collocations of psychical products; aesthetic and ethical Ideas involve more than feelings and desires. They claim, in short, to be authoritative, to be the standard of truth and law for what is given in experience. We must distinguish between the *questio facti* and the *regulative principle*; it is quite another to ask what ought to be. In dealing with the distinctively mental, we discover something beyond the fact of determination by natural law, namely, *regulative* law. The laws of logic, of science, of morals, like the laws of nature, formulate that which ought to take place, not that which actually and invariably does take place. Thus we cannot deny the fact of the mind's peculiar heritage, as evinced by this unique claim to regulative authority. We must allow, nevertheless, that the objection indicated above, namely, that even these peculiar intellectual products must manifest themselves in consciousness, is something more than a truism; it expresses the fact that the real cannot be evolved by purely logical processes from abstract conceptions, for the conception of a real idea must always contain, in contemplating the dialectic movement amid which it has placed itself. Without a single side-glance, it pursues only the dialectic necessity with which each conception as it comes to birth in turn subordinates the conception before it. It is therefore quite legitimate, in opposition to a mode of thought which arrogates to itself creative omnipotence, to emphasize the experiential character of our knowledge. But, on the other hand, empiricism is in error when it narrows down experience to experience of what is external; the mind has also an experience of itself. The real nature of mind can be manifested only in consciousness—and upon this fact depends the experiential character of our mental life; but what concerns us here is the mind's experience of its own peculiar endowment, which, as we have seen, claims to possess regulative authority, and which carries us beyond the bare experience of empiricism.

This doctrine is not only in conflict with the purely speculative method, but is also at variance with the view of Kant. Kant believed that he could completely and finally determine that which belonged to mind or reason; but his conclusions were of a purely formal kind. The view advocated here involves not only a much greater amplitude in our mental life, but also a capacity for producing new real elements. What the mind really is cannot be determined once for all; an avenue must ever be left open for further developments. In other words, there is a historical element in consciousness, or at least in human consciousness. We are not for thinkers who would identify philosophy with psychology, they are therefore evolved from mere experience. If consciousness is to cover everything, then all its various "facts" would be co-ordinate and of equal value, and would all be tested by the same standard, the question of the origin of the mind. Arbitrary changes of consciousness, or even changes determined by mechanical causality, would simply follow upon one another, and no arrangement or grouping thereof would mean more than any other. Amid such a world of Ideas, it is not even so much as ask for the truth. Now, in point of fact, all distinctively mental creations claim to have judicial authority; judgments purport to be more than collocations of psychical products; aesthetic and ethical Ideas involve more than feelings and desires. They claim, in short, to be authoritative, to be the standard of truth and law for what is given in experience. We must distinguish between the *questio facti* and the *regulative principle*; it is quite another to ask what ought to be. In dealing with the distinctively mental, we discover something beyond the fact of determination by natural law, namely, *regulative* law. The laws of logic, of science, of morals, like the laws of nature, formulate that which ought to take place, not that which actually and invariably does take place. Thus we cannot deny the fact of the mind's peculiar heritage, as evinced by this unique claim to regulative authority. We must allow, nevertheless, that the objection indicated above, namely, that even these peculiar intellectual products must manifest themselves in consciousness, is something more than a truism; it expresses the fact that the real cannot be evolved by purely logical processes from abstract conceptions, for the conception of a real idea must always contain, in contemplating the dialectic movement amid which it has placed itself. Without a single side-glance, it pursues only the dialectic necessity with which each conception as it comes to birth in turn subordinates the conception before it. It is therefore quite legitimate, in opposition to a mode of thought which arrogates to itself creative omnipotence, to emphasize the experiential character of our knowledge. But, on the other hand, empiricism is in error when it narrows down experience to experience of what is external; the mind has also an experience of itself. The real nature of mind can be manifested only in consciousness—and upon this fact depends the experiential character of our mental life; but what concerns us here is the mind's experience of its own peculiar endowment, which, as we have seen, claims to possess regulative authority, and which carries us beyond the bare experience of empiricism.

The answer given by empirical limits varies according to the kind of question put to it. It is obvious that, on the one hand, Aristotle's investigation of nature by means of the conception of entelechy, i.e. a form realizing its own idea in matter, and, on the other, that of modern science, i.e. the causal universal, to ask what is the appropriate answer to this antecedent, thus winning for its Ideas a structure increasingly delicate, and an organization increasingly rich.

The answer given by empirical limits varies according to the kind of question put to it. It is obvious that, on the one hand, Aristotle's investigation of nature by means of the conception of entelechy, i.e. a form realizing its own idea in matter, and, on the other, that of modern science, i.e. the causal universal, to ask what is the appropriate answer to this antecedent, thus winning for its Ideas a structure increasingly delicate, and an organization increasingly rich.

The first it signified more than the purely formal, involving indeed a conviction regarding the actual constitution of the world. Similarly the manifold aesthetic and ethical Ideas, which are certain of its real forms, find their function in organizing the real, and that it did not go further into that matter here. Suffice it to say that the human mind has brought a great variety of Ideas to bear upon the real, and that it did not begin its task with the same inherent

* Theologische Ethik, ed. 2, i. 19.
equipment with which it pursues it. In fine, the mind also has a history. Now the question arises whether these Ideas should be called a priori. If they are related to history, they must also be related to experience. Nothing save the tedious discipline of facts could have conversed its form to form a fresh Idea. We must with absolute certainty that the mind is not something ready-made, anterior to all experience; it is in reality built up by intercourse with the facts of experience and history. But for that very reason it is not the product of these. What they supply is the environment for the mind's own creative activity. Accordingly the fresh element generated by this spontaneous activity is an A Priori in reference to the whole province of empirical reality, which thus becomes the mind's palestra, that which is to be organized by means of the Ideas. Just as, according to Kant, the a priori forms of reason are the necessary condition of experience in the higher sense, so also are the Ideas generated by the mind. We must likewise note that these Ideas exist only in virtue of the mind's own activity, were they wholly forthwith pass away—another link of affinity with the A Priori of Kant. We must accordingly assign to them the efficiency which marks the A Priori. The fact that they undergo changes and transformation is necessarily supposed. Whether, need we not perplex any one who does not postulate the original perfection of the mind. We must grant, of course, that we can win a truth only by much effort, and that our approach to the ultimate and supreme end is asymptotic, never issuing in complete realization. Nevertheless in all our effort and travail we assume the reality of absolute truth; we must, in fact, make this assumption, else were all our striving fruitless, and even partial truth beyond our grasp. Just as the various parts of space lie within one and the same Space, so partial truths are constituents of the one absolute Truth. That this eternal, absolute truth is no ignis fatuus appears from the fact that there exists in us a mighty unrest, ever urging us beyond the position we have won. Whence this unrest? Certainly not from without. Were our mind sufficient to itself, no external force could move it onwards. There must exist, therefore, something in itself, which ever and anon provokes it to dissatisfaction with what it has achieved, and imperfections thereof. Hence it is no arbitrary assumption that the human consciousness is interpenetrated by an Absolute Consciousness. The actual existence of this Absolute Mind would thus be the ultimate and supreme A Priori, and we recognize it as such even though we must refrain from analyzing it more particularly. We cannot once for all explicate its constituent elements by logical operations or by introspection; but it gradually reveals itself in the process of our intellectual life.

To sum up: The A Priori has a threefold significance. It embraces (1) the formal laws of mind, of which logic furnishes the best example; (2) the Ideas generated by the mind; and (3) the contents of the absolute mind. This view, or one all but identical, is championed by the new Idealism, whose principal representative is Prof. R. Eucken, of Jena.

Kant's results require modification in still another respect. He approached religion from the side of morality. He regarded the A Priori of the former, in contrast with that of the latter, as in some degree derivative. In point of fact, he was not resolute enough in regard to the independent position of religion, and it is Schleiermacher who makes good the deficiency. Kant's view of the distinctive character of religion as something independent of thought or moral action. True, his own definition of religion as 'the feeling of absolute dependence' is most defective. It may be, and has often been, misunderstood, since 'feeling' has a psychological reference which tends to obscure its
A PRIORI SIGNIFICATION. Hence the protest of Hegel: 'It is matter of experience that the ingredients of feeling are of the most fortuitous character; they may be of the purest, or of the basest. If God lives in feeling, He is in no way superior to the worst, for on this soil the kindest flower may also up before the rainiest need.' Hence the protest of Hegel: 'It is matter of experience that the ingredients of feeling are of the most fortuitous character; they may be of the purest, or of the basest. If God lives in feeling, He is in no way superior to the worst, for on this soil the kindest flower may also up before the rainiest need.'
army, and besought them to get their brother back again. They succeeded in recovering him from the Dominicans, but no pressure could induce him to lay aside the habit of the order, and even two years' imprisonment in the castle of Rocca Secca could not break his purpose. He employed this time of solitude in studying the Bible and the Schoolmen, and his mother was convinced that it was impossible to change his will, she herself helped him to escape. He let himself down by a rope from the window, and rejoined the Dominicans. Towards the end of 1244 he accompanied Johannes Tauler, to Cologne, to study under Albertus Magnus. They travelled on foot, and reached their destination in 1245, after a journey of three months.

The many stories told of his youth, e.g. the well-known one of the Bos mutus Sicilis, show that, as is the case with many great intellects, his development was slow, but before the age of 20 Albertus had discovered his powers, and made him his alter ego. On the 4th of June, 1245, at a general chapter of the order held at Cologne, it was decided to send him to Rome. In 1247 he returned to Cologne. In 1252 Thomas was sent back to Paris to receive his degrees, and to establish an independent school there. This residence was interrupted by the contest of the mendicant orders with the university authorities headed by William of St. Amour. Thomas was sent to Rome to plead the cause of his order before Alexander IV. This he did with success. On his return to Paris he received in 1256 the degree of Magister which had been refused him before on account of his habit. The University bore him no ill will, and shortly afterwards referred to the young doctor the much agitated question whether the accidents in the Eucharist really exist, or are only appearances.

In 1251 he was summoned to Italy by Urban IV., who tried in vain to persuade him to accept high ecclesiastical preferment. He taught at Ostia, Viterbo, Anagni, Perugia, Bologna, and Rome. In 1259 he returned to Paris, and taught there for the rest of his life. He was then sent by the Order to Naples at the instance of Pope Alexander, bishop of St. Louis, to give the authority of his name to the school where he had himself received his first important instruction. In 1273 he was summoned by Gregory X. to the Council of Lyons, which was controlled by Urban and the rival claims of the Greek and Latin Churches. Though in bad health, he started, accompanied by brother Reginald, his ever faithful assistant. At the Castle of Magenza—the possession of one of his nieces, the Countess of Cessano—he fell into a long ecstasy, which much enfeebled him, and after which he felt his end to be near. As he wished to die in a house of his own order, he continued his journey, but was obliged to stop at the Carmelite nuns of Abbe near Terracina. There he died, 7th March, 1274. At the time of his death, he was, at the request of his hosts, dictating for them an exposition of the Song of Solomon. He had got as far as 'Filium Jerusalem dixit dilecto meo, quia prae amore morior,' when his strength gave way. The report was current that he had been poisoned by Charles of Anjou.†

For nearly a century the Dominicans and Cistercians disputed the honour of possessing his remains. The quarrel was not yet settled when, 41 years after his death, he was canonized by John XXII. It was finally decided in 1308, by a bull of Urban V., that the body should be surrendered to the Dominicans of Toulouse, the mother church of the order. An arm was given to the Convent of St. Jacques at Paris, where St. Thomas and B. Albertus had taught. In 1286 he was raised by the Dominicans to the rank of Doctor Ordinis. In 1567 he was made by Pius v. the fifth 'Doctor of the Church,' and thus placed on an equality with St. Jerome, St. Ambrose, St. Augustine, and St. Gregory the Great. *

* His works fill 17 folio volumes in the edition of Pius v. (Rome, 1570). Their exact chronological order is not yet completely decided, and the genuineness of some is disputed. He began his work at Cologne, the Ordinis de Ente et Essentia (No. 30 of the Opuscula in the Roman edition). The most important are the Summa contra Gentiles, the materials for which he began to gather at Paris, during his first period of teaching there, at the request of Raymond de Pannoforte; the Summa Theologica, begun in 1265 in Italy and left incomplete at his death; the Questiones disputatae (1261-1264); the Quodlibeta, of which the first five were composed at Paris, the last six at Rome; and the Aristotelian commentaries, begun 1246 at Paris. In the instances where there are commentaries on books of Sacred Scripture, of which the best known is the Catena Aurea, properly called Espositio continua, and the commentary on the Sentences, which was the first extensive work composed by him.

This enormous literary output is all the more remarkable, when it is remembered that it was far from being the only occupation of these strenuous twenty years. During the whole time Aquinas was busily engaged in teaching. The attraction of his lectures was so great that it was difficult to find a hall large enough to contain the audience. At times he employed three or four secretaries at once, and dictated to them about different subjects without confusion. It is a mistake to speak of him as 'pure embodied intellect, perfectly passionless.' † This is not the meaning of the praece of the intellect over the will as taught by him. His hymns are proof enough of this—the famous sequence, "Lauda Sion Salvatorem," "Vange lingus gloriæ corporis mysteriorum" and "Verbum supernum propter," (there is a hymn of St. Ambrose beginning with the same line), "Sacræ solemnii juncta sint gaudia," and "Adoro de latens Deitatis." They were written for the festival of Corpus Christi, the observance of which was imposed by Urban II. in 1265. They are 'powerful in thought, feeling, and expression,' and probably exercised important influence on the general acceptance of the dogma of transubstantiation, the doctrine of which is set forth in them with a wonderful degree of scholastic precision. § Every day he had a portion of a book of edification read aloud to him (Enfini collationes Patrum); and when asked why he withdrew this time from speculative thought, he answered that he considered the rousing of the spirit of devotion to be the due preparation for the possibility of speculation. When the feeling of devotion was roused, the spirit rose all the more easily to the contemplation of the highest truth. He never began to study, to lecture, or to write, without first giving himself to prayer to obtain Divine illumination. When doubts intruded upon his investigations, he interrupted them to seek en-

lightenment in prayer. The fact that the Summa Theologica was left incomplete was not due entirely to want of time. In the Acta we read: 'The witness—Bartholomew of Capua—declared that brother Reginald, seeing that the holy doctor did not continue the third part of the Summa, after the questions demanded from the sacrament of penance, asked him why he had stopped this great work, which he had begun for the glory of God, and which would enlighten the world. St. Thomas, filled with the thought of having soon to appear before the Supreme Judge, replied that he could not continue: that all he had written so far appeared to him to be nothing in comparison with the wonderful things that God had been pleased to reveal to him recently.' St. Thomas had a sane mysticism of his own, not the spurious kind that would banish reason from religion altogether, and drown itself in the wild fancies of the Evangelium aeternum, but that which recognizes, with St. Augustine, that no real progress in the religious life can be made without corresponding progress in knowledge, and for which the supreme communion with God has no other content than that of the Visio Dei, i.e. essential knowledge.

2. Sources.—(1) The Sacred Scriptures.—St. Thomas did not attempt to separate the point of the old knowledge, Scripture according to all the four methods of interpretation (Sum. Theol. i. i. art. 10). He insists very strongly on the importance of not sacrificing the historical. For instance (ib. 2, c. 1), in the question of locus corporis, he says: 'Es, que de Paradiso in Scriptura dicitur, per modum narrationis historicis proponuntur. In omnibus autem, quae sic Scriptura tradit, est pro fundamento tenenda veritas, et non spiritus vel expositionis fas canendi.' It is to be noted that in his exposition of Isaiah 8 he has so faithfully presented the sensus literalis, that Cornelius a Lapide and others declare it 'judicata exposito, Divi Thomas ingenio prorsus indigna.' The three other senses are explained (ib. i. i. 10): 'Secundum ergo quod ea qua sunt veteris legis significat ea quae sunt nocc legis: est sensus allegoricus. Secundum vero quod ea quae in Christo sunt facta vel in Ihesu Christo specta est sensus moralis, quae nos agere debemus: est sensus moralis. Prout vero significat ea quae sunt in aeterna gloria: est sensus analogicus.'

The testimony of Erasmus to St. Thomas' merits as an interpreter of Scripture is amply justified by the following: 'Nam mei quidem animo nilus est recentiorum theologorum, cui par sit diligentia, cui suis ingenio, cui soloer endudio: planeae digniss erat, cui lingueram quaque persilis, reliquiae bonarum litterarum supellex congeterit, quin sibi quom per eam tempusatem debentur deum dare sui esse' (Rom. i. 13, Curs., vol. vi. p. 664).

He had at hand some who were not unacquainted with Hebrew (e.g. he knows that ו is feminine), but this does not prevent him from falling into pitfalls of translation, e.g. the use of verbum in Lk 11 (Sum. Theol. i. xxv. 3).

Greece.—De Rufheis has counted 66 Greek and 22 Latin Fathers as used by Aquinas. The greater part are taken at first hand. He informs us himself: 'Quasdam expositiones doctorum Graecorun in Latinum feci transferrir' (Preface to Catena aurea). He makes special use of Dionysius. The charge of Monophysitism made against this author, which has recently been revived, has been amply examined and refuted by de Rufheis in his ninth Dissertation.

3. Other Authors.—Dr. Sandys has noted that the Summa Theologica is an embodiment of the scientific spirit of the 13th cent., which stands in sharp contrast with the literary and classical spirit of the 12th.*

(a) Aristotle is, of course, the chief. How far his Aristotelianism is pure, and how far coloured by Neo-Platonism, is still sub judicis. It must be remembered that this process of Platonicizing Aristotle had begun by the time of Alexander and Aphrodias. When Prantl† says that St. Thomas corrupted Aristotelianism and Platonicism by the mysticism of the book de Causis, this statement needs a good deal of qualification. Aquinas was well aware that Proclus was the author of this book, and he gives the correct title to it, 'elementatio [not elevatio] theologica.'‡ It is to be noted that in the crucial question of the νος προτερος he is quite free from Neo-Platonic influences. Brentano says: 'He gives an explanation, which is most notably, in all the points above mentioned, in agreement with the fragment of Theophrastus which is preserved in the paraphrase of Theopistius.' And again: 'If we ask which of the earlier interpreters has come nearest to the truth, it is undeniable that we must give this honour to St. Thomas. I do not know whether I ought not to say that he has grasped correctly the whole teaching of Aristotle.§

(b) Of Plate. Paradise is known only the Timaeus in Chalcidius' version. He says expressly that the Republic was not accessible.

(c) Of the Latin philosophers he uses mainly Boethius, Cicero, Macrobius, and Seneca. He is more familiar with the writings of St. Augustine: xxxvii. (Dissertatio, c. iv.) notes that in the Summa Theologica there are quoted 46 Greek, Latin, and Arabic philosophers, besides orators and poets.

(d) Of the Arabic and Jewish philosophers.—The indebtedness of Aquinas to these sources has been the subject of much controversy. Some have gone so far as to say that there had been no Maimonides there would have been no Aquinas. This is an exaggeration, but Aquinas had certainly learnt much from the Maimonides concerning arguments about the creation of the world in Sum, Theol. i. xlv. 1 with Mor. Neb. ii. c. 16 [ed. Munk, vol. ii. p. 121]. His attitude to Ibn Gebir is very hostile. 'In opposition to the Franciscans, who so carefully presented and circulated certain opinions of Avencebro, St. Thomas, like his teacher Albert, rejects his opinions.' He is the bitter enemy of the Andalusian school of Arabic philosophers, and is as well acquainted with Avempace, who is very often referred to in the Summa contra Gentiles, as with Averroés.

Of equal importance with his own contributions to the interpretation of Aristotle is the fact that Aquinas secured the making of new translations from the Greek, which displaced the earlier ones which were made from the Arabic. It was at his instance that William of Brabant—William de Moerbecka—is said to have produced in 1273—doubtless with the help of others—a literal translation of the Greek text of all the works of Aristotle.¶

In connexion with this work, the question has

been raised as to St. Thomas’ own knowledge of
Greek. This question cannot be answered de-
cisively until all his works have been critically
edited. De Rubeis has shown that he was certainly
not a complete stranger to the Greek language. ʼIn
his commentary on the Ethic, the presentation of
the right reading misspelt, and of a ludicrous ethe
diction, it is very nearly right, seems to show that, while Aquinas had about
him people who knew Greek, he had himself no
substantial knowledge of it. ʼ*

3. Main points of system.—The age of St. Thomas’ own
knowledge of Greek. This question cannot be answered de-
cisively until all his works have been critically
edited. De Rubeis has shown that he was certainly
not a complete stranger to the Greek language. ʼIn
his commentary on the Ethic, the presentation of
the right reading misspelt, and of a ludicrous ethe
diction, it is very nearly right, seems to show that, while Aquinas had about
him people who knew Greek, he had himself no
substantial knowledge of it. ʼ*

The distinctive characteristics of the system of
philosophy which Thomism displaced in the
Western Church are well summed up by de Wulf
as follows: ʼAbsence of any formal distinction
between the domain of philosophy and that of
theology, i.e. between the order of rational and of
revealed truth; primacy of the notion of the
good over that of the true, and in consequence
primacy of the will over the intellect both in
God and man; the necessity of an immediate illumination of
the intellect by God in accomplishing certain intellectual acts; actuality, in a low degree, but still some
positive actuality in primitive matter independent of
a substantial form; the presence in matter of
reasons seminales which are even at present a
core of the substantial form; plurality of forms in
natural things; individuality of the soul independently of its union with the body, especially in
man; the identity of the soul with its faculties’ (Gilles de Lestines, p. 15). The philosophical
element incorporated in this school was essen-
tially Platonic.

For this Thomism substitutes Aristotelianism:
not blindly, for ʼlocus ab auctoritate est inifirmi-
issimus’ (Summ. Theol. I., c. 36), but legally,
ʻsi audierit omnes quasi adversarium sub-
tantiam’ (Metaph. iii., Lect. 1), though respectfully.
The novelty of the teaching of St. Thomas is
universally willed upon—the novelty not only in
matter but in method. Thus: strict distinction between Natural and Revealed
Theology; unity of the substantial principle, as opposed to the plurality of forms; passive
existence of matter, as opposed to the theory of rationes
seminales; one of the substance of subsistent forms, as opposed
to the notion of spiritual substance being
composed of matter and of form; the real
distinction of the substance of the soul and its faculties,
Laundys, i.e. p. 683 f.; de Rubels, xxx. c.; Mandonnet, l.c.
p. 55.

† This letter is given in Denzinger’s Rerum Vidtion, p. 379.
‡ On rationes seminales—an idea derived from St. Augustine—
see Kleutgen, Philes. der Forschung, I, 159.

as opposed to the Augustinian doctrine of their
identity; the primacy of the intellect over the
will. ʼ The new system was, of course, not received
without a struggle, which continued long after the
death of St. Thomas. The articles of 1277 were
directed not merely against Averroism, but against
Peripateticism in general.

Notwithstanding the vast extent of St. Thomas’
writing, a sufficient knowledge of his whole
system may be obtained from the two Summae. The
Opuscula are useful for giving a more elaborate
treatment of special subjects, but the whole is to
be found in the two great treatises. St. Thomas’
work is therefore not merely a little sign of gradual development in his writings, because he early reached his complete system. In the Acta,
p. 670, we have the evidence of Egidius of Rome
(afterwards bishop of Bourges): ʼIn this marvellous
and memorable doctor, it was a manifest token of the
subtlety of his genius and the accuracy of his
judgment, that as a master neither in teaching nor
in writing did he change the new opinions and arguments which he upheld as a bachelor, with
very few exceptions. ʼ The fact is that Albertus
Magus had laid the foundations of St. Thomas’
philosophy, so to say, and St. Thomas’ system was
elaborated and developed in detail. But both the Summa
must be employed. The better known Summa
Theologica handles many philosophical problems
very briefly, which are dealt with at length in
the other, which is in consequence often called a
Philosophia. In the short prefatory letter to the
Summa
Theol. the author says that it is intended to be a
compendium for beginners, and that he will deal
with the questions ʼbreviter et dilucide. ʼ These
questions are dealt with in the Commentaries on
the principal points dealt with by the Greek philoso-
pher. St. Thomas proceeded ʼquodam singulari et
novo modo’ (Acta, p. 681). This new method was
that of Averroës, not following the text servilely,
but expressing its meaning as faithfully as possible.
They therefore are intended to give Aristotle’s own
meaning, which may or may not be that of the
writer. They sought not merely to interpret, but to
disseminate in the whole Church the works of St. Thomas. Thomistic
Philosophy is a summation de veritate
Catholica Fidei contra Gentiles is the title as given
by Ucelli from the autograph MS, though the work
is not addressed to Gentiles in the proper sense,
but to Mohammedans, Jews, heretics, and un-
believers of all sorts, i.e. all outside the Church.
Since the opponents either do not recognize
the authority of sacred Scripture as all or only
imperfectly, and do not recognize that of the Church,
it is necessary in their case ʼto have recourse to
natural reason, although in things Divine this is
insufficient. ʼ The work is divided into two
parts. In the First, Aquinas deals with the existence and attributes of God. In the Second, he shows how
all things proceed from God as regards their being
and their distinctive characteristics. The develop-
ment of this subject leads him to speak of the
distinct kinds of substances, and especially of the
substantia intellectuales, regarded in them.

* On this matter Mandonnet, l.c. p. 66; de Wulf, La Philes-
metaphysique, p. 660, and Filles de Lestines, p. 15.
† One of the substan
tialis, or spiritual substance, is composed of
matter and of form; the real
distinction of the substance of the soul and its faculties,
selves, in their relations to body, and in their operations. He dwells specially, of course, upon the human soul, demonstrates its spiritual nature and its personality, and develops his theory of knowledge. The Third shows that all things are oriented towards one end, which is God, and that the supreme and final beatitude of man consists in the contemplation of God; that Providence embraces the whole universe, that it extends to intelligent creatures, without destroying their liberty, and prescribes to them laws, which are the maxims of the intellectual. The Fourth gives an exposition of revealed truth. This is above the powers of unassisted human intellect. All that can be done, therefore, is to show that these truths are beyond, not contrary to, human reason.

**Summa Theologica.**—This is divided into three parts. The First deals in 119 Questions, with God, and the procession of all things from God. The Second is divided into two sections, the first of which deals with Ethics in general, in 114 Questions; the second with Ethics in particular, in 189 Questions. The Third deals with Christ and the sacraments, but breaks off in the middle of the sacrament of penance. In the short preface to this part the scheme is laid down to deal first with the Sacraments, to which man sanctifies himself in which we attain salvation; thirdly, with immortal life, which we reach through Him by the Resurrection. To complete the work, therefore, the rest of the sacraments and the eschatology have been left for a future. And the order in which the problems are treated embraces, in this sense, the difficulties, and is designed to make the teaching intelligible. Each Quaestio is divided into a number of Articuli, and each article consists of three parts. (1) The difficulties are alleged, which seem to negative the Quaestio; (2) the authorities are quoted, sacred and secular; (3) the thesis is followed by a discussion based on first principles, and the resolution of the difficulties. The whole is one of the most magnificent monuments of the human intellect, dwarfing all other bodies of theology into insignificance. Apart from its importance as the authoritative code of Latin Christianity, it is great as a work of art. At the Council of Trent it was placed on the desk, side by side with the sacred Scriptures, as normative of the discussions.

The First of the Four is not of profound novelty in theology is the strict separation of natural from revealed. It had not so been laid down by any of the Fathers, or by any of the preceding Schoolmen; but it has remained in force, not only in Catholic, but Protestant. The principles of the division are laid down as follows: It is the object of wisdom, taken absolutely, to discover the truth, and therefore, incidentally, to unmask falsehood. By truth is here meant, not any special truth, such as is the object of a special science, but the ultimate absolute truth, which is the foundation of all special truths (Sum. c. Gent. i. 1). The way of attaining to this truth is double. There are some things which are true about God, which transcend entirely the powers of human reason: this is the doctrine of the Trinity in unity, and all the distinctively Christian dogmas. There are others to which natural reason can attain, such as those of the existence and the unity of God. These things the philosophers have demonstrated exactly, under the guidance of the light of human reason (ib. i. 3).

When we speak of this double nature of truth, this must be understood relatively to ourselves, not as concerning the nature of truth absolutely. When we speak of Himself; then truth is not to be understood in reference to God Himself, who is the one and simple truth, but in reference to our own knowledge, which has different ways of reaching this Divine truth (ib. i. 9).

(1) The first way is ratio naturalis. It is not the intention of St. Thomas in any way to vilipend reason, and so to drive it outside the sphere of religion altogether. It is defective, i.e. inadequate for ascertaining the truth completely, but not deceptive. It is 'the impression of the Divine light in us.' The light of natural reason by which we discern between good and evil, in that which appertains to the natural, not that which appertains to the impression of the Divine light in us (Sum. Theol. II. a. xci. 2). Human reason is perfected by God in two ways: first, by a natural perfection, according to the light of reason; secondly, by a supernatural perfection, by means of the theologica virtues. Although this second perfection is greater than the first, the first perfection is possessed by man in a more perfect way; for the first is held by man, as it were, in full possession. The second is held only imperfectly, because such is our knowledge and love of God (ib. i. xlviii. 2).

(2) The second way is faith. The knowledge of God by faith comes to us by Divine revelation (Sum. c. Gent. iv. i.). Since the knowledge of God to a considerable degree by reason, the intellect is almost, or altogether, out of His superabundant mercy, to make it more perfect, revealed to us certain things about Himself which transcend human knowledge. In this revelation a certain order is observed, such as is suited to make the Scholastics proceed from the imperfect to the perfect. At first they are so revealed as not to be understood, but only to be believed, as it were, on hearsay, because the intellect of man, when in that state in which it is bound to things philosophical, is not able to behold those things which exceed all the analogies of sense; but when it is freed from the bondage of sensible things, then it can rise to contemplate the things that are revealed (ib.). There is therefore in one sense a triple division of man's knowledge of Divine things, on account of this division of faith into two degrees (ib).

This second means of reaching truth is needed: (a) On account of the imperfection of natural reason. The human intellect has not the power of grasping the substance of God, because the knowledge of our intellect according to the mode of this present life begins with the objects of sense. We see that there are various grades of mystery; and the more perfect it is, the more it is suited to man, and thus what is intelligible to the philosopher, nor can the philosopher understand that which is intelligible to the angel (ib. i. 3). (b) Out of mercy it extends even to those things which natural reason could discover, because few could thus attain to them. The process of investigation takes a long time, and is not certain to be successful, because falsehood creeps in on account of the weakness of the intellect and the disturbing element of the fancy (ib. i. 4). Faith, therefore, supercedes but does not destroy reason. It is not that the light of the air is by the greater, but rather increased, as the light of the air is by that of the sun; and in this way the light of science is not darkened, but rather grows brighter, in the soul of Christ by means of the light of Divine knowledge (Sum. Theol. III. ix. 1 ad 2). Still less is it contrary to it. Because it transcends reason, it is thought by some to be contrary to it; but this is impossible (Sum. c. Gent. i. 7).

The relation, therefore, between philosophy and theology in things divine is this: by reason of its proper province. In the teaching of philosophy, which considers the creatures in themselves, and leads us from them to the knowledge of God, it is the creatures who are considered first, and finally God. But in the teaching of Faith, which considers the
creature only in its relation to God, it is God who is the first object of consideration and the creatures afterwards. (Sum. c. Gent. ii. 4.) (ii.) Natural reason must keep to its own department. Only those things can be known about God by natural reason which belong to the unity of His essence, but not those which belong to the division of the creature: of course, the double division of Plotinus is introduced (II. lxii. 5 from Macrobius). In the development of the idea of virtue, and the division of virtues into moral and intellectual, he follows Aristotle. The intellectual take precedence, because the contemplative life, if the contemplation be theological, stands higher than the practical: 'Ultima et perfecta beatitud non potest esse nisi in visione divinae essentiae' (II. iii. 8), and 'beatissimum est verum virtuosarum operationum' (II. v. 7). The moral value of actions is determined by three elements: (1) ex objecto; (2) ex circumstantiis; (3) ex fine (II. xviii.), and 'bonum virtutis moralis consistit in adequate ad mensuram rationis' (II. lxiv. 1). There are three intellectual virtues: (1) sapientia ('que considerat aliasias causas'); (2) memoria ('qua recordatur'); (3) fortitudo ('qua facit firmitatem animi contra quaesumque passiones'), (II. lxii. 3). These are the virtutes acquisitae, and are subordinate to the theological virtues ('virtutes in fusa'), viz. Fides, which completes our knowledge by the union; only is known by revelation; (4) Spes, which renders accessible the Divine end, which passes the forces of nature; and Charity, by which the will unites itself to that end, and so to speak transforms itself into it. Fides without charity is useless. The question of the will and its freedom is discussed at length (I. lxxii. and lxxiii.); voluntas media est inter rationem et concupiscibilem et potest ab utroque moveri. (II. lib. 3.) It corresponds, however, to the doctrine of the natural appetite does to the senses (I. lxxii. 2). This question is discussed 'utrum homo posse velle et facere bonum abeque gratia.' The answer given is carefully qualified.

It is a characteristic of Thomism that it maintains that good is per se, not ex institutione ('per seitas boni'). This is based upon Aquinas' view of the will, which in God as well as in man has knowledge for its presupposition and basis.

One of the most prominent sections of the Prima Secunda is the discussion on law (xvii. e-viii.): the first systematic discussion of the subject in post-classical times, and, says Jourdain, the best introduction to the study of law which has ever appeared among the Catholic writers. On this point, Aquinas distinguishes between the synderesis and conscientia, the former being the general moral consciousness—the latter applying this to particular cases (I. xix. ad 3): 'Habitus autem ex quibus conscientia informatur eti multi sunt, omnes tamen efficaciam habent ab uno primo principio, sicut in habitu primum principiorum, qui dicitur synderesis.' Aquinas is decidedly anti-socialistic (II. lxvi. 1), and, of course, no advocate of toleration (II. xi. 3). The influence of Aquinas has been all-powerful over those who have come after him, not merely within the limits of Scientific Theology; e.g. in Dante's Paradiso, x. 8, 9, it is St. Thomas who speaks in heaven; his writings had a mysterious influence over Savonarola; and Jellinek states that St. Thomas was the favorite author of Descartes, and the only theologian he ever wished to study. How much Hooker was his debtor any one may see who compares the first book of the Ecclesiastical Polity with St. Thomas' section upon 'law.' Is Thomism a theology of law? The question is a good one, and we are to regard it as an overpassed standpoint. This is the question that lies at the root of the debates about the Encyclical Pascendi. One thing is clear, that Thomism is absolutely incompatible with the conception of Evolution—Transformism— that dominates modern thought. 'Nulla forma substantialis suscipit magis et minus' (de Potentia, ii. ix. ad 9; de Wulf, Giles de Lusines, p. 59). But is Thomism compatible with the theology of the Catholic Church? The authorities for the life are in the Bollandist Acta Sanctorum, March 7. The principal one is William de Toccio. Mondanet (loc. cit. p. 81) considers him weak in chronology. The fullest account of Thomism (philosophical) is Kleutgen, Die Philosophie, der Vorsor vorherrschte, 1878; (theological) Die Theol. der Vorsor vertheidigt, 1897, 6 vols. The system is well summed up from the Catholic side in Schwane, Dogmengesch. 1882, vol. III. and Wilhelm, Gesch. des Idealismus, 1896, II. pp. 442-541; and from the Protestant in Harbeck, Dogmengesch. iii. p. 438 f. De Wulf, Hist. de la philos. mediævalis, is specially to be recommended; as also the same author, with Averroës, Mondanet, Siger de Brabant, etc., 1899. H. Slodzian gives a good summing up of the Ethics of St. Thomas in Eth. viii. p. 194 (to which the present writer owes obligation). R. L. Poole, Illust. of Hist. of Medieval Thought, 1884, p. 245, gives a good review of his political theories.

The edition of the complete works (Leo XIII., 12 vols., now appeared, has now completed the summum TheoLOGIA. In the Theoma, which is invaluable dissertationes, published in a convenient edition of the Sum. Theol. published at Rome in 6 vols. 1894 (Edito auronum nominata donata a s. P. Leone XIII.). See also Uccelli, Sum. cent. ii. 382 (not in orthography, but in style, and consists principally of the Systematicus of Uccelli, 1894. The doctrine has been treated by Rodulphus of the results of the study of Civil Law at Bologna as the most brilliant achievement of the intelligence of medieval Europe (from Sanders, p. 883). See also Omman, Octavo et Philosophiae Rerum Theologiae et Philosophiae, p. 187 f.

Villari, Savonarola, vol. i. p. 6: 'Le opere di San Tommaso lo attiravano con una tal magisterial Thesaurum sì, che, quando si fermava, non sembrava, poi, sin da fucilato, preso nel leggere e studiare San Tommaso una strana passione.'

Baillie, La vie de M. Descartes, 1991, p. 286 (from Jourdain).

The evidence for the worship of Sirius (ασ-Şīrā) is not altogether above suspicion. Possibly the statements on the subject are mere inferences drawn from the Qur'an, Sūra lii, 50, where God is called "the Lord of Sirius"; this may have been interpreted as a condemnation of the belief that Sirius itself is a divine power.

Far more important, at least in historical times, was the cult of the planet Venus, revered as a great goddess under the name of al-'Uzza, which may be rendered 'the Most Mighty.' The Syriac poet Isaac of Antioch, who lived in the first half of the 6th cent., bears witness to the marriage of 'Uzza by the Arabs of that period; in another passage he identifies 'Uzza with the planet Venus. In the first half of the 6th cent., Mundhir, the Arab king of Hira, sacrificed to 'Uzza a large number of captive nuns, as we learn from a contemporary Syriac author. Procopius, also a contemporary, tells us that this same Mundhir slaughtered in honour of Aphrodite (i.e. 'Uzza, the planet Venus) the captive son of his Christian rival, king Arethas (Ḥarīth). The Arabian cult of the planet Venus was especially strong in the tribe of the Ansars (who died in A.D. 373), by Jerome, Theodoret, and later still by Evagrius. Nilus, about A.D. 410, gives us an account of a wild Arab tribe who offered sacrifices of a singularly barbarous kind to the morning star, doubting if the god 'Uzza (see below). As early as the 2nd cent., or thereabouts, references to a priest of this goddess occur in two Syriac inscriptions, found not far from the district in which the scenes described by Nilus took place. Another Syriac inscription mentions the name 'Abd al-Uzza, which at a later time, just before the rise of Islam, was extremely common among the Arabs. The phrase 'by the two 'Uzzas,' used in swearing, presumably refers to Venus as the morning and as the evening star. In the same manner we may explain the two pillars or obelisks, called al-Gharīyān, 'the two objects smeared (with blood),' which appear in connexion with human sacrifices offered by a king of Hira, the very place to which reference has been made above. 'Uzza figures in the Qur'an (Sūra lii, 19) as one of the three great goddesses of Mecca, who were supposed to be daughters of Allah. That Muhammad himself offered sacrifices to her in his younger days is expressly stated by tradition. At Najlis, near Mecca, this goddess had a sanctuary, which is said to have consisted only of three trees. Whether the Meccans and the other inhabitants of central Arabia at all realized the astral character of 'Uzza is very doubtful. A deity is, in the eyes of its worshippers, an actual person, and does not necessarily represent anything else. We are not to suppose that the pious men who sacrificed to Apollo or Athene thought of inquiring what was the original significance of these deities as personifications of natural phenomena.

Whoever the expression 'by the Lord of the (or Deity)' 'Uzza and by the god before whose house (i.e. the Ka'ba) Sarif! I live' is once used by a poet as a form of oath. Hence Weilhhausen very plausibly argues that the term (or goddess) which occurs elsewhere as the name of a deity at Medina and of a sanctuary on the lower Esphura, whether the Arabs made pilgrimages, is nothing more than an epithet of 'Uzza which had come to be regarded as a proper name.

Kuthrā, which probably means 'the Most Rich,' the name of an idol destroyed by order of Muhammad, is perhaps only another title of the goddess al-Šīrā, also read of a man called 'Abd Kuthrā, belonging to the tribe of Tai, in the very centre of Arabia. Here the absence of the definite article proves that the name Kuthrā is ancient.

Qozāh was possibly at one time a god of storms. Finally, 'Uzza has been found to be a goddess of the fishermen too.

This is probably a Muhammadan correction for 'by the life.' Sarif is a place about 4½ miles from Mecca.

II. INDIVIDUAL GODS AND GODDESSES.

1. THE HEAVENLY BODIES AND OTHER POWERS OF NAZAR, has often been supposed that the religion of the Arabs, or even of the Semites in general, is entirely based upon the worship of the heavenly bodies. This theory, however, is scarcely in accordance with the facts. That the Arabs, at a comparatively late period, worshipped the sun and other heavenly bodies, is unquestionable, but they had various other deities also who cannot be explained as astral powers. The Sun (Shamsa, const12

1. See pl. xxxi. for the contrary view see Robertson Smith, Rel. Sem. 3, p. 64 ff.

2. The Greek orthography, especially when it expresses primarily the notion of fright: see Iliad, iv. 242, xviii. 78, and esp. the Hymn to Demeter, πολιον τινα δοκεσθαι, who implies that she is the shapeshifting deity. She is the only one of the gods who is called 'the servant of the Sun.' In both of these cases the Sun is treated as masculine, contrary to the general usage. Once we meet with the name 'Abd al-Muharrir; here Muharrir, the 'Burner," may perhaps be another title of the same god. The same god who is mentioned as the ancestor of certain royal houses admits of a similar explanation.

The constellation of the Pleiades (ath-Thuhrāyāt), which was supposed to bestow rain, appears as a deity in the name 'Abd al-Thuhrāyāt; the name Najm probably refers also to the Pleiades, for the latter are often called an-Najm, 'the constellation.'

See a paper by the author of the present article in ARW 1. (1888) p. 51 ff.; and cf. the word (or term) τινα θεον εφοινική, Plut. Oedipus, 1, 322; also the μετά εὐθυναμία μείναι τόκου of He 132.

This name is more widely diffused than would appear from the statements of Wallisæus, Rel. Senior, p. 19.
Thus, for instance, Time in the abstract was popularly imagined to be the cause of all earthly happiness and especially of all earthly misery. Muhammad in the Qur'an (Sūra xl. 23) blames the unbelievers for saying, 'It is Time that destroys us.' The poets are continually alluding to the notion of Time (dhār, zaman), for which they often substitute 'the days,' or 'the nights.' Time is represented as bringing misfortune, causing perpetual change, as biting, wearing down, shooting arrows that never miss the mark, hurling stones, and so forth.

In such cases we are often obliged to render 'time' by 'fate,' which is not quite correct, since time is here conceived as the determining factor, not as being itself determined by some other power, least of all by a conscious agent. But it must be admitted that the Arabs themselves do not always clearly distinguish the power of Time from that of Destiny pure and simple. Occasionally we come across such passages as the following: 'Time has brought woe upon him, for the days and the (allotted) measure (pazadar) have caused him to perish.' Or again: 'I submit not to the injustice of Time, and I behave as though unaware that the measure (allotted to me) hindered me from attaining aught.' Various other expressions are used by the contemporaries in speaking of the portion allotted to them, or of the goal that is set before them. The notion of a personified Māya is here vaguer presently, but she has not yet become a living deity. The fatalism of the poets, as we might expect, is not merely by itself clearly formulated nor consistently carried out. Rigid dogmas on the subject of determinism and free-will were quite out of the question. Once we meet with the phrase 'till it be seen what the Apportioner shall apportion to thee' (mā zāyiqa ġāh mān), we realize that this is a personification, not a god; but this is an altogether exceptional case. The word here translated 'apportionment' originally means 'to count,' hence 'to reckon' a thing to some one. From this root is derived the name of the god of death, a favourite expression with the poets; the plural Mānūya is used in the same sense. Maniya appears in poetry as driving man into the grave, piercing him with an arrow, hanging him the cup of death, lying in wait for him as he is about to die, and so forth. Not infrequently the possessive suffix is added, 'when my Maniya overtakes me,' his Maniya has come upon him,' and the like. We also find, but rarely, the construct state Maniayā, a name derived from the cognate root MNN. These personifications, as we have seen, are merely poetical. But the same etymological group includes the ancient Menē (Is 66:18), perhaps a Cannaite deity, and also the great godness Manāt, who figures in the Qur'an (Sūra lii. 20), by the side of 'Uzzâ and Allāt, as one of the three 'daughters of Allāh' revered at Mecca. Since she had been raised long before to the dignity of a real goddess, we may assume that her worshippers were no longer conscious of her original character. Curiously enough, the two oldest documents which mention her, namely, a Nabataean and a Latin inscription, use the plural form Manuālī (spelt Manuval in Latin), just as the plural Mānūya is used for Maniya.

Among the Arabs, Manāt had a sanctuary in the territory of the tribe Hudhayl, not very far from Mecca. She was especially venerated by the inhabitants of Yathrib (afterwards called Medina).

The opinion of some native scholars that Qozah was 'a Satan's merely a deduction drawn from the name of the rainbow.'

This we may infer from the fact that the rainbow is called in Arabic 'the bow of Qozah,' and also from the use of Qozah as the name of a certain spot, within the sacred territory of Mecca, where pilgrims were accustomed to kindle a fire. This god had once been worshipped by the Edomites, and is first of all the case in the use of the name Allāt, which, so far as we can judge, means simply 'the Goddess,' is particularly suitable in this case. The same goddess appears in Herod. i. 131, iii. 8, as 'Allār, the older form of Allāt (cf. 'Alīdāh, the older form of Allāh). In both passages Herodotus identifies her with Šēmā. But from this we can infer no more than that she was a great celestial goddess; to regard it as a definite interpretation would be illegitimate. Similarly we find that in later times her worshippers identified her with Athena. The goddess is again named as 'erṣādār,' and as 'Allār,' but it is not so far as to assert that 'Allār and 'erṣādār are the sole deities of Arabia; the latter name, which he describes as the equivalent of Dionysus, unfortunately does not admit of any plausible explanation. Thal. must have occupied a very prominent place in the religion of those Arabs to whom Herodotus alludes, namely, the inhabitants of the Sinaic Peninsula and of the immediate neighbourhood. That 'Allār is identical with Allāt, a goddess much more closely connected with the Semitic goddess, must be supposed, but the second name has not been acknowledged fact. References to Allāt are found in several Nabataean inscriptions; in one of them she is called 'the Mother of the gods.' Moreover, proper names compounded with Allāt appear both among the Nabataeans and the Palmyrenes. In the inscriptions of Sāfā her name is spelt 'LT' and perhaps HLT, which apparently should be pronounced Hallāt. Among the later Arabs this goddess was no less venerated. In the Qur'an (xly. 11) she is one of the three daughters of Allāt. She is also mentioned occasionally in poetry. Thus one poet says: 'I swore to him, in the presence of the thron, by the salt, by the fire, and by Allāt, who is the greatest of all.' Of the name and personification of the goddess nothing is known; but it is not, as has been commonly supposed, a synonym of 'cold,' 'servant'; perhaps it should be rendered 'distant,' 'frozen,' so that 'frozen Allāt would mean 'frozen by (or for the sake of) Allāt.'

The son and co-regent of Zenobia, Wahballah (Ωδάβα, Βαβαλαθα), i.e., 'Gift of Allāt,' also called himself 'Gift of Zenobia.' The name is not, as has been commonly supposed, a synonym of 'cold,' 'servant'; perhaps it should be rendered 'distant,' 'frozen,' so that 'frozen Allāt would mean 'frozen by (or for the sake of) Allāt.'
Moreover, a number of proper names compounded with Manāfī prove that her cult extended over a great part of Arabia. There exists in Arabic a rare word for 'time,' namely, 'a'id.' A poet, who belonged to the tribe of Bakr b. Wā'il, in the North East of Arabia, says in describing his old age: 'The arrows of 'A'id pierced my limbs and joints.' This does not differ at all from those poetical personifications which have been enumerated above; the same poem, it may be observed in passing, alludes to 'the changes wrought by time' (guraf ad-dahr). But Israēl, who contains the phrase, 'I swear by the blood (of the sacrifices) that flows round 'A'id'; here 'A'id, 'time,' 'fate,' appears as a real deity, with a regular cult, and Ibn al-Kalbī expressly states that 'A'id was an idol worshiped by the Banū Bakr b. Wā'il, the very tribe of which the afore-said poet was a member.

Gād, equivalent in meaning to ṭāqān but construed as masculine, is the name of a deity who was venerated by various Semitic peoples (see 662). The tribe of Gad derived its name from this cult is improbable. The form Ḡaddā, which occurs in Nabatean inscriptions, might appear to have been borrowed, at a comparatively late period, from the neighboring Aramaeans. But since we meet with the proper name 'Abd al-Jādī in a few cases (which, it is true, are confined to the coast of Yemen), and since the noun jādī, 'luck,' remained in current use among the Arabs, it is more natural to regard the Nabatean Ḡaddā as an Aramaized form of the native Arabic word al-Ġadd (al-Jādī).

To this category belongs sa'dī, 'fortune' (used in a good sense only). According to a certain verse and the statements of the commentator, Sa'dī was the name given to a rock not far from Jidda, to which divine honors were paid. Moreover, we meet with the name 'Abd Sa'dī in quite a different part of Arabia, to the north-east. At an earlier period a man's name which seems to be compounded with Sa'dī occurs in the inscriptions of Sa'da.

Another deity which appears to have been designated by an abstract term is Rubādī, 'good-will,' 'favour.' The commentary on a verse in which the name is mentioned informs us that Rubādī was worshiped in the shape of an idol, by the great tribe of Tamūr. The proper name 'Abd Rubādī is found among several Arabian tribes. To the nature of the deity in question the name supplies no clue. It might even be supposed that it was originally a euphemistic title given to some malignant power. The remarkable fact in the above-mentioned verse Rubādī is construed as feminine (whereas this grammatical form would be normally masculine), naturally suggests that at that period, about the time of Muhammad, people still realized that Rubādī was merely an epithet applied to a goddess who properly bore some other name. But against this hypothesis it may be urged that the name is of considerable antiquity, as is proved by the Palmyrene inscriptions, where it occurs separately in an independent form, and in theophorous proper names as RSU; the pronunciation is fixed approximately by the Latin transcription Themarbus. The RDU of the Sa'ā inscription seems to denote the same deity.

'Udād, also pronounced 'Udād or 'Uddā, i.e. 'friendship,' 'affection,' was, according to the Qur'an (Sūra Ixxxi. 22), a god worshipped by the contemporaries of Noah. But it would be a mistake to conclude that his cult was obsolete in Muhammad's time, for we have sufficient evidence to the contrary. The poet Nabīgha says once, 'Wādd greet thee!' There was a statue of this god at Dūma, a great oasis in the extreme north of Arabia. The name 'Abd Wādd occurs in a number of wholly distinct inscriptions. But Wādd is another instance of a deity whose character remains altogether obscure. As we are told that his statue had a bow and arrows attached to it, we might be tempted to imagine that he was a kind of Eros, and this would imply a foreign origin. But though the root LDD means 'to love,' 'to feel affection' for an object, it is never used in a sexual sense. Moreover, the statue in question bore not only a bow and arrows, but likewise a sword and a lance from which hung a flag; the god was also fully clad, and therefore does not look like a copy of the Greek Eros. Finally, it should be remembered that there were other Arabian idols which had weapons suspended to them.

The name Manāfī, 'height,' 'high place,' is also a kind of abstract noun. That Manāfī was worshipped as a god is proved by the testimony of a verse, and is confirmed by the occurrence of the name 'Abd Manāfī, which was especially common at Mecca and among the neighbouring tribe of J. H. R. R. N. J. 1896. Moreover, the poet Ijauran, in an inscription from the Ḥaurān, is derived from the name of this god (= Marāghṣ); he also makes the very plausible suggestion that, in an inscription set up in Hungary by an Oriental soldier, the sentence nisi patriae MN - PHO + et Theandri votum solvit is to be understood as a reference to the same deity.

3. DEITIES BEARING NAMES OF ANIMALS.

The Arabian deities which bear animal names are few in number, and it is naturally impossible for us to ascertain their true significance. That they were originally totems is scarcely probable, for of totemism no clear traces are to be found among the Arabs, and the hypothesis that these names date from a very primitive age does not rest on sufficient evidence. In the case of the Lion-god, whose existence is proved only by the mention of a man named 'Abd al-Aza'd, 'servant of the Lion,' belonging to the tribe of Quraish, such a supposition would be especially hazardous, when we compare the word for 'lion,' not the old word common to the various Semitic languages.

One of the gods worshipped by the contemporaries of Noah, according to the Qur'an (Sūra Ixxxi. 23), was Naṣr, 'the vulture.' The Talmud ('Abodah zara, 118), and the Syriac Doctrine of Addai (of the 4th cent.), p. 24, mention Naṣhrā, the Aramaic form of Naṣr, as an Arabian god. These statements, taken by themselves, might be explained as referring to some cult practiced among the Arab tribes in this period.

* For the idea of sexual affection the Arabic language has plenty of other expressions.

This is the reading now adopted, see CIL iii. 3068; Ephemer. Epigr. ii. 390, No. 26. We may assume that the original spelling, or at least the spelling originally intended, was MANA-PHO. Nordmann had before him the incorrect form MANAL-PHO, which rendered the identification all the more difficult.

2DMG xxix. 106. The god Theandrus (with some variations of form) occurs repeatedly in inscriptions from the Baurān. What Oriental name lurks under this Greek disguise we cannot say.

§ This point has been discussed by the author of the present article in the ZDMG, 1896; and E. Wunderle, Gesch. der urzeitl. sprachwissenschaft (Strassburg, 1904), p. 74.

* See the faith.

† This is the meaning which the word always has in Arabic. In the North-Semitic languages the corresponding form (with š) is applied to the eagle, but, in the case of large birds of prey, popular usage does not sharply discriminate between the various species. Even in the NT (Mt 2424, Lk 1797) carrion vultures are called a'tev.
Arabia, since elsewhere we undoubtedly meet with an Aramaean god Neshra, for instance, in the Syrian proper name Neshrubah, 'Neshr has given.' But it is to be noticed that the Nabateans likewise had a god called Nasr. Thus the worship of the god, once widely diffused over the Semitic lands; in Arabia, however, it became nearly obsolete. Ibn al-Kalbi was unable to find any personal name compounded with Nasr; nevertheless it is not impossible that the Nēsepātaw mentioned in the ancient inscription of Memphis * was an Arab, 'Auf, in the fairly common name 'Abd 'Auf, means 'the great bird (of prey).'</td>
period; there is reason, however, to believe that the god had a human form. We may accept arak of the Deity. It is true that it does not actually occur except in compound proper names of persons, *Qaṣṣālam, Warḥ El,* and many others. Some of these, such as Wabib, 'gift of El,' *Abdul, servant of El,* appear also among the Arabs of a later age, but at least in certain cases they must have been borrowed from the Sabean language, which in other cases they are the same as elsewhere north of Arabia. It may be added that the divine name *Iṣāl,* which occurs once in an ancient verse, is possibly a plural of majesty formed from *El; Uwaq* is a variation of the same name.

In the *Našāt,* the name Hubal, 'the god,' enters into the composition of numerous personal names among the Nabataeans and other Northern Arabs of an early period, e.g. *Zaid Ḫallāb,* 'increase of God' (that is, increase of the family through the son given by God), *Abd Allāh,* and so forth. In the Nabataean inscriptions Allāh does not seem to occur separately as the name of a god, but in the inscriptions of Ṣafā the separate use is found. Among the heathen Arabs of later times Allāh is extremely common, both by itself and in theo- nymic combinations with personal names. Allāh is the name of passages in which pre-Islamic Arabs mention Allāh as a great deity; and even if we strike out some passages (for instance, on the ground that the text has been altered by Muhammadan scribes), so many still remain over, and so many are quite above serious doubt, that the fact is clearly established. Moreover, Allāh forms an integral part of various dogmatic phrases which were in common use among the heathen Arabs. Of special importance is the testimony of the Qurʾān, which proves, beyond all doubt, that the heathen themselves regarded Allāh as the Supreme Being. Thus, men turn to Allāh when they are in distress (Sūra x. 33, xxxix. 65, xxxi. 51). Solemn oaths are sworn in his name (vii. 109, xvi. 40, xxxiv. 40). He is recognized by mankind as the Creator and the Giver of rain (xxix. 61 ff.). Their crime consists only in the fact that they worship other gods beside him; the three goddesses, Manāt, Allāt, and *‘Uzza* are believed to be his daughters (xvi. 59).

In the Nabataean inscriptions we repeatedly find the name of a deity accompanied by the title *Allāh,* 'the god.' Hence Wellhausen argues that the Arabs of a later age may also have applied the epithet Allāh, 'the god,' to a number of different divinities, and that Allats of inscriptions times were not aware that any such deity had existed, but certain phrases in their language clearly prove that he had once been known. Thus the term *‘oil of Allāt,*' or simply *‘Allāt,*' is applied to land which does not require rain or artificial irrigation, but has an underground water supply, and therefore yields fruit of the best quality. In this case the god seems to be regarded as the lord of the cultivated land. That here the word *Allāt* really refers to him is shown by the synonymous, or nearly synonymous expression *‘athkhatari,* derived from *Allāh,* a deity whose name had likewise sunk into oblivion among the Arabs of that period, whereas it appears in all the older Semitic languages with the usual variations of form (*Ashkhar, Aṭhkar,* and so forth). Again, the verb *bata* and other derivatives of *Bata* mean ‘to be bewildered,’ properly ‘to be seized by the god *Bata.*'

Among the Northern Arabs of early times, particularly in the region of Ṣafā, the word El, 'God,' was very freely commonly used as a separate name and a plural of majesty, formed from this noun, is used in Ethiopia, the ordinary word for 'God.'

In the days of Islam, *al-Malik* became one of the epithets of Allāh, and hence the name *Abd al-Malik* reappears among the same.

This applies primarily to the date-palm, which requires much moisture at its root but none above.
to the original meaning; hence it may be concluded that, when Muhammad first proclaimed his mission, popular ideas as to the relation between gods and men had already begun to grow dim. It is also to be noticed that, in consequence of the abbreviations which names of persons are liable to undergo in daily life, compound names were often deprived of their divine element; thus *Ausz Manât*, 'gift of Manât'; Zaid Allât, 'increase (bestowed) by Allât'; *'Abd Allâh, 'servant of God', respectively. In theophoric proper names the deity sometimes appears as a lord, while the human individual is his servant, his handmaid, his obedient subject (*faw'); sometimes, again, the deity is described as gracious, while the human individual is his gift, his reward, his act of favour, the aid which he supplies, his *protégé* who stands with him, etc. At other times the deity is represented as increasing the family, as sending a good omen and good fortune. The human individual is also said to be the 'man' of the deity, his companion, and so forth. Some of these compounds are of doubtful meaning. With the exception of a very small number of uncertain cases found in inscriptions, there are absolutely no names which designate a human being as the kinsman or descendant of a deity, like those which we find among the Hebrews and other Semites.†

### III. The Cult.

#### I. Idols, Altars, and Sacrifices.

It has already been remarked that the sanctity of our knowledge respecting the Arabian gods is largely due to the fact that our information dates, for the most part, from the close of the heathen period, that is to say, from a time when the Arabs themselves had no very clear ideas on this subject. The traditional cult was duly practised; but mythology, not to mention religious dogma, could scarcely be said to exist. Even as to the fundamental question of the relation in which the Deity stood to the sacred stones, idols, and other objects of worship, no definite belief seems to have prevailed. If the heathen Arabs reflected about such matters at all, they probably imagined that the block of stone was the 'altar' (after the primeval Semitic fashion so clearly portrayed in the OT) was venerated by a divine power, and, in its turn, exercised a divine influence. We have already had occasion to mention the black stone of Dusares at Palmyra, and we have another instance of the same object being used for both purposes. The vast human sacrifices offered, at a later period, by King Mundhir of Hira to the planet Venus, the goddess to whom Nius was also referred, have already been mentioned.‡ But in Arabia primitive traces of human sacrifice.** Possibly among the Arabs of the extreme North, the continuity, or it may be the revival, of the ghastly ancient rite was due to the influence of the neighbouring peoples, whose religion had remained barbarous in spite of their advanced material civilization.

At the period to which our principal authorities relate, the Arabs sacrificed camels, sheep, goats, and apparently less often, kine.†† We frequently find *Count Landberg, La langue arabe antique* (1898), p. 72, mentions a remarkable specimen of blood-ritual which is still practised in a certain district of South Arabia at the conclusion of a contract of service. The anointing of fetishes, as we find it in Gn 21:29, as it appears elsewhere, both of the North and the South Arabian peoples, is likewise to be considered a secondary form of homage.

‡ Similarly, at an earlier period, the altar in the sacred grove, probably near the southern extremity of the Sinaitic Peninsula, was the *'amūd Abū*, according to Agatharchides, cited by Diodorus, iii. 42.

§ In manner the 'Ablawa, a Muhammadan confraternity existing at the present day in the district of Tiemen, Algeria, perform a religious rite in the course of which they devour a beast raw, with the skin and hair—see Douét, *Les Astasènes d'Elfen* (Chalons-Marne, 1895). This is a mix-up of primitive African savagery; it was certainly not imported from Arabia. But there is reason to believe that similar things took place in the paroxysms of excoriation that attended the Dionysiac cult. The *'abuha* of Euripides contains no very precise evidence on the subject.

¶ Probably not the oasis Dumat al-Jandal, where Wadd was worshipped (see above, p. 902), but Dūma in the Bahrūn, which was also included in the p. s. of Arabia.

‖ These sacrifices may be compared with the savage custom of 'devoting' vanquished enemies, which was in vogue among the ancient Hebrews (see *Josh* ii. 20, 24; *2 Sam* vi. 12); of the North Arabian tribes.†

** The word *'adad*, 'conducted,' cannot be cited as an argument. When applied to a single individual, it denotes a person who is under the protection of another, or a bride who is brought to her husband. When applied to a sacrificial victim, it is always a collective, the singular being then *hadya*. Thus it would not be correct to say that a prisoner is called a *'adad*.†† The most usual words for animals offered in sacrifice are *'alu* and *'arîra*; hence we may conclude that the Hebrew *hâtar*, 'to treat, matter,' *tarîv*—divided by etymology, originally referred to sacrifice, accompanied by prayer, and to the effect which it produced on the deity.
read of the blood of the victims being applied to the sacred stone or pillar. The number of the animals slaughtered must sometimes have been very large, since the poets hyperbolically compare warriors slain in battle to a multitude of sacrificial victims. Offerings of other kinds are rarely mentioned, but new of a milk-offering presented to the god Wadd (see above, p. 682), and another passage refers to an oblation consisting of barley and wheat over which milk was poured. Most of the Arabs being very poor, these less pretentious kinds of offering may perhaps in ordinary life have played a larger part than we should first be inclined to suppose. But the words *swenāk, mandsīk, ‘outpouring,* which are applied to religious ceremonies in general, and have become part of the terminology of Islam, certainly do not refer, in the first instance, to drink-offerings of this sort (as is the case with the Hebrew *nēsekh,* but to the outpouring of blood. The flesh of the sacrifice was usually eaten by the worshippers, the god contenting himself with the blood. Sometimes, however, sacrifices were left to be devoured by vultures; hence the name (which is the name by which the Ka'ba was called *mut'im at-tawr,* ‘the feeder of the birds (of prey).’ In this case the god was probably imagined to be—through human instrumentality, it is true—an example of those vultures which we know from other Arab traditions to be symbols of hospitality and munificence. But originally every sacrifice, properly so called, was regarded as food consumed by the god, or at least as a means of gratifying his sensations.* Thus the sacrificial meal brought the worshipper into closer connexion with the Deity.

The Arabs, like the Hebrews, were in the habit of sacrificing the firstlings of their flocks and herds. But how far the custom extended it is impossible to say.† Soon after the birth of an infant, its head was shaved, and it was carried to the Ka'ba, and when offered on his behalf; perhaps this was originally a ransomed, offered as a substitute for the sacrifice of the child.

We may here mention a totally different kind of offering, namely, the practice of *setting an animal at liberty,* either in fulfillment of a vow or as an expression of gratitude to the deity for the increase of the flock; thenceforth the animal in question was not to be used for any purpose, except perhaps by needy travellers who might be allowed to milk it. There were several shrines of this kind, each offering various sorts, each denoted by a distinct term. But as to the precise meaning of the terms, no trustworthy information was possessed by later scholars, since the Qur'ān had abolished these customs, together with the religion of which they formed a part. It is probable that the animals to which we have referred pastured in districts sacred to the deity, and generally were held inviolable.

The practice of *marching round the sanctuary* on the occasion of a sacrifice, as the Saracens described by Nīhus, was called by them *mut'am* or *takīd,* corresponding, in modern Arabic, to the ‘hymn’ of the early Saracens. We may be sure that what the Qur'ān contemptuously calls ‘whistling and clapping’ (Sūra viii. 35) was not confined to the Meccan sanctuary. *The act of standing (‘ukfīf) in a devout posture before the sacred stone or image likewise formed an essential part of the ritual.*

In addition to these traditional forms, there were other means of influencing the gods, namely, extemporized prayers, requests for special favours, benedictions, and, above all, imprecations. The effect of an imprecation was heightened by its being uttered in a sacred month and at a sacred spot, for instance, in the month of Dhū 'l-qa'da at 'Okaṣ. We have already seen that the gods were represented not only by rude blocks of stone, but also by *statues* executed with more or less skill. The most usual word for a divine statue, whether of stone or wood, is *panām,* derived from the Aramaic *šēlam,* and perhaps introduced into Arabia together with the object itself. The other word, *wathān,* is certainly indigenous, and seems primarily to mean nothing more than ‘stone.’† Examples of *tree-worship* are likewise to be found among the Arabs. The tree known as Dhāt *nasīr, ‘an able man,* is the object of veneration, and is surrounded with ritual honours; weapons and other objects were suspended from it. We also hear of a sacred palm-tree which was decked with apparel. At Nahla, as has been mentioned above (p. 660), the goddess *Ar'īn* and *Uzās* is said to be adored in three forms by three trees. We may assume that the deity was supposed to stand in the same relation to the tree as to the fetishes of stone. The garments, rags, and other things which were placed upon it are to be regarded as a substitute for sacrifice.‡

The *kindling of a fire in honour of a god* was quite exceptional among the Arabs. It took place in connexion with the great festival of the pilgrimage, at the spot called Qozah; moreover, the term *as-Sa’wār,* which occurs in an ancient verse of poetry referring to some particular cult, may not improbably be explained as meaning ‘fire,’ ‘blaze,’ in accordance with the ordinary use of the word, rather than as the name of a god, although the latter interpretation might seem, at first sight, to suit the context.\footnote{Robertson Smith very justly remarks (*Rel. Sem.*, p. 340, note 2): ‘The festal song of praise (Ps. 98:6) properly goes with the dance round the altar (Ps. 106:39), for in primitive times song and dance are inseparable.\footnote{1 As to the distinguished between these two expressions the native authorities supply no trustworthy information.\footnote{2 Sacred trees, to which rags are attached, exist in Arabia at the present day, and still more frequently in Syria. They are found in other countries also, but the rites connected with them present many difficulties of interpretation. On tree-worship in general see Fraser, *Golden Bough,* I. 169 ff.\footnote{3 Among the Syrians we find the name *Bēthā haikūd, ‘servant of the temple.’}}}.

2. Places of Worship.—Temples, properly so called, were certainly very rare, unless we include buildings in the Graeco-Roman style erected by the Arabs of the extreme North. The primitive similitude of the Ka'ba, of which there were various forms, each denoted by a distinct term, the deity of which was suspended, is a well-known fact, and proves that the sanctuaries of Arabia are by no means to be imagined as imposing edifices. The three temples which stood, according to Agatharchides (Diod. iii. 45), on a hill near the Arabian seacoast, may have been somewhat hand-somer specimens of architecture, but it would seem that they were built by a foreign prince, probably a Sabean. Yet in spite of their humble appearance, they housed the gods of the regarded with extreme veneration, as is shown by the proper names *Abd ad-laḥār, ‘serving of the (holy) dwelling* (the ancestor of the family who were actually in charge of the temple at Mecca); *Abd al-baqi, ‘serving of the (holy) house*; and *Abd al-Ka'ba, ‘serving of the Ka’ba.* § The word *masjīd, ‘mosque,* ‘temple,* which has become part of the terminology of Islam, was originally derived from the

* Hence, wherever human sacrifices are offered—and this can be proved to have been the case among almost all peoples—we may assume that in the very earliest times cannibalism also existed. The idea that sacrifice is required by the gods appears, for instance, in Dt 28:88, but it is entirely rejected in Ps 136:21.

† The remarkable, but well attested, statement that the Arabs considered it unlucky if the firstborn of a woman was a boy, may perhaps be explained as a sort of posthumous revenge like the Hebrews, offered to the deity their own firstborn, as well as the firstborn of animals. That the father should have specially unwonted to sacrifice a boy is natural.
**ARABS (ANCIENT)**

Aramaic, as is shown by the occurrence of **maṣṣālḥā**, ‘place of worship,’ in the Nabatean inscriptions. The sanctuary in which an idol stood was usually not enclosed with walls, but marked off by means of boundary-stones, after the fashion described by **Nīthea**.

3. PRIESTS.—That all the details of the cult could not be mastered without special training is sufficiently obvious. In connexion with several of the sanctuaries and idols we read of ministrants, who bore the title of **sandā** (pl. **saddān**); this term often otherwise means who hold the curtain; this is, one who admits to the shrine. But it is improbable that in the times with which we are mainly concerned there were men who had no other function than that of priest. At an earlier period, it is true, such persons existed. We learn from Agatharchides (Diod. iii. 42; Strabo, 776) that a man and a woman acted as priests, during their whole lifetime, in the sacred palm-grove, and wore the costume of primitive ages, consisting entirely of skins. In the Sinaitic inscriptions several individuals are expressly designated as ‘priests,’ which implies that they occupied posts of some dignity. This conclusion is supported by the fact that some of the persons in question appear from the inscription to have accompanied the same family. Furthermore, Ibn al-Kalbi, in his account of the various gods, sometimes mentions the name of the priestly family by whom this or that god was served, and in the case of the **Ka‘ba** we possess a considerable amount of detailed information as to the division of the several departments of the cult among a number of families closely related to one another. Wellhausen points out that in some cases the ministrants of a sanctuary belonged to a tribe that was not known to us, the surrounding country. Usually this is to be explained by the supposition that the priestly family remained attached to the spot after their fellow-tribesmen had emigrated or been driven out. Occasionally it may have happened that a strange clan acquired control of a sanctuary by force or fraud; that was the case at Mecca itself is not impossible.† In the inscriptions the word for ‘priest’ is **kāḥin**, which seems to have been borrowed from the Aramaic. At the same time, it is interesting to note that one of the terms for the priestly office **kāḥin** is also a title (Sura cvi. 3); only a few modifications were introduced, but there is reason to suspect that the changes made by the Prophet chiefly affected those very details which, if they were not altered, would have been out of place or out of the original meaning of the whole. In particular, he abolished all the idols† after the capture of his native city, whereas he retained a sample of the most primitive fetishism, the Black Stone, connecting it, as he connected the **Ka‘ba** itself, with Abraham. According to one tradition, which has all the appearance of trustworthiness, the Prophet forbade his followers to march round the sacred spot naked; the practice in question must therefore have existed before the Prophet’s time. Indeed, it is probable that those who took part in the festival ought not to appear before the Deity in their ordinary garb; hence, if any one had not the means of borrowing a suit of clothes at Mecca, he was obliged to perform the ceremony in nudity. The custom of worshipping at a shrine in garments lent by the priest occurs also elsewhere in Arabia. In one case, we are told, a Bedawi, who belonged to the neighbouring tribe of Hudail, marched round the **Ka‘ba** with his buttocks uncovered, apparently imagining that this was a

**IV. MECCA.**

THE ‘OMRA AND THE HAJJ.—The **Ka‘ba** at Mecca was an unpretending edifice, erected, in the second half of the 6th cent. after Christ, on the site of an older sanctuary which had been destroyed by fire. The new building was constructed by a native of the Roman Empire, partly out of timber obtained from a stranded vessel, wood suitable for architectural purposes being a rare article in most parts of Arabia. To the heathen Arabs the **Ka‘ba** was an important centre of worship, and it afterwards acquired, through Muhammad and Islam, a worldwide fame, surpassing even that of the Church of the Holy Sepulchre or of St. Peter’s at Rome. At what period a **Ka‘ba**, that is, a durable building with rectangular walls, ‡ was set up for the first time in that altogether sterile valley, we have absolutely no means of determining. It has been plausibly conjectured that the selection of the spot was due to the existence of the well called Zamzam, which has a tolerably abundant supply of water, and might naturally be regarded as a gift of the gods by the caravans which passed to and fro between Yemen and Syria, though the water of Zamzam, it must be admitted, is of an inferior quality, judged even by Arabian standards, and as compared with some other springs which are to be found not far away off. But, however this may be, the primitive structure in question, which was little more than a box containing, it is true, a repository for treasures, first appears in history as a sanctuary in the hands of the Qurānid, surrounded by a stretch of sacred territory (**sawrah**), and visited by strangers who performed a pilgrimage (‘omra) to the place. The traditions which relate to the early history of Mecca are extremely untrustworthy, and many of them have been perverted in the interests ofious parties; but there is no reason to doubt the statement that this territory, unattractive as it is in itself, had once, if not oftener, been overrun and seized by violence.* The ceremony of marching round the **Ka‘ba**, and of such an excursion between the two great stones, called **Sa‘īf** and **Marwâ**, which stood in the immediate vicinity, were rigidly fixed. The greater part of this ritual was incorporated into Islam by Muhammad, who from the first adopted the **Ka‘ba** as the temple of Allah (Sūra cvi. 3); only a few modifications were introduced, but there is reason to suspect that the changes made by the Prophet chiefly affected those very details which, if they were not altered, would have been out of place or out of the original meaning of the whole. In particular, he abolished all the idols† after the capture of his native city, whereas he retained a sample of the most primitive fetishism, the Black Stone, connecting it, as he connected the **Ka‘ba** itself, with Abraham. According to one tradition, which has all the appearance of trustworthiness, the Prophet forbade his followers to march round the sacred spot naked; the practice in question must therefore have existed before the Prophet’s time. Indeed, it is probable that those who took part in the festival ought not to appear before the Deity in their ordinary garb; hence, if any one had not the means of borrowing a suit of clothes at Mecca, he was obliged to perform the ceremony in nudity. The custom of worshipping at a shrine in garments lent by the priest occurs also elsewhere in Arabia. In one case, we are told, a Bedawi, who belonged to the neighbouring tribe of Hudail, marched round the **Ka‘ba** with his buttocks uncovered, apparently imagining that this was a

† A man named **Amādī** calls himself ‘a priest of **Uzza’ (Eutin, 650), and a certain **Habībīnī, son of Amādī, is also a priest (Eutin, 249). A second **Habībīnī** is likewise so described (Eutin, 345). In another inscription, which is unfortunately not preserved, a priest of Mecca is attached to the Church of the Holy Sepulchre or of St. Peter’s at Rome. At what period a **Ka‘ba**, that is, a durable building with rectangular walls, ‡ was set up for the first time in that altogether sterile valley, we have absolutely no means of determining. It has been plausibly conjectured that the selection of the spot was due to the existence of the well called Zamzam, which has a tolerably abundant supply of water, and might naturally be regarded as a gift of the gods by the caravans which passed to and fro between Yemen and Syria, though the water of Zamzam, it must be admitted, is of an inferior quality, judged even by Arabian standards, and as compared with some other springs which are to be found not far away off. But, however this may be, the primitive structure in question, which was little more than a box containing, it is true, a repository for treasures, first appears in history as a sanctuary in the hands of the Qurānid, surrounded by a stretch of sacred territory (**sawrah**), and visited by strangers who performed a pilgrimage (‘omra) to the place. The traditions which relate to the early history of Mecca are extremely untrustworthy, and many of them have been perverted in the interests ofious parties; but there is no reason to doubt the statement that this territory, unattractive as it is in itself, had once, if not oftener, been overrun and seized by violence.* The ceremony of marching round the **Ka‘ba**, and of such an excursion between the two great stones, called **Sa‘īf** and **Marwâ**, which stood in the immediate vicinity, were rigidly fixed. The greater part of this ritual was incorporated into Islam by Muhammad, who from the first adopted the **Ka‘ba** as the temple of Allah (Sūra cvi. 3); only a few modifications were introduced, but there is reason to suspect that the changes made by the Prophet chiefly affected those very details which, if they were not altered, would have been out of place or out of the original meaning of the whole. In particular, he abolished all the idols† after the capture of his native city, whereas he retained a sample of the most primitive fetishism, the Black Stone, connecting it, as he connected the **Ka‘ba** itself, with Abraham. According to one tradition, which has all the appearance of trustworthiness, the Prophet forbade his followers to march round the sacred spot naked; the practice in question must therefore have existed before the Prophet’s time. Indeed, it is probable that those who took part in the festival ought not to appear before the Deity in their ordinary garb; hence, if any one had not the means of borrowing a suit of clothes at Mecca, he was obliged to perform the ceremony in nudity. The custom of worshipping at a shrine in garments lent by the priest occurs also elsewhere in Arabia. In one case, we are told, a Bedawi, who belonged to the neighbouring tribe of Hudail, marched round the **Ka‘ba** with his buttocks uncovered, apparently imagining that this was a

* The word **ka‘ba** occurs thus, as an appellative, in the **Muṣaddälīyat**, xxv. 72. ‘The castle of Sindâd with the **Ka‘ba**'
peculiarly effective means of appealing to the god. It is said that the Meccans and certain tribes known as ëHums, who were nearly akin to them, used to wear sandals when they went through the ceremony—a rule which may be explained by the supposition that they regarded the place as their home; members of other tribes, on the contrary, always entered the sacred precinct barefoot.

Wellhausen has had the merit of discovering and carefully pointing out that the solemn procession from the hill called 'Arafat to the valley of Minã, the real pilgrimage (hajj) or Ḥajj, once a holy thing within the haram and the Ka'ba.* It is true that the route followed by the procession lay, for the most part, within the limits of the haram, which was generally acknowledged to be the sacred territory of the Meccans; but the fact that the opening ceremonies, the hajj on of 'Arafat and the kindling of the lights on the hill of Iil, took place outside the haram—for which reason the Meccans and the Huns as a whole had no share in them—is quite sufficient to prove that the festival was not really connected with the city. Moreover, it should be observed that even at the present day, in spite of the changes introduced by the Prophet, who endeavoured to assimilate the ritual as far as possible to the theory of Islam, the festival, properly so called, in the end when the victims, which had been slaughtered at Minã, the subsequent visit to the Ka'ba is not an integral part of the hajj. Nevertheless, we cannot deny that by the time of Muhammad the pilgrimage had come to be closely associated with Mecca. The Qurãsh were sufficiently averse to appreciate the advantage which they derived from the sacrosanct character of their domain, and from the annual assemblage of pilgrims out of all parts of the country; these two circumstances together formed the basis of their trade, which rendered them intellectually far superior to other Arabs. The hospitality which they extended to the starving Bedawin at the time of the festival was amply repaid by the security guaranteed to the Meccan caravans.

In the Arabic the word hajj is a very ancient Semitic expression; whatever its original meaning may have been, it corresponds for practical purposes to our word 'festival' (see, for instance, 1 S 304). In Arabic the verbal form of this root is used also transitively, signifying 'to visit' a shrine. How familiar the idea of pilgrimage was to the ancient Arabs is shown by the fact that Ḥaggâqa, al-Ḥajjâj, 'he who is wont to go on pilgrimage,' appears not unfrequently as a proper name; furthermore, madâjâ, which originally meant a pilgrim-route, is used for a route in general, and ḥijâj, 'annual festival,' has become a synonym for 'year.' That the festivals attended by pilgrims could take place only at fixed seasons is obvious; thus the pilgrimages were intimately connected with the calendar, known as the sacred months, that is to say, months during which a universal peace prevailed, no vengeance could be executed, and even the murderer enjoyed security. How such an institution can have established itself, it is difficult to explain; it has remained a matter of unsolved mystery; in any case it was generally accepted among the Arabs. Its existence is attested by Professor Perz (2, 16), though, of course, we cannot be quite sure that the months to which he refers are precisely the same as those with which the concourse at Mecca was associated. The question is closely connected with the theory of the ancient Arabian calendar, about which some dispute still prevails. Nevertheless, however, that Rajab, the sacred month which stood by itself, which was the favourite season for sacrifices, and seems to have been the proper time for the pilgrimage ('umra) to the Ka'ba, normally fell between the spring and the autumn, is strongly supported by the fact that the great hajj took place, coincided with the autumn. Similarly, we learn from Nonnosus, who lived during the first half of the 6th cent., that two annual festivals were celebrated in the sacred palm-grove, which is probably to be identified with the grove described by Agatharchides (see above, p. 666), but is nowhere mentioned in Arabic literature.† At the beginning of the hajj a man who belonged to a certain family renowned for skill in such matters solemnly inaugurated the Feast of Pilgrimage by kindling a fire to contain an intercalary month or not; in this manner the calendar was fixed annually. But the methods employed by the Arabs were of a cruelly empirical kind, and hence, as we might have expected, their year was gradually shifted within a tolerable extent.‡ The pilgrims, who came to the festival from far and near, all wore a peculiar but very simple costume, known as the iyârûm, and abstained from shaving their heads until the ceremonies were over. It would seem that washing also was forbidden—a privilege which most of the Arabs probably did not feel very keenly. Among certain tribes it was the rule that no one might enter a house by the door so long as he wore the garb of a pilgrim; in other words, during the time of the pilgrimage they dispensed with every sort of shelter; if, however, a man found it necessary to enter his house, he was allowed to creep in at the back (see Sûra li. 185).§ The animals brought by the pilgrims had sandals, strips of plaited bark, and other objects attached to them, in order to show that they were intended for sacrifices. The festival began at 'Arafat on the 9th day of the month of Dhul-bi'bija (i.e. the month of the feast); here the assembled pilgrims made merry with lighted torches and probably with other adjuncts which are not very clearly known to us. From the first day of the pilgrimage, which this applies to the institution even in its Muhammadan form—the proceedings were conducted with much noise and, from a European point of view, without solemnity. On every side were heard cries of 'Labbaka!'; 'At thy service!'; but whether this invocation was addressed by every one to the same deity is uncertain. A little before sunset the whole of the vast throng, on foot or on camels, began to race towards Muzdalifa, a journey of some two hours; here they were joined by the force of a tradition. But how a widely dispersed and altogether uncivilized people, who had no code of law and no social sanctions, could have been induced to suspend their feud for the space of whole months, it seems quite impossible to imagine.

* In the Arabian calendar as given by Ephraemi (Harl. ii. 34), the month called Ḥugāṭ abi'a, i.e. 'pilgrimage to the holy house,' likewise falls to the autumn. According to Ibn Hayyân, the pilgrimage refers, not to the Meccan sanctuary, but to some other sanctuary.

† According to Agatharchides there were three months, of which hēctons of camels were slaughtered, took place every fifth year—a very remarkable statement.

‡ If the adjustment of the lunar months to the solar year had been carried out at all rationally, Muhammad would hardly have conceived the unfortunate idea of imposing upon his followers a purely lunar year without any intercalation whatsoever.

§ Similar naïve attempts to deceive the Deity occur among other peoples.

The grammatical derivation of this term is altogether obscure. Perhaps Professor Buxton is right in suggesting that it may be the Aramaic ḫappûk, 'towards thee (O God)!'
Quraish and their associates the Huns (see p. 668). At Qozah, in the immediate neighbourhood, a fire was kindled. During the night spent at Musalla every one remained awake, and as soon as the sun rose, the assembly started for the valley of Minä, about two hours farther on. On the way the pilgrims, at intervals, threw some pebbles upon a heap of stones. At Minä the sacrificial animals were slaughtered; part of the flesh was consumed by the owners on the spot, and distributed among those who had nothing to offer, while part of it was cut into stripes and dried in the sun for subsequent use. Thereupon the pilgrims shaved their heads, and the festival came to an end.

The practice of kindling lights on the hill of Ibl, the fire at Qozah, combined with the observation of the setting and rising sun as temporal limits, seem to indicate that the festival was held primarily in honour of the Sun-god. Just as the Saracens described by Nils were careful to offer their tribute early to the morning star before it vanished in the brightness of the dawn, so the pilgrims at 'Arafat regulated their proceedings by the sun. But whether the whole march from 'Arafat to Minä was determined by a single plan, having a consistent mythological significance, or whether, as other writers, each individual rite is to be regarded as an integral part of a mythological drama and is capable of being so interpreted by us, appears extremely doubtful, notwithstanding the ingenious theory which has been put forward.

The custom of throwing stones is particularly hard to explain. We have to take into account the fact that ceremonies of the same kind were performed by the Arabs in at least two other places, and occur in existent or extinct parts of the world. The great festival which we have described had gradually thrown all others into the shade. At several places not very far from Mecca, feasts, which originally had a religious character, were celebrated on fixed days in the course of the sacred months; but these assemblies became in process of time little more than fairs, where men came together for purposes of business or pleasure. This applies, in particular, to the fair held at 'Oqä. It must, of course, be understood that the seat of the fair itself was extended far beyond, and other secular objects. The influence of these gatherings extended over a vast area. Thus at the fair of Dhul-majaz, a place some four miles from 'Arafat, peace was concluded about the beginning of the civil war of the Persians; at Thumir, the residence of Mundhir, king of Hira, between the two kindred tribes of Bekr and Taghlib, who had long been deadly enemies, although the town of Hira and the territory of the tribes in question lay far to the north-east of Dhul-majaz.

It is necessary to add that there were certain tribes, not very distant from Mecca, who did not recognize the sanctity of the festivals associated with that city, and even went so far as to plunder the procession of the pilgrims. At the case of the tribe of the farak, who boasts that he slew a pilgrim at Minä in the midst of the festive throng, thus violating at once the holiness of the place and of the occasion, belongs to a somewhat different category, since Muhammad deliberately modified the connexion of the festival with the sun, for he ordered that the departure from 'Arafat should take place soon after sunset, and the departure from Musalla shortly before sunrise.

7. VARIOUS PRACTICES AND BELIEFS.

1. CIRCUMCISION.—The practice of circumcision (q.t.) was universal among the Arabs. Owing to its origin is, it seems highly probable that the rite in the oldest times was connected with religion. In historical times the Arabs regarded circumcision as obligatory, not offering any reason for it except that it had always been associated with it; hence, without any formal sanction, it was adopted into Islam.

2. THE SACRIFICE OF INFANTS.—It is possible that the habit of burying infant females alive, which prevailed very widely, was likewise associated with some crude religious belief. The child may have been originally offered as a sacrifice to subterranean deities. In any case it is important to observe that the victim was slain without shedding of blood. But the real motive for the act, was doubtless that which is assigned in the Qur'an (Sûra vi. 152, xvii. 39), namely, poverty. It is well known that the same cause has led to infanticide in other countries.

3. DEMONS.—In addition to the gods who were publicly recognized, though sometimes half-forgotten, we meet with a great mass of shadowy beings, everywhere present yet nowhere distinctly perceived, the demons or, as the Arabs call them, the Jinn. The name is probably 'covert' or 'darkness'; another form is Jân (pl. Jinnân), to which the Ethiopic Gânân, 'demon,' approximately corresponds. The demons are always, in the main, objects of fear, crafty, mischievous, or evil. For they are considered the acts of light, heat, and cold, and the invisible invaders of the world. The demons, who are regarded by the heathen Arabs as a benevolent seems to have arisen under the influence of Islam, which teaches that at least some of the Jinn are true believers, though they cannot be denied that, even in the pre-Islamic age, certain friendly acts may occasionally be ascribed to them: the Devil himself has moments of good temper, and strict consistency is not to be expected in a world of phantoms. The Jinn are usually invisible, but are capable of assuming various forms, especially those of snakes, lizards, and other creeping things; hence the word Jânn may be used to denote a snake. In this case also two separate ideas have been confounded: on the one hand, that of repulsive animal forms, pertaining to the Jinn; on the other hand, the invisible terrors of the desert. It is related that the Meccan clan of Sa'mah once suffered injuries at the hands of the Jinn, and accordingly marched out to a certain spot, where they proceeded to kill many snakes, beetles, etc., that the Jinn were forced to sue for peace; here the creatures slay are evidently regarded as being themselves Jinn. It was natural to suppose that these demons were appointed punishers of the infidel, to suit their loneliness or for their unhealthy climate. When Harb, the grandfather of the Khalif Mu'awiyah, together with another man, was engaged in clearing a marsh for purposes of cult.
vation, white serpents were seen to fly out of the burning weeds; and when both persons died forthwith, every one perceived that the Jinn had slain them. Perhaps we may hazard the rationalistic conjecture that their death was due to the poisonous air which they had breathing. There are many instances in which the Infant prematurely killed or consumed off human beings; their spiteful nature also leads them sometimes to prevent cattle from drinking. They utter a peculiar sound.* Their limbs are often very powerful; hence a strong man is said to resemble them. Occasionally they ride upon other animals, delighting in the habitation of the pure desert. A brave warrior is described as alarming even 'the dogs of the Jinn,' so that they growl. These are merely samples of the fantastic notions connected with them; as we might have expected, there were equally fantastic devices for the purpose of warding off their influence.

Frequently a Jinni (i.e., one of the Jinn) enters into a human being, rendering him possessed or mad.† But this belief, familiar as it was to the Arabian time, has become, as it appears, originally a foreign importation, or at least to have been greatly intensified through contact with foreigners. In the OT scarcely a trace of such a conception appears, whereas in the NT it is extremely common, phrases like δαιμόνιον, δαίμων, δαίμων, δαίμων, indicating deportation, were introduced from Palestine into Iran. The Persian word for 'madman' is دِعَوَانَا, literally 'demonic' (from دُعُو، originally دَعْوَ, 'demon'), whence comes the Arabic شَكْدآن (from شَكْدَ, which was used as the equivalent of the Persian دَوُ) passed into Persian in the form شکدَه. In pre-Islamic times the Arabs borrowed from their northern neighbours not only many of the elements of civilization, but also beliefs that were fanciful and superstitiously the latter class includes the belief in demonical possession. Even heathen Arabians poets speak of Palmyra as having been built for king Solomon by the Jinn; ‡ in this case the foreign origin of the legend is quite obvious.

The demons frequently use a collective noun in referring to demons; an individual demon has no distinct character, and consequently bears no personal name. To regard Shaitān as a proper name is scarcely permissible. It seems tolerably certain that this word was known to the Arabs before the days of Muhammad, and usually occurs as the name of human individuals; but its form agrees so closely with that of the Ethiopeic shaitān, which is derived from the Heb. שִׁדַּן,‡ which we are forced to translate as 'the demon.' The occasional usage of shaitān for 'serpent' is even less primitive than the use of jinn in the same sense.

Though the Jinn have no individuality, they fall into various classes, and certain of these are sometimes mentioned as particularly harmful. The most dangerous kind of all is the Ghūl (a feminine noun), of which the plural is Ghūlān or Ḡyāhēl; this word comes from a root signifying 'to destroy,' perhaps originally 'to assault.' The Ghūl is supposed to lie in wait at some place where men are destined to perish; she also entices them thither, especially by night. The Ghūl has carried him off' is sometimes merely a poetical expression, 'he has been perished.' She has the power of changing her shape, that is say, of beguiling men in order to destroy them. But

* The word applied to it is ʿasūr, apparently a bare, dull sound; it is also used to denote the changing of a bowstring.
† To be possessed is ʿijāna, and the participles maghāna means 'possessed.'
‡ The idea that Solomon was concerned in the building of Palmyra (Tadmor) is due to an ancient textual corruption in 2 Ch 29, where Tadmor stands for Tāmār (see 1 K 8:2). The demons were brought into the story because the existence of the city seemed too marvellous to be the work of men. From the Hebrew and the Aramaic several religious expressions passed into the Ethiopeic, and this has been developed through the influence of Jewish or Christian missionaries.

This is by no means the only Arabic word which was borrowed from the Ethiopic.

ARABS (ANCIENT)

usually she is described as a hideous monster. A poet relates how the Ghūl, 'the daughter of the Jinn,' came one night to the fire which he had kindled, and how he cut off her head. It was a frightful object, like the head of a cat, but with a forked tongue; moreover, she had the legs of an infant, and their infantile white skin, and a hairy skin, resembling that of a dog or a rough and crumpled garment. In another poet we meet with the phrase 'arrows sharp as the canine teeth of Ghūl.'

The poets also mention a kind of female demon called Si‘lāt, of which the plural is Sa‘lūt; this term scarcely ever occurs except as a simile, for the purpose of describing swift horses or camels, formidable warriors, and frightful women. A certain Arabian clan was supposed to have sprung from a marriage between a man and a Si‘lāt. Whether this ancestry was originally regarded as an honour or the reverse is doubtful; in any case no great importance can be attached to the story which was related on the subject.

In passages relating to the Jinn we occasionally meet with the expression Ḥabl, Ḥablīt, or some other derivative of the root ḤBL, which primarily means 'to destroy,' and is applied, in particular, to the destruction of the reason, or, in other words, to madness. Usually the term is employed in an abstract sense. It serves to illustrate the occurrence of the being, sometimes the beings so designated are conceived as personal; thus, for instance, a poet says to his wife, 'Leave me in peace, even though I should give away my substance to the Jinn and the Ḥahl.'

The mysterious tribe called Banū Uqaisih seem likewise to be a class of demons. In order to scare them away, it was the custom to rattle a number of dry skin-bottles one against another.*

The demons were never the object of a cult, in the strict sense of the word; but on certain occasions, as, for example, at the building of a house, it was thought prudent to conciliate them with some offering, lest they should frustrate the work.† The curious proper name ʿAbd al-Jinn, 'servant of the Jinn,' may here be mentioned. Whether it was actually in use does not seem quite certain; in any case it cannot have been common.

The belief in this motley assemblage of inferior spirits was, on the whole, maintained by Islam; in fact, the Prophet went so far as to recognize the existence of the heathen gods, classing them among the demons (see Sūra xxvii. 158). Hence these primitive superstitions not only held their ground in Muhammadan Arabia, but were further developed, spread over the rest of the Muhammadan world, and often combined with similar, in some cases much more elaborate, conceptions which prevailed among foreign peoples. Thus later narratives which refer to such subjects may, if examined with due caution, be used to illustrate the ideas of the ancient Arabs; but we must cast an earnest and fearful eye on accepting the testimony of the statements of those Muhammadan scholars who endeavoured to reduce demonology to a system.

4. SOothSAYERS AND MAGICIANS. — The notion that certain persons are under the immediate influence of the gods, and so possess the power of foretelling events or of performing other superhuman feats, prevailed generally in the ancient

Some words which are often understood as referring to demons really have a different sense. Thus zauda's is not a personal being, but simply 'a defilement.' (Sūra xxvi. 39) is an epithet of somewhat doubtful meaning, applied to a demon; the edifice is not the seat of a particular class of demons. The belief current in later times, that the ʿAfīrin or ʿAfīrits are demons of a specially dangerous kind, is due to misunderstanding of an early period, through the influence of Jewish or Christian missionaries.*

Here we have an instance of the so-called 'foundation sacrifice' which is practised in many parts of the world; see, in particular, ZE, vol. xxx.
world. It is certainly significant that the term kḥīn, which, as we have seen (p. 667), retained among the Sinai-Arabs its original meaning of 'priest,' was used by the later Arabs in the sense of 'soothsayer.' In early times the Deity had bestowed revelations to His priests; the divine arrows of Hubal and of other gods—things which, we may be sure, only the ministers of the sanctuary ventured to use—survived as relics of a more primitive age.* In the various stories which refer to soothsayers, we find no other traces of their connexion with the gods properly so called. We are sometimes told, it is true, that a soothsayer or a magician had a 'follower' (tābī'); in other words, a familiar spirit † who occasionally revealed secrets to him, but was not always at his disposal. This spirit seems also to have been called a rā', 'one who is seen,' or perhaps we should translate 'seer,' assuming that the term was originally applied to the soothsayer himself, like the Heb. rā', the ancient word for 'prophet.' The Hebrew synonym ḫāšī has an exact equivalent in the Arabic ḫāšī; 'seer,' 'presager,' 'diviner,' which is often used, as well as the verb corresponding to it.‡ In the same category we may include the ṣārīf, 'sage,' who is acquainted with hidden things, to some extent the ḥāshī, 'physician,' literally 'skilful, well-informed,' who in many cases is an enchanter (rāqī), and even the man whose wisdom qualifies him to act as arbitrator (qākom). The word ṣādīr, 'one who knows,' must in early times have denoted the ḫāshī, 'physician,' or 'skilful.' Seer's sayings inspired by some higher power; afterwards it gradually became the technical term for a poet.§ In general, any one who possesses secret powers is called a sābī, 'magician.' Among the Arabs, as among other nations, the idea of the feminine soul made itself felt; we read both of female soothsayers and female enchanters. A female familiar spirit (rā'īya) is likewise mentioned.

Arabic literature contains many stories about kāhīna and many utterances which were attributed to them; but of all these only a very small proportion can be considered trustworthy, and a greater number are inventions in later writers. Nevertheless the passages in question enable us at least to form an idea of the style in which the soothsayers expressed themselves; the same style re-appears in the oldest chapters of the Qurān. The sorcerer of his time and the soothsayers embodied by Muhammad to a far higher level. He felt in himself an inspiration which proceeded from the one true God. But if he had not had before him the example of the heathen kāhīna, it is hard to believe that any such idea would have entered his mind; on the other hand, we cannot wonder that his prosaic fellow-citizens called him a soothsayer, a magician, and a "possessed poet." Nor is it impossible that his more fervent rival, Maslama ibn Ḥabīb of the tribe of Ḥanīfa, was likewise sincerely convinced of his own divine inspiration.¶

5. OMENS.—The belief in signs as betokening future events was, of course, no less common among the Arabs than among other nations. Some birds were regarded as lucky, some as unlucky. The animals that crossed a man's path and the direction in which they moved alike conveyed a meaning which hatfa has in this connexion remains obscure. One peculiar art consisted in scaring birds and drawing omens from their flight; this operation was known as ṣayr. Various other omens and signs might be enumerated, but such beliefs and practices do not properly belong to the domain of religion, and it is therefore sufficient to notice them in passing.

6. THE SOUL.—The Arabs, like all other Semites, identified the breath (nafs) with the principle of life, or the soul.* So completely did nafs convey, from the earliest times onward, the idea of human personality, that the word is used, with the addition of the possessive suffix, as an ordinary reflexive pronoun: nafsī, 'my soul,' means 'myself'; nafṣakā, 'thysel'; līnafṣikī, 'for himself,' etc.† When the nafṣ permanently quits a man, death is the result; but the words of the Qurān (43, lxxv.) 'the bodies of the souls to Himself when they die, and those who have not died (He takes) in their sleep,' presuppose the belief that during sleep also the soul is absent from the body.‡ It is true that the conception of the 'breath' as the principle of life does not harmonize very well with the theory that the life resides in the blood (see above, p. 665). But this latter view is much less popular among the Arabs than it was among the Israelites, and when the nafs of a woman was particularly mentioned in this sphere that the mysterious depth of the feminine soul made itself felt; we read both of female soothsayers and female enchanters. A female familiar spirit (rā'īya) is likewise mentioned.

* Cf. 1 S 307 etc.
† Hence any man noted for his intelligence is supposed to have a tābī', who reveals all manner of things to him.
‡ The root is no longer employed by the Arabs in the simple sense 'belonging to' even in Hebrew this usage is confined to the poetical and rhythmical style.
§ The connexion between poetical inspiration and the unseen world was not lost in later times, though in allusions which a poet makes to his 'demons' or 'Satan' are little more than jests. A very primitive stage in the development of this idea is represented by the stories of Nu 'Sāsā, Goldscheider, Abhandlungen zur arab. Philologie, i. (Leiden, 1899) pp. 1-305.
¶ In the Muhammadians he was contemptuously called Musālīmā, i.e. 'little Muslama.'

One must partly account for the fact that his adherents were the only Arabs who displayed real courage and stubbornness in contending against Islam.

* The Ethiope nafṣ, 'that which contains the nafs (breath, life)' means the living human body (cf. animus, anima, etc.).
† The Arabic proper denotes the 'breath' only; its use in the sense of 'spirit' was unknown to the heathen, and when employed it is to be regarded as one of the foreign religious terms which were introduced by Islam.
‡ The corresponding forms are similarly used in Hebrew and Aramaic.

---

†† The common phrase mode nafsā anfiṣū, 'he died a natural death,' similarly refers, it would appear, to a healthy breath, since the 'nose' (anfiṣ) is here associated with the idea of 'dying' (māṣa); but the special meaning which nafsā has in this connexion remains obscure.
††† See the Commentary on the Naqqāl of Jarir and al-Paradazq
These words, however, are probably to be taken as nothing more than a statement, based on ordinary experience, that the severing of the head puts an end to life, not as the expression of an idea opposed to the deeply-rooted popular belief which has been described above (see also footnote, p. 671). In reading the Qur'an we might be tempted to construe the words just as translated, and have concluded that the departure of the nafs as equivalent to annihilation; but in reality all that Muhammad's opponents denied was the novel, and to their minds absurd, doctrine of the resurrection and the other world.

The Arabs down to the 19th century commonly expressed it of course, vaguer, than the notions of Homer's fellow-countrymen as to the ψυχη. Nevertheless in an elegy composed upon his death the ancient formula occurs, 'May Shanfara be not far away'; the usual invocation addressed to the dead, 'Be not far away!' does not admit of any satisfactory interpretation, unless it presupposes the belief that the dead had a dwelling-place, and might be induced by entreaty to remain in the neighbourhood of his people. It is true that the formula in question dates from a period when such things were more vividly conceived. Sometimes we meet with substances of the following kind: 'May I say, when they bury me, 'Be not far away!' but what place can then be far away, if mine is not?'

Nothing seems to the Arabs more obvious than that blood must be expiated by blood. Hence one may address a slain beloved one, 'Sacrifice a shadd, the thirsts of the murderer'. These phrases must originally have been understood in quite a literal fashion; whence we may conclude with certainty that some sort of life was ascribed to the departed. On this subject strange fancies are disseminated. The soul of the murdered man is represented as appearing in the form of an owl, and as continually crying out, 'Give me to drink!' until vengeance had been executed. It must be remembered that the scene of the murder was, in most cases, a lonely spot where the weird cry of the feathered anchorite would not be out of place. The term applied to the departed is hāma, properly 'skull', the skull being the most characteristic part of the dead body; it is the voice of the departed.

The substitution of a blood-wit (dīyāt) for blood-revenge is a later modification. But in historical times the blood-wit had become very common; well-disposed persons eagerly furthered the device for maintaining peace, often at disastrous expense. Nevertheless it was not considered quite honourable (i.e. for camels or other animals that could be milked) instead of blood.

In reality, of course, the thirst for blood is felt by the surviving relations. The daughter of the slain man, Umm-Duraid the Simma, who was miserably slain by a Muslim just after the battle of Hunafā' (a.d. 630), says in a poem, 'When we march against them, may He (i.e. Allah) give us the blood of the noblest ones on the day of battle! ' This is evidently meant, but we can scarcely doubt that the phrase was coined at a time when men actually drank the blood of the slain enemies, partly in order to quench the burning thirst for vengeance, and partly to abate the strength of the vanquished. It must not be forgotten that, after the battle of Ubayt, Hind bint 'Otha, a woman of remarkable intelligence, gave to her fallen enemy Hamza, who in a previous battle, at Bedr, had had the aid of two companions killed him with his own sword, and her sword. Perhaps this use of hāma may be partly due to the notion that in the head, as the poet says, is the 'greater part' of the man, an expression which refers not to the brain, but to the external organs of sensation.
ARAKH—ARANYAKAS 673

fitting the departed is sufficiently obvious from the usage of modern Europe.*

The belief which exists among many primitive races, that the dead are malevolent, and seek to injure the living, is one of which no traces are to be found among the Arabs.

VI. MORALS.

It is almost superfluous to say that the Arabs had a generally recognized code of morals, which, we must admit, did not always reach a very high ethical standard. Some of Hindu origin, it is contained in the maxims, which the poets repeat in various forms, that the misuse of strength leads to calamity; † there are likewise narratives which inculcate the same doctrine. Moreover, the poets sometimes bring the Deity into immediate connection with the fulfillment of duties, for instance, as vindicating the sanctity of compacts. But in general it may be said that the maintenance of morality was due much more to respect for traditional usages and public opinion than to fear of Divine wrath.

LITERATURE.—L. Krehl, Die Religion der vorislam. Araber, Leipzig. 1852; M. Wellhausen’s Reise arab. Hindustans (= Steine u. Vorarbeiten, drittes Heft), Berlin, 1887 [1st ed. 1877]. Much of value was also published by the Oriental Society of the University of Edinburgh, 1889 (2nd ed. 1941), and in the works of Ignatius Goldschmied, esp. his Abhandlungen zur arab. Philologie, erster Theil, Leipzig. See also 1859-1909 in the works cited in the body of this article. The present writer cannot recommend D. Nielsen’s Die altara. Mondreligion, Strassburg, 1898.

TH. NÜDEKER.

ARAKH.—A tribe of cultivators and field-labourers in Northern India, of Dravidian origin, which at the Census of 1901 numbered 76,456, practically all of whom are found in the United Provinces. They claim to be Hindus, but their religion is really an advanced form of animism, and they are never initiated into any of the orthodox sects. Their tribal goddess is Devi, whom they propitiate by a shower of goats, the service being done by a class of Brahmins of low rank. They observe the usual Hindu feasts, and at that of the Kavī Chath in October-November their women worship the moon by pouring water on the ground in the form of a conch. An earthen pot with gravel is burnt in Central India, as in the United Provinces, they are not assisted in their domestic worship by Brahmins, and their worship is chiefly devoted to a snake god whom they call Kartal Deo.

ARAMEANS.—See SYRIANS.

ARANYAKAS.—The Aranyakas literature of the Hindus holds a position intermediate between the Brähmanas and the Upanishads; in a formal and technical sense supplementary to the Brähmanas, but sharing generally the themes and subject-matter of the Upanishads, in which their turn are appended to or form a part of the Aranyakas (see art. UPAṆIṢĀDAS). These treatises are not stupidly inspired Scripture. The name indicates either that they were composed in the forest (aranyas) by the hermits who devoted themselves there to a life of seclusion and meditation, or that they were intended to be there read and studied. They are called the Indian view.

* The outburst of popular indignation which proved fatal to the victorious commanders after the battle of Arägnas shows that, near the end of the 2nd millennium B.C., notwithstanding the rationalistic doctrines of the Sophists, still adhered to the belief that funeral rites were of great importance to the dead. From the same standpoint we must regard the conduct of Antigonus; it is not merely a formal expression of piety.

† For example, one poet says, ‘Those who gaze on the posture of iniquity are smitten with pithlessness.’

Skṣyā on the Tatțātirīya Arāṇyaka: ‘The rule is that this

Perhaps both are correct. Strictly speaking, also, each Brähmana had its own Aranyakas, just as each śakha, or school of Vedant teaching, had its Brähmana; and the Aranyakas was completed and supplemented by a corresponding Upaniṣad.

This accepted classification of the Sanskrit sacred literature is not unconnected with the theory of the four āramanas (see art. ĀSrama). The Brähmanas were the text-books of the Brähman householders, upon which he relied for the due performance of his obligations as grahastha. Later in life, during his retirement, the Deity, on the contrary, is admitted to the stadium as vānaprastha, he devoted himself to the study of the Aranyakas, as sanctioned and adopted in the śakha to which he belonged.*

It has been shown that the Aranyakas literature in general is chronologically of more recent date than the sanikhidas of the Veda, which are known to it essentially in the form in which they have come down to us; and that it is later also than the Brähmanas. On the other hand, the greater part at least is anterior to the period of the śrutis, to positions, and the character and style of which the more recent portions of the Aranyakas approximate.

Pāṇini † is said to be unacquainted with them; but in this instance the supposed ignorance may be only a figure of speech.

The extant Aranyakas belong to the Rigveda and the Sāmaveda. There are no known Aranyakas of the Atharvaveda.

The Ātītayoga Aranyakas of the Rigveda is described as a distinct and separate treatise, not forming a part of the Alt. Brähmanas. It consists of five divisions, or aranyakas, of which the last two are ascribed to the authors Ādvayana and Śaunaka, and are written in a later style, suggesting the peculiar features of the āra. literature. Chapters 4-6 of the second aranyakas form the Uparjanapada. The first aranyakas detail the rules for the morning, mid-day, and evening offerings in the maṇḍala, or great vow day, and the parjanya-gāyana, the ‘procession of cows.’ The first three chapters of the second aranyakas treat of the allegorical significance of the sādān, the spoken word: 1 while in the third part is discussed, quite after the upanibahs manner, the meaning of the letters of the alphabet and their combinations.

The Kaṇḍākōṣa aranyakas also belongs to the Rigveda, but is attached to a different śakha, or school, that of the Kausānikas. It contains fifteen adhyayas, or chapters, some of which are connected with chapters of the Ātītayoga aranyakas. Adhyāya 3-4, according to the usual numbering, forms the Upanīṣad; but their position is said to vary somewhat. The first four chapters of the Upaniṣad had originally existed, and been in circulation apart from the Aranyakas.

Of the Yajurveda two Aranyakas are known, the Yṛhad- aranyakas and the Tatṭātirīya Aranyakas, belonging respectively to the White and Black Yajurveda. The former, the Sarvaparāja śatpāthā Brāhmaṇas, of which it forms the last six adhyāyas or five praṇāpākṣakas of the fourteenth or last book according to the Mahāyāna school; but in the śāstra the first four chapters of the Upaniṣad had been reckoned separately as the seventeenth book. Thus the Upaṇiṣad and the Brāhmaṇas coincide; but the whole of this book in the Madhyā is reckoned also sometimes as considered as the Aranyakas.† The Tatṭātirīya Ar. consists of 10 books or praṇāpākṣaks of which the first are the Aranyakas proper. These books discuss the mantras for various ceremonies, the teaching and Vedic studies of a Brähman, and the offerings to the Fathers. Books vii. to ix. are the Tatīt. Up.; and book x is supplementary, the so-called Mahānākṣāya Upaniṣad. The style and contents seem to betray a comparatively late date.**

aranyakas is for forest-study; it should be studied, therefore, in the forest, etc. (Max Müller, Ancient Sanskrit Literature, 1868, 290; A. B. Keith in J. R. A. S., 1890, 227). Aranyas Upaniṣad, 2: the śatapatha (baṣṭikāha) is to live without the mantras of the Vedas, but to observe the three daily ablutions, to meditate on the Aranyakas, and to recite the Aranyakas and the Upaniṣad’ (Deussen, Schopenhauers, 290, p. 150). Cf. W. Schubart, "Das Upanisatwesen," 110: ‘He who wishes to attain Yoga should know the Aranyakas’; Mahābh. 1,288: ‘this body of the Mahābhārata is truth and immortality; it is . . . like the Aranyakas from the Vedas.’ The last two quotations are in Maxim Muller, pp. 320 n. 2, 315 n. 1. See also E. W. Hopkins, Great Epic of India, New York, 1910, p. 9.

† About the latter half of the section on the Mahāyāna (O. Bohlen)’s attribution to an earlier date. See C. M. Woodhouse, Chronology of India, London, 1859, p. 7; Macdonell, Sanskrit Literature, 420.

* The beginning of the Alt. Ar. is in fact a commentary on the Rigvedas (Max Müller, Aranyakas, i. 1, 1869, 215); P. Deussen, Schopenhauers, 290, p. 100 ff.; Max Müller, I.e. Deussen, 211, f.; Max Müller, p. 337 f.; A. B. Keith in J. R. A. S., 1895, 230 ff., who prefers the term śāstra-śakhasa.

** Max Müller, p. 334 ff.; Deussen, p. 213 ff.}
ARBITRARINESS—ARBITRATION

A. S. GHORDEN.

ARBIRARINESS is, according to the popular use of the term, that quality which is ascribed to an act of will (arbitrium), and whatsoever follows from it, not merely in so far as it is free, but in so far as the choice of the individual who wills is not influenced by consideration for others or subject for any law which is not self-imposed. Hence arbitrariness tends to imply capriciousness, irrationality, and an incausal character generally. It must be in this wider sense that the word is employed by critics of the indeterminist theory of the Free Will (wh. see above), when they say that that doctrine implies total arbitrariness of the will.

The theory of the arbitrariness of good, advanced by the Scotists, Occam and Descartes, is the doctrine that good is good because it proceeds from the undetermined will of God, who has chosen and commanded it; a moral act is not intrinsically good. Cf. Windelband, Hist. of Philos. (Eng. tr.) 392, 394.

G. R. T. Ross.

ARBIRATION is an arrangement by which two persons, having a difference, agree to submit it to the decision of a third, and abide by that decision when it has been given. Such an agreement precludes either party from instituting a suit in the ordinary Courts of law on the matter in question; and indeed those Courts are so favourable to arbitration that they will make the submission to arbitration a rule of Court, so that the decision of the third person, called the arbiter or arbitrator, may be enforced at law by either party against the other.

The reasons why induce persons who would otherwise become as litigants to consent to arbitration. As a rule, arbitration is cheaper than a suit at law; (1) that it does not involve the personal hostility caused by legal proceedings; (2) that it is more economical in its cost; (3) that the arbitrator is at liberty to consider the whole circumstances of the matter in dispute and arrived at a conclusion which is the best equitable solution of it; (4) that the arbitrator is a person selected by themselves upon the ground of his special fitness to deal with that matter.

It does not often happen, however, that the two parties at variance are able to agree upon a third who possesses equally the confidence of both. The ordinary form of arbitration is, therefore, the appointment by each party of a different arbitrator, and the appointment by the two arbitrators of a third, or of their conciliation, or of their appointment of an umpire, or of their appointment of a referee. The appointment of an umpire, or of a referee, is the appointment of a person who is not an arbitrator, and whose decision is not enforced at law by either party against the other.

The decision of the arbitrator or umpire, when duly arrived at, is binding upon both parties, and the Courts will not enter upon any inquiry whether it is right or wrong. He draws it up in the form of an award, and, speaking generally, the Courts accept that award as conclusive. There are cases, however, where it may appear to the Court that the arbitrator has been guilty of such negligence or bias as to deprive the parties of the benefits of the principles of justice, as by refusing to hear evidence, or has not brought his mind to the consideration of the subject, or has not disposed of the question reasonably and truly, or has in some other way failed in the due exercise of his functions; and the Court will in such case either refer the matter back to him, or hold that it is not ousted of its own inherent jurisdiction to determine that matter.

For these reasons the parties in their choice of an arbitrator, and the arbitrators in their choice of an umpire, should be careful to select a person who, whether a practising lawyer or not, has a mind imbued with the principles of law, and has some experience in their practical application, as well as an expert knowledge of the definite questions at issue.

In certain cases, in order to avoid the cost of litigation, a recourse to arbitration has been prescribed or authorized by statute. The Savings Banks Acts, the Friendly Societies Acts, the Building Societies Acts, and the Industrial and Provident Societies Acts contain such provisions.

In the case of the Savings Banks, including the Post Office Savings Banks, all disputes between a depositor or other claimant and the Bank are to be settled by the Registrar of Friendly Societies, and the jurisdiction of the Courts of law is thus ousted. As, however, the depositor has no choice in the matter, this is in effect only the creation of another Court having final jurisdiction, and using cheaper and more speedy methods than those of the ordinary Courts. In the other cases the statutes enable a society to provide by its rules that all disputes shall be referred to arbitration, and to define in those rules the manner in which the arbitrators shall be chosen. Where the rules contain such a provision, the jurisdiction of the Courts is much as a rule eliminated, and the arbitrator or other claimant has no other remedy than to avail himself of the arbitration thus provided.

In regard to the trade disputes between employer and employed, which frequently lead to much suffering and loss when pursued by the ordinary Courts of law, various methods of trade arbitration are adopted in the United States in cases of conflict between capital and labour, as when, in the great miners' strike of 1902, President

...
Roosevelt appointed a Board of Arbitration which satisfactorily settled the disputes in question. Some States, as New Jersey, have regularly appointed State Boards of Arbitration.

Another still more important development of the principle of arbitration, rich in its promise for the peace of the world, has been the application of this principle to the disputes between nations. Such disputes, even more than those between individuals, are apt to be coloured with local prejudice, amour propre, and all the elements that go to make up the sentiment of patriotism. The difference is only that for the people of one country, party to such a dispute, to appreciate the strength of the cause of the other party, the nation's honour and prestige are thought to be at issue on the result of the dispute; and nothing is easier than to create an unreasonable popular clamour for war. To substitute for the appeal to arms—with all its consequences to both countries in bloodshed, suffering, waste, and demoralization—an appeal to argument and to calm reason is a triumph of civilization. The supersession of the ancients led them to think that the gods would defend the right, and even in Christian times we have seen two hostile armies each appealing to the god of battles for success upon that ground; but, instead, the recourse to war is nothing but a resort to brute force.

An instance in point is afforded by the dispute between Great Britain and Venezuela. A question arose between those two countries in certain portions of the territories called British Guiana. In 1890 the Venezuelan Government proposed a reference to arbitration on this question, which Great Britain refused. Thenceupon the Government of the United States of America interposed, upon the ground that any hostile action taken by Great Britain against Venezuela would be an infringement of the Monroe doctrine, and President Cleveland took upon himself to appoint a Commission to ascertain the just grounds. The British Government, however, refused to recognize this Commission, a war of words ensued over the United States, and if popular excitement had not in any way, a war between two great and kindred nations would have resulted, with all its horrible consequences, arising out of a matter of no real importance to either. Fortunately, better counsels prevailed, and Great Britain and Venezuela agreed to a reference to arbitration. The result of that arbitration was a concession to Venezuela of territory which Great Britain had more than once offered to that State, and the confirmation in other respects of the contentions of the British Government.

A still more famous instance is that known as the 'Alabama' arbitration. During the Civil War in the United States, resulting in the death of so many of the citizens of both the United States and the Confederate States and in the destruction of a vessel built at Birkenhead, which was allowed to leave England and made a voyage to the United States, in defiance of the United States Government, the United States ambassador had complained to the British Government of the breach of neutrality involved. The British Government replied that it had no such orders, and that the vessel in question had been under the charge of a British officer. Then British vessels were refused permission to enter American ports, and the war between the two races kindred nations would have resulted, with all its horrible consequences, arising out of a matter of no real importance to either. Fortunately, better counsels prevailed, and Great Britain and Venezuela agreed to a reference to arbitration. The result of that arbitration was a concession to Venezuela of territory which Great Britain had more than once offered to that State, and the confirmation in other respects of the contentions of the British Government.

The government prevented the celebration of the Supper and the Agape at night, and compelled the observance of the former in connexion with the open preaching of the word in the daytime, and perhaps the gradual abandonment of the latter. The catechumens were then dismissed before the celebration of the Holy Eucharist, and the rite of baptism continued by itself. The catechumenate afforded a period of probation. In the first part of it the candidates were instructed in the general principles of religion. It was just before their baptism that they were instructed in the mysteries of faith. Thence was derived the doctrine of the Trinity which explained the formula of Baptism, were not imparted to them until just before their baptism; and the Lord's Prayer not until afterwards. The example of the heathen Mysteries was felt. Those who had been admitted to the Communion, having gone through the grades of the catechumenate, and having transacted successive renunciations and exorcisms, were spoken of as 'The Initiated.' Finally, it became usual to regard the full members of the Church as excluded from the Episcopal Church, due to the necessity of opposing its authority to the Gnostic sects and their teachings. The rites of the Church were thought to have no validity apart from the bishop; and those performed by them were invested with mysterious awfulness. To this conception of Divine worship, Roman Catholic writers have joined the notion of a secret tradition of doctrine from the first Apostles, to the present time, teaching of the NT. To this tradition they ascribe, for instance, the doctrine of Transubstantiation, and also the reverence for images and for the saints.

This Secret Discipline, beginning about A.D. 175, was in vogue until the end of the 6th century. Its features may, perhaps, be best set forth by the following quotations from Fathers and teachers of the 3rd and 4th centuries.

Text. (Prescr. Hort. xiii.) 'To begin with, it is doubtful who is a catechumen and who a believer; they have all access alike, and if the same things are allowed to be said to one and to the other, they happen to come among them. That which is holy they will cast to the dogs; and their pearls, although (to be sure) they are not real ones, they will fling to the swine. They have to consist in the overthrow of discipline, attention to which on our part is that which we have received delivered to us in "a mystery" by the tradition of the Apostles; and both of these in relation to true religion have the same force.'

In a note in Nicea Fathers, vol. viii. p. 41 Am. ed., Photius is quoted: 'In this work Eulogius (Palaeologus of Alexandria 579-607) says that of the doctrines (oιδηωνα) handed down in the church by the ministers of the word, some are αποτελματα, and others εισεργοι. The distinction is made between concealment and prudence, and are often designedly passed with obscurity, in order that holy things may not be exposed to profane eyes or ear. The mysteries are either κερνετα, on the other hand, are announced without any concealment.'

For we are not,' Basil continues, 'content with what the Apostle or the Gospel has recorded, but both in preface and conclusion we add other words as being of great importance to the validity of the ministry, and these we derive from unwritten teaching. Moreover, we bless the water of baptism and the oil of chrism. It is true that the Saint Martin Martyr describes the worship of the Church, and the fact that the followers of Marcion had not the practice, show that it was not usual before the third quarter of the 2nd century.'

There is no reason to suppose that the celebration of the Holy Supper by the congregations in Apostolic times was virtually private. Danger of persecution led to concealment of the Christian assemblies and rites. The measures of the Roman
ARCHAEOLOGY

who laid down laws for the Church from the beginning thus guarded the awful dignity of the mysteries in secrecy and silence, for what is bruited abroad at random among the com-
mons. This is the reason for our transactions of unwritten precepts and practices, that the knowledge of our dogmas may not become neglected and connived at by the multitude of the laity. "Dogma" and "Rergy" are two distinct things: the former is observed in silence; the latter is proclaimed to all the world.

Our Lord, who together with the Holy Ghost from the beginning thus guarded the awful dignity of the mysteries in silence, was brought up in the Due Conformity of the Old Testament, as is known in the interpretation. But this is not the point we are endeavoring to establish. We do not presume to shroud the evidence in silence, and then, in the spirit of the conversion of the Empire and the prevalence of Infant Baptism, the old catechumens of adults fell away, the Disciplina Arcani ceased to be, although in the Greek Liturgy the distinction between a Missa Catechumenorum and a Missa Fuldecium is still marked by pros and cons to all the catechumens to go out of the church.

EDWARD T. HORN.

ARCHAEOLOGY.—I. Archæology is a descriptive science, dealing with the interpretation of the remains of past phases of human civilization. Etymologically, the name denotes the study in general of 'origin,' 'original' (originis, 'original'), and strictly it implies that the remains which it studies are interpreted as members of an original or developmental series, irrespective of their nearness to the present time. Popularly, however archæology is restricted to mean the 'study of antiquity,' and is understood to mean the interpretation, either, generally, of all the available evidence for past phases of civilization (in which sense it includes formal 'history' among its subdivisions); or more particularly, of such evidence as is furnished by the material remains of human handiwork. In the latter and commoner sense, archæology stands alongside formal history, which is concerned with the interpretation of documents; and it is to be regarded essentially as the study of objects which, though not contemplated only in so far as it may be possible to test interpretation (e.g. of the evidence for an obsolescent mode of manipulation) by re-constituting now the presumed conditions of the ancient process, so as to attain an analogous result.

It is only in its wider signification that archæology comes into contact with the study of religion or ethics. Ancient technology and ancient aesthetic, considered specially, occupy their own domain apart. But there are few, if any, religions which have not prompted the production of monuments, ornaments, utensils, and other ritual accessories; or, in other words, decoration of the instruments of daily life. And as these material expressions of religious ideas, once produced, are capable of preservation independently of their makers, they may, and often are, the only evidence which has been preserved of the religion of an extinct race whose beliefs and traditions have perished with it.

2. Archeological evidence may establish the occurrence of an act or a custom within assignable limits either of (a) space or of (b) time. (a) To prove the distribution of an occurrence in space, the method of archæology is geographical. The instances which have been observed are tabulated in their geographical context, and in the absence of evidence to the contrary may be presumed to have a continuous distribution over the intervening areas. Such evidence to the contrary would be supplied inter alia by diversity of physical circumstance, exempting humanity locally from the need, or the inducement, to act in the manner presumed; or by evidence locally of other human observances inconsistent with the act or custom in question. The quality, as well as the quantity, of evidence requisite to give archæological proof varies almost indefinitely. But in general, quantity is incomparably more cogent than quantity, and positive evidence than negative: a single really well-authenticated occurrence (e.g. of an object of human manufacture or of recognized style in a given area), not only supplies the contradictory instance, but all negative generalities, but gives a positive though indefinite presumption that further instances exist. This characteristic, archæology shares with all branches of knowledge which are concerned with discontinuous series; the area actually open to inspection is at the same time an arbitrarily assigned, and so small a proportion of the whole, that the probable value of every positive instance is in any case somewhat greater, and of every negative instance somewhat less, than it would be in a region of which the large area is known.

This theoretical consideration is in the main confirmed by a retrospect of the archæological work of the last century. As in geology, a very small number of well-selected data from small areas isolated from each other, and indicated by accidental circumstances, have permitted a hypothetical re-construction of the human culture of wide regions, which subsequent evidence, more copious, continuous, and cogent logically, has done little if anything to modify, or even to confute. The archæological work of the last century, in which our complete confidence is placed, was an exercise of archæological imagination, the theoretical basis of which is a tacit recognition that the evidence which we actually possess is, in most cases, the only evidence which we shall ever possess, and that we must surmise the whole of what is missing from the evidence, and as far as we can, supply the gaps in our evidence from the best possible analogues. The work of the last century was done by men who had no wish to imagine, but who, having deliberate wishes to fill gaps in the evidence, were, perhaps, more ready to imagine than the men of our own time. There is no reason to expect that the imagination of our time will not be more accurate than that of the last century; and the work of the last century was, indeed, done by men of great sagacity and with many qualifications which the men of our time have lost.
ARCHITECTURE (Egean) 677

cance (such as the monuments of a hated ruler or an alien creed) disappearing most readily, and causing the most serious breaks in the record.

(2) To prove the distribution of similar occurrences in time, or the sequence of dissimilar occurrences, archaeology depends, again, like geography, upon the comparison of the remains from the same locality or indirectly, comparison of style. The latter method, however, gives, strictly speaking, a series which is only morphological, not historical; it is evidence of change, not of development; and in many cases such a series is capable of being read in either direction, since no precise criterion exists to distinguish immaturity from decadence. When doubt arises from this cause as to which is the initial end of a series, recourse must be had in the long run to the evidence of stratification; but the results obtained can frequently be con- structed if it is possible to correlate a number of concurrent series.

For example, on a given site, a large number of tombs may be found containing pottery, metalwork, stone-work, and other manufactures, of varying design. There is a probability that the tombs represent burials of a consider-
able number of generations. The pottery, weapons, and so forth, form morphological series, independent but approximately concurrent; i.e., phase $D$ of the pottery is always found with phases $e$ or $e$ of the metal-work; phase $D$ always with phases $p$ or $q$ never with $o$ or $r$. In these circumstances, clear evidence as to the direction of the change, or where any one series is to be read biologically is conclusive for the remainder, and for the culture as a whole; and such evidence would be supplied if any one kind of object began to appear suddenly and copiously as a useful implement at $k$, for example, and was replaced by the phases of less frequent occurrence for a time, or forms, or materials, or otherwise clearly imitative. If these after-types occur at $z$, it, and after, the historical order of the whole series is from $k$ to $z$; if at $j$ and before, the order is from $z$ to $a$.

It is, of course, often the case that a purely morphological series is concurrent at one or more points with another series which belongs to a "historic" civilization, that is, to one in which the relative antiquity of each phase can be represented by an "absolute" or chronological date. In these circumstances alone is it possible to deter-
mine the actual rate of technological progress, and thereby of other elements of a civilization.

Such cases of contact between concurrent series representing the civilizations of different areas or régimes can only show valid contemporaneity when the proof is bilateral.

ARCHITECTURE (Egean). — Of the architect-
ure in Greece lands before the true Hellenic architecture appeared upon the scene we know com-
paratively little, but even that little is great com-
pared with our almost entire ignorance of the subject a generation ago. The account of the great

In locality A, for example, a group of objects of diverse styles are found together as the result of a single act of deposition, such as a burial, or the laying of a foundation stone. In such a case, obviously one must compose the group can be of a later date of manufacture than the date of its deposition in that group. On the other hand, any of them may have been of an inscrutable age already, at the moment of deposition. External evidence (of custom, craftsmanship, and the like) alone decide in each case whether the indigenous objects as included in the find-group fairly representative of the culture $A$, at which it has been ascertained that the group was deposited in the place where it was found. Now, if this find-group at A contains, not only indigenous objects but of relative date $a$ in the series characteristi of this locality A, then among the number of objects $b$, the circumstance (otherwise demonstrated) that the object $b$ is of the relative date $b$ in the series characteristic of the phase $a$, to which the group as a whole belongs, is contemporary with phase $b$, but not that it is of any later date; for the object $b$ may have been of any age as yet at the moment of its deposit at A. If, however, a single object of origin $a$ and date $a$ is found at B with objects of origin $b$ and date $b$ in the Beries, then by the same reasoning $a$ is not of later date than the objects $b$, with which it has been found. And if so, the proof is complete, that $a$ and $b$ are contemporary; for it was already known that an object $b$ could not be of later date than $a$.

It is a matter of accurate observation to determine whether in any given case it is certain that the exotic object was really deposited contemporaneously with the rest of the find-group, and not intruded into it at some later time.

3. The combination of evidence derived from distributions in space and sequences in time gives archeological proof of the transmission of new characters from one centre of civilization to another.

A character $z$ which has already appeared at phase $y$ in series (or region) A does not necessarily appear at the same phase $z$ in series (or region) A; it is absent, moreover, from series C until phase $k$. Here alternative interpretation characterizes the character, the character may have been introduced from A to B, or it may have arisen spontaneously also at B. At C, moreover, it may have arisen spontaneously, or have been introduced directly from A; or in addition, it may have been introduced directly from B, and only indirectly from A; or in addition, it may be increasing directly with that of the series or regions in question. The conclusive proof of direct transmission is given only when, in addition to objects of chronological strata of the archetype at A, but of demonstrably local origin, B yields an object which demonstrably originated at A. Such proof is furnishes most clearly by unmediated evidence supplied by the physical composition of the object; e.g., knives of an unusual style but made of bronze occur on an island B which yields copper and tin but not iron; there is no adequate proof that these are not due to indigenous invention. But if there occurs also at B a knife of the same style but made of iron, and iron knives of exactly this exotic style are also found in an accessible iron-yielding area, the probability becomes very strong that the knife found at B is exotic, and the proto-
type of the bronze examples, which differ from it only in being of indigenous manufacture. However, the conclusive only when it is shown that bronze, or this particular variety of bronze, was not in use at A. Otherwise there is still the possibility that the bronze knife may have been imports from A or from some other region C which culturally is dependent on A.

JOHN L. MYERS.
very existence the greatest scholars were sceptical, reads like a fairy story. Since then a longer series of excavations, carried out with greater and greater scientific precision throughout the whole Egean area, has provided for us a mass of material which it will probably require the scholarship of many years to analyze and reduce to any systematic conclusions so that yet no conclusions can be more than tentative.

This pre-Hellenic architecture can hardly be considered the parent of Greek architecture: its influence was on the whole smaller than might have been expected, and the fine balance between primitive and developed, which serves to emphasize the originality and independence of the Hellenic style that came after. It is convenient to term this architecture and the civilizations to which it belonged ‘Egean,’ as it flourished not only in Greece itself but throughout all the coasts and islands of the Egean Sea. But, at the same time, although there is a certain continuity of development with no decided break, such as exists between itself and the architecture of the Hellenes, it is nevertheless marked that these peoples, whatever their race, were all basically agricultural and could not for long remain away from the sea. Their conceptions were developed, it is quite as certain, as the influence of the obisidans, ofMelos, Crete, the Aegean, to Phylakopi. In this very remote era the neolithic remains at Knossos contain obsidian, and Melos is the only known source of obsidian anywhere near the eastern coast of the Mediterranean. Obsidian beads are found in Egypt in the third millennium, which a rough date of the seventh millennium may be assigned, and obsidian flakes occur there some 900 years or so later. By the time of the foundation of the first city at Phylakopi the trade with the north, which rendered these fortifications necessary. They apparently first made their appearance upon the mainland, and worked their way southward, the cities of the Mediterranean time of Crete remaining unwalled, probably on account of that very sea power. The great brick city of Troy, the second in the series, already shows this type completely developed, and its final destruction must have been at least as early as B.C. 2000. The second city at Phylakopi is of this type, and it was probably founded somewhere about B.C. 2000, reaching its remains, and to the other arts, and begins to show signs of decadence while they are still in some ways advancing. It may seem strange to sum up a period, running into many hundreds of years, as though there were a single style throughout the whole of our knowledge, particularly in the extreme uncertainty of the chronology, some such simplification is necessary if lengthy controversial matter is to be excluded. Very approximately it may be said that the architecture was at its finest at a time ranging round the 17th century B.C. But certain broad general characteristics may be noticed. The materials and construction used seem to have differed very considerably locally, such intractable material can be seen at Phylakopi, and limestone, gypsum, brick, all show in other places; and varying from the roughest blocks, hardly shaped at all, to the finest jointed masonry, such as we see at Phaistos or in the walls of the great megaron at Knossos. Even early in the period there is good sound work with headers and out almost as scattered groups of buildings, yet in the main preserving a certain parallelism of plan, although they do not seem to be arranged along definite street lines. The building is rough rubble work of comparatively small stones built with clay and mud, and plastered over with the same; lime mortar is not yet used. So far there are no signs of any religious buildings, and indeed throughout the whole of the Egean development there seems to have been hardly anything of the nature of religious architecture. This is one of the essential contrasts between the religious buildings of the Egean and those of its Greek successors. The religious buildings were of such marvellous excellence and occupied so prominent a place in their style. The nature of the architecture, however, is of importance for the purposes of this article, as it is necessary to grasp both the resemblances and the differences between the architectural principles of the two styles, in order fully to understand the position of Greek religious architecture in the history of the art.

(3) A third architectural stage is reached roughly about B.C. 2000 when a closer system of town building, generally although not necessarily fortified, is adopted. It is marked by an elaborate system of street planning, with a distinct preference for rectangular rather than convergent systems. There is a very considerable advance in the art of building, with a regular drainage system beneath the streets. We find lime beginning to be used. There are great walls and fortifications, and the towns in the generality of cases are no longer open. The probable cause seems to have been pressure from the north, which rendered these fortifications necessary. There apparently first made their appearance upon the mainland, and worked their way southward, the cities of the Mediterranean time of Crete remaining unwalled, probably on account of that very sea power. The great brick city of Troy, the second in the series, already shows this type completely developed, and its final destruction must have been at least as early as B.C. 2000. The second city at Phylakopi is of this type, and it was probably founded somewhere about B.C. 2000, reaching its remains. Of the general character of building, it may be said that it passes from a comparatively rude to a highly developed style, and indeed might be divided into periods. But the variations of type are far greater than any purely architectural development. This period is the one that tries to combine the logical aspect, which latter is much more visible in the paintings and the minor arts of pottery. Architecturally, the second city of Troy is more akin to the great sixth city than either is to any period of Knossian architecture. The architecture seems to reach its zenith somewhat earlier than the other arts, and begins to show signs of decadence while they are still in some ways advancing.
stretcher roughly shaped, as at Phylakopi. On
the whole, work on the Greek mainland is rougher
and less carefully finished, the so-called cyclopean
masonry at Tylryns and elsewhere being typical.
This would point to the civilizing influence proceeding
from the south northward. Troy seems to be
somewhat outside the main stream. Its archi-
tecture, particularly its fortifications, is very
advanced, although in other particulars its civilization
seems to be behind the rest of the Aegean.

There is a great tendency from the first to use
rubble for interior walls and for less important
structures. This is faced with plaster and
frequently elaborately painted, as in the fresco
of the Flower Gatherer at Knossos, or the abso-
dutely delightful example of the Flying Fish at
Phylakopi. Another method is to build one or
two courses with great blocks of ashlar masonry
and raise the rubble walls upon the top. In
outside work some such foundation is almost
necessary. In the early second city of Troy,
built mainly of sun-dried brick, there is a sub-
structure of stone to protect the brick from the
wet. Rubble tends to become more common in
later work, and sometimes later rubble walls are
found built upon older stone foundations. The
system may be the origin of the orthostati of
later Greek architecture (q.v.). Sometimes there
is also a projecting plinth, as in the case of the
limestone blocks below the gypsum in the West
Court at Knossos, or the reverse arrangement,
with the gypsum blocks below, on the southern
terrace (fig. 1). This is quite possibly the origin of
another Greek feature, the stylobate [see Archi-
tecture (Greek)]. Another method, which on
account of its material was not likely to survive
to our day, seems to have been something of the
nature of tall timber construction, in which
courses of short lengths of timber set transversely
in plaster across the wall were used at intervals
in the ashlar, or plastered rubble, as the case
might be (fig. 2). There are grounds for sup-
posing that we have the remains of such a course
in the megaron at Knossos. In interiors the ends
of these were masked by rosettes or medallions.
In the last phase of Aegean architecture, the
over the doorway of the so-called Treasury of
Atreus (see p. 688 and figs. 3 and 17).

On the whole it may be said that there is a
distinct architectural decadence which in Crete
becomes obviously marked about the 14th century
B.C. But in the north it seems to be otherwise,
and the masonry continues to improve until a later
date, as, for instance, in the very fine beehive tombs
at Mycenae, which may be not much earlier than
the 13th century. This may be accounted for by
the fact that the artistic impulse spread from the
south. Hence the north would be longer in develop-
ing; and, on the other hand, a northern subjugation
of Crete, which seems to be probable, would have
greatly arrested progress there.

The spanning of openings seems in most instances
to have been with timber lintels, and in early work
the stones are not even gathered over above.
Stone lintels, however, were sometimes used. The
jambs of doors were very commonly of stone, and
in later work certainly an inward inclination was
usual, which is very possibly the origin of the same
feature in Greek doorways (figs. 3 below and fig. 8.
Architecture [Greek]). Windows, as contrasted
with Greek architecture, seem to have been of
frequent occurrence. They appear to have had
timber lintels, jambs, and sills, and we may notice
a remarkable anticipation of the modern window
in the division into 'panes' of which we have
clear evidence in tablets found at Knossos (fig. 3).
The nature of the filling is unknown; it may
have been oiled cloth or parchment, and is indicated
in red colour on the tablets. Timber seems to have played a large part in
the construction, especially in the columns, which
were commonly of wood, although with bases of
stone. The columns, and generally the bases, were
circular in form, and it is noticeable that the col-
umns tapered towards the lower end (figs. 4 and 12),
the exact contrary of columns in Greek architecture.
The taper, however, is generally exaggerated in
drawings. The charred remains of actual columns
were found both at Knossos and at Phaistos. Stone
examples of similar shape but of much later date
occur at Eleusis and Mycenae. They were treated with different kinds of fluting as ornaments, sometimes vertical, sometimes diagonal (fig. 4), and this may even have suggested the Doric flute. The anta was used both in stone and in wood, and is possibly the prototype of that feature in Greek architecture. It is interesting to notice that when stone columns were used they were almost always square in section, especially in early work, as in the case of the Northern Portico at Knossos, the so-called 'pillar rooms' at Phylakopi, and at Knossos both in the palace and in houses outside. They are also of rectangular shape in the court at Phaistos, and by the N. entrance at Knossos, and even in the megaron itself, although there they are recessed. This is important in view of the discussion regarding the origin of the Greek column [see Architecture (Greek)]. The inter-columns were wide, and the architrave apparently was a wooden beam upon which the upper masonry rested.

In spite, however, of the use of wood, it does not seem to have been used for floors. The floor joists were of circular logs of wood, and above these was laid clay, and upon that a fine hard cement or a pavement. On the ground floor cement seems to have been the favourite material for exterior work, and is often laid over paving; but in interiors fine gypsum slabs are not uncommon. The ceilings, where there was no floor above, were in all probability of thick reeds covered with plaster. Remains of plaster have been found at Phylakopi, clearly showing the shapes of the reeds embedded in the plaster (fig. 5).

The plans are in almost all cases characterized by numerous offsets, angles, and returns in the outer walls, which must have given a most delightful effect of light and shade to the complete elevation, and which are carried out with a lofty indifference to the extra work that they must have entailed (figs. 6, 8, and 9). Where fortifications occur, an arrangement may also be noticed by which the entrance is guarded by a complicated and circuitous means of approach, as at Syros and Siphnos, and which attains its fullest development at Tiryns (fig. 8, E). This seems to have been due to northern mainland influence, and gradually to have spread southward. The buildings of greatest importance were the palaces of the kings, which show in almost all cases a remarkable complexity of plan; but there are certain marked variations. Both in the north and in the south there is a distinct parallelism in the arrangement, but the Cretan plan is more regular and conceived more definitely as an artistic whole. The equal balancing of the main masses about a central court is also a southern feature. In the north this is less obvious, and the court partakes more of the nature of a fore-court, and is surrounded by a colonnade. The greater regularity is doubtless mainly because in the islands the question of fortification was of minor importance. In the north the buildings were castles as well as palaces. But there is also a difference in the artistic motif that cannot thus be explained. The northern plan tends to rooms comparatively square in shape; the Cretan type is long and narrow. The difference is most noticeable in the small chambers and magazines, which are very characteristic features of the style (figs. 7, 8, and 9), but it holds good throughout, and is true even of the great halls. Tiryns and Knossos, the finest examples and the best known, may be taken as typical (figs. 8 and 9). The fortress of Goula or Gl in Boeotia, although northern in its main features, is to some extent an exception, and shows affinities with the southern type. Propylae are common throughout, but here a northern type
can be distinguished which is almost the exact counterpart of the later Greek examples (fig. 10).

**ARCHITECTURE (Ægean)**

Knossos.

**GENERAL PLAN.**

(The magazines are the narrow chambers on the left.)

But the most marked difference between north and south is in the megaron itself. The northern megaron is a broad rectangular chamber with an antechamber and a portico, and contains the hearth in the centre. Above the hearth was probably an opening, and the sides of the opening were normally supported upon four columns which in all likelihood carried a sort of clerestory admitting light and allowing the smoke to escape. The typical Cretan megaron, on the other hand, has no central hearth, possibly on account of the warmer climate; but it has a feature peculiar to itself in the open chamber at the end of the hall, apparently open to the sky for the admission of light. This "light-well" is found alike at Knossos, Phaistos, and Hagia Triada.

The southern type also contains columns which presumably supported the roof; but they are arranged in lines, as the square arrangement around the hearth is unnecessary. Moreover, whatever may have been the case in the north, there is no doubt that in Crete there were halls upon different storeys one above the other.

The northern type, although belonging to the ruder style, eventually superseded the other, and we find it appearing in the south in the late third city at Phylakopi (compare the examples in fig. 11). In this northern type we see a plan closely resembling that of the classical Greek temple; and if it is really the origin of the temple form, it may be considered the most important of the Ægean influences upon later Hellenic architecture.

It is, of course, natural that we should know a great deal more about the plans than the elevations, but we have a certain amount of valuable evidence about the latter. In the south there is no doubt that there were several storeys, and in each storey the column played an important part. As in Spanish architecture, the main architectural features were in the interior, but the deep wells, with their tiers of columns and great staircases, must have produced a fine effect (fig. 12). There is some evidence that columns played a part in the external façade also. In the north, upper storeys, above the megaron, were unlikely because of the hearth.

On the whole, it may be said that the northern influence is much more marked in the temple architecture of Greece than any influence we can trace to the southern types.

The columned storeys rising magnificently one above another are startling indeed, occurring at a date some 18 centuries before Christ, in a European civilization of which we had never previously heard; but the elaborate drainage system is almost equally surprising, finding its parallels only in the beautiful systems of the best work of the Middle Ages, and in those of modern times. Street drains were generally built of stone with large flat slabs above and below, but an open terra-cotta channel sometimes occurs. In small underground drains terra-cotta pipes with a collar were used (fig. 13), whereas in the great palace systems the main drains were well built passages large enough.
to allow of a man entering them for cleaning purposes. Sanitary conveniences were supplied; and if there was not the extensive accommodation that was demanded in the Middle Ages, where in many instances every room has its own separate arrangements, at least there is no reason to suppose that it was less than satisfied the last generation, or than is commonly found on the Continent to-day. The same remarks apply to bath-rooms, which were plentiful, and often elaborately treated. Sometimes there was a sunk bath with steps, sometimes merely a move-

able bath with a channel all round the floor to carry off any splashings.

Such is a very brief description, enough to indicate the highly developed character of the style. When we turn to consider religious architecture, it is obvious that there was little or none, and the main importance from that point of view is the influence exerted upon succeeding styles. Yet there are just a few points that may be noted. We have in the 'pillar rooms' at Knossos and Phylakopi something of obvious religious significance. It does not seem to be necessary to suppose that the pillar was not purely structural in its function,—even a sacred sign upon the top does not preclude the possibility of its supporting other blocks. Many of the blocks of the palaces in Crete are marked with sacred signs, which may be paralleled by the numerous masons' marks upon our own medieval buildings. But there does seem to have been a special sacredness attaching to the pillar form, and in the case of a 'pillar room' in a house at Knossos, a great number, some 200, of little inverted cups were discovered, beneath which were found the charred remains of small vegetable offerings (fig. 14). If we cannot

say that these rooms are examples of religious architecture, it can at least be said that some religious significance was attached to their architecture.

We have also a fresco, mentioned above, which in the light of the secular architectural discoveries of the palaces, admits of interpretation, and seems to represent a temple or shrine (fig. 16). Below we have the great gypsum blocks that we have seen in the palace, and above half timber work with its frescoes on the plaster. The pillars, presumably of wood, are of the usual inverted form of Ægean architecture, and their sacredness is thought to be indicated by the horned cult object set before them. An interesting frieze, resembling that of porphyry-like stone found at Knossos (fig. 15), or the alabaster example from Tiryns, occurs below the central opening. This seems to be

the progenitor of the triglyph frieze of the Doric order. The triglyphs in this instance, judging by the colour, were apparently of wood. There is also indication of the blue glass paste or enamel which occurs at Tiryns—a delightful form of architectural decoration—the κάμμιος of Homer, so long a stumbling-block to the critics. In this connexion may also be noticed some little gold ornaments found at Mycenae, which are also generally supposed to represent a shrine (fig. 16). The lower part is again of ashlar masonry, the upper part is apparently of timber. There are three timber-framed doorways through which appear columns; but it is difficult to say whether they are meant to be within the building or form part of the façade. In front of them are the same sacred horns. The most interesting point is that the central part is higher than the sides, and it certainly does suggest a nave and aisle construction with clerestory lighting. On the other hand, it might equally well represent a lantern rising above the hearth, which would, of course, be visible from a point of view a little distance in front of the shrine, and could therefore quite legitimately be represented pictorially in the plane elevation.
They are found widely distributed over the Greek mainland, where the best specimens occur, but have been found at Phaistos, Palaiokastro, Praisos, in Crete, and also in Melos.

The chambered form is that of a square chamber cut in the rock, with a gabled roof and approached by a doorway, or passage. It seems probable that it is merely a development of the shaft grave, and the dromos is simply a means of closer and more ready approach to the tomb itself for the worshippers of the shade of the deceased. This finally develops into the great domed chamber out of which, in some cases the tomb itself opens, and which can hardly have served any other purpose than one connected with religious ceremonies in relation to the deceased. This development is borne out by the shaft-construction of the grave at Orchomenos, in some respects the finest example of these beehive tombs. It is, however, not in as perfect a condition as the so-called Treasury of Atreus at Mycenae, which was a trifle larger than this example (fig. 17).

In both cases a large domed chamber, of beehive shape, about 47 feet in diameter, is cut out in the hill-side and lined with masonry of large blocks built on the corbelled system (fig. 17). Opening out of the central chamber is a smaller side chamber, which in the case of the Orchomenos example was, like the shaft graves, clearly excavated by a shaft sunk from the top. The bottom was first lined with small stone masonry and then covered with marble slabs. This was roofed over with great slabs of green schielet elaborately decorated with a typical Mycenean

ARCHITECTURE (American) 683

pattern (fig. 18), and the marble walls were decorated in the same way. Above was another chamber to relieve the ceiling of weight, and above that again the shaft was filled up with débris.

The vault part is marked with numerous holes, some still containing bronze nails, and, as was also the case with the Mycenean example, it was covered with bronze rosettes.

The fine doorway to the latter tomb can be restored with some degree of accuracy. A great door, narrower at the top than at the bottom, is flanked by two half columns, which taper downwards and are adorned with zigzag flutings. Above is an enormous lintel, the pressure upon which is relieved by a great triangular space originally filled with a light triangular slab. The architrave was ornamented with a pattern, clearly recalling the short log construction mentioned above, and below this was probably a series of lions' heads.

LITERATURE.—There is no work on Mycenean Architecture as such, but some of the most useful sources of information are: T. J. Dörpfeld, Troja und Ilion, Athens, 1902; C. Schuchardt, Schliemann's Excavations, tr. Eugenie Seliers, London, 1891; Excavations at Phylakopi in Melos, conducted by the British School at Athens, London, 1904; C. Tsountas and J. I. Manatt, The Mycenean Age, London, 1897; see also the Annual of the British School at Athens, esp. vol. vi. f., London, and Monumenti Antichi dei Lincei, Rome.

J. B. STOUGHTON HOLDORN.

ARCHITECTURE (American).—Both in character and in material the dwellings and temples of the American Indians present the widest variety, ranging from the brush wigwam of the Pai Utse and the snow igloo of the Eskimos, to the elaborate stone palaces of the Mayas of Yucatan. This diversity, however, must not be construed as racial in origin, since closely related neighbouring tribes frequently have dwellings of different types; nor is the cause any essential intellectual limitation. The diversity is climatic and economic in source. The snow-covered wastes of the extreme north, the forests of the Atlantic coast, the prairies which once abounded in herds of bison, the arid regions of the south-west, and the tropical luxuriance of central America, each produce a distinct type of architecture. The dwellings of the American Indians admit of a triple classification: temporary, portable, and permanent, the first being exemplified by the Pai Utse wigwam, the second by the Dakota tipi, and the third by the stone pueblo.

i. The temporary dwelling is represented in its simplest form by the wigwam of Arizona. This is constructed by placing branches about 10 feet in length so as to form half or three-quarters of a circle. The tops are then brought together and smaller branches are thrown over them. The entire structure is, therefore, little more than a wind-break, and may be a development of the kis of the Hopis, which is a rough shelter set up in the fields to protect those who watch the flocks. This general type of temporary dwelling is especially characteristic of the less developed tribes of the western desert, where the arid soil furnishes little building material beyond brush and mud. Closely akin to the wigwam is the Navaho Hogan, a hut built either of branches or of poles plastered with mud; and the same statement holds true of the Pimas and Mohaves. Such dwellings are frequently abandoned, since the materials of which they are composed are not portable, and the region affords no other kind. Religion also enters into the migrations of these tribes, since they do not occupy a dwelling which has been entered by death. Here too may be mentioned the grass houses still built by the Wichitas but formerly part of the Cadouans (except the Pawnees and Arikaras, who built, instead, the 'earth lodges' noted below).
2. A higher grade of American architecture is found, under more favourable economic circumstances, among the prairie tribes. Here the *wickup* yields place to the *tipi*. The typical form of this structure is found among the Omahas, and is constructed by tying twenty or thirty long poles together at the top, and spreading out the bottom so as to form a circle. This is covered with skin or canvas, and an opening is left at the top for the escape of the smoke. Yet these tribes were by no means restricted to the *tipi*, since in the summer they sometimes built lodges covered with bark, and in their congener the Algonquian *wigwam*, and the latter what may be supposed to have been an earlier stage of *pueblo* construction. At all events, both represent a transition to the permanent dwelling. While the *wickup* is naturally devoid of any ornamentation, the *tipi* often received somewhat elaborate adornment, this decoration being frequently totemistic, and sometimes the result of a vision or other omen. Here the form of the dwelling is conditioned by the material at hand, since trees are comparatively rare, while the poles, although not only ranged in the plains, furnished an abundance of skins to form the covering of the poles. According to Dakota tradition, the tribes formerly dwelt in houses of bark in the present State of Minnesota, and were forced by the invasions of the whites to adopt a more sedentary life, and, in consequence, portable houses.

3. The *tipi* thus forms the transition from the temporary dwelling to the permanent. The latter form of house is characteristic of a settled people, and is, therefore, found among the most highly civilized American Indians. In its simplest form it may be exemplified by the *wigwam* of the Algonquins, which is constructed of a framework of poles, as are the *tipi* and the *wickup*, but is covered with bark instead of brush, mud, or skins. This type is possible only in a wooded country, where the abundance of game and other necessities of life renders a certain degree of permanence possible. At the same time, the dwelling is capable of enlargement, and thus seen in social life. The permanent type of dwelling was common throughout the continent at the time of its discovery, being found not only among the Algonquins and Iroquois, but in the Mississippi valley, Florida, the North-West Coast, and Arizona, and, in its highest form of development, among the Maya.

From the permanent house was evolved, moreover, the permanent village, in contrast to the temporary encampments found, for example, among the Pai Utes and the Dakotas. These villages were frequently defended by palisades, as among the Algonquin Leni-Lenape, the Virginians, and the Cadonos of the Mississippi valley. A remarkable feature of many of these permanent dwellings was their elevation on mounds of earth, which were frequently covered with its original mounding had, in the main, sanitary, dampness being thus avoided. This practice was also common among the natives of Florida, where these artificial elevations are described as being a kind of platform or raised earth, the mound which is large enough to give room for twelve, fifteen, or twenty houses, to lodge the cacique and his attendants. At the foot of this elevation they mark out a square place, according to the size of the village, and place in the leading men have their houses. . . . To ascend the elevated house is by a straight passage-way from bottom to top, fifteen or twenty feet wide. Here steps are made by massive beams, and others are planted firmly in the ground to serve as walls. On all other sides of the platform the sides are cut steep' (quoted from Garciíasso by Thomas, Mound Explorations, p. 647). The temples naturally stood at a still higher elevation than the houses of the people. Even dwellings of the permanent type here described, however, were liable to speedy decay if long abandoned for any reason, and the ruins of such houses no longer exist. Yet in them probably lies the secret of many of the mysterious mounds so common in the Ohio valley, which, according to the present theory, is the work of a race differing widely from the American Indians. Excavations of these structures have shown that their builders were simply American Indians, differing in no respect from them but in their material. Yet it is not impossible that the religious mounds were not necessarily of this origin, and that they were supported by those tribes to whom mounds were unknown.

To conclude, there are some data which suggest that the great majority of mounds are doubtless mortuary in origin, and thus do not properly come within the scope of architecture (cf. Yarrow, Introduction to the Study of Mortuary Customs among the North American Indians, Washington, 1880, pp. 17-20). Others, such as the Serpent Roubay and the Ohio valley or the pyramid of Cholula in Mexico, were structures designed for purposes of religion, the latter, at least, serving as the base of a temple. Yet it is not impossible that the religious mounds were of considerable development, and were, in origin those designed to support ordinary dwellings. The *hodenesotes*, or 'long houses,' of the Algonquian and Iroquoian stocks—are developments of the *wigwam* noted above—and find analogues in the slab houses of the West Coast. Here the abundance of cedars, which may readily be split, renders it possible to construct houses of planks instead of poles and bark, these structures being more permanent than the eastern wigwams. In the dwellings of this type, moreover, as in the Iroquois *long house*, separate rooms were partitioned off, thus marking a distinct step forward in civilization. Farther to the north, the Alaskan Aleuts construct their houses of ribs of the whale, driftwood, stone, turf, or any material which may be at hand in that barren region. The dwellings are not infrequently built entirely of turf cut in slabs. The most curious form of American Indian architecture, in some respects, is the Eskimo *sinojoo* (properly *qiyungkin*, 'house snow'). This is a structure of putting compact blocks of snow, which are so laid on a circular form as gradually to slant towards the centre, thus forming the only case of a true arch among the North American aborigines. A house designed for occupancy throughout the winter is some 12 feet in height and 18 feet in diameter, and is supported by stone lamps filled with seal oil, while additional light is admitted by a window of ice or the intestine of a seal. Whenever his supply of material renders it possible, however, the Inuit constructs a still more durable dwelling of whale-ribs, driftwood, and the like, thus approximating to the Aleut house. In this same region, moreover, were semi-subterranean dwellings, especially among the Aleuts, Eskimos, coast Salishans, and kindred tribes. Their origin with the subterranean hole of the Gilyaks, Kamchatskans, Koryaks, Chukchis, and Yukaghirs of North-Eastern Asia is too striking and too close not to be due to borrowing from the part of the American Indians (Jochelson, XVI's Congress International des Américanistes, Quebec, 1907, li. 115-128). Among the Pawnees, as among the Arikaras, Osages, Omahas, Poncas, and other tribes, are found 'earth lodges,' also semi-subterranean and somewhat analogous to the Navaho hogans mentioned above.

Of these dwellings have a short series as follows (in Hodge, Handbook of American Indians, i. 411): 'These tribes are said to have abandoned the grass house of their ancestors at some distant period, and, going to the bottom of aquatic animals, to have learned to construct the earth lodge. According to their ceremony, the animals, not only the animals were concerned with its construction—the boulder digging the holes, the beaver sawing the logs, the bears carrying them and all obeying the directions of the whale—
but the stars also exercised authority. The earlier star cult of the people is recognized by the star-worshipers in what may be termed the central group: Chichen-Itza, Uxmal, Kabah, Zayi, and Labna in Yucatan, the so-called Mexican pueblos, are as follows: 

In the Rio Grande pueblos are built in the permanent dwellings of the Iroquois and on the North-West Coast, reaches a high stage of development among the ‘cliff-dwellers’ and the Pueblo tribes. In the deserts of the South-western United States the country is arid and treeless, although verdure at once springs up if irrigation be successfully practised. Caves and cliffs abound, and the caves in the sides of these precipices, often modified artificially, are utilized as dwellings, especially since trees of any considerable size are extremely rare. A cliff-dwelling, moreover, is usually comparatively difficult of access and easy to defend, an important consideration when hostile Apaches stand ready to attack less warlike tribes. The houses in the cliffs are not hewn but are constructed of various kinds of materials, and are modern. The crevice on the face of the rock carefully walled up, both for shelter and for protection. An excellent example of this kind of dwelling is found in the Mesa Verde, where in a large crevice in the cliff is constructed the circular pueblo, forming a marked contrast to the simple wall on the edge of the rock. The crevice is frequently modified to suit the requirements of its inhabitants, and the cliff-dwelling is divided into rooms. These apartments were usually occupied by a family, and are sometimes, average height 10 by 17 feet in area. The only communication with the outer world is by a door, which is usually approached by steps cut in the face of the cliff. The floor was levelled off, and an effort was evidently made to avoid dampness by constructing low adobe ridges, across which poles covered with skins may have been laid. The general rule of the cliff-dwellers were the Northern Rio Grande valley, the valley of the San Juan, the San Francisco mountain range, and the valley of the Rio Verde.

Where cliffs were not available, and, perhaps, where a higher grade of civilization had been attained, the American Indians of the South-west constructed buildings of a so-called communal type, and it is not improbable that many of the American Indians of the North-West Coast, and on the other hand among the American Indians of the South Americans of Lake Maracaibo. These adobe dwellings were frequently constructed on foundations of stone, while the temples, as already noted, were elevated on high platforms of earth or stone, the Toltec pyramid of the sun at Teotihuacan having measured 580 ft. in altitude and 100 ft. in width, and the height of the so-called pyramid is, in fact, one of the chief characteristics of Aztec, Toltec, and Maya architecture. It differs essentially from the Egyptian pyramid in its object, since it is designed mainly for mortuary purposes, or as a temple. The Allied structure was a gigantic tomb. The Great Mound of Cholula is almost 1000 ft. square at the base, and reaches an altitude of 200 ft. The pyramid of Huiztilopochtli and Taloc in Mexico itself had five terraces, the lowest 360 ft. square and the highest 70, and was ascended by a flight of 113 steps, the processions to the chapels on the summit winding round each terrace before mounting to the next. Not only temples but palaces were so constructed, so that the Maya palace of Palenque stands on an oblong mound 310 ft. in length by 260 in width, and 40 ft. in height.

5. North and Central American architecture reached its zenith among the Mayas of Yucatan, Honduras, and Guatemala. Over all this territory are scattered ruins of ancient cities, and many more, hidden in the tropical vegetation, doubtless still await discovery. The final history of the art and architecture of this region cannot, therefore, be written for another, but what has been common at any rate are scattered ruins of ancient cities, and many more, hidden in the tropical vegetation, doubtless still await discovery. The final history of the art and architecture of this region cannot, therefore, be written for another, but what has been common at any rate is more likely that even more extensive and important remains may yet be found than are thus far known. The sites hitherto best described are as follows: in Yucatan, Uxmal, Kabah, Zayi, and Labna in what may be termed the central group; Chichen-
ARCHITECTURE (American)

Itza and Tuloom in the east; Izamal, Ticul, and Aké in the north; Ləphakin in the south; in Honduras there are Tenampu, Calamun, and, above all, Copan; and in Guatemala mention must be made of Quirigua, Cinacah-Mecallo, Patanimit, Utalpan, and Tikal. Here, too, must be classed the ruins of Palenque, in the Mexican States of Chiapas, which are akin to those of Yucatan, but with western Yucatan the line of architectural remains in Central America seems to be drawn.

Of the sites here noted—the list does not pretend to be complete—the most important for knowledge of Central American architecture are Palenque, Uxmal, and Chichen-Itza. From these three centres a general idea may perhaps be gained of the main outlines of a Maya city, supplementary information being obtainable from a study of other sites. It becomes, therefore, advisable to give a brief summary of the principal structures still preserved at each of these three cities. At Palenque the chief ruins are those of the Palace and the Temples of the Three Tablets, the Cross, and the Cenote. A palace is, of course, no evidence that it was actually intended to be a palace. This structure is erected on a quadrangular pyramid some 40 ft. high, measuring about 200 by 310 ft. at the bottom, originally faced with stucco, perhaps two or three inches thick, and plastered and ascended by broad central stairways on the east and north. The palace itself, which nearly covers the upper surface of the pyramid, measures about 180 by 235 ft. and has a height of 30 ft. In the outer wall were some 40 doorways, 5 ft. high and 9 ft. wide, while above them runs a cornice pierced with small holes which may have held poles for the support of an awning. The main building is found to consist of two corridors, formed by three parallel walls and covered by one roof, which extend entirely round the circumference of the platform, and enclose a quadrangular court measuring about 150 by 200 ft. This court also contains five or six buildings, some of them combined with the main edifice, others separate, which divide the court into four smaller ones (Bancroft, Native Races, iv. 308). The walls of the corridors vary between 2 and 3 ft. in thickness, and the corridors themselves have a width of 9 ft. and a height of 20 ft., the latter half of which is formed into a broad day-way through the central wall is found a trefoil arch, and niches of similar form occur frequently on either side of it. The pavement of the interior courts is 8 or 10 ft. below that of the corridors, and is approached by stairways. Of the buildings which divide this court into four parts, the most remarkable is a tower of solid masonry about 50 ft. high, in its present state, resting on a base about 30 ft. square, and with three storeys, each receding boldly from the main edifice to the solid core of each side. The pyramid itself contains apartments, or galleries, with walls of stone plastered, but without ornament, of the same form and construction as the corridors above. The stairways from the hierarchal courts to the upper houses or windows leading out to the surface of the pyramid; the other galleries are dark and damp.

These rooms are variously regarded as sleeping-rooms, dungeons, or sepulchres, according to the temperament of the observer (Bancroft, op. cit. p. 320). The restoration of the palace given, for example, by Bancroft (p. 323), well illustrates the high architectural abilities of the Mayas. Mention should also be made, in this connexion, of a bridge in the vicinity of Palenque, built of hewn stone, with a convex conduit 9 ft. wide. The bridge itself is 56 ft. long, 42 ft. wide, and 11 ft. high.

At Uxmal the ruins are still more extensive than at Palenque, the principal remains being the Casa del Gobernador, Casa de Tortugas, Casa de Palomas, Casa de Monjas, and Casa de Adivino, as well as a number of pyramids. The most remarkable of these is the Casa de Monjas, or 'Nunnery.' This is perhaps the most wonderful edifice, or collection of edifices, in Yucatan, if not the finest specimen of aboriginal architecture and sculpture in America. The supporting mound of this building is, in general terms 350 ft. square, and its sides are nearly facing the cardinal points. The southern, or front, slope of the mound, about 70 ft. wide, rises in three grades, 21 ft., 8 ft., and 19 ft. high, respectively, from the base. There are some traces of a wide central stairway leading up to the second terrace on this side, but none of the steps remain in place. This platform stand four of the typical Yucatan edifices built round a courtyard, with unequal intervals between them. The southern building is 270 ft. long, 39 ft. wide, and 18 ft. high; the northern building, 294 ft. long, 28 ft. wide, and 25 ft. high; the eastern, 323 ft. long, 21 ft. wide, and 24 ft. high; the latter is the largest in the 'Nunnery,' each 13 by 33 ft., with an ante-room at each end measuring 9 by 13 ft. . . . The rooms around the Casa de Monjas, 58 in number, were built entirely with a thin coat of hard white material like plaster of Paris. Those of the southern building average 24 ft. long, 10 ft. wide, and 17 ft. high. They are the present dayey, of the upper room of the building, the lower is converted into a chamber or store-room, and the stairway is divided into two galleries, each with a roof. The rooms are circular, with carved wooden ceilings, wooden lintels, stone rings, or hinges, on the inside of the doors, the whole being covered with wooden floors, entire absence of any openings except the doors. . . . The platform on which the buildings stand forms a vast promenade, 10 ft. in width, round each, both on the exterior and on the court. The entrance to the court is by a gateway . . . in the centre of the southern building. It is 18 ft. high and about 14 ft. high, the top being formed by the usual triangular arch. . . . Opposite this gateway . . . a stairway 95 ft. wide leads up to the upper terrace, which supports the northern building. On each side of this stairway . . . on the slope of the terrace, is the ruin of the usual construction, but nothing serious may be traced. . . . Instead of the upper building, the lower is covered with a roof. . . . The court is approached by doorways. Above this cornice the whole surface, over 24,000 sq. ft. for the four buildings, is covered with elegant and elaborate sculpture. The bases of the columns, the cornices of the court are pronounced by all beholders the chefs d'oeuvre of aboriginal decorative art in America. The art is realistic, and at the same time less complicated and grotesque, than any other fronts in Yucatan. . . . The northern building, standing on a terrace 20 ft. above the platform, consists of the other structures, and consequently overlooking them all, was very probably intended by the builders as the crowning feature of the Casa de Monjas. Its eastern façade was crowded with sculptured designs. . . . Apparently from no other motive than to obtain more space on which to exercise their talent for the reproductive art, and thus to render this front more striking, the builders extended the front wall at regular intervals above the upper cornice, door in the centre of each side, placed generally above the doorways' (Bancroft, op. cit. pp. 173-179, 187.)

The chief remains at Chichen-Itza are the Nunners, Akab-Tzab Maya, 'Writing in the Dark,' and its walls, at nearly the same level with the plain instead of on a mound, but with the ground surrounding it excavated, the Castle (or Pyramid), the Gymnasium (also called the Temple, and by the natives the Iglesia), the Chiachanchob ('Red House,' or 'House by the Fraser'), a series of 360 pillars from 4 to 6 ft. high, receding to the 'Hall of Columns' (on a miniature scale) at Mitla, and the Caracol. The last is the most curious structure and is unique of its kind. It is a circular, domed building, 22 ft. in diameter and 24 ft. high, with two narrow corridors surrounding its apparently solid core. It rests on a
ARCHITECTURE (American) 687

pyramid of two rectangular terraces, the lower 150 by 223 ft., and the upper 55 by 80 ft.

As already noted, many other ruins of Central America are of deep interest. Here mention may be made of the Casa de Justicia at Kickab; the Casa Grande at Zacay with its three storeys built around (instead of upon) a mound, the first storey being 120 by 265 ft., the second 60 by 220 ft., and the third (on the summit of the mound) 15 by 150 ft.; a room with an acute-angled roof at Nohcabab; the Castle at Tuoloom; and the great fortress of El Rincón, words at Wietla and Cen, having in open space in the centre. Those of the Quatos of the Amazon are about 4 metres square and thatched on the sides with leaves (Schmidt, Indianerstudien in Zentralbrasilien, Berlin, 1905, pp. 177-178), while the Lenguas of the Paraguayan Chaco construct dwellings of long, low, rough booths, either of papyrus reed or of sticks thatched with grass, although for stormy weather they place poles in a circle, and then bring them together to be covered with leaves, leaves, and similar materials (Grubb, Among the Indians of the Paraguayan Chaco, London, 1904, pp. 72-73).

On the Pampas tents were used, consisting of a framework of poles covered with horse-hide, and in Patagonia likewise. The walls of these latter structures were frequently between 10 and 12 ft. in length, 10 in width, and 7 in height, and the interior was divided into a number of rooms, thus forming a sort of small communal dwelling. In the north of the other hand, with its far inferior civilization, wretched huts are built of sticks wattled with grass or rammed with mud, marking one of the lowest types of architecture to be found on the American continent.

7. Midway between Mexico and America stands the architecture of the Antilles. The majority of houses on these islands were round, pointed huts, with leaf roofs and wattled sides, often of perfumed reeds and elaborately adorned. The villages were small. There were, however, large houses, especially in Cuba, where some lodged between 100 and 200 men, and the residences of the caciques naturally received special adornment.

The larger dwellings frequently had covered porches, and were divided into rooms. While it is not impossible that in the most archaic period the inhabitants of Porto Rico, Haiti, Cuba, and other West India islands were, at least in part, troglodytic, by the time of the first discoveries they were largely village-dwellers, their groups of some 15 to 20 families being typical. The villages were small. There were, however, large houses, especially in Cuba, where some lodged between 100 and 200 men, and the residences of the caciques naturally received special adornment. The larger dwellings frequently had covered porches, and were divided into rooms.

8. Architecture reached its zenith in South America among the Chibchas of Colombia and the Quichuas of Peru. The ordinary houses of the former people were built of straw and earth, and were frequently 100 ft. long and 20 wide; and even in Cuzco the common houses were of wood
and thatched with straw (Botero, Relazioni universali, Venice, 1600, i. 234). Stone structures, however, were unknown, even in the case of the temples. This is the more remarkable since sculpture was known to the Chibchas, who were also acquainted with the column. The architecture of the Peruvians forms the South American counterpart to that of the Maya, although its spirit is entirely different. The Peruvian buildings which have survived are mostly of stone, and many of them, unlike those of Mexico and Central America, are true examples of cyclopean construction. Mono-liths form the gateway at Tiahuanaco measures 13 ft. 5 in. in length, 7 ft. 2 in. in height above the ground, and 18 in. in thickness, with a door 4 ft. 6 in. high and 2 ft. 9 in. wide. At this same site are a large number of monoliths bounding a rectangle 446 ft. in length by 388 in width. These pillars vary from 14 ft. to 24 ft. in height. Elaborate sun-circles, bounded by monoliths, also occur, as at Sillustani; and the latter site and its vicinity are also of importance for the chuipas, or funeral towers. These are plain to square and, with corbelled cupolas, and measuring from 16 to 40 ft. in height, containing, within walls of extreme thickness, a very small funerary chamber (cf., further, art. DEATH and DISPOSAL of the DEAD [Peruvian]).

The chief sites of ancient Peruvian (and Bolivian) remains are Pachacamac, Callao; Quebrada de Chima, Marca Huamachuco, Huancuno Viejo, Vilcas Huamán, Cuzco, Ollantaitambo, Pisac, Sillustani, Titicaca, and the islands of Lake Titicaca. At Pachacamac are found the ruins of the Temple of the Sun and the House of the Virgin of the Sun. The former covering an area 600 by 450 ft., and the latter one of 350 by 200 ft. Over the four hills which form the site of the ancient city are scattered the remains of other large structures, including communal dwellings which recall the pueblos of New Mexico. But Pachacamac, like Ancon, is more noteworthy for its necropolis than for its architecture; nor are the coast sites of Peru, generally speaking, as important in their contributions to a knowledge of the ancient architecture of the country as the more inland remains. Nevertheless, mention should be made of the elaborate fortress at Paracanga. Here a hill about 825 ft. high, surrounded by an adobe wall, sustains a fortress of three terraces with a detached quen-bastion of similar construction. Another, more extensive, wall is found at Marca Huamachuco; and the presence of such structures in Peru is the more noteworthy when it is remembered that in the corresponding culture-regions of Mexico and Central America the sole clear example is found in the Maya site of Tulcön. This wall at Marca Huamachuco is nearly 10 ft. high, and it encloses the still imposing ruins of two oblong rectangular buildings, originally of three storeys, surrounded by courts. The exact purpose of these buildings, known locally as the Church and the Castle, is uncertain; but close by are the undoubted remains of extensive llama-stables. On a third hill—the Cerro de la Monja—surrounded by a triple wall, is the Tesoro, an appellation which may not be without reason. The entire group of structures at Marca Huamachuco is dominated by the Cerro del Castillo, where the rulers evidently dwelt; and the entire community was, accordingly, thus divided, running from north to south: Cerro de Amara (residence and citizens), Cerro del Castillo, Cerro de la Falda (lama-stables), Cerro de la Monja (nunnery), and Cerro Viejo (purpose unknown).

Huancuno Viejo, which, according to the conquistador historian Xerez, covered an area three leagues in circumference, still has a perimeter of nearly a league, even when the dwellings of the people have disappeared, and only the palace, baths, temples, and wall surrounding the principal buildings remain. The building material is hard grey stone, and a noteworthy feature is the baths ‘se composant de onze piscines en pierre et surmontées de parois d’un appareil admirable, pourvu de fontaines, dont des quielles sont fixés des bancs en pierre’ (Wiener, Pérou et Bolivie, p. 211). Mention should likewise be made of the elaborate system of courts and of an avenue with four large pyloonic gates. Vilcas Huamán is noteworthy chiefly for the truncated rectangular pyramid in three stages, ascended by a flight of steps, and surrounded by a wall with doors whose sloping sides resemble those of Huamucno Viejo. The structure is strikingly suggestive of the Aztec and Maya pyramids.

Peruvian architecture reached its height of grandeur in the structures at Tiahuanaco and the islands of Lake Titicaca. At the former site are the remains of the Temples, Temple, Plaza, Hall of Justice, and Sanctuary. The Temple measures 388 by 455 ft., with a sunken court 290 by 190 ft.; while the Hall of Justice is a cyclopean platform 133 by 23 ft. with a group of seats at each end and in the centre, these groups being separated by a monolithic door. Copper claws were used to hold the stones together. (On the entire site cf. Strübel and Uhle, Die Ruinenstatte von Tiahuanaco, Breslau, 1882.) On the islands of Titicaca and Coati are structures dedicated respectively to the sun and to the moon. At the latter the Palace of the Incas (also called the Temple of the Sun), the Houseof the Sun, and the Bath of the Incas. The Palace, or Temple, 51 by 44 ft., is in two storeys, and originally had painted and stuccoed walls; while the Bath is 40 by 100 ft. and 5 ft. in depth. The island of Coati is especially famous for its Palace of the Virgins of the Sun, which, also in two storeys, is 183 by 80 ft. It contains numerous apartments, but, rather curiously, none of the structures on these two islands is cyclopean in type, nor is the approach to such monuments as the monolithic gateways at Tiahuanaco, mentioned above.

Although less ornamental than the Maya structures, Peruvian architecture is of a higher type. The arch is occasionally found, especially at Pachacamac and Vilcas Huamán, and windows were not unknown in the interior, though they do not seem to have been constructed on the coast. The most important advance over the architecture of Mexico and Central America, however, was the roof, which obliterated the necessity of the excessively narrow loopholes which forms so marked a characteristic of the more northern style. The smaller structures seem to have been covered with a hip roof, at least in some cases, while in the larger buildings it has been suggested that the interior
ARCHITECTURE (Assyro-Babylonian) was lined with wooden columns supporting a sort of verandah which did not cover the entire floor space. Although there is, naturally, no trace of columns in the present condition of the Peruvian ruins, this hypothesis is confirmed by the small footpaths which border the interior of the walls. Such a roof, roof, moreover, would admit the necessary light to the dwellings, and the entire structure would thus present an analogue to the Roman atrium. Rooms were formed in the Peruvian houses by curtains. The doors varied remarkably in form, some of them being trapezoids, while others were truncated ovals, and still others resembled the reversed spade of the conventional playing card. A noteworthy feature of Peruvian architecture was the niche in the wall, usually either a rectangle or a trapezoid, sometimes perhaps serving for a closet and again for ornament. Stairs of considerable elaboration were frequent. Again, deviating from Maya and Aztec architecture, many of the larger structures, especially the temples, contained only one or two rooms, presenting ground-plans of much complexity, as in the palaces at Chimu. Structures of several storeys were erected, as in the case of the palace at Marca Huamachuco and the palace of the Inca on the island of Tapia. The palaces for the shrines of the sacred temple of the latter structure being entirely different from that of the first floor. Some buildings, notably the fortress of Paramonga, almost suggest the pueblo type of North America in their pyramidal form, although, as far as we can judge, they were not, like the American type, at all analogous. A decided analogy of form also exists between the Aztec tecolallis and the Peruvian huacas, although the latter were used, not as pyramids to support the temples, but as places of sacrifice. Furthermore, it may be noted that the Incas—altogether the most civilized race of South America, and the rivals even of the Mayas of Yucatan—were able to construct bridges of stone and elaborate aqueducts, as well as admirable roads and cyclopean terraces.

LOUIS H. GRAY.

ARCHITECTURE (Assyro-Babylonian).—In the absence of clear statements as to the history of the architectural forms found in the sacred buildings of the Babylonians and Assyrians, much doubt as to their origin naturally exists. The two principal forms are the temple on its earthy foundation, without any upper storeys, and the temple-tower, or zigurrat, in stages. It is probable that the former preceded the latter in date. As elsewhere, the temple in Babylon has been regarded as originating from the tomb—a very natural development, in view of the probability that certain of the gods of the Babylonians were nothing more than venerated heroes or mortal ages who had become deified. So far, however, no sepulchre which may be called an edifice in the true sense of the word has been found, either in Babylon or Assyria. The form of the temple probably originated from small beginnings, as is suggested by a document of about 2000 B.C. in the British Museum. In this Nuri-šu finds a temple to Nuri-šu (or Lugal) and Sullat (probably Merodach and his spouse Zer-panitu*), and dedicates it for the preservation of his life. * One priest only is named, so the building was probably a very simple structure—an oblong hall with a recess at one end for the statues or emblems of the deities to whom it was dedicated, and one or two rooms for sacred utensils and robes. In this case the motive for the foundation seems to have been to provide a temple for the gods of Babylon in a district where the sun-god was the patron deity, and it seems not improbable that other temples and shrines may have been founded in the same way.†

One of the most interesting temple plans is that of the goddess Nin-mah, as excavated at Babylon by the Deutsche Orient-Gesellschaft (Delitzsch, Im Lande des einstigen Paradises, p. 39). The ruin lies on the eastern side of the Istar-gate, and, as is usual in the sacred buildings of Babylon and Assyria, has its corners towards the cardinal points. It is of sun-dried brick, and its remains have even now traces of white decoration. The entrance on the N.W. led into a large vestibule communicating, with a room on the left, and giving access to a court-yard with six other doorways serving the remaining chambers, eleven in number. Four of these had smaller rooms, probably the sanctuaries where were kept the statues or deities. The temple proper was square, and the temple E-mah probably resembled others in Babylonia in associating certain companions with the principal divinity. The first hall was entered from the court-yard by a doorway nearly facing that giving access from the vestibule, and this, in its turn, led to the inner hall—the holy place. There seems to have been no rule for the position of the small rooms which probably contained the statues or shrines, although some were placed in the upper storey, while others were used in the N.E. and S.W., and at the N.E. end (when the room ran N.W. to S.E.). The court-yard was not in the centre of the building, but set more towards the S.W. side, so that there was space on that side for only one row of two narrow rooms, whilst on the N.E. side there are two rows of rooms, narrower and longer, with sanctuaries for statues or shrines. Beyond the ‘holy place’ are two narrow rooms only. To all appearances the temples of Babylonia and Assyria were built upon the same general plan. From the outside the visitor gained access to a vestibule, which, in its turn, admitted him to the court-yard, or to a hall around which were the doorways leading to the remaining halls and chambers.

More ornate, to all appearance, than the temple of Nin-mah at Babylon was that built by Sargon of Assyria at Khorsabad. This edifice lay in the ‘temple-court’ of the palace, on the S.E. side of which were the ‘priests’ rooms, the temple itself being on the S.W. side of the court, facing the state-apartments. A flight of stone steps gave access to a platform of crude brick (faced by a retaining wall of black basalt with a veneer of grey limestone). Two chambers were traced, floored with a mixture of stone and chalk. The fragments of black basalt bas-reliefs found here showed that the ornamentation was the same as that in the palace, but the subjects were religious.‡ A better example, however, is the Assyrian temple excavated by Sir H. Layard in the mound of Nimrud (Calah). This lay at the S.E. angle of the great temple-tower, but was apparently unconnected with it. Here also we have an outer court, an entrance leading into a vestibule, a side-chamber (with two entrances), and a hall with a

* JRAS, Jan. 1899, p. 103 ff.
† A temple of these modest dimensions may have been simply an enlargement of the popular household sanctuary.
‡ Rawlinson’s Monarchies, vol. i, pp. 586-571.
ARCHITECTURE (Assyro-Babylonian) recess at the end. It differs from the Babylonian temple of Nin-mah, however, in having no interior court-yard. Its importance for Assyrian art, on the other hand, was considerable, many slabs of a religious nature having been found; and its pavement-slabs give the history of the reign of Assur-našar-āpil (B.C. 856–850), its builder. Its main entrance, was flanked, with winged male-headed lions, and the entrance leading into the side-room had reliefs showing the deity expelling an evil spirit, represented as a winged dragon, from the place. At the side of this doorway the altar stood, the Babylonian Representation of the king (Assur-našar-āpil) in his divine character, with an altar before it, implying that sacrifices of some kind were made to him. The smaller temple apparently had no vestibule, and the visitor entered at once into the holy place, which had a recess for the statue or shrine at the left-hand end. Chambers supplying the place of the vestibule were constructed at each end. Altars for libations were placed in angles made to receive them on each side of the main entrance. These oblong niches were hollow, and were decorated with gradines, similar to those of the walls already described.

One of the sculptures found at Khorsabad is a small building which has been regarded as a fishing-pavilion, because built on the banks of a stream, and also by some, as a small temple. It is one storey high only, and is built, as usual, upon a platform. The roof is supported by two columns resembling the Doric of the Greeks. Above the columns the entablature broadens out into a deep cornice, which is embellished by gradines like those above the walls of the temples and temple-towers, but rather smaller. No doorway is shown, so that the building looks like a mere shelter from the rain. That it is really a temple is also implied by the similar structure sculptured on a slab from the palace of Assurban-āpil in the British Museum. It shows a temple on rising ground beside a terrace on arches (possibly the 'fanging gardens' of Babylon). It is flanked by thickish columns, and has two sides of twelve paces, and the conclusion of the columns is shown. The entablature above the columns has gradines, but its cornice is provided with a more elaborate moulding. On the left is an outbuilding surmounted by a shallow moulding and gradines, but all supported by the columns shown. The animal-headed stele in front was evidently detached from it. It has the figure of a Babylonian king in the usual conventional attitude, and an altar like those found by Layard at the smaller temple, at Nimrud, already described.

Though there may be doubt as to the origin of the Babylonian temple—whether it was a development of the tomb or of the simple household shrine—the testimony in favour of the temple-towers of Babylonia being exceedingly strong, and is rendered still more so by the analogy of the pyramids of Egypt, which they resembled in their general appearance. Ctesias says (Diodorus, ii. vii. 1) that the great sepulchral mound built by Semiramis at Nineveh on the Tigris was erected over the body of her husband Ninus; and Ovid (Metam. iv. 98) speaks of the 'tombs of Ninus,' under whose shadow the tragedy of Thésbe and Pyramus took place. On the other hand, this tomb-theory of the origin of the Babylonian temple-towers is quite unsupported by the older writings (Gn 11:4; Berosus, ap. Euseb. Chronicon, 15, Prop. Evangel. ix.; Jos. Ant. i. iv.; Symmachus, Chron. 44), which state that the tumulus for Babylon was for the purpose of reaching heaven. As far as the Babylonian records are known, this statement is likewise unconfirmed, though the use of the Bab. term (ziqquratu), applied to them to indicate the 'peak' of the mountain on which the temple-towers were placed, would seem to support the idea that these erections were for the purpose of getting nearer to the deity when sacrificing, and likewise, probably, when offering prayers. It has also been suggested that the original inhabitants of the plain of Sillar, having come from a mountainous country, desired to break the monotony of their new home, and therefore built these mountain-like structures, which they turned to pious uses.

Apart from the descriptions given by explorers, perhaps the best history of a Babylonian temple-tower is that of Herodotus when describing the temple of Belus at Babylon (i. 181–183)—the building called by Nebuchadrezzar 'the Tower of Babylon.' Herodotus describes it as a massive tower 200 yards square at the base, within an enclosure 400 yards each way, and provided with gates of bronze. The stages, or 'towers,' of Herodotus calls them, amounted to eight in number, and, like the temple-tower found by the French explorers at Khorsabad, were provided with an inclined pathway on all four sides of each, enabling the visitor to reach the top. About the middle of the ascent (apparently the fourth stage) was a stopping-place, with seats to rest upon. On the topmost stage was a large cell, with a couch and a golden table, but no image, as the god himself was said to descend thither when he visited the woman chosen by him to pass the night there. The image of the god was in a cell below, with a table, probably for offerings, and an altar outside. Image, table, and altar are all said to have been at the entrance of the temple, but no sucklings only. An altar for full-grown animals, and one for frankincense on the occasion of the god's festival, were also there. See ALTAR (Sem.), p. 333.

A detailed description of this famous temple is much needed, till these lines have been added to the list of ancient mounds being altogether inadequate. The late G. Smith was once fortunate enough to have in his hands a Babylonian tablet in which the building was described, and this is probably the most trustworthy account of it in existence. Adopting his estimate of the metric system used, the 'grand court' of the temple measured 1156 ft. by 900 ft., and the next, the 'court of Ístari and Zaggara,' 1056 ft. by 450 ft., with six gates admitting to the temple. The next division is described as a space or platform, apparently walled, called, in Semero-Akkadian, kigalla or sur, and in Semitic Babylonian kigâlu or birûtu—words apparently meaning an enclosed and levelled space. It was described as square, 2400 ft. each way (this is possibly the portion described by Herodotus as 'the temple' or sacred precinct, which measured 2 stadii—1213 ft. 6 in.—each way, and was furnished with bronze gates). In accordance with the usual Babylonian custom, the angles indicated the cardinal points, and each side had an altar on it. The enclosure, at the time the tablet was written, stood some kind of erection 200 ft. square, connected with the ziqquratu, or tower, and having round it's...
ARCHITECTURE (Assyro-Babylonian, 691

base the chapels or temples of the various gods, on
all four sides, and facing the cardinal points.
On the E. side was a building 70 or 80 cubits
long and 40 broad, containing sixteen shrines,
the chief ones being dedicated to Nebo and Tašmēt,
his consort. On the N. were temples to Ea or Ia
and Istar; on the S. a single temple dedicated
to Anu and Bel.

It was on the W. side, however, that the principal
buildings were to be found—a 'double house'
or temple with a court between two wings of
different height, but the long side at the back
was 125 cubits by 30. Mr. Smith was unable to
make out with certainty the disposition of all the
erectures, but in the W. chambers stood the couch
of the god, and the throne of gold mentioned by
Herodotus, besides other furniture of great value.

The main building was the zigurrat, or temple-
tower, square, and with its corners towards the

architectural decorations of Babylonian architecture.

The second stage was 250 ft. square by 60 ft. high.

The third stage commenced a regular series all
equal in height, namely, 1 gar or 20 ft., but
decreasing in size. The third was 200 ft. square, the
fourth 150, the fifth 100, and the sixth (the actual
dimensions of which were omitted) apparently
110 ft. high. On this was the topmost stage, the
seventh, which was the upper temple or sanctuary
of the god Bel-Merodach. Its dimensions G. Smith
marks as 80 ft. long, 70 ft. wide, and 50 ft. high,
the total height of the tower being 300 ft.,
exactly equal to the dimensions of the base.
The raising of the base above the level of the ground
would naturally make the height above the plain
greater than this.

Weissbach’s estimate of the measures does not
differ greatly from that of G. Smith; he makes the
base to have been about 100 metres, or 328 ft.

The differing heights of the stages of the great
'Tower of Babylon' are in contrast with the regularity of the
structure at Khorsabad. At present this latter
shows portions of four stages on a low platform;
and those who visited it gained the summit by
means of the gently sloping exterior passage lead-
ing to the first or topmost portion, which was about
140 ft. above the platform. Though in their restorations Perrot and Chipiez† do not place any
chambers in the structure, it is not improbable
that such existed, if not at some intermediate
level, at any rate on the topmost platform.

Exceedingly noteworthy, however, are the
cavations made by Layard in the ruins of the
temple-tower at Nimrud (Calah). Wishing to find
out what authority there might be for supposing
that the city of Ovid was intended when it was
inhabited, he cut through the masonry in certain places, and was
at last rewarded by finding a vault on the platform-
level 100 ft. long, 12 ft. high, and 6 ft. broad.
There is no doubt that this discovery permitted
him to regard these temple-towers as being
even tombs, as stated, but that it is 'the
tomb of Sardanapalus which, according to the
Greek geographers, stood at the entrance of the
city of Nineveh,' must be left doubtful, notwithstanding
that Calah (Nimrud) may have been regarded
as part of Nineveh, at least in later times.

Layard’s statement that it had been entered at
some unknown period by people who must have
known exactly where to make the opening, is
also in favour of his supposition: they had appar-
tently entered for the purpose of rifting the tomb.
The vaulted gallery found by Layard runs east
and west. Details concerning the upper part of the
monument are unfortunately wanting. Layard
regarded it as having been a tower in five stages,
which is probable enough, but the dimensions of
the tower are small but the length of the back
was built massively with a thick facing of stone,
exactly 20 ft. high, and finished at the top with
a line of gradines. The stones were carefully
fitting together, without any mortar, though mud
may have been used instead, as at the present
time. As far as preserved, the upper part is of
brick.

As has been pointed out by Canon Rawlinson,
the Babylonians and Assyrians made their temples
the object of religious devotion with the dwellings
of their kings, thus apparently not imitating
the Egyptians. As the Babylonians and Assyrians,
like all the Semitic nations, were exceedingly
reverent, this shortcoming was probably due
to the stone extent at which the use of
suitable building-stone; perhaps, too, more of the
temple-revenues may have been appropriated by
the priests. The want of stone was more especi-
ally felt in Babylonia; the Assyrians made use
of it largely, though not to the same extent as brick.
The possession of stone enabled the Assyrians to
adorn their temples with many fine bas-reliefs.

As an accessory of a temple, and therefore belong-
ing to religious architecture, may be mentioned
the Istargate, a festival-street of various stages,
the ruins of the temple of Ištu-, and consists of
massive walls—the sides of the gate—decorated
with bulls and the fabulous creatures called
sirrusha—strange and impossible serpent-dragons.
These alternate vertically from top to bottom,
and are exceedingly well preserved. The beauty of
the workmanship and the excellence of the enamel
were not surpassed even by the artisans of the
Persian period. From the Istargate a ‘festival-
street’ led northward to ‘the place of Fate,’†
and the Medes laid up there the sacrificial ashes.
Thus decorated with tiles imitating valuable stones.

In the temple of the Sun at Abū-ḥabbāb (Sippar,
identified, though doubtfully, with the Biblical
Sepharvaim), let us add a word or two. Here was
the main road; on each side of the rooms, was found an earthenware cofier
containing the celebrated ‘sun-god stone’; (see
ART [Assyr.-Bab.]). Receptacles for sacred objects
were probably made in all temples in Babylonia.
It seems likely that there were but few erec-
tions of the kind which had not closed recesses,
at each corner, for the reception of the cylinders
recording the building, re-building, or repairing of the edifice.

Naturally there are a number of religious
erections whose real use is at present difficult
to discover or to prove. At Babylon, on the site
which the German explorers regard as being that
† Layard’s Niniveh and Babylon, pl. 2, and p. 123 ff.
The stones ‘were bevelled with a lathing level, and the turn-
ning of the wall were eight recesses or false windows, tour on each side
of a square projecting block between the pilasters’ (Layard, p. 123).
The northern side had a semicircular hollow projecting in the
centre, flanked by three pilasters on the E. and five on the W.
The western side had no projection, but the recesses were eleven in number.
The eastern and southern sides were perfectly
plain.

† The inner walls of this building, Nebuchadrezzar states,
had been overlaid with silver; but this he took away, substitut-
ing impure gold.

‡ See H. Rassam’s ‘Recent Discoveries of Ancient Babylonian

* Das Stadtbild von Babylon (1904), p. 23. The site of this
temple-tower is the rectangular depression now called Salahān,
which is of the dimensions stated.

of 'the place of Fate,' several chambers were found, which may have formed part of that edifice. This seems to point to the probability that the oracles of the Babylonians and Assyrians were declared in special buildings, though such things may, from time to time, have been delivered in the temples, such as are described above. At present we know nothing concrete concerning the oracles, or of the rites which accompanied their declarations of events, so that the nature of the building they needed receives no illustration from the ruins which have come down to us.

The walls were the grading number of cells whose uses seemed to be religious, though in what way was not clear. Some of them contained a bronze figure of a kneeling bull upon a shank or tang, others had a figure of what has been described as 'the god with the firestick.' They were accompanied by inscriptions on stone dedicating them to a deity. The figures are thought to have been for the protection of the buildings in which they were found. Here and there tanks and cisterns occurred, suggesting some connexion with the temple in which they were found. These cisterns, however, had no special designation; any deity, it may be supposed, could be worshipped there. Perhaps, as they were regarded as the abode of the god without specifying his attributes, any worshipper could enter, and perform his religious duties there. That it was simply an emblem of divinity, or of the presence of the divinity, without any walls to shield it from the gaze of the careless passer-by, seems, from the inscriptions, to be unlikely. The places where oracles were declared must have contained chambers where the oracles worships occurred when it was intended to examine their entrails or other parts.

The bricks used by the Babylonians and Assyrians varied in size from 1 1/2 in. square and 2 1/2 in. thick to 12 in. square and 3 in. thick, but usually from 9 in. square and 2 in. thick. Sometimes crude and burnt brick are used in alternate layers each several feet in thickness, but more commonly the unbaked brick was used for the internal parts of a building or for the core of a temple-tower, and the baked brick for the parts exposed to the weather. The layers of reed-matting which are found seem to have been used for buildings of unbaked brick. The use of this is exemplified by the ruins of the temple Wenonah (Bethel), dedicated to Baal, which is now called Bowartiah; 'reed-mats.' The mass of the structure is of unbaked brick, the lower part butttressed with baked brick. That these buildings have resisted so long is remarkable, but they must have been unsatisfactory. As a contrast to the temple of Ishtar at Erech may be mentioned that of Nebu at Borsip (the traditional Tower of Babel), where there are masses of brickwork of extraordinary hardness. The ruin still awaits complete excavation.

Besides brick and Babylonian, and brick and stone in the inscriptions are cedar, terebinth (?), oak (?), palm-wood, cypress, pistachio-wood, etc. Nebu-

chadrezzar speaks of the cedar-beams from Lebanon which were used for the roofing of the temples of Babylon, which he adds, were overlaid with shining gold. Besides this, silver, bronze, copper, rare stones, and ivory were used for their adornment. As before mentioned, baked and unbaked brick took the place, with the Babylonians, of the building-stones used by the Assyrians, bitumen being generally used for mortar, as stated in Gn 11.

Concerning the ornamentation, the inscriptions give but little information. The principal architectural decoration of the upper terminations of the walls were also the grading number of cells, large recesses in the brick or stone walls in a vertical direction, and, when well carried out, had a sufficiently decorative effect.

Failing stone, certain of the buildings of Babylon were decorated with reliefs of enamelled brick; and though this cannot be proved for the temples, it is extremely probable that some of them at least were made of bricks, either more especially as some of the fragments found seemed to have been parts of fabulous or mythological beings (see ART [Assy.-Bab.]). In these there was an attempt at reproduction in natural colours, and there were inscriptions in white characters on a blue ground—a habit, but the whole showing considerable knowledge and skill.

The Babylonians seem often to have employed, however, the same method of decoration as the Assyrians, namely, fresco, traces of which have been found. In the case of the temple E-mah at Babylon, the distemper, as far as preserved, is white, probably chosen as the groundwork for decorations in colours, similar to the more or less geometrical flower-forms of the painted tiles and other decorations of the temple called Kidmer at Calah. The centres of the tiles, which were circular or lozenge-shaped, are generally provided with a knob pierced with a hole, probably for the purpose of hanging a lamp, though no remains of lamps are stated to have been found. Other Assyrian ornament consists of rosettes between two colored borders, and red, blue, and black rosettes above a similar border supported by a kind of arcade-ornament—perhaps the original suggestion for the true arcades of architecture. The colours in the distemper-ornamentation were exceedingly bright.*

The principal portals of the temples of Assyria were guarded by colossal bulls and lions, with the usual sacred figures, which, in the case of the smaller temple at Nimrud, were generally covered with inscriptions. The bas-reliefs always represent religious subjects. The exterior walls of this building seem to have been faced with enamelled bricks, some of which were found. Whether the temples at Babylon had their entrances flanked by colossal winged bulls or not is not certain; it seems probable, at least in some cases, as they are to all appearance referred to by Ashur-bani-apli, king of Assyria, in his account of the destruction wrought by his grandfather Sennacherib at Babylon on the occasion of his final conquest of the city (see Ashur-bani-apli's great cylinder, transl. iv. line 70).

T. G. PINCHES.

ARCHITECTURE (Celtic),—We have no definite information about the religious architecture of the Gauls. In the case of the Celts, ancient writers never describe places devoted to worship by the word saos or adts; they make use of vaguer

* See Layard's Monuments of Nineveh, 1st series, p. 86, 87

This art. deals with pre-Christian Celtic Architecture; for Christian Celtic Architecture see ASCENTEAE (Christian).
ARCHITECTURE (Chinese) 693
terms, such as locus consecratus (Caesar, de Bb.
Gall. vi. 13. 17), tepor (Diod. v. 27. 4; Strabo, iv.
4. 5; Plut. Caesar. 26; Dio Cae. lix. 7; cf. xxvii.
90), templum (Livy, xxiii. 24. 11; Suet. Caesar, 54),
témeus (Strabo, xii. 5. 2; Diod. v. 27. 4), and σηχος
(Strabo, iv. 1. 13).
The term of the ancient Celts, therefore, resembled neither the sanctuary of the Greek
temples nor the great buildings which constituted the
temples of the Romans. There is no doubt
that they were enclosures frequently situated in
the woods. Lucan (iii. 399-425) describes a sacred
area of wood near Marseilles where sacrifices were offered
to the gods with barbaric ceremonies, and
where there were altars on which cruel rites were per-
formed; all the trees in the wood were purified
with human blood; the miserable effigies of
the gods were devoid of art—shapeless masses of
 trunk-tree. Pompianus Mela (iii. 2. 17) remarks that
the large sacred woods of Gaul lent a pleasing
appearance to the country. Caesar mentions the
sacred place in the territory of the Carnutes where
year by year the Druids assembled to administer
justice (de Bb. Gall. vi. 13), and states that in
the sacred places of many races were to be seen pieces
of spoil taken from enemies, and that a Gaul would
never go away from a place of the hundred oaks, in his
hurt, or carry off anything from these stores (vi. 17).
The Arvernii had hung up in front of a temple (τεφις λεόβοι)
the little sword that Caesar had left with them
during a battle. Plutarch (Caesar, 20), who reports
the traditions, refers to the practices of the
Greek and Roman custom, and we cannot conclude
from this statement that a building was referred to.
At Toulouse the sacred places included lakes, where
great treasures were eventually accumulated under
the water (Cass. xlix. 1. 13; Justini. xxxii. 3. 10).
There were temples among the Galatians; and it was to
one of them that the Boii brought their boot and the head
of the consul Postumius. There
my head made into a cup hooped with gold,
and it was this sacred vessel that was used by
the priests of the temple on their feast-days (Livy,
xxiii. 24). Polibus mentions a temple (τεφος τεφος)
of Athene among the Insurians where the ensigns
of war were kept (ii. 32). There is nothing to show
that these temples were anything else than
ordinary buildings.
The Britons in the time of Queen Boudicca
had sacred places, and they offered human sacrifices in
the sacred wood (τεφρος τεφρος) of the goddess Adrastia
(Dio Cae. lixi. 7). In B.C. 61, Suetonius Paulinus
occupied the sacred woods of Mona, which were
devoted to savage superstitions, to be cut down
(Tac. Ann. xiv. 30).
The council of the Galatians of Asia Minor met
and judge cases of murder in a place called
περμερον. The second part of this word means, in
Celtic, ‘sacred wood.’ It probably refers to a place
consecrated to worship (Strabo, xii. 5. 1).
It must further be added that the Druids were
regarded as the inhabitants of the forests. Accord-
ing to Mela (iii. 2. 17), according to Lucan (i. 493) they lived, in caves or
secret glades. Pliny states that it was in oak-
trees that they gathered mistletoe. The oldest
tymology of the name ‘Druids’ made them ‘the
men of the oaks,’ from the Gr. τεφος (Pliny, xvi. 56,
293). If we may calculate the shape of the sacred
enclosures from the ruins of Gallo-Roman temples,
ye were almost perfectly square. But nothing
more can be determined concerning the Gallic
period from the numerous stone temples of which
ruins have been found in Gaul, and which date from
the Roman epoch. If there were small buildings
sacred to the gods in Celtic countries in ancient
times, these buildings, like the Gallic houses, were
made of wood and wicker-work (Strabo, iv. 4. 3;
Caesar, v. 43; Vitruvius, vi. 1. 5). The Gauls did not use stone except for building the walls of their
oppida, and even then it was unhewn stone, ad-
justed by means of wooden cross-pieces and iron
bolts (Caesar, vii. 23). They seem to have been
ignorant of the art of building stones and joining
them with mortar.
They probably found it as ridiculous to enclose
the gods in any kind of house as to represent
them in human form. Diodorus tells that Brennus
laughed very much on seeing wooden and stone
statues of anthropomorphic gods in a Greek temple
(xxxii. 9. 4). Lucan, when describing the sacred wood
near Marseilles, and Caesar, when speaking of the
Gallic Mercury (vi. 17), use the word simulacra to
denote the representations of the gods. Does this
refer to more or less rough wooden statues similar to
the ἔστρα of primitive Greece, or to shapeless
stone statues like some of the extinct menhirs?
It is possible that the Gallic races employed now the
same method of representing their deities and now
the other, according to the nature of the soil. The
deities of the Gallo-Roman period—the Bull, the
Woodman, the god with the mallet, the god with
the wheel—undoubtedly arose from a new religious
and religious superstitions. No text gives evidence of the Druids having for-
bidden idolatry, and no text states clearly that
there were real statues of gods among the Celts;
therefore we cannot affirm that their sacred en-
closures contained wooden symbols similar to those of savage tribes. The
huge bronze statue of Zeus which the Galatians
had at Tavium was probably of Greek origin, like
the cult of the god whom it represented (Strabo,
xxii. 5. 2).
There do not seem to have been any buildings
devoted to worship in pagan Ireland. Idols were
apparently erected in the open air, as, e.g.,
the large stone idol called ‘Crom Cruch,’ which was
surrounded by twelve smaller idols covered with
brass and bronze ornaments. There were similar
idol-places in various parts of Ireland, and some of
them were believed to deliver oracles, e.g. the
famous ‘Lia Fail’ at Tara. The idol Bel, in honour of
which bonfires (through which cattle were made
to pass) were kindled on the summer solstice,
does not seem to have been enclosed in a temple any
more than the other idols.
As regards the civil architecture of ancient
Ireland, it is practically the same as that of races at
the same stage of civilization. The houses were
usually round in shape, built of wood and wicker-
work, and covered with thatch. They were very
small. The chief room served as kitchen, dining-
room, drawing-room, and bed-room. Among
the higher classes of society, small recesses were fitted
in along the walls, each containing one or more
beds. But the common people undoubtedly slept
on beds arranged along the wall, as was the custom
in Gaul and in Scotland during the same period.
The fire was in the middle of the house, and smoke escaped through an opening in the roof.
The beds were placed in such a way that the
sleepers had their feet towards the fire. Each
bed contained often two and sometimes three persons.
It was only in the houses of chiefs that arrange-
ments were made to avoid too complete promiscuity,
and that beds were surrounded with curtains.

ARCHITECTURE (Chinese).—As the world
is still in the dark with regard to the whole
problem of China and the Chinese, so is it with
Chinese architecture. From an architectural point of view, this is a very novel and interesting subject. A style never dreamed of by Europeans is adopted quite freely, and a design which they call irrational and unnatural is executed with success. Little wonder, therefore, that we find few students of Chinese architecture, and those few touching on the subject but superficially.

The style of the architecture is a combination of the trebled and arced systems, the materials consisting of wood, brick, and stone. The curved roof, with the skyward-projecting eaves, forms the principal feature of the building. This feature is especially noticeable in Southern China. Generally speaking, however, both the plan and the elevation are monotonous, and the whole structure is rigidly symmetrical. The mode of decoration is strikingly peculiar. The exterior is usually coloured bright red; and temples and palaces are sometimes decorated with ornamental sculptures and paintings. Gorgious colours are applied to the interior, and the whole appearance of rooms and furniture is very picturesque. Red is the prominent colour, and green, blue, purple, and yellow (gold). Northern China is destitute of trees, as rain falls only once a year. Hence the building materials are principally brick and stone. Consequently a trebled system of wood and an arched one are the only forms known. On the other hand, the abundance of trees in the South has given an impulse to a considerable development of wooden buildings, with deeply curved and boldly projecting eaves. As to the origin of the concave outline of the roof, there is diversity of opinion. The present writer considers it but a natural result of the necessity of making a gradual change in the slope of the roof as it approaches the eaves, and of the maintenance of harmony with their curves. The fact is that the bold curvature always follows the bold concave of the roofs. It is rather strange that the plan of Chinese architecture is always an arrangement of rectangular blocks; not a single example of roofing on irregular plans is known. This is due to the direct transmission of the ideas of primitive times, and is a good illustration of the stagnant mind of the people.

Chinese architecture may be called the architecture of colouring. Without colours it is a bare, rugged skeleton. Both without and within colour are profusely adopted. The fondness for red betrays the primitive mind. But this primitive colouring is in harmony and uniformity with the taste of the primitive plans and elevations. The simplicity and coarseness of the construction and the carelessness of workmanship are beyond expression, especially in the productions of recent date. The exaltation of art and the execution of details have been entirely ignored by modern architects.

Historically, Chinese architecture may be arranged as follows: (1) Chinese architecture proper (B.C. 2200–A.D. 68, i.e., from the earliest historical age to the introduction of Buddhism: Hsiia, Shang, Chou, Ch' in, and the earlier Han Dynasties); (2) the rise of Buddhist architecture (A.D. 68–A.D. 608, i.e., from the introduction of Buddhism to the Six Dynasties: the later Han, both Chins, Sung, Ch' i, Lian, Chén, and Sui Dynasties, and also Wei, Ch' i, Chou of the North Dynasties); (3) Buddhist architecture in full splendour (A.D. 618–A.D. 1290, i.e., T'ang, Wu-tai, and Sung Dynasties); and (4) the introduction of Lámaism (A.D. 1260–present day, i.e., Yuen, Ming, and Ch'ing Dynasties).

(1) The first was the period of palace building. Unfortun ately, there are no remains in existence for our investigation. From a study of the time, however, we find that there existed during this period magnificent palaces and towers, great in design and majestic in style, such as A-Fang of the Ch'in emperor Shih- Whu-an Ti, and Chang-Lè, and Wei-Yang of the Han. The relics which show most clearly the structural aspect and treatment of details of that time are the relics of Wu-Lian-Tzu, though the monument itself belongs to the later Han dynasty. We can trace long projected wooden eaves, halafatored towers, various kinds of carvings, richly decorated roofs, etc.

(2) The second period may be divided into the earlier Han and the North and South Dynasties. During the North and South Dynasties the influence of Buddhist architecture began to be felt. The style of Buddhist architecture remained without much alteration, any change being confined to the inner arrangement and decorations. This feature is especially noticeable in Southern China. Generally speaking, however, both the plan and the elevation are monotonous, and the whole structure is rigidly symmetrical. The mode of decoration is strikingly peculiar. The exterior is usually coloured bright red; and temples and palaces are sometimes decorated with ornamental sculptures and paintings. Gorgious colours are applied to the interior, and the whole appearance of rooms and furniture is very picturesque.

(3) The third period may be divided into the earlier T'ang, the later T'ang, and Sung. In the earlier T'ang, Buddhist architecture and all other branches of art had reached the height of their grandeur, and from the later T'ang to Sung they began to decline continuously. During that time elaborate Taoistic temples were also built. The pagodas of T'ou-wen-ssu and of Chien-foo-ssu, at Si-an, Shensi, are specimens of the earlier T'ang. The two pillars and the two stone pagodas of Ling-yin temple at Hang-chow, Che-k'iang, are probably remains of the Five Dynasties. Besides, dissipated temples and exceptional pagodas belonging to the Five Dynasties and Sung are found in various parts of Southern China.

(4) The fourth period is divided as follows: (a) The Yuen. With the introduction of Lámaism changes were brought about in architecture. A fine specimen of this time is the temple near Pe-king. There are also the rock-cut sculptures at Fe-héi-ling, at the front of Ling-yin-ssu, Hang-chow. (b) The Ch'ing. Remains of this period are abundant in the old palaces at Nan-king and several of the Pe-king palaces are examples, and there is also an innominate number of pagodas. (c) The Ch'ing. Somewhat noteworthy relics belonging to the reigns of the emperors Kung-hsi and Ch'ien-lung are in abundance, but the productions of later date are valueless.

The Chinese architecture developed rapidly with the introduction of Buddhism and reached its golden age under the T'ang Dynasty. From the Sung it gradually degenerated down to the present day, when its ancient splendour has entirely vanished.

For convenience' sake, we may classify Chinese architecture according to the religions which have influenced the thoughts and arts of the people: Confucianism, Buddhism, Taoism, and Muham- madanism. Others, such as Zoroastrianism, Mani- chaeism, Nestorianism, and Judaism, were of a transient nature, and have left no architectural remains. Then we have a group of secular architecture: castles, palaces, dwelling-houses, etc., which will be treated below.

I. Confucian Architecture. The religion which has spread all over China, and is found only by all the people, is Confucianism. Temples, known as Hsin-shih-miao or Wén-miao (the latter different from Wu-miao [see § 3]), are dedicated everywhere in cities and towns. The most celebrated one is in Ch' u-fou-hsien, Shantsu, the birthplace of the sage. The temples of Pe-king and of Nan-king are well known, the former on account of the stone drums in the Ta-ch'Ieng-mén, and the latter on account of its immense size. But from an architectural point of view they show very little variety of plan and elevation.

The main edifice of the temple is the Ta-ch'Ieng- tien, built on a high platform, two-storeyed, and mostly hip-roofed. In the centre of the interior the tablet of Chi-sheng-k'ung-tzu (the most sacred of Confucius) is enshrined. To the right of the tablet of Chi-sheng-k'ung-tzu, the tablet of Tsung-sheng-te-t'ang-tzu and Ya-sheng-t'ung-t'ien, and to the right, those of Fu-sheng-yuen-tzu and Shu-sheng-tzu-tzu-tzu, are arranged. As a rule, there are also the tablets of the twelve disciples. In front of the gate is the Lung-t'mén, and in front of the men is a pond, and still farther forward is a pai-lou (popularly known as the Ling- hing-men). On the sides of these buildings there are the East and the West corridors. Occasionally behind the Ta-ch'Ieng-tien there is a building which is sometimes called Ch'ung-sheng-tu. Within the
Ta-ch'ing-mên there are sometimes a bell-tower and a drum-tower facing each other. The general arrangement of these buildings resembles that of the Buddhist temple: e.g. Ta-ch'ing-mên stands for Fou-tien, Ta-ch'ing-mên for Tien-wang-tien, etc. As a rule, the Wên-miao is combined with the intorial. One of the most famous institutions is Pai-ma-szu, at the foot of Wu-lao-fêng, a south-east peak of Lu-shan in Nan-kung-fu, Kiangsi. This was established by Chu-tzu. The largest among numerous buildings in the compound is Tchang-hsien-shu-yuan. Within this temple are the Three Taoist styles, Confucian teaching; hence the relation of schools to the Wên-miao is similar to that of monasteries to the Buddhist temple.

2. Buddhist Architecture. The most important fact from the development of Chinese architecture is Buddhism. History says that in the reign of Ming-ti of the later Han the new religion was first introduced into China (65 A.D.), and Pai-ma-szu was built at Lâ-yang. Henceforward it spread and flourisheth continuously, with the result that the city of Lâ-yang, the seat of the most important Buddhist temple, was built in Yung-ning-szu by the Empress Dowager Hu of the North Wei. It is said to have been 900 ft. high, with a finial of 100 ft. But Buddhism suffered from the corruptions and disorders that were prevalent from the later T'ang to the Five Dynasties, and no temples of any importance were built. A temporary revival began under the earlier Sung, resulting in elaborate temple-building in Southern China during the Sung Dynasty. Ta-Chou (Kiang-su), Chiang-ling (now Nan-kings), and their neighbourliness were the centres. Under the Yüan Dynasty, Lâmaism was made the State religion. The architectural style of Lâma temples does not differ from that of the Buddhist temples, except in the Tibetan style to details, and the importation of new images and ritual articles. One new feature is the introduction of a pagoda which is a direct copy of a Tibetan model. Since the Ming Dynasty, Buddhism has been in a dormant state, greatly influenced by Lâmaism. In earlier days, Buddhism was divided into thirteen sects, but under the later T'ang only three prevailed: Vinaya sect, Dhyâna sect, and Sukhâvati sect. Dhyâna was subdivided into five sects. At present this is the ruling sect, other shades of belief being indistinguishable. We may say that the architectural features are practically common to all sects. Among the temples now existing are Yung-wo-kun in Pe-king and several other temples on the Western hills of Pe-king. The architectural city in Shan-si, Tientsai-shan, Pu-t'o-shan, Tien-t'ung-shan, Tienomu-shan in Chê-kie, Lu-shan in Kiang-si, Womei-shan in Szechuan, etc., are widely known, but they are almost in ruins and deserted, without a trace of their former splendour.

The common arrangement of Buddhist architecture is as follows:—In the main front there is the first gateway (shan-mên), wherein usually two guardian figures (er-tien) are kept. Then comes the t'ien-wang-tien ('temple'). In the centre of this temple an image of Maitreya with the features of Pu-tai is enshrined; behind Maitreya, and back to back, is a standing figure of Veddaveda. In the four corners are the su-tien-wang ('four heavenly kings'); in the North-east is Virûpâksha with a harp, in the South-east is Dhriti-kashtri with a sword, in the North-west Vaisravana with an umbrella, and in the South-west Virûdhaka grasping a serpent. Behind the t'ien-wang-tien is the ta-tien, known by various names, such as Ta-hsing-pao-tien or Fou-tien, where the Buddha and eighteen Arhats are enshrined.

Still further behind the ta-tien are sometimes the fa-t'ang ('preaching hall'), tsung-ch'ing-kê ('library'), and fan-ch'ang ('cloister for head priest'). To the right and left of the above buildings are corridors, divided into sections, used for various purposes. Generally there are the ko-t'ang ('reception hall'), ch'ieh-tien ('shrine for the guardian god'), tsu-shih-tien ('shrine for the founder of the sect'), shên-t'ang ('meditation hall'), ch'i-t'ang ('court hall'), yin-shui-t'ang ('cloister for mendicant priests'), etc. To the right and left of the t'ien-wang-tien a bell-tower and a drum-tower stand facing each other, sometimes with the addition of a pagoda.

The pagoda is the most interesting and tasteful of Buddhist buildings, there being numerous varieties of form. Its origin is the stûpa of India, obviously transported from Central Asia and India. The process of the modification of form is not yet plain, as even the pagoda of a very remote period seen on reliefs and carvings are many-storied, already losing the shape of the original stûpa. The pagoda of Ts'en-szu, Si-an, is the oldest now in existence, and is said to be a copy of a model from Central Asia. The pagoda of the T'ien-szu-shih-t'ang is in plan. Others are mostly seven- to thirteen-storied, octagonal, and built of brick. One in Tien-ningsz, Pe-king, is an example of the kind. In the Southern China and Yanzê valleys seven-storied and hexagonal pagodas are also seen. The Lâma pagoda is merely a copy of a Tibetan model, the origin of which is an Indian stûpa. They are abundantly seen in Northern China, and a beautiful example is that of Pai-ta-szu of Pe-king.

3. Taoist Architecture. The special style of architecture in Taoism, as it is practically borrowed from Buddhism. With a slight modification of the images and ritual articles, a Buddhist temple gives a good idea of the Taoist temple, such as is represented in Pe-king and Chou-tu-shih. Behind the entrance pai-lou there is a shan-mên; and then comes a ling-kuan-tien, where at the centre and in the four corners the images of Lin-kuan are enshrined, corresponding to the t'ien-wang-tien of a Buddhist temple. Then there is the yu-huang-tien, where Yü-huan is worshipped; the luo-lu-tien for the seven sages of Taoism; the ch'iu-tou-tien, and the su-yu-tien successively follow. In the last hall even the 'Eight Treasures' of Lâmaism are contained.

Temples for Chinese gods owe their origin to Taoism. The architectural style is Buddhist, with the following exceptions: at the front they have a stage for theatrical purposes, and before the stage there is an extensive court-yard; the architectural city is on in Shan-si, and the decorations more elaborate. The Kuan-ti-miao, or Wu-miao, is seen everywhere in China. Here Kuan-yû is worshipped, always attended by his two followers, Ch'ou-.tsang and Kuan-ping. The cheng-huang-miao is a guardian temple of town and village. Numerous temples of Wên-miao ('Temple of the Star-god'), T'ai-shen-miao ('Temple of the god of Wealth'), Huo-shen-miao ('Temple of the god of Fire'), Fên-shen-miao
ARCHITECTURE (Christian)

(‘Temple of the god of Wind’), Shui-shen-kun (‘Temple of the god of Water’), ... of art, has endeavoured, in the light of what he did understand, to interpret things which he did not understand.

In later days the art of temple building was gradually developed. The buildings were usually covered with an arched-shaped roof. In the Northern Wei period the house of the imperial family in the capital Chang-an was built in large style. From this time the art of temple building in China may be said to have been established.

4. Muhammadan Architecture.—Since the first mosque was built at Canton in the 7th cent. A.D., Muhammadanism has seen many ebbs and flows during the course of time, but it is flourishing far and wide. Ardent adherents are numerous, especially in the provinces of Kan-su and Shen-si. All the buildings are similar in plan, and pagoda-shaped towers, instead of domed like the mosques in other countries, are built, with a mihrab, and decorated with arabesque and Arabic characters. The tower is usually divided into front and back parts and is arched at the upper part. The interior is divided into the right-hand corner of the back hall, where decorations of arabesque and Arabic characters are again executed here and there. Near the bell there is sometimes a fountain, and sometimes a hall for purification. Occasionally halls for the head priest, for receptions, etc., are arranged as in a Buddhist temple. Often even the interior of the hall is of a Chinese style, entirely losing all signs of Muhammadanism. Thus in a Chinese mosque there is neither dome nor minaret; but it is a slight modification of an ordinary Chinese temple.

5. Tombs.—The ancient Chinese tombs were simply low artificial mounds where coffins were kept. Later on, monuments were erected, accompanied by stone figures of men and animals. This custom was prevalent as early as the later Han Dynasty, and still exists at the present day. Massively designed mausoleums of the T'ang Dynasty may be seen in the neighbourhood of Si-an. Earth is raised in a mound, and human and animal figures of stone and stone statues of the emperor and empress are placed in the north, east, west, and south. In the T'ang period the mausoleums of the Ming Dynasty were built of the same design: pai-lou, ta-hung-mên, pei-lou, stone-men, stone-animals, and then again gates and archways leading to the last mound. The mausoleums of Tai-tsu and Tai-teung of the present dynasty are near Mukden. They are simply copies of the Ming mausoleum. In the tomb of an ordinary person there are no stone-figures. It is a little cone-shaped mound, often enclosed by earth with an opening on the back. Sometimes the coffins are placed in a cave made on the hill-side and covered with stone slabs. Sometimes a stone chamber is built to contain the coffin. The tombs of priests are pagodas of either brick or stone, or probably a combination of both.

6. Secular Architecture.—Castles, palaces, meeting-halls, dwelling-houses, and the like, are distinguished from ecclesiastical architecture. The castle is surrounded by high battlements, with embrasures, are erected on the walls. The entrances consist of double gates (yu-chêng): beyond the first the path turns sharply and leads to another. The upper part of the two-towered tower, and beneath it is a vaulted passage, which can be closed at will by huge doors strengthened by bands of iron. On a large building in the main street of the city there stand bell- and drum-towers for reporting the time, the upper part being the tower and the lower the passage. The present mode of palace architecture in general is the same as that of the past. The Pe-king palace is similar to the old Ming palace of Nan-ch'ing. It is called Chiu-chang-tien-mien (Nine-fold system). The front part, which is used for public audiences, is called chao, and the back, for private audiences, is t'ing. The architectural mode of the tien and the mên does not differ from that of the temples already described. Here the T'ai, or platform, for natarevo of the temple, is extended, for which the Tien-t'an at Pe-king is so famous.

A building called hui-kwan is an assembly-hall for colonial clans and commercial guilds. The club-system is wonderfully developed in China, and there are magnificent buildings for the purpose. In front they have a theatrical stage facing an extensive court-yard, which is surrounded by corridors.

Dwelling-houses in Northern China vary in some respects from those of the South. In the former, the premises are covered by high wings. At the entrance is a gate with a cell, and then a court-yard. A second gate with corridors, a second court-yard, a third gate with corridors, a third court-yard, etc., are repeated in the same manner and disposed according to the wealth and rank of the occupant. The house itself is a simple repetition of rectangular blocks and corridors. The unsuitable materials, the heavy mode of construction, the defectiveness of lighting and ventilation, etc., detract from its architectural value; but, on the whole, with its fantastic features, it presents a picturesque appearance.

C. ITO.

ARCHITECTURE (Christian).—Although it is possible to discuss the different edifices erected by Christians in divers times and places, it is most important, at the outset, to dispel any of those misconceptions which would suppose that there ever was any Christian style as such. The Gothic architecture of the Middle Ages has often been spoken of as Christian architecture par excellence, and undoubtedly it is the most important of the styles in which Christians have erected their buildings, and being the style of our own country, it naturally demands the largest share of our attention. But it is not to the medieval Church that we could create, a style of architecture, any more than it could create a style of mathematics, or science, although it may make use of all of them. It has used buildings of the Latin, Byzantine, Moorish, Gothic, and Renaissance, and even the Greek styles, which differ from each other as much as one style of architecture can differ from another; and the differences are due to differences in the aesthetic expression of the people. These may be associated with other differences of character which may affect the forms of Christianity itself, but they are both the outcome of causes behind; the one is not the cause of the other. A certain type of man will produce a certain type of art and a certain type of Christianity, but the type of Christianity does not make the type of art, any more than the type of art makes the type of Christianity. Even schools of science or philosophy may be coloured in the same way. The failure to grasp this very simple fundamental principle has led to much absurd and unscientific assumption of the understanding of art and architecture. Doubtless the cause lies in the fact that to be a Christian it is not necessary to be an artist, and many a good Christian, quite innocent of any knowledge of art, has endeavoured, in the light of what he did understand, to interpret things which he did not understand.
ARCHITECTURE (Christian) 697

All this does not alter the fact that a church is a definitely Christian building erected for Christian purposes, and as such it may in many ways reveal this fact; but, at the same time, its principal architectural qualities are aesthetic rather than religious, and a building such as St. Paul’s is architecturally more akin to Castle Howard than to Westminster Abbey, which, in its turn, claims a closer kinship with Westminster Hall or the town halls of Belgium. The architecture of the Middle Ages was as much an architecture of castle and hall as of cathedral and church, and as is closely related to the spirit of chivalry and romance as to Christianity. Medieval Christianity, chivalry, romance, and architecture are alike the outcome of the medieval man; one is not the cause of the other, even although there is a certain amount of interaction. To speak of Christian architecture, then, as a parallel term with Greek architecture, is entirely illogical. Herefore, we can examine Christian buildings in various styles of architecture, although we cannot strictly speak of Christian architecture as such. It may also be possible to show how Christian building doubtless left some impress upon the several styles of which it made use.

1. Latin Architecture.—The earliest form of church with which we have an intimate acquaintance is the so-called Christian basilica, and its origin is exceedingly difficult to trace. One thing at least is clear; it is not directly derived from the Roman basilica, as was absurdly suggested in an uncritical and unhistorical age. The Christian church naturally developed from humble beginnings, where two or three might gather together; and such a lordly prototype is impossible. It used even to be suggested that the actual basilicas were the first Christian churches. But, as Christianity was over 300 years old before the conversion of Constantine, the Christians could not have had the remotest chance of using these buildings. Moreover, even after A.D. 312 (the date of Constantine’s conversion), the basilicas were still required for their original purpose, and could not have been handed over to, what, even at that time, was but a minority of the people. During all these three hundred years the Christians had required places of worship, and undoubtedly a more or less definite arrangement of their buildings by that time had become crystallized. As an instance of the futility of the argument, not to say the gross perversion of the contexts, we may note the following passage, one of the main passages quoted in favour of this theory:

In a laudatory piece of writing by Ausonius addressed to the Emperor Gratian thanking him for the consulship, we find the following passage: ‘Qua, inquam, locus est, qui non beneficis tuis agit, inquam? Nullus, inquam, Imperator Augustus, qui admiramenta speciem tuo venerandissimis inscit; non palatum, quod tu, cum terram sacrossecpas, amabile presidiis; non forum, et basilia olim nobiles plena, nunc volat, velatque pro tua salus expectat.’ The passage is given by Professor Baldwin Brown in his admirably suggestive work, From Schools to Cathedral (1900), and, as he points out, was, for an Emperor’s welfare in palace, forum, basilica, or senate house (mentioned later), are scanty evidence that any one of these was converted into a church, and why the basilicas should be singled out from the others with which it is coupled remains a mystery.

Leaving such puerilities, it remains perfectly true that the Christian basilica in the 4th cent. A.D. bore some resemblance to the Roman basilica, although it has never been proved that the Roman basilica was ever roofed in; but one might as well argue from a modern fleet as to the appearance of the Spanish Armada, the interval of time being the same, and the development of Christianity as rapid as that of our fleets. What was the case in A.D. 350 is of little value as evidence for what was the case at the beginning of the Christian era, in architecture as in anything else.

The earliest Christian services were held in the Jewish synagogues, and in private houses; and in comparatively early times we find the Christians locally occupying the position of the sodalicia, which correspond to our Friendly and Burial Societies. These Societies often possessed a scuola, or lodge-room, where they held their banquets in honour of the deceased.

These three forms of building may all have influenced the early form of the Christian church, although it should be noted that the scuola, with its aper, was probably itself derived from the large private hall, which often had an apsidal termination.

On the whole, the largest influence may be assigned to the private house (fig. 1). Certainly such houses were made over to the Christians for their use, and it may be even more than a coincidence that we find in the atrium of the early church the atrium of the Greco-Roman house, in the cloisters the peristyle of the house, and in the church itself the hall, acco, or principal chamber, as at St. Ambrogio, Milan (fig. 2), or the Church of the Nativity at Bethlehem, where the atrium is reduced to a simple narthex.

The narthex, which gradually disappears from the Christian church, was the outer vestibule into which catechumens and penitents were permitted to enter, who were not admitted into the church itself. It is probable that the atrium originally served a similar purpose, and the idea may be derived from the Court of the Gentiles in the Jewish Temple.

Some of the earliest actual places of meeting that still exist are the little chapels such as that in the catacomb of St. Agnes (fig. 3); but their value as evidence is slight, as the conditions were peculiar, and the form caused by throwing two or three cells together was the result of necessity rather than choice. The several cells may suggest divisions between the sexes or simply be...
between clergy and laity, the clergy fairly obviously occupying the end cell and the bishop the seat at the end. The altar must have been somewhere in the body of the chapel, and as there is no trace of it, it was presumably in the form of a wooden table. But even this cannot be dated earlier than A.D. 250, and there is room for much change in a couple of hundred years.

What, then, are the characteristics of the early Christian basilica when first it emerges into the light of history? It is a three- or five-aisled hall, with the central aisle rising higher than the others and lit by a clerestory. At the end of the central aisle, generally the west end, is an apse containing the seats of the clergy. The entrance is at the opposite end, and beyond that is a narthex, and sometimes a complete atrium. The baptistery, commonly of circular or octagonal form, is usually in a separate building, on the other side of the atrium, or of the narthex, as at Parenzo. In the latter arrangement we may possibly see the origin of the German two-apsed church.

Occasionally, particularly in Rome, there is a space in front of the apse, and a great arch is thrown across the last pair of columns, known as the triumphal arch, as in Santa Maria in Trastevere (figs. 6, 7, and 10).

In this space is seen by some the origin of the later transept, but it does not occur in the Ravenna churches, and the later transept probably has a double origin; and this is, at any rate, not the only factor. The building was apparently roofed with a simple open timber roof. The flat ceilings that occur in some Roman examples are late Renaissance, although they may possibly represent something older. They are rarely found elsewhere, but are supposed to have been a feature of the Roman public basilica (fig. 6). The walls were generally of brick, and comparatively thin, as there was only the wooden roof to support. Unlike the Roman basilica, it had no galleries, and consequently we find a very large wall space above the line of columns (fig. 7). This formed an excellent field for pictorial decoration, and at the same time distinguished it from the public basilica. Neither were the columns returned across the end opposite to the apse, at any rate in Italy, as was the case with the Roman building.

On the whole also, it seems probable that the apse was not a usual feature of the public basilica, and, when it did occur, it was practically in a separate part of the building. The columns in the Christian basilicas, particularly in the case of Rome, were stolen from earlier buildings, and it is very usual to find that they do not match. This also accounts for the poor proportions of the earlier Christian buildings in Rome, as compared with those in Ravenna, where there was no such available spoil to hand, and the builders had to fall back upon their own resources. At first the horizontal entablature is more common, but it is gradually superseded by an arcade of arches, which gives an appearance of greater height to the building, although the necessarily wider intercolumniations detract somewhat from the effect of length. The principal entrance was perhaps more often at the east end, following the arrangement of the temples of Greece. But the question of orientation was of little moment, and churches faced in any direction. After the custom of having the entrance at the west, and the altar at the east, came into vogue, as in England to-day, it was hardly ever more than a Northern fashion. Moreover, the first fashion was exactly the reverse way, with the altar at the west. The first church that we know to have had an altar at the east end was built in A.D. 470 (St. Agatha, Ravenna). Of the early churches in Rome 40 out of 50 have net their altars at the east.

The altar or table in the 6th cent. was at the opposite end from the main entrance, but in the body of the church in front of the apse, so arranged
that the faithful sat round it, the clergy on one side and the laity on the other. Of course, this arrangement in most instances has been altered, but the following churches in Italy show the old plan more or less undisturbed:—Torcello Cathedral, St. Apollinare in Classe, Ravenna, and Parenzo Cathedral (figs. 8, 11, and 4). (The bishop presided in a raised seat in the centre of the apse, very much as did the president at the table in the early senate.) Outside Italy, in the East, where there has been less change and alteration, such churches are quite numerous, but the following instances will suffice:—Ezra, Fitzounda, Mochwi, Bedochwinta, Abu Sargah (fig. 14), Dair-as-Suriani. Bedochwinta has the seats at the back and down both sides, advancing even beyond the altar (fig. 9).

Churches with the altar in the body of the church, and the bishop’s seat behind, but without the other seats, are familiar in Italy. There seems also to have been an arrangement, at any rate sometimes, for the lesser clergy and choir, whereby they occupied all the space immediately in front of the altar and were separated from the laity by a low screen. In the old church of St. Clemente in Rome, this screen, part of which is built from the actual pre-existing screen, may be taken to represent the original arrangement.

The floors of the churches were of ordinary marble mosaic, but this has often been altered in later times, and we see the so-called Cosmati work made with large pieces of coloured marble, surrounded by small mosaic, and this, again, by bands of white marble. A good example of the basilican church is S. Paolo fuori le mura, Rome (fig. 10). This, although almost entirely a modern restoration after the fire of 1823, is still the best representative of a great five-aisled basilicas that has come down to us. It is 400 ft. long and 200 ft. wide, with a central aisle of 78 ft. The complete atrium of Old St. Peter’s is here represented only by a narthex. The bema hardly projects beyond the aisle walls, and is peculiar in being double. It is in area among the largest churches in Christendom; but it is quite a simple thing to build these comparatively low buildings, with their light wooden roofs. There are 19 columns with pseudo-Corinthian capitals and a sort of Attic base. They are without flutings, and carry a series of simple, round arches. Above is a cornice, and where there would be the gallery in a Roman basilica, or the triforium in a Gothic church, is a series of medallions. The triumphal arch is carried upon a pair of columns on plinths. These columns have Ionic capitals, and the whole arch forms a very imposing feature, although not comparable with the great arches of the crossing in a Gothic cathedral. The general vista is fine, although, partly from excessive breadth, and still more from an inadequate marking of the bay divisions, which is so well managed in a Gothic cathedral, the length here is not felt. The church at present has a rich coffered ceiling, but it is doubtful whether this would have been the case with the original church of the 4th century.

In Ravenna perhaps the noblest example is St. Apollinare in Classe. It illustrates the characteristics of the place, which on the whole shows the indebtedness to Greek work even more than to Rome. As a result, the work forms a far more complete artistic unity. Everything is designed for the position that it occupies, and is not the spoil from other days. The church is a three-aisled basilica and has no transeptal space before the apse, this, as already stated, being what we should expect in Ravenna. In the dosseret above
the capitals, as at S. Vitale (fig. 12), and the polygonal exterior to the apse, we see Byzantine features.

The capitals are carved for their place. Above the nave arcade is a series of medallions, as in S. Paolo fuori le mura. The apse is raised, with a small crypt below it, and it retains the seats round the altar on the side opposite the entrance. The brick exterior is bald to hideousness.

In the Eastern Empire one of the best examples of the Latin or basilican style is St. Demetrius at Salonica. It has certain features, more or less characteristic of the East, which should be noted. The columns are returned across the building at the entrance end, which in this case is the west, and so form a sort of inner narthex. Over the aisles are galleries for the women—another arrangement common in the East. The capitals are finely carved, as we have here the still living Greek influence. This, as already indicated, was felt in the West. It was long before the Italians could carve capitals or lay mosaicq for themselves, and either they made use of the old work, as we have seen, or else the new work was executed by Greek workmen. Even in the 8th and 9th centuries, when the Italians began to copy the old work, theirs is very inferior and rude in comparison. In St. Demetrius there are fairly clearly defined projections which perhaps may be termed transeptal, but they are at the extreme end of the church, even projecting beyond the apse, and they are cut across by the main arcade of the church which makes them more or less invisible, and, in short, they are side chambers rather than a transept. Consequently there is no triumphal arch.

Other modified forms of the basilican church are found in Egypt and in Syria. In both cases there seems to be a tendency to keep the form of the apse only on the inside and to make the outside of the building square. The Coptic churches in Egypt are generally triapsidal with three altars, an apse occurring at the end of each of the side aisles—a form we shall meet again later (fig. 14). Syrian churches generally show a marked reminiscence of the style of Ancient Greece, and are finer in their work than those of the West. Not only were there many remains of ancient Greek work, but doubtless after the conquests of Alexander there was a certain admixture of actual Greek blood in the population. In many cases piers, and not columns, are used, and the church is divided into a few great square bays. The result is curiously suggestive of some of the later Romanesque Gothic churches. Almost invariably there is a narthex, and above this, and outside the building, often a gallery with columns, forming a sort of loggia which makes a very pleasing feature (fig. 15). A point in Syrian construction might be noted which is possibly another reminiscence of Greek tradition. There is a distinct aversion to the arch construction, and often an arch is merely an arch in form, or is reduced by corbeling to the smallest possible limits (fig. 16). Note also another common form shown in the figure.

The Christian basilicas, then, may be considered as a type of building, but hardly a style of architecture; and although we have seen that it was erected in various styles, they are all more or less a
continuation of the later Roman manner, affected
nevertheless by different influences, as in Ravenna
or Syria. It is perhaps convenient to group the
whole together as the Latin style, and remember
that other buildings than churches were built in
it, but, as is natural from the lack of sacred
association, they have very largely perished.

2. Byzantine Architecture.—In Italy, although
Greeks to a great extent executed the work,
they were trammelled by the traditions on an alien
soil, and by the masters they served; but when the
seat of the Empire passed to Byzantium they were
able to build more freely on their own lines, in
their own country, and among their own traditions.
The result was marvellous, and we find the speedy
growth of one of the greatest styles of the world,
culminating under Justinian, which itself gave
birth to descendant styles, and is still a living
influence. There are two great ways of cover-
ing a square space so as to leave all the sides open
—the intersecting vault and the dome. The first
was used by the Romans, yet the full compre-
sension of its principles and possibilities was not
grasped until the Gothic architects invented the
tรรue rib. The dome was used by the Byzantines,
and although they cannot exactly be said to be the
inventors, they perfected the system, and herein
lies the great achievement of the style. The
problem involved is the fitting of a hemisphere
upon a square. Now, the circle may be made to
 touch either at the corners or at the centres of the
sides. In the one case it is too big; in the other it
is too small (fig. 17, I and II).

In the former case we may carry up the sides
of the square, so to speak, cutting off the over-
hanging portion of the hemisphere, and the dome
then rests upon the points of the square, and, pro-
vided a sufficient abutment is brought, the outward
thrust upon the arches formed by this process,
the dome is stable (fig. 17, I and III).

Now, it is interesting to notice that these arches,
formed by the intersection of the planes of the
sides of the cube below the dome, are semicircular,
and, further, the intersection of a sphere by a plane
always gives a circle, and therefore it is always pos-
sible to raise such a dome upon semicircular arches;
moreover, it is always possible to place one such
dome up against another, and it is not necessary
for the two domes to be of the same size. It is only
necessary that the chords upon which the arches
rest should be of the same length; the arches them-
selves will always be semicircles. It may also be
put conversely that the intersection of two spheres
is always in a plane circle, and therefore the inter-
section of two domes always allows of the building
of a plane arch; and thereby the Byzantine archi-
tect escaped the greatest difficulty of the Gothic
builders, who found that the intersections of their
vaults were not in planes. This was perhaps the
principle (a) in the formation of individual character-
istic of the Byzantine style, which, in certain of
its aspects, can be described as a congeries of
globular forms growing out of one another, as in
the case of a mass of soap bubbles, which perfectly
illustrates the system (fig. 18, St. Sophia).

But although such a dome, in its simple form as
thus described, occurs in Byzantine architecture, it
is open to certain objections. The apparent height
is given only by the part above the arches, and
the resulting effect is comparatively low and flat. In
order to remedy this, the dome is raised in one of
two ways. The first is another instance of the
intersecting spheres. A dome (as in fig. 17, II) with
diameter equal to the diameter of the square,
intersects, and rests upon, a dome (as in fig. 17, I)
with diameter equal to the diagonal of the square.
Of the lower, nothing is left, save the ring upon
which the upper hemisphere rests, and the four
triangular portions that remain after the foursides
of the square have been raised in the manner
indicated above. These triangular portions are
termed pendentives (fig. 18).

This is the characteristic method of the first
great period of Byzantine architecture. But the
dome may be even further raised by the introduc-
tion of a cylindrical drum between the dome itself
and the pendentives. This is, on the whole, the
characteristic arrangement of the second period of
Byzantine architecture, although it is not uni-
versal. The same pendentive method may be
employed above an octagon as above a square, and
it is not uncommon to find such an octagon set
within a square, and the lower dome, resting on the
octagon and forming the pendentives, itself inter-
sected by little domes that form semi-domes in the
corner of the square (fig. 18). Another method, and
one frequently used in the case of a dome upon an
octagon, is a system of corbelling, wherein squared
stones are set horizontally, instead of radiating to the
required curve of the dome. It is really the
same system as the domed chambers of the My-
cenean civilization, but in this case the surface of
the stones is not rounded off to the curved surface
of the vault (fig. 18, Corbelled Pendentive).

The first great period of Byzantine architecture
may be said to be from A.D. 500 to 600, but its
principal achievements were all accomplished in
the first 50 years. Its crowning glory is St. Sophia,
completed in A.D. 537. Then follows a blank inter-
val during the Persian and Saracen wars, until we
come to the second great period which lasted from
the middle of the 9th cent. to the end of the 12th.
In this period the great masterpiece is St. Mark's at
Venice. After this follows a long period of decline,
lasting till about the end of the 16th century.
the alternate intervals, semicircular niches which extend the central area toward the corners of the square (fig. 19). There is an apse behind the altar containing the seats of the clergy. The outside of the apse is polygonal. The central apse in which the altar stands is shut off from the church by an iconostasis, and where there are two side apses there are generally two more of these screens. The side apses, except in the rarest instances, do not contain altars.

The whole style is much lighter and more skilful than that of the Romans, and the Byzantine builders made their domes generally of brick, using no concrete. Consequently the supporting piers were much less massive. Columns were used, as we have seen, not as an essential feature of construction, but rather as screens, and to break up the building. Thus, by this slight use of the principle of multiplicity, they produce an effect of scale that the open, undivided building would lack. The columns have bases with a few simple moldings, and a capital, generally most elaborate in execution. Above the capital is the dosseret—one of the sign marks of Byzantine architecture. It is sometimes said that its use is to enable the column to support the very thick wall above it. It may be so, but the upper section of the dosseret is generally about the same area as that of the capital itself, and, in any case, there is no advantage in diminishing to the bottom of the dosseret, and then starting with a large top to the capital, so as to diminish again. The very function of a capital is to do this work, and there is no reason why, if necessary, its sides should not slope inwards more sharply. A capital that cannot do its work is a solecism. It seems, perhaps, more likely that the dosseret is a curious survival of the entablature (fig. 20). In any case it is not a pleasing feature. When it is so reduced as to make merely a sort of double abacus, there is not the same objection, as the diminution in the upper one, or dosseret, makes it a mere molding, emphasizing the horizontal nature of the abacus, as in some examples in St. Sophia (fig. 21). The shafts are commonly monoliths of coloured marble, generally with an entasis but no flutes, and the whole style depends for its effect upon colour rather than upon solid forms. The forms that are used depend for their value upon pattern, not upon mass, doubtless as the result of the same aesthetic preferences where surface rather than solidity is used as the medium of expression. Hence we find no great cornices, as in classic architecture, and no subdivided columns or ribs upon the vaults, as in Gothic architecture. The wall surfaces are flat and the decorations are flat. There are practically no moldings, and the arches have plain soffits. Pediments or basemolds to the wall, and string courses, are insignificant or altogether absent. The very corners, even, are rounded off to allow of mosaics being carried round them. Hence the carving is all surface carving, and does not stand out from the background. The drill plays an important part, and there is but little modelling; the effects are those of patterns with a dark background formed by deep drilling, which is sometimes undercut, so that the pattern is detached from the stone behind. Even the capitals have the same character; projecting masses are rarely found. As wholes they are comparatively formless, although covered with the most intricate surface work. Doors are square-headed, although usually with an arch and tympanum above. Windows are generally simple semicircular-headed openings, but sometimes two or three lights, with semicircular heads, are placed together with shafts, or plain unmolded mullions, between.

Large semicircular windows are occasionally divided up by shafts, and even by a sort of transom bar, as at St. Sophia. The result is not beautiful. A more beautiful device is the thin slab of marble, often carved with the most exquisite patterns, which frequently fills the smaller windows. These patterns are cut deeply into the marble, which is sufficiently translucent to allow the light to come through. It is conceivable that this represents a Greek tradition.

The total result is a style easily grasped as far as its main architectural features are concerned. The variety which actually exists is perhaps surprising, considering that it is achieved within such comparatively narrow limits. Of course it cannot amount to the variety found in the Gothic style, which depends for its aesthetic expression largely upon complexity, whereas the Byzantine style, in its purely architectural character, is wholly simple. Complexity, with a touch of Eastern barbarism, makes its appearance only in the surface ornament.

The glory of Byzantine architecture of the first
period—indeed of the whole style—is St. Sophia. This church was begun in A.D. 532 and completed in the extraordinarily short period of six years. This time can apply only to the architecture, and much of the interior decoration must have been added afterwards. In the centre is a great dome, a trifle over 100 feet in diameter, and nearly as large as the dome of St. Paul's, London. It rests on pendentives raised upon four immense piers. The great feature is the extension of this central space by two huge semi-domes of the same diameter as the principal dome, abutting against the arches of the pendentives. These semi-domes, together with the great masses of the piers in the direction of the length of the church, resist the thrust of the great dome in that direction. But the thrust in the direction across the church is met by enormous masses of masonry carried by arches over the aisles, and forming a bold, if somewhat extraordinary, feature upon the outside of the building. The result is the most spacious interior in the world. In order, however, to preserve the apparent as well as the actual size, there is a skilful arrangement of columns, in two storeys, in the great arches at the S.E. and N.W. sides, and in the semicircular niches that we have already seen as characteristic of the first period of Byzantine architecture. These columns give something of the principle of multiplicity, and provide a unity of measurement, without destroying the majesty simplicity of the whole.

The central area is surrounded by aisles covered with intersecting groined vaults, after the Roman manner, and at the lowest end is a fine narthex 235 ft. long. Over it is a gallery for the women, which is continued on either side over the aisles. A gallery for the women is the usual arrangement in Byzantine churches, and may be contrasted with the curious arrangement in the Basque provinces, where there are two or three galleries, one above the other, for the men and the boys. The lighting is effected by forty windows round the central dome and five in each of the semi-domes and the minor domes. Above the two tiers of columns on the sides are two tiers of windows (fig. 23). There are also large windows in the aisles. But in no case is the window arrangement satisfactory, and this is the weakest feature in the church.

St. Sophia was by far the most important church in Christendom built in this epoch, and it is interesting to notice that there is no attempt made to orientate it; the axis is one degree south of S.W.

The majesty and simplicity of the interior of St. Sophia, with the richness of its colouring, make it by far the finest interior of its kind in the world. It is difficult to compare things that are so utterly unlike as a Gothic cathedral and this building; each is wonderful in its own way; but certainly there is nothing in St. Sophia that warrants us in ranking it after any interior whatever. The exterior is different. One may work up a qualified admiration for it; but, in spite of a certain dignity of mass which it shares with all great engineering works, it is hardly architectural, and finds its companions rather in the pyramids or in a modern railway station.

St. Vitale at Ravenna is generally classed as one of the great churches of the first Byzantine period; but, as Fergusson points out, it shows affinities with the so-called temple of Minerva Medica at Rome, quite as marked as any resemblances between it and St. Sophia. There is, however, Greek influence in the Roman building, so there is something to be said for this view.

(b) The churches of the second period are smaller than those of the first, and have several characteristics of their own, although in the main they follow the earlier work. The lighting of the dome had always been a difficulty. Windows in a dome are, of course, not vertical, and the effect is always unpleasant. The difficulty can be met on the exterior by raising a vertical wall, which at the same time is helpful in resisting the thrust, acting as a pinnacle would in Gothic architecture. The outside of the dome is then generally treated with a double curve (fig. 25).

Viewed from the exterior, this naturally suggests the drum, which we find as the characteristic feature of the second period, even if it made its first appearance earlier. It is, however, not invariant. The effect of the drum is on the whole pleasing, forming an effective lantern in the interior, and giving altitude and architectural character to the exterior (fig. 26), which latter is so much needed at St. Sophia. The central dome is still the leading feature of the design, but subsidiary domes are frequently grouped round it. In St. Mark's, Venice, there are five domes. The dome is almost invariably, in this period, placed upon four supports only, instead of the eight common in the earlier period; and the semicircles (as in fig. 19) do not occur. The general proportions of the building show more variety than the practically square outline of the previous period. Sometimes we find an elongated rectangle or an approximation to the cruciform plan. The triple apse is almost universal in this period, with the
altar in the bema before the central apse. In other features the two great Byzantine periods are not markedly different.

Of this period the greatest church is undoubtedly St. Mark’s at Venice, which, in spite of numerous later alterations, still preserves in its interior its principal Byzantine features. The Byzantine parts of the church of St. Mark’s, as we now see it, are the result of extensive alterations, amounting nearly to a re-building, in the middle of the 11th cent., of an earlier basilican church of A.D. 976, itself containing parts of a still earlier building. The western narthex, the walls and arcade of the nave, and portions of the east end, are practically all that remains of the basilican church. The columns in the eastern part of the church were removed, and six great piers were introduced—two at the west end and four in the centre of the building. These are themselves pierced by arches of the same height as the nave arcade. Two transepts were added, the east end was lengthened, and the narthex was continued round the two sides of the building. Above the nave and the crossing were erected two large domes and three somewhat smaller domes over the bema and the transepts, which are made slightly smaller than the crossing by the width of the pilaster shafts that support the arches leading into the three arms. By this skilful device a perspective effect of greater size is obtained. Great arches, which are practically barrel vaults, cross from pier to pier, and upon these the domes rest. Above the nave arcade is a narrow gallery, some 3 ft. wide, which represents the women’s galleries of the Eastern Byzantine churches. It is, however, valuable as providing a unit of measurement, and thus giving size to the church, rather than for any utilitarian purpose. The capitals are not very characteristically Byzantine, being of a sort of pseudo-Corinthian type. They probably belonged to the original basilican church, and are of very excellent workmanship. Above them is a double abacus, or abacus and reduced dosseret. The church is not nearly so well lit as St. Sophia, the principal light coming from sixteen windows in each dome, placed just above the springing.

The chief effect is the main feature of the building: the marble columns, and the famous floor with the wonderful Byzantine mosaics on their golden ground, and even the pictorial mosaics of a later age, all give a richness unsurpassed elsewhere. Hence we find the usual flat Byzantine treatment with few moldings of any kind, although St. Mark’s, figs. 27 and 28, has an unusual amount of carving of a bolder type than one associates with Byzantine work, most of it, however, not belonging to the Byzantine design of the building. St. Mark’s retains a magnificent example of an iconostasis with figures of the Virgin, St. Mark, and the Twelve Apostles. This feature in the Byzantine churches corresponds to the roof loft of the Gothic buildings. In later times, particularly during the 13th and 14th centuries, a great deal of ornament has been added, especially to the exterior, which has been cased with a veneer of marble. The domes have been covered with tall cupolas, and to the same period belong the pinnacles and over-flourish Gothic ornament.

3. Gothic Architecture. — During the development of Byzantine architecture—the direct outcome of the aesthetic character of the people of the regions where it occurs—we have another style developing in the West, a little later in reaching its maturity, but roughly the contemporary of the Byzantine. This style, to which the name ‘Gothic’ is not altogether inappropriately given, if we extend the term a little beyond its usual and somewhat arbitrary limits, was the style principally used by the Christians of the North. Those of the East made use chiefly of the Byzantine, and Italy of the Latin style—one, as we have seen, much more closely related to the Roman. Of course other styles have been used by Christians in different countries, as, for instance, in Norway and in Russia. Even in N.W. Europe, although it is convenient to group the styles of several countries under the one heading, there are in reality several styles: and the more one studies, say, the Gothic architecture of England and France, the more one realizes how little they have in common. It is true that to some extent the great wave of Romanticism marks the aesthetic character of the whole area, so that a church in England is, of course, more like a church in France
than a church in Russia, Constantinople, Italy, or Norway; but it is only a very inartistic or superficial observer that fails to see the enormous difference. The comparatively little that is known about the styles of the East offers an interesting parallel. We class Armenian architecture as Byzantine, there is almost much difference between the cathedral at Ani and St. Sophia as there is between St. Sophia and St. Paul's, London.

But, provided we remember that 'Gothic' is a name belonging to a group of styles rather than to one single style, it is readily seen how these together. The Gothic, then, may be defined as the architectural expression of those races which, beginning with Alaric the Goth (d. 410 A.D.), and Theodoric the Ostrogoth (d. 526 A.D.), overshadowed and superseded the power and civilization of Rome. The beginnings of the Gothic tendency in architecture may perhaps even be taken as far back as Theodoric, but the culmination of the style is in the 13th century. The name 'Gothic' was originally given at the time to the classical revival as a term of contempt, practically meaning 'barbarous'; but although the actual Goths had nothing to do with what we term Gothic architecture, nevertheless they were the pioneers in that which afterwards culminated with Rime; it is the highest artistic expression in the architecture that passes under its name.

The character of the Northern races is essentially different from that of the South of Europe, and especially as they were without the intellectual and artistic; in a manner of its own. There is also, undoubtedly, the character of an age and genius of the kind, even when the North had invented the style and carried the art to perfection. The different schools were not equally successful. Burgundy and Provence, with their barrel vaults, exercised comparatively little influence; and although the Rhine churches at first were in the van, they dropped behind and left it for England and Normandy, and the slightly later school of the Ile de France, to perfect the art. The influence of the Ile de France school ultimately became the greatest of all, although the different schools, having been settled beyond dispute, prove that the Durham, or at any rate the English, school was first in the field, with perhaps the two greatest inventions of the Gothic architects—the shell vault on ribs and the flying buttress. But English architecture, uninfluenced, pursued its own line of development to the last, ignoring the French work alike at Canterbury and at Westminster.

In a short article such as this, a sketch of the development of our own school, and a brief comparison with that of the Ile de France, will perhaps be the best way of illustrating the leading features of the age.

(a) Celtic-Saxon work.—Putting aside for the present all architecture save that of church building, the influence of Gothic architecture are to be found in what is perhaps best termed Romanesque—Celtic Gothic—a style commonly known as Romanesque, and largely dependent upon Roman architecture. The term by which it is known is hardly a matter of much importance; the chief interest in the study of the modes in which it shows its living force in developing from Roman architecture, and in pointing the way towards the later Gothic, rather than in its dependence upon the former. The style, moreover, is largely influenced by other elements that have nothing to do with it; the Celtic language is inhabited by our own country, for instance, or even the influence of Byzantium.

After the downfall of the Western Roman Empire, while Europe was in the melting-pot, architecture seems to have been somewhat stationary. It is, however, difficult to make certain, as later re-building has practically destroyed all evidence. Even if the conquerors were desirous of building, the opportunities were much more than in times of peace. About the beginning of the 9th century, we find men's thoughts turning towards architectural expression that rapidly blossomed into great things. In Burgundy and Provence, along the Rhine valley, in Lombardy, in Nor"
work. In the year in which St. Columba died, St. Augustine came over to Canterbury, with the powers of a bishop, to convert the English, and he introduced a Latin element. But this influence was small, and affected the style but little.

Later we have an influence of Northern monasticism which must be distinguished from the great Norman influence of the Conquest, but which also represents the Romanesque Gothic of Northern Europe. East Anglia was converted by a Lombard priest, Felix, afterwards bishop, and even until quite a late date we find a distinctly English influence at work in the great Benedictine foundations of East Anglia. Sussex was converted by Birinus, an Italian or Lombard monk, early in the 7th cent., and to some extent East Anglia, Kent, and Sussex remained the stronghold of Continental influence until the last. Monastic builders from Normandy were employed at Romsey Abbey in 967, and upon Bishop Ethelwold's cathedral, Winchester, during the reign of Edgar, who with Dunstan as his administrator largely reformed the monastic system.

The first element is by far the most important in the formation of the Celto-Saxon type of church. It is characterized by a narrow rectangular plan, commonly of two or more chambers, of which Trinity Church, Glendalough, Ireland; Eglisay, Orkney; St. Regulus, St. Andrews, Scotland; Eascomb, Durham, and Bradford-on-Avon, Wilts, England, may be taken as typical. The different characteristics to be noted are—(1) the general length as compared with the breadth; (2) separate rectangular chambers; (3) large porches, or side chambers, as at Bradford, Repton, Deerhurst, etc.; (4) a western tower of defence, round or square, usually entered from within the church; this is a common feature; occasionally, as at Brechin, it is separate from the church; (5) a type that occurs as at Stedland, Dorset, Barton on Humber, or Basing, Hants, where the tower actually forms the body of the church (fig. 29).

All these features continue to play a prominent part in English architecture, and help to distinguish it from that of the Continent. In the first place, the extreme length of the English churches is one of their most characteristic features, and they are the longest in the world. Secondly, the rectangular, instead of apsidal, endings to English churches are too familiar to need comment. Although the apse was introduced, it speedily disappeared, and never made way at all in the West of England. Thirdly, we may notice the English tendency to a series of more or less separate chambers—the separate closed-in choir, the nave being often, as at Canterbury or Windsor, completely shut off, and the separate extensions at the east end, as at St. Albans, Wells, Gloucester, Hereford, Winchester, and indeed most of our cathedrals. Fourthly, the large porches or side chambers have a double influence. As entrance porches they are exceedingly common, e.g. Worcester, Gloucester, Canterbury, etc., and in hundreds of small parish churches. It is said that our \( \text{in}\) element Westerner was the reason why the western entrances being rarely used or altogether absent in this country. We also see these side projections in the very marked English transepts, as compared with those of the Continent (see fig. 55 and 56). We also find many round towers; many of our English cathedrals have three, while Lincoln has four, pairs of such projections. Fifthly, the single western tower, so familiar a feature in the English parish church, can be traced hack to this source, and it hardly ever occurs in France. With regard to the last feature—when the tower forms the centre of the church—we reach by the addition of the characteristic side chamber a cruciform central towered type (e.g. Braemore, Hants, and the Priory, Dover Castle). There are doubtless other influences that give us this type, but it is probably the double influence that preserves it as the typical English great church, right through the Middle Ages.

The second element in the Celto-Saxon style is the Latin style introduced direct from Rome by St. Augustine, 597, as at Deerhurst, with the help of Regulus; but the Augustine influence seems to have been local and of little moment. The original church at Canterbury was quasi-basilican with an eastern as well as a western apse, the altar presumably being in the western at so early a date. There are one or two basilican examples up and down the country, but they are very rare. It is, indeed, not at all certain whether the type as found at Minster in the vale of Aylesbury has anything to do with St. Augustine, and may not rather be a survival of the old Romano-British type of far earlier date, such as, presumably, we see in the plan at Silchester.

Latin influence, however, does make itself felt, but through an indirect channel, and the division into nave and aisle is introduced through the third great element—the Northern and Continental.

The aisle, however, never becomes quite the popular feature in this country that it is on the Continent. Five aisles, so common abroad, practically do not occur in English cathedrals. It is also largely to this influence that we owe the great central towered cross-church plan. But even this would probably have disappeared along with other importations had it not practically coincided with a type of more native origin. To this composite influence we may be said to owe the unequalled pyramidal composition of Salisbury, or the dominance of the central tower in such magnificent tower groups as Durham, Lincoln (fig. 57), or Lichfield, quite unapproached by the Continental architects.

The details of the Celto-Saxon style are very largely of Celtic and Tentu-Scandinavian origin, although decadent Roman work is also a factor to be considered. There are certainly affinities with early German work, particularly noticeable in the method of wall building, which is solid, and not built with a ruble core after the Roman method found in France. A brief résumé of the principal details is as follows:—

1. Long and short work, or massive corner quoina. (2) Arches of hestress, or straight, stone, or brick, with strap work—a feature whose origin is obscure, but a far-away derivation from the Roman pilaster is perhaps the most probable. (3) The arches are semicircular, or even single stone, or else they are straight-sided—a peculiarity not found in other styles. (4) The windows are often divided by baluster shafts, which are set in the centre of the wall, with a long stone forming a sort of abacus that runs from front to back.
through the whole thickness of the wall. (6) The windows are
widely splayed, both internally and externally. (7) There is a
great fondness for parallel lines as ornament, foreshadowing the
later characteristic English parallel moldings of many bands,
which contrast with the simpler flatter treatment of the Conti-

tinental. (8) The intersecting bands and characteristic Celtic
curves seem also to foreshadow the English ornamental work of
the 13th century. There is a vast difference in the character of
English and French ornament, which is generally overlooked.
It is probably connected with a difference in origin.

Such are some of the principal points in connec-
tion with the Celto-Saxon work—a style much
more important than is commonly supposed, which
tends to be ignored on account of the greatness of
the next style of architecture that made its appear-
ance in these islands, and was in its turn made use
of for Christian purposes.

(b) The Rise of English Gothic.—The Norman
Conquest produced in Britain a massive style of
architecture, of towers, fortresses, and strong-
holds. The churches, which naturally are always
built in the style of the country, partake of the
same character, so that a change comes over the
church building in these lands. Contrasted with
the comparatively light buildings of Celto-Saxon
work, we find heaviness almost the leading feature
of the new work. But the English soon made
their own influence felt, and for a time English
church architecture undoubtedly led the way in
Europe.

In the first place, the number of churches built
is entirely without parallel. During the hundred
years that followed, when the country had settled
down after the disturbance of the Conquest, there
were built between three and four hundred great
cathedrals and monasteries, churches of first-class
rank, besides numberless smaller buildings. In
the last hundred years, with a population nearly
twenty times as large, and enormously improved
methods of transit and mechanical appliances, we
have built not even one great church, nearly completed
a second, and laid the foundations of a third. Not
only, however, was the number of churches re-
markable, but the scale of the English churches
very greatly exceeded all other churches in the
world that were built about that time. In all the
rest of Europe there were built only two churches of
over 50,000 sq. ft. area. In England there were
four churches that exceeded even 60,000 sq. ft.

The Continent.

England.

Mayence . . . c. 56,000 sq. ft.
Gloucester . . . c. 31,000 sq. ft.
Worms . . . . 40,000
Norwich . . . c. 40,000
Tourna . . . . 44,000
Con According to
St. Sernan, Toul-
house . . . . 16,000
York . . . . 43,000
Spier . . . . 33,000
Launiston’s, Canter-
bury, with Con-
rad’s Choir . . . . 46,000
Durham . . . . 40,000
St. Albans . . . 60,000
St. Swithin’s, Win-
chester . . . . 66,000
St. Paul’s, London . . . 65,000
St. Edmund’s, Bury . . . 68,000
Chichester . . . 54,000 sq. ft.

In many respects the very fact that England led
the way was against her, because her great churches
were already built when advancing art would have
allowed her to build greater. Still more was she
hampered in re-building and enlargement by the

sizes already fixed. A new choir built on to an old
nave cannot be made altogether out of scale with it.

That England led the way in number and size
shows an activity, a resource, and an initiative
that, even taken by themselves, would be strong
presumptive evidence in favour of her being a
leader in style; and this we shall afterwards see to
be the case.

The Romanesque Gothic is marked by the cruci-
form plan, and the Norman form has the central
lantern tower. The origin of both these features
is far from clear. The transom is generally con-
sidered to be the development of the space in front
of the altar in the Latin style. This, however,
is not found at Ravenna, for instance, and is not
common outside Rome, and the intermediate steps
in any case can hardly be said to be traceable.

The central lantern is still more doubtful in origin.
Some have suggested a Byzantine origin for the
whole North European Cross church as explaining
both the cross and the central lantern; but
although it may explain the cross better than the
basilican church, and there is at least the lantern
dome, while the basilica has no such thing, it is
still a far cry from a Byzantine dome of the first
period to a Norman lantern tower. The few dated
examples are merely enough to make us beware of
drawing hasty conclusions. There seems no par-
ticular reason for not supposing that the central
tower was invented in the North, except that it is
the fashion just now to believe that no one ever in-
vented anything—which is true only within certain
limits. The object of the central tower was two-
fold. In the first place, it threw light into the
centre of the building, where the high altar was
put; and, in the second place, it formed a unifying
central feature, both within and without. The
removal of the high altar from its proper position
to the east end leaves the lantern tower to throw
its light upon an empty space.

In any case, we find two distinct types of Cross
church making their appearance in this country,
both of which the national genius modified to suit its
own aesthetic conceptions. First, we have the mul-
apsidal type, and, secondly, the chevet type. The
origin of the multapsidal type is possibly to be
sought in the Byzantine or Egyptian types already
noted, or it may be directly derived from the
basilica, but it certainly became quite a common
variety. The Normans in Normandy treated it in
their own way, squaring the end two bays beyond
the crossing, in a manner perhaps foreshadowed at
St. Apollinaire Nuovo at Ravenna, and then adding

the apse (fig. 31). The Anglo-Normans took this
plan, and it at once began to assume the first
English characteristic of greater length. We find
a typical example at St. Albans, with its long
parallel apsidal chambers (fig. 31). This becomes
one of the great types of Benedictine orthodoxy
But it is to the West and the North that we have to turn to find the truly English manner. Here we find Hereford with a square end as early as 1079-1095, and Llandaff and Romsey early in the next century. It has been said that the square end was introduced into this country by the Cistercians. This is impossible, as it was in use before the Cistercian order was founded. But it is interesting to observe that from this very Western district came Stephen Harding, one of the original founders, and head of the order, and abbot of Citeaux in 1109. It seems most probable that the Cistercians owe their square East ends to him. Hence, when we find the Cistercians at a later date building their square East ends in England, they are merely bringing back an English feature that naturally falls in with, and helps to strengthen, the native tradition.

The Reformed orders, Cistercians and Augustinians, mainly in the West and North, worked out the English manner, and although the great Benedictine abbeys of the East have had the fortune to survive, it is rather to the ruined abbeys of Yorkshire and the Welsh Border that we must turn if we wish to see the English style in the making. Hence, while the conservative Benedictine abbeys were still using the round arch and the apsidal termination, we find the pointed arch and the square end in the North and the West. The change of style is, as in France, partly due to an Episcopal influence that furthered advance and reform. In the latter country the bishops joined hands with the laity against the old Monastic orders, and we get the great laic cathedrals of France. In this country they joined hands with the Reformed orders, and to this is due the strongly marked Monastic character of English building. In early days the Cistercians eschewed ornament, central towers and triforiums, which gave a chastenedness to the style in their hands that, to some extent, it would be true to say, marks the English work until well into the 14th cent., even after such luxuries as towers and triforiums had become common again.

The other great type is the chevet type, which, as Ferguson points out, is very probably a development from the circular church by the addition of a nave, the circular part becoming the choir. The development is apparently French (fig. 33). In England the circular churches have had choirs built on to them, and the circular part becomes the nave. The chevet type, with or without its circumscribing chapels, is found at Bury St. Edmunds, Norwich, Edward the Confessor's, Westminster Abbey, etc., and is always widened in the English manner (fig. 34). This we also find still further Anglicized with a square ambulatory at the east end, as at Dore Abbey, Salisbury, or Glasgow.

Besides the lengthening from east to west, the English aesthetic character shows itself in the wide transepts and the still more characteristic transeptal west ends (fig. 55), which we find even in Rouen Cathedral, a church planned by an English architect. This we can contrast with the narrow twin-towered French Norman type, such as we see at St. Etienne, Caen.

**Figure 33**

![Kirkstall Abbey Plan](image)

So we find that in English hands the multiaspidual type develops a squared form, as such we see in Kirkstall Abbey, Yorkshire.

The Anglo-Norman church of Bury St. Edmunds had a wide-spreading front of 260 feet. Ely was planned for a west front of 200 ft., although it is doubtful whether this front was ever completed. These two are about three times as wide as the nave.

The best way to obtain a general survey of each period is to work from the ground plan upwards. It has already been pointed out that Romanesque Gothic in England, perhaps best termed Anglo-Norman, is massive in its treatment, and this naturally shows on the ground plan. A single pier of Durham contains as much material as the whole set of piers of some of the later churches. The walls are always immensely thick, even when they support only a wooden roof, which on the whole is the commoner arrangement; but when they have to resist the thrust of a stone vault, this

**FIG. 35.—Wall Diagram and Section of Church.**
is even more the case. Buttresses are as yet quite rudimentary, and the history of Gothic architecture might be described as a progression from a heavy wall with a wooden roof to a glass wall and a stone roof. The projection of the buttresses becomes greater and the wall thinner, and the progress might be diagrammatically represented as in fig. 35. So what practically happens is that the wall is turned round in sections upon itself, whereby, with the same or even less material, a greater resisting power is obtained (fig. 35).

Before passing upward to details, the general treatment of the elevation should be noted. The Anglo-Norman great church is a three aisled building of three storeys (fig. 35). The nave-arcade is the principal series of arches in the church, and divides the central aisle, or nave, from the side aisles. In order to light the central aisle it is raised above the roof of the side aisles, whereby we obtain a clerestory, through which the light passes, and which is contrasted with the blind storey or triforium that occupies the space of the aisle roof. Sometimes the triforium is transparent, as it is termed; that is, it is treated as a gallery with windows over the side aisles. This treatment is more common in France than in England.

There is more variety in the bay treatment in this country than in France, arising in part from a different initial standpoint. The French architects were more interested in the logic of construction, and the tendency for their buildings is to become, as it were, skeleton constructions, and for the wall as such to disappear. The English, however, continued to regard the wall as a feature in itself, giving an aesthetic sense of horizontal continuity, as distinct from the vertical skeleton expression of French architecture. The wall, therefore, continues to some extent to be regarded as a field for decorative treatment on its own account. A single instance must suffice, and is seen in the interesting bay treatment, favoured mainly by the Augustinians, in which the triforium is treated as a hanging gallery, depending from the main arcade. Examples may be seen at Jedburgh, Romsey Abbey, Oxford Cathedral, Glastonbury, and Dunstable. It gives a sense of height greater than either the simple two-storey or the simple three-storey treatment.

Anglo-Norman piers are of two main types. In the first, which is more or less columnar, we probably see a far-off descendant of the columns of Greece. There are two distinct varieties, of which one, although generally built up in courses, and not in single drums, still, in general proportion of capital, and base, preserves the characteristics of a true column. The other is a huge mass of masonry with a few moldings round the top in lieu of a capital. This partakes more of the nature of a pier, and is peculiar to this country. Examples may be seen in Gloucester, Durham, Tewkesbury, etc. The second type is the pier proper, developed from a section of wall left between the arches.

Both these types develop in two ways which mutually influence each other; first, the struc-
particularly characteristic of this country. In the first system additions are made to the pier, in order to support sub-arches and vaulting shafts; thus we get a composite type of pier where each part is assigned to the performance of some definite function. In the decorative system the pier also becomes composite, but in a different manner. The corner of the pier, for instance, may be chamfered off so as to form an octagon, or cut out as at St. Lawrence, Kent, and ornamental shafts inserted (fig. 38), thus giving a sense of lightness to the whole. Later we find these ornamental shafts arranged round the octagon formed by cutting out the corners. The octagon may become a circle. In the decorative system the change begins with the shaft, and the abacus remains square, and, in any case, the detached shafts have no direct connexion with the load above. When both load and support become very complex, the eye is sufficiently satisfied with the complex support for the complex load, without logically following out each subordinate part. The carpal and metacarpal bones in the beauty of the human anatomy may be taken as a parallel. The bases are generally set on a square plinth, often with an ornament to fill up the angles. The commonest form of molding is a hollow above a round (fig. 39).

There are three types of capital: (1) a pseudo-classic, a sort of debased Corinthian or Ionic, usually commoner on the Continent than here; (2) a cushion-shaped capital which seems an original invention; and (3) the scalloped capital, a type derived from the cushion variety, which in its turn has important influences upon the next period. The abacus is always square, first with plain cham-

![Fig. 39.](image)

fer, then with hollow chamfer and small nick above. Passing upward, we may note that the arches are generally round, although the pointed arch is occasionally found. The earliest known example in this country is c. 1090 A.D., half a century before it becomes at all a general feature. The arcade arches are rarely of more than two orders (i.e. recesses or steps) — a main arch and a sub-arch (fig. 39). The moldings of the arch are very simple, a plain chamfer, a hollow chamfer, or an edge roll being all that is generally found. Door arches are often of many orders, being recessed sometimes as many as seven times. They are frequently much enriched.

The features of the triforium arcade are the same as those below, but it might be noted that the decorative development often makes its appearance here before it is seen anywhere else.

The clerestory generally shows an ornamental arcade on the inner face of the wall, and plain round-headed windows on the outer face, commonly with a passage between the two in the thickness of the wall. The Anglo-Norman window is generally widely splayed within, and set near the outer face of the wall, in which respect it may be contrasted with the Celto-Saxon window.
Merton College, Oxford; Willingham, Cambridge; Minchinhampton; Rosslyn; and Bothwell.

The simplest form of vault is the plain barrel or wagon vault, which gives a great continuous thrust throughout its length, and therefore requires a very thick continuous wall. The effect is gloomy, because the lighting problem is difficult of solution. Large windows are impossible in a wall bearing a continuous thrust, and sloping windows in the vault are both weak and ugly. If a window is put in the wall, it is a natural step to carry up the vertical surface of the wall below, as we saw in Byzantine architecture (fig. 29). This at once suggests the treatment of intersecting barrel vaults, which is eminently suitable for the vaulting of a square space, A, O, C, being the square of intersection of two half cylinders of hemispherical section, corresponding to A', O', C (fig. 41, I and II).

This form of vault was used by the Romans, and the tradition never completely died out; and this vault, the ribless quadripartite vault, as well as the simple barrel vault, is used by the early Romanesque builders, as in the castle at Oxford.

The intersection of two cylinders is not a circle, as in the case of intersecting spheres (see p. 701), but an ellipse. This elliptical line of intersection is termed the groin of the vault. Directly the space to be vaulted is not square, difficulties arise, and as long as semicircular vaults are used they will not intersect at the crown at all, as the vaults are of different height (fig. 41, III). It is therefore necessary to bring them to the same height, which may be done by stilling the narrower vault, that is, raising it on two vertical walls that serve the purpose of stilts. This may also be helped by using less than a semicircle for the larger vault. But, in any case, the groins will become twisted in plan, as may be seen in fig. 41, IV and V. In the narrow vault it is obvious that any point in that vault, up to which the height of the stilts must be reduced, will lie above the line CB. Any point, therefore, being on the line of intersection of both vaults, must be vertically above the line CB. The groin also must keep close above the side CB, until a height above A is reached. On the other hand, in the bigger vault, there is no vertical portion, and the groins are raised away from the side BF at the outset; the groin, therefore, will tend away from above BF, but keep close above CB. When the top of the stilts is reached, however, the narrow vault curves rapidly over to the other side, but the larger vault continues its gradual curve, so that the groin now crosses rapidly over to the other side, and then keeps similarly close above GF until it reaches G. In actual building the curve is generally coaxed a little, so as slightly to reduce the violent break in the line, as seen in the plan above, but in any case it is excessively ugly and weak, as the weight of the vault rests upon the groins. By making the vaults enormously thick and filling in the back with concrete, until the whole has lost any semblance for some way up the vault, the weakness is counteracted, but it means an undue weight upon the walls and supports.

Now the great invention of the Gothic architects was the substitution of another principle. So far the vault has been regarded as the intersection of two continuous cylindrical tunnels, and the groin is merely the line of intersection. At any point along the vault we have, say at ML or HK (fig. 41, V) a section of a perfect cylinder; the line of the groin, however, we saw was not in a plane, but twisted. The invention is to build the groin regular (i.e. in a plane), and then accommodate the vaults to fit the groin, which is made in the form of a strong rib to support the whole. The vault is built by first erecting a series of arches of regular shape (i.e. in planes), not twisted, to form the ribs. The short ends may be stilted, the diagonals segmental, and the broad ends semicircular, so as to be of equal height. The vault itself is then built, as a light shell, resting on these ribs. This shell is built in courses, as NP, PR (VI), which are practically straight, but very slightly arched to the ribs upon which they rest. The consequence is that, as now the shell must follow the curve of the groin ribs, it cannot itself be part of a regular cylinder; and as before the diagonals were twisted to suit the vault surface, now the vault surface is twisted to suit the diagonals. The result is a curved surface very much resembling that of a ploughshare.

The ribbed vault—and by ribbed vault is meant a ribbed shell vault upon the above principle, i.e. one which is structurally based upon the rib curvature—is perhaps the most distinctive invention made by the Gothic architects. Ribs may occasionally have been used in earlier days to strengthen the groins of vaults, based upon the curvature of the vault surface, but that is not the Gothic vault. There is no doubt that the earliest vaults of this type of which we have any knowledge are those of Durham Cathedral. Such were the high vaults of the choir begun in 1093. The earliest properly attested date in France is, at the very least, more than thirty years later.\footnote{The whole discussion of these dates, with regard to England and France, is given in J. Bilson's able little book, Beginnings of Gothic Architecture (1890). No other writer approaches Bilson in his thorough grip of his subject. A short résumé of the subject is given in the present writer's book now in the press (Fairbairns & Co.).}
As to the cause of the compartments assuming the rectangular form instead of the square, it can hardly be questioned that the primary reason was aesthetic and non-mechanical, as the great English Chapter Houses, with spans of 40 ft., where there were no structural considerations, are so built. The immense improvement to the vista, and the beauty of the apparent length thereby gained, quite apart from any principle of unified complexity, are sufficient to account for it (fig. 42). The French continued to use the square vault for a long time, taking two compartments of the aisle to one of the nave, even inventing the sexpartite vault (fig. 41, VIII) to get over the difficulty before finally following the English lead. The introduction of the pointed arch into the vault followed not long after. It offers an aesthetically more pleasing solution of the problem of vaulting over a rectangle, at the same time preserving the level crown, than does the stilted arch (fig. 41, VII). The pointed arch in every rib gives a far more satisfactory sense of aesthetic unity than the mixture of segmental and stilted arches, and it also reduces the ploughshare twist.

The pointed arch was used by no means solely in order to keep the level crown over the different spans, because in France the domical vaults, used when the ribbed system was introduced, continue even after the introduction of the pointed arch in the vault, and there is no attempt to make the crown level. Nevertheless, the fact that pointed arches of the same height can be erected over varying widths (fig. 41, IX) is one of their many advantages, as we may see in numbers of transept crossings, e.g. St. Bartholomew’s, Smithfield.

An interesting variant of the sexpartite vault, which we might term quinquepartite, occurs in the aisle vaults of Lincoln, which is an ingenious and more justifiable use of the principle, as there are two windows on one side and only one opening on the other (fig. 42).

The origin of the pointed arch is another of those unsolved problems, but it occurs in the East long before it is found in Northern Europe. It is even found in Roman work—in the bridge of Severus in the Levant. It was certainly in common use in France earlier than here, although an example is found at Gloucester (c. 1090), of which Wilson gives an illustration. The pointed arch cannot be considered a specially Gothic feature, being found in various Eastern styles; and, moreover, many buildings where it does not occur are obviously completely Gothic in feeling.

In connection with the ribbed vault appears the other great invention of the Gothic architects, namely, the flying or oblique buttress, where the buttress, instead of descending vertically to the ground, is carried obliquely upon an arch over an intervening space. This enables the abutment of the high vault to be carried across the aisles. The beginnings of this are seen in the demi-berceau or half-barrel vault of Gloucester (c. 1090), strength-ened at intervals with buttresses or ribs. But the perfect system brings the abutment to bear, not continuously, but only so as to meet the resultant thrust of the vault ribs that support the vault. This we find in Durham choir (commenced A.D. 1095), where the buttress is carried over a semi-circular arch. It occurs also at Chichester (commenced 1091), whereas the later development, namely, where the buttress is carried over a quadrant, was probably actually built at Norwich in 1096. It was certainly planned and half executed at that date, as that which remains after later alterations attests. The nave of Durham shows it complete (A.D. 1125). * The French examples are later, but the credit of perfecting the feature certainly belongs to them, if they did not even carry it too far.

Anglo-Norman ornament, at first sparing, gradually becomes rich if not over-ornate. The frequent use of arcades along the walls, particularly as a sort of ‘dado,’ and on towers, is the most prominent of these features, but minor forms are endless, of which perhaps the most common are given in fig. 44.

* See references quoted above re the vault.
On the exterior the lofty spires of these two periods are the most distinguishing features. The decorative sense develops and shows itself in every member. Three great types of pier make their appearance—the South-Western, the South-Eastern, and the Northern. The South-Western is formed by triplets of shafts attached to a central core and ranged regularly round it (Pershore, fig. 45). It is probably directly derived from the Anglo-Norman composite pier. But it makes little headway beyond its own district, and gradually dies out. Not so the South-Eastern and Northern varieties. The South-Eastern type is formed by a central core with detached shafts round it, generally, although not invariably, of purbeck marble or some local variety (fig. 45). The central core is built up, and the shafts are monoliths, or in two or three long sections with annular bands. The Northern type, e.g. Roche and Sweetheart abbeys (fig. 45), is a composite pier of several shafts all united in one, without a central core, and seems to have originated from such forms as we see in Bishop-Auckland Castle, York crypt, Durham galilee, or Selby triforium. In these cases there are a number of separate shafts not grouped round a central mass. In the Northern type the composite pier is built up in horizontal courses, and the shafts composing it are therefore not continuous.

For a time the South-Eastern type carries everything before it and drives back the Northern, so that during the 13th cent. (Early English period) it practically becomes the type of the period, and is found, for instance, as far north as Durham. In the 14th cent. (Decorated period) the Northern re-asserts itself, and the South-Eastern type is driven back and disappears. The Northern type remains supreme, as long as Gothic architecture lasts, and is found all over the kingdom. A very beautiful example occurs at Grantham, with the fillets particularly common to this type. In the same church is an early example of the South-Eastern type (fig. 46).

The commonest base in the 13th cent. is characterized by the water-holding molding (fig. 47), developed from the so-called Attic base (fig. 2).

The commonest type of the 14th cent. is the hollow round the main member, and in the 14th the hollow is filled by a round, the lowest member often overlapping the plinth. The English capitals are distinguished from those of the Continent by the characteristic abacus, which in English work is almost always round, and in the thirteenth century consists of a roll and fillet deeply undercut, and in the 14th of a scroll molding. The neck-molding is generally a plain astragal in the 13th cent. and a scroll molding in the 14th. Those capitals that have foliage are marked in the 13th cent., by a beautiful type, apparently derived from the scallop capital (see fig. 46), and very different from the French type derived from the classical capitals. The English variety, which we may term stiff stem foliage, is generally said to have the same origin as the French capitals, being derived from the classical volutes; but a careful examination of the capitals of the West Country and the North, where the national style has its origin, has led the present writer to the above conclusion. Doubtless the Continental variety was not without its influence; but not only does the other derivation explain the general form more satisfactorily, with its stiff stem and without the lower band of foliage found in French work, but it also explains another peculiarity of the English capital. The English foliage tends to twirl round the capital instead of standing out from the centre as in Continental work.

In the 14th cent., although the forms are some-
times exceedingly beautiful, there is a distinct artistic decadence. An attempt to be true to nature results in being untrue to the stone material in which the artist is working—a much more serious fault. The forms are ill adapted to stone, and, moreover, instead of growing up from the neck, are twined round like a harvest festival decoration, and have no part in the organic unity of the whole.

The arches are pointed and with numerous moldings, of which those in fig. 49 are typical. The Early English moldings are marked by freehand drawing and numerous independent members, separated by deep hollows, e.g., Peterborough. Characteristic members are the roll and fillet and the pointed bowtell. Decorated moldings are set out by the compass instead of being drawn freehand. The fillets on the triple roll and fillet are set differently. The ogee curve makes its appearance, and a three-quarter hollow often marks off the orders of the arches (fig. 49). Up to the end of the 14th cent. the orders of the arch are generally clearly distinguished.

The development of the window is a long story, whose course can only be briefly indicated. The normal early Anglo-Norman window is a square with a semicircle over it. This tends to become longer in its proportions, and the process continues after the introduction of the pointed arch, producing the so-called lancet window, until such extreme examples are reached as at Bottesford, which is 8 in. wide and 15 ft. 6 in. high. The natural result is to group windows together, one being insufficient for lighting purposes (fig. 50).

In the gable end the normal arrangement in the first half of the 13th cent. is three windows, the central one raised to fill the gable. At first the windows are quite distinct; then a common hood mold gradually draws them together, and finally includes them under one arch. The small spandrels are first pierced with various shapes and finally cut out altogether, and then cusped as at Cirencester or Peterborough Cathedral. But this pushes all the ornament up into the extreme head; and it is perhaps the two-light window in the aisle, which follows suit, that tends to the filling with tracery of the whole head of the window above the springing (see examples in fig. 50).

We thus pass from the lancet to the first tracery period, which has been called the Geometrical period. This is a most misleading name, as it implies that the curves of the next period are not set out with a compass. Although at first glance they may not appear to be parts of circles, they invariably are. The real distinction is between curves of single and double curvature; for the first period may be described as composed of independent figures—circles, curvilinear triangles, and squares (not spherical, of course), quatrefoils, trefoils, etc., filling the head of the window. The terms Simple and Compound would be short and self-explanatory.

There are three main types of Simple or independent-figure tracery. In type I (fig. 51) the circle or other figure rests on two sub-arches. The points of the sub-arches projecting below the central ornament are objectionable, and probably are the cause of type II, making its appearance, in which the outer curves of the sub-arches coincide with the curves of the window arch. It should be noted that type I does not disappear but continues to be used, and this is the case all through the development of window tracery; a new form does not entirely oust an old one. The objection to type II is that it tends to push the ornament too much into the head of the window. In all cases the sub-arches may also intersect or be separated from each other. Type III, which is really a three-light develop-
great discoveries—was to omit the points, and continue the curve of the sub-arch into the curve of the circle. Thus is obtained a curve of double curvature or an ogee curve. The other side of the sub-arch is made to correspond, and we have a circle supported on ogee arches (fig. 52, A). The bottom and top of the circle then disappear, leaving us the completed type I. of the Compound period. This develops on lines similar to the independent-figure period with a second and third type (fig. 52).

The vaulting continues to develop. First, in order to reduce the ploughshares curvature, resort is had to elliptical ribs, involving a most difficult and complex problem in the setting out and erection of every vault. This is superseded by pseudo-elliptical vaulting, where, instead of a true ellipse, an approximation to the ellipse is made by parts of circles, which join at points where the tangent is common to both circles, so as to avoid breaks in the curve (fig. 53). The line of the pier or shaft from which the vault springs is also tangential to the arch curve.

The ridge rib to mark the leading line of the roof, and also to provide a line of fitting for the vault shell, was apparently first used at Ripon. It has great aesthetic value, giving continuity to the whole and a line of emphasis to the vista. It is, in fact, the dominant aesthetic line of the building, corresponding to the keel of a boat. The French architects could not use it without effect, on account of their broken ridge lines caused by the domical vault. Where they have used it the result is unpleasantly suggestive of the sea.

In order to reduce the space between the ribs, and to make the filling easier, subsidiary ribs are introduced, called tiercerons by the French architects. They were invented by the builders of Lincoln Cathedral and used first in a peculiar way (fig. 53). In the 14th cent. lierne or net ribs make their appearance, and give great complexity to the vaults (fig. 53).

The buttresses in the 13th and 14th centuries become more prominent, and the pinnacle, giving additional resisting power to the buttress, soon appears in the Early English period. Angle buttresses in the 14th cent. are commonly set diagonally, instead of in pairs at right angles (fig. 54).

It is difficult, and indeed inadvisable, to try to assign any particular date or period for the summit of Gothic architecture. In many points it continued to advance down to a very late date, more particularly in the development of towers and of the vault, but the decorative foliage certainly declines after the 13th century. For beauty of lighting nothing equals the so-called lantern churches of the 15th cent., but the window itself is perhaps at its best in the 14th. It is so with all arts; decadence does not come suddenly throughout the whole, but shows itself here and there, while the main trend is still forward. It would be much easier to assign a definite summit to French than to English architecture. In France there is a more or less definite single effort culminating in the 13th century. In England there are continuous new impulses: vault, wall, pier, foliage, window, and vault again; each in turn seems to play the leading part.

As said at the outset, the French and English styles are entirely different. A summing up at this point of a few of the differences between the plan of a great English and a great French church may show that it is surprising, not that they are now seen to be different, but that any one ever thought they were the same.

The English church is long and narrow with three aisles. The French is short and broad with five aisles. The English West Front is narrow. The French West Front is narrow, in Notre Dame narrower even than the nave. The English transepts project enormously beyond the main lines, and often the English church has two or three of these projections. The French transepts hardly project at all, and one only is attempted.

The English church has a square East end. The French church has a semicircular chevet.

The English church has a long choir, generally more or less
shut off from the nave, being largely the result of monastic influence. It has no side chapels. The French church is broad and open throughout, with a short choir, largely the result of lay influence, and has numerous side chapels near to the layly.

The four enormous central piers in the English church show the central tower that dominates the whole. The French church has great Western towers, but nothing, or merely a 'fèche,' at the crossing.

The English church is cut up by screens and divisions. The French church is open (figs. 52-55).

The interior of a French church is hard to surpass. It is exceedingly lofty, which gives it a most impressive character. The internal effect of the chevet is often exquisitely lovely, and the grace of the proportions as a whole, width of bays, and width to height, is in every way admirable.

The English church in its interior depends for its impressiveness upon length rather than height, except where modern folly, as at Norwich, has planted an enormous organ that entirely destroys the whole raison d'être of the building, completely (not partially) blocking the vista which would be, in its way, perhaps the finest in the world. Both English and French effects are delightful, but perhaps the French is the finer. Yet there is no reason why they should not be combined.

But with regard to the exteriors there is no comparison. The English here loses something by want of height. (Visit Chartres, Amiens, and then Lincoln within two days of each other, and the result will be startling! But the dominant central tower, the wonderful skyline, together with the tower-groups, the grand projecting transepts and fronts, with their fine shadow effects, make the French examples look in comparison a shapeless mass. Where there is a narrow tall twin-towered front, there is an unpleasant effect of an over-weighted end suggestive of a giraffe. The Franco-

(d) The Decline of English Gothic.—The last period of English architecture is marked by rectangular forms and horizontal lines, and is generally called 'Perpendicular.' This word in most minds is so closely associated with vertical, that 'Rectangular' is a more satisfactory name.

Roofs become nearly horizontal, tops of doors and windows and all the arches follow the same tendency. There is often an actual straight horizontal line, strongly emphasized, above these features, particularly in the case of doors. Horizontal topped towers take the place of spires, horizontal transoms bars appear in the windows, and horizontal topped panelling instead of niches, occur all over the walls. Even the foliage and other ornaments become rectangular in form.

The Early English period was an age of Ecclesiastic reform, and the work of that period is marked by a certain ecclesiasticism in its planning and arrangements. The Traceried period of the 14th cent. is the age of the great nobles; the very ecclesiastics themselves aped the pride and pomp of worldly splendour; and the churches, with their private chantries and heraldic ornament and such things, partake to some extent of this character, as Mr. Prior points out (History of Gothic Art in England, 1900). The people, too, are beginning to assert themselves. The worship of Our Lady being particularly the cult of the people in England, we find the Lady chapels being built all over the country, in most instances actually at the east end, and approached from behind the high altar. The ecclesiastic privacy of the monastic choir perfume disappears. During the Wars of the Roses, the great barons gradually vanished, and the trading classes made their influence felt. This is the age of the guild chantries, and above all of the parish churches of the people. The large proportion of our parish churches belong to this date, and are built in the rectangular style. Hardly a single great monastic church or cathedral was built at this time, although, of course, there was a certain amount of re-building and enlargement. The chantries and other extensions affect the plans of the churches, and tend to obscure all transeptal projections.

The piers still belong to the Northern type, but incline to become meagre in their treatment both in section and in their capitals and bases (fig. 59). The S-shaped curve under the chamfered abacus is characteristic, as is also the curious cushion mold-
ARCHITECTURE (Christian) 717

run right round the arch without a stop. Foliage
when found is rectangular in treatment (fig. 59).
The arches above show the same attenuation in
the treatment of their moldings, and the distinction
between the orders of the arch is often quite lost.
The most characteristic feature is the cavetto,
a deep hollow in the middle of the group (fig. 59).
The arch, both in the main arcades and
in the window, is often of the four-centred variety.
Most arches are struck from two centres, but a
four-centred arch, while rising without a break
from the springing, allows the crown to be com-
paratively flat (DCEK, fig. 59). A drop arch, as it
is called, gives the flat crown, but produces a broken
effect where it springs from the shafts (B, fig. 59).
The triforium, owing to the horizontal tendency
in the roofs, practically disappears and becomes a
mere band of ornament.
The window gradually becomes a series of rect-
angular panels, partly as offering increased strength
for the vast windows that become common, partly
to further the easy arrangement in the glass of
rows of saints standing in niches. The vertical
lines at first appear timidly in the head of the
window, then ascend from sill to crown, and finally
even cut across the tracery sub-arches (fig. 59).
The vault still continues its development until
we reach the wonderful fan tracery characteristic
of this country. The multiplication of tiercerons
seems to have suggested a polygonal form for the
vault conoid, and from this to a circle is easy,
break with the lines of the ribs. It is probably
this that led to the introduction of the four-centred
arch, which allows the line of the ribs to pass imper-
ceptibly into the central space (fig. 60, Windsor).
This is very satisfactory for a vault over a square,
but the problems of satisfactorily vaulting a rect-
angular space begin again. The most complete
solution is by the Oxford architects in the Divinity
schools and the Cathedral, which are not true fan
vaults (fig. 61); and the same principle, somewhat
meretriciously carried out in a true fan vault,
appears in Henry VII.'s Chapel, Westminster. The
principle is practically that of dividing up the
rectangular space to be vaulted into a new nave
and aisles, as it were. The springings of the vaults
are then supported upon great transverse arches
thrown across the whole space. In this way a
square compartment is obtained in the middle,
which is easy to vault, and the small minor com-
partments can be treated by some other method.
In the case of the Cathedral at Oxford they are
very effectively treated as barrel vaults.

The influence of domestic architecture upon that
of the church is a subject of great interest which
has hardly yet received the study that it deserves.
In early days many of the problems were first
worked out in the Norman castles. Later, the
domestic window with its transom bars and the
beautiful open timber-roofs of the great halls had
considerable effect upon church architecture. Of
course, the plans and arrangements are different,
but the spirit of the two is the same. Sometimes,
as, for instance, in Belgium, the greatest achieve-
ments are in civil architecture; and although the
bulk of these buildings in our own country have
perished, such examples as the small Town Hall at
Oxford and the Normans have a charm quite equal to that of
the churches. But in any case, whether the building
is for the Church, the State, the Borough, or the
private individual, the artistic qualities triumph
over the special difficulties involved in the partic-
ular instance, and the series of buildings—castles,
cathedrals, halls, palaces, and churches—is as noble
as that in any style.

RENAISSANCE ARCHITECTURE.

When, at the time of the Renaissance, men's
minds began to turn back to the glories of the
classical epoch, the result was naturally seen in
architecture as in everything else. It was also
natural that the beginning of the architectural
change should be in Italy, as was the case in other
departments of the movement, particularly in view
of the large number of actually existing remains
upon Italian soil. The development, however,
was considerably stimulated by the discovery of
the manuscript of Vitruvius Pollio, the architect
of Augustus, who wrote the De Architectura. This
famous treatise, in ten books, upon the architecture
of the Augustan epoch, was translated into Italian
in A.D. 1531. In spite of the impetus thus given to

and we reach the concavo-convex conoid of the fan
vault (fig. 60). The architects of the Gloucester
cloisters have produced a delightful piece of work
on this principle. But there is one objection,
namely, that the flat central space makes an abrupt

the study, it would appear to have been by no means entirely beneficial in its results. Vitruvius seems to have been the Palladio of his day, viewing the art in a cut and dried and somehow lifeless manner, which was not without its effect upon his followers of a later generation. It is true that Vitruvius' work was drawn chiefly from Greek sources, although these were probably not late; but it must always be remembered that, in the main, Renaissance architecture was founded not upon the Greek but upon the Roman style—a style itself a hybrid and full of solecisms. Many of the criticisms that are brought against Renaissance work apply equally to the work itself; it is not so hideous or so foolish as the leaving of irregularity, which is a defect that may arise in scattered examples as the profuse use of meaningless decoration, and the unintelligible application of features imperfectly understood, e.g. the architrave that supports no ceiling, the incomplete drums, flutings, or drafted stones copied from unfinished Greek work, and chopped off sections of entablature, as in the church of St. Spirito, Florence.

It may be said that Brunelleschi, the Florentine, was the first great architect of the Renaissance. He produced a plan for the building of the dome of the cathedral of Florence in 1420, which was eventually carried out. The spread of the style in Italy was extraordinarily rapid. The cause was very largely that the Gothic style had never firmly established itself in Italy: indeed, it may practically be said that it never penetrated to Central Italy at all. Although in Florence such an example as the famous campanile of Giotto has hardly anything of the real Gothic spirit, in spite of the applied Gothic features and ornament. It is not the living organism of Gothic structure and ornament, but a simple rectilinear mass work with an elaborate veneer of surface adornment. The Italian medieval churches were mainly Latin in motive, and it was natural that the Italian mind should turn whole-heartedly toward a style which it had never in essence entirely abandoned.

From Italy the movement spread throughout the world of architecture. It was spread by the architects themselves, who took the plan with them as they travelled. In the East, the Turks, who had been the most cultured people of Europe, were at this time overwhelmed by the Turks. In fact, the sack of Constantinople in 1453, although it was the final blow to Greek civilization in the East, did not affect the Greeks or Europe, and very largely made the Renaissance what it was.

In the case of any revival or Renaissance style, it is almost more difficult to make a division into periods than in the case of a style of true growth; because, in the first place, the individual factor is stronger, depending upon study and research, and also at any moment fortuitous circumstances may combine to make a particular building a more complete representation of the old style. But it may be said that Renaissance architecture was by no means so 're-naissance'; it was in many respects a living style. And it may be noticed that it did pass through three more or less clearly marked stages, although these vary considerably both in manner and in date in different countries.

The first period is marked by a distinctly Gothic tendency, with a comparatively limited knowledge of the nature of ancient work.

The second period, the period of maturity, shows a much greater knowledge of classical detail and arrangement, and is marked by a much more definitely classical spirit. The picturesque irregularity of Gothic planning is often an elevation given way to a precise and calculated symmetry. The style reaches its zenith and exhibits itself in many of the world's noblest buildings, although the lover of Gothic architecture will always feel a certain coldness about them, and the lover of Greek architecture will be repelled still more by their lack of spontaneity, sublety, and delicate restraint.

In the work of the second Spanish period there is a certain restraint, it is true, but it is rather a formal coldness, and does not resemble the reserved but intense passion of Greek work. The nearest approach to the true Greek restraint is in the best work of Florence. It is to this second period that we have to look for the true work of the Renaissance. It is here that we learn what are really its characteristics. The first period is buttressed by the reconstruction and the last of over-ripeness and decay.

The third period, sometimes known as the 'Rocco,' is marked by exaggeration, ostentation, and a still more mechanical application of rule, which proceeds side by side with a tendency towards slavish reproduction of ancient work. The latter tendency resulted in what is sometimes called the 'neo-Classic revival,' doubtless hastened as an antidote to the extravagances of the Rocco.

In Florence, although the classical orders were used, they were very much subordinated, and in comparison with later work their use seems timid. Their actual scale was small, and this also was the case with the ornamental features which are characteristic of Gothic work. There was still a tendency towards that multiplicity of parts which characterizes Gothic feeling. Windows are generally round-headed, often with sub-arches in the typical Gothic manner, and occasionally they even contain a sort of tracery, especially in France and Britain (fig. 62). Even pointed arches are used, particularly in Venice, as in the Doge's palace.

In Florence great use is made of rustication—one of the typical affectations of the Renaissance, which seems to have had its origin in ancient Roman work, where unfinished Greek work was copied in which only the outer borders of the stones had been dressed. Ugly and meaningless as it frequently is, particularly in its aggressively finished forms, it is not so hideous or so foolish as the leaving of
occasional square blocks in a round column—a device that even the most extreme admirer of Renaissance work does not attempt to defend. This, however, does not appear until the style is more or less advanced. It becomes common in France during the reign of Charles IX. (A.D. 1560–1574). Rustication was never popular in Venice, where there had always been a certain true Gothic feeling, mingled with Byzantine, which was distinctly opposed to anything Roman. Indeed, it was doubtless partly a survival of this feeling that caused the Renaissance style to be reluctantly adopted in Venice only when the 16th cent. was well advanced. A rather charming device common in Venice at this period may at this point be noted, namely, the so-called shell ornament (fig. 62).

Another objectionable feature, apparently first used by Alberti in St. Maria Novella at Florence, in A.D. 1470, is the inverted console placed above the aisles. Presumably it may be regarded as the successor of the flying buttress of Gothic work, but it is utterly unfitted to perform any function structurally or aesthetically. It overreaches for a small decorative bracket becomes ridiculous when applied to a feature of the main composition over a score of feet in length (fig. 63).

On the whole, it may be said that, although many churches were built in Italy during the Renaissance, partly as a result of the counter-Reformation of the Jesuits, in the North the Gothic epoch had more than supplied all the churches that were required. Hence, religious buildings in the North, particularly during the first period, are comparatively rare, and it is only in such instances as the churches of London built after the Great Fire that there is anything very extensive in the way of ecclesiastical work. It was rather a palace-building epoch, such as is shown in the great châteaux on the Loire, of which the Château Chambord may be taken as typical. In the North, Renaissance architecture made its way very slowly, at first appearing only in minor accessories such as altars, tombs, pulpits, doorways, and occasional enlargements, as the apse of St. Pierre at Caen. When the main fabric itself is attempted, the result is a building entirely Gothic in planning, arrangement, and construction, and the surface ornament merely is of the classical type. Pilasters take the place of buttresses, and cornices the place of corbel tables, and so on, as, for example, in St. Eustachie, Paris—an excellent specimen of the first period of Renaissance work in France. In Britain, although Inigo Jones and Wren introduced a pure classical style earlier than anything of the kind in France, this transitional feeling continued in certain districts very much longer, particularly in Oxford. As late as 1648–1652 the charming little church of Derwicke-on-Tweed affords a most pleasing instance of the fusion of the two styles.

In the South of France much of the work was done by hands of travelling Italians, who have left a considerable impress upon the minor features of the period in that district. In the main it is true to say that French work of the time of Francis I. (1515–1547) is marked by a special elegance which is peculiar to itself. It is doubtless the outcome of the elegant French-Gothic acting upon the Renaissance style, and applies especially to domestic examples. In England, the Early period, which may be said to cover the reigns from Henry VIII. to James I., may be divided into two. The earlier part, from the close of Henry VII.'s reign to the death of Edward VI., is marked by Italian influence, as in the case of Torrigiano's tomb made for Henry VII., and the later part is marked by Flemish and German influence; but throughout the whole period everything is tentative and experimental.

a. In the second period we have the matured Renaissance style, when buildings were classical not only in detail, but in spirit. This may be said to have been inaugurated in Italy when in A.D. 1506 Bramante commenced the church of St. Peter's in Rome, a date which was about contemporary with the very first beginnings of Renaissance influence in Britain.

In this second period the picturesqueness of Gothic planning almost entirely disappears. It is, however, to be noticed that the great cross plan of the large churches, although carried out in a severely symmetrical manner, is the indelible impress of the Gothic hand upon the succeeding age. Even St. Peter's itself is so planned. Not only so, but, in the case of both St. Peter's, Rome, and of St. Paul's, London (figs. 64, 65)—the two greatest buildings of the style—the more severely symmetrical plan of the Greek cross, as designed by the architects, was altered to the long-naved Latin cross in deference to Gothic tradition. Both churches suffered by this arrangement, St. Peter's very much so.

The orders in this period are no longer used in an unobtrusive manner, but become, except
perhaps in Florence, the main feature of the style, although, as in ancient Roman work, they are generally little more than mere ornament unrelated to the anatomy of the building. They are generally treated on Roman lines; but there was considerable latitude, the shafts occasionally being even fluted sparingly, or wreathed with bands of foliage and fruit, or, worst of all, broken by square blocks. The Tuscan order becomes clearly defined in Renaissance work as a separate order. In Spain a new kind of capital appears, termed the 'bracket capital,' in which two or more brackets spring from the head of the column. It has the advantage of reducing the strain on the architrave.

The ornament is founded upon classical Roman work; but in the best Renaissance examples, especially in Florence, it is more refined. It should be noticed that Renaissance carving was almost invariably executed after the building was set up. In Gothic buildings every stone was cut; but it was put into its place. The result is that the jointings often cut unpleasantly across Renaissance work, whereas Gothic jointing and the carving-design are thought out together. It is simply one aspect of the principle that the Gothic pile was always essentially a building; the Renaissance pile was rather a monument, treated somewhat after the manner of a picture.

The old Roman ribless vault was revived, at least in form, but a considerable geometrical improvement was made. In the plain barrel form it remained semicircular, but in the case of intersecting vaults over a rectangular space the curve of the vault was made elliptical, so that the diagonal groins might be projected as straight lines upon the plan (fig. 66). It should, however, be observed that in an enormous number of cases the vault was a mere plaster sham, and not part of the construction, as in Roman or Gothic work. All roofs in Italy were hidden within by ceilings, but in France and Germany the open timber-roof was made an important feature. The roof is of low pitch, and in the majority of instances so low that from most points of view the parapet forms the sky-line. In France, however, we find the high 'Mansard' roof; and in Germany the high roof with tiers of dormer windows is a very common feature. The fact is that Germany never wholly adopted the Renaissance style until long after every other country in Europe, and these high roofs are mediaeval in character.

The glory of the style is the dome, which in its general treatment follows the Byzantine method. There is almost universally a drum, as in the second Byzantine period; but it is made an even more important feature, and very commonly is enriched by a colonnade. It was usual to build these domes with an outer and an inner shell of different curvature and quite separate. The outer dome is frequently a mere timber-framed erection, resting upon the other, as in Sansovino's S. Giorgio dei Greci at Venice, or the outer dome of the Église des Invalides, Paris, which consists of three domes, each surmounted by a hemisphere (fig. 66). In this connexion may be noticed the very great use of carpentry all through Renaissance work, which has been compared by some writers to the modern use of iron. St. Paul's, London, has an outer and
an inner dome, with a brick cone between. St. Peter's, Rome, has two brick domes.

Renaissance spires were not of common occurrence save in England and Spain. They seem to have been invented first by Sir Christopher Wren, but the Spanish use is possibly independent.

In the second period round-headed windows were less frequent, and square-headed windows, often with small pediments over them, were the rule. The rustication, so common in Florence in the early period, was now generally confined to the quoins, as in the Pandolfini Palace designed by Raphael, and more or less freely copied in Travellers' Club, London. At the same time there was a tendency for all wall space to disappear, and for the whole surface to be covered with an exuberance of applied architectural features. The detail and moldings became more vigorous and elaborate, but lacked the earlier refinement.

The Roman method of building had been largely one of veneers. The inner part of the wall was of inferior material, but the outside was faced with fine stone or more often marble. The Romanesque Gothic made use of a double wall with a rubble core, derived from Roman use; but this system was gradually abandoned, and in the best Gothic work the wall was built solid, or at least all the stone facings were bonded into and formed an integral part of the wall. The Renaissance architects realized that this was a better system, and endeavoured to follow it out in their work. At the same time veneer was not infrequently used, and plaster facing was by no means uncommon. This was particularly so in the last period, when panels, cornices, and ornaments even upon the exterior were of plaster—a most unsatisfactory arrangement.

It may certainly be said that there were three distinct schools of the art:

1. The Florentine, which depended largely on fenestration, and in which the orders played a secondary part. It was very severe, with a breadth and vigour of treatment exemplified in the due sense of the value of contrast as applied to plain wall surface and ornament, and again in the effective depths of shadow given by deep recesses and heavy cornices. It is marked by extreme delicacy in the ornamental carving.

2. The Venetian, which was more pugilous and more pompous, with great ornaments introduced for ornament's sake, often coarse and over-insistent. There is less severity, and many curves give a weakness of effect. Orders of varying heights are used, and are often piled upon other orders somewhat indiscriminately.

3. The Roman, which is midway between the two in severity. It is marked by great pilasters of the whole height of the building, so as to give the effect of one storey, and in consequence of this it has had a greater influence upon church architecture. The pilaster and not the column is used, as the inter-columniations upon so huge a scale would make the span of the architrave impossible.

In the second period there was a distinct decline, and a great deal of extravagance and affectation, such as broken entablatures, and pediments, and curved and irregular cornices. In Italy there is a peculiar lack of inspiration, and the work of Maderno and Bernini may be taken as typical. One of the most pleasing examples is that of St. Maria della Salute, by Longhena, in Venice (A.D. 1632). Its proportions and general mass are excellent, although the details leave something to be desired. Doubtless it owes a great deal to its site, being on the Giudecca (Venice), Paris (A.D. 1755), although greatly superior to most work of the time, belongs to this period. It was built from Soufflot's designs, and is interesting as having the smallest amount of area of support of any Renaissance church, comparing even with Gothic work in this respect. Compare its plan (fig. 67) with that of St. Peter's or St. Paul's (fig. 68). It has not been successful, however, for it has been necessary to prop and support it several times.

The extravagances of the 'rococo' in France are even surpassed by the work in Spain generally known as 'Churriguersque,' after the architect Churriguera, doubtless partly caused by a revolution from the over-balanced mechanical style of such men as Herrera in the previous period.

In considering the Renaissance style as a whole, certain broad characteristics should be noticed. In the first place, there was a very distinct tendency, particularly in the case of its Italian inventors, to view the whole composition as a matter of line and proportion rather than as a building. There is often very little relation between the uses of the building and its form. Architecture is an applied art, and therefore, unless it be well adapted to the function that it has to perform, it cannot be a success. But, further, it is not only upon these grounds that so much Renaissance work must be condemned. Even upon aesthetic grounds, in the erection of a monument as distinct from a building, it is necessary that the thing should form an organic whole; and a column which is the outcome of the aesthetic endeavour of many ages to express the beauty of support, is clearly out of place when it supports nothing. The concealment of construction and arrangement is a similar but different question. An enormously heavy lantern, rising above what is apparently a dome of light construction, may, it is true, be defended upon the grounds that it is obvious that there must be some further support within. The eye would, however, probably be aesthetically more satisfied if there were some indication of this support, as otherwise there is considerable though not absolutely certain danger of the artistic unity being broken. To treat the matter as a moral question is, of course, absurd, and simply shows entire ignorance of the nature of all aesthetic
philosophy. One might as well argue that a portrait was false because it was not flesh and blood but paint and canvas. But there is no doubt that Renaissance architects were in the habit of sailing very near the wind, and there is frequently a distinct want of harmony in their work. Some of the faults are directly traceable to the great masters, and it is true that the greatest of the Renaissance architects were not so well acquainted with Greek work, not merely in detail, but viewed as an artistic conception. As contrasted with Gothic work, Renaissance work is more like that of both Greek and Roman work—is more concerned with the building as a whole than with the parts. It is this that makes the exact repetition of similar parts a possibility. But when the Renaissance architect—as was not infrequently the case—allowed the quality of the detail to suffer, although he may find precedent in Roman work, he falls far behind that of Greece, whose detail was the most exquisite and subtle of any architecture in the world. Connected with the desire to form a pleasing whole was the attention paid to proportion and also to symmetry, which was regarded as the best means of attaining this end. With regard to proportion, it is doubtful whether, with all their rules and formulae, the Renaissance architects were more successful than those of the Gothic era in this respect. A certain level was maintained; but these laws were a check against falling below, they were also a check against rising above. For an interior vista the Renaissance architects never surpassed such an one as Amiens. The proportions of the bay designs of most of the great Gothic cathedrals are admirable. With reference to their exteriors more may be said; but as regards the proportionate disposition of its masses, it would be hard to find any Renaissance building to rival Durham; certainly not St. Peter's, Rome, whose façade and minor cupolas are entirely out of proportion with the rest. It is true it is a work of many architects, but so is Durham. St. Paul's, London, is perhaps the one rival; and St. Paul's, taking all things into consideration, is the finest of all Renaissance buildings. As for façades, the simple inevitability of such an one as York Minster has deprived it of the praise it deserves. A façade such as this will never appeal in any comparison. From a moment, neither will that of the Invalides at Paris nor the Pantheon, good as far as it goes, and certainly not Bernini's façade to St. Peter's. Again St. Paul's is the only possible rival.

A great deal of nonsense has been talked about Renaissance proportions. One of the most characteristic qualities of Renaissance work is its treatment of scale. The parts themselves are few in number, but of great size. The result is to give the impression of the building as a whole being one rival, and St. Paul's, taking all things into consideration, is the finest of all Gothic cathedrals not approaching it in area. It is probable that the contrary result was expected, but such is the fact. It is one that there are certain calm and even dignity about the system, but this should rather be set against the loss of mystery and suggestiveness.

Renaissance architecture is largely the product of Italian architects, and as such challenges criticism in a way that is not the case with less studied styles. It is therefore easy to form an erroneous notion of its value as a style in the architecture of the world, and to fail in giving it the place it deserves.

J. B. STOUGHTON HOLBORN.
from strengthening the column with a coat of the harder palm branches, whose thin tops were left loose around the capital. The sloping walls of the pylon result from tilting the courses of bricks inward, so as to prevent them from being easily dislodged. In order to strengthen the column with a coat of brickwork from being broken away, bundles of reeds were lashed on down the edge; these were the origin of the torus molding marked by diagonal windings along the angles of the buildings. The fence, formed of palm-sticks with loose heads, lashed together near the top to a line called the saper, was the source of the cavetto molding with torus roll below it. The palm-log roof is copied in stone in tombs at Gizeh and Abydos. Thus the forms adopted for the stone architecture belong to the earlier materials, as in Greece.

2. The plans.—The plans of the temples vary considerably in different ages. The earlier temples are scarcely known except from the plans of the Osiris temples at Abydos, and the views of primitive shrines. The hieroglyph for the temple of Osiris was sometimes used as a temple symbol, and the form of the temple was adopted in other cases.

A great temenos was built around it, 192 ft. distant to the eastward, with a wall 23 ft. thick. To this temple Sebekhotep III. added a chapel and doorway on the south.

The XVIIIth dynasty saw all this re-built still larger. The temenos was 256 ft. long, E.-W.; in it lay the stone temple facing east, 215 ft. long, and 129 ft. wide; the temenos wall was nearly 30 ft. thick, with gateways of red granite. Lastly, in the XXVth dynasty, there was an entirely new stone temple, facing east, 129 ft. square. It seems to have been of the processional type, open back and front. We have detailed these successive temples as they are the only examples that have yet been observed and recorded, showing the growth and alterations throughout Egyptian history on one site. Many secondary details, and the outlying store-rooms, are not noticed here, nor buildings of the XIXth and XXth dynasties which were in adjacent positions, but are too much ruined to be traced. The total result is that there were seven entirely different plans on one site, besides alterations to these. The direction of facing was successively S., N., ?., and E., E., E.

Another early temple plan is that of Hierakonpolis. This was entirely of brick, but can hardly have been earlier than the XIXth dynasty. Its shrines consisted of five chambers in a row, each 8 ft. wide and 20 ft. long. The whole block was 92 ft. wide over all. The shrines were each a closed cell with one door, and not of the processional type.

Coming now to the temples which can still be examined in a more or less perfect state, the oldest is that of Medium, built by Seneferu of the IIIrd dynasty. This is merely an enclosed courtyard (nearly 20 ft. by 8) against the side of the pyramid, containing an out 6 ft. thick. The approach to it is through two chambers placed with their length across the whole breadth of the building. Next is the granite temple of Khafra of the IVth dynasty, near the sphinx; the entrance to it is still buried, so that its nature is unknown. The first hall is 12 ft. by 60 ft. wide; the second hall is 22 ft. from back to front, divided by a row of six pillars, and 81 ft. wide; and from this branches another hall 33 ft. wide, divided by two rows of five pillars, and 52 ft. long. This whole is built of red granite. Neither of these was a temple in the usual sense, but a place for religious services for the benefit of the deceased king.

The oldest type of temple which we have full plans of is that of Tahutmes III. at Medinet Habu. It is solely a place for processional rites, for a hall 49 ft. N.-S. at both ends, with a colonnade round it for the procession to pass, and six store chambers behind. Of the same type were the subsequent temples of Amenhotep III. at Elephantine, of Rameses III. at Karnak, of Alexander at Lusor, of Philip Annicados at Karnak, and of the Ptolemiac age at Kom Ombo and Dackheh.

The other type of temple was not adapted for processions, nor, perhaps, for fairs of gods, but on the contrary was chosen to contain a single large statue too heavy to be moved. Of this type there seem to be two of Amenhotep III., at Lusor and at el-Kab; but all the others are Ptolemiac, as at Denderah, Deir el-Medineh, Elfu, Philae (Isi, Harendotes, Arhigos), and Kalabcheh. Probably also of this type were the late temples with moonlight shrines, which were mostly set up in the Delta (Saft el-Henneh, Nebeshah, Tmey el-Amidi, Sebenytuos, Baqlieh) and less often in Upper Egypt, as at Abydos and Edfu.

The third type of temple was funerary, for ceremonies of offering to the deceased king, and neither for processions with a bark, nor for holding a statue in a naos. Such are those of Deir el-Bahri,
EGYPTIAN TEMPLE PLANS.

FIRST TO THIRD DYNASTY

SIXTH DYNASTY

SMALL SQUARE (ELEVENTH) AND OBLONG (TWELFTH DYNASTY) TEMPLES OF OSIRIS, ABYDOS

COMPLETE TEMPLE OF TWENTIETH DYNASTY, OF KHONSU, KARNAK

[All above, 1 : 400]
Architecture (Egyptian)

Sety I. at Qurneh, Ramessu II., Merenptah, and Ramessu III.

For noting the various divisions of a temple it is best to take one built in a single reign, such as that of Khonsu at Karnak built by Ramessu III. The massive pylon leads to the peristyle court, with a single or a double row of columns around three sides. This is the expansion of the portico of the dwelling-house, with a courtyard in front of it. Behind this is the closed hypostyle hall, which originated in the hall of the house with its sometimes a single column in the centre.

At the back of this is the actual sanctuary, with store chambers at each side, and sometimes also behind it. The sanctuary was either a long chamber, with wide doors front and back, and a wide passage around it for processions to pass bearing the bark of the god; or else it was a closed naisk containing the statue of the god.

3. The elevations.—The elevations show almost always a slight slope inwards of the face of the walls, which is vertical inside, but becomes thinner toward the top. This form was inherited from building in brick. The doorways are, however, always vertical. The overhanging cornices with a roll below it was copied from the loose ends of the blocking stones left from the stones being taken from the cross stub to which they were lashed. When elaborated, the cornice always has a palm leaf pattern on it. The columns are of various orders. The square pillar without any capital is termed Khafra, and in the courts of the XVIIIth dynasty. Octagonal columns occur in the Xlth and XIXth dynasties. The further truncation to sixteen sides belongs to the Xlth and XVIIth dynasties. The palm column is apparently the same as the term Khafra, formed of palm-sticks round the outside, with the leafy ends of the palm-sticks left hanging free around the top, forming a capital. It always had a square abacus to carry the weight free of the projecting leaves.

The lotus column represents a similar bundle decorated with lotus buds stuck into the hollows of the binding, and a sculptured capital imitating a half-opened lotus flower. The papyrus column is a bundle of papyrus stems, with a sculptured capital copied from the feathery head of the plant. The Hathor capital is usually on a polygonal column or circular in late times, with a head of the goddess on one, or two, or all four sides. In Roman times various complex types with foreign elements were introduced.

The columns were either of wood, brick, or stone. The earlier little shrines were evidently roofed with the same stems which formed the sides. Brick roofing was certainly used largely for houses and tombs, and probably, therefore, for the smaller brick temples. Barrel roofs 6 ft. across were common in the Vlth dynasty, and larger ones up to 15 ft. wide in later times. For stone buildings, roofs of stone were naturally used, either of limestone or sandstone like the walls. But so strong was the sense of brick making that the roofs are often cut out in a curve beneath, while flat above, as at Abydos. The earlier stone roofs are very massive. The limestone slabs on the tombs of the I11rd dynasty reach the size of 20 x 8 x 3 ft., weighing 33 tons. The granite beams in the great pyramid are at least 21 ft. long, 4 to 5 ft. wide, and about as deep. For greater security, the early roofs were often pointed, and on the cantilever principle; the centre of gravity of the block was over the wall, and it would not tend to fall even if the opposing block were absent. Such blocks sloped from 30° to 40°; and with their great depth, as much as 7 ft., their resistance as beams was enormous. In the pyramids there are generally three layers of such beams, one over the other. The roofing of temples was on a similar scale. Deep stone architraves rested on the columns, and large slabs stretched across the passage and chambers; those roof which the axial passage at Karnak are 28 ft. long.

4. The decoration.—The decoration was the life of an Egyptian temple. At first the walls are severely plain; at Medum there is not a single figure or hieroglyph, even on the funeral stele. At the granite temple of Khafra nothing is seen but perfectly smooth granite and alabaster, without even a minute line to tell. But in the 14th dynasty the Ra temple of Ra-em-unsu is as richly sculptured as the tombs of that age. The temple walls of the Xlth dynasty were very finely sculptured, and sometimes richly coloured (see Koptos and Qahnu). In the XVIIth dynasty the more complete temples enable us to follow the scheme of design. But it is in a quite perfect temple, such as that of Denderah, that we can see the connexions of the scenes with the use of each part. On the outer screens between the columns is shown the king leaving his palace, followed by his ka, and preceded by an incense offerer. Then Horus and Thoth purify him, and the goddesses of south and north bless him. Mentu and Atmu—of Thebes and Heliopolis—fly in to show him before the goddess of Denderah. On entering the hypostyle hall the king is shown sacrificing to the gods of Denderah; and along the lowest line of the wall are the scenes of the founding of the temple by the king, building the foundation, and presenting the bricks for the building. In the next chamber the king proceeds to worship the gods. And on reaching the sanctuary itself, the king is shown ascending the steps to the shrine, removing the offering to the god. Then the doors, opening the door, gazing on the goddess, praying to her, censing the sacred barks, and worshipping before the barks. Finally, he presents the image of truth to the goddess. Thus the decoration all has its purpose as an outline of the ceremonies proper to each part of the temple; it is a kind of ritual and rubrics in stone, like the scenes and figures of the early tombs, so that eternally the king should be considered to be performing the divine service in his spirit body.

Apart from the ritual decoration, there were many details of customary ornament. The palm-leaf cornice we have already noticed. On the screens of stone between the columns, and on the tops of shrines, a cornice of urei was often placed. Such was originally proper to the flower of the deadly ureus serpent being the emblem of the right of capital punishment. A fortunate combination was the disc of the sun, the ureus in front of it, a vulture's wings at the sides, and ram's horns above it. This represents Ra, in three aspects, as Creator—the ram's horns belonging to Khnumu, the creative rain god; as Preserver—the vulture's wings spread out being the emblem of maternal care; and as Judge or Destroyer—the serpent head on the ram's right. The head of Horus is shown over a king's head, it is often seen without the serpent, and with the wings drooping to embrace the king, as he is protected but not judged by Ra. Similarly on the roofs of tombs, especially the kings' tombs, there is a painting of vultures, with outspread wings across the passage, along the whole distance, showing the authority given to the soul.

A favourite structural decoration was a dado of papyrus plants along the lower part of walls. This seems to have been used in the 1st dynasty, to judge by the ribbed green tiles; it often appears in later times, and was usual in Ptolemaic and Roman temples. Similarly the ceilings are covered with a dark blue ground, spangled with
golden stars. The stars are always five-rayed; and the representation of stars with rays suggests that the ancient Egyptians were short-sighted like the modern, for stars appear only as points of light to long-sighted eyes.

Of minor decoration there is a very ancient form in the figure of a round sun defaced by painting, with which is the emblem of the tomb entrance, and is often shown painted below the sacred hawk. The ka name of the king is always written above such a doorway. The very elaborate coloured patterns of the painting on examples in the Old and Middle Kingdoms, like so much of the art itself, is only a type, and the small square panels are probably an imitation of a woodwork screen built up of small pieces. Such construction was requisite in so dry a climate, where wood warped and shrank so much, and only small pieces could be trusted to keep their form. The medieval Arab woodwork met this difficulty in the same way. Another decorative use of wood was in the open-work carving of a pair of lotus leaves tied together, or a group of dad signs, which formed a fretwork over the ventilating holes in the ceiling. A similar style of fretwork was inserted to steady the framing of chairs and tables by fretwork groups of hieroglyphs, as the girdle tie of Isis, the dad, the ankh, and other signs. Such furniture work passed on to stone dressing and survived in the decoration of temples. It had a great part in Egyptian life. Every festivity, every sociality, was a field for floral ornament with wreaths, garlands, and streamers of convolvulus; every water-jar had flowers over it and round it, and every group of offerings on an altar was heaped with flowers. Hence wreaths became a customary decoration on surface carvings and paintings. Also a favourite ceiling design was a vine trellis; and along the beams purple bunches of grapes hung down, made in glazed pottery.

5. The furniture. The furniture of the temples is frequently represented. The central object of devotion was the sacred bark. This was a boat about 8 ft. in length (Koptos, xix.), fastened down to a framework of poles by rope ties (Temple of Kings, vi.). This framework was put upon the shoulders of the priests for carrying it in procession; as many as twelve to twenty priests are represented, each probably carrying a burden of half a hundredweight. To set down this bark a high stand was needed. This was sometimes of wood, a sort of square box with decorated panels (Temple of Kings, iii.—vi.), or a block of granite, like one in the British Museum with figures of six gods around it (see illustration in Art [Egyptian]). Upon the bark there stood a canopy or casket of slender wooden pillars and a springy top of board; and from this was suspended the square shrine of the god, hung by ropes, and kept from swaying by guide ties at the bottom. The detail of the structure is shown in a working drawing on page 715b.

The carved and decorated, and almost always half-swathed in a linen wrapper. Fore and aft of the shrine were statuettes of the king and of various gods, adoring the divinity. At each end of the bark was a figure-head, and a great enameled collar of metal hanging below it. Some shrines had a winged figure of Maat, the goddess of truth, at each end, embracing the shrine with her wings. Such seems to be the prototype of the winged cherubs on the Jewish ark. Of other furniture there were the standards of the gods upon long poles, which were carried in procession, as well as the stands for holding the libation jars and other vessels used in the ceremonies; the framed wooden stands for vessels hung round with garlands; and the tall trumpet-shaped stands of pottery or metal for holding jars. In the papyri of Ramessu III. are named the tables of gold, silver, and bronze, the collars and ornaments for decorating the statues on the festivals, and a great balance plated with electrum. The buildings and chambers which now seem so bare and blank were radiant with plated tables and stands, glittering with precious vases of gold and silver, and bright with garments of wondrous splendour.

6. The popular shrines. These shrines were scattered all over the country by the waysides, doubtless like the modern Muhammadan weyl. Such local worship is directly contrary to Islam, and must, therefore, have persisted from earlier times, like so much of the arts and crafts. But one might find the shrine was set up where a recess a lamp burned before the figure of the god.

W. M. FLINDERS PETRIE.

ARCHITECTURE (Greek).—The subject of Greek architecture is one that has been curiously neglected, and one has the feeling that we should be himself beset by an insufficiency of data and an atmosphere of uncertainty immediately he enters upon the study. This accounts for the vagueness and incompleteness of what little has been written upon the question. It is therefore especially necessary in dealing with the subject of origins to try upon one's guard against certain popular fallacies, particularly when those origins are lost in the obscurity of a remote antiquity. A mere resemblance between two forms is absolutely no evidence that one is derived from the other, and nothing is more harmful to true knowledge than the shallow kind of art criticism that makes such an assumption without a very careful weighing of the evidence. Art is in its essence creative, and in a great art, even when it does borrow, it is always not what it takes, but what it gives of itself. At the same time, the higher the art the more subtle it is, and consequently by the inartistic observer the primitive borrowed element is absurdly over-emphasized.

A familiar parallel is seen in the case of faces. The shallow observer is always noticing 'likenesses'; the artist notes differences. The stranger notices the 'likeness' among members of a family; those who really know the faces note the differences. Twins at first sight are often almost indistinguishable; later, as knowledge grows, we wonder that we ever noted any marked resemblance. (An excellent instance of this is seen on p. 719.)

The architecture of Greece, the most refined, the most subtle, and in some respects the most artistic, that the world has seen, is pre-eminently the natural architectural expression of the gifted race that produced it. The Ionian architecture was marked by extraordinary individuality and independence. It was a most unusual degree, and therefore, except where there is real evidence, it is not unreasonable to give them credit for invention, when the forms are such that they might be developed from the simplest elements by any people of intelligence; and it is unnecessary to seek for far-fetched resemblances to bolster up improbable theories. At the same time, of course, due weight must be given to the conditions of previous and contemporary art, whose influences doubtless made themselves felt.

Of these influences three possible sources may be briefly noted—Egypt, Assyria, and the Aegean civilizations. In each case the most striking fact is the extreme difference in purpose, sentiment, treatment, and detail that distinguishes them from Greek architecture.
(1) The earlier periods of architecture in Egypt—of pyramids and tombs—hardly need be considered; partly because they belong to a time that had long since ceased to exercise any influence on architecture as a whole, partly because there was little, if any, intention to anything built by the Greeks, who were never a race for architectural thought. The earliest and simplest architectural remains of the Tholos period, it may be said, that it was erected with more definitely religious intent than was that of Greece. The architectural parts, the stylobate, the column, and the entablature, are found in all three orders. 

(2) Asymmetry architecture offers even less resemblance. It was of brick construction, non-trabeated style, characterized by the arch or the vault. It was primarily sanitary, and neither tombs nor temples played any important part, but, as far as remains go, the different parts of the whole. The ornamental detail in some ways resembles that of Egypt, and it is here that Greek work seems to have certain affinities, as there are more than can be accounted for perfectly natural process of development or suggestion from previous work in Greece land. It may, however, be noted that the influence of minor object is always more widespread than that of major forms, from this it is seen that more portable objects move with a petito principis to assume that the influence passed from Assyria to the Egee any more than vice versa. The probable is that there was a certain amount of interaction between the early Egee, Assyria, and Egypt.

In the case of Persian architecture, which may at earliest be said to have been from c. 680, although again entirely different in general intention from Greek architecture, there are certain minor features of detail which offer slight resemblance, particularly in the columns. But as the styles are contemporary—a fact which itself is of most conceivable, we should assume a certain amount of interaction rather than definitely assert that the less original and less artistic race even as that the places may be dated as c. 680. Therefore, to suppose that it can have had any influence upon Egee Ionic architecture is absurd. The temple of Ephesus, for instance, whose perfect Ionic capitals can be seen in the British Museum, dates from the time of Croesus, whose empire ended c. 646. The influence is almost certainly that of Greece upon Persia, and not the other way.

(3) In the third place, there are the great Egee civilizations, of which we know little or nothing of a generation ago, and which our knowledge increases daily. Here on Greek soil most probably may be sought those influences which earlier writers have found in and throughout the art of Egypt. Original as the Egyptian work undoubtedly is, it is not to be uncritically accepted. The most that can be said to the Egyptian art—one, if it may so be phrased, has become distinctly self-conscious. But the point to be noticed is that any Egyptian influence is but a little touch of a channel intended to be left open to any case, be only indirect.

Here again, in the case of Egee architecture, the entire spirit of the style, which are those of palaces and tombs, and not the work of temple-building peoples at all, allows at most of a limited range of influence. The wholly different art character of the two peoples, if we may group the Egee peoples as one and the Greeks as another, is, however, a far more fundamental line of cleavage. The earlier art is more luxurious and less restrained. It is less structural in its character, depending more for its effect upon surface ornamentation. Further, the earlier art seems to have been less definitely intellectual, and expressed itself largely by an arbitrary symbolism, whereas the Greek is more rational and self-explanatory embodiment of its content—a characteristic feature of the Egee art. So obvious as Greek art reaches its acme with the art of the Doric order.

There may, however, be a real though limited amount of influence in the case of Egee art, even though such influence be of a rather indirect sort. Of the most obvious significance may be found in a method of building which in-close to the use of stone for the lower part of the work and of tiles for the upper part, characteristic of the East. A point of architectural significance is marked by an attempt to rationalize and self-explanatory embodiment of its content—a characteristic feature of the Greek art. So obvious as Greek art reaches its acme with the art of the Doric order.

The more general point of interest is that the colonnaded style of the temple of Zeus at Olympia. This, therefore, does point to an early development on the Ionic and Corinthian, and that the need for a column to support the entablature at the foot of the wall in later Greek work may point to this origin (p. 679, fig. 1). It has been suggested that the very plan of the temple is derived from the megaron in the chief's house, as at Tiryns (p. 680, fig. 8). The plan of the Hera temple shows a very great advance upon this, which

must have taken a considerable time to effect, implying several earlier stages. The temple has been dated as early as c. 1100, in which case it becomes doubtful whether it should be considered as original. The temple building, adopted and gradually altered to the Doric style.

In the case of the temple of Hera, the Doric order is entirely out of place. This, though, there remains a certain amount of pre-Doric. The temple is, of course, with the continual alterations, whatever the explanation of them.

There are, however, questions of great importance in this connection. The Greek society and the government of a city-state, in particular, namely the Athenians, were in all probability a mixed race, descended partly from an Egee stock (probably Ionians from stock), and partly from an indigenous stock, which for convenience is here called 'Egee,' nevertheless it was the spirit of the Egee peoples, combined with that of the Turks and the Northern races, and the spirit that was produced. It may even be hazarded as a suggestion that the ultimate decadence of Greek work was due to the gradual re-absorption of the indigenous stock over that of the conqueror, and that the glory of what we might term the crooked fruit ultimately succumbed to the characteristics of the original wild crab. In that case the decadence is not a simple decadence, such as we may trace in the history of the art of coinage in comparison with Egee, the state of Philip of Macedon to the Bodvoc coins of Britain, but the re-absorption of a lost, more ornate, and less restrained style. It, as seems most likely, we are to regard Egeeian, Greek work as the true descendant of Egee architecture, this view receives a certain amount of additional confirmation.
With regard to the temples, at any rate, it may be said that every building rested upon a platform or stylobate, generally of three steps. In this it may be distinguished from all other styles, where, although a base-mold or plinth may be found, nothing of this nature occurs. Upon this, as its name implies, stood the columns, and these in their turn supported the entablature or stone lintel which is the main characteristic of the style. This lintel, or trabeated, construction was used, not because the Greeks were unacquainted with the arch: apparently they deliberately rejected it upon aesthetic grounds. They knew of the arch in the East, and quite early made use of it occasionally for purely structural purposes, as in the case of a water-drain at Athens, a barrel-vault at Sicyon, the passage to the stadiion at Olympia, an arch in Carmania, and in the lower storey of a stoa at Alinda. It is not altogether improbable that the Tholos at Athens was covered by a small dome. The arches of the Aegean period are not, as a rule, built with radiating voussoirs, although an example occurs in Arcadia. The arch principle is really involved at Tiryns, perhaps unconsciously, but it is not truly the corbelled system. One may suggest that the reason is to be sought in the Greek type of mind, as it expresses itself both in religion and art, partly in its sense of reserve, the μήκος ἄριστας of the temple at Delphi, partly in its tendency to seek the highest in a completed and finished perfection that does not lead out beyond itself. Hence it is more readily satisfied in the rectangular self-contained composition of Greek architecture than in a style involving the distribution of thrusts and the aesthetic incompletedness of the line of the arch. This became one of the most expressive features of the essentially suggestive, rather than perfected or finished, medieval style.

The further major divisions of the order may be tabulated as follows:—

The Doric order has generally been considered the oldest; but there is no adequate reason for supposing so, although it is not unlikely. The pre-Persic remains from the Acropolis of Athens and the temples at Ephesus and Samos, Neandria and Naucratit, show Ionic work of very remote date. Indeed, one might even suppose that they are cognate developments from a common beginning, rather than that the one is derived from the other or is a later invention. The Doric order is marked by somewhat massive proportions; for instance, the columns of the temple at Corinth are 4'47 diameters, and those of the Parthenon, 34 ft. high, are 6'025 diameters. The entablature is similarly heavy in proportion to the whole.

The Doric column consists of a shaft and capital only; there is no base. It is conceivable that there was originally a plain square base, and that a series of these have coalesced to form the top step of the stylobate. The early columns at Corinth (c. 650 b.c.) are monoliths, but in other cases the columns are built up in drums, fitted together with the most marvellous accuracy. The shafts are invariably fluted, with a sharp arsis between the flutes (fig. 2). These flutes are generally 20 in number, but other numbers are not so rare as is commonly supposed. Thus:—

- 1. The two half orders of each column are termed colonnettes. The Doric column is distinguished from the Ionic by its square, not circular, section, and the absence of the secondary orders of frieze and entablature. The Doric order is characterized by its heavy proportions, its square section, and its absence of the secondary orders. The Doric order is distinguished from the Ionic by its square, not circular, section, and the absence of the secondary orders of frieze and entablature. The Doric order is characterized by its heavy proportions, its square section, and its absence of the secondary orders.
round posts of a primitive wooden style. Other Egyptian polygonal types are even less likely.

The capital is composed of three parts. The abacus is a square flat block that takes the bearing of the architrave. Below this is the echnos or capital itself—a bold molded member eminently suggestive of powerful support. Below this are three fillets to emphasize the neck. This gently curves into the shaft by means of the apophyses, and at the top of the shaft, immediately below the apophyses, are three sinkings which prepare the eye, as it ascends, for the changes from the vertical lines of the shaft to the horizontal lines of the capital.

The entablature is divided into three portions—the architrave or lintel proper, the frieze and the cornice. The architrave is quite plain—a single solid block. In very large examples it may be necessary to use more than one block, but they are placed on their edges so as to present a single face to the front. The frieze is divided into spaces by upright blocks of stone (triglyphs) which support the architrave and, at the same time, add to the aesthetic effect. These triglyphs, or channels, are arranged with two complete in the middle and one half on either side. The early form of the triglyph seems to have been nearly round-headed (fig. 3). The spaces between are filled with alaba which do not support anything. These are termed metopes. The metope (i.e., the thing behind, or after, or at the back of the echnos) is the slab that goes behind the hole, or hole opening, in the frieze (fig. 3). This does not imply that the interval was originally open. In a cella wall this would give light to the building (στήν in later writers means a window). In a peristyle it would become useless; and the introduction of the peristyle may have done away with the custom.

It does not throw much light on the beam-end theory, as the opening would be there in any case; but the method of fitting invariably used—which is to put the slab at the back of the hole—and the name—which does not mean between the triglyphs but behind the opening—if they point any way at all, suggest that the metope was always fitted as we find it, at the back of or behind the opening (fig. 3), which would not be possible if there were beam-ends. In rich examples the metopes are sculptured, particularly at the end of the building.

The cornice moldings need not be enumerated, but it might be observed that the uppermost member, the cymatium, is generally very similar to the ovol molding of the echinos of the capital. This molding is carried up over the pediment at the ends of the building, and the corona or flat member beneath it is repeated, occurring twice over the triglyph frieze, and once, with slight modifications, under the cymatium of the pediment.

The Doric order is the most simple and refined of the Greek orders, and this characteristic enables it the better to act as the frame of the glorious sculpture with which it was adorned. The tympanum, or triangular space in the pediment or gable, was generally filled with a frieze sculptured and ornamented with a series of triglyphs and metopes which could be treated in a variety of ways. The frieze of the Erechtheum is an example.

It is generally said that sculpture is a specialization of the Doric order, and is not found in Ionic, but for absolutely no reason. The Erechtheum, the temple of Athena Nike Apteros, the temple of the Illissus, the great temples of Artemis at Ephesus, the temple of Aphrodite at Aphrodisias, the Mausoleum, and the Ionic order in the interior of Phigalia, were all richly decorated with sculpture.

The Ionic order is marked by several important characteristics. In the first place, it is a lighter style; its columns are of more slender proportions and more widely spaced. At the same time it should be noted that, in proportion to the weight that they carry in the lighter entablature, they are no lighter than the Doric. It is less severe, and in any hands but those of the Greeks might have become over-ornate. The columns have bases which show very considerable variety in their moldings. The so-called Attic base is not a wide spread form, occurring only in a single instance in the north porch of the Erechtheum and not elsewhere even in that building (fig. 2). The Corinthian example of the monument of Lykites is, however, but slightly different. The influence of this base upon the architecture of the world was extraordinary, but not more than its extreme simplicity and great beauty justify (p. 718, fig. 47, and context). The original form of Ionic base seems to have been a torus molding above a sort of plinth with several astragals between the torus and the fluting. It was first introduced, and then the second torus below.

The fluting is generally 24 in number, and much deeper than the Doric. They are separated by a fillet in place of the sharp arris, which gives a very different effect to the column (fig. 2). In early examples the fluting were more numerous—40 at Naukratis, 40 at Ephesus, 44 on a votive column at Delphi. The sharp arris is also found in these early instances. The capital is lighter and the most distinctive feature of the order. It may be described as resembling a scroll upon two rollers, which form the well-known Ionic volutes. There is a very small circular abacus which has ornamental carving. The head of the capital, the echinos, immediately below and between the volutes, is also carved, and sometimes, as in the Erechtheum, the neck also is richly decorated.

There seem to have been two early forms of the Ionic capital, that which may perhaps be termed Aiolic and the Ionic form proper (Neandria and Erechtheum, fig. 4). It may also be noticed that the egg and dart of the small echinos of the Ionic capital tend to diminish and become pushed up into the volute part of the capital. It is quite possible that this part is really the descendant of free overhanging leaves in an earlier form (fig. 4, Delphi). The architrave is not simple projecting over the one below (fig. 1). The frieze is a continuous band unbroken by triglyphs
and frequently sculptured. The cornice is more elaborate than the Doric, and the lowest member, as found in Asiatic examples, and afterwards borrowed in the Corinthian order, is very distinctive. This is the dentil band, which may be described as a series of small blocks set below the cornice, giving the appearance of a square serration. The uppermost member of the cornice is almost invariably the molding known as the cyma recta (fig. 9). On the whole it may be said that the Ionic style is less robust than the Doric, and depends more upon architectural ornament.

3. The Corinthian order is practically only the Ionic with a different capital. We are told by Vitruvius that Callimachus saw an acanthus plant at Bassae near Phigalia, which had twined itself about a basket of sepulchral offerings, and that this suggested the idea of the Corinthian capital. A single capital of this type occurred at the S. end of the main chamber of the temple of Apollo at Phigalia, all the other capitals being of a peculiar Ionic type. This temple was built as a thank-offering for immunity during a great plague in either B.C. 430 or 429. It might even be hazarded as a suggestion that Callimachus was associated with the architect Ictinus in this case, just as Phidias was in the case of the Parthenon. The ultra-restlessness of the design of the frieze, and an almost over-elaborate treatment of the drapery, carried out though it may have been by Peloponnesian workmen, would point to the influence of an extreme Attic tendency, such as we would associate with Callimachus rather than with Phidias and his school. That Ictinus, the most famous Athenian architect, built the temple, and Phidias himself made the temple image, suggests some famous Athenian designing the sculptural decorations. It is fairly clear that the Corinthian order was an individual invention, as it suddenly appears complete, late in the history of Greek architecture. What more likely than that in this single central capital, among a set of another kind, we have the original itself? This is strengthened by the fact that at Phigalia there also get us a departure from the true Ionic capital, showing obvious experimental tendencies in new directions on the part of the architect. Callimachus himself was famous as a worker in metal, and there is something suggestive of metal in the design, with its free overhanging leaves. That the inventor may have been familiar with the upward springing tendency of Egyptian capitals is conceivable, but to suggest an Egyptian origin is merely to go out of one's way to find things utterly unlike. The capitals of the Horologium, or so-called Temple of the Winds (fig. 5), have the lotus leaf, but so have those at Persepolis. Vitruvius may very possibly be wrong, but to reject his evidence on the ground of his general unreliability is not of much assistance.

The capital is found in a considerable variety of forms, almost always including some sort of tendrils or spirals, totally unlike the Ionic volute, which is more of the nature of a thick scroll, or roll of cloth. Greek examples are not very common. Besides Phigalia, Pausanias informs us that it was used by the logopas in the interior of Tegae. The Choragic monument of Lysicrates is Corinthian, and the Horologium has Corinthian columns with acanthus leaves of Roman type. The temple of Olympian Zeus and the Corinthian Stoa, all in Athens, are other instances. A beautiful and somewhat peculiar example exists from the lesser Propylaea at Eleusis. The temple of Apollo Didymæus at Miletus shows fine examples, and there is an archaic Corinthian capital of uncertain date also found at Branchidae near Miletus. But the love of all Corinthian capitals is the Tholos at Epidaurus, obviously fairly early in date, and, with all their richness, marked by the chasteness and refinement of Greek work. The Corinthian order became the favourite of the Romans, and these subtle restrained delicacies were lost. It may be noted that in Greek work the acanthus leaf is worked with a crisp sharp edge, which becomes blunt and rounded in Roman hands (fig. 6).

This slight survey of the general characteristics of the orders prepares the way for the consideration of the commonly accepted theory of the wooden origin of Greek architecture. It is generally said that the Doric order is of unmistakably wooden origin, although it may be more doubtful in the case of Ionic. The grounds for suggesting this are the triglyphs, which are supposed to represent the beam ends, and the upward slope of the mutules, which represent the ends of the rafters. These features do not occur in the Ionic order.

In the first place, the general similarity in the main essentials of the two orders is far too marked for the principal Ionic order of origin and inspiration not to be the same. At the same time there are probably different contributory influences.

The stylobate can hardly be claimed as anything but a stone feature, even though the upper part were timber. In Doric architecture, as contrasted with Ionic, the columns have no base. The stylobate is one of the supposed signs of a wooden origin, either representing a metal shoe to prevent splitting—a feature hardly consonant with a primi-
tive style—or a flat stone laid on the ground to distribute the weight. However, it might be remarked that the distribution of weight is esthetically demanded in any case by the slender Ionic column. The massive Doric column requires no base, and if it ever had one, it was early seen to be unnecessary. Its proportions are obviously those of stone, as are the narrow intercolumniations. The more slender Ionic with its considerably longer lintel has a closer resemblance to wooden proportions. It should further be noticed that the oldest Doric columns are the most massive, and most obviously the outcome of their stone material. The tendency of development from a wooden origin would naturally be in the reverse direction. Pausanias says that one of the columns of the Heraeum at Olympia was of oak. It has been suggested that this was the last of the original wooden set, which were gradually replaced. There are, however, difficulties with regard to the entablature, which would not fit equally well upon a set of stone Doric columns of more or less normal proportions on wooden styli. Nevertheless, it is conceivable, and the intercolumniations are certainly wider than usual.

The heavy Doric abacus projecting on all four sides is also obviously of stone; a wooden one would split. To some extent the same might be said of the echinos, but its whole shape is essentially non-wooden.

In the Ionic capital, however, we find proportions that are not square and that would be eminently adaptable to timber. The grain of the wood would run parallel with the line of the architrave. The spreading support is obtained, and at the same time the capital does not overhang at the front or the back, so there would be no danger of splitting off. Again, the spirals are a natural primitive incised ornament equally suitable to stone and wood, although their final form is more suited to stone. Early incised and painted capitals have been found on the Acropolis of Athens. The Doric echinos, however, though subtle in its curvature, is a natural primitive stone form, claiming kinship with such a form as the rude primitive cushion capital of the Normans (fig. 37, p. 710).

It is just possible that the different fluting points the same way. A polygon when fluted can give only a sharp sense. It is a natural and simple expedient, in borrowing the idea of fluting from the stone Doric form and applying it to the circular form, to leave the plain fillet which we find in Ionic work. The surfaces of the fillets are on the circumference of a circle and are not flat. The circular form is the natural shape of the tree-trunk; the polygonal form is the natural development from the square block of quarried stone.

But it is in the Doric entablature that the wooden origin is supposed to be most conspicuous. The general proportions, which may be contrasted with the light entablature of the Ionic, are certainly true stone proportions as we find them. The massive architrave in a single block certainly does not suggest anything but the stone block which it is, whatever may be said for the three facets of Ionic work.

The triglyph frieze is generally said to represent the ends of the beams, and it is suggested that the guttae represent the heads of the pins. What the regula are, from which the guttae depend, is gracefully omitted from the theory. Now, in the first place, the actual position of the guttae suggesting a vertical pin is quite impossible as at α (fig. 6); but even if we try a diagonal position such as at γ (fig. 6), the pin would be absolutely useless, as it would draw, and this is really wholly impossible. A pin might be placed at γ or a huge pin directly underneath at η, but in neither place are the guttae found. A true artist may have had the guttae suggested to his mind by pin-heads, and then created a genuine stone feature, but that has nothing to do with a wooden origin for architecture, any more than the acanthus leaf implies a haystack as an architectural prototype. The raindrops may equally well have suggested the idea and have spontaneously suggested rain-drops to children, who did not know the meaning of the word gutta.

But the most serious objection to the pin theory is that guttae are not found in early work. They do not occur in the Bouleuterion at Olympia or the Selinunte treasury, or in the newer, but still early, porch of the Colosseum. They are not found at Assos or in the early Athenian fragments, or in the temple of Demeter at Pentam.

With regard to the triglyphs, they are in the first place needlessly enormous for any ceiling joints. They might be the right scale for the beams, but they are then placed at impossibly close intervals. The dentils of the Ionic order would in many examples, although most of them late, approximate more nearly to a reasonable scantling. But the most pertinent question to ask is how one could have beam ends all round the building at the same level—which is a hopeless impossibility. Now, in the case of the Lycian tombs at Xanthos (fig. 7), where we have actual copies of timber work in stone, we see, of course, where ends and sides of the building are visible, that the ends of the beams show only at the sides of the building.

We also get a feature resembling purlin ends under the gable roof. It should be noticed that where we find timber construction reproduced in stone, as at

---

Xanthos, Beni Hassan (Egypt), or Naksh-i-Rustam (Persia), it is in no case a building, but simply a representatively carved out of the solid, and is entirely non-structural. It is, in short, merely a pictorial representation. Every material demands
Its own methods of construction, and this is perhaps partly necessary in days of early development. Further, if they were beam ends, they would not occur at the corners, but a metope or a portion of the wall would finish the series. This again is, of course, the case in the Lycian tombs.

The difficulty of the metopes has already been noted. But what are the vertical channels themselves? They seem to serve the same purpose as the vertical flutes of the column. But to emphasize the verticality of a horizontal beam is somewhat of a solecism. The suggestion has been made that they are timber markings—which is not merely untrue but foolish, for they could not resemble timber markings, which radiate from a centre. The very early treasury of the Geloans at Olympia is so early that it is not even Doric in character, but it is undoubtedly stone; and if its influence may be considered at all, it points in this direction. Although probably of the 7th or 6th cent., it may be set against the supposed original wooden Heraeum. In several features, particularly its stylobate, its columns,* and its characteristic waterspouts, it anticipates Greek work of a later date. It might further be noted that the dentil band in Ionic work, which may possibly represent beam ends, is above the frieze, whereas the beams of the offered ceilings in Doric work are above the frieze, making triglyphs as beam ends impossible.

The construction of the triglyph frieze, with rebated uprights and slabs behind, is found in the dado or frieze discovered at Knossos (fig. 15, p. 682). There it was obviously a stone construction from the outset, and was applied to the face of the wall. This is quite a conceivable origin for the triglyphs.

In early examples the triglyph and metope are frequently worked in one piece, as in several of the treasuries at Olympia. This is also found in many of the stones of Libon’s temple of Zeus (also at Olympia), and was the case on the sides of the Athenian Hekatompedon. This of itself is enough to constitute a fatal objection to the whole theory.

The slope of the under side of the mutules would not coincide with the slope of rafters, and (like that of the under slope of the corinix itself) is sufficiently explained as a slope to throw off the rain and prevent its running under and down the face of the frieze. This device is common in stone architecture, of all styles. It occurs even in string courses of Gothic moldings. The mutules above and the regulae below the triglyphs are a delightful way of softening the effect of these members and also of providing for the eye an aesthetic support or introduction to the frieze and cornice respectively. They correspond to the corbel tables of Gothic architecture, which are more aesthetic than structural.

It should be noticed that Greek doors are narrower at the top than at the bottom (fig. 8). This is obviously to reduce the interspace for the stone lintel, and would be quite pointless in a wooden construction. Even as it is the lintels have often creaked. The exquisitely beautiful doorways of the Erechtheum had to be repaired in classical times.

Perhaps then it may be said that we have in Greek architecture the work of a stone-building people, modified in the East by a wooden type of work resulting in the Ionic style, and perhaps slightly affected in Greece itself by a mixed style of stone and wood. To some extent the two materials have always been used together: doors, ceilings, and roofs tend to be of wood in a stone building, and door-sills and hearths of stone in a wooden one. In any case it is the remarkable adaptability of every detail to the stone material in the perfected style, and the inevitableness of Greek architecture, that give it its charm.

Greek Architectural ornament consisted in the first place of sculpture, either free, as in the case of the pedimental sculptura in the temple, and the akroteria (figures placed on the summit of the pediment, and on little platforms at the lower extremities and standing out against the sky), or in reliefs, as in the case of the metopes and friezes. Sculpture also occurs upon the lowest drum of the column, as in both the archaic and later temples at Ephesus. Figures in the round are used as supports, as in the Telemones at Agrigentum or the Caryatids of the Erechtheum or at Delphi. In the second place, there are the exquisite moldings, which seem to be entirely original, and in any case the actual refinement in the forms used has no parallel in any other architecture in the world.

The most important are the ovolo, e.g. in Doric capitals; the cyma recta, e.g. in the capital of the Ionic anta; the cyma reversa, used in string moldings; the torus, e.g. in the Ionic base; the scotia, a large hollow of double curvature, also found as a base molding; the fillet, a small projecting square-edged mold; and the astragal, a small projecting round molding; this when sunk is termed a bead (fig. 9).

A remarkable quality of Greek ornament is the adaptation of the surface decoration to the molding which it enriches. The outline of the ornament tends to be the same as the section of the molding; thus the egg ornament is found on the ovolo, the honeysuckle ornament on the cyma recta, the water leaf on the cyma reversa, and the guilloche on the torus (fig. 10).

In the third place, Greek architects made use of colour, as for instance on the echinos molding of the Doric capital, and traces of it are not infrequent in many places. It is possible that more

---

* There is some doubt about the assignment to this building of a column found at Olympia.
was used than would be pleasing to a modern eye, particularly in cases where marble stucco was applied to some inferior quality of stone such as poros. But we are not to imagine that the Greeks were not keenly alive to the beauty of their exquisite Parian, Pentelic, and other marbles, and the major portions of the surface of the buildings remained without colour. A very small amount of colour judiciously applied certainly enhances the effect of the marble, which looks almost startlingly white without it, when new; and the comparison between buildings with and without colour may probably be made in modern Athens to-day and to-morrow.

The workmanship of Greek architecture has never been approached, although some of their methods of construction are not above criticism, particularly in early work, as for instance in the blocks placed on edge on the face of the foot of the wall, forming a course much higher than the other courses (parastatai) (fig. 1 in Architecture [Egean]). Very little bond is used in Greek work, but the size of the blocks makes these things a matter of small moment. Yet so accurately are the stones fitted that in some instances they have actually grown together, and survived the accident of a fall without coming apart. Dowels are very frequently used, and their different shapes are useful for the determination of dates.

The methods employed can largely be gathered from internal evidence, particularly in the case of unfinished buildings. The building was apparently completed before the final dressing of the stone, which was done from the top downwards as the scaffolding was removed. The fine dressings on the faces of the stones, worked only for a short distance from the joint, and the short flutings of an inch or two at the top and bottom of columns, otherwise plain, are instances that may be cited of unfinished work, both of which have been ignorantly copied in Roman and modern times as though complete. Even in the finest work there is always a difference between the top joint of the column, which shows distinctly, and the others; as the flutings on the top block, which included the capital, were worked before it was placed in position. The rest of the fluting was worked when the joints had been made absolutely true by turning the blocks round and round after being placed in position. This seems to be the explanation both of their finer joints and of the wooden plugs and pins that have been found in the centre of the Parthenon drums (fig. 2, p. 679). The pin would be just strong enough to stand the turning of the drum but could not add any real strength to the building. The ankones, or projecting pieces on unfinished drums and on other blocks, must have been used for this turning process. Doubtless they would also have been convenient for hoisting, but a quite unnecessary luxury, whereas the turning of a round drum would have been impossible with these. The uppermost block could not be turned for fear of chipping the finished edge, hence the difference between that and the joints that were finished afterwards, which is always noticeable. The joints in the walls were probably made accurate by a similar process of pushing the blocks backwards and forwards, so as to grind the contiguous surfaces absolutely true, with the result that the finest knife blade could not be inserted anywhere between these mortarless joints. For this again the ankones would be useful. Every piece of carving, as for instance in the moldings of the Erechtheum, is executed with a minuteness of finish that one would naturally associate with ivory carving rather than with work in stone.

It is, however, the subtle curvatures in Greek architecture that are its most remarkable refinement, and the whole problem connected with them offers in itself a wide field for study. The following points may, however, be noted here. In the first place, it may be broadly stated that there are no straight lines in a Greek building of the finest class—a rather startling discovery to those who are accustomed to think of a Greek building as composed of nothing else.

Taking the principal lines of a building, the stylobate and the architrave, we find in each case a slight curve amounting to a rise of about 34 in. in the case of the long sides of the Parthenon, 228 ft. in length, and about 2 in. in the short sides, 101 ft. in breadth. These curves occur in the temple of Hephaestus and the Propylaea, but apparently not in the colonies or at Bassae or Argos. The next most important curve is the entasis of the column, which is the convex departure from the straight amounting in the Parthenon to \( \frac{1}{2} \) of an inch at a point about \( \frac{1}{2} \) of the height from the ground, the columns being 34 ft. in height. The entasis of the Erechtheum shafts is even more visible, \( \frac{1}{2} \) of the length of the shaft and \( \frac{1}{4} \) of the lower diameter, against \( \frac{1}{2} \) and \( \frac{1}{4} \) in the Parthenon. It should be noticed that these curves are not segments of circles but parabolic, or in some cases hyperbolic; but whether they were laid out mathematically or by eye seems to be uncertain. We may assume that the eye which would be sufficiently accurate to appreciate such a subtle distinction of curvature would probably be equal to the task of drawing the curve with a sufficient degree of precision. In the case of the echinos of the Parthenon, what appears at first glance to be a straight line rounded off at the end is found to be a subtle curve throughout, but the application of a 'straight-edge' to it reveals how minute this curvature is.

In addition to these refinements of curvature, others may be noticed. The columns that appear to the modern eye to be vertical really incline inwards towards the centre, so that the lines of the side columns in the Parthenon would meet at a point a mile and a quarter above the earth (fig. 11). The inclination of front to back is similar, and of
course all the intermediate columns incline proportionately. It is also preserved in the faces of the entablature and the pediment and the steps of the stylobate. But here a counter-subtlety is introduced, and the faces of the higher moldings are slightly inclined the reverse way, so as to counteract undue foreshortening, occasioned by the other processes and by their actual height above the ground.

It might also be observed that the angle columns are an inch or so wider than the others. The intercolumniations are slightly smaller, so as to bring the angle column under the triglyph. There is an exception in the temple of Demeter at Pestum, where the last metope is made larger so as to attain the same result.

The extraordinary skill and refinement required may perhaps best be realized, as Professor E. Gardner suggests, by considering the case of the bottom corner drum. Here then what do we find? In the first place, the base of the drum has to be cut so as to allow for the curve of 3½ in. in 228 ft. But the mason has also to consider the curve, running at right angles to this, of 2 in. in 103 ft. This is very puzzling if the axis of the column were vertical; but it is not. It has to be so inclined that it shall meet the axis of the corresponding column at the other end of the front, at a point ½ miles above the earth, and a similar inclination has to be made in the other direction along the side. Added to this, the edge of the step from which he works is not vertical; and, further, he has to allow for the beginning of the entasis a curve of ½ in. in 34 ft. Those who are familiar with the extreme difficulty of cutting a voussoir for an arch in a curved wall—a comparatively simple process—will appreciate the work of the Greek mason. For not only did he conform to these requirements, but he executed it all with an accuracy that would not admit of paper being put into the joint. The voussoirs of the arches in such a building as the circular nave of the Temple Church, London, are well cut, but it is mere child's play in comparison.

It may well be asked for what purpose all these things were done, and in any case the answer seems to throw light upon the character of the Greek mind, confirming what might have been otherwise deduced.

It has generally been said that these are optical corrections, that the entasis of the column counteracted the hollow in the middle, that a straight architrave would appear to sag and a straight stylobate would appear to curve up at the ends, that the slope inwards is to correct a tendency of the columns to appear out of the vertical and overhang at the top.

It may be so.

But there are certain objections to the optical illusion theory.

In the first place, what does this theory mean? It means that the result of all the curves is to give lines that are optically straight and horizontal, and this may be. If it is, then the result, the optical illusion theory is rididulous, as its only justifications curve and deviations on the vertical, which on this theory we ass hypothesis. Now, it is quite true that in very early buildings, e.g. Corinth, there is no entasis. But when it does appear, do we find any curve swaying visible for miles, that no optical illusion could ever make look straight? The curve can be there for no conceivable object but that it should be seen. But, further, the parabolic curve with its maximum deviation of 2 from the base would not be a correction of an optical illusion, whatever the amount of the curvature. In the case of the echinos there is no possible suggestion of such a theory, but we find a similar curve and what is that, in early examples, is it coarse, just as in the case of the entasis, and ultimately becomes refined. These curves, then, were obviously delighted in for their own sake, and, as the eye became more trained, it naturally demanded that they should become more such as the curves of the entablature and the stylobate. Now, if the side of the building be viewed from some little distance, the optical illusion caused by these lines would be the same as that caused by the lines of the column; in other words, the architrave would drop in the middle and the

FIG. 12.—Diagram showing optical illusion caused by angular lines, from which the eye is led to infer that the architrave is not straight but rounded at the ends even though there is no curve or angle below it (see diagram and test with ruler).
echinos. It is curious that the eye does not demand a base to the Doric column for the same reason. Indeed, some people have felt the want. But the side lines are diverging at the base, whereas they are converging at the top; the foot of the column, moreover, is so large as in some measure to dispense with such a necessity; it sits firmly without aid, so to speak. At the same time, it is a bold experiment, and is a feature that occupies aesthetically a somewhat peculiar position among great works of art.

It seems unreasonable to suppose that the 5th cent. Greek saw all these things and delighted in them, just as his ancestors had delighted in their ruder curves, their less subtly proportioned columns, and their exaggerated projection of capital, all exemplifying the same principles, but carried out with less refinement. The result must have given to his keenly sensitive eye an organic artistic unity that has never been surpassed.

Whatever be the interpretation of these subtleties, one inference at least is certain, namely, the accuracy and refinement of the Greek eye, coupled with an aesthetic demand for completeness and thoroughness in even the minutest particulars that go to make up perfection in a work of art. The instance here, that is, the Greek, to make him expend such extreme care upon them, can be paralleled in modern times only outside the field of art, as in the making of a modern rifle barrel or an observatory telescope. Even optics is a discipline we casually content to leave alone. But alongside this minuteness is a breadth and majesty equally astonishing. The composition as a whole is simple in the extreme, and the dignity of its proportions is unsurpassable. But we find the same qualities embodied in the interpretation of Greek art, and there are certain distinct advantages in approaching that art through its architecture. Much can here be demonstrated by rule and line which only the highly-trained eye can see in the sculpture. The whole artistic feeling, too, that inspired every detail of Greek architecture and art, has its corresponding parallels in the Greek conception of religion and in Greek intellectual investigations. Naturally it is necessary to consider the mind of the inquirer, who would make one the mere result of the other, rather than go deep enough to find their common basis. This does not mean that the one had no influence upon the others, but that each, as it were, remained master in its own department and in its own principles. In the case, however, of the plan and general arrangement of the Greek temple the aesthetic and religious factors are somewhat closely connected. The general design of the building is naturally largely determined by religious requirements. It is hardly necessary to point out that the Greek temple was not a place of worship; the act of worship took place in the open air, generally in the temenos, or enclosure surrounding the temple; and the statues and the altar was placed when the temple was not the object of worship; the altar architecturally is therefore entirely unrelated to it. The temenos itself and the altar in it are supposed by some to represent the forecourt with its altar in the Mycenean house. Small subordi-

nate altars there seem to have been within the building; and doubtless there were always two tendencies at work—that which is essentially Greek, and culminates in the highest flights of Greek philosophy and art, and art, and the more superficial side which was shared with others. It is not always easy to disentangle these elements, but the essential Greek characteristic, that which distinguishes them, rather than that which they share with all mankind, is, of course, the main question. Doubtless it is easier to discern it in the time of its full growth, but the tendency is there from the outset; and it is this tendency that made the Greeks what they were, and that was their contribution to the world of humanity. Whatever may have been the origin of the temple image, to which it would be out of place to discuss here, it may be briefly said that in the golden age of Athens it was certainly not a fetish or an idol, in the sense of a spirit or spiritual quality embodied in a material object. Nor can it even be regarded as a symbol; it is rather the mental and self-explanatory expression of a concept, viewed, it is true, from the aesthetic side, in which we may say Greek art preceded Greek philosophy. It was not an idol, for it was not regarded as possessing any power per se. It was not a symbol, for it rationally explained itself without interpretation. Least of all was it a portrait or likeness; it represented no traditional appearance, and pretended to no inspired vision on the part of the artist. But we find in the outward beauty of certain typical tendencies mentally conceived, and these qualities were the qualities of deity. It would perhaps seem a little strained to describe the temple image as the formulated creed of the Greek religion and worship. It is rather that we look upon the later images of Phidias and Scopas in any other light. The natural superstition and conservativeness of humanity among the masses were countereacting tendencies, but at the same time the fundamental Greek characteristics tend away from these. The intellectual expression in art of a religious and ethical position is an instance of the complete balance of the aesthetic, intellectual, and moral nature, tersely summed up in the word μόρφωμα, or the concomitant μορφή, implying a complete knowledge and development of all that makes man man, and yet excess in nothing. It is this that makes the Greeks unique among the peoples of the world. The temple may be considered as the casket containing the image, and it is on this account that it is the outside, rather than the inside, which on the whole receives the first consideration. At the same time it is aesthetically the embodiment of the image as art, and the temple image itself. The idealism of Greek religion in its highest aspect had not to wait for Plato for its exposition, in the case of those who could understand. It is already aesthetically complete at the time of Phidias, the house with its fundamental principles. In the case, however, of the plan and general arrangement of the Greek temple the aesthetic and religious factors are somewhat closely connected. The general design of the building is naturally largely determined by religious requirements. It is hardly necessary to point out that the Greek temple was not a place of worship; the act of worship took place in the open air, generally in the temenos, or enclosure surrounding the temple; and the statues and the altar was placed when the temple was not the object of worship; the altar architecturally is therefore entirely unrelated to it. The temenos itself and the altar in it are supposed by some to represent the forecourt with its altar in the Mycenean house. Small subordinate altars there seem to have been within the building; and doubtless there were always two tendencies at work—that which is essentially Greek, and culminates in the highest flights of Greek philosophy and art, and art, and the more superficial side which was shared with others. It is not always easy to disentangle these elements, but the essential Greek characteristic, that which distinguishes them, rather than that which they share with all mankind, is, of course, the main question. Doubtless it is easier to discern it in the time of its full growth, but the tendency is there from the outset; and it is this tendency that made the Greeks what they were, and that was their contribution to the world of humanity. Whatever may have been the origin of the temple image, to which it would be out of place to discuss here, it may be briefly said that in the golden age of Athens it was certainly not a fetish or an idol, in the sense of a spirit or spiritual quality embodied in a material object. Nor can it even be regarded as a symbol; it is rather the mental and self-explanatory expression of a concept, viewed, it is true, from the aesthetic side, in which we may say Greek art preceded Greek philosophy. It was not an idol, for it was not regarded as possessing any power per se. It was not a symbol, for it rationally explained itself without interpretation. Least of all was it a portrait or likeness; it represented no traditional appearance, and pretended to no inspired vision on the part of the artist. But we find in the outward beauty of certain typical tendencies mentally conceived, and these qualities were the qualities of deity. It would perhaps seem a little strained to describe the temple image as the formulated creed of the Greek religion and worship. It is rather that we look upon the later images of Phidias and Scopas in any other light. The natural superstition and conservativeness of humanity among the masses were countereacting tendencies, but at the same time the fundamental Greek characteristics tend away from these. The intellectual expression in art of a religious and ethical position is an instance of the complete balance of the aesthetic, intellectual, and moral nature, tersely summed up in the word μόρφωμα, or the concomitant μορφή, implying a complete knowledge and development of all that makes man man, and yet excess in nothing. It is this that makes the Greeks unique among the peoples of the world. The temple may be considered as the casket containing the image, and it is on this account that it is the outside, rather than the inside, which on the whole receives the first consideration. At the same time it is aesthetically the embodiment of the image as art, and the temple image itself. The idealism of Greek religion in its highest aspect had not to wait for Plato for its exposition, in the case of those who could understand. It is already aesthetically complete at the time of Phidias, the house with its fundamental principles. In the case, however, of the plan and general arrangement of the Greek temple the aesthetic and religious factors are somewhat closely connected. The general design of the building is naturally largely determined by religious requirements. It is hardly necessary to point out that the Greek temple was not a place of worship; the act of worship took place in the open air, generally in the temenos, or enclosure surrounding the temple; and the statues and the altar was placed when the temple was not the object of worship; the altar architecturally is therefore entirely unrelated to it. The temenos itself and the altar in it are supposed by some to represent the forecourt with its altar in the Mycenean house. Small subordinate altars there seem to have been within the building; and doubtless there were always two tendencies at work—that which is essentially Greek, and culminates in the highest flights of Greek philosophy and art, and art, and the more superficial side which was shared with others. It is not always easy to disentangle these elements, but the essential Greek characteristic, that which distinguishes them, rather than that which they share with all mankind, is, of course,
priestly caste and the artificial mystery of the Egyptian were entirely alien to the Greek mind. There was no priestly caste, and hardly anything that could be called a priestly order; and we find this reflected in the popular character of their ceremonies and the open simplicity of their religious architecture. To say that the extraordinary progress of thought in the 5th and 4th centuries, the most rapid and far-reaching that the world has seen, was either the result of these things or their cause, would perhaps be an error, but the inter-relation is unmistakable, and they are alike the product of the Greek mind. It should be said that one important religious building which survives, at least in plan, is to some extent an exception to the general rule—the Telesterion (so-called temple of Demeter) at Eleusis (fig. 14).

![Diagram of Telesterion](image)

To the simple primitive rectangular cells a second rectangular chamber is apparently an early addition; but throughout Greek history there is hardly a departure from the general rectangular plan, although circular religious buildings do occur, such as the Thymele at Epidaurus.

![Diagram of Thymele at Epidaurus](image)

The simplest form is a three-walled building with an open end divided by two columns 'distyle in antis' (fig. 13). The trabe or architrave, resting upon a column, required a support at the other end that would satisfy the eye as well as merely subserve its utilitarian end. It was not sufficient, therefore, that it should rest upon the wall, but a special feature was built for its support, a flat column of rectangular section attached to the wall, called an anta. Hence, wherever we have an architrave passing from a column to a wall, there is invariably an anta to receive it with its own capital and base. This capital and base mark the double character of the member, and are not the same as those of the column, but are in some respects more closely related to the flat wall (fig. 13). The anta with its clearly defined function degenerates into the Roman pilaster of later date. It has been suggested that the origin of the anta is an end-facing to a rubble wall. This does not explain the capital and base, or its frequent position not at the end of a wall. On the other hand, the anta is never found where it does not support an architrave. The 'distyle in antis' arrangement may be at one or both ends, as at Rhamnus or Eleusis (figs. 13, 14).

![Diagram of Distyle in Antis](image)

There is, however, no entrance to the temple at the back, the temple image being placed at that end of the temple with its back to the wall—an arrangement occasionally modified in the larger examples. The next development that may be noticed is a portico in front, 'prostyle'; or one in front and one behind, which is by far the more common arrangement, 'amphiprostyle,' as in the charming little temple of Athene Nike Apteros at Athens and the one by the Ilissus, both destroyed in comparatively modern times, although the former has been re-built. In the largest examples a range of columns is carried right round the building, 'peristyle'; and sometimes there is a double row of columns, 'dipteral,' as in the temple of Olympic Zeus in Athens. A single line of columns at a considerable distance from the central building, or naos, is termed 'pseudo-dipteral,' as at Selinus (fig. 15). A temple is also sometimes described according to the number of columns at the ends—hexastyle, octostyle, and so on. In the smaller temples the roof was apparently of a single span, leaving the floor space perfectly free. But in larger temples we find columns inside. They may be down the centre, as in the Doric temple at Paestum (fig. 15), or the Ionic temple at Locris. The temple of Apollo at Thermum in Aetolia.
shows the same arrangement. More commonly we find two ranges of columns, forming three aisles, as

in the temple of Poseidon at Paestum or the Parthenon. These were apparently in two tiers, one above the other, as those remaining in situ attest (fig. 16). The roof, presumably, was of timber, and was covered with tiles, frequently of marble.

The columns down the centre seem obviously to support the ridge piece of the roof; but the arrangement must have been very unsatisfactory, blocking the central view of the building, and the temple image if placed in the middle line. The three-aisled arrangement would also lend support to the roof; but clearly that cannot have been the only function, for in the case of the two largest Doric temples known, that at Selinus and the temple of Olympic Zeus at Athens, a considerable part of the roof, which was the same breadth throughout, was apparently without these supports.

In the temple of Zeus at Olympia the lower tier supported a gallery, which was approached by stairs at the east end. There seem also to have been stairs in other instances, as in the great Ionic temple of Artemis at Ephesus, which may have served the same purpose (fig. 14). But they also occur where there were no interior columns, as in the great temple of Apollo Didymus at Miletus, in which case they presumably only led to the space above the ceiling. That ceilings existed below the roof proper, we know from the record of the finding of a corpse between the ceiling and the roof at Olympia. The columns seem partly to have served a quasi-religious purpose, for we find that a low screen often existed between them, as in the Parthenon or the Zeus-temple at Olympia. In the case of the Parthenon and the temple of Artemis at Ephesus the columns are returned at the west end (fig. 14). Only the priests would be allowed within the screens, and possibly only favoured persons would be admitted to walk round the gallery or aisles, and so obtain varying views of the statue.

It is also possible that the three-aisled arrangement may have had something to do with the lighting of the cella, which has always been a difficult problem. There are several possibilities. (1) It is suggested that all the light was admitted through the great temple doors, and when the great brilliance of the light

in Greece is considered, it does become just conceivable. But let any one who holds this theory seriously examine such plans as those of the great temple at Selinus, the temple of Artemis at Ephesus, or the temple of Olympic Zeus at Athens. A distance of 115 ft. through two doors and three sets of columns will shed almost any light. After all, it is hard enough to see the part of the Parthenon frieze in situ, and this is outside. The interior frieze at Philadda will be absolutely invisible. (2) A second suggestion is that of artificial light, which doubleless would produce a certain richness of effect with a statue made of such materials as gold and ivory. Of course one cannot disprove such a theory, but it is a strange and unsatisfactory arrangement. (3) It is suggested that the light was largely given by what filtered through the marble tiles. This almost precludes the possibility of a ceiling, as, even if spaces were left in it, such a comparatively dim light would by this additional screen be still further reduced. In this connection, however, it seems worth noticing that in Byzantine architecture, which may even represent a Greek tradition, thin slabs of marble, deeply carved, so as to become still more translucent, were actually used as windows. (4) Some sort of opening in the roof is suggested, which may be of two kinds. There might be one or more comparatively small openings in the tiles, or one single great hypostyle opening. The former receives some support from tiles found by Professor Cockerell at Russe (fig. 17), and the latter from sarcophagi found in the form of little model temples (fig. 17). We are told that the temple at Miletus was open, and had shrubs growing inside—the temple image being in a small shrine within the temple. Strabo, however, mentions it as peculiar and not intentional, but due to the fact that it was found to be too big to roof. Vitruvius says that the temple of Olympic Zeus at Athens was hypostyle, but the temple was not completed until long after Vitruvius' death, so that this statement is valueless. We may therefore assume, first, that these temples were exceptional, and secondly, that they were merely unfinished buildings. A hypostyle opening would certainly, therefore, the line of the roof, and would admit rain and moisture that would have been very destructive. However, it is generally

FIG. 17.

FIG. 18.

FIG. 19.

forgotten that we have an actually existing instance in the Pantheon at Rome, and what was possible in the one place is
conceivable in the other. There seems, in some cases at least, to have been a parapetasma, or curtain, before the image, which may have been to protect it from the weather. It has to be admitted that this theory, although in some ways the least pleasing, has a certain amount of real evidence in its support.

(5) The fact that the covers of the coffers in the ceiling of the peristyle of the Temple of Athena at Apollo was not movable, and marked with letters, has been used as evidence that light was obtained thus by reflection from the pavement below, and then presumably reflected a second time, or tripled. The reflection of light thus obtained would be exceedingly small, and to reduce it any circumstances putting the coffers on would seem to be quite unnecessary. The markings were probably simply for the convenience of the builders, just as in a modern building a façade would be marked for a special position to be occupied by the architrave of the pediment.

(6) The presence of the internal columns, as pointed out above, suggests the most ingenious and beautiful theory of all, if not the most probable. It is the theory of Fergusson, who suggested a kind of clerestory somewhat after the Egyptian manner. It is a tempietto theory, but there is nothing to support it, save the bare fact that Fergusson anticipated so many of the so-called discoveries of other people, more particularly upon Gothic architecture, and has shown the keenest insight of the writers that have ever written upon the subject. It may be noted that the system is possible without interior columns, although the windows can be made much larger when they are present. The theory receives some measure of support from the fact that the columns certainly were not used solely to decrease the span, as shown above, nor were there generally galleries (fig. 18).

Unless new evidence be found the problem is likely to remain unsolved.

In size the Greek temples corresponded to our parish churches rather than to our cathedrals, making up, however, for the lack of size in the extreme refinement of workmanship. Moreover, the mass of material was considerable, and the actual size of blocks enormous, many of them weighing as much as 20 or 30 tons. The largest stone at Baalbec, very likely of Greek workmanship, weighs approximately 1100 tons. The cela almost invariably faced the east in the case of temples of the gods, although there were slight variations, probably in order that the image might catch the first rays of the morning sun on the day sacred to the god. This may even be trusted to give us the dates of their erection, calculated astronomically. In the case of heroes, the general rule seems to have been the reverse, and the temple to have faced west. In this matter of orientation the Greek usage may be contrasted with the Roman, which paid no attention to such things.

Within the temple, the temple statute held the place of honour, facing the entrance, and from the 5th cent. B.C., at any rate, this statue was of colossal dimensions. That of Zeus at Olympia, we are told, was so large that he would have been unable to stand upright if he had risen from his throne. It would add to this effect if the temple were not too large; and what size it was had clearly nothing to do with the accommodation of worshippers, but simply what was necessary for the display of the statue. Indeed, one must clearly grasp that the temple and its image were a unity, and cannot be considered apart.

Within the temple there would be a minor altar to the deity, upon which offerings of cakes, or things of vegetable nature, would be made; and there seem also in some other cases to have been altars to other than the principal deity of the place, as, for instance, to the hero Butes in the Erechtheum. In addition to the altars, there would be numberless votive offerings dedicated to the deity by the State, as in the case of spoils of war, or by private individuals. These would have a tendency to accumulate, and yet, from their nature, it would doubtless have been sacrilege to throw them away. There would be small portable objects too, that would not be suitable for public display, particularly when of great value. Moreover, the deity, especially in the case of Athena Polias, represented the city herself, and the wealth of the city and the wealth of the goddess were, in a sense, one. These circumstances combined to make it necessary that, attached to the temple, there should be some place for the storing of treasure. Hence, in the larger temples we frequently find at the back of the cela (os, temple proper) another chamber prolonging the rectangular plan, and used for the above purposes. Indeed, the treasure chambers of the temples may in some senses be regarded as the State banks. The porticoes themselves were not infrequently closed in by railings between the columns.

In considering the plans of the larger Greek temples, we must not suppose that they were built upon any one pattern. Quite the contrary is the case, and it would be truer to say that there are almost as many different arrangements as temples. Perhaps the two most irregular plans are those of the Erechtheum (fig. 19) and the temple of Apollo at Bassae. [The building at Eleusis is not a temple.] The irregularity of the first of these is well known, occasioned partly by the irregularity of the site, partly by its having to house the image of more than one deity, and possibly in order that it might include certain sacred objects, such as the marks of Poseidon's trident and the salt spring.

The temple at Philaea is interesting partly because of the curious arrangement of attached Ionic columns running round the interior of the building with the beautiful frieze above, which form a series of small recesses the whole way round, but even more as showing the importance attached to the correct orientation of the statue. It was more convenient to build the temple with its longer axis from north to south; the cela, therefore, had a door in the east side of the temple through which the statue looked eastward (fig. 20). The effect of lighting, to one entering the temple from the north during the morning light, must have been most impressive, and the aesthetic value of such an arrangement would undoubtedly influence the architect. It is possible that the actual cela occupied the site of a smaller sanctuary of special orientation. The temple in some respects bears a curious resemblance to the Heraeum at Olympia.
early temple, the tendency being for the later temples to be wider. The Ionic half columns attached to the short side walls also recall the earlier building. Richter figures an Ionic capital from the Hereaom, presumably from the interior, which, in the proportions of its volutes and the arrangement of the continuation of the volute-head, strikingly anticipates the later capitals at Bassae.*

* The present writer has not been able to see this capital, and does not know where Eichter saw it (fig. 4).

In his restoration, all but the end column of the central row are omitted; but although this would provide a wider open space and better lighting, and account for the curious disposition of the columns, six on the sides and seven on the end, nevertheless it is not necessary. If most of Philon's interior columns were Doric, as those of his portico undoubtedly were, there might have been a single range of the more slender Ionic columns down the centre instead of the two-storey arrangement, a device used where columns of two heights were required. Those in the so-called Parthenon-chamber of the Parthenon were possibly Ionic columns of the height of the two tiers of Doric, possibly in the cells. Unfortunately, little exists but the ground plan, and there are practically no architectural remains from which to deduce the character of the building. The existing remains are mainly of Roman date, with Ionic columns.

In the island of Delos are the remains of the so-called 'sanctuary of the bulls,' the building containing the horned altar of Apollo, reckoned among the seven wonders of the world. In this building is said to have taken place the celebrated dance of the Delian maidens. It was extraordinarily long and very narrow, 219 ft. by 19 ft. (fig. 23). It was built upon a granite base with marble steps. The building was divided into three parts, a long central hall, with a sunken area, in which presumably the dances took place, and at the southern end a Doric portico, possibly tetrastyle, possibly 'dystyle in antis.' At the north end of the long hall was the chamber containing the altar. It was entered between two composite piers, formed by a half Doric column on the one side, and an anta with two recumbent bulls as a capital on the other side. Above was a frieze with bulls' heads upon the triglyphs. It is these bulls that give the name to the building.

The Thymele (i.e. 'place of sacrifice'), the so-called Tholos, at Epidaurus (fig. 24) is one of the few round buildings, used for religious purposes, that have come down to us. Others were the Arsinooeion at Samothrace sacred to the Great Gods, the very small building, if so it may be called, whose circular foundations may be found in the Asklepieion at Athens, and the quasi-religious Philippeion at Olympia, which may be regarded as a sort of Heroon of Philip. It seems to have been one of the loveliest buildings of antiquity. The foundations are probably of older date, but the principal remains date from the end of the 4th cent. B.C., when it was built by the architect Polyclitus (possibly a grandson of the famous sculptor). It was 107 ft.
columns, the outermost and widest were two circles of

ARCHITECTURE (Hindu).—The adherents of all the Indian sects and religions used for their several purposes the art of each age and country, which was applied, as occasion arose, to the special requirements of each form of worship. No fundamental distinction, from the point of view of the historian of art, can be drawn between the buildings of the various religions, and often it is impossible to determine merely by considerations of style whether a given building or sculpture is Buddhist, Jain, or Brâhmanical. As Le Bon observes, 'l'architecture est beaucoup plus fille de la race que des croyances.' But the meditative and contemplative spirit of the Hindu sublime religion, if not projected into the ritual, is the spirit, con- 

FIG. 24.

THYMELE 

in diameter, and stood upon ringwalls 4 in number. Upon the outermost and widest were two circles of

EPIDAUROS

columns, the outer Corinthian, 14. The inner rings are divided by openings and connected by cross walls in a rather curious way. The Doric entablature had large richly sculptural rosettes upon the metopes. The ceiling of the ambulatory was executed with beautiful marble coffers. The capitals of the Corinthian order, as has already been noted, are in their way the acme of Greek art. The use of the building has been much dis- 

cussed, but its name, and its correspondence to its miniature prototype or copy in the temenos of the sancta of Zeus at Eu- ster, point on the whole to the use of the building covering a sacrificial pit. That sacred serpents may have been kept in the spaces between the ring walls is also conceivable, without interfering with the first theory.

In its own way Greek architecture has never been surpassed, and probably never will be. It has said the last word upon such problems as nicety of construction and proportion, and has carried the deftness of ornamental treatment to the furthest limits that are visible to the most highly trained building experts may be said to have set out to achieve perfection, and they have achieved it. Their style was original and practically entirely self-created. It is not until we reach the architecture of the Gothic that we again find an entirely original creation. The Gothic architects, however, did not aim at perfection, but at something different, and they, too, in their way were unsurpassed. In order fully to comprehend even the general spirit of Greek architecture, it would be necessary to have some knowledge of other than religious buildings, which alone come properly within the scope of this article. But in the main it is an extension of the same principles, showing, however, more variety and power of practical adaptation than is perhaps evident in the sacred buildings here considered.

ARCHITECTURE AND ART (Hindu).—The adherents of all the Indian sects and religions used for their several purposes the art of each age and country, which was applied, as occasion arose, to the special requirements of each form of worship. No fundamental distinction, from the point of view of the historian of art, can be drawn between the buildings of the various religions, and often it is impossible to determine merely by considerations of style whether a given building or sculpture is Buddhist, Jain, or Brâhmanical. As Le Bon observes, 'l'architecture est beaucoup plus fille de la race que des croyances.' But the meditative and contemplative spirit of the Hindu sublime religion, if not projected into the ritual, is the spirit, con-

ARCHITECTURE (Hindu) 741

the composition, being overshadowed by the subsidiary parts added for the purpose of giving the desired impression of dignity and mass—not for congregational uses, which Hindu ritual excludes.

The leading styles of Brahmanical temple architecture in India in number, namely, four northern and two southern. The northern styles are (1) the ‘Indo-Aryan’ of Ferguson; (2) the Gupta; (3) the Kasmiri; and (4) the Nepalese. The southern styles are (5) the Dravidian, and (6) the Chalukyan of Ferguson, better designated as that of the Deccan. We proceed to indicate briefly the geographical distribution, chronology, characteristics, and principal examples of each of these six styles. The reader who desires to pursue the subject will find a great mass of information recorded in the selected works named at the end of this article, and in the unnamed multitude of other books dealing with Indian archaeology.

1. The ‘Indo-Aryan’ style is characterized by the bulging steeple with curvilinear outlines which strongly marks the shrine or sanctuary containing the image, and frequently is repeated in other parts of the design. In Orissa an early temple sometimes consists of nothing more than the steepled shrine with a low-roofed porch, devoid, or almost devoid, of other parts; but larger examples have additional pillared chambers. The great temples at Khajuraho, in Bundelkhand, dating from the time of the Chandel dynasty, are built on a cruciform plan, with naves and transepts, which results in building of imposing dignity.

The style in one variety or another is found all over northern India, between the Himalayan and the Vindhyan mountains. The most elegant examples may be assigned to the period between A.D. 700 and 1200, but some of the finest temples are supposed by Ferguson to date from A.D. 600. As a rule the material is stone, but a few brick temples in this style are known. The best preserved specimen built of brick is that at Konch in Bihar, to the north-west of Gayā, which is assigned to the 8th cent. A.D. (Cunningham, Archæol. S. Rep. vol. xvi. p. 58).

Certain brick temples in the Cawnpore district, rather earlier in date, probably had steeples of the standard form, but are too much ruined to admit of recognition. The most famous known Brahmanical temple is one built of decorated moulded bricks, discovered by Dr. Führer in 1891–92 at Ahichhatrā in Rohilkhand, and assigned for good reason to the first century B.C. (Archæol. S. for N. India, vol. xii. p. 79). Unfortunately no description of the building has been published. It is probable that the style was developed originally in brick, but it is not known how it originated. Nor is the genesis of the curvilinear steeple easy to explain. The most plausible suggestion is that the design was modelled on the form of a frame of bamboos fastened together at the top. In modern buildings the tendency is to diminish greatly or dispense with the curvature of the outline, and many temples of recent date have slender pillars in place of spires, closely resembling European church forms.

2. The Gupta style, with which Ferguson was not acquainted, is so named because it was favoured by architects in the 4th and 5th centuries A.D., when the imperial Gupta dynasty ruled northern India (see art. CHANDRAGUPTA, 2, 3). The recorded examples, about thirteen in number, including a good one at Sānehi, are found in the southern parts of the United Provinces and the neighbouring territories. Cunningham, who first distinguished the style, enumerates its characteristic features as follows:

(1) Flat roofs, without spires of any kind, as in the cave temples; (2) prolongation of the head of the doorway beyond the jambs, as in Egyptian temples; (3) statues of the rivers Ganges and Jumna guarding the entrance door; (4) pillars with massive square capitals, ornamented with two lions back to back, with a tree between them; (5) bases on the capitals, and friezes of artistic forms, like Indian flowers, and of a very peculiar form, like Indian letters standing on projecting horns; (6) continuation of the architrave of the portico as a moulding all around the building; (7) deviation of the pillars from the cardinal points (Cunningham, Archæol. S. Rep. vol. ix. p. 42, and ib. vol. i. v. x. xiv. xvi. xx. xxii.).

3. The Kasmiri style is restricted to the valley of Kasmir and the Salt Range. The temples at the Panjāb, between the Indus and the Jelum, its peculiarities are distinctly marked, and include pyramidal roofs, fluted pillars closely resembling those of the Doric order, arches with trefoil-shaped apertures, and, as ornaments, cymas or vine leaves are usually small, but in some cases are surrounded by cloistered enclosures of considerable magnitude. The notion that such enclosures were intended to contain water is erroneous. The oldest example to which a date can be assigned is the well-known temple of the Sun, under the name of Mārtanda, which was built by order of king Lalitaditya, about A.D. 750 (Stein, trans. of Rājatarangini).

All known specimens of the style may be dated between A.D. 700 and 1200. The Greek character of the pillars has attracted much attention from European writers; but it is not easy to ascertain how quasi-Doric pillars became the fashion in Kasmir and the Salt Range, and nowhere else. Perhaps, as Le Bon conjectures, the style was introduced from Persia during the rule of the Arscads.

4. The Nepalese style in its characteristic form is mainly Chinese, being merely a local modification of the Chinese style described by Bushell (Chinese Art, vol. i. p. 49, London, 1904):

‘The most general model of Chinese buildings is the tânt. This consists essentially of a massive roof with recurved edges protruding upon shed by Ferguson to date from A.D. 600. As a rule the material is stone, but a few brick temples in this style are known. The best preserved specimen built of brick is that at Konch in Bihar, to the north-west of Gayā, which is assigned to the 8th cent. A.D. (Cunningham, Archæol. S. Rep. vol. xvi. p. 58).

Certain brick temples in the Cawnpore district, rather earlier in date, probably had steeples of the standard form, but are too much ruined to admit of recognition. The most famous known Brahmanical temple is one built of decorated moulded bricks, discovered by Dr. Führer in 1891–92 at Ahichhatrā in Rohilkhand, and assigned for good reason to the first century B.C. (Archæol. S. for N. India, vol. xii. p. 79). Unfortunately no description of the building has been published. It is probable that the style was developed originally in brick, but it is not known how it originated. Nor is the genesis of the curvilinear steeple easy to explain. The most plausible suggestion is that the design was modelled on the form of a frame of bamboos fastened together at the top. In modern buildings the tendency is to diminish greatly or dispense with the curvature of the outline, and many temples of recent date have slender pillars in place of spires, closely resembling European church forms.

2. The Gupta style, with which Ferguson was not acquainted, is so named because it was favoured by architects in the 4th and 5th centuries A.D., when the imperial Gupta dynasty ruled northern India (see art. CHANDRAGUPTA, 2, 3). The recorded examples, about thirteen in number, including a good one at Sānehi, are found in the southern parts of the United Provinces and the neighbouring territories. Cunningham, who first distinguished the style, enumerates its characteristic features as follows:

(1) Flat roofs, without spires of any kind, as in the cave temples; (2) prolongation of the head of the doorway beyond the jambs, as in Egyptian temples; (3) statues of the rivers
ARCHITECTURE (Hindu)

Manical temples in this style may be devoted to the worship of either Siva or Vi^nu. Dravidian temples in this style may be devoted to the worship of either Siva or Vi^nu. The temples consist almost invariably of the four following parts, the exigences of which are also explained, but differing in themselves only according to the age in which they were executed:

1. The principal part, the actual temple itself, which is called the vimana. It is always square in plan, and surmounted by a pyramidal roof of one or more stores; it contains the cell in which the image of the god or goddess is placed.

2. The porches, or mantapas (mantapa), which always cover and surround the vimana, and lead to the entrances.

3. Gate pyramids, garudas, which are the principal features in the quadrangular enclosures which always surround the temple.

4. Pillared halls, or choultries, which are used for various purposes, and are the invariable accompaniment of these temples.

Besides these, a temple always contains tanks or wells for water, to be used either for sacred purposes or the convenience of the priests; dwellings for all the various grades of the priesthood attached to it; and numerous other buildings designed for state or convenience.

Except in the earliest rock-cut examples, the roofs and almost all parts are bounded by right lines, and the whole temple is covered by a slender 'Indo-Aryan' style is unknown in the south. The celebrated Seven Pagodas at Mamallapuram (Mamallapuram) near Madras, executed under the orders of Pallava kings in the 6th and 7th centuries, are the only other examples of the style, the North Arcot and Trichinopoly districts; mark the earliest known stages in the development of the style, which then showed distinct traces of specially Buddhist forms. At Ellora, in the Nizam's dominions, we possess in the magnificent rock-cut Kailasa a perfect Dravidian temple, as complete in all its parts as any later example of the style. This edifice is made to simulate a structural temple by the complete cutting away of the superfluous rock, both externally and internally, so that the temple stands out freely. It was excavated in the reign of Kṛṣṇa I. Rāṣṭrakūṭa, about 760 A.D.

The great structural temples of Southern India are much later in date. They are extremely numerous, and remarkable for their vast size. Ferguson personally was acquainted with upwards of thirty great Dravidian temples, or groups of temples, any one of which must have cost as much to build as an English cathedral, some a great deal more. One of the most notable is the temple erected at Tanjore by the victorious Chola king Rājarāja between A.D. 1011 and 1110, which has the great merit of having been commenced on a well-defined and stately plan, which was persevered in till its completion. The numerous inscriptions on this temple have been edited by Dr. Hultzsch (South Indian Inscri. vol. ii.). Other huge similar structures, less laudable in plan but still magnificent, are to be seen at Srirangam, Chilambaram, Rāmāsavaram, Madura, and many other places. The adequate description of any one of these volumes. The central corridor of the choultrie at Rāmāsavaram has an uninterrupted length of 700 feet, that is to say 100 feet longer than the nave of St. Peter's; and these figures may suffice to give some notion of the large scale on which the southern temples are designed.

Ferguson expresses the opinion that the Dravidian temples 'certainly do form as extensive, and in some respects as remarkable, a group of buildings as is to be found in provinces of similar extent in any part of the world—Egypt, perhaps, alone excepted; but they equal even the Egyptian in extent' (op. cit. p. 379).

6. The so-called Chāḷukyan style, which may be designated more fittingly by a territorial name as that of the Deccan, is, as Le Bon correctly observes, a transitional one connecting the forms characteristic respectively of the North and South.

If we exclude the purely local and isolated styles of Kaśmīr and Nepal, the two extremes of Indian architecture are formed by the Indo-Aryan and the Dravidian styles. The Gupta and Chāḷukyan both possess an intermediate character, and are to some extent related to each other. The latter has two well-defined varieties, that of Mysores, described by Ferguson, and that of Bellary, described by Rea.

The Chāḷukyan empire, which comprised at its greatest extent most of Mysores, parts of the Nizam's territories, and some districts in about A.D. 750 A.D. This was the first dynasty for about two centuries. The second dynasty, which was established in about 1190, is of importance, about A.D. 1190. But early in the 12th century, the Chāḷukya kings lost the Mysores country, which passed under the government of a Hoyasal dynasty, and the splendid temples at Halebid (Dorasaamudra) and Bêlur, which excited the enthusiastic admiration of Ferguson, who gave the inappropriate name Chāḷukyan to their style, really were built under the orders of the Hoyasal kings. The Bêlur temple was erected by king Virupāsa when he was converted from Jainism to Hinduisa in A.D. 1117, and the Halebid temple belongs to the same reign, a few years earlier (Jagr. Carnatica, vol. p. 86).

The Mysores style, as described by Ferguson, is characterized by a richly carved base on which the temple stands, a complete plan, and a stepped conical roof, not rising high enough to become a steeple, and a peculiar vase-like ornament crowning the summit. The Bellary variety, which Rea has devoted a monograph, has a rectangular plan, and the buildings belong to a subdivision of the Deccan style. Rea, while using the name Chāḷukyan, admits that the temples discussed by him 'might best be described as an embodiment of Chāḷukyan details engraved on a Dravidian building.' These works seem to belong wholly to the 12th century. The decorative sculpture is remarkable for its marvellous intricacy and artistic finish even in the minutest details, the ornament generally being completely undercut, and sometimes attached to the solid masonry by the most slender of stalks. The effect is described as being that of the incrustation of foliage placed upon the wall. The beautiful style of Western India, sometimes described as the Jain style, may be regarded as a variety of the Chāḷukyan style.
magnificent manuscript of the Razm Nâmah—a Persian abstract of the Mahâyáhârata—preserved in the Royal Library at Jaipur, exhibits the myths of Râma, Krâña, and other Hindu deities as represented in colour by artists of Aâkâr’s time (A.D. 1558) and trained in the Persian style. The illustrations cost four lakhs of rupees, or more than £40,000.

The existence of extant fragmentary and corrupt copies proves that a considerable body of Sanskrit treatises dealt with the rules of Indian architecture, both religious and secular, from the earliest times. The dates of the composition of these treatises have not been ascertained, and the little that is known about their contents is to be found almost exclusively in the essay by Râm Râz, who collected the remains of the architectural literature procurable in southern India, and published the results of his inquiry in 1834. The works examined by him are certainly ancient, because they lay down rules for the provision of sites for Jain and Buddhist temples, and also for the construction of houses, churches, and palaces.

In the 1st century B.C. a treatise was written by the Grammarian and Grammarian’s Grammar, which seems to have been intended as a guide for the construction of temples, although it does not give any indication of the system of the edifice, only of the materials to be used. The treatise was published in 1834 and is known as the Aâkârsâstrás.

The treatise was published in 1834 and is known as the Aâkârsâstrás.

ARCHITECTURE (Jewish).—Materials for a history of ancient Hebrew architecture are accumulating to an extent that must upset some conventional theories. The new Elephantine papyri reveal the existence in Egypt, at the end of the 5th century B.C., of a Jewish temple with five piers, a large roof of sculptured stone, copper-hinged doors, cedar-wood roofing, and gold and silver chalices. Flinders Petrie, again, has been able to identify the Onias Temple, which was also built in Egypt more than two centuries later. Here we have a tower-like structure, with massive walls of drafted stone, a substantial brick retaining wall, and Corinthian ornamentation.

Half a century later Jewish architecture is represented by such buildings as the palace of Simon the Maccabee unearthed by R. A. S. Macalister at Gezer. The remains of Herodian buildings in Jerusalem, and the ruins of synagogues in Galilee, dating from the 1st cent. A.D., carry on the story. These stone synagogues seem to have been built on the facade three doors,—one in the centre, large, the others at the sides, smaller. The Galilean synagogues well existed at our entrance in the south. The interior (as at Tel il Hum, Meiron, and Kefr Birim) was divided into three by two rows of pillars. The central space of the Telil Hum synagogue was surrounded by a gallery on three sides, and traces of similar galleries have been found elsewhere (Schürer, ii. p. 521). If these structures were meant for women, then the women’s gallery, which became a distinctive feature of synagogues only after the Middle Ages, is traceable to an older date.

Though there was no legal prescription on the subject, the favourite shape for synagogues was the basilica, and square or oblong buildings are still the prevalent form everywhere. The Temple courts, where prayer-masses were held, were usually rectangular, and the famous synagogue of Alexandria (destroyed in the time of Trajan) was a basilica. In modern times a number of octagonal synagogues have been built, but the basilica form has remained constant for the most part, due to its local style and taste. In Italy the Renaissance, in Spain the Moorish, influence, modified the decorations and columns; but there were certain essential requirements which kept the synagogue to one general plan. There was first the ark to contain the scrolls of the Law, secondly the Reading Desk or Almenar, thirdly the Entrance. The ark was by preference placed in the east, though this rule was frequently neglected. The Almenar (properly al-minbar, Arabic for ‘pulpit’) was mostly a rectangular structure occupying the centre of the building. It was used primarily for reading the Scriptures, but in Spanish synagogues it was also the place whence the prayers were read. In many parts, especially in those which are still live, the old plans are still preserved in the form of the ark or the Almenar.

was protected by a lattice sufficiently thick to render the occupants of the gallery invisible from below. This grille has, however, been abandoned in modern times.

A somewhat unreasonable preference for a pseudo-Moorish style of decoration has prevented synagogues architects from adopting classical styles, which are now found in many parts of the world. The contrast between the exterior and the interior of the synagogue has often been noted. The Talmud has referred to an elevated place for the synagogue, but it became impolitic for the Jews to draw upon themselves the attention of the world by making their places of worship too prominent. Hence there grew up a tendency towards mean exteriors with low elevations. Compensation was sought by deepening the floor. In the case of the old Karate synagogue in Jerusalem the building is practically under ground. In Persia it was long forbidden for the synagogue to rise higher than any neighbouring mosque. Architecturally, being founded, as it was, on the East, good many synagogues resemble mosques, and the domes of Moorish buildings in Spain have found wide imitation among the synagogues of Europe and America. Though the exteriors of synagogues were often wanting, they were compensated for by the beauty of the interiors. In many cases, indeed, sacred and even severity of taste prevailed, and no ornament at all was admitted. But the general tendency was towards ornate decoration: lion, flowers, fruits, interlaced triangles, and other geometrical patterns (on Arab models), elaborate gilding, and arabesques, fine ornamentation of lamps, and such utensils of worship as are described in the article on ART (Jewish)—in these directions much was possible. There were, by preference, twelve windows in the synagogue, but this number was not general. There were painted windows in the Cologne synagogue in the 12th cent., but it is only in recent times that such ornament has become at all common. Much more often the floor was richly covered with marble mosaics. A feature which added effect to the synagogue was the circular space round it. This was sometimes laid out as a garden; but, even when merely a court-yard, it lent itself to the marriage and other processions in which the Jews were adept.

LITURGIA.—See under ART (Jewish).

I. ABRAHAMS.

ARCHITECTURE (Mithraic).—According to Porphyry (de Antro Nymph. 6), Zoroaster had consecrated to Mithra in the mountains of Persia ‘a cave adorned with flowers and watered by springs,’ and from that fact the adherents of the sect had derived and kept the custom of performing their initiatory rites in natural or artificial caverns. Modern investigation has confirmed the correctness of this statement. The worshippers of the Persian god, in order to carry on their worship, often took up their abode in rock-caves, and chose by preference for their sanctuaries places where a spring rose, or at any rate was drawn from the neighbourhood. The origin of this custom is more doubtful. Does it go back, as Porphyry states, to ancient Zoroastrianism? We know that in the time of Herodotus the Persians offered their sacrifices on the summit of the mountains (Herod. i. 131). Caverns may have been the first, and perhaps the only, places where they put up their gods under shelter (cf. Strabo, xi. 7, 5, p. 510 C). On the other hand, caverns have served as temples in so many different religions and among so many different races (Bötticher, Tektonik der Hellenen, ii. 414 ff.; W. K. Smith, Rel. Sem., p. 197 f.) that it is difficult to ascertain which influence may have enforced the universally obeyed law that Mithra must be worshipped in subterranean spelaeae.

Sometimes the followers of the sect chose their abode in a spacious cavern, whose mouth then marked the threshold of the sanctuary which was entirely contained within it. Sometimes, on the other hand, the narrower caverns served simply as a shrine to the god, which was set up before their entrance. When a subterranean cavern was unobtainable, they sometimes chose a circular group of rocks which could be roofed in, or they hollowed out the side of a hill, so that at least two of the four sides of the rock were for the temple, the other two for solid rock. Often they were even content to carve the image of the bull-slaying Mithra on a vertical rock, which served as a support for a structure of which it formed the back wall.

Thus we see the sanctuary gradually becoming separate from the mountain which at first enclosed it completely, and we can accordingly follow the successive stages of a development which little by little rendered the temple independent of the rock, from which it was originally inseparable.

A last step in the evolution of the Mithraeums in the plains, far from any rock-cave or natural spring, there arose ‘mithreums’ without a natural support on any side. But they were always built in imitation of the caverns which they superseded, and they continued to bear the technical name of templum (Justin Martyr, Dial. com. Tryph. 8; Porphyry, de Antro Nymph. 6; Tertull. de Corona, 15; for inscriptions, cf. Cuman, Mon. Myst. Mithra, ii. 536), although sometimes they received the more general name of templum. These two terms, like sanctus, sanctuana, androm (or cela) and sacraeum (or on rare occasions are substituted for them), are used to denote one and the same kind of structure, as has been definitely shown by M. Wolff (Das Mithrasheiligtum).

We possess at present the exact plans of a score of these subterranean temples which have been drawn in Italy, in Pannonia, in Dacia, in Britain, and especially in Germany. Their likeness to each other proves that an almost uniform type was everywhere adhered to. In these temples, the orientation of which is very variable and not settled by any liturgical rule, different portions may be distinguished. They are enumerated in an inscription of Apulum (CIL ii. 1096) which mentions ‘cryptam cum portico et apparatorio et exedra.’ A portico (porticus; CIL ii. 3960) faced the street. It was doubtless composed of a colonnade surmounted by a pediment. Thence one entered into a large hall, the pronaos, situated on the level or above the level of the ground (CIL xiv. 61). Through the wall at the back a door led as a rule into a smaller hall, the apparaetorium (CIL iii. 1096, 3960), that is to say, doubtless, the sanctuary, where preparation was made for the celebration of the mysteries. From this sanctuary, at certain times, or perhaps immediately, it was possible to descend through a flight of steps by which descent was made into the sanctuary proper, the crypta. This crypt imitated the appearance of the gloomy caves which it represented; occasionally the walls were made to look like rock, and the crypt was always roofed with a vault, in which the worshippers saw an image of the sky. This was sometimes constructed in masonry, e.g. at St. Clement in Rome (Cuman, op. cit. ii. No. 19, fig. 50); sometimes the effect was produced by the effect of a vault, in which the worshippers saw an image of the sky. It may be represented as an image of the sky as a vault, in which the worshippers saw an image of the sky. This was sometimes constructed in masonry, e.g. at St. Clement in Rome (Cuman, op. cit. ii. No. 19, fig. 50); sometimes the effect was produced by the effect of a vault, in which the worshippers saw an image of the sky. This was sometimes constructed in masonry, e.g. at St. Clement in Rome (Cuman, op. cit. ii. No. 19, fig. 50); sometimes the effect was produced by the effect of a vault, in which the worshippers saw an image of the sky. This was sometimes constructed in masonry, e.g. at St. Clement in Rome (Cuman, op. cit. ii. No. 19, fig. 50); sometimes the effect was produced by the effect of a vault, in which the worshippers saw an image of the sky. This was sometimes constructed in masonry, e.g. at St. Clement in Rome (Cuman, op. cit. ii. No. 19, fig. 50); sometimes the effect was produced by the effect of a vault, in which the worshippers saw an image of the sky.
three parts—in the middle a passage of an average width of 24 metres, and on the two sides massive ledges of masonry stretching along the side-walls of the temple. The average height of these was about 80 centimetres, and the width about 14 metres. Modern archaeologists have applied to the passage the name cælia, and to the ledges that of podia, but these terms do not appear in the inscriptions, like the Latin names previously cited. Attempts have been made to compare this arrangement of the 'mithraea' with the division of churches into three parts, but the likeness is purely superficial. The podia, whose upper surfaces are slanting and whose width is not great, were occupied by the worshippers, who knelt there, while the cælia was reserved for the officiating priests. Here it was that the victims were sacrificed, and that the ceremonies of initiation took place. In a 'mithraeum' of Ostia (ib. 84d), 7 semi-circles marked in the pavement undoubtedly indicated the places where the priest paused to invoke the planets represented on the sides of the lateral ledges. In other parts certain receptacles appear to have held the water employed in purifications.

At the end of the sanctuary facing the entrance there always rose a great piece of sculpture, the so-called Jason of Mithras facing the bull (cf. art. ART [Mithraic]), and before that were generally placed two altars, one of which seems to have been especially dedicated to the sun and the other to the moon. The extremity of the sanctuary, where the great bas-relief of Mithras was placed, had no absolute fixity in its arrangement. Sometimes it occupied an apse (absidata, CIL iii. 988; exedra, iii. 1090), making a projection in the exterior wall at the back; sometimes, on the other hand, it was placed in the open court, and the sculptured niche or temple was placed. Occasionally the bas-relief, revolving on itself in this niche or apse, could, during the services, present successively its two sculptured sides to the worshippers. There were also cases when the architect dispensed with these additions. The wall at the back was plain and the sculpture was made to fit into a recess in its thickness, or to rest upon a base. The part of the temple, generally raised above the rest, where this sculptured display in the open court could be seen from without, was hollowed out; but the inner shrine accessible apparently only to the priests, and sometimes screened off by wooden railings.

It is difficult to settle the origin of the arrangement in the 'mithraea' which we find in vase sculpture; it borrows its most important elements from the sanctuaries of Mithras in the East, and we do not know if the plan adopted in Europe was already followed there. We are, however, in a position to state that the portico and the pediment were imitated from the Greek temples, which transmitted their Greek name, pronaoi, to this forepart of the building. We may surmise that the apse, which, moreover, is often wanting, is borrowed from the Roman basilicas, but the interior arrangement of the crypt remains as yet inexplicable. The division of the crypt into three parts of unequal height does not offer, so far as the present writer knows, any likeness to any other kind of ancient architecture, and its resemblance to the early Christian basilicas is purely superficial. We must not conceive of these 'mithraea' as structures of vast proportions. Covered as they were by a single roof, they could not easily be enlarged. The most considerable of them are 20 metres in length by 6 to 8 in width, and not more than 2½ metres thick. People could find room on the stone ledges. Thus there are often several temples collected in the same place, even in very small towns (five at Ostia, four at Aquinum and Apulum, three at Hedderenheim and Friedberg, etc.).

These small buildings were brilliantly ornamented. In the richest sanctuaries, marbles and mosaics covered the ground, the walls, and even the roof; in the poorest, stucco-work and plaster-coatings decorated with brilliant colours sufficed. When the lamps were lit, this gorgeous ornamentation was intensified by harmonies with the varied colours of the bas-reliefs and the statues in order to produce a more vivid effect.

Often, instead of building a temple for a body of worshippers, wealthy Romans used to place a cella at their disposal. The traditional formula of the 'mithraea' had then to be modified in accordance with local peculiarities. The division of the crypt into three parts was always preserved, but the accessory constructions, the pronaos and the apse, disappeared. The apse was removed to a contiguous hall, which was used as a sacristy. It is thus often difficult, in examining ruins, to ascertain where the owner's oratory ended and where his kitchen commenced.

LITERATURE.—Wolff, 'Uber die architektonische Beschaffenheit der Mithraskleidungen' in Darstellung der Kunst, i. 1882, pp. 58, 101; Cumont, Textes et monuments figurés relatifs aux mystères de Mithra (1893); Moret, Mithra et le monde romain (1899); Ritter, Mithraismus in Kretzschmar, Cassel, 1895, pp. 88, 101; Cumont, Textes et monuments figurés relatifs aux mystères de Mithra (1893); Kroll, The Mithraic Temple of Apulum, i. 54-67, of which we have given a resume here. Nothing of importance has been found since the publication of this book. Attempts have been made to identify the principal dice-throwing on the wall (cf. the diceboard, or stele [Borovicus] on the Roman Wall [Bosanquet, Archaeologia Britannica, 1904, xxv. 355 ff.], and of Salzburg [near Frankfort], which have been re-constructed by the architect Jacobi, and can be visited.

FRANZ CUMONT.

ARCHITECTURE (Muhammadan).—Introduction.—Muhammadan architecture is one of the most striking creations of the human mind, since, like music, it is capable of producing effects impossible with other things, as sculpture and painting do, but from successive abstractions, of relations, of emotions and associations which affect the least material portions of our being. Architecture is an art whose origins lie far back in the past, and yet even at the earliest period the fundamental characteristics of architectural composition were clearly defined. This remarkable fact is due to the simplicity of the component parts, the regularity of the plans, the grandeur of the façades, and the magnitude of the sanctuaries dedicated to the Deity. As a matter of fact, it is in the construction of temples that the first architects worthy of the name produced their first works. The temple is thus the first building on which the newly-developed human spirit desired to impress a more lofty character than that required to satisfy the material needs of the utilitarian. Men aimed at giving to the building intended for the worship of Deity a character superior to that which had occurred to the ordinary human dwellings, but to that of royal palaces.

When Islam came on the scene, the human race had already travelled far from its origins, and the religious idea had already found diverse expression in the monuments of Chaldea, Assyria, Babylonia,
Egypt, Persia, India, Greece, Eturia, Rome, and Byzantium. Thus the first Muhammadan temples, the first mosques during the early centuries of the Hijra, assumed no other forms than those derived from imitation of monuments already existing where the new religion was established by right of the first ascenders of Islam, therefore, had no other means of expression than the procedure or tradition of the art of the Byzantines, Copts, Sassanians, or Indians. But these pre-existing elements were applied to new purposes: the new religion had neither mysteries, nor antiquities, nor jurisprudence so called. None of its temples was to enshrine the wonder-working image of a Deity, or of a saint, or the Divinity itself contained in consecrated elements. The mosque was only a place of prayer, of preaching, and, up to a certain point, of instruction. It was, properly speaking, a place of meeting in the general sense of that word (the jami, jama, gama). The first mosque at Medina, where the Prophet collected his earliest disciples, was an enclosure open, having the gable, by a flat roof supported by wooden pillars covered with plaster, and the Prophet ascended some steps in order to preach.

Here, then, we have in their simplest form the elements of the mosque—a court, porches to shelter the faithful, the pulpit for the imam, and the qibla, or the direction in which one ought to turn in order to have one's face directed towards the central shrine, the Ka'ba of Mecca. This Ka'ba, the real sanctuary of Islam, and the only one which has a supernatural significance, is not a mosque. It is the 'House of God' built by Abraham, and there is set in the side of it a miraculous and Divine stone. It is the Egyptian 'nose,' or rather the Jewish 'ark,' where the invisible and indivisible God is present. But it is not the prototype of the mosque. The form specially typical of the mosque is the pillared hall, like the Amr mosque at Cairo, the mosque of Sidi Othba at Kairwan, the primitive al-Aqsa mosque at Jerusalem, the mosque of Cordova, the great mosque of Samarra, etc. The origin of this form is easily explained when we remember that in order to recite their prayers the Musalmans are arranged in ranks parallel to the wall at the end of the mosque, where the mihrab, the place of the direction of Mecca. This is the original and specially Islamic plan of a place for worship.

The Muhammadans, whose energetic advance had, so to speak, extended the limits of the ancient world, had continued their progress from the Pillars of Hercules to Java; and from the early centuries of the Hijra the empire of Islam united under one faith the most widely differing nations. The very diversity of the races conquered by Islam was destined to give rise to a multiplicity in Muhammadan architecture, for however the new religion was planted, it found itself face to face with fully formed civilizations possessing a well-defined architecture, and often very skilful workmen. The result is that the architecture of the early Muhammadan buildings was the native architecture, more or less strongly affected by new ideas, and without the representations of living creatures. We ought then to divide the study of Muhammadan architecture into as many sections as these distinct nationalities. But it is not the province of this work to speak of those divisions, which may still be studied in the productions of the nomadic tribes from the extreme west of Morocco to the centre of Turkestan—which is based upon a similar tradition, and sometimes reaches a high pitch of refinement, has not existed without exercising a remarkable and important influence on the internal
and external ornamentation of buildings. Of this we shall find numerous examples throughout the course of this article.

The Arab, a nomad in a special degree, developed, among all the nations where he planted his tent religion, a taste for distant journeys, and the prescribed ritual of the Meccan pilgrimage; and the external ornamentation of buildings. Of this we shall find numerous examples, and we cannot fail to find in it the most striking token of this. Arabic literature, so rich in stories of travel, also witnesses to it. This pilgrimage, binding on every Musalman, has brought into contact the most widely differing peoples; and it has been, so to speak, by a kind of reciprocal interfusion that the most heterogeneous civilizations have seen certain of their elements mix with foreign ones to form Musalman civilization.

From the point of view of the arts these reciprocal influences were not less remarkable. The artists who made the pilgrimage to Mecca, having arrived in the Holy City, and being impelled thereto by an instinct of affinity, certainly did not fail to enter into relations with the fellow-travellers who were also there on pilgrimage. From this there undoubtedly arose an interchange of ideas and of skill; and all the more because, this journey being excessively laborious, the less wealthy of these travellers could not return, who were obliged to halt on their way in order to work at their trade to provide the means necessary for accomplishing the next stage of the journey. It is, on a much larger scale, a similar experience to that of the travelling merchants of Mesopotamia, Syria, Egypt, Persia, and even of Spain, an influence which certain passages of the historians explain to us, and of which we obtain a good idea from the observations to be made on many of the decorative details.

In this preliminary to a close, we must dwell on one very remarkable aspect of Musalman art. It is a common, indeed hackneyed, remark, that Oriental luxury is the standing example of a degree of wealth and extra-ordinary richness rarely reached in other civilizations. This is, in fact, characteristic of Islam, and is explained partly by the peculiarity of the Musalman mind and partly by the events of history.

The chief characteristic of the Musalman mind, although not the absolute fatalism so often charged against it, is entire submission to the will of God. This submission accordingly implies the possibility of reverses of fortune which can in a short time destroy the greatest prosperity. The practical effect of this is to incite men to enjoy as rapidly and as intensely as possible the transitory possessions which fortune places at their disposal. The precariousness of absolute power and the enormous resources which despotism placed in the hands of the Khalifs both had the same result. Despots, like common folk, were obliged to enjoy rapidly the means of luxury which they had within their reach. To this may be traced the extremely luxurious character of Musalman architecture, and also, unfortunately, the want of solidity in most of the private dwellings, palaces, mansions, or country-seats. The buildings devoted to worship, or built upon plans inspired by religious ideas, were, as a rule, more durably constructed.

1. The Syro-Egyptian school.—This division is treated in a separate article—ARCHITECTURE (Musalman in Syria and Egypt)—and will not be discussed here.

2. The Moorish or Maghrib school.—The term 'Maghrib' indicates the whole of Northern Africa lying, of course, west of Egypt. Two elements have contributed to form the Musalman art of the Maghrib: on the one side the local traditions, Roman, Romano-Berber, and Byzantine in Africa, Roman, Romano-Iberian, and Visigothic in Spain; on the other hand, on the one side the Byzantine architecture which appears to have been in the first place the Byzantine architecture of Syria, for certain Syrian forms seem to have been introduced directly into Africa. To be convinced of this, one has only to compare the Arabid gates of the great mosque of Tunis and the eastern façade of the great mosque of Sfax with the lateral façades of the great church of Qalat Simân (de Vogüé, Architecture civil et religieuse dans la Syrie ouest et le Hauran du xixe siècle). Another source of inspiration borrowed from the East, but this time from the Musalman East, is the plan of the mosques. The present writer has shown in his manual of Architecture Musulman (Manuel d'art musul- 

mane, Paris, 1907, i. [History of Architecture]) the likeness existing between the plan of the Zituna mosque at Tunis and that of the great mosque of Damascus, which itself is suggested by the plan of the church of St. John at Qalat Simân (de Vogüé, op. cit. ii. pl. 139), two of the great aisles of which were joined at the ends by a transept running at right angles to them. This comparison has never been made so far as the present writer is aware; it is, however, extremely remarkable. G. Marçais has mentioned in the Revue Africaine the numerous ideas borrowed, according to the Arab historians of Spain, from the Arab monuments of Syria by the architects of the Khalifis of Cordova. This process of borrowing was quite natural because of the Syrian origin of the Omeyyads of Spain. But the prototype of the great mosque of Cordova cannot be looked for at Damascus; its plan presents no resemblance to the Syrian churches of the same period. It is certain we find it at Jerusalem in the plan of the chief mosque al-Aqsâ. Guy le Strange, in his work, Palestine under the Moslems (London, 1890), has given a restored plan of it according to the description of M. Ducqadis, which shows its arrangement in a.D. 985. The most characteristic feature of the mosque is a number of great arches in breadth and 21 in length; that of Cordova 11 arches in breadth and 21 in length (at least originally); both have side-gates on the eastern façade. Idriši, quoted by le Strange (op. cit. p. 108), seems to have noticed this likeness, which le Strange has perfectly understood (p. 103). As to the decoration of the mosque at Cordova, it is borrowed partly from Byzantine art, and partly from Arab or Syrian or Mosopotamian ornamentation. This is naturally not longer doubtful, so that we can ascertain the origin of the serrated arches used systematically in the great mosque at Cordova, and recurring in the palace of Harûn ar-Rashid at Racco (Saladin, op. cit. p. 323, fig. 321), the al-Ashik palace at Samarra (ib. p. 325), of which General de Beylis† was the first to publish a very correct view (de Beylis, Promes et Samarra, Paris, 1907, pl. xiii.), and in the interior archivolts of the southern windows of the great mosque of Samarra (ib. p. 81). The horse-shoe arch is also of Oriental origin—Mesopotamian or Sasanian (exemplified in the secondary gate of the Palace of | It was the mosque re-built by 'Abd al-Malik towards 691 of our era, and restored in 746 by al-Maghrib. | Cf. also the work of Hirschfeld published since that of General de Beylis.
ARCHITECTURE (Muhammadan)

Ctesiphon; see Herzfeld, Samarra), for it is found in Persia at Firuzabad and at Täq-i-Girra. This mosque—plan of which we have just been speaking is, to a certain extent (except in the proportion between the breadth and the length of the building), that of the mosques with aisles, like the Amr mosque at Cairo, and those of Samarra, which de Beylié and Herzfeld have described, and that of Abü-Dilîf which de Beylié was the first to portray, but these are the latest of the mosque of Cordova. They are mentioned here as giving the characteristics of the typical plan of the mosque of Cordova. The illustrations which we know at present regarding the most ancient Muslim monuments of Mesopotamia; for the monuments of Samarra and of Abü-Dilîf owe absolutely nothing to Syrian architectural traditions, which are based upon the use of dressed stone. These, on the other hand, are constructions of brick, and consequently connected with the pure Mesopotamian tradition, though strongly influenced by Sasanian art.

Thus, then, Spain appears to have been more directly influenced by Syria and Mesopotamia than was the case with Northern Africa. The great mosque of Kairwan in Tunis, for example, borrows an ancient or Byzantine character from all the ancient and Byzantine fragments which have been employed to construct it in the eastern side of the mosque, in the gates on the ground floor. It appears to have been employed there in a systematic fashion, while in the Christian monuments of central Syria and in certain buildings of Armenia it appears to have been used only in an intermittent way. The most ancient examples of the use of this arch may be seen in Tunis in the inner window of the maqṣūra of the mosque of Sîdi Okba, at Kairwan, in the central motive of the interior façade of the Zituna mosque at Tunis, and in the eastern side façade of the great mosque of Sfax. This arch, which has been justly compared in shape to a horse-shoe, has been systematically used in the celebrated mosque of Cordova. It is found in the windows, the gates, and the interior arches, whether they are many-lobed or not.

Finally, local Christian art, whether African or Spanish, also had much influence on the architecture of the Maghrib. It is impossible to give a general outline of this influence. The two Christian communities of Morocco and Spain, though they have never been connected with each other, have shown a great affinity of taste, and the same applies to the architecture of the Maghrib and of Spain. The Moorish artists, who were of Moorish descent, have been influenced by the architecture of the Byzantine and the Roman, and have erected a number of magnificent buildings, which have been preserved to this day. The most important of these are the mosques of Kairwan, of Sfax, and of Sidi Okba, at Kairwan, which have been erected in the 12th century. The Moorish architects have used the same form of the mihrab, but above all in the admirable

enamelled mosaics executed on the spot by the Byzantine artists who came for the purpose from Constantinople.

We may here recapitulate the chronology of these early monuments of the Maghrib:

As early as the 8th century, the new style in Spain seems to have assumed a distinct character; the great mosque of Cordova is obviously a building of a style absolutely and clearly defined. The contrary, we do not find in Northern Africa, whether in Tunis, or Algeria, or Morocco, such a homogeneity of style in the first Arab buildings. The successive restorations of the mosque of Sidi Okba at Kairwan, the traces of which are still sufficiently visible on the building itself, the Aghlabid portions of the Zituna mosque at Tunis, of the great mosque of Beja, and of that of Sfax at Tunis, in no way bear any sign of a well-defined style. The reason for this must very probably be found in the fact that the commencement of the Umayyad Khalifate of Cordova constituted a political and social regime on a sufficient scale to give to the country such prosperity that the magnificence of the buildings far surpassed those of Africa, which was then a much poorer country. On the other hand, the continual relations of Cordova with Syria, and the arrival in Spain of a great number of followers of the Umayyads, made Arabized Andalusia at this time, so to speak, a second Arabized Syria. The proofs of this are abundant in the Arab historians and even in the buildings.

In the 11th century, the influence of Middle Asia, that is to say, of Mesopotamia and perhaps even of Persia, was making itself felt in Africa in the style of the buildings of Qal'a of the Beni Hammâd, and probably in those of Bougie, which are unfortunately in an advanced stage of decay. In the central motive of the interior façade of the Zituna mosque at Tunis, and in the eastern side façade of the great mosque of Sfax. This arch, which has been justly compared in shape to a horse-shoe, has been systematically used in the celebrated mosque of Cordova. enamelled mosaics executed on the spot by the Byzantine artists who came for the purpose from Constantinople.
ARCHITECTURE (Muhammadan) 749

A short enumeration will give the chronological sequence of these.

Christian

From 574 A.H. (A.D. 1178) to 590 A.H. (A.D. 1194)

Yaqūb al-Manṣūr covered Morocco and Andalusia with numerous buildings. In Morocco, Chella, Rabat, Marrakesh, Centa, Alcazar-Kabir, Manṣūra, mosques, fortifications, and buildings of every kind are ascribed to him. In Spain, and especially at Seville, he built mosques, qaṣbas, fortifications, quays, and aqueducts, and he completed the great mosque recently founded at Cordova. The surviving standing almost entirely intact. The Kutubiya of Marrakesh, the tower of Ḥasan at Rabat, the minaret of Chella, and its fortified enclosure may be considered the most perfect types of this fine architecture. In A.H. 586 (A.D. 1190) the Alazara of Seville was founded, but the 13th cent. was destined to inaugurate for the Moorish style a period of luxuriance and florid abundance quite different from the preceding one.

The chief of the Achemenians with that of the Abbasids is still wanting. We do not know what sort of fictile art was used in the architecture of the Arsacids and the Sassanians, although from a passage in the Life of Apollonius of Tyana by Philostratus we learn that when the latter wrote, enamelled earthenware still formed one of the most characteristic components of the architectural decoration of the monuments and palaces of Babylon.

This digression, though somewhat long, on the use and origin of enamel-work in Moorish architecture, is, however, indispensable in order to show how slight a link Moorish art is connected with that of the Mesopotamian East. We have seen that at Ashik-Khān, as at Kufa, the Abbasid monuments the many-lobed arches to the use of which Moorish architecture owes one of its most elegant characteristics. The plan of the Moorish mosque was originally the plan with aisles, as in the 'Amr mosque at Cairo, the plan, which recurs in Tunis, in Algeria, and in Morocco, slightly modified by the broadening of the central nave and the aisle which runs along the miḥrāb-wall, undergoes a gradual alteration. Already in the Qa' building of the Beni Hammād an enclosed chancel was outlined before the maqāṣīra. This is only slightly indicated in the great mosque of Tlemesn (550 A.H. = A.D. 1156), but is clearly defined two centuries later in the mosque of Manṣūra at Tlemesn (737-744 A.H. = A.D. 1337-1344).

It comprises the following: a forecourt commanding the entrance, side porticoes, in the court, a large hall with parallel aisles, and at the end the maqāṣīra, or chancel, in front of the miḥrāb, marked by a cupola crowning a square hall. This is the same arrangement as exists in principle in the great mosque of Cordova, but at Tlemesn it is differently emphasized. This maqāṣīra, instead of seeming to be a mere adjunct of the building as at Cordova, is at Tlemesn an integral portion of it, and forms, so to speak, the main feature, thus indicating in a formal way the real sanctuary of the mosque.

As this article is limited chiefly to the study of the religious monuments, we shall dwell on civil architecture only very briefly. The buildings, ancient specimens to copy, for the present writer once sketched a fragment of white marble inlaid with coloured marbles found at Lixus (Morocco) by H. de la Martinière. This fragment dates from the 5th cent. of our era, and evidently belongs to that series of works in marble and mosaic which served as models to the Arab workmen. This work in faience mosaic, or rather in marquetry, was afterwards succeeded by square tiles, on which pieces of enamel in slight relief showed the usual ornamentation. Later they contented themselves with tracing in the ground on the white enamel a polygonal design with tracery worked in different colours. At a still later date the purely geometrical ornamentation was replaced by a floral decoration or one of some conventional pattern. In Persia and in Turkestan we shall be able to trace a similar development in ceramic decoration. There is no doubt that this art was of Asiatic origin. The similarity between the Spanish enamelled decora-
tions and those of the famous frieze of arches in the apadāna of Susa is obvious. On the other hand, the likeness of the enamelling of the most ancient enamelled vases found at Racca (Mesopotamia) to the enamel-work of the Maghrib at this period leads us to the conclusion that this Asiatic origin, since we may confidently assign the most ancient enamel-work of Racca to the period of the Abbasids. But the intermediary link which would enable us to connect the enamel ornamentation found in the mosque of the Beni Hammād with that of the Abbasids is still wanting. We do not know what sort of fictile art was used in the architecture of the Arsacids and the Sassanians, although from a passage in the Life of Apollonius of Tyana by Philostratus we learn that when the latter wrote, enamelled earthenware still formed one of the most characteristic components of the architectural decoration of the monuments and palaces of Babylon.

This digression, though somewhat long, on the use and origin of enamel-work in Moorish architecture, is, however, indispensable in order to show how slight a link Moorish art is connected with that of the Mesopotamian East. We have seen that at Ashik-Khān, as at Kufa, the Abbasid monuments the many-lobed arches to the use of which Moorish architecture owes one of its most elegant characteristics. The plan of the Moorish mosque was originally the plan with aisles, as in the 'Amr mosque at Cairo, the plan, which recurs in Tunis, in Algeria, and in Morocco, slightly modified by the broadening of the central nave and the aisle which runs along the miḥrāb-wall, undergoes a gradual alteration. Already in the Qa' building of the Beni Hammād an enclosed chancel was outlined before the maqāṣīra. This is only slightly indicated in the great mosque of Tlemesn (550 A.H. = A.D. 1156), but is clearly defined two centuries later in the mosque of Manṣūra at Tlemesn (737-744 A.H. = A.D. 1337-1344).

It comprises the following: a forecourt commanding the entrance, side porticoes, in the court, a large hall with parallel aisles, and at the end the maqāṣīra, or chancel, in front of the miḥrāb, marked by a cupola crowning a square hall. This is the same arrangement as exists in principle in the great mosque of Cordova, but at Tlemesn it is differently emphasized. This maqāṣīra, instead of seeming to be a mere adjunct of the building as at Cordova, is at Tlemesn an integral portion of it, and forms, so to speak, the main feature, thus indicating in a formal way the real sanctuary of the mosque.

As this article is limited chiefly to the study of the religious monuments, we shall dwell on civil architecture only very briefly. The buildings,
however, which the Moors have left in Spain—
the palaces of Tunis, of Algiers, of Morocco, of
Fez, and of Mequinez, cannot be passed over.
The architecture of the houses of the Maghrib
contains at the same time suggestions from Roman
and Byzantine houses, and very probably also from
houses of Mesopotamia and Persia. We do not
know how many ancient Arab houses in the North of
Africa, but the persistence with which the plan
of these houses is reproduced, with very few vari-
a tions, leads us to believe that the prototype has
never lacked the features with which we are famil-

dar: and, we know that in the same place
contains Fez, of Algiers, of Morocco,
mosque of Isfahan, we easily
see how Malik Shah, Shah Tamasp, and Shah
Abbas, in their successive enlargements of the

From the earliest period the palaces have been
buildings of great magnificence, and the descrip-
tions of the Arab historians give us full informa-
tion regarding the curious style in which they
were decorated and furnished. Of these we may
mention, by way of example, the famous house
of Medinat-az-Zahra near Cordova, the palace of
Mustanṣir In Tunis (described by Ibn Ḥalda, Hi-

dory of the Berbers), which possessed elevated
pavilions, cupolas, kiosks, aqueducts, fountains, and
large basins, forming, as it were, liquid mirrors.
These were also to be found in the Sasanian palace
of Qaṣr-i Shirin, and have remained from that time
a traditional ornament in Persia. Mustanṣir's
palace also contained pavilions with marble columns
and wainscoting of marble and faience mosaics.
The palace of the Sultan Hamadīt of Bougie,
and those of Fez, Morocco, and Mequinez, were
not less magnificent. We can have, so to speak,
an encaustic demonstration of the splendour to which
Moorish architecture had attained in the Alhambra
of Granada, of which the greater part is still
standing, although by an unaccountable whim
Charles V. caused the south wing to be destroyed in
1562, and build in its place a palace of lamentable
mediocrity.

Part of the plan of the Alhambra is an exten-
sion of the plan of the Arab house. There are
always numerous structures surrounding courts
bordered by porticoes, with fountains or large
uncovered basins. There is no need to enlarge,
in addition, on the lavishness and taste with which a
great wealth of constantly varied decoration has
been expended on every portion of this delightful
palace, which is the glory of Granada and of Ar-

3. The Persian School (Persia, Mesopotamia,
Turkestan, etc.).—We have already spoken of the
mosques of Mesopotamia, Samarra, and Abu-Dīlīf.
In Persia the style is quite different. Yet the
most ancient Persian mosques whose plans are
known to us are built with aisles like the
primitive mosques. The arrangement of some of
these is still recognizable in the plan of the mosque at Isfahān built in 142-143 A.H. under
the Khilafate of the Abbāsid al-Maṣūr; but in this
plan there is a peculiar arrangement: in the court
there is an isolated structure on a square plan.
Dienalofsky describes a similar square pavilion in
the centre of the old mosque of Shiraz, built in A.D. 876
by Amr ibn Laith. This pavilion is evidently
a reminiscence of the Ka'ba of Mecca, for it is known
at Shiraz by the name of Khuda Khan, or 'House
of God.' We should mention also the Juma
mosque of Kazvin, re-built by Ḥasan ibn Anšād in
A.D. 790 on the plan of the ancient mosque erected
in the early years of the Hijra by Mūhammad ibn
al-Hajjāj.

At a period which it is as yet impossible to define,
a remarkable development affects the arrangement of the Persian mosques: on the four sides of the
court of the mosque there open enormous porches of
great height and in the form of an immense arcade.
These fāsads, as they are called, are certainly a reminiscence of the fāsads of Chosroes, the Tāj-i
Kı̄sar̃ of Ctesiphon, the magnificence of which had
astonished the first Arab conquerors, and the
recollection of which was always present in the
minds of Oriental monarchs when they were erect-
ning great buildings. Mūhammadan historians, in
fact, when they wish to emphasize the splendour of a
building raised by one of their monarchs,
always compare it to the fāsads of Chosroes, to
the mosques of Mada'in, etc. In the plan of all the
Persian mosques this detail (the fāsads) always re-appears, and we find the same architectural feature in certain mosques of Turkestan and espe-
cially of Samarcand—mosques which also serve the
purpose of madrasas, i.e. schools or academies,
or rather universities. When we closely examine
the plan of the Juma mosque of Isfahān, we easily
see how Malik Shah, Shāh Tamān, and Shāh
Abbās, in their successive enlargements of the
building, changed its original appearance in order finally to give it that definite character which has been, so to speak, the type to which the Persian mosques have conformed, and which is so admirably condensed in the plan of the imperial mosque of Baghdad erected under Shah Abbas. This latter may be considered as the archetypal type of religious architecture in Persia, where we find no other mosques with aisles, but only the four great _liwans_, one of which serves as a porch of entry, and the other three as distinct places for prayer, each possessing its own _mihrāb_.

We see, accordingly, that just as the Persians sharply divided themselves from the majority of the Muhammadans (who are Sunnites, forming a sort of heretical sect by themselves), since they are Shi'ites and therefore abandon the purely Muhammadan tradition, they gave to their religious architecture quite a different character from that of the buildings to be seen in Syria, Egypt, and in the Maghrib. When the mosques are deprived of a central court, as was the case with the blue mosque of Tabris, the praying place is always square-shaped, and is led up to by a large square hall surrounded by very broad galleries. Then we have nothing left to recall the primitive mosque, whose form is derived from the Persian, Hindu, or Sasanian, by Chosroes II, the latter built along the wall of the _mihrāb_, which allows the crowd of the faithful to line out along this wall and in files parallel to it, but with faces always turned in the same direction. The tendency in Persia was rather to introduce the idea of uniting the worshippers in a closed sanctuary in order to secure for them the isolation which favours the collectiveness of thought and prayer.

We see, therefore, that by a kind of natural development through which the Persian mosque passed, while tending more and more towards a closed sanctuary, would produce successive forms approaching gradually those of certain Christian churches—those of Armenia, for instance.

The earliest Muhammadan architecture in Persia has also quite a special character. The leading elements in Persian architecture are, in fact, almost entirely borrowed from local traditions, that is to say, from the architecture of the ancient Persians and the Sassanians. (1) The tapered column accompanied by flat ceilings and terraces, which seems to be derived principally from Assyrian and Median art. (2) The arch carried on drums or on columns standing in sets of four. (This arrangement was afterwards transplanted to the Nidges, but strengthened by four joined columns.) Since the arch and the pillar are constructed of rubble-stone or more frequently of bricks, we cannot doubt that the origin of this system of architecture must be sought in Chaldaea, whence it passed into Persia. As to the arch of dressed and cut stone and structures with binding masonry, they seem to be of Armenian origin, and to have passed from Armenia into the North-west provinces of Persia, where alone they are preserved.

The arch constructed of bricks was a matter of choice for the Persians; and this system seems to have been chosen because of the scarcity of timber in the greater part of the country. In this art,

... The Sunnite mosque seems to be derived from the mosque of Medina, which originally consisted only of a wall with a flat roof supported by very rude porticoes. The brick mosque, on the other hand, seems to be derived from the mosque of Mecca. In the centre of the court (haram) is the _ka'ba_, the _House of God_, an imitation of the Ka'ba, and places for prayer are arranged on the four sides of the court.

* This mosque was certainly erected by a Sunnite monarch, but the architect who constructed it has drawn his inspiration somewhat from the architectural traditions of Persia. Compare this plan with that of the mosque of Mir Buzurg Kawkām-ad-din, _at Amul_ in _A.D._ 1379.
are built to that of the caravanserais with which Persia is covered to escape any, any more than its similarity to the plans of the great Persian mosques. If we could ascertain the most ancient types of these buildings, for example the Persian or Sasanian caravanserais, we should perhaps have the origin of that cruciform plan which the Persian architects have been able to turn to such excellent account.

One of the most remarkable madrasas which have been built in Persia is the Madrasa-i-Shah Sultan Husain at Isfahan (A.D. 1635). As a caravanserai it has been turned into a mosque, and, at the same time, by merely examining the two plans in juxtaposition we understand what a striking likeness exists between them.

This arrangement has been reproduced in the great mosque-madrasa of Samarqand and Bokhara, and indeed in those of all the large towns of Turkestan, whence it is certain that the first architects of these buildings were Persians. In the case of some of them the proof is ready to hand. The madrasa Shir-Dar near Samarqand is the reduction in scale of a portion of the Persian madrasa; the mosque, madrasa, and tomb of Bibi Hanum at Samarqand is the expansion of it on a colossal scale (the plans are given by Schubert von Soldern, *Baukunst* von Samarkand, 1898).

The tombs and sepulchral monuments in the Persian style of architecture also quite a special character. In the Maghrâb they generally consist merely of a square structure surmounted by a cupola, which seems simply a detached portion of what ordinarily constitutes a mosque, for we have seen that generally the entrance is crowned by a cupola and the mihrâb of the mosque by another; this is, at any rate, the arrangement which exists in the most ancient mosques of Tunis (Kairwan, Tunis, Gaïsa, Beja, *Sfax*) and of Morocco (as in the Kairouin mosque at Fez).

In Persia these buildings are of entirely different character. They consist of square, polygonal, or cylindrical towers covered with conical or pyramidal roofs, or crowned by a bulb-shaped cupola, *e.g.* at Maragha, Nishabur, Demavend. At Herat and in the Malāy, in the province of Sanjar, the plan is even more complicated, and sometimes, as in Persian Mesopotamia, these tombs of polygonal construction are crowned by cupolas composed of a series of stalactites superimposed on each other, but the general effect is striking. Such are the tomb of Zubaâda at Bagdad, and the tomb of Daniel at Suza.

Around these tombs of various styles are grouped different buildings, as, for example, at the tomb of the Sheikh Sufi at Ardâhil; but the finest of all these sepulchral monuments is certainly the tomb of Timur or Gur Emir at Samarqand, built in 808 A.H. (A.D. 1405) by Muhammad, son of Mahmud of Isfahan. The whole effect of this impressive monument is very remarkable. The tomb, properly speaking, consists of a great square hall, the sides of which are grooved with large square niches, and which is crowned with a bulb-shaped cupola set on a drum decorated with enamelled bricks, the whole being also adorned in the same way. The porch of the tomb opens on a square court surrounded with cells, at the four corners of which formerly rose four great cylindrical minarets of which only one now remains; two others flanked the entrance porch of the court. Other very striking tombs are still to be found near Samarqand adjoining the mosque of Shah Zindah, and we can trace in them with a singular variety of detail the whole development through which the use of baked enamelled earthenware for the construction and decoration of these buildings had passed at this time. Besides the Persian artists engaged in the construction of the buildings of Samarqand, Chinese artists in pottery, summoned by Bibi Hanum (who was a Chinese princess), the wife of Timur, have exercised an indisputable influence both on the technique of enamelled earthenware and on the style of this decoration.

It is also clear that in the great specimens of enamelled decoration the Persian architects drew their inspiration from suggestions afforded by the decoration of tapestry, embroidery, cloths, and especially carpets. As the present writer has described in his manual of the history of Muhammadan architecture, there is a perfection of this enamelled decoration—a perfection attained at the commencement from an aesthetic point of view—can be explained only by the fact that they applied to decoration rules established by the long practice of manufacturers of carpets and painted cloths—rules which, by a process of continual selection, had eliminated imperfect elements from decorative compositions in order to preserve only such as were satisfactory.

Secular architecture in Persia has, perhaps more than religious, remained impregnated with the ancient traditions of the country. The Persian palaces have been compared above to the Sasanian palaces of Qâsr-i Shîrin; they might also be compared to the ancient Achaemenian palaces of Susa and of Persopolis. It is doubly appropriate that we should assign the use of terraces supported on long wooden columns, which are found in the palaces of Isfahan, of Shiraz, and of Teheran. The authenticity of this tradition is all the more remarkable because wood is a comparatively rare and costly substance in nearly all the provinces of Persia.

In the royal palaces of Isfahan these columns were covered with little squares of looking-glass not only on the front of their shafts, but on their capitals; the stalactites of the ceilings and arches were also covered with them, and the flashing of these thousands of mirrors, the brilliance of the paintings, and the facings of faience, made these lofty halls, with glittering ceilings, marvellous of taste and luxuriance, more remarkable even than they have been in the Sasanian palaces of Andahust.

The Persian house, like all Muhammadan houses, is divided into an andarun, or part reserved for the women and the family, and a *birun*, or part reserved for the reception of guests. But its arrangement neither presents nor preserves anything like that of the ancient house. The building is no longer arranged round the front court. This court in Persia is replaced by a garden. If the house is a simple one, the andarun is on the first floor; if it belongs to a richer class, the *birun* opens on the garden and on the street, and at the bottom of the garden is the andarun. The Persians also built enormous bazaars, streets roofed in and lined with shops; and all their large towns still possess them, the finest certainly being those of Isfahan. These bazaars consisted of little roofed streets and shops, but baths, or hammâms, mosques, schools, tombs, and city caravanserais, in which merchants with their wares put up. Other caravanserais are disposed at different stages along the roads; these are resting-places for travellers and caravans. Herodotus mentions that Cyrus had had them placed all along the roads of his empire. Here we have again in Persia a tradition dating from before the time of Islam.

The Sassanian Samarqand had built a number of remarkable bridges. The Muhammadan sovereigns of Persia followed their example. Without counting the numerous bridges constructed in Persia since the Muhammadan conquest, we ought not to forget to mention the two very striking bridges of Isfahan, that of Allah-Verdi-
ARCHITECTURE (Muhammadan)

Khan and that of Baba Rukn-ad-din, which are real masterpieces.

In a country as barren as Persia, the discovery, securing, and conveyance of water were naturally questions of vital importance. Subterraneous aqueducts, or qanats, made possible the search for water at great depths, for the purposes of supply and irrigation. These aqueducts supplied either large subterranean reservoirs (called abambār) in the towns and villages, or vaulted cisterns, placed along the roads near the caravanserai. At other times the river-water was held back by dams to be conducted into irrigation canals. M. Dieulafoy has described two of them, the dam of Savheh and the Bandāmir.

We shall not enter in this section, any more than in the preceding one, on the examination of military architecture. That of the Magrib is known to us by a large number of drawn or photographed buildings; that of Persia, on the contrary, is as yet almost unknown to us.

The Persian school of architecture spread its influence as far as Baghdad and even Armenia, and exercised an indescribable effect on the Seljuk architecture of Asia Minor and on the Ottoman architecture derived from it. It has directly influenced the architecture of Turkestan, and we shall see that, as regards India, it is absolutely certain that the finest buildings of the Mughal period were immediately inspired by the finest architectural and decorative traditions of Muhammadan Persia.

But, since among Muhammadan arts architecture is absolutely supreme and all the other arts are based more or less on the principles which govern architecture in Egypt or of Turkish construction, we ought not to be surprised at the immense importance of the influence of Persian decorative art on all the arts of other Muhammadan countries.

Chronology of the Buildings of Persia and of Turkestan.

Hijra. Christian

137 755 Tomb at Râd. 143 792 Foundation of the Juma Mosque at Isfahān.

174 790 Juma Mosque at Kâsvin.

198 875 Juma Mosque at Shirâz.

242 930 Foundation of the Juma Mosque of Ardabil.

552 1157 Tomb of Sultan Sanjar at Merv.

554 1159 Mausoleum of Sultan Nâşir ad-Din of Tabari, at Nakhâzehan.

630 1230 Mausoleum of the Saids at Amul.

651 1256 Tomb of the daughter of Hâlid at Muraghâsh.

704 1304 Mosque of Ujlain Shah-Khodabandah at Sultanīya.

722 1322 Mosque of Veramishe.

723 1323 Mosque of Mir Burāq Kâsvan-ad-din.

791 1389 Mosque of Bībī Hanum at Samarcand.

803 1403 Great or blue mosque at Tâhirz.

901 1496 Darwâzâ-i-Kishâch at Isfâhan.

942 1535 The town of Isfâhan embellished with magnificent buildings.

1021 1612 Masjid-î-Shah at Isfâhan.

1104 1698 Madrasa and caravan Sar Madrasa-ı-Shah Sultan Humâûn at Isfâhan.

1206 1791 Buildings of Teherân.

1327 1842 Embellishment of Isfâhan by Fatih Allî-Shah.

The Ottoman School in Europe and Asia Minor.—The first real entrance of the Osmanli Turks on the stage of history is at the time when the last Seljuk ruler of Konia, Ala-ud-din III, conquered by the Mongols, yielded his empire to Othman, that is to say, in the 13th cent. of the era.

The Seljuk kingdom was therefore the germ of the future Ottoman empire. We also find that the buildings erected by the Seljuks of Rûm (i.e. the kingdom of Konia) are the first which exhibit the union of Persian and Syro-Egyptian influences still distinct and even widely differing in these buildings. These are the influences the fusion of which with the constructive traditions of Byzantine architecture produced the striking art of the Turkish buildings of Brâsî, Adrianople, and Constantinople. For this reason we should study them first. We find, in fact, in the buildings of Konia, Syrian features in the porches, the small columns joined together, the niches, the stalactites, and those long girths ornamented with eight-rayed half-stars which we see so frequently in buildings of the 13th cent. in Syria, and especially at Damascoc. However (what we do not find in Syria, while the buildings of Konia and its neighbourhood show us numerous examples of it), there are various applications of enamelled earthenware and brick to the interior of these buildings, and even to some interior elevations of them, such as that of the inner court of the Sirchehi Madrasâ at Konia. This, with its enamelled facings, seems to be a Persian building transplanted bodily to Konia, although the porch of its exterior façade is entirely of stone, and of a very decided Syrian style.

When the Turkoman tribes arrived in Asia Minor after a long sojourn and long wanderings in Persia, they imported thither the industries necessary to the life of nomad communities: saddlery and the manufacture of cloths, of carpets, and of embroideries. This art of the nomads has influenced in a very high degree not only the decoration of their own buildings, but also the façades of the magnificent imperial buildings of İne-Minareli at Konia, but still more the striking north gate of the great mosque of Divrîgi, the complicated ornamentation of which is distributed over the whole façade in an arbitrary and unsymmetrical way (cf. Saladin, Mâsâsar, fig. 335). Some of these mosques, like that of Ala-ud-din at Konia, or that of Eşrif-Rûm-Jami at Beishehr, or, again, that of Houen at Kaisariya, are arranged on plans with aisles like the ancient mosques of Egypt. These, however, differ from them with their lâwâtin arranged crosswise, e.g. the Sirchehi Madrasâ at Konia, the İbrahim Bey Madrasa at Akerâî, the madrasâs of Sivas and of Erzerum, etc. We find caravanserais also in Persia, but with an entirely different plan. These caravanserais rather recall the plan of the Roman or Byzantine costellum, comprising, as they do, storehouses, dwelling-rooms, and stables. One of the most imposing of these buildings is the Sultan Khan, north-east of Konia, all the parts of which have been carried out with remarkable skill. Its enclosure is strengthened by enormous buttresses, which reveal more decidedly than usual its defensive character, but a magnificent porch which adorns the entry prevents it from presenting a building an appearance. This doorway is still marked by Syrian character; nevertheless we can already trace in it the chief tendencies which, modified and brought to perfection by the architects of the Green Mosque at Brâsî and of the Bayazidîya of Constantinople, evolved those splendid porches of the most ancient Turkish mosques. In the middle of the court a small square building serves as a mosque, representing the Khusra Khane of the Persian mosques. The interior decoration of this caravanserai is reduced to its most simple expression, as being a building erected for public use. But these caravanserais no longer follow the Persian plan at all, while on the other hand the madrasâs or mosques-madrasas still draw their inspiration from it. But in Erzerum, for example, the plan of the mosque is doubled by a long nave, at the end of which is a tomb (Imaret Ulu Jami' or Chifte Minare); cf. Texter, Arménien, Perse, et Mésopotamie, and assumes almost the appearance of a church-nave preceded by the bower hall surrounded with dwelling-rooms. In this case we must trace it in a Byzantine tradition.

As to the mausoleums, or tombs, they share as much in the Persian as in the Armenian tradition (cf. the tombs of Akhlat; see Lynch, Travels in...
It is certain that Armenia also exercised a very strong influence on Seljuk architecture. The chief reasons for this will be found in the present writer's *Manual*. We might, therefore, sum up the character of Seljuk art by describing it as a mixture of Persian, Syrian, and Christian art. They have been completely explained by the geographical position of Konia (Iconium). We may remark, moreover, that as we travel northwards the Seljuk buildings assume an unctuous and heavy style of decoration which seems to be strictly due to the predominance of Armenian art, for the more we approach the south, the more Syrian influence reveals itself by its refinement, distinctness, and exactitude. The harmonious collocation of forms of stone architecture and of enamelled decoration did not at once reach complete perfection. It is easy to understand that brick architecture and stone architecture, which proceed from entirely different starting points, and consequently have quite distinct characters, could be harmonized only after many bungling attempts and trials. One of the first buildings of this nature is the mosque of Sultan III. It is a magnificent structure, having nearly the same dimensions as the mosque of Sultan IV. The greatest ornamentation of the mosque consists, in fact, of a very homogeneous exterior harmony of marble architecture; a great porch opens on a façade, supported by enormous pillars and flanked by two niches; the porch is still the Seljuk porch, but simplified, corrected, and admirably crowned by a kind of half-dome in stalactites; the latter is encircled by very fine arabesques, which are themselves set, as is the entire porch, in a majestic door-frame decorated with sculptured and inscribed decorations in magnificent characters. The interior is completely decorated with faience mosaic of the greatest beauty. The mihrāb, entirely of enamelled ware, is very lofty, and the general impression made by it recalls a little that of a great Seljuk doorway; the walls are decorated with a ceramic panelling surmounted by a magnificent frieze, and the inner wall of the mosque opposite the mihrāb, which is generally bare of decoration, here assumes a singular importance by reason of two great *kalâmets* on the ground floor, and a fine aicove on the first floor, all entirely executed in very beautiful enamelled work. The plan of this mosque at Brusa, although rendered totally different from those which we have already described, is the result of a very skilful use of large cupolas, recalls, although in an imperfect manner, the cruciform plans of the madrasas, because of these two lateral *kalâmets* which flank the chief cupola. This enamelled decoration is still Persian in its workmanship and suggestion, and even the first secular buildings of Constantinople, such as the Chini Kiosk, built at the Seraglio in 1456, in their plan and appearance are still altogether Persian.

At the time of the occupation of Constantinople by the Turks, however, the influence of the Byzantine buildings immediately made itself felt on the productions of the Sultans' architects who built for them their first mosques. Thus the mosque of Sultan Bayazid, commenced in 1497, reproduces on a small scale the plan of St. Sophia at Constantinople, i.e. its main characteristic is a great cupola resting on pendentes, supported in front and behind by two large semi-cupolas of equal radius. But this mosque is already distinguished from the mosque of Brusa by a correction in the plan, and in the general arrangement of the exterior and interior parts, a correction which shows an art already completely master of its methods. This art, now that it has been able to borrow from Byzantine the chief element of structural arrangement, may be regarded as complete, for till the conquest of Byzantium the mosques did not possess that character of boldness, exactness, and definiteness which an architectural work must possess in order to rank among works of art. As long as the plan is undetermined, the work of architecture cannot be considered as complete.

The Turkish mosque consists, then, of a praying place properly called—a large rectangular hall covered by an enormous cupola supported by two large semi-cupolas. The mihrāb of marble or of enamel-work faces the entrance. Coloured panels are set in plaster traceries light the mosque. The Turkish mosques are much the best lit of all, even the older ones of their plain panes are preserved, which is not often. In front of the mosque is a court surrounded by porticoes; in the centre a fountain, the *φάτος* of the Byzantine churches, and commanding the four corners of the court, gigantic minarets like monolithic pillars crowned by a pointed roof. Such is the type of the Ottoman mosque from Bosna-Serai to Cairo.

From this time Ottoman art made giant strides, and the wonderful great mosques, the outlines of which still in our day adorn the capital of Turkey, possibly erected one that may be regarded as the greatest of Ottoman architecture; it is that of Sultan Selim; the Suleimaniya, or mosque of Sulaiman the Magnificent, with its court surrounded with porticoes, its four minarets, its colossal dome supported by four great piers and true columns of porphyry and syenite seized from the Imperial palaces, its coloured panels and its enamel-work; the mosque of Shahzada; that of Sultan Ahmad, the largest of all; and the Jami of Yeni Valideh, one of the finest.

Sulaiman's architect, the celebrated Sinan, is the builder of the finest mosques raised during the reign of the great legislator, but his masterpiece is perhaps not at Constantinople; it is possibly his last work, the Selimiya of Adrianople, which is the most perfect of all, with the extreme simplicity of its plan, the harmony of its proportions, and the perfection of its outline. Unfortunately the decadence of this fine art was rapid; contact with Western art was fatal to it. Already in the mosque Nur-i-Ostiana (1746) we see the introduction of European elements into Ottoman architecture. That intermixture, which perhaps in skilful hands might have been able to bring about a happy modification of Turkish art, was left in the hands of second-rate French or Italian architects. These, by their very work, only brought about the decay of that art which had produced such great masterpieces.

A few words remain to be said on other architectural works. The Ottomans built numerous schools, madrasas, and monasteries, or *takiyas*. These are generally occupied by dervishes of the Mevlevi order, who played such an important part at the commencement of the history of the Ottoman empire, and do so still in a quiet way, since it is their Grand Master who acts as judge of each Sirdar, invests the girds of the Prophet's sabre in the old mosque of Ayyub. Frequently the architecture of these buildings is affected by local traditions, and their case differs from that of the mosques which from the commencement of Sulaiman's reign were all erected on plans derived more or less directly from the types invented by Sinan.

The tombs of sovereigns and of great personages are influenced more or less, as regards their plan, to the use of the cupola. To give a list of them here would be tedious. We shall mention especially those which are near St. Sophia, those of the Sultans Selim, Murad, and Muhammad IV., that of Sultan Ahmad, and, above all, those of Suleimân and Bozalana, near the Sulaimanya. Turkish tombs are often simplified to mere steles, but it
also happens that these stèles, passing through stages of increasing richness of decoration, are evolved into monuments luxuriantly gilded and carved, which are sheltered under kiosks or cupola-crowned pavilions.

From their ancient nomad life the Turks have preserved a love of nature and of gardens; they regard the houses or palaces they erect only as transitory dwellings. Except the palaces of the sultans, it is rare to see in Turkey houses other than those of wood, or with wooden frameworks; such is, at any rate, generally the character of the Turkish house. Even when rich or luxurious, it is only a transient decoration; and this feeling seems to be essentially Muhammadan, for we find it in all the countries of Islam, where men build only for themselves, not for their children. At the zenith of their splendour the Ottomans were great constructors of buildings for public use—fountains, caravanserais, bridges, aqueducts, reservoirs, roads, inārets, or kitchens for the poor, and hospitals and shelters for the sick. The sultans, their ministers, and persons of position vied in strenuous rivalry in erecting during their lifetime such buildings as might perpetuate their memory. The study of Ottoman art has been of a merely superficial character; but it cannot fail to afford great interest from the parallel suggested between the magnificence and wide scope of the conceptions of the Ottoman architects and the splendour and energy which characterize the history of the Ottoman sultans. We might say that the characteristic of Persia is elegance, that of Syria and Egypt wealth, that of Moorish art abundance, and even redundancy, and that of Turkish force—characteristics which are found both in the history and in the art of these nations. This study of the Turkish buildings would be incomplete if unaccompanied by a chronology, which is accordingly appended (including the Seljuk buildings from which, without a doubt, Ottoman art is derived).

555 2160 Palace of the Seljuks at Konia.
671 1216 Tash madrasa at As-sahbil.
614 1217 Shifisht madrasa at Sivas.
677 1224 Mosque of Ali-ad-din at Konia.
677 1229 Caravanserai of Sultan Khan.
640 1243 Serehli madrasa at Konia.
720 1320 Mosque of House at Raisiya.
768 1367 Ulu Jami' at Brusa.
813 1415 Yeshl Jami' at Brasa.

856-81 1452-76 (1) Muhammad II. builds the mosque of Ayvab, the palace of the Old Seraglio, the mosque named Jami' of Constantinople.
902 1470 Mosque of Sultan Bayazid at Constantinople.
919 1518 Built at Constantinople, during the reign of Selim I: the mosques of Shahma, Selimiya, Mihrimah, Sultanah, Rustam Fasha, etc.

5: The Indian School. - Islam, as it spread westward, had transformed everything in its passage. We have seen that in converting Persia it had not been able to effect a thorough conversion to the new doctrine, since the Muhammadans of Persia differ so strongly from those of Turkey, Arabia, and the Maghrib, that the former and the latter form, so to speak, two distinct sects, Shi'ites and Sunnites, each of which considers itself the only orthodox party. Similarly the Muhammadan art of Persia differs more fundamentally from the arts of other Muslim countries than the latter differ among themselves. We shall see that in India Islam had difficulty in taking artistic shape, and in creating devices and forms whose Islamic character might differentiate them from those consecrated to other religions. We shall also see subsequently that in the far East, in China, Muhammadan art tends to disappear entirely under the effect of the strong originality of the Chinese character. In that country there is an 'influence of the mass,' as chemists would say. In India and in China the Muhammadan is only in a minority; he disappears in the crowd, and despite his stubbornness without being able to defend himself against them or to escape them.

The first Muhammadan conquest of India dates from A.D. 712. The first Indo-Muhammadan kingdom was in the 10th cent. A.D., that of Ghazni, which united one day the Panjāb, Multān, Gujrat, and Khásmir up to the Ganges. Delhi became the capital of the Afghan House of Ghor after the destruction of Ghazni (A.D. 1192). It was sacked in 1398 by Timur. Bābar (1494–1530), his great-grandson, founded a stable empire on the ruins of the ancient Muhammadan kingdoms of India. It was then that, under the dynasty of the Great Mughals, we pass to the history of the Musulmān, the character of which, as we shall see, with its long and complicated history, is the last and most notable phenomenon of the development of Persia, and the reaction of the great element against Islam had been so powerful that the art devoted to Muhammadan buildings spin off from all, preserved a marked local character. Bābar and his successors, by admirable general organization, unity of policy, and remarkable administrative ability, bestowed on their Empire a transient homogeneity, which forms its most striking characteristic, and which is reflected even in the buildings that they have left.

Accordingly, previous to the time of the Great Mughals, the Muhammadan buildings of India exhibit, in proportion as we approach the early times of the Hijra, features of increasing importance, borrowed from local traditions and from native art. From these the Muhammadans eliminated all representations of men and animals. Among them we find the building of the Jain art of construction, the piling up of materials, corbelings, methods borrowed from timber-work, ceilings with simple or superimposed panels.

With the Great Mughals, on the contrary, we see the distinctively Persian influence which, commencing under Bābar, continued under Akbar, to become dominant under his successors.

Fergusson, the best historian of the Muhammadan architecture of India, proposes the following classification of the Muhammadan styles of that country:

(1) Style of the Ghaznavids.
(2) Pathan style (Northern India, 1193-1554).
(3) Style of Jaunpur (1394–1476).
(4) Style of Gujrat (1586–1578), derived almost exclusively from the architecture of the Jain buildings.
(5) Style of the buildings of Malwa (from 1401 to the Mughal conquest), allied to that of Delhi.
(6) Style of Bengal (1293–1576).
(7) Style of Kāhilpur (1347–1525).
(8) Style of Bijapur (1489–1660), which exhibits an almost exclusively Persian character.
(9) Style of Golkonda (1512–1752), in which decadence already appears.
(10) Mughal art, which on which nearly all these different schools are based, especially those which have undergone the influence of Persian art. The chief monuments are at Fathpur, Agra, and Delhi.
(11) Buildings in Sind, of a Persian character.
ARCHITECTURE (Muhammadan)

(12) Buildings of Oudh (1756-1847).
(13) Buildings of Mysore (1760-1799).

In all these different countries, as elsewhere, the Muhammadans have left mosques, madrasas, and tombs. It is naturally in these buildings that we ought to look for Muhammadan characteristics, and yet in the early Indian mosques like that of Ajmir (d. 1235) and the Mosque of Kutab at Delhi, though the facade overlooking the large court is furnished with pointed window-eyes, more or less recalling Western Muhammadan art, the interior of the building possesses an exclusively Hindu character. As Ferguson says, 'the more the mosque was excised, it was a screen in the pointed style before a Jain temple. Historians agree in saying that these two mosques and many others were built of fragments which were taken from pagan temples. Cunningham discovered in the mosque of Kutab at Delhi an inscription stating that twenty-seven pagan temples were despoiled in order to provide materials for them. Thus, to quote Ferguson again (on the plan of the mosque of Ajmir, Indian and Eastern Architecture, 1899, p. 128), 'if we refer to the plan of the mosque at Jaunpur At the entrance and remove in our thought the principal cell and its porch in the centre of the court and the constructions in front of it from the side of the entrance, keeping only the portico which surrounds the court and that at the back with the cupolas, we have a picture of the plan of the mosque provided the back-wall be turned towards Mecca.' Later on the mosque becomes gradually free from Hindu forms, and under the Mughals all its features are Persian, a little softened, however, by the tendency of the Hindu genius to curve the lines. The public buildings, caravanserais, and bungalows, dams, bridges, and reservoirs also reveal the magnificence of the Muhammadan rulers of India. Historians have depicted for us the splendour of their State ceremonies, with a lavish expenditure of details which makes an indelible impression.

We have already spoken of the early mosques of India, that of Ajmir and that of Delhi. We speak of the buildings of Ghazni only by way of connecting the complete, for they have an almost exclusively Persian character. By the side of the mosque of Kutab at Delhi rises the tomb of the Sultan Altamah (1255), the pointed arches of which are still dressed with horizontal joinings, while on the sides of the court a dome is roofed with courses of corbeling. Consequently the local tradition still persists behind this pointed decoration. The doorway of Al-ud-din at the same mosque already contains a much greater number of Western elements, and the arches are dressed with voussoirs. But the small columns of the principal porch and a thousand details exhibit the tenacious life of the local traditions.

After the reign of Al-ud-din the style of building becomes more severe (tomb of Tughlaq at Delhi, and the tomb of Shāh-Shah at Sassesram in Shahabad). At Jaunpur the mosques are great vaulted halls, but the porticoes preserve a Jain appearance. The mosques of Gajrat, while retaining the features of the local style, display a remarkable spaciousness of conception. In Bengal, brick architecture assumes a majestic type, which is extremely striking, as in the mosque of Khedim-ar-RASUL at Gur. The Adina mosque at Malda being a Western plan it is the same at Kalburga, where vaulted construction almost entirely replaces that by corbelings. At Bijapur the Persian style dominates, but possibly the first sultan of Bijapur, who was a son of Sultan Murad II., contributed to this artistic revolution by summoning experienced architects from Turkey and Persia; such is the opinion of Ferguson—a correct one in the present writer's judgment. The masterpiece of the architects of Bijapur is the tomb of Mahmud, with its enormous cupola of 40 metres in interior diameter, and 55 metres in height under the crown.

The buildings of Indore are also in the Persian style, but of brick, with bulbous domes. In the 16th. cent. appear the buildings of the Great Mughals, and it is in them that we may say that Persia played in relation to the Muhammadan art of India, the same part which the Italian Renaissance played in relation to France and Spain. The buildings under the reign of Bābar (d. 1530) are few, but in a chaste and graceful style. Under Akbar architectural style assumes a remarkably force and magnificence, keeping all the while its great originality. Here Persian grace and elegance, destined to preponderate under Akbar's successors in the buildings of Agra and Delhi, mingle with the strength of the Pathan and Jain styles. This is noticeable in the wonderful buildings of the Fatehpur-Sikri palace, thence the tomb of Akbar at Sikandra, with its Persian domes. If the tomb of Itmad-ud-daula at Agra, possibly a little Jainsque in appearance, has purely Persian details (arches, windows, ornaments), the Tāj Mahal, erected by Shāh-Jahān at Agra in memory of his wife, the Empress Mumtāz-i-Mahal, is itself purely Persian as a whole and in details (built between 1630 and 1647). Twenty thousand artisans worked on it for seven years. What interests us more than the particularity of its cost in time and money, is to see in what a masterly fashion the architect of this imposing building has been able, while preserving Persian devices and details invented, arranged, and reduced to rules andornamentals, with new drawings and while transferring these forms to marble architecture, to deduce from them effects so novel and so striking that the Tāj Mahal rightly passes for one of the most wonderful buildings in the world. On a large platform measuring 35 metres each way rises the Tāj, the pointed and slightly bulbous dome of which is about 210 ft. in exterior height. This cupola crowns the hall containing the tomb, supported by four accessory halls and five great pointed porches. The whole building is of marble, inlaid with the rarest kinds of hard stones, black or coloured marbles, with parts gilded. In the interior the hall of the tomb, which holds only an imitation of the sarcophagus, is decorated even more luxuriantly than the exterior of the building.

The Tāj forms the centre of a plan in which gardens, terraces rising one above another, porches, pavilions, basin-shaped reservoirs, and marble aqueducts combine into a whole of wonderful beauty and harmony.

The decorations of the palace of the early Mughals were in a style befitting their power and splendour, and the remains of their palace at Delhi still exhibit portions admirable from an architectural point of view. Unfortunately, this wonderful efflorescence of art was only temporary;
ARCHITECTURE (Muhammadan in Syria and Egypt) 757

the mausoleums of Golconda already seem heavy, but put together, incoherent. After the proof of the Mughals was shattered in consequence of the death of Aurangzib, several kingdoms rose on its ruins, and this confusion was immediately reflected in the most thorough disorder of architectural details. Decadence had set in beyond hope of cure.

It is not necessary to mention any Chinese mosques here. Nothing in their decorations presents any feature whatever which differs in character from those of the Persian style, and the whole of its influence. We shall conclude this account with a short chronological list of the buildings of India.

10th cent., Buildings of Ghamul.
906 1906 Mausoleum of Alamu at Dault.
729 1929 Mausoleum of Tuglaq at Delhi.
549 1999 Mausoleum of Kaliburg.

1040 1903 At the result of a conference, the architect Deginnings of the Taz Mainal at Agra.

H. SALADIN.

ARCHITECTURE (Muhammadan in Syria and Egypt).—1. Mosques.—The mosque dates from the beginnings of Islam. The simplicity of Muslim worship demanded a simple plan, which was settled as early as the 1st centuries of the Hijra. It consisted of a large square court (q

a ralling of carved wood, the masqara. On the side facing the court it contains the platform (dikka) for the clerics (muballigh) who repeat

the words of the imām. At the back of the prayer-
hall opens the niche (mihrab), indicating the direc-
tion of Mecca (qibla), with the pulpit (minbar) at the

side, from which the high priest (ālim) and the

preacher (ḥāfiz) preside at prayer and divine

service.

This arrangement presents clear analogies to that of primitive churches. The court surrounded by porticoes, themuqarnas and ribat, was built sometimes in a corner and sometimes against a face of the building. These analogies are easily explained. The conquering Muslims, finding a more advanced art among the conquered peoples, took possession of it, and began by transforming a large number of churches into mosques.

We may mention two famous buildings of this kind: the great Mosque at Damascus and the al-Aqṣā Mosque at Jerusalem, which was at the first glance betray their Christian origin.

The style and methods of construction were modified during the course of time, particularly as to choice of materials, gateways, façades, and minarets, profile outline of the interior arches and decoration; but the general plan remained the same until the Ottoman conquest.

The classical and primitive name of the mosque was masjid, 'place of prayer.' The Qur'an does not contain any other expression, and the ancient writers designate by that name every mosque, large or small. But towards the 4th cent. of the Hijra, on account of the progress of culture and of architecture, the mosque divided in a fashion into two.

The great Mosque, in which the congregational prayer (jum'a) took place, was called simply al-jam'a, 'the great Mosque.' Since that time the word masijd has been reserved for the mosques of the second rank, to which the number which is constantly diminishing. No great Mosques continue to be called masjid except those of Mecca, Medina, and Jerusalem (al-Aqṣā). Tradition, following the Qur'an, calls them by this name, and it has thus remained popular.

This evolution of terms traceable in literature is reflected in the inscriptions, which furnish definite, official, and dated evidence. The great Mosque of Ahmad ibn Tulun, built in Cairo in 975 (1092), still bears the name of masjid in its dedicatory inscription. The name of the Mosque of the Nilometer, built in Cairo in 1092 (1092), is called jam'i in its three foundation inscriptions.

2. Madrasa.—When diffusing the Shi'i heresy in Egypt and Syria, the Fatimid khilafah did not modify the general mosque-plan; we meet with it again especially in those which they built in Cairo. But soon after their time the movement of religious ideas and the political situation created by the Mongol invasions, and the remembrance of the khilafate of Baghdad called forth in the Middle

East an orthodox or Sunnite reaction, directed specially against Alid or Shi'ite sects and dynasties. This religious (Aš'arite) and political (Sunnite) reaction caused a series of reforms in all domains
of civilization. One of the most important was the extension of the madrasa. Originating in Khorasan about the beginning of the 4th cent. A.H., the madrasa was at first simply a private school of religious sciences, i.e. of tradition, exegesis, and law, according to the Sunnite rites. But in the Il-khanian and A.H. the Seljuk sultans of Bagdad, having become powerful vassals of the Abbasid khalifate, and the official protectors of Sunnism and Shi'ism, transformed the madrasa into a State institution, intended to produce a select body of officials for all branches of administra- tion. This was carried out at first by Saladin, the founder of the first Egyptian fikak, a central State, defended by a regular army, and governed, from high to low, by a hierarchy of officials. The madrasa became the powerful centre of religious and political propa- ganda, the school of official Sunnism, and almost a government institution. It was in this form that it was introduced into Syria in the 6th cent. A.H. by the Sunnite At'abeks, particularly Nur-ad-din; then into Egypt by Saladin.

If the madrasa differs from the mosque in its character and purpose, its origin and history, it is also distinguished from it by its plan. When Saladin introduced it into Egypt, this plan was already settled: a small square or rectangle (qubba or qâ'a), enclosed by four high walls, with four halls (liwâ'is) in the form of a Greek cross, opening on to the court by a high arch (sugq), and, in the outer corners of the building, four pavilions for the use of the civil establishment. This symmetrical plan with four branches was admirably suited for the quadruple madrasa, i.e. the school devoted to the four chief Sunnite sects (Hanafite, Shâfi'ite, Malikite, and Hanbalite). Each sect was installed in one of the four liwâ'is, as is testified by the inscriptions in the large madrasa of the Sultan Hasan, built in Cairo in 764 (1363). This plan seems to have originated in Syria. It is found in a curious Syrian monument, of a far earlier date than the Syro-Egyptian madrasas, the Qair of 'Amman. Like the plan of the mosque, it combines elements of various origin: the liwâ'is are arched in the Persian style (Sasanian palaces), but their arrangement in a cross around a central court recalls the symmetrical plan with two axes of certain Byzantine and Syrian churches, which the Qurân resembles in many other architectural details.

Like the mosque, the madrasa became in time modified in its style and methods of construc- tion. At the end of the 12th cent., its liwâ'is were covered with barrel-vaults (qâ'aq or specific) of brick (liyun), following the Persian and Byzantine methods (without centring). The last large vaulted madrasa is that of the Sultan Barqûq, built in 788 (1386). Then the vaults were replaced by a flat wooden (hashab) roof (nagq) and ceilings whose rich polychrome decoration merely disguises a serious decadence in the art of building. The only vault that remained was that of the front arch of the four liwâ'is opening on the court, built with arch-stones. In spite of these modifications, the plan and general arrangement of the madrasa subsisted until the Ottoman conquest.

The Sunnite reaction gave rise to some institutions analogous to the madrasa, particularly the dâr al-hadith, the 'school of tradition' (Sunnite). But these establishments, not having the same political standing, remained in the background and created no type of architecture; or rather, being simply varieties of the madrasa, they adopted its general plan.

Under the Ayyûbids, who may have feared a troublesome return of the Shi'ite doctrines, the madrasa retained its character as a State institution. Its function was to be the Fâtimid school, the dâr al-tâm, a kind of academy with eclectic tendencies, where, along with Shi'ite doctrines, were taught the sciences inherited from Persia and ancient Greece. But Sunnism did not encounter the Shi'ite sects only. The Crusades had stirred up another opponent, the Latin kingdom of Jerusalem. Saladin and his successors, impeded by feudal administra- tion and political decentralization, had weakened but not destroyed these foes before Baibars. On the ruins of Ayyûbīud feudalism, he founded the kingdom of the Mamlûks, a central State, defended by a regular army, and governed, from high to low, by a hierarchy of officials. The madrasa became the great religious and political centre of the Mamlûk state, which at once the Latin kingdom and the fortresses of the Assassins, the last bulwark of Shi'ite heresy in Syria. He afterwards established his prestige in the eyes of the Muslim masses by welcoming to Cairo the wreck of the khalifate of Bagdad, which had been overturned by Hâljâgû (1260). In re-estabhlishing, for his own benefit, the duality of the spiritual and temporal powers, he re-tied the thread broken by the Mongol invasion, and completed the work begun by the great Sunnites of the preceding century, with opening the way for every original character and assume that of the mosque. All the large madrasas were then fitted up for the Friday service. The liwân gibrît, which was larger than the other three, served as prayer- hall and sheltered the pulpit and the mihrâb. Last of all the minaret came to give to the madrasa the complete appearance of a mosque. But it had acquired such prestige that, instead of merging in the mosque, it threatened rather to supplant it.

While the number of the great Mosques of classical plan continued to diminish, that of the madrasas of cruciform plan increased under the Ottoman conquest.

This evolution is reflected in linguistic usage also. The madrasa set apart for religious worship took the name of a mosque (jâmi'); then they were called simply jâmi' like the great Mosques of Maqrizi, who drew up his Topography of Cairo in the first quarter of the 15th cent. A.D., gives this name to the majority of the large madrasas of the Mamlûks. Finally, epigraphy officially established this use from the year 930 (1524), when the word madrasa fell into the background as the old word masjid had done. At the present day in Egypt it is applied exclusively to a civil and lay school; every great religious building is a jâmi'. Thus the original mosque, the masjid, became subdivided into great Mosque (jâmi') and small mosque (masjid). The madrasa, in its turn, subdivided into jâmi' and lay school. These two classes of jâmi' became blended in their purpose but not in their plan. They remained distinct until the Ottoman conquest, which caused the madrasa-plan to disappear. In Egypt and Syria the Ottomans continued to build jâmi's on the plan of the great Mosques, but modified under the influence of the Turkish school, whose mosques are built on the St. Sophia plan (the dome typie).

3. Monasteries.—The Sunnite reaction, which brought the madrasa from Persia to Egypt, mingled during its course with tributaries of ancient origin, quite foreign to primitive Islam. One of the most important was Sûfism, i.e. Neo-Platonism with mystic tendencies of Persian origin. The public building of Sufism is the Sâfî monastery, the hânanâq, a Persian word which penetrated with the building first into Syria and then into Egypt, through Saladin, the founder of the first Egyptian hânanânq. About that time it became.
confused with the ribāṭ, an Arabic word denoting an ancient military settlement, which had also become, by a profound change of the original idea, a Sufi monastery.

The ribāṭ and the bānaqāḥ flourished under the Ayyūbids, and then under the Mamluks, but without carrying any real type of architecture. These monasteries sometimes assume the plan of the great Mosque (monastery of the Emir Shahīḥū in Cairo, 756 [1355]), and sometimes that of the madrasa (monastery of the Sultan Baibars II. in Cairo, 709 [1310]). Like the architectural types, they possessed all the visible appliances for worship: minaret, prayer-hall, pulpit, and mīhrāb. But their dependencies, fitted up for cenotetic life, and arranged in long lines of cells, give a peculiar appearance to their plan. Several curious traces of them still survive, especially in Cairo, where the monastery of the Sultan Ināl (588 [1454]) affords the most complete specimen.

At the Ottoman conquest the ribāṭ and the bānaqāḥ gave way to the monasteries of Turkish dervishes, the plan of which also came under the influence of the Constantinople school (porticoes with domes). We may mention, lastly, the ẓāwīya, a word which means, in the Muslim World, a cell or hermitage, and then a real monastery, but which in Egypt is applied only to a very small mosque, an oratory, or a chapel.

4. Fountains and Schools.—Connected with these there are three great types—the mosque, the madrasa, and the monastery—two secondary types, the sabil and the kuttāb. Sabil means 'road'; fi sabil allāh, 'in the way of Allah,' 'for the sake of God,' is said of every pious work, of the Holy War as well as of almsgiving, and especially of the foundation use of incantations. In the East water is a treasure; according to a saying attributed to Muhammad, to give a drink of water is one of the most meritorious charities. Every free foundation is a sabil, but the sabil par excellence is the public fountain.

In Syro-Egyptian architecture, the sabil is rarely isolated. It is placed at the corner of a mosque, a madrasa, or a monastery, on the ground-floor, and can be recognized by its two large square windows at right angles, closed with beautiful built and decorated gratings. Above the sabil is situated the primary school (kuttāb or maktāb), which is rendered conspicuous at a distance by its elegant loggia, open on both sides, in rows of arches on small pillars. The latter, to whose date most of these sabils go back, were almost all destroyed until the Ottoman invasion. At that time the sabil became separated, first along with the kuttāb, and then quite alone. Its style has degenerated down to our time, when the fountain displays all the false taste of the modern Turkish school.

5. Mausoleums.—For the obscure dead a grave is sufficient. The illustrious dead, not content with a tomb, require a mausoleum. As far back as it is possible to go, the Syro-Egyptian mausoleum preserves its own characteristic form: a cubical hall, square in plan, covered with a dome. Is this type a distant recollection of the ancient Egyptian mastaba? It seems to be more directly connected with a Christian type, the kalybe (kolybe), some traces of which still survive in Syria. The problem of building the dome on a square plan, outlined in these old Syrian kalybes, receives in Muslim architecture the most varied solutions, which reflect the successive efforts and inventions of the Persians, Romans, and Byzantines. The transition between the square and the circle is built of bricks dressed or arranged in corbels, of beams covered with stucco, of hanging arches in semi-ellipses, or of beautiful stone pendants like stalactites. The materials, proportions, outline of the square, of the drum, and of the dome, the decoration—all, in a word, that constitutes the style—changed from age to age, but the general plan remained the same until the Ottoman conquest.

The classical name of the mausoleum is turba. But as the dome is the most conspicuous feature, the name of the latter (gubbah) was extended to the whole building. In literature and the Syro-Egyptian inscriptions these two words are indifferently applied to the mausoleum as a whole, i.e. the architectural ensemble which itself is called qabr or madfān or marqūd or darbū, the last an Arabic word of Aramaic origin.

The mausoleum is often built by itself, isolated in a cemetery. Sometimes there are several together in a single enclosure (kastā), but not forming an organic whole. Frequently the mausoleum of a great person is placed in the corner of a religious building which he has founded. Like the great Italian condottieri of the Renaissance, the Sultans and Emirs formed slaves who died well to fortune, and who were always uncertain of the future, took care to provide for their own tombs beforehand.

This association creates three chief combined types: the mosque-mausoleum, the madrasa-mausoleum, and the monastery-mausoleum. We may mention in Cairo: the mosque of the Sultan Shāhī ḥū (823 [1420]), the madrasa of the Sultan Qāyūt-Bāy (879 [1474]), and the monastery of the Sultan Qareṣ (913 [1411]), popularly called the tomb of Barqūq.

We find also more complicated types, e.g. the mosque-madrasa-mausoleum. We may cite those of the Sultans Barqūq (788 [1386]) and Ināl (758 [1454]). Now, in these mausoleums, the sabil-kuttab motif, and unite one or several minarets to one or several domes. They do not have special names. The inscriptions of these huge buildings, agreeing with the literary texts, refer to them sometimes under one name and sometimes under another, according to the part of the whole that they wish to emphasize.

Like all the types of Syro-Egyptian architecture, the turba disappeared after the Ottoman conquest. The name continued in use, but it refers to tombs of any kind. Since the 16th cent. the great cities in Egypt and Syria have not had any mausoleums worthy of their past.

6. Holy places and pilgrimages.—In spite of the express intention of its founder, İslām at an early date adopted the worship of saints, and the belief in miracles accomplished by their intercession. This cult was too deeply rooted in the Oriental religions for Muhammad to make it disappear. In Syria, especially, the old pagan cults connected with local gods, which had resisted Christianity, lay hidden under İslām, which had to tolerate while apparently assimilating them. The tenacity of these local traditions explains the manifold origin of Muslim saints. Some of them were pagans, and their architecture took the form of ideas, beliefs, or mere words into Muslim saints; others are the great personages in the Qur'ān, Muhammad, Jesus, and the Jewish prophets; others again are heroes of history, conquerors, or famous sovereigns; and others, ascetics, monks, or scholars, celebrated for their learning and canonized by the common people with their irresistible inclination towards the supernatural. All these saints have their sanctuaries (mashḥad). The belief in miracles wrought by their intercession makes these sanctuaries places of pilgrimage (maṣdar).

The mashḥad has not created any special type of architecture. As it is almost invariably erected at the grave of the saint, it takes the plan of the
The architecture of several of these religious buildings is of great interest, especially their domes, which were often used as a symbol of the heavens. The dome was a common feature in the architecture of the Persian Empire, and it is likely that the Persians derived their techniques from the earlier Etruscan and Greek traditions.

From the architectural point of view it is worth noting that the Persians had developed a form of the dome that was quite different from the earlier domes of the Greeks and Romans. The Persian dome was not simply a half-circle, but was made up of a series of smaller domes, each of which was supported by a column. This allowed for a greater degree of flexibility in the design of the building, and it also allowed for a more efficient use of space.

The Persian architects also used a great deal of ornamentation in their buildings, and this can be seen in the use of大量的 relief sculptures and intricate carvings. They were also skilled in the use of glass and other materials, and they used these materials to create stunning visual effects.

In conclusion, the architecture of the Persians is a fascinating topic that has been the subject of much study and debate. While the results of these studies are not always clear, it is clear that the Persians were skilled architects who were able to create buildings that were both functional and beautiful. Their influence can still be seen today, and it is clear that their contributions to the field of architecture were significant.
by the Pahlavi writers of a later date to have existed in those early times (cf. Pahlavi and Sanskrit., ii. 30, 37, 40; Zat-saram, vii. 22, xi. 8-10; Bündahish, xii. 18, 34, xvii. 7, etc.), so that it is possible that the temple at Ecbatana, as described by Polybius, may have preserved some architectural features historically prior to the Achaemenian period. These customs enjoined by their religion, moreover, the early Iranians, whether Medians or Bactrians, made use of temporary structures, called dakhmajas (wh. see) in the Avesta (Vend. i. 9, xii. 54, vi. 44-51, etc.), on which to expose the dead, just as their modern representatives, the Parsis (wh. see) and Gabars (wh. see) still follow the custom in their 'Towers of Silence'; but what kind of these recepts may have been in ancient times is only a matter of inference.

2. Achaemenian period (B.C. 550-330).—With the victory of Cyrus of Persia over the Median king Astyages, the supremacy of N. Iran passed to S. Iran, and a new dominion, the sovereignty of the Achæmenians, or the combined rule of the Medes and Persians, came into being. The architectural remains, both religious and civil, which belong to this period are abundant, and they show the art of the builder in early Persia at its zenith. Terraced platforms of massive masonry and palace-gardens with tall fluted columns, crowned by bull-headed capitals, were typical of the age.

Ecbatana, Pasargadae, Persepolis, and Susa were the capitals of the Medo-Persian empire, and the chief seats, therefore, of architectural relics. The site of Ecbatana is now occupied by Hamadan; and there, or in its vicinity, are to be found portions of broken columns, and a few carved stones, remnants of walls that belonged to ruined structures, and may date back to the Achaemenian period. But no systematic excavations have been carried on to determine their age, or tell whether extensive finds of a similar character may yet be made. If we leave Ecbatana out of account, the earliest remains of Achaemenian architecture are to be seen at Pasargadae, the capital of Cyrus the Great, in the plain of the modern Murghab, between Isfahan and Shiraz. As we approach it from the north, we first pass the remains of a ruined platform on the crest of a range of low hills on the left. It was apparently designed to support an audience-hall of Cyrus, but was never completed. Spread over the surface of the plain itself traces of the royal city are to be seen. Nearest to the ridge is a single shattered wall of a monumental building, which have been of from 10 to 12 feet high by 10 ft. square, and which may have served as a shrine for the sacred fire, although some authorities (on less good grounds, it seems) believe that it was a princely tomb. A second group of ruins lies not far distant to the south, and comprises a high round column (not fluted), some angle-piers of an edifice that once surrounded a royal court, and a stone shaft consisting of three blocks, on the uppermost of which is inscribed in cuneiform characters, 'To Cyrus, the Achaemenian.' A huge slab stands somewhat to the east of this group, and on its face is carved in low relief a winged representation of the Great King, above whose head was similarly inscribed the device of Cyrus just quoted, although the part of the stone containing it has been sawn off and lost within the last century. Still another collection of ruins lies somewhat to the south-east, and shows vestiges of pillars and stone door-sills grouped around a paved court that belonged to some palace or temple.

Most important of all the ruins is the tomb of Cyrus, which lies about a mile beyond in a south-westerly direction. It is known to be his mausoleum from descriptions in the classics. The structure resembles a small house, with a slightly pointed roof, and is made of a handsome white sandstone resembling marble. It stands high upon a sub-basement, built of the same material and consisting of a large foundation plinth, nearly 50 ft. long, 40 ft. wide, and 2 ft. high, surmounted by a series of six stone layers that form a pyramidal series of high steps approaching the mausoleum from every side. The mammoth structure, which make up the tomb itself were originally fastened together by iron clamps, but without the use of mortar; and so we distinctly see that the structure still forms a compact whole, even though falling more and more into ruin. The sepulchre, measured from the outside, is about 20 ft. long, by 17 broad, and 18 high. A very low door in the western side serves as an entrance. The mortuary chamber measures 10½ ft. long, by 7½ ft. wide, and 8 ft. high (the exact measurements in metres may be found in Jackson, Persia, p. 288). It is needless to add that the chamber is now empty. From an architectural style the tomb of Cyrus is thought to show Lycian influence, since somewhat similar burial edifices have been found in Asia Minor, the land first conquered by Cyrus after Media; but it may also be possible that the idea of such a vaulted sepulchre was suggested by some of the Avestan kats, 'house,' a temporary structure for the body before it was carried to the dakhma.

Around the tomb, moreover, there once stood a decorative colonnade, as is clear from the fragments of columns still upstanding. About 350 yards beyond it are the vestiges of a platform on which was once erected a habitation for the Magian priests who were custodians of the tomb, as we know from Arrian (Anabasis, vi. 29. 7).

A single other important site of Achaemenian architecture, religious in its character, is found at some distance to the N.W. in the same plain; it is in the form of the bases of two altars, used by the Magi in celebrating their sacrificial rites, as they did, in the open air.

Illustrations and descriptions of all the architectural monuments in the Murghab Plain are to be found in the works of Teixier, Piandrin and Grote, Ker Porter, Stolze and Andrews, Dieulafoy, Perrot and Chippies, Curzon, and Jackson; and they convey a good idea of the architecture of Cyrus's capital.

Far grander than the ruins of Pasargadae are those of Persepolis, the capital of Darius, and Xerxes, and their successors. These tokens of a vanished empire are spread over a considerable area in the Plain of Murghab, some forty miles to the south of Cyrus's city. The most important of these structures are the towers of the lost city of Stakhra, indicated by some broken columns, remains of portals, and scattered fragments of buildings blocks at the site now called Stakhr or Isakhr. The southernmost point of this city is now marked by a small granite stagion, some 40 ft. square and 7 ft. high, which the natives call Takh-ti Ta'us, 'Peacock Throne,' or Takh-ti Rustam, 'Throne of (the hero) Rustam.' A mile or so farther south rises the Platform of Persepolis itself, with its inner staircases and palace-crowned terraces, which the Persians call Takh-ti Jamshid, 'Throne of Jamshid,' after the legendary king of that name, or Chuhul Mindar, 'Forty Pillars,' from the columns that remain standing. The great staircase leading up to the palace may date back to legendary times (cf. possibly Bündahish, xxix. 14). We know from an inscription on the southern wall that it owed its origin as a stronghold to Darius I., apparently about B.C. 516-513, and it is generally believed that Greek designers were employed in its construction (see Justi, 'Gesicht. Iran' in Geiger and Kuhn's Grundriss, li. 448-449). Even when considered apart from the edifices that stood upon it, the platform is a remarkable piece of constructive
It measures over 1500 ft. from north to south, varying from 20 to 50 ft. in height, according to the elevation of the three main terraces, and it has an expanse running back eastward for nearly 1000 ft. until it merges into a low range of hills, called Kuh-i Rahmat, 'Mountain of Mercy,' in spurs of which have been partly used away to furnish material for its construction. By the aid of inscriptions, and judging from the position of the different ruins, the columns that remain standing, and the arrangement of the bases of those that have fallen, as well as from the outlines of the walls, porticoes, pilasters, and sculptured pediments, we are able to identify each of the buildings that once occupied this site. Opposite the Grand Staircase of approach at the northern end, is the Porch of Xerxes; 50 yards to the south stand the relics of the Audience Hall of Xerxes; still farther southward, and near a mound, are the better preserved remains of the Palace of Darius; while a short distance southward again, across a ruined courtyard, are some traces of a Palace of Artaxerxes II. Ochus, identified by a stone inscription last year. Directly behind this is the Palace of Xerxes himself, with a minor edifice still farther back, while at some distance northward is the great Hall of a Hundred Columns, erected by Darius, which forms the south-east corner, standing in stone the king seated on his throne of state. The destruction of these gorgeous buildings is attributed to the drunken act of Alexander the Great, when he burst the citadel after his victory over the last Darius; but though the hand of the conqueror destroyed the beauty of the edifices and left them a ruin for all time, it could not obliterate those traces that still in after ages bear witness to their ancient glory.

Some further remains of royal architecture are to be seen at Persepolis and in its vicinity; they are the rock-hewn tombs of the Achaemenian kings. Three of these sepulchres are cut in the hills, behind the great platform already described. They are believed to be the mortuary chambers of Artaxerxes II. Mennmon (B.C. 494-465), Artaxerxes II. Ochus (B.C. 358-337), and of Darius III. Codomannus (B.C. 336-330), if we are justified in regarding the unfinished grave as that of the last of the Achaemenians. More imposing in size and older in point of time are the four tombs carved in the rocky front of the necropolis cliff of Naksh-i Rustam, on the other side of the plain, about 6 miles north-west of the platform. These sepulchres, which were the model for the three later ones, are each hewn in the shape of an immense Greek cross, and sunk deep in the face of the rock. They are elaborately carved in architectural style to represent a façade decorated with bull-capped pillars, two on either side of the doorway, and surmounted in each case by a richly sculptured relief of the king, his subjects, and Ormazd. An inscription shows that one of these tombs was the sepulchre of Darius the Great; the other vaults, it is believed, belonged to Xerxes, Artaxerxes I., and Darius II. A few yards distant from the tomb last named is there a square stone edifice which closely resembles the rectangular structure at Pasargade, already mentioned, but well preserved, and, like the latter, probably a fire-shrine rather than a tomb. Near a base of the necropolis hill, but hidden from the shrine by the spur of the cliff, are the remains of two altars, hewn out of the living rock and serving as fine examples of the stonecutter's work for religious purposes in Achaemenian times. To the same age may likewise belong some rude cuttings in the rocks on the crest of the cliff, apparently designed as repositories for exposing the bodies of the dead in accordance with the ancient Zoroastrian custom, but the date is not certain. To a later age, however, we must assign the seven sculptures cut in the rock beneath the tombs themselves, since their subjects prove them to be of Sassanian origin. The most beautiful of these Sassanian tombs is to be supplemented by several other sepulchres, somewhat resembling those of Naksh-i Rustam, but probably dating from an earlier period than they or the Persepolitan tombs, and without inscriptions or ornamentation, excepting one which has a crude relief. They are approached by a terrace from Sabah, between Hamadan and Kermanshah, at Holvan in Western Persia, and Takirikha in Azerbaijan, as well as elsewhere (see de Morgan, Mission scientifique en Perse, iv. 292-302, and Justi, op. cit. ii. 450, 460).

The fourth and last of the great Achaemenian capitals was Susa, whose remains were first made known by Loftus in 1832, and were excavated with very important results by Dieulafoy in 1884, 1885, 1886, followed by de Morgan in 1897, 1898, 1899. The ruins are now at their height in the occupation of the residence of the Achaemenian kings and the old seat of government of Elam. The ruins extend over several tells, or hilly spots, between the river Chaur, or Jaur, and the Kerkhah, in the vicinity of the modern city. Achaemenian remains and groups of remains are distinguishable, according to the results of the explorations that have been mentioned: They are, first, the tell, called the Citadell; second, the Royal City, where stood the palaces of the successors of Darius; third, the traces of the city itself; and, fourth, the vestiges of the inhabited town along the river's edge. If we may judge from the elaborate finds made by Dieulafoy, the Citadel and the Royal City must have made an imposing spectacle in the days of their pristine glory (see the plates in Dieulafoy, L'Acropole de Susa); and the same investigator's researches have revealed, among other ruins, the remains of the apadana, or throne-room, of Artaxerxes II. Mennmon, which was erected on the earlier occupied by a palace of Darius I., which had never been destroyed by fire. It was here that the archaeological expedition, led by Dieulafoy and his wife, discovered the frieze of archers and a lion-frieze, together with the remains of an enameled staircase and various other objects that enticed the keenest student of Persian architecture and art. In point of style the Susian remains are quite like those of Persepolis, even as regards the character of the so-called 'Persepolitan column,' and, like the latter, they are thought to show traces of Greek influence combined with Assyro-Babylonian elements and other features already mentioned, although they are so thoroughly Persianized as to possess an individuality of their own.

The ruins of the palace edifice in Persia may be referred to here as belonging possibly to the latter part of the Achaemenian period; it is the remains of the great temple of Anaitis (see ANAHITA) at Kangavar, between Hamadan and Kermanshah. A portion of the N.W. wall of the stylobate on which the temple stood is still intact, and is crowned with the remains of a colonnade of pillars, while on the south-eastern side of the temple precinct there is a disordered mass of large granite blocks and columns, whose size conveys some idea of the magnificence of the sanctuary which is now a mass of ruins. Owing to the presence of certain characteristics in the columns, which seem to show later Greek or Syro-Roman affinities, Dieulafoy and some others propose to assign this temple to the Parthian period; but, to the present writer, the evidence seems
stronger in favour of attributing its erection to Artaxerxes Mnemon or some other of the later Achaemenians. For the sake of completeness it should be added that Dieulafoy, on the contrary, assigns to the Achaemenian period some of the remains of Firuzabad and Sarvestan in S.W. Persia; but other authorities, like Perrot and Chipiez, de Morgen, and Gayet, are better justified in assigning them to the Sassanian epoch.

3. Seljuk and Parthian periods (B.C. 330- A.D. 969). - The interregnum of seventy years occupied by the wars of Alexander's direct successors and the Seljuk rule exercised no appreciable effect on Persian architecture, unless it was to extend the sphere of possibility for Greek influence. The Parthians were Philhellenes, as is shown by their employing the Greek language and Greek devices on their coins; but they were not great architects, as is clear from the Parthian ruins—practically the only ones surviving—at Hatra and at Wara, although these are built with crude solidity, if not with beauty of design. Among the latter is Hastra, the modern al-Lādar, in Mesopotamia, which was either a palace or a temple, or possibly both combined in a single precinct, for which reason it is commonly spoken of as a palace-temple. The ruins of the browning structure of the pre-Khosrow 3rd or even of the 5th century and the bases on the left are the bases of the tower-tombs of Jenghiz Khan's grandson Hulagüt (d. 1265) and his queen at Maragha, the royal seat of the period.

4. Sassanian period (A.D. 224-661). - The Sassanian monarchs, unlike their Parthian forerunners, were great builders, and distant architectural rivals of the Achaemenians. An enumeration of the places where monuments that date from their reign are found would take in a large part of Persia, as is clear from such a list as that given by Justi (op. cit. ii. 540-541). These remains show advances in constructive art over the Parthian period, more especially in the development of the dome, an outgrowth of the arched vault, and in the elaboration of the façade of such a palace as that at Ctesiphon, where high recessed arches and galleried panels on either side, anticipate the sweeping curve of the grand portal and the panelled front which is typical of the mosque and madrasa architecture in Muhammadan times. The standard of royal magnificence under the Sasanians is shown in the ruins of Qasr-i Shirin, the castle built by Khusru II. Parviz (A.D. 600), for his favourite, on the road between Baghdad and Kermanshah, and is evident in the sculptured grotto at Taq-i Bostān, near the latter city. To about the second half of the period belong the ruins at Mashtit and at Ammun (the 'Rabbah of the children of Ammon' of Dt 30), as well as the palace called Aivan-i Khusru, not far from Susa. The religious architectural treatment of the Sasanian period is represented by the construction of numerous fire-temples, like the atash-Kudah, near Ispahan, and that at Abargah or at Jaur, in the district southeast of Shiraz; or, again, by a portion of the crumbling sanctuary of brick at Taq-i Sulaimān, near Lake Urmia. The style of construction of a Sasanian caravanserai may be judged by the stone ruins, said to be the work of Khusru I, 'Anūshirvān the Just' (A.D. 591-629), at Aqāhān, between Teherān and Meshed. The Sasanian architecture seems to have been influenced by several bridges and dams, as at Dizful and Shuster, or the stone aqueducts, descriptions of which may be seen in the standard works mentioned at the end of this article.

5. Muhammadan period (from A.D. 661). - As already stated, the history of the Muhammadan period of Persian architecture forms a special branch of Muslim art, and the best examples of its development are found in the mosques, the religious edifices which supplanted the fire-temples of Persia adopted Islam as its national faith, and which are characterized by towering domes (sometimes bulbous in shape), high façades with immense recessed arches, graceful minarets that give balance to an unusual number, and exteriors decorated with glazed tiles and scroll-like arabesques. The architectural remains of the first period of the Khalifate, the Umayyads and Abbásids (A.D. 661-847), have mostly been destroyed by the long series of wars that have devastated Persia from time to time; but the foundation of the mosque of Harūn al-Rashid at Kāzvin (A.D. 786) belongs to that epoch, and a mosque at Shiraz, built in the latter part of the 9th cent. by the Safarid Amr ibn Lāth, is numbered among the older remains (M'Tom at Al-Tayfīquine en Perse, ii. 137 and plate lix.), there is a ruin of a Parthian palace or temple at Velajjord, near Kangavar, and mention has already been made of the view which would associate the ruined temple at Kangavar with the Parthian era. The scarcity of Parthian remains is probably to be accounted for, as in other cases, by the fact that brick was more largely used than stone in the construction of their buildings. As to originality in architectural art, the Persians are credited with the development of the arch- and tunnel-shaped roof, in contrast to the flat ceiling and square lintel of the Achaemenian period.
Mongols in north-western Persia; while the mausoleum of Uljaitu Khodabandah (d. 1316) is of the later Mongol period. The best illustration of the architecture which flourished during the rule of the Tartars, after Timur's invasion, is the beautiful Masjid-i Kabud, or 'Blue Mosque,' erected by Shah Jahan, or Shahzad. Muhammadan architecture in Persia reached its height in the reign of Shah Abbas the Great (1585-1629), and is well illustrated by the Masjid-i Shah, or 'Royal Mosque,' erected in 1612 at Isfahan, and by the other imperial edifices of the same period. The arch of the mausoleum of Shah Abbas was not confined to his capital, however, or to places and places of worship, but was exercised in the construction of caravanserais, bridges, and other useful structures in many parts of Persia, so that his name is widely known throughout the land as the patron of the builder's art.

The cities which best show the different styles of Muhammadan architecture are those which had the honour at one time or another to be the royal capital, Isfahan, Tabriz, Kerman, and Shiraz; but hardly of lesser fame are Kurn, Kashan, Meshed, Bāstān, and Ardabil. Modern architectural tendencies are best observed in the present capital, Tehran, where it is possible to see European art combined with the most conservative features of the past. When viewed as a whole, it may be said that Persia's contribution to the history of architecture, if not distinctly original, is, nevertheless, considerable, and deserves the attention of the student of religious art as well as the architectural specialist.

LITERATURE.—For a general description consult Perrot-Chipiez, Hist. de l'art dans l'antiquité, v. Paris, 1890; Gayet, L'Art persan, Paris, 1886; Geiger, Ostiran. Sultun im Alte-
thum, Erlangen, 1885, pp. 216-222; Saladin, Manuel d'art musulman, l. ch. iv. (École Prusse), Paris, 1907. For special discussions, illustrative drawings, and photographic reproductions, see Flandin-Coste, Voyage en Perse, 8 vols., Paris, 1843-54; Texier, Description de l'Egypte, la Perse, et le Méopotame, 2 vols., Paris, 1842-46; Duhault, L'Art antique de la Perse, 4 vols., Paris, 1884-90, and L'Acropole de Salamine, la Perse, 4 vols., Paris, 1896-1902; Mme. Jane Duhault d'Asso: J'art des peuples de l'Orient, 1898-99, Paris, 1898; de Morgan, Mission scientifique en Perse, v., Paris, 1896; Rawlinson, The Five Great Monarchies of the ancient East, London, 1893; J. S. Maria, Monuments de Perse, vols. I and II, London, 1899; Rawlinson, The Story of Persepolis, part II, London, 1907; S. F. and T. A. J. This is an account of the fabulous temple, 'the temple, at Amlar near Tartas. This erection is built in a court, 52 yds. by 60, hewn in the rock and levelled, the 8. wall being about 10 ft. high. If there ever was any wall on the N. or front side, as is probable, it has now disappeared, and is replaced by a hedge. Remains of columns near the corners of the court suggest that the walls were flanked by cloisters. The 'temple' is in reality a cella, and stands on a square mass of rock high and being composed of three enormous blocks of stone covered with a monolithic roof. The blocks having been superimposed, the structure was apparently carved out in the form it now presents. The roof opening is twinned with the most conservative features of the past. When viewed as a whole, it may be said that Persia's contribution to the history of architecture, if not distinctly original, is, nevertheless, considerable, and deserves the attention of the student of religious art as well as the architectural specialist.

ARCHITECTURE (Phoenician).—Worshipers of the powers of nature, it is not surprising that the Phoenicians, in the earlier stages of their national existence, should have discarded the work of the architect and builder, and taken to worshiping in the 'high places' so often referred to in the Old Testament. That these were natural eminences, and not artificial erections, like those of the Babylonians and Assyrians, is quite clear from the statements concerning them. They were within easy access from the cities, and thither the people resorted when assembling for worship. How common they were may be gathered from the fact that they were the customary places for worship among the Israelites until the 7th century B.C. The oracle on Carmel, which, according to Thucydus and Strabo, was the seat of an oracle in the Phoenician temple, is seemingly a sacred place of this kind. The god consulted had neither statue nor temple, but only an altar which was much revered. This altar was probably of unhewn stones, like the one dedicated to Jehovah upon that same mount Carmel which Elijah re-built and consecrated anew on the day when he confounded the prophets of Baal. In all probability the Phoenicians would have continued worshipping in the same way, without temple and image, had it not been for foreign influence. The close relations, however, which the Phoenicians had with Egypt, brought them under the influence of that nation, with its splendid temples and elaborate ritual, and the result was that they sought to imitate them, though they did so only to a certain extent, as far as our present knowledge goes. The most perfect type of the small imitations of Egyptian temples is that now called al-Ma'bed, 'the temple,' at Amrit near Tartas. This erection is built in a court, 52 yds. by 60, hewn in the rock and levelled, the S. wall being about 10 ft. high. If there ever was any wall on the N. or front side, as is probable, it has now disappeared, and is replaced by a hedge. Remains of columns near the corners of the court suggest that the walls were flanked by cloisters. The 'temple' is in reality a cella, and stands on a square mass of rock high and being composed of three enormous blocks of stone covered with a monolithic roof. The blocks having been superimposed, the structure was apparently carved out in the form it now presents. The roof opening is twinned with the most conservative features of the past. When viewed as a whole, it may be said that Persia's contribution to the history of architecture, if not distinctly original, is, nevertheless, considerable, and deserves the attention of the student of religious art as well as the architectural specialist.
supplied by the spring, and it is possible that this was also the case in ancient times. Backed by verdure, it must have been a secluded and sufficiently picturesque spot, and the difficulty of access to the shrines would naturally prevent their desecration.

It is improbable, however, that these remains show the common religious architecture of their time, and the faces of Astarte at Sidon and Melqart at Tyre were undoubtedly much more important and imposing structures, though Erodotos’ description of the latter (ii. 44) does not point to either of its four gates as the principal entrance. To all appearance he was most struck by its two pillars (ὕλη), ‘one of pure gold and the other of an emerald stone of such size as to shine by night.’ Another important shrine was that of Eshmun on the left bank of the Nahar Ani, about a hour N. of Sidon. This was a rectangular erection built apparently on the side of the slope, remains of the walls and masonry of the terraces being still in existence. The slope looks towards the N., and is in part shaded by the shady trees of the hill. There was a shrine like that at Amrit, which has the same orientation. Large numbers of votive statuettes were found on the site. The stones of the shrine, however, seem to have been long and since the days of the days of the temples to build their houses with, and some, with holes, are used in olive-pressing.†

Of greater importance, perhaps, are the indications available for the architecture of the temple at Gebal, made known by coins of the Roman period.‡ On the left is shown a chapel, the front surmounted by a pediment. The whole front was open, flanked by pilasters supporting the pediment. At the top of the steps giving access to the interior was placed, probably as an offering, a strange emblem surmounted the point of the roof, which seems to have been decorated on each side with three rows of sunken panels.

Naturally the architecture of this building suggests Greek influence, and to all appearance it is a simple reproduction of the Egyptian shrine, but it may be noted that Babylonian architecture had something analogous (see p. 632), and may have been the true origin of the structure. What would seem to be due to Greek influence is the pointed roof.

The real ancient part, however, was probably the structure on the right, which shows a colonnade to which access was gained by a flight of steps, and a large court-yard, with columns—a kind of arcade behind. The representation of this building was evidently altogether too much for the die-sinker, whose ideas of perspective were on a level with those of the Assyrians. Above the cornice of the colonnade is an erection of open work, behind which one sees a conical object towering high in the open—the emblem of the god of the place, corresponding with the sacred stones in which the divinity was supposed to reside.

And here we again have the ‘high place,’ not formed out of the solid rock by the laborious quarrying of all the mass which was not needed, but by an enclosure of hewn stone, ornamented with a colonnade all round. This was naturally much labor to erect than the plain stones of the open, and also more aesthetic than the hill-enclosures marked off by simple rows of tall stones.

But it will be asked: Were these two forms—the ‘high place’ and the chapel or mountain-shrine—the only architectural creations of the Phoenicians for the purpose of worship? All that can be said is that they are the principal forms found. It seems not improbable, however, that they had others, and known as well as these.

In Cyprus the most famous temples were those of Paphos, Amathus, Idalion, and Golgos, in which places were Phoenician settlements, as also, probably, at Citium (now Larosaca), Salamis, and other sites. From Cypriote coins,† an idea may be gained of the celebrated temple of Venus, dedicated to Vesta or Astarte. It consisted of a central erection—a kind of pylon—in the form of two narrow towers connected, in the upper part, by a chamber or chambers furnished with three windows. Below this was the entrance, in which was the main cult, and there—a conical stone surmounted by a naëve indication of a head, and two rudimentary arms.

Perrot suggests that the size of the opening has been purposely exaggerated by the engraver in order to exhibit the divine image, which was, in reality, not at the entrance, but at the far end of the sanctuary. On each side of the pylon were porticoes or colonnades, flat-roofed, hardly more than half the height of the central portion, surmounted by pediments and enriched with statues of the goddess. Under these arcades objects like candelabra are shown, the upper part arranged either for the purpose of giving light or for the burning of incense. Above the upper structure, and between the two towers, are shown a star and the crescent moon—emblems of the goddess. The space in front of the building seems to be represented paved, and enclosed by a semicircular railing, provided with a double gate. Within this enclosure is a dove, apparently sacred. Some details vary somewhat in the different coins;‡ and it is to be supposed that the engraver had no intention of giving more than a general idea of the building, so that numerous accessories have been omitted. As well as to the enclosure, so much of the body of the edifice was rectangular, 67 metres by 50, surrounded by a court-yard 210 by 164, more or less. As it is based upon actual exploration, it is to be preferred to the plan given by Gerhard after the indications of travellers who visited the site in the early years of the 19th cent.;§ but how the latter could have obtained the exceedingly probable details of the interior which he gives is difficult to understand. According to his plan, there were two enclosures, the first provided with four entrances, and surrounded by a colonnade. A doorway opened to the second enclosure, in which was the temple. There we see the semicircular railing, the paved forecourt, the sites of the towers, the central portion of the building, divided into a vestibule, a large hall, and a sanctuary wherein was the sacred image; likewise the lateral structures, each with four chambers, to which admission was gained only.

from the large central hall, and one (that at the end) which could be entered only from the sanctuary. The two plans are so different that one asks whether they could have been taken from the same remains. According to Tacitus, the stone emblematic of the goddess was in the open air, indicating that the place where it stood had no roof; notwithstanding this, it is said never to have been wet with rain. This rather favours Di Cesnola's plan, which, however, does not agree with the picture on the coins. Probably further exploration is needed.

In 1879, Cesnola visited the Island of Malta, Malta, 1882, reproduced in Perrot-Chipiez, ib. flg. 225. lb. figs. 219, 220.

Strange walls, hard.

The temple at Paphos, without the lateral structures or aisles. At Golgoz the temple was a parallelogram, the roof supported by five rows of three columns each. There were two doors, one S., the other E. A large cone of grey stone found on the site implies that the building was dedicated to the goddess of Paphos. It resembles in form, but on a large scale, the terra-cotta cones found in such numbers at Tellah in S. Babylonia. Many figures of women holding or sucking their children, and cows sucking their calves, were discovered at many points on the site. Numerous pedestals, each of which anacreon bore a statue, and some of them two, were found. Ceccaldi, who studied the objects dispersed there, has given a very vivid picture of the appearance of the temple when it was still standing. Its four walls were of sunbaked brick covered with white or coloured cement, and the pillars were of wood, with stone capitals, the sides of the roof which they supported having only a very slight slope, forming a terrace, like the present Cypriote roofs. The roof was of wood covered with reeds and mats, upon which was spread a thick layer of earth beaten down hard. The exterior was therefore of a very simple appearance, holding or sucking, but being assimilated to the conical object on a plinth, surmounted by a flat top, on which stands a dove, the emblem of the goddess. In front is a semicircular enclosure with a single central gate. The whole shows a simple form of the temple at Paphos, without the lateral structures or aisles.

This is a vivid and probable picture, of which, however, some of the details require verification. Perrot suggests that this building was simply a treasury or museum belonging to the real temple. A few underground buildings exist, the most noteworthy being the crypt at Curium, in which were found many objects of value. Having descended the steps and passed along a short passage, one finds three successive bayed rooms, and at right angles with these, a fourth, with a further length of the passage. This interesting and well-built structure seems to have been used as a treasure-chamber, but whether intended for such is uncertain. That at Larnaca is known as the Panaghia Phaneromini. Enormous blocks, as well as small stones, have been used in this construction, which consists of a vestibule with a door leading to a small chamber, within which was found an old spring, probably some sacred source. The roof was formed of two large blocks of stone considerably arched on the under side. It has been thought to be a tomb; but in view of the existence of the spring, this is unlikely.

Far behind the perfection of the temples of Phoenicia and Cyprus are those of Malta and Gozo. The Gozans (now at Malta) naturally, a wide gap separates them from the structures of the Phoenicians, but the conical (sacred) stones found therein have caused them to be regarded as certainly Phoenician. Evans and others, however, are of opinion that these buildings are really Libyan. At Gozzo there are two temples, side by side, and joined together by a wall, which forms a kind of rough façade. Passing through a narrow entrance, one reaches, in the case of the larger building, first a small and afterwards, continuing along the passage, a larger hall arranged at right angles thereto. The rear termination of the building is an apse in the form of a semicircle, and the whole suggests the arrangement of a church choir with deep bays. In consequence of its size the apse building has the first hall larger than the second, and the semicircular apse at the end is decidedly smaller; otherwise the arrangement is in both cases the same. In the various apses of which the building consists, the ground is made to mount by means of steps and side entrances. A wall was built off these raised bays, which then resembled the chapels in Catholic churches. It was in the right-hand bay, in the first hall, that the cone was found which gave the clue to the nature of these structures. Though symmetrically planned, the individual bays are not by any means regular in shape, and the stone supports for the furniture or sacred objects of the shrines seem to be placed without any attempt at orderly arrangement.

Still more irregular than that of Hagiar Kim, Malta, in which, moreover, the want of care and regularity extends also to the arrangement of the stones that form the walls, which are in some cases of enormous size. There are two entrances, giving access to two bays or apses on the E. and W.

They are called the Góspit, the enormous stones used in their construction having led to the tradition that they were the work of giant builders. Plans and views, from La Marca, Nouvelles Annales de l'Institut de correspondance archéologique, publiées par la section française, t. 1, Paris, 1839, pp. 1-22 and pl. 1-15, are published in Perrot-Chipiez, Phénicie, figs. 221-224.

fous on the W., but the southernmost of each seems to have been separated from the rest, and partitions in the case of two others are shown on the plan. Stones decorated with spiral ornaments show that attempts at decoration were made; the ground upon which the spirals are carved is covered with a number of minute holes, emblematic, it is supposed, of the starry vault of heaven.* A striking altar,† with fluting, decorated with a representation of a growing tree, has the same ground-work, which covers also many of the great blocks of stone used in the building. Another altar, like a small table‡ with a thick central support—a type met with often in Syria—was found in one of the large bays.

Sculptures show that similar temples to those in Syria existed, in Punic times, in Sicily and Carthage. One of these was known under the name of Erck Hayim, 'Length of Lives,' and was dedicated to Astarte as goddess of longevity, whence the name of Eryx, given by the Greeks to the city where it was. It stood on the peak of a mountain, within that mighty wall which protected the summit. Judging from a stele found at Lilybaeum (Marsala), a temple to Hammon existed there. The upper part of this monument§ shows a priest adoring the sun-dial, or fire altar, behind which is the sacred cone with 'arms and head,' similar to the symbols found on the votive steles at Carthage. Inscriptions dedicated to Batal Samaim, 'the lord of the heavens,' at Bata Hayim, Ammon, and El, make it probable that Phoenician temples to these deities existed in Sardinia, where they were found. A shrine¶ in the Egyptian style, found at Suleis (Beja, in Etruria), has an openness between a disc, and a row of uraei above. In another example from the same place,¶ carved with a goddess in Greek costume, we have a mixture of styles, Doric columns being introduced as supports of an entablature showing the Egyptian winged disc surmounted by a row of uraei.

Carthage and its dependencies have but little to offer in the way of religious architecture in the Phoenician style. At Euboe a lintel of a doorway** covered with a large lotus-fish relief is seen above them, and two crescent moons on each side, and at Jezza a capital of a column†† in modified Ionic, suggesting Cypriote influence, testify to buildings erected there. At Carthage itself the great temple of Eshmun, Baal Hammon, and El-Mat, seems to be, the Phoenician temples to these deities were associated with the Egyptian, and as such were considered of the same order as the Egyptian cult. When the Phoenicians were conquered by the Romans, it was re-built as the temple of Aesculapius; but nothing now exists of it, as the church of St. Louis and its dependencies at present cover the site.

The ornamentation of the Phoenician temples has been referred to from time to time in the preceding pages, but a few additional words are necessary. The cornices are often plain, but when a row of uraei-serpents was added,** the effect was decidedly decorative. Egyptian influence was also evident in the entablature of the temple at Gebal,§§ with its Greco-Roman decoration, including scrolls and flowers flanking a conventional Egyptian winged disc-emblem with uraei. The doorway at Um-al-Awamid,¶¶ being much more Egyptian in style, forms a striking piece for comparison. Egyptian influence is again manifest in the relief showing a sphinx, beautifully carved, found at Arad.¶¶

Apparently it was a favourite decoration with the Phoenicians, for it occurs also as the support of a throne in the decorative panel-relief showing a seated personage in the presence of the sacred fire (see below, p. 885 f.). Gradine ornaments,* such as are found in Assyro-Babylonian reliefs showing fortifications, occur on alabaster slabs from Gebal, now in the Louvre. They suggest the Assyro-Babylonian temple-tower, surmounting a decoration of flowers in squares over a band of laurel. This gradine-ornament is also applied to altars,† and even of the Round Temple. As if in the case of the Round tower-like monument of the tomb of Amrkt,‡ however, the idea that it was really a battle-ment is lost by the material between the gradines being left; there are no openings. The great disadvantage to the modern student of their decoration, however, is that the remains are so scanty.

There is hardly any doubt that the architecture of the Phoenicians has had an influence on that of the nations around. Perrot and Chipiez cite the old mosques in Jerusalem, and temples with their great rectangular courts surrounded on all four sides by rows of columns, the idol alone being absent. 'If one wish to have the type complete, one must go as far as Mecca, and enter into the Ka'ba, where the triumph of the Qur'an has not succeeded in ousting the primitive bethel, the black stone, which, set up in the sanctuary, has received the homage of the Arab tribes throughout many centuries' (Phénicie, p. 319 f.).

But perhaps most interesting of all the elements not derived directly from Phoenician architecture. We have always to take into consideration the possibility of their having come down to the nations which produced them by some collateral line, and the influence of the Romans on them may be due to action and reaction. Whatever reservations may be made, however, the evidence of history and the monuments seems to show that the influence of Phoenicia preponderated.

ARCHITECTURE (Roman).—GENERAL CHARACTERISTICS.—If it be necessary in the case of Greece to point out that religious buildings were but a part of the architectural activity of the state, it is still more necessary with regard to Rome. Roman religious architecture plays a very small and comparatively unimportant rôle. Her baths, her palaces, her amphitheatres, and other public buildings were all upon a grander scale than her temples.

When Rome became mistress of the world, although she had at that time no architecture of her own, she made use of artists from all nations, and thus arose a composite style of the architectures of the world, in which Greece played by far the largest part. The origin of the Roman temples seems to have been partly Etruscan, partly Greek; but whatever part Etruscan architecture played in other branches of Roman architecture, the Roman temple in its final form was almost wholly Greek. This is the reason that the great development of Roman architecture was almost entirely in the hands of Greek artists, and it is by no means easy to determine how much can really be considered Roman at all.

The true Greek style was tamely accommodated, the arch, as has been shown, being only occasionally used. The style of the Romans, however, was a hybrid, partly arcuated and partly tamely accommodated, and in their hands the fusion of the two elements never became complete. It is generally said that the arch in Roman architecture is the arch of the Etruscans: it is, however, doubtful whether it was not an introduction of the Greek artists of the East
and Alexandria. In any case both the arch and the barrel vault date back to remote ages in the East, and the later Greek architects were more likely to be influenced by these traditions than by the comparatively obscure work of Etruria. At the same time, fine arches with large voussoirs were built by the Etruscans, as in the canal of the Marta at Gravina, supposed to date from the beginning of the 7th cent. B.C., or the Cloaca Maxima at Rome of the 6th. If, however, the Romans themselves had continued the tradition and built in a fine stone arched style, it at least seems probable that some remnants, however scanty, would have come down to us. Indeed, we know that early Roman architecture was of brick, and brick vaulting with voussoirs occurs in Egypt as far back as B.C. 3500. Even the intersecting vault is found in a Greek example at Pergamos dating from the 2nd cent. B.C. The earliest surviving Roman building that had arches is the Tabularium, and it dates only from B.C. 78, long after the sack of Corinth, when Rome passed under the rule of Greece intellectually and artistically. Arches were in use in Greece at any rate for structural purposes, as early as the time of Eumenes I. (B.C. 263–241), so there is no reason to suppose that Greek architects working for Rome were in any way necessarily indebted to their Etruscan predecessors. Even the triumphal arch—that ornamental form which we are wont to consider typically Roman—was built in Athens in B.C. 318. The earliest instance of such an arch in Rome is that of Scipio Africanus (B.C. 190), of which we have the record, but no remains. The most that can be said, then, is that it is not impossible that the Romans may have had a developed arched style derived from the Etruscans before they fell under the dominion of Greece; but there is no evidence of any kind, and, as far as existing remains are concerned, there are no new developments that precede Greek work. The attached column, for instance, sometimes spoken of as a Roman invention, occurs in the Arisonoeum in but slightly modified form, in the monument of Lycurgus in Athens, and at Phigalia, and if those of the Erechtheum were of Roman date.

With regard to their brick and concrete construction it is otherwise. The Romans were certainly great engineers. There is, however, not the same intellectual nicety about Roman work that there is in Greek work, and this was never acquired. When the Roman Empire was finally divided, the Greek or Byzantine portion at once began to develop a more scientific style in marked contrast with the rude work of the West. Roman work was practical, rough and ready, often grandiose, but lacking in the finer artistic sense.

It is likely that we shall never be able to say what elements are Roman and what are Hellenistic, but it is possible in the general plan of the Roman influence is strongest.

The Romans borrowed the Greek orders; or perhaps a more correct way of putting it is to say that the Greek architects working for Rome used their own orders, and by slow degrees trained a native school. The Doric order became very debased, and is found in a great variety of forms. The simpler of these forms are commonly grouped together as Tuscan, but they differ very much among themselves, and there is no historical evidence for any Tuscan origin. Vitruvius uses the term, but it is impossible to draw any clear dividing line between Tuscan and the debased Doric. The cause of the common error is that the Renaissance architects did make such a hard and fast division as that between Renaissance work has a definite meaning, but has no relation to anything in Rome. There was a Roman tendency to dispense with the fluting of Greek work both in Doric and Ionic, and occasionally in the Corinthian order, which greatly detracts from the strong refined vertical character of the shaft. Flutings were expensive to work, and were not showy enough to please Roman taste, which preferred monolithic shafts in hard brightly-coloured marbles in which fluting would have little effect. The column loses the sturdy proportions of Greek Doric, and tends to assimilate itself to the proportions of the other orders. In most of the existing examples of Roman Doric there is a base, but this is absent in early examples such as those at Pompeii, which are much more Greek in feeling. It has been suggested that the origin of the base is Etruscan, but its absence in early work is against this theory; and the part that Vitruvius would assign to Etruscan influence in architecture is not much more of a reality than the part assigned by Virgil to Æneas in Roman history. The contours gradually deteriorate, and the echinos of the Doric column speedily becomes a simple quarter round. In the almost unique early example of the Temple of Hercules at Cora the hyperbolic curve is found, and is obviously executed by Greeks. The architrave shrinks in importance, and the whole entablature is much shallower. There is a marked tendency for the intercolumniations to become wider. This is mainly the result of the fact that the order as such is not an essential part of the construction in Roman work. It does not govern the building, but is merely something applied afterwards, and has to suit its proportions to the available space. It is to this that we owe the introduction of the pedestal as a regular feature, which occurs only occasionally in Greek work. The architrave is set farther back than in Greek architecture, and the line of its face tends to fall within the base (fig. 1). The beautiful sculpture

![Roman Doric Order: Temple of Hercules at Cora](image-url)
The Ionic order remains the same in its principal features, but the capital is not infrequently found with the volutes set anglewise (fig. 2). They are, however, comparatively rare, although the text-books speak of them as almost universal. This arrangement in Greek work at Pompeii has already been noted, and its first known occurrence in Italy is at Pompeii, where the refined carving marks it as the work of Greek hands. The volute in Roman Ionic projects very much less than in Greek examples, and the proportions are not at all satisfactory. There is generally a dentil course beneath the cornice as in Asiatic Greek examples: this occurs even in Roman Doric in the Theatre of Marcellus. The Roman dentils, however, are set much closer together and are shallower in Greek work, generally with a fillet underneath.

The tendency throughout is towards greater enrichment, clearly seen in the choice of the Corinthian as the favourite Roman order. In Greek hands, as at Epidaurus, or the choragic monument of Lysicrates, this order, in spite of its richness, is yet restrained and most delicate in its refinement. In Roman work this is lost, and mere carving takes the place of the sculpture which is still found in the choragic monument. The foliage, too, loses its crispness, and the acanthus mollis takes the place of the acanthus spinosus (fig. 6 in Architecture [Greek]). In some instances, particularly in triumphal arches, the small angle volutes are greatly enlarged, and may have helped to popularise the angle treatment of Roman Ionic. The capital then partakes of the nature of both Ionic and Corinthian, and the egg and dart molding is introduced above the acanthus. Thus treated, the order is sometimes called the Composite order, a name unknown to Vitruvius, and not at all necessary; it is in no true sense a distinct order, although the architects of the Renaissance en-

**FIG. 2.**

**IONIC CAPITAL**

**TEMPLE OF SATURN ROME.**

deavoured it to make so. The origin of the arrangement is as usual Greek, and in the temple of Apollo at Naukratis, the Erechtheum itself, and a capital in the forum of Trajan, we see it in its undeveloped form.

The entablature in Roman Corinthian work is very ornate. The architrave is divided by several moldings more or less enriched. The frieze is often decorated with continuous scroll work, founded on the acanthus leaf, which is beautiful in itself although giving a restless effect as the result of over-ornamentation. Below the cornice a new feature is introduced in the modillions—ornamental brackets which give an aesthetic sense of support (fig. 3).

Religious buildings.—Of course in most of the great secular work the arch plays an important part, and the orders are placed as ornaments in front of the real arched construction; but except in the case of the propylaea in the East before the sacred temenos, the arch practically plays no part in religious work. The vault, however, does occur (see below). The religious buildings of the Romans were of comparatively small importance, and the great thermae are far more typical of Roman work than the temples. The temples, too, were used for many other besides religious purposes, just as was the case with the great medieval cathedrals. The temple of Concord was not only an art museum of the spoils of the world, but was often used for meetings of the senate, as also was the temple of Mars Ultor. The public weights and measures office was in the temple of Castor. But the Roman temples, although in their main features simply modifications of the Greek, have certain distinctive marks of their own. It seems probable that the early Etruscan temples were often of three cellae placed side by side, and, moreover, that it was the custom to erect them upon a lofty base, or podium.

The Etruscan architecture apparently was largely of wood, and terra-cotta ornaments played a very important part, noticeably in a peculiar fringe of ornamented terra-cotta tiles hanging from under the eaves and apparently also from the main beam of the portico. These features can be traced in Roman work—the lofty podium with a great flight of steps approaching the main portico, the wide intercolumniations, and the use of terra-cotta ornaments—and even the three-celled temple may have had its influence in the great buildings of the Roman temple, or in the case of a triple temple such as occurs at Sbeitla in N. Africa. (See Art and Architecture [Etruscan and Early Italic], p. 803.)

The ruins of the temple of Mars Ultor and three columns of the temple of Castor and Pollux (completed A.D. 6) are probably the earliest extant remains. There may, however, have been earlier examples, as Greece can be said to have begun its dominion over Rome in B.C. 146. The temple of Jupiter Capitolinus was possibly largely Etruscan. Generally speaking, the earlier the date the purer the work and the more marked the Greek influence. It has been observed that the Greek temple was orientated; but this was not the case with Roman temples, and we find them facing in different directions, generally planned in relation to their architectural surroundings. We find them all round the Forum Romanum, for instance, each facing into the forum. As in the case of Greece, the altar was not in the temple but outside, and the exact raison d'être of the temple itself is by no means so clearly defined.

The typical Roman temple, then, is a rectangular building with a cela very much wider than was usual in Greece. In the temple of Concord the width was greater than the depth, which possibly have been the result of the earlier three-celled temple or of the many uses to which the
Roman temple was put. The architectural effect was always concentrated upon the front, and the back of the temple was often absolutely plain. As part of the same tendency we may notice that the temples were generally only pseudo-peripteral, with attached columns round three sides of the cela and an abnormally large front portico. The temple of Fortuna Virilis is a good early example; there is a very fine later temple known as the Maison Carrée at Nîmes (fig. 4).

The Roman temples within were apparently rarely divided into nave and aisles, so that a greater floor space was obtained, but the span was sometimes reduced by internal columns close against the wall, after the manner of the Greek temple at Phigalia. Occasionally there was an apse, as in the temple of Mars Ultor; and in the temple of Venus and Rome there was an interesting arrangement of a double temple with two cellae and apses back to back (fig. 5). The whole in this case was surrounded by a court and stoa.

The roof appears to have been normally of wood, but certainly in a few instances a concrete or stone vault was employed, as in the above-mentioned temple of Venus and Rome, the temple of Neptune, the temple of Ceres and Proserpine, and the temple at Nîmes known as the Nymphaeum or the Baths of Diana, which has a stone barrel-vault supported on stone arches which rested upon attached columns (fig. 6).

In front of the temple was a great flight of steps generally flanked by two projecting portions of the podium, the steps not extending the entire width of the building. In the temple of Minerva at Assisi the steps are carried between the columns which are raised on pedestals. This was probably from want of space.

A favourite form of temple with the Romans was the circular building which had become popular in Greece during the 4th and 3rd centuries B.C. It has been suggested that the Roman circular temple had an independent Etruscan origin. Even if this be the case with regard to the mere fact of the plan being circular, it has certainly nothing whatever to do with the actual form, which is simply a copy of Greek work. The lofty podium is generally found in Roman examples; but this, too, occurs in Greek examples of much earlier date. The picturesquely situate temple of Vesta at Tivoli is a fine example, of which the cela itself may even date back to the close of the 1st cent. B.C., although the Corinthian peristyle is later (fig. 7).

By far the most remarkable of the circular temples, and indeed of all the Roman temples, is the celebrated Pantheon (fig. 8)—a great building 142 ft. 6 in. in diameter; 2 ft. in excess of the domed reading-room of the British Museum. The exterior is plain, not to say ugly; but originally the brick was faced with marble up to the first string course, and above this with stucco, which may possibly have somewhat improved the general appearance although not actually affecting the building architecturally. It is approached by a great portico built from the spoils of Agrippa’s temple, which was taken down for that purpose. This fact was discovered in 1892, and is some consolation to those
who have always maintained that the portico is hopelessly out of place, and ruins the severe dignity that the plain circular building might otherwise have possessed. The date of the main building also has conclusively been proved to be A.D. 120–124, from the stamps upon the bricks of which it is constructed. This is a most important fact, as the assignment of the building to Agrippa has led to many wrong inferences with regard to the history of dome construction.

The building occupies the site of what was once an open circular piazza, the pavement of which has been found some 7 or 8 ft. below the floor of the present building. The walls are 20 ft. in thickness, containing eight great recesses three of which are apses: the highest faces the entrance on the main axis, and the other two are at the extremities of the diameter, at right angles to the main axis. The entrance itself is a great rectangular recess covered by a barrel-vault, and between these four recesses are four others, all of rectangular form. Except in the case of the entrance and the main apse opposite to it, all the recesses have two columns in antis in front. The dome is divided in its lower part by vertical and horizontal ribs into five ranges of thirty-two coffers. Above this it is plain, and the whole building is lit by a huge circular hypostyle opening 20 ft. across. Altogether the interior effect ranks very high among the great buildings of the world.

Under Roman rule many great temples were built in many other countries than Italy, but, as in those countries that had no architectural styles of their own, it is misleading to call them Roman. Particularly in the East we find many buildings that are practically simply a development of Hellenistic architecture. The great temples of Syria, for instance, are not placed at the end of the fora as in Rome, but in a temenos of their own as in Greece, with propylea leading into them. With one exception too (Baalbek) they are orientated in the Greek manner. Of this type is the great temenos of the temple of the Sun at Palmyra. In most instances, just as at Athens, the propylea have a wider intercolumniation in the centre, but it was spanned by an arch, round which the entablature is carried. The propylea of Damascus (fig. 9), which may be dated c. 110 A.D., or not much later, are probably the first instance, and a similar dated example occurs in the temple of Attil (A.D. 151). Baalbek (A.D. 160) and probably Palmyra were the same.

The invention—if so it may be termed—appears to be that of Apollodoros, a Greek of Damascus, and seems a natural development of the arches of later Greek tradition already noted. It afterwards appears in Diocletian’s Palace at Spalato, on the north-east coast of the Adriatic (c. 306 A.D.). It marks an important step, because hitherto the arch had always been carried by portions of walls or piers. On the other hand, the columns had never before carried anything but a horizontal entablature; and the piers and arches behind, with the columns and entablature in front, always remained two distinct and irreconcilable elements. Indeed, it was left for the Byzantine and Gothic architects to work out truly homogeneous styles of column and arch.

Of these Syrian examples the finest is that at Baalbek, which is built upon a great platform forming an acropolis. The general setting out is probably not Roman, and some of the substructure is pre-Roman in date. It was approached by great propylea of Roman times, the restoration of which is largely conjectural. An interesting feature is the hexagonal court, surrounded by a double peristyle upon which the propylea opened. The hexagonal court leads in its turn to a great square court, at the end of which, somewhat in the Roman manner, is the larger of the two temples. Apparently it was never completed. The other temple to the south, the temple of Jupiter, is a very fine piece of work. In some ways the building was a compound of Greek and Roman feeling. It was peribolal with two ranges of columns in the front, but the portico was very deep, and the central intercolumniation was wider than the rest. The interior had attached columns after the manner of the temple at Phigalia, except that the entablature was broken and carried round and back between the columns. It probably had a flat roof, except at the far end, where there was a small vaulted recess, about half the total width, approached by a flight of steps. A curious feature is a two-storey division into shallow niches between the columns, which has a very unpleasing effect. The lower one is arched, with a horizontal cornice, and the upper has only the cornice, but is surmounted by a pediment. The carving is bold and good, and shows the influence of Greek tradition.

Construction. — The Roman method of construc-

![Fig. 9. Damascus](image9)

![Fig. 10. Bay from Colosseum](image10)

Whereas the Greeks generally built in large stone blocks bonding right through the wall, the
Romans built mainly in brick and concrete, and the finer materials were used only for facing. In Rome itself even brick was never used throughout, although in the provinces brick walls or courses of stone and brick alternately are not uncommon. Whether brick or stone was used in the core of the wall or not, the outer face was invariably covered with stucco or some finer material. When brick or stone occurs, its use is not easy to determine, as it would neither add to the strength of the wall, nor admit of its being built without plastering to keep the concrete in position while setting. Bricks were of flat triangular shape, and stones pyramidal. 'Opus incertum' was work where the stones were more or less irregular in shape, and 'opus reticulatum' where they were dressed to a true square, and set diagonal-wise in the wall (fig. 11). In either case occasional courses of large flat bricks, 1 ft. 11 in. long, bonding through the wall, were used. A similar method was adopted with arches to prevent the concrete from spreading and settling down before it had set (fig. 11). The marble or other facings were secured to the wall by iron or bronze cramps running into the body of the wall (fig. 11).

![CONCRETE WALL WITH BRICK FACING](image)

**TUFFA WALL WITH MARBLE FACING**

![CONCRETE ARCH](image)

**CONCRETE ARCH**

In vaults and domes, arches or ribs of brick were built upon light wooden centering, and cross bonding bricks dividing the whole into compartments were inserted at intervals. The concrete was then poured into these, and the whole set into one solid mass, exerting no outward thrust whatever. Stone vaults, instead of concrete, were occasionally built in later days, as in the Nymphaeum at Nîmes, mentioned above.

Ornamentation.—The ornamental work of the Romans was not nearly so good as their construction, which was sound and workmanlike, and of great durability. One even regrets that they ever attempted ornament at all, as the bold and simple majesty of their great work is only spoilt by the applied ornament. After all there is very little Roman work, if any, more pleasing than the Pont du Gard at Nîmes; and it has no ornament at all. One of the most delightful of their more purely architectural works is the gateway at Trèves, which is practically a wall built without the use of any ornament used by the Romans all derived from Greek sources, but there is a roughness and want of delicacy that shows an entire ignorance of the subtlety and refinement of Greek work. The profiles of the moldings are nearly always segments of circles, instead of the complicated and hyperbolic curves of Greek art. Moreover, the molding, as a rule, does not depend for its effect upon the subtle gradations of light and shade produced by its own contour, but upon the elaboration of the carving cut upon it. Somewhat similarly we find a preference among the Roman architects for the acaenthus mollis with its rounded and less precise form, whereas the Greeks preferred the acaenthus spinosus with its more crisp refined lines (fig. 6, Architecture [Greek]). It is true that the acaenthus spinosus is less satisfactory even than the other, but this kind of thing is well known—the greater the height, the worse the fall. The carving, too, although vigorous in its way, is rougher and much more mechanical than that of Greece. Instead of the fine sculpture that adorned the temples in Greece, we frequently find endless repetitions of ox-skulls and hanging festoons of fruit and flowers between. There was a great tendency to use the ornament in such profusion that it suffocated itself. Such an example, for instance, as the arch at Beneventum is so overloaded that there are practically no plain surfaces at all, and the whole effect is worried and unsatisfying.

Colour was used in their buildings by the Romans as by the Greeks, and the great fondness of the Romans for marbles of many colours gave their buildings an opulence in effect that was one of their most marked characteristics.

One of the most important adjuncts of Roman ornament was the mosaic, which, however difficult to work satisfactorily, is undoubtedly more in consonance with architectonic feeling than any mere surface pigment. Adequately to appreciate Roman work, it would be necessary to study much more than the religious architecture. Rome's finest achievements were in the thermae—the great baths, which were the centres of Roman life, where literature was read and discussed, and politics debated. In these magnificent buildings it was the interior that was the greatest achievement. It was in interior effects that the Roman architects made the real architectural advance, giving to them a magnificence hitherto undreamed of. Magnificence was the aim and end of Roman art; subtlety and refinement were beyond its comprehension. How, ver, of existing remains, it is a religious building—the Pantheon—that gives us the clearest conception of what this interior magnificence was; and for us the Pantheon, with its fine interior and poor exterior, is the great typical example of Roman achievement, as the Parthenon, with its delicate subtleties and sculpture of unsurpassable perfection, is of Greek.

J. B. STOUGHTON HOLBORN.
ARCHITECTURE (Shinto).—There are indications that the original Shinto place of worship was, like the Roman temple, not a building, but simply a plot of ground consecrated for the purpose. It was probably enclosed by a row of twigs of the sacred evergreen sakaki tree stuck in the ground. 'Spirit terraces' for Shinto worship are mentioned in the old records, and the common word for a Shinto shrine, viz. yashiro, means 'house-equivalent,' i.e. a make-believe house for the god—no doubt a plot of ground of this kind. Another word for a shrine is 'kamidana,' which means 'august house,' and is applied alike to a palace and a shrine. Sir Ernest Satow says (TASJ, 1874):

'The architecture of the Shinto temples is derived from the primordial, but with more or less modification in proportion to the influence of Buddhism in each particular case. Those of the purest style retain the thatched roof, others are covered with thick shingling, while others have tiled, and even coppered, roofs. The projecting ends of the rafters (called chigi) have been somewhat lengthened, and carved more or less elaborately.'

It appears from passages in the Nihongi that the chigi were restricted to imperial residences and to Shinto shrines. Another distinctive feature of the shrines is a row of cigar-shaped pieces of timber laid cross-wise on the roof-tree. The walls consist of the sanctuary, the roof, the round, and without bases. The shrine has a wooden floor, raised some feet above the ground. There is a sort of balcony all round, with a flight of steps up to the entrance. A certain amount of brass ornament and wood carving is used in some shrines, but, generally speaking, they are characterized by great simplicity. The wood-carving and metal ornamentation of some of them are traceable to Buddhist influences, and were removed when the Japanese with confidence in the power of the Imperial divinity restored the ancient Shinto shrines. The existence of temples in the time of the Slav Russian Empire is very questionable. Hilarius, a monk of the 10th cent., writes: 'We are no longer building kopishta, but churches of Christ,' from which we may infer that the kopishta (from kop, 'idol') was not peculiar to the Slavs. The oldest Russian chronicles speak only of idols, and the word kopishta may mean simply idols. Among the Baltic Slavs we find the existence of temples attested by German writings, in which the descriptions of the temple were not altered after the restoration of the Imperial power in 1688. They are always of wood, without paint or lacquer, which, of course, limits their duration. The shrines of Isæ are renewed every twenty years. Nor are they of great size. In the 9th cent. a greater shrine had only fourteen feet frontage. At the present day the outer shrine of Isæ—that in honour of the Goddess of Food—measures 34 feet by 19 feet. The great majority of Shinto shrines are very tiny indeed.

The more important Shinto shrines are surrounded by a cluster of subsidiary buildings, which serve various purposes. There is a small oratory, where the Mikado's envoy performs his devotions. No provision is made for ordinary worship. He remains outside in front of the shrine whilst he utters a brief invocation. The joint worship of a congregation of believers is a rare phenomenon in Shinto. Within the precinct there are usually a number of smaller shrines (maeshita) to other deities than the one worshipped in the main building. At Isæ there were formerly more than a hundred of these. Sometimes there is an emado, or picture-gallery, for the reception of za voto offerings of this kind. A characteristic feature in Shinto architecture is the torii, or honorary gateway, which adorns the approaches to the shrine, sometimes in great numbers. These are usually placed in pairs, leaning slightly towards one another. Near the top they are connected by a cross beam or a high beam rests on the upright columns, projecting a little on each side. It is often made to curve upwards at the end. The torii is usually constructed of wood painted red, but may also be of stone, bronze, or even occasionally of brick. They have a symbolic effect. Mr S. Tuke has shown that the torii is identical with the Indian tauran, the Chinese pailou, and the Korean hongsalmun, which are similar in form and purpose. The name is probably Japanese. It means literally 'bird-rest,' i.e. hen-roost; and the gateways were so called from their resemblance to this familiar object.

ARCHITECTURE AND ART (of the pagan Slavs).—The pagan Slavs seem to have had only the most rudimentary ideas on the subject of art. The few monuments which are ascribed to them are very crude, and it cannot yet be asserted with any absolute certainty, which may have been the work of Slav artists. There is no connexion between these monuments and the more or less grotesque descriptions given in some of the Chronicles of the Middle Ages. These chronicles owe to the Germans, Adam of Bremen of the 11th cent. (Gesta Hammenburgensis ecclesiae pontificum), Helmond of the 12th cent. (Chronicon Slavorum), Thietmar, Bishop of Merseburg (976—1011), Saxo Grammaticus the Dane (12th cent.) in his Gesta Danorum, and the biographers of Bishop Otto of Bamberg (12th century).

The majority of the Slavs seem to have worshipped only idols and in the open air, and to have been quite unacquainted with temples. The existence of temples in the Russian Empire is very questionable. Hilarion, a monk of the 10th cent., writes: 'We are no longer building kapishtha, but churches of Christ,' from which we may infer that the kapishtha (from kap, 'idol') was not peculiar to the Slavs. The oldest Russian chronicles speak only of idols, and the word kapishtha may mean simply idols. Among the Baltic Slavs we find the existence of temples attested by German writings, in which the descriptions of the temple were not altered after the restoration of the Imperial power in 1688. They are always of wood, without paint or lacquer, which, of course, limits their duration. The shrines of Isæ are renewed every twenty years. Nor are they of great size. In the 9th cent. a greater shrine had only fourteen feet frontage. At the present day the outer shrine of Isæ—that in honour of the Goddess of Food—measures 34 feet by 19 feet. The great majority of Shinto shrines are very tiny indeed.

The more important Shinto shrines are surrounded by a cluster of subsidiary buildings, which serve various purposes. There is a small oratory, where the Mikado's envoy performs his devotions. It means literally 'bird-rest,'
ARDASHIR I.—ARHAT

when on the point of making war; to it they bring gifts after a successful expedition.' Did the Slavs themselves build those temples, which were probably very small? Did they call in foreign architects? We do not know. The Arab geographer Mas'ūdī (10th cent.) had heard of their temples, but he gives an absolutely apocryphal description of them, which cannot be believed, and he places the people whom he is describing in districts no less fanciful (Les prairies d'or, ch. lxvi.).

We have practically no specimen of the architecture of the pagan Slavs; and no ruined temple is known. We know the names of a number of idols worshipped in ancient Russia and among the Baltic Slavs—Swantovit, Perun, Trügul. The present writer has reproduced in his Mythologie slave (1901) illustrations of some of the idols which have been discovered in Germany and in Galicia (Austria). They are believed to be of Slav origin; but we are not absolutely sure, as we have no trustworthy information. German and Ancient Russian writings alone bear witness to the existence of these idols. When Christianity reached the Slavs, these were the architectural style of the neighbouring races, from whom the gospel had come to them—the Roman style prevailing among the Western Slavs, and the Byzantine among the Slavs of Russia, Bulgaria, and Servia.

ARDASHIR I. (Artaxshār, Artakhshathr, Avestes.)—Ardashir I. (A.D. 229-241), the founder of the Sassanian dynasty, was the son of Pāpāk, 'king of Khīr (Chir), south-east of Persepolis. Having made himself master of Persia and some neighbouring kingdoms, Ardashir killed the Parthian 'king of kings,' Artaban, in 224, and seems to have conquered the capital, Ctesiphon, two years later.

From the beginning Ardashir identified his political aims with the restoration of the Mazdāyasnian faith, which, notwithstanding the superficial sway of Hellenism, had never lost its hold on the people. He thus secured a mighty ally—the Zarathushtrian priesthood, the 'race of the Magians'—and continued and accomplished a work already begun by Parthian monarchs. In his zeal for the national religion, he seems to have kept to familiar traditions—his grandfather Sāsān having been attached to the temple of the goddess Arta Virāf (Persepolis)—as well as to his personal feelings. 'He was devoted to the Magian rites, and he himself celebrated the mysteries' (Agathias, Hist. ii. 36). The Avesta texts, destroyed and scattered in the time of Alexander and the following centuries, were collected by Ardashir, and completed by his high priest Tansar (according to a tradition reported in Dinkart, iii.), who thus gave 'a faithful image of the original light.' Another passage, in Dinkart, iv., which corroborates the king's having called Tansar to his capital in order to gather the scattered texts, adds the important fact that canonical authority was attributed only to the collection of Tansar, all doctrines that did not originate from him being considered as heretical. The collection was not completed until the reign of Ardashir's successor Shāh Pāpār I. (241-279). A different tradition, reported in the introduction to the Persian translation of Artā Virāf Nāman, makes Ardashir collect the Avestan texts and the Zend comments from the memories of the priests summoned to the capital (Hang and West, Book of Artā Virāf, Bombay, 1872, pp. xv-xviii). The custom of reciting a chapter, called sauud (Yasna), dates, according to Mašūdī, from Ardashir's time. Hence we may perhaps conclude with Darmesteter (Zend-Av. iii. p. xxxii) that Ardashir and his Hērābid of Hērābād regulated the liturgy. The two chief facts of the restoration, viz. the collection of texts, legends, traditions, laws, and doctrines, and the monopolizing of true faith and of true faith by the king, are expressed in the letter to Tansar to Gushnap, king of Tabaristān (south of the Caspian), preserved, with additions and alterations, in the Zend-Avesta, as a provisional restoration by a Pahlavi original (Darmesteter, op. cit. xxv-xxx).

The pretended letter of Tansar is discussed in a most thorough way by L. H. Mills ('T'anārs's alleged Letter' in Zoroastrian Path, iv. 1912, pp. 21-76), who, in pointing out the peculiar elements of this document, especially a certain ascetic tendency evidently contrasting with the Zarathushtrian character, as it appears in its present form, calls a subtle political fiction. He goes much further than Darmesteter in eliminating spurious parts and in reducing the remainder, but he expressly recognizes a historical nucleus.

Ardashir has immortalized his political and religious restoration by his theory of the mutual aid of the two powers, the State and the Church, if Mas'ūdī ('Les prairies d'or, text and tr. by C. Barbier de Meynard and Pavet de Courteille, ii. 162) has correctly rendered his testament to his son Shah Pāpār: 'Religion and kingship are two sisters that cannot exist one without the other, because religion is the foundation of kingship, and kingship is the protectress of religion.'

LITERATURE.—For the Dinkart passages see Hang, Zend-Pahlavi Glossary, Bombay, 1887, pp. xxxv-xxxvii; West, SBE v. 199, xxxvii. 414, xlviii. 32, 137; Darmesteter, Le Zend-Avesta, Paris, 1892-3, iii. pp. xxv-xxx; Geldner, Dinkart Philologie, ii. 33 f. In general, Justi in Grundriss d. ir. Ph. ii. 512 f.; Kār-nāmagti-Artakhshathr, ed. with translations, tr., by J. D. L. Kersselli (Antik. Bombay, 1900; Browne, Literary Hist. of Persia, Lond. 1902-6, i. 138-140; Nādīska, 'Gesch. des Artakhsārs' in J. E. Buechberger's Beiträge, iv. 1874, 22-69.

ARDHAH (lit. 'fit,' 'worthy').—In its Pali form, arahat, it is met with in the earliest Buddhist texts, and is used there in the same sense as it is applied to the Buddhist arahata, or to those belonging to other communities. In the latter sense, which is exceedingly rare (Vinaya, i. 30-32; Sān-hūta, ii. 220), it means a man who has attained to the ideal of that particular community, to what was regarded in it as the fit state for a religious man. This sense is not found in pre-Buddhist literature; but the usage by the early Buddhists makes it almost certain that the term was employed before Buddhism arose in its religious communities then being formed in N.E. India. In the more usual, the Buddhist sense, the technical term arahat is applied to those who have reached the end of the Eightfold Path, and are enjoying the fruits of it, the maggahapalithā. They had perfected themselves in each of the eight stages of the Path—right views, aspirations, speech, conduct, mode of livelihood, effort, mindfulness, and rapture (Sān-hūtta, iv. 81; Puggala, 73). They had conquered the three so-called 'intoxications' (dooses) of sensuality, re-births, and ignorances (Diṣa, i. 84). In a list of punning derivations in Majjhima, i. 280, the arahat is said to be one from whose evil dispositions are far (ākrād). The first five disciples attained arahatship on perceiving that there was no sign of a soul in any one of the five groups of bodily and mental qualities constituting a sentient being (Vinaya, i. 14). Rāhula, the Buddha's son, claims to be an arahat because he has overcome the 'intoxications,' and will henceforth no more re-birth (Thera Gāthā, 296; cf. 295). Every arahat that has the sambodaṅhi, or the ascetic light, divided into seven parts—self-possession, investigation, energy, calm, joy, concentration, and magnanimity. There is extant in the Canon a collection of hymns, 204 of which are by men, and 78 by women, who had become the friends of the Buddha. Fifteen of these claim also to have

* The question of sambodaṅhi has been discussed at length in the present writer's Dialogues of the Buddha, Oxford, 1899, pp. 193-192.
gained the three vijjas, or 'sorts of knowledge': the knowledge of their own and other people's previous births, and of other people's thoughts. Laymen could become arahats. A list of twenty who had done so in the time of the Buddha is given in Anguttara, iii. 451. Every Buddha was an arahat. The word occurs in the standing description applied to each of the seven Buddhas known in the earliest documents (Digha, ii. 2). The Játaka commentator says that the Buddha made arahat-ship the climax of his discourses (Játaka, i. 114, 276, 383, 401).

The climax of the career of either arahat is reached under one or other of its numerous epithets, or the details of the mental and moral qualities and experiences associated with it, forms the climax of the great majority of the Dialogues. Thus the first Dialogues in the Digha deal with the first stage in the Path. The second is started with the question, by a layman, as to what is the use of the religious life. After a lengthy enumeration of various advantages, each nearer than the previous one to arahat-ship, the discussion of the question ends with arahat-ship. The third is on social rank, and ends with the conclusion that arahat-ship is the best. In the fourth the climax is that the arahat is the true Brahman. The fifth discusses the sacrifice of the sambodhi, or the result that arahat-ship is the best sacrifice. The sixth is on the aim of the members of the Buddhist Order, and ends with arahat-ship; and so on through the remaining seven Dialogues in that volume. Ten out of the chapters in the Digha treat of these three stages of development.

But in the later stages of the Buddha's life, the knowledge gained was applied in a higher sphere, and forms the climax of the Path. The second is started with the question, by a layman, as to what is the use of the religious life. After a lengthy enumeration of various advantages, each nearer than the previous one to arahat-ship, the discussion of the question ends with arahat-ship. The third is on social rank, and ends with the conclusion that arahat-ship is the best. In the fourth the climax is that the arahat is the true Brahman. The fifth discusses the sacrifice of the sambodhi, or the result that arahat-ship is the best sacrifice. The sixth is on the aim of the members of the Buddhist Order, and ends with arahat-ship; and so on through the remaining seven Dialogues in that volume. Ten out of the chapters in the Digha treat of these three stages of development.

But in the later stages of the Buddha's life, the knowledge gained was applied in a higher sphere, and forms the climax of the Path. ARIANISM

2. The years A.D. 318 and 319 found the Church of Alexandria in great confusion, distracted by the obscure Mælian schism and by a controversy between the bishop Alexander and the presbyter Arius (A′řiūs) of the district of Bæcaulis. Alexander, in a charge to his clergy, impressed upon them the unity in the Trinity of the Godhead. According to the historian Socrates (l. 5), Alexander in this discourse somewhat exceeded the limits of discretion (φιλοσοφοῖρος... ἑρατῶνη) in insisting on what is, after all, a single aspect of the truth; that the mystery of the Trinity. Arius forthwith accused his bishop of teaching Sabellianism, and proceeded to formulate his own scheme of doctrine.

Alexander’s doctrine is summed up in the following words in the letter of Arius to Eusebius of Nicomedia: ‘Δεῖ θεόν, δεῖ υἱόν, δεῖ πατρὶ διὰ υἱόν, συνεντέχνει τὸ υἱός ἀγανακτός τῷ θεῷ, ἀγανακτός, ἀγανακτόγεννος, οὐκ ἐπεταιχὶ οὐτοῦ ἄτοπος προέχει οὐδὲ θεὸν τοῦ υἱοῦ, δεί θεόν, δεί υἱόν, οὐ κάτω τοῦ θεοῦ οὐ υἱός (Arius’ letter to Eusebius, vol. iii. 14). Arius, considering that this definition detracted from the unique majesty of the Father and introduced confusion, maintained the complete distinction between the Father and the Son, and the subordination of the latter. His own letter (op. cit. vol. iv. p. 15) enumerates eight points of the view advanced by Arius—

(1) The characteristic of the One and Only God is solitude and eternity. He can put nothing forth from His own being. He is not always Father, but only after He begat (i.e. created) the Son.

(2) Wisdom and the Word (λόγος) dwell within this God, but they are powers, not persons.

(3) To create the universe, God brought into being a Word (ὁ λόγος), as the instrument by which all things were created. This Being is termed, in Scripture, Wisdom, Son, Image, Word, etc.

(4) As regards His substance, the Son is a separate being from the Father, different from Him in substance and nature. Like all rational creatures, the Son is endowed with free will, and consequently capable of change.

(5) The Son is not truly God, but is only the second Word and Wisdom. He has no absolute, but only a relative, knowledge of the Father.

(6) The Son is not, however, a creature like other creatures. He is the perfect creature (στέρεος ῥήματος), and has become God, so that we may consequently be ‘the only-begotten God,’ etc.

(7) Christ took a real body, but it was a σῶμα ἄφυσος, the Logos taking the place of the soul. From the Gospel record we see that this Logos is not an absolutely perfect being, but is capable of suffering.

(8) Amongst other created beings the Holy Ghost is to be placed beside the Son as a second, independent substance. According to Arius, apparently, the Spirit is the creation of the Son.

Arius was Arianism—a theory of the mutual relations of the Persons in the Trinity based nominally on the words of Scripture, but arrived at really by the methods of the heathen philosophers. It led either to polytheism by allowing the existence of the Logos as a secondary God, or to Juvinic Unitarianism by denying His proper Divinity. Clement of Alexandria had paved the way for Arianism by his doctrine of God: ‘Stripping from concrete existence all physical attributes, taking away from it in the next place the three dimensions of space, we arrive at the conception of a point having no substance, and a further step,’ says Bigg, ‘for perfect simplicity has not yet been gained. Reject the idea of position, and we have reached the most stable and unalterable, the most lasting. The subject appears to be one of those points from which a gap is gone astray from the first by his mode of approaching the subject. He has propounded as his question, not What is the Spirit? or What is God? but What is that incorporeal, incapable of being conceived? This he assumes to be the cause of all that exists. Nothing that is part of the effect can belong to the cause. . . . The result is a chaos, the pure Mephistophelian. This, but if unprofitable in its conclusions, and leading to the ultimate substitution of Christianity, Ariusism was most difficult to refuse, owing to the confusion of thought prevalent at the time of its appearance.

In the controversy which ensued, Alexander seems to have acted with some moderation, and even to have allowed his hesitant and evasive methods to such extremes as to be made an excuse for a schism. Arius had no scruples in forming a party of his own. He enlisted the support of two bishops, Secundus of Ptolemais in the Pentapolis, and Theonas of Marmaria, and also that of several presbyters and virgins. To secure popular favour, he put his opinions in doggerel verse, adopting the metre of the licentious poet Sotades, in order that the sailors and dock-labourers of Alexandria might sing at their work of ‘How the Father is not always Father,’ etc. His Thalia, as this strange collection of songs was called, popularized his system among the formidable proletariat of the capital of Egypt. But Arius’ strongest support was his ‘fellow-Lucianist.’ Eusebius of Nicomedia, the most influential prelate in the East. In A.D. 321, Alexander held a Council at Alexandria; Arius was excommunicated and left the city (see De potestate dominii, 20). Hosius, bishop of Cordova, in Spain, to Alexandria with a very remarkable letter to Alexander and Arius, begging them to lay aside their logomachies and cooperate with him in restoring peace to the distracted world. But an Imperial letter, ‘though marvellously and full of wisdom,’ as Socrates describes it, could not allay so embittered a strife, and Constantine decided to submit all matters in dispute to a Council of the whole Church, to assemble in the year A.D. 325 at Nicæa, on Lake Issus, in Asia Minor. The first act of the Council as regards Arius was with practical unanimity to pronounce his doctrine heretical. That the Son had been created out of things that were not (ἐκ οὐδεμα), that He was of the Like Father, that, even before time was, the Father was without the Logos, were on all sides regarded as blasphemous assertions. It was not till the question arose as to how the error should be refuted that there
ARIAISM

was any serious difference of opinion. The Fathers had meant to affirm the ancient faith of the Church against novelty; but when they wished to express what they meant in words, they found that none to which they had been hitherto accustomed were capable of escaping the evasions of such masters as the Arians in the art of making Scripture phrases assume meanings contrary to the teaching of Scripture. In consequence of this, the Council, probably at the suggestion of Hosius, was induced to adopt the expression ἐν τῇ ὁδῷ τῶν Ἡρῴδων and the word ἁρωνία, neither of which is to be found in

ὁρωνίας (syneudem substantiae) was a word which presented no difficulty to the Latins who followed the teaching of Tertullian, ad. Polycarp, and Nicator. Dionysius of Alexandria in his correspondence with his namesake of Alexandria had protested against any undue separation (ὑπερευθητῷ υποστάσει) of the Father and the Son, thus virtually the ὑσευιας. Tertullian had also, in Hbis de Anima (c. 52), carefully distinguished substantia (seceia) from nature. The Latins and the anti-Origenists at the Council desired to press the unity rather than the equality of the Son with the Father; and to them the word was conveniently adapted. But the majority of the Greek-speaking bishops had a strong objection to both expressions, ἐν τῇ ὁδῷ ὁρωνίας, on the following grounds: (1) They regarded them as the Council alleged were {284} of a Samosata (A.D. 361) had condemned the use of ὤσευιαν. (2) The idea of an alius common to the Trinity might countenance words which might imply an oneness prior to the Father and the Son, or countenance materialism (e.g. Didymus conceived an alius equivalent to ἱδρία or ἀνθρώπινον). (3) The Creed differs from our Nicene Creed in its definition of the doctrine of the Son in several important points (see Hort, Two Dissertations, p. 61; Bethune-Baker, Chr. Doct., p. 185). After a bare profession of belief in the Holy Spirit, the creed concludes with anathema of all the distinctive teaching of Arius, (1) that there was a time when the Son was not, (2) that His He was not before He was begotten, (3) that He was not by the word of God, (4) that He is of a different essence (ὑποστάσεις) or being (ὑποστάσεις), or (5) that He is created or capable of change or alteration. It is generally agreed that at Nicene there was some apprehension that after certain words were carefully distinguished, were practically synonymous.

4. Into the intrigues whichculminated with the banishment of Athanasius, who became bishop of Alexandria on 5th June, 328, it is needless to enter, it being sufficient for us to inquire into the causes which prevented the Creed of Nicea from being the immediate conclusion of the controversy. Few of the bishops, whilst abhorring the heresy of Arius, understood the exact merits of the question. They were afraid of the error of Sabellius, and to this the Homoeism seemed to have committed them. Moreover, with the natural conservatism of men pledged to hold fast to the faith 'once delivered to the saints,' they distrusted words unsanctioned by Scripture. The tradition, Emperor himself, who to the end of his life believed himself faithful to the Creed of Nicea, when he saw that its promulgation had failed to give peace to the Church, was less enthusiastic in its defence. So much readiness to welcome back its opponents that he received Eusebius of Nicomedia not long after the Council; and, for the sudden death of the heresiarch, Athius would, at his command, have been reconciled to the Church.

New the phrases introduced into the Creed were as formula of belief is shown by Athanasius' defence of them in his De Synag. c. 32. He reformulates, Dionysius of Rome, and Dionysius of Alexandria. 'This anxious appeal to theological writers,' says Hort (Two Dissertations, p. 65), 'was in strong relief the absence of authority derived from public creeds.' Eusebius' objections and his reasons for ultimately accepting the word ἁρωνίας are set forth in his letter to his Church at Caesarea. In this letter he discusses the expressions in the Creed, ἀρωνιας ἡτος ἐν τῇ ὁδῷ Αρωνίας ἐστιν, ἢ ἁρωνίας, and ὁρωνίας. He accepted the first on being assured that it meant that the Son is not a part of Him. 'Begotten, not made,' panded, because 'made' was an appellative common to the other creatures which were to be through the Son, this term might well be assimilated. As for ὁρωνίας, Eusebius received it as implying that the Son bears no resemblance to the created creatures, but that He was begotten to His Father alone who begot Him in every way assimilated.' It is easy enough to see that Eusebius did not come to the definitions of the Creed with an open mind; and he is still more ready to explain away the sentiment of the Creed as hav served in Athanasius, de Deo, sect. 9, 10, being mutilated by Socrates, H. III.

5. On the death of Constantine (A.D. 337), his Eastern dominions passed to his son Constans, who encouraged his bishops to draw up a creed to supersede that of Nicea, to which all the Asiatic and Syrian Churches seemed opposed. The result of their labours is apparent in the five creeds of Antioch, which exhibit the tendencies of the different factions, those one point of union seems to have been antagonism to Athanasius and the Nicene formula. These confessions of faith, together with the Athanasian creed, therefore, served elsewhere, served only to show that there was no possible compromise between avowed Arianism and the Homoeonian doctrine. The orthodox opponents of the language of the Creed of Nicea, whom Professor Gwatkin terms 'the Conservative,' were such as Eusebius of Cesarea, whom Creeds of Sabellianism and hatred of innovation drove into opposition to Athanasius—were being made use of by those who were at heart Arians to force an Arianizing creed upon the unwilling Church. The weak and unstable Constantine was always in the hands of those whom he believed capable of pacifying the Church by a new creed. He was in reality aiming at a comprehensive State-religion acceptable to all parties, and thought that a sort of modified Arianism would supply this want in the provinces over which he at this time bore rule. In A.D. 339, Athanasius was driven out of Alexandria, and in A.D. 341 the formal reaction against the Nicene doctrine began; the church assembled for the dedication of the Golden Church at Antioch. Athanasianus and Marcellus of Ancyra went to Rome to lay their cause before Julius, to whom the bishops assembled at Antioch wrote in A.D. 336, over which Professor Gwatkin (Arianism, p. 117) as 'one of the abiding monuments of the entire controversy' (Athanasius, Apol. cont. Ar. ec. 21-26; Socr. H. III. 17; Socr. H. III. 19).

In all probability, Darius, bishop of Cesarea in Cappadocia, presided at this synod, and there were also present Eusebius of Nicomedia, now bishop of Constantinople, who gave the name by which the opponents of Athanasius were at this time known, and Acacius, the successor of Eusebius Pamphilus in the see of Cesarea.

The opponents of Athanasius were called εὐσεβείς ἑπισκόποι, or the Εὐσεβιας, as the words have been somewhat inexact rendered. The term is used in two senses: (1) literally denoting the personal entourage of Eusebius, i.e. the court party, crypto-Arians all of them; (2) more generally the majority of the Asiatic bishops who were discontented with the Nicene Council. These latter are generally called by the term Εὐσεβοι.

Four creeds were put forward by this Council—all attempts to dispense with the objectionable word ἁρωνίας. The most celebrated was the so-called second Creed of Antioch, to which the name of Lucian the martyr was attached. In this the Persons of the Trinity were said to be One by reason of the harmony existing between them—τῷ μὲν υποστάτῃ τῷ ἁγιῷ, τῷ δὲ συμφώνῳ τῷ.
Arius: "We have never become followers of Arius, for how shall we who are bishops follow a presbyter?" This creed was suspiciously like the confession which Arius himself had made before he was expelled, and there is every reason to regard the second creed, which became the watchword of the anti-Athanasian party. It declared the Son to be the unchangeable image (ἀμφότερος καθολικός τιμίας) of the Godhead, essence (essentia), consubstantial power, and glory of the Father. It laid special stress on the rejection of the Creed of Caesarea, and the invocation of the Holy Spirit—of the same sort as the other creeds of this nature, all the distinctive dates of the creed have been restored in such a way that an Arius could easily subscribe to them. (3) A parallel was supplied to the Caesarean Creed by that of Tyana at the conclusion of the controversy between the doctrines of Marcellus of Ancyra, as representing the Sabellianizing tendency of the Nicene, and those of Sabellius. (4) The Nicene church was soon aghast at so contentuous a document. (5) The tendency of the West inclined to Sabellianism, and those of the East to Ariantism. The Nicene doctrine of the Son is such that we can well understand how the Western bishops refused to condemn Marcellus (Harnack, op. cit. 163). The tendentiousness of the creed was increased by the orthodoxy of Marcellus by St. Epiphanius, who would only subscribe, showing that he had an equally poor opinion of his friend as of Arius. Theology and politics were worked upon together, and each had to be checked. The infamous plot of Stephen of Antioch against the two Western delegates Vincentius of Capua and Epiphanius of Cologne is related by Athanasius (Hist. Arian. c. 29).

7. During the next ten years (A.D. 346-356) the two parties were outwardly at peace, but yet bitterly arming for the conflict. At Alexandria, Athanasius, who had been welcomed back with surprising enthusiasm, maintained his influence undiminished, and set a seal upon the loyalty of his church to the Creed of Nicæa. The monastic movement was in all the vigour of its first enthusiasm, and the ascetics, recognizing the earnestness of the bishop, became his firmest supporters. At Antioch, Leonius, whose early indiscretion was similar to that of Origen (Hist. Arian. 28), though an Arian at heart, had managed to maintain the peace by his cautious policy. This wise man knew well that the tranquility his discretion had secured was only temporary, and in allusion to his death he would pathetically touch his grey hairs and say: 'When this snow melts, there will be much mud.' At Rome, Photinus of Sirmium, whose indiscretion outran even that of Marcellus, had been sacrificed for his Sabellian teaching; but the death of the wise and politic pope Julius in A.D. 352 was a serious loss to the cause of orthodoxy. His successor Liberius lacked both his firmness and his tact. Political events were also precipitating the crisis. Athanasius' faithful friend, the Emperor Constans, was killed by the usurper Magnentius. From the end of A.D. 350, when he was at or near Sardica in Dec. 25, to the close of A.D. 359, Constans spent his time in his Western dominions, being most frequently to be found at Sirmium or Milan (Gwatkin, Studies of Arianism 2, App. ii. 'Movements of the Eastern Emperors'). Sirmium, not Antioch, was destined henceforward to be the scene of creed-making.

8. Many of the original disputants in the controversy had already passed away, and a new generation had arisen. Parties were becoming more and more clearly defined. The Oriental bishops were developing, stern force led the Arians to become more Arian than their father. Some of the old conservatives were drifting towards Ariantism, whilst others shrank back in dismay at its encroachments. The general tendency favoured the obliteration of the old party landmarks and the rise of new factions. The place of Eusebius of Nicomedia as Imperial adviser had been taken by Valens, bishop of Mursa in Pannonia, the province bordering on Illyricum, to which Arius had been exiled after the Council of Nicæa. Valens, with his friend Ursacius, bishop of Singidunum, was a most uncompromising Arian, and his policy was not, like the old Eusebius, to fight Athanasius by means of conservative prejudice, but to force an Arian creed on the Council of Nicæa (Robertson, Athanasius, p. liv). Valens had won great influence over Constans, who believed that the bishop had received from an angel the news of the victory of Mursa (A.D. 351), and from this time an organized campaign was conducted against Athanasius, which culminated in the coup d'etat at Alexandria, when the bishop was expelled by military violence (A.D. 356). Valens' ablest assistants in the East were Acacius,
ARIANISM

the successor of Eusebius Pamphilus in the see of Cesarea, and Eudoxius, bishop of Antichio and Constantinople successively. In A.D. 357 there appeared from Sirmium the first really Arian creed, called by Hilary of Poitiers 'the blasphemy of Sirmium.' Other formule of belief were promulgated from the same place by the 'direct creed' in which the consuls of the year are mentioned, a fact of which Athanasius is not slow to take advantage in his de Synodic.

The Arians, supported by the Emperor, did not hesitate to push their claims; and finally, at the great Council of Constantinople in A.D. 381, their creeds were accepted as the orthodox doctrine of the empire. Thus in A.D. 359 it seemed as though the Nicene profession of faith was repealed and Arianism was triumphant.

The creeds of Sirmium are as follows. The 1st was drawn up against Photinus in A.D. 347. The 2nd (A.D. 350)—but commonly known as the 3rd—is identical with the fourth creed of Antichio (βλασφημία τῆς πρώτης). The 3rd (A.D. 357), called the 'Synodonic' (of) distinctly denies the true Divinity of the Son; (2) it also declares the terms υἱοθεσία and τρινοθεσία un-Scriptural, maintaining that it is impossible to declare the Natur of the Son, because it is written generationem sui ontus ex Patria. In opposition to the creed proposed but not accepted at Sardica (see above), makes the literal sense of the person in the Father to be impossible (see Bethune-Baker, Introd. p. 181 n.). This extreme teaching startled the bishops of Asia Minor, and under the presidency of Anacius a synod was held at that place in A.D. 358. At this synod the extreme Ariant, Eudoxius, Acetius, and others, were excommunicated with anathemas condemning all who acknowledged the formal equality (υἱοθεσία) of the Son to the Father, as well as the terms υἱοθεσία and τρινοθεσία (Anastasius six, [Ibn. p. 201]). The result of the stand made by Basel and his friends was an attempt to compromise, i.e. to allow that the Son was like the Father. But the 4th, or 'dated creed,' (A.D. 360), composed by Maris, bishop of Antichio and declared the Son to be υἱοθεσία γεννηθησίας ἁγίου ψεριτον with the addition 'according to the Scriptures,' which allowed the Arians to have their way. It was this fourth creed which was Arianism that was accepted under imperial pressure at Sirmium, S. 111.

9. Already, however, a reaction had begun. In the first place, the Arians were divided among themselves. Logical and consistent Ariants, like Aetius and his disciple Eunomius of Cyrizus, were prepared to push the teaching of Arians to its ultimate conclusion; but the Son was not God in the same sense as the Father. He could not be like Him, for there can be nothing like God. Their argument, different as was the inference drawn from it, was the same as that used by Athanasius himself. 'It is the same in essence, but not in person, and qualities; for in the case of essences we speak not of likeness, but of identity' (de Synodic, 53).

From their denial of the likeness of the Son to the Father this class of Arians were called Anomceans. But the majority of Ariants were men of compromise and evasion, having no other idea than to insinuate their opinions under the guise of apparently innoxious phraseology. These, led by the dexterous Acacius of Cesarea, allowed that the Son might be acknowledged to be like the Father, and were consequently called Homoeans. Lastly, there was the party headed by Basil of Anacysa, the successors of those conservatives who had opposed Athanasius. These men, who constituted the strength of the episcopate of Asia Minor, were as hostile to Arianism as Athanasius himself, and were ready to accept the term οὐσία in their definition of the Godhead. Fearing that Sabellianism underlay the use of υἱοθεσία, they rejected the Nicene test word, but were ready to admit that our Lord was a Logos (υἱοθεσία) to the Father. This formidable combination was known as the party of the Semi-Arians (q.v.). At heart most of them were orthodox, and this the two great champions of the Nicene faith, Athanasius and Hilary of Poitiers (son of Photinus, who had been exiled by Constantiua to Asia Minor), had the wisdom to perceive. After their triumph at Sclacicia and Ariminum, the Arians and Homoeans had the folly to attempt to crush these Semi-Arians at the Synod of Constantinople (A.D. 360), and thereby drove them in self-defence into the arms of the Nicenes. It needed only the help of the great Cappadocian Fathers, Basil of Neo-Cesarea, Gregory of Nazianzus, and Gregory of Nyssa, to complete the triumph of the Nicene Christology.

The Semi-Arians and the Cappadocin Fathers are subjects of separate treatment in this work; and it is unnecessary to do more here than allude to the important dispute as to the final settlement of the Arian controversy. The question at issue was whether the Homoeans or the Semi-Arians were correct in their use of οὐσία, the ambiguity was removed. This was the work of Prof. Gwatkin's most instructive survey of the importance of the Arian controversy: 'The Cambridge History of Christendom,' p. 64). Attention should be paid to Prof. Gwatkin's most instructive survey of the importance of the Arian controversy: 'The Cambridge History of Christendom,' p. 64). Nevertheless, the Arian party in A.D. 398, and their doctrine, was too plainly artificial and too unscriptural to have a place among the creeds of the church. Perhaps it is translated by the LXX, and on this the Arians based their doctrine that the Son was a μικρομοι. To the delight of the people, always at this time more orthodox than the Bishop, no Church would ever accept a doctrine which could be made use of. This paved the way for a reconciliation between the conservatives, with their dread of Sabellianism, and the Athanasiyan and Western Christians, who clung to the importance of the Unity of the Divine essence. As Bethune-Baker says, 'the 4th Council showed that the only solution of the problem was to be found in a distinction within the divine unity . . . it was necessary to revise the idea of divine personality and to acknowledge not three persons but three essential parts of the Divine' (Ch. Doct. p. 157 n.). This was done when the distinction in meaning between οὐσία and ἐνσάρξ was agreed upon, and the ambiguity of the Latin and Greek terminology removed.

In the early days of the controversy the terms οὐσία and ἐνσάρξ were used interchangeably with the great misunderstanding, because, while one part of Christendom spoke of υἱοθεσία in the sense of Sabellianism, there was only one. By distinguishing between οὐσία and ἐνσάρξ, and explaining the mystery of the Trinity as δύο οὐσία ἐν ἕνῃ ἔνσαρξ, the ambiguity was removed. This was the work of
of the Cappadocian Fathers, but it really began with the Council of Alexandria. In Latin legal language substantia means property, and persona a being with legal rights, a 'party' in an action a.,. Law. Thus a person has certain proper, 16, and a substance, and a substantia might belong to more than one person or use. Substance, therefore, of which Father, Son, and Holy Ghost partake; or he seems to have used substance in a sense, or 'substance, of which Father, Son, and Holy Ghost partake; in the Synod of Constantinople (a.d. 381), the denial of the Divinity of the Holy Ghost, which subsequently became characteristic of Semi-Arianism.

11. But though Arianism may justly be described as having been the death of Constantinianism, it remained, in its Homoean form, the official religion of the Eastern half of the Roman Empire down to a.d. 378. On the death of Jovian (a.d. 364), Valentinian was chosen as emperor by the army on Feb. 26, and associated his brother Valens with him on the 29th of March, taking upon himself the government of the Western provinces, and assigning the Eastern to Valens. The stern but just Valentinian pursued a rigidly impartial policy in matters of religion, and as the Tribune, the government of the capital of Italy, remained under an Arian bishop, orthodoxy generally prevailed in Italy, Gaul, Spain, and Africa. Valens, on the other hand, supported the Homoeans, thereby forcing the Semi-Arian party to open negotiations with. Libirus, bishop of Rome, and his successor Damasus. The Homoean supremacy lasted down to the defeat and death of Valens at Adrianople (Aug. 7, 378). Valentinian had died three years earlier, and his son Gratian had the magnanimity to appoint Theodosius, son of a distinguished official who had been put to death under Valentinian and Valens, as his colleague in the Eastern provinces. Theodosius, an orthodox Spaniard, cleared the Roman territory of victorious Goths, and, being afflicted with sickness in the year following his accession (a.d. 380), accepted baptism at the hands of Ascleius, bishop of Thessalonica. Theodosius took the faith of Rome and Alexander of Alexandria as the norm of Christian belief in a public act, commanding all to follow the faith 'commended by the Apostle Peter to the Romans, and now professed by Damasus of Rome and Peter of Alexandria' (Cod. Theod. xvi. 1, 2). He allowed Gregory of Nazianzus to establish himself at Constantinople and to preach the doctrine upheld so strenuously by his friend Basil, bishop of Neo-Caesarea (d. 379), in the evil days of Valens. The course in which Gregory delivered his discourses against the Arians became the Church of the Anastasia, the Resurrection of the Faith. In 381 the comparatively insignificant assembly, afterwards known as the Second General Council, met at Constantinople to confirm the faith of Nicæa. Further councils were made to the Arians in the ensuing years; but in a.d. 383, Arianism was finally proscribed, and ceased to be legal for Roman citizens to profess.

Of the interval between the councils of Alexandria (a.d. 362) and Constantinople (a.d. 381), though extremely important, the history of dogma is not necessary to treat at length in an account of Arianism, whose very triumph in the last days of Constantine made its ultimate overthrow only a matter of time. In the present article it is only requisite to mention a few landmarks, referring the reader to the articles CAPPADOCIAN THEOCRACY; ARIANISM. The Semi-Arians were at first disfavoured by Valens and allowed to assemble at Lampsacus, where they were 'honoured with the Te Deum' by the Father, and cast out the Homoean Eudoxus and Asclepius. Eudoxus, however, gained the Emperor's ear, and Valens expelled from their see for refusing to communicate with the Homoeans. One of their most distinguished leaders, Eusebius of Cyzicus, compiled with the imperial demands and abjured Homoeodoxy, but he repented bitterly of his action. Then came the negotiations with Rome, culminating in the Synod of Tyana (a.d. 387). The Semi-Arians were not really disposed to accept the Nicene faith in its entirety; and under the name of Macedonians many refused to acknowledge the proper Divinity of the Holy Spirit (Isthmic, Bact. of Councils, a.d. 388). The work was done by the unfortunate schism at Antioch, directed to a real recantation of the doctrine by implicit acknowledgment of Homoeousian doctrine. For the question as to which creed was accepted by the Council of Constantinople in a.d. 381 see Oecumenical Councils, B. 7. Introduction to the Creeds; and, above all, Hort, Two Dissertations.

12. Arianism may be defined as an attempt to determine the relations of the Persons of the Trinity on a basis of distinction and subordination. Despite all the efforts of Arius to popularize his opinions, they never found favour with the people. The movement was clerical rather than lay; the difficulties it sought to overcome were those of Origenist theologians perplexed by philosophical doubts and seeking an explanation where none was possible. Nor did Arianism pure and simple ever fail to arouse a strong feeling of indignation: the creed of Arius at Nicæa, the Sirian blasphemy, the opinions of Aëtius and Eunomius, all caused a storm. It was only by immunising it in the plausible guise of Scriptural philosophy that Arianism ever obtained a hearing. Nor could it be otherwise. An Arian Christ, a created Logos unable to reveal an unknown God, could never be the Christ of the orthodoxians as the Incarnate Word, the sole Mediator between God and man, the supreme Sacrifice for the sin of the world. All who acknowledged this adored at heart to the Nicene doctrine, however they might object to the language in which it was expressed. The great merit of Athanasius was his ability to recognize this truth; and he and Hilary were ready to make any concessions to those who shared the spirit, though they might not adopt the orthodoxy of Nicæa. That the homoeousian, hardly appears in the works of Athanasius.

Arianism does not seem to have sprung from any strong ethical impulse. Its philosophy was pagan, and the object of its leaders was political rather than religious. 'Arius tried to interpret the Christian revelation in such a way as to render it acceptable to men whose whole conception of God and of life was heathen' (Bethune-Baker, op. cit. p. 156). His heresy was, in short, a symptom of the disease of the Church in the 4th century, increasing in ingratitude with the civil power. What the Roman government required when it invited the Christian Church to enter into alliance with it was that the Faith should cause as little disturbance as possible to the empire. Arianism promised to provide this, in the form of a creed offering an easy and almost imperceptible transition from paganism to Christianity. By the edict of Milan, Christianity, the religion of the minority, had been virtually accepted by the Roman government, which thereby had committed itself to the policy of making it the religion of the majority. Arianism, by surrendering the chief characteristic of Christianity, the proper Divinity of Christ, made the new faith less hard to accept; and for this reason the Emperors, though from time to time encouraging the Nicene theology, were naturally disposed, especially in the Eastern provinces, towards Arianism. But, as the long controversy showed, the Arian doctrine led not merely to an accommodation to pagan theology, but also to an approach to pagan morality. For though some, especially of the extreme Arians, were faithful to their opinions, the majority of the party were dexterous politicians ready to serve the interests of the corrupt court of Constantius. Bishop Robertson sums up the character of no few of the Arian intriguers when he says of Aëtius of Cesarea: 'The real opinions of a man with such a record are naturally not easy to determine, but we may be sure that he was in thorough sympathy.
with the policy of Constantius, namely, the union of all parties in the Church on the basis of sub-serviency to the State (Athanasius, p. iv). The men most opposed to the rapid secularization of the Church which characterized the 4th cent. were almost uniformly opposed to Arian teaching.

13. None the less, the Arian controversy was not without its opposite; indeed, it was inevitable outcome of the tendencies of the age. A Sabellian Christology would have been as fatal to Christianity as that of Arius, since it would have robbed the Incarnation of its reality, making it little more than an abstract conception of God, interpreted by the eloquence of Gregory of Nazianzus, and the philosophy of Gregory of Nyssa were alike instrumental in inducing the bishops of Asia and Syria to accept the Homoousion as the one and only safeguard of the Divinity of the Son against the seditious teaching of the Arians.

14. But though the Arian controversy virtually ended with the Council of Constantinople in A.D. 381, it was fruitful in new disputes destined to distract and divide Christendom. As early as the time of his banishment to Phyrgia (A.D. 366), Hilarion of Poitiers was able to foretell the approach of a heresy concerning the Divinity of the Holy Spirit (de Trin. lib. ii. and vatii.; Swete, Hist. of the Doct. of the Procession of the Holy Spirit, p. 112). In 381 the rise of the Tropici caused St. Athanasius to enter, in the Letters to Serapion, upon the subject of the Divinity and Procession of the Spirit (Swete, op. cit. p. 91; see also pp. 47-49). The subject was also considered at the Council of Alexandria (A.D. 362) and about the same time Macedonius, the Semi-Arian bishop of Constantinople, deposed by the Homoean Synod in A.D. 360, was elaborating the theory (which was afterwards known by his name) that the Son was like, and the Holy Spirit unlikable to the Father. Though the controversy caused by this question never ceased the world like those on the Divinity of the Son, the consequences were even more serious, the question of the Procession of the Holy Ghost being the pretext of the schism between Eastern and Western Christendom. Even more fruitful in divisions was the problem raised by Athanasius of Laodicea, one of the chief opponents of Arianism, concerning the relations of the Manhood to the Godhead of Christ.

AMILLARISM.

The first phase for which Athanasius contended so nobly, and which he asserted in early youth before the appearance of Arianism, was the union between God and man brought about by the Incarnation (de Incarnatione). But the zeal with which the Divinity of the Son was contended, as Har- nack truly says, to obscure the historical Jesus (op. cit. iv.); and theology occupied itself with the dogmatic aspect of the Divine rather than with the practical example of the human Christ.

At all parts in the history of the Church the fact that one of the results of the great dogmatic controversies in the early Church was that the defeated party displayed conspicuous zeal in missionary effort; and, without sparing condemnation of the self-seeking and unscrupulous spirit of the political Arians, we have also to remember that some later Arians, like the heresiarch himself, were ready to condescend to instuct the simple. Possibly Arius believed that by re-stating the theology of the Church in terms suited to his age he was doing good service in rendering the faith acceptable to the heathen; and his followers found ready converts among the Teutoon invaders of the empire. The exile of Arius and Eusebius of Nicomedia was only not in the inevitable outcome of the tendencies of the age. It truly of

op.

Incarnatione).
was then that the belief of Rome, and the Churches in communion with her, won its most signal triumph in the conversion of Clovis (A.D. 496). The strength of the organization of the Church of the fallen Empire stands in remarkable contrast to the weakness of the less disciplined national churches of its Arian invaders. As Dr. Hodgkin remarks, 'The Arian bishops took their fill of court favour and influence while it lasted, but made no provision for the future. They stood apart from one another in stupid and ignominious isolation. Unhappily by the great Augustinian thought of the world - encompassing city of God, they tended more and more to form local tribal churches, one for the Visigoths, another for the Vandals, another for the Burgundians. And thus in the end the fable of the loosened faggot and the broken sticks proved true of all the Arian monarchies' (Italy and Her Invaders, vol. iii. p. 345; see also Gwatkin, op. cit. p. 72).

The events which followed the conversion of Clovis showed the immense political power of the Catholic-Nicene Church of the West. The important Visigothic kingdom of Toulouse, which lasted for a hundred years, and reached the apex of its power under Euric (a.d. 466-484), fell before the Frankish army in 496. The Visigoths, led by Totila, was driven to a crushing defeat by the Vandals, led by Giseric, at Tolbiac (a.d. 530). The Visigoths, led by Arians, in defence of which Ecdicius and the bishop Sidonius Apollinaris played so vital a part, was opposed by the orthodox party of Clovis, and the triumph of the former was followed by severe measures of repression, which have been lamented by later admirers. For a discussion of these measures see C. A. Scott, Ulfils, p. 185; and DCB, art. 'Euric,' by Mrs. Humphry Ward, who quotes the letter of Sidonius (Ep. vii. 6). It was not until the death of the Arian Arianizing of the Visigoths, and their clergy tended to misinterpret and misapply Sidonius' allusion to the natural death of bishops, to whose vacant see Euric refused to permit a successor to be chosen, and imagined that they were slain by Ecdicius. After the conversion of Clovis the Catholics had their revenge; that some priests realized the value of their assistance, and made the battle of Alarc, the son of Ecdicius, a holy war. 'Valde moleste fero nisi quid mihi partem tenuisse Galliae non teneatur, et superstites redignamus terram in diametrum nostram' (Greg. Tours, i. 37).

In the case of the Burgundian Gundobald, the Catholic spokes- man Axtus, bishop of Vienne, held out as an inducement to him to embrace orthodoxy, that he would be protected against Clovis (Avitus, Op. xvi. 17; quoted by Hodgkin, Italy and Her Invaders, vol. iii. p. 347). The fall of the Visigothic kingdom in Italy is an even stronger proof of the political strength of orthodoxy. The admirable rule of Theodoric, his fairness and tolerance, were of no avail to save his dynasty; directly an orthodox Emperor was on the throne at Constantinople, the Church intrigued against him and his family. 'Tuttis,' says Professor Gwatkin, 'was a model of barbarian justice; yet even that illustrious man would have sanctioned his unius esse virtutibus.' 'In that case,' answered Gregory, 'why will you not receive the communion with us?' Qui quisquirit, quia non receptae sunt sanctorum apostolorum nos dicimus Gloria deo patri per filium; vos autem Gregori, Gloria patri, et sanguine (Greg. Hist. ii. 18). Avitus, Epist. iv. 15, 16. Avitus, Epist. ii. 7. The ninety-one letters of Avitus, bp. of Vienne, should be consulted; see also Gibbon, Decline and Fall, ch. xxvii.; Bevillot, Arianisme chez les peuples germains; Maimbourg, Hist. of Arianism, bk. x.; Hodgkin, Italy and Her Invaders.

16. Every barbarian kingdom ultimately abandoned Arianism, or else, as in the case of the Ostrogoths in Italy and the Vandals in Africa, Arianism proved one of the causes of national ruin. The principal Arian nations were the Burgundians, the Visigoths, and the Lombards; and each in turn suffered from the brutal suppression of Christianity in which they had been instructed for the Niceno-Roman faith. As the chief reasons for their conversion were political, the reader is referred to the history of the period; all that is possible in this article is to give the main features of the struggle with the orthodox prelates, in which each of the three nations mentioned eventually succumbed. The Burgundians do not seem to have been originally Arians; indeed, if we are to believe Socrates, who wrote in the reign of Theodosius II. (c. A.D. 430), they were originally Catholics (HE vii. 30); see also DCC, art. 'Gundicarius,' and 'Orosius.' It would seem that the Burgundians were never entirely Arian, though the majority of the nation at the time of Clovis were
of that persuasion. It is an open question whether Gundobald, the contemporary of Clovis, was Arian or orthodox (Greg. Tours, Hist. Franc. ii. 34, iii. prologue; Avitus, Ep.). His son, the unfortunate Sigibaud, was certainly orthodox, whilst the next king Godomar (also a son of Gundobald) was an Arian. In A.D. 534 the Franks subdued Burgundy; but Arianism seems to have continued to drag out an obscure existence till the end of the century (Revellout, op. cit. p. 218).

19. After their defeat by Clovis, the Visigoths were gradually driven out of all Gaul except Septimania, but they continued to live in the south of France, being otherwise confined to the Spanish peninsula. In their dominions as elsewhere the Roman provincials remained orthodox, and in the seaport towns the influence of Constantinople was still considerable. Spain, however, was the great stronghold of Arianism, which made a long and obstinate struggle before it gave way to the orthodox belief of the Empire. In A.D. 569 the able Leovigild became king of the Visigoths; and, after a series of successful campaigns, reduced his people to almost complete submission to that faith. His son, Hermenegild was married to Ingunthia, daughter of Sigibaud and Brunichildis of Austrasia. The bride (she was only thirteen years of age) was expected to become an easy convert from Frankish orthodoxy to Visigothic Arianism. She professed the faith very firm in her heart, and absolutely refused to be re-baptized by the Arians, though her grandmother Goiswintha, the wife of Leovigild, treated her with great brutality. To prevent further trouble in his family, Leovigild made his son king, and gave him a separate establishment at Seville. There, it is said, by the influence of his uncle, the famous bishop Leander, and that of his wife, Hermenegild became a Catholic. The young prince soon rebelled against his father, and with the assistance of the Catholic provincials and the Byzantines his party became very formidable. To conciliate his subjects, Leovigild visited the churches, and professed that his belief was Catholic save for his denial of the Divinity of the Holy Spirit; for which he was able to find no Scriptural warrant. He also made a remarkable concession to the prejudices of his subjects, by allowing them to go from the Roman to the Catholic Church, for so the Arians denominated the Roman creed simply by the name of catholicam fidei, without any repetition of the baptismal rite, but merely by imposition of hands and saying the Gloria in the Arian form, 'Pater et Filium in Spiritu Sancto.' The rebellion of Hermenegild was suppressed, and Leovigild is said to have persecuted the orthodox faith with severity. The unfortunate Hermenegild was put to death, and received, on somewhat doubtful authority, the honours of canonization at the hands of Pope Urban VIII. (1622-1644). Leovigild died in A.D. 596, and was succeeded by his son, Recared. One of the first acts of Recared was to declare himself in favour of the Catholics, and, according to Gregory of Tours (ix. 15), he arranged a disputation in A.D. 597 between the adherents of the two creeds, after which he embraced the Nicene faith; but this Synod is passed over in all collections of Councils save Manni's ('Hefele, Councils, sec. 286). Two years later, Recared held the famous third Council of Toledo, at which 67 bishops and 200 monks were more present. The leading bishops were St. Leanderv of Seville, uncle to the king, and Massona of Emerita. Twenty-three anathemas were pronounced against Arianism, the most interesting of which are the third, which declared 'Christus et Filium et Spiritum Sanctum, quae pater et filius; et filius et Spiritus; et pater et Spiritus; et pater et filius et Spiritus.' The ninth, against declaring that the Son in His Godhead was ever visible; the fourteenth, prescribing the correct form of the Gloria; the sixteenth, condemning the 'abominable treatise which we composed' to seduce the provincials into the Arian heresy, i.e. at the Arian Synod of Toledo (581); and the seventeenth condemned the Synod of Ariminum (A.D. 359). 'The holy creed' (the Niceno-Constantinopolitan) was ordered to be recited before communion after the manner of the Greek Fathers; and, as is well known, the creed to which Recared and his queen, Athanasia, submitted, besides the Arians, subscribed, contained the fateful addition of the Filioque. Arianism, however, was not suppressed by Recared without force, as many of the Gothic nobles held out for some years. For fuller particulars consult the Council see Gams, Kirchengesch. von Spanien, vol. ii. p. 1. secs. 6-16; also Dahn, Uebergeschichte der german. und roman. Väter, p. 515. The native chronicler is Johannes Biciarensis (Migne, Patrol. lat. vol. xxiii.). It is noteworthy that from Spain proceeded the one of the most important Western heretics concerning the Christian doctrine, the Adoptionist or Arianism that of the Filiusque, promulgated by Eclipandus, the metropolitan of Toledo, and condemned at the Council of Frankfort (A.D. 794).

20. The Lombard conquerors of Italy were Arians down to the close of the 6th cent., and, even in the days of St. Gregory the Great, Autharhis, their king, forbade any of his Lombards to give their children Catholic baptism. But shortly before his death Autharhis married a Bavarian princess Theodelinda, who had been brought up in the Catholic faith. So great an impression did her wisdom and beauty make on her people, that, when she became a widow, the Lombards begged her to adopt her own husband and continue to reign over them. She chose Agilulf, and by her persuasions the new king was gradually reconciled to the Catholic faith. It was to Theodelinda that Gregory addressed that most interesting revelation of the credulity of his age, the Dialogues. Traces of Arianism remained among the Lombards down to the middle of the next century, and it is not at all certain by what means the whole nation was induced to abandon the Arianism. The Roman pontiffs regarded them always with the greatest abhorrence. For the correspondence between Gregory and Theodelinda see Hodgkin, Italy and Her Invaders (1889), vols. vi., and Homes Dudden, Gregory the Great (1908).

The whole subject of the transmission of the Teutonic from Arianism to Catholicism is one of great obscurity, and deserves careful investigation. Of the Churches nothing seems to have survived, and, except Udal's translation, there is no literature which has come down to us. The three important factors in the destruction of Arianism were the power of the Franks, listed on the side of orthodoxy, the weight of influence which the subject Roman provincials were able to throw on the side they favoured in any struggle between rival barbarians, and the part taken by the wives of the kings and chieftains in bringing their people over to the religion of the Romans. Teutonic Arianism was at best a somewhat barbarous Christianity, and it is interesting to observe that a form of Christianity, which began with the highly educated and highly placed epoch of East as a speculative creed, ended in the West as the national religion of ignorant and barbarous warriors. But the struggle between Catholicism and Arianism in Western Europe was not so critical and far more protracted than in the eastern provinces.

21. During the Middle Ages there seems to have been little if any revival of Arian opinions properly so called, the tendency being perhaps in the direction of Sabellianism rather than otherwise, though the drift of Christian thought led men to speculate more on the nature of the Church, and eventually on the position of the Virgin Mary in the hierarchy of heaven, than on Christ (Dorner, Doct. of the Person of Christ, Div. ii. vol. 1. [Third Section]).
of the three ages of the world. But they touched Christology merely at a few points. It was not till the Reformation, the term 'Arian' was frequently misapplied to those who held Unitarian views; and before discussing the later developments of those opinions which derogated from the supreme Godhead of the Son, it may be well to explain the difference between the position assumed by the Arians of the 4th cent., and to give some idea of their more modern followers. 

Arian controversy proper concerned the Nature of the Divine Logos rather than the historic Christ of the Gospels. Arius and all his disciples acknowledged the pre-existence of our Lord, and concerned themselves but little with His Humanity. Indeed, Arius practically denied the manhood of our Lord, by teaching that His human body was animated by the Logos. But this Logos, though the creative principle by which all things were made, was according to his teaching, not really God, but a demi-god called into being to create the world, and, in the Incarnate Christ, to save mankind. No serious attempt was made to renew this heresy at the time of the Reformation, started, on the other hand, with the denial of the pre-existence of Christ, who was declared to be no more than man, though miraculously born of the Virgin Mary and actually raised from the dead. The first Unitarians were Petavius in France, and H. More in England, and the majority took refuge in Poland, where the laxity of the laws and the independence of the nobility secured for them a toleration which would have been denied to their views in other countries. They were divided into two main parties: those who declared that worship ought to be paid to Christ, and those who held that to adore Him, a creature, was idolatry. The leader of the former party was Faustus Socinus (Sozini), and those who followed him are often termed Arians to distinguish them from genuine Unitarians like Blandrata and Francis Davi. These opinions, however, must be considered apart from Arianism proper, which is the subject of the present article. 

See Toulmin's Memoirs of Faustus Socinus. In his introduction this author says that some of the Unitarians adopted Arian notions, and he distinguishes those from the followers of Socinus (Socinians, xvii.). In the meantime Legate, the unfortunate heretic who was burned at Smithfield, 1555, announced that his name was Eusebius. The same claim was assumed by the followers, and when Socinus published his 

Acute enough to see that the drift of his thesis, that the Anti-Nicene Fathers did not hold the doctrine of the Council, was completely different, and that he had the cause of the Papacy rather than that of Arius in his mind ('pontificis potius quam Arianiae causa consultum voluisse,' Def. Fidei, p. 36). Bull’s famous treatise in reply to the arguments of the faith of Nicea appeared in 1684; and ten years later he wrote his Judicium Ecclesiae Catholicae in answer to views similar to those of Petavius advanced by the Remonstrant Episcopii, an amiable and learned man, who made so much to attack the Trinitarian position as to maintain its comparative insignificance as an essential of Christianity ('frigidum nimirum tante veritatis vindicem se ostendit,' Introd.: see also Nelson, Life of Bull, ch, xi. v.ii. The Judicium, as is well known, was highly commended by the great Bossuet, bishop of Meaux, and the clergy of the Gallican Church (Life, ch. lix). 

The opponents of Bishop Bull were not, as a rule, Englishmen, anti-Trinitarian opinions in Britain having as yet no prominent advocates, but rather, as Bp. Van Mildert styles them in his Life of Waterland (p. 37), 'importers of foreign novelties.' Perhaps the best known English work advocating Arianism in the 17th cent. was the Adversus Arianism of Dr. Bury, rector of Exeter College (Oxford, 1890). In the same year, Dr. Sherlock, dean of St. Paul's, published his Vindication of the Doctrine of the Holy and Ever-blessed Trinity, in which, following some suggestions made by Cudworth, he held that there are three distinct infinite minds or spirits.' 

(Appendix to Dorner, by Patrick Fairbairn.) 23. Professor Gwatkin in his Gifford Lectures ('Knowledge of God,' ch. xvii.) says incisively: Arianism is one of the most modern of the old heresies strangely English in its impatient common sense.' And it was in the England of the 18th cent. that the controversy revived. 

' A variety of circumstances combined to give this turn to religious thought in England. The reaction from Puritanism, which was in part due to thei (p. v.) able to place itself in an era when science and art, and scope no longer existed for mental energy in that direction, had been marred by the Nickan Works of Milton, the theological views of the poet are put forward. He opposes the teaching of the Calvinists on Free Will, and works out from the Bible a Christology of a Semi-Arian character. He does not appear to have read the 

"The two English divines properly deserving of the name of Arians were William Whiston, who succeeded Sir Isaac Newton in the chair of Mathematics at Cambridge, and his friend Dr. Samuel Clarke. Whiston was a man of high learning, his name, he is well known, being marred by many eccentricities. His study of Christian documents led him to place the Apostolical Constitutions on a par with the Gospels, and to choose Eusebius of Nicomedia as the exponent of the true tradition of Christian doctrine. He repudiated the name of Arian, but his unspoken utterances caused him to be deprived of his professorship. His more cautious friends, among them Benjamin Hoadly, rose to the highest and
most lucrative positions in the Church of England (Avery and Overton, The English Church in the Eighteenth Century, vol. i. p. 490 ff.). Dr. Samuel Clarke, Rector of St. James's, Piccadilly, in 1712 published his Scripture Doctrine of the Trinity, in which no fewer than 1257 texts were adduced to prove that the Son was made out to be Gods, the Father declared to be alone Supreme, the Son Divine only so far as Divinity is communicable by the Supreme God, and the Holy Spirit inferior to the Father and the Son, not in order only, but also in distinction and authority. This avowed Arianism (for it was) was pointed out by Dr. Clarke, and Jackson in his Vindication of Christ's Divinity. In the long war of pamphlets which followed, Waterland was conspicuous alike for basing his doctrine on Scripture alone and for the respect he showed for the Fathers. The Ariean dispute in England marks a period when the Fathers were confidently appealed to in theological disputes. Nor was the Church of England alone disturbed by the question, since from the time of Emlyn's condemnation in Dublin (1702) and his expulsion from his church, the Nonconformists were disturbed by the presence of Arianism, which culminated in the Salters Hall Conference in 1718 between Presbyterians, Baptists, and Congregationalists. The Arieanism of the early 18th cent. was succeeded by anti-Trinitarianism, and the subordinationist theories of the first decades gave way to more distinctly Unitarian doctrines, the discussion of which is scarcely within the scope of the present article.

For English Arianism see Nelson, Life of Bull, 1713; Van Mildert, Life of Waterland; Whiston, Memoirs, 1744-50; the Appendix to Dörner's Person of Christ (Eng. tr. 1865-69); And The English Church in the Eighteenth Century, 1878, ch. viii.; Sykes, Anti-Trinitarian Biographies; Dale, History of Eng. Congregationalists, 1897.

As a philosophy of religion, Arianism struck a blow not only at the Creed, but at the whole principle of Scriptural revelation. 'Is,' asks Harnack at the beginning of his chapter on the subject (op. cit. vol. iv. Eng. tr.), 'the Divine, which appeared on the earth and has made its presence actively felt, identical with the supremely Divine that rules heaven and earth? Did the Divine which appeared on earth enter into a close and permanent union with human nature, so that it has actually transfigured it and raised it to the plane of the eternal? The OT teaches that the One True God revealed Himself, in part at any rate, to Israel; and the NT supplements this by showing that humanity is made one in the Christ (Greek), and by this is brought into complete harmony with the God and Father of All. Arianism declared God to be unknowable, and the Son completely detached from Him. Humanity can therefore never be brought by Christ to the truly Divine, but only to a sort of pseudo-divinity created by the Father by the Son. Such an evacuation of the purpose of the Christian revolution has always been repudiated whenever the doctrine is presented in its crude form. But we must carefully distinguish between the logical result of such systems as Arius propounded and the opinions of those who unhesitatingly held it. Aristotle himself, in his creed of Sabellianism, may have advanced a theory of the Trinity without considera-

tion of all that it involved. As a matter of fact, he was ready in later life to subscribe to a creed approximating to that of Nicene. Of his opinions the famous Unitarian Dr. Priestley rightly says in his Church History (vol. ii. p. 189) : 'Nay, the proper opinions of Arius, viz., that the Son was made out of eternity, and that at a time when He did not exist, were really adopted by very few. So that what we call Arianism arose much later and spread much less rapidly than has generally imagined.' The Ariean Controversy resulted, however, in bringing forward two conclusions of which the Unitarians maintain a perfect merit of condemnation. If Jesus Christ existed from eternity, and is Head of a Kingdom which shall have no end, if He is indeed to be worshipped and received as God, then the Nicene doctrine is true, and He is of one substance with the Father. Otherwise, Christians have been mistaken from the first in their conception of Him, and He is not Divine, but a creature; not eternal, but belonging to time: either, as Arius suggested, a Second, God, using the term 'God' in its looser polytheistic sense, or, as the Unitarians maintain, a creature competent for goodness, but subject to human limitations, and unable to bring those who trust in Him to peace and communion with the Father. It is without significance that Socinus expressly denied the doctrine of atonement which the Father. F. J. FOAKES-JACKSON.

ARISTOTLE, ARISTOTELIANISM. — i. Life.—Aristotle—son of Nicocamus, friend and physician of Amyntas, king of Macedonia—was born B.C. 384 at Stagira or Stagirus, a city of Chalcidice. In his eighteenth year (367) he came to Athens and joined the Academy, of which he continued to be a member, learning and teaching, during twenty years. Tradition relates that he taught rhetoric in opposition to Isocrates, that is to say, whereas at this time the school of the politico-rhetorical sophist Isocrates and the Academy, the school of Plato, were rival colleges, Isocrates was professor of rhetoric in the one, Aristotle in the other. In 347, when Plato died and his nephew Speusippus succeeded him as scholarch, Aristotle and Xenocrates, on the invitation of Hermias, lord of Atarneus and Assos, who was himself an Academic, betook themselves to his court. After a three years' residence there, Aristotle removed to Mysia, and, at a time, after the death of Hermias, he married Pythias, a near relative of his friend. In 343 Aristotle received and accepted a call to the Macedonian court to undertake the education of Alexander, then thirteen years old. This task occupied him during three years (343-340), when he removed to Stagira followed; and it was not till Alexander had ascended the throne, and was about to start on his Asiatic expedition, that Aristotle finally left Macedonia. Meanwhile, in 339, Speusippus had died, and Xenocrates, and Heraclides Ponticus and Menedemus, had succeeded him as head of the Academy.

In 335 Aristotle returned to Athens and founded a school of his own in the gymnasion known as the Lyceum. There he spent twelve busy years, teaching in the morning a select class of advanced students, and in the afternoon a larger audience. From his habit of walking to and fro as he discussed, the members of the school were called Peripatetics (I.: 335; 334). For this period of twelve years he lost the favour of Alexander, whose jealousy of Antipater and suspicion of Callisthenes prejudiced him against their friend and correspondent. Nevertheless, when Alexander died in 323, the anti-Macedonian party at Athens vented their spleen against Aristotle in a charge of 'impiety.' The accusation, based upon a
hymn to virtue, in which he was alleged to have represented Hermias as a god, was plainly frivolous; but Aristotle prudently left Athens and retired to his house near Chalcis in Euboea. There he died in the summer of the following year (322). The story that he committed suicide by drinking hemlock is forgeries; in any case, it appears to have no foundation. Dr. Waldstein in 1881 opened a tomb near Eretria which he supposed to be that of the great philosopher.

2. Writings.— Cicero extols the golden stream of Aristotle's Dialogues, which seems to have kept its grace and fertility; and Dionysius of Halicarnassus, its force, clearness, and grace. These praises must needs refer to Aristotle's published writings, and, in particular, to his Dialogues, of which only fragments have come down to us. The philosophical writings, upon which his fame rests, are wholly deficient in literary quality. The style is curt, abrupt, jejune. The language is careless and conversational. The exposition is sometimes incomplete, sometimes redundant, sometimes inconsistent. There are reminders, recapitulations, revisions. Arguments are sometimes indicated without being worked out; inquiries which are promised are sometimes tacitly dropped. In a word, these, which have so profoundly impressed the thought of many centuries, would seem to be neither completed and published works nor text-books for use in the school, but informal records of oral teaching addressed to a few advanced students. In this way, and perhaps in the way only, are explicable the rough and ready terminology, the diagrams and examples, the references to the furniture and the decorations of the lecture-room and to members of the class, the episodical sentences which begin and end, and, in one instance, the peroration addressed to an audience. But if these are records of oral teaching, some of them more completely finished than others, by whom were they prepared? Are they Aristotle's notes made with a view to his lectures? Are they notes of his teaching made by his hearers? Are they compilations made by an editor who had before him both Aristotle's notes for lectures and his hearers' notes of them? In this instance, the present form in which have come down to us are in the main the notes of Aristotle himself. If they were the notes of pupils, and, a fortiori, if they were compilations, much of the roughness and the obscurity would have been avoided.

For example, in Metaphysics, A iii. 1009b 35 and 1070a 5 the words μετὰ ταύτα ἐγραμμένα would not have survived; and in A ix. 990b 11-16 we should not find indications of three Platonic arguments and Aristotle's objections to them packed into four lines. It would seem that Aristotle's notes, made for his own use and supplemented and corrected by himself, but never revised for publication, were treasured in the school; so that we possess, not indeed always his last thoughts, but at any rate his thoughts; and the inconsistencies which trouble us prove only that his thinking was progressive.

The chief of the so-called 'Aristocratic' treatises and ethics to Aristotle may be classified under its medieval titles as follows:—

i. LOGIC: the Organon, including Categories, de Interpretatione, Analytica Priora, Priora, Topica, de Sophisticis Elenchis.
ii. PHYSICS: Physica or Physical Examinations, de Caelo, de Generatione et Corruptione, Meteorologica.
iii. BIOLOGY: Historia Animalium, de Partibus Animalium, de Insectis Animalium, de Generatione Animalium, Animae Animalium, Anima Naturata.
iv. PHILOSOPHY: Metaphysica.

vi. LITERATURE: Historia, Poetica.

It is not possible to specify with any certainty about the ontology of these writings; for there can be no assurance that references from one to another are Aristotle's and not the additions of editors. But we know that the collection of treatises from which we gather Aristotle's ontology was early placed after the treatises on Natural History: for this, and no more, is implied in the title τὰ μετὰ τὰ φυσικά, whence we derive our convenient misnomer 'metaphysics.'

Besides the 'published works' (ἐκδοθέντα λόγον), and the 'lectures' (ἀκομαρατία), there were also 'memoranda' (χαρακτήρα). Under this last head may perhaps be placed certain summaries of the teaching of philosophers, the προλόγια, and the προλογία, i.e. notices of the constitutions of 158 political communities. The recently discovered Ἀθηναῖον πολεμικόν of the School of Athens contains (1) a brief constitutional history of Athens and (2) a citizen's handbook, but the want of proportion obvious in the former of these two sections suggests that it was a compilation, made by some member of the school, from extracts and documents which Aristotle had casually collected.

Strabo and Plutarch relate that Aristotle's library, including his own writings, became the possession of Theophrastus, and after his death passed into the hands of Nicias of Scopis in the Troad; that his heirs, for fear of the lords of Pergamum, had burned them in a celebration about B.C. 150. Apollodorus lists them and brought them to Athens; and that in 88 they came into the hands of Sulla, and so became known to the grammarian Syntiphon. The copies were prepared about 70 by Andronicus of Rhodos, the eleventh of the three Platonists. This curious story is not to be taken for granted either that the school had no philosophical library or that its library did not contain copies of Aristotle's principal writings.

3. Philosophical system.—We have seen that Aristotle entered the Academy and continued to be an active member of it during twenty years. In later life he stil led himself as an Academic; for even when he is criticizing certain of Plato's tenets, he speaks of them as doctrines which we hold. Indeed, it would appear that, had he been at Athens in 339, he might have succeeded Speusippus as head of the school; but the word of the scholars, it is expressly noted that when Xenocrates was elected, 'Aristotle was in foreign parts.' But though an Academic, Aristotle cannot be regarded as a Platonist. The master and the pupil differed fundamentally in their attitude towards inquiry, Plato taking his departure from that which is eternal, Aristotle from that which is actual in time and space. Yet, in spite of this disagreement, they were at one in restating their conceptions of science the theory of forms that there are in Nature determinate kinds of species, which may be studied in their resemblances and their differences. After all, Aristotle had more sympathy with Plato than Speusippus, a biologist who assumed the natural kinds without attempting a metaphysical explanation of them; and more appreciation of Plato than Xenocrates, a moralist, who, when he ventured into Platonic metaphysics, was soon out of his depth; and whereas Speusippus dropped the theory of Ideas, and Xenocrates blended it with Pythagorean fancies, Aristotle was, at any rate, careful to formulate his dissent. In a word, Plato propounded an idealist ontology and rested upon it a theory of natural kinds, which should be the basis for the study of cosmic evolution; but, rejecting the idealist ontology, proceeded to restate the theory of natural kinds, resting it upon an ontology of his own. The criticism of his master's idealism is indeed Aristotle's starting-point, and for this reason it will be convenient, in the present account of Aristotle's system of philosophy, to give precedence to 'First Philosophy' (ἀρχαί φιλοσοφία) or 'Theology' (θεολογία).

(1) FIRST PHILOSOPHY.—There are, thought Aristotle, four principal lines of inquiry, having for their ends the discovery of four 'principles' or 'causes':—

(a) First causes or principles are the material cause (οὐσία), the essential cause (ονομα), the moving cause (ἀρχὴ τῆς κίνησεως), and the final cause (τὰ σοῦ ένόον, τέλος). Apart from
accidents or attributes which are not common to all the members of a natural kind, each of its members is, in thought though not in fact, resolvable into a specific soul or life, which is its form, and an appropriate body, which is its proximate matter. But again, the body is resolvable, in thought though not in fact, into organs and constituencies. Furthermore, the constituents of the four elements—fire, air, water, and earth. Finally, fire, air, water, and earth have for their ultimate matter a purely indeterminate potentiality which is the recipient of four primary qualities: Aristotle seems to regard cold, fire, the combination of hot and dry; air, that of hot and wet; water, that of cold and wet; earth, that of cold and dry. The ultimate matter of the member of a natural kind is then a potentiality, in virtue of which that member exists in time and space; its form is the sum of its specific characteristics, in virtue of which it is what it is. What we can know of the member of a natural kind is its specific characteristics. Anything which is peculiar to an individual member or to individuals is not resolvable.

Such is Aristotle's analysis of the particular member of the natural kind. It may serve as a statement of the aims which he has in view in his classificatory researches; but it leaves the adaptability of the soul, the complex of body, and the differentiation of species wholly unexplained; and when he tells us vaguely that 'Nature works always to an end and does nothing at random' (οὑδὲν ἀτελεῖ ἢ μὴν τὰ καὶ ἐφίλοι), it is plain that 'Nature' is no more than a deus ex machina.

For the proximate moving cause, by which the particular member of a natural kind is brought into existence, Aristotle looks, not to any transcendental cause eternally operant, but to a previous member of the species which in its maturity transmits the specific characteristics to its offspring. This principle is expressed in the formula 'man generates man' (ἄνθρωπος ἀνθρώπον γεννά). The final cause, the end sought, is the maintenance of the species. For though, under the influence of the sun as it approaches and recedes in its apparent progress through the signs, the life of the particular animal or vegetable wanes and wanes and ultimately ceases, Nature is 'careful of the type.'

If necessary, however, to account not only for the existence of the animal and vegetable kinds, but also for that of the earth and the heavenly bodies, and for their motions, especially if, as the use made of the sun suggests, animal and vegetable life is to be dependent upon them. For this purpose Aristotle postulates (a) a prime unmoved move...
teristics of the species to which the particular belongs. Such is the doctrine of Metaphysics Z. Nevertheless, in the Categories, primary existence is ascribed to the particular or composite of form and matter. The inconsistency is one of terminology and not of thought. For the specific form which is the primary essential of the Metaphysics, exists only in the members of the species; and the primarily existent particular of the Categories is known only in so far as it represents the species to which it belongs. Aristotle coined many technical terms; but he allowed himself to be carried away by the use of them, and he was not always careful to harmonize the terminology of one treatise with that of another. In this case, the terminological discrepancy is unfortunate; but, in the opinion of the present writer, it is a mistake to infer from it either confusion or vacillation.

(2) Psychology.—The conception of mind, except from matter, reappears in the Psychology (πραγμ. ψυχής). In this treatise Aristotle begins with a review of previous and existing views. There it appears that some had regarded soul exclusively as the organ of motion, others exclusively as that of sensation and cognition. For himself, he proposes to include under this name all activity, which, whether manifesting itself in living body, and distinguishes living body from which it is lifeless. (Perhaps this is all that Aristotle meant in the first instance by defining soul as 'the first actuality of a natural organized body') just as ψυχή (spirit) but when he adds that, while soul is activity of body, body is not actuality of soul, the definition becomes a declaration of soul's supremacy.) Having thus widened the scope of psychology, Aristotle proceeds to enumerate its various faculties. Nutrition (together with generation), sensation, appetite, locomotion, intellect, and other faculties are included in this order; and the possession of a higher faculty implies that of all the faculties below it. The soul of plants is nutritive only. The soul of animals is not only nutritive, but also sensitive, appetitive, motive. The soul of man has all the faculties of animals, and is intellectual also. In sensation the form of the sensible, without its matter, reaches the sense through an intervening medium; and when the sensitive resides in the sensible virtue of the change which the advent of the sensible brings about in it. Hence, when subject and object are in the like condition, there is no sensation; and when the sensible is in excess, the organ may be damaged by the excess. Thus Aristotle recognizes a common or central sense, which (a) is conscious of sensation, and (b) distinguishes and co-ordinates the impressions received by the special senses. Its organ is the heart. So far we have been dealing with faculties which man shares with the animals.

Passing next to reason—the faculty which belongs distinctively to man—Aristotle distinguishes a passive reason (πραγμ. ψυχής ψων), which receives from the sensible; an active, constitutive reason (πραγμ. ψυχής χων), which provides forms of thought for the interpretation of the impressions received from the senses. Such is the function of the active reason in the individual; but it and its instrument, the God of the Metaphysics, in so far as man possesses this reason, it comes to him from without. Plainly the passive reason is interposed in order to bring the recepta of sense into relation with the divine faculty.

(3) Logic.—Of all Aristotle's achievements the greatest was perhaps the invention of logic. The group of treatises known as the Organon includes a formal logic, a theory of scientific research, a treatise on disputation, and a classification of fallacies. The formal logic comprises an enumeration of categories or heads of proposition; a study of the quality, quantity, and conversion of propositions; a detailed investigation of the syllogism and its figures; and a careful discrimination between adsection (ἐκκλεισμον), or generalization from the known particulars to a large licence, and example (ἐμπειρία), or inference from known particulars in regard to unknown particulars, effected by ascent to an imperfectly certified general and subsequent descent from it. Within the limits of the Organon, Aristotle takes account at once of dialectical debate, by which the premises of demonstration are provisionally justified, of demonstration, by which the consequences of given premises are ascertained, and of sophistry or eristic, the pursued illusion of truth with a view to argumentative success.

(4) Science.—While the formal logic still holds its ground, Aristotle's scientific writings were no more than stepping-stones. His physical speculations occupied an important place in ancient science, but they were never more than stop-gaps; and the time came when, by reason of his great name, they were positive hindrances to progress. His biological works are still praised for the observation, the insight, and the knowledge, of which they afford conclusive evidence.

(5) Ethics and Politics.—In the Nicomachean Ethics and the Politics, Aristotle raises and discusses the old question, What is man's chief good (τὸ ἀρσενικὸν ἔνδομα) or paradigm? regarding it as one, as the end sought by the individual, and in the other, as much as man is a social animal and cannot realize himself except as a citizen, as the end sought by the city-State (πόλις). Thus the two treatises are contributions to the architectonic science of Politics (πολιτική); but the one (δικαίως), is concerned with the 'character' of the individual, the other (πολιτική) with the 'constitution' of the State. All are agreed that man's good or end is well-being (καθάρσις, μέτωκος) or well-being (ἐν αὐτῇ), or well-being (πολιτική); and man's well-being— the term 'happiness' should be avoided—is the satisfactory performance of those functions which are distinctively human. In a word, a man's chief good or end is a psychical activity characteristic of man in excellence (ἀριστεία), or, if there are more excellences than one, characteristic of the best and most complete of them, such activity being continued during a complete period of existence. Setting aside nutrition and growth which man shares with plants, and sensation which he shares with animals, we find that man's distinctive functions are reason, reasoning, and the rational control of appetite, under which head are included desires and passions. What, then, are the excellences of these functions? What is (dis) excellence? Then, the nature of the one complete? There are two sorts of excellence—moral excellence, the excellence which the appetitive part of soul displays when it is duly obedient to the rational part, and intellectual excellence, the excellence of the rational part. Moral excellence (or virtue) is 'a deliberate habit which enables the individual, with the help of his reasoning faculty—subject to an appeal to the man of practical wisdom—to attain what is for him the mean between two vices or vices' The principal moral virtues are courage, temperance, liberality, munificence, magnanimity or self-respect, gentleness, justice. The intellectual excellences are practical wisdom or prudence (διακρίσις), the excellence of that subdivision of the rational part of soul which controls
the appetitive part, and speculative wisdom (epistêma) the excellence of that purely intellectual part which is called reason (nous). Practical wisdom and the moral virtues must be developed paries (paris). Now, reason is obviously the best part of the soul, and therefore its excellence, speculative wisdom, is the best of excellences. This best of excellences and for its activity (térpyesi) study (térpeia). Consequently, the completest well-being of the individual is to be found in the life of the student (térpyeiô̂n ßôlos), who, however, must loyally do his duty as a member of the city and the family. This completest well-being is the highest of all excellences. Next to the life of the student ranks the practical life of moral virtue. For the production of excellence, three things are requisite: first, natural aptitude; secondly, instruction, for its guidance; thirdly, habituation, to establish the habit. Inasmuch as well-being implies not merely the possession of a habit, but also its exercise, we require for the realization of well-being those external goods upon which the exercise of the habit depends. The doctrine that well-being is the result of a virtue and not merely the possession of it, and the corollary that external goods are indispensable conditions, distinguish Peripatetic from Academic ethics.

As in the Ethics Aristotle is concerned with the whole being of the individual, in the Politics he is concerned with the well-being of the community. The city (polis) is a complex organism, developed out of the village (êkôma), which again has its origin in the patriarchal family (oikia). Right politics (êðêtai politeia) are those in which the sovereign (êkôros)—whether one, few, or many—rules for the benefit of the community; perversions (êpexêgê̂s) are those in which the sovereign—whether one, few, or many—uses power for personal advantage. The right politics are aristocracy, monarchy, polity proper; the perversions are democracy, oligarchy, and tyranny. The best of cities would be one in which absolute power was exercised for the benefit of all the citizens by one person, or more persons than one, superior to the rest in mind and body. But we cannot hope to find rulers thus exceptionally qualified, and accordingly monarchy and aristocracy must be regarded as unattainable ideals. Thus of the three right politics one alone remains, namely, polity proper, in which all free men are admitted to a share in the administration and at the same time submit themselves to the passionless intelligence of law. All of politics this is, in Aristotle’s estimation, the most stable; for inasmuch as all in turn rule and are ruled, the middle class has a preponderant influence. For the maintenance of polity proper, Aristotle would rely, as Athens did and as the United States do, upon supreme or constitutional laws (êtopos), alterable only by special formalities, to which supreme or constitutional laws, upheld by courts of justice, in an ordinary manner, must conform. Of the three perversions—democracy, oligarchy, tyranny—democracy, which has the smallest power for evil, is the least bad; tyranny, in which such power is greatest, is the worst. Tradition places at the end of the treatise a fragmentary scheme for a perfect State; but, unlike Plato, Aristotle had no hope of its realization. In the intervening books, on the strength of a careful study of known constitutions, Aristotle inquires into what sorts of constitution are suitable to given sorts of people; how a constitution may be established and maintained in accordance with given assumptions or conditions; what is the best constitution for the generality of States; what constitutions tend to change, to overthrow, and to maintain the several constitutions. The reader of the Politics must not forget that, on the one part, the citizen population of a Greek State was very small, so that Aristotle knew nothing of representative government; and that, on the other part, the number of slaves was, in comparison with the number of free men, very great, so that what he calls a democracy was in some sort an aristocracy.

In these two treatises, the Nicomachean Ethics and the Politics, Aristotle is an acute and judicious student of human nature. They have a Shak-spearean quality which makes them perennially interesting. But it must be clearly understood that they do not contain the highest of ethics and morality. Aristotle says nothing about the Good, about Duty, about the distinction between Right and Wrong; and very little about the faculty which discriminates them. Moreover, inasmuch as he concentrates his attention in the Ethics upon the well-being of the individual, and in the Politics upon the well-being of the State, the relations of man to man and of citizen to citizen are insufficiently handled. Indeed, they find a place, and that a subordinate place, only in so far as they have a particular virtue, not merely a virtue, and are concerned with them. In a word, Aristotle works upon the lines of Plato’s Republic.

In the Eudemian Ethics, which is now generally regarded as a summary prepared, mutatis mutandis, for the first time by Eudemus, the third disciple of Aristotle, the treatment of the functions of the soul is similar to that of the Nicomacheans. But (a) Eudemus shaves under the limitations of the inquiry, and would fain seek an explanation of moral differences; (b) regarding pleasure, not as the concomitant of an energy, but as identical with it, he sees in ethêmas the best of pleasures; and (c) abandoning the distinction drawn in the Nicomacheans between the activity of the student and the activity of the man of the world, he finds man’s well-being in a life of culture (sômacapiea) which combines both. It would appear that Aristotle himself, when he was writing the Politics (see iv. [vii.] iii. 1325b-14), had learnt to regard statesmanship as a proper subject for scientific study. In the opinion of the present writer, Books v. vi. vii. of the Nicomachean Ethics contain those which Eudemus could and should have borrowed from him, when writing the Eudemian Ethics, from Books v. vi. of the Eudemians, belong to the Eudemians, which they resemble both in their doctrine and in their style.

6. RHETORIC, ETC.—In the Rhetoric—a treatise on oratory and style, apparently framed on lines marked out by Plato in the Phaedrus, and in the fragmentary Poetics, Aristotle shows himself a literary critic of a high order. In particular, his appreciations of the tragedians have a permanent value. Perhaps no literary judgment has given rise to more controversy than the remark that tragedy, ‘by raising pity and fear, purges the mind of those passions’. This theory of the ‘homeopathic purification’ effected by tragedy (see Milton’s Preface to Samson Agonistes) is Aristotle’s answer to Plato, who condemned it as a low mode, an incentive and stimulus to mischievous emotions.

The greatness of Aristotle was not fully understood until the Middle Ages, when the Church borrowed from him the framework of its theology, when the whole of civilized Europe saw in his encyclopedic writings the summation of the sciences, and when Dante hailed him ‘as the master of those who know.’ In the present article no more has been attempted than to describe in outline the philosophy upon which the schoolmen built, and to indicate the scope of Aristotle’s labours. See, further, SCHOLASTICISM.

Literature.—The following editions of Aristotle’s writings deserve special mention: Bekker, Opera Omnia, 6 vols., Berlin, 1831-70; Pauly, Realencyklopädie, Frankfort, 1869; Rainey, Aristotelis, Cambridge, 1897; Bonitz, Metaphysik, Bonn, 1849-53; Eyewalter.
ARK

ARK.—In an inquiry into the nature and use of sacred arks, our interest centre chiefly in that which was already enough, an Ark, not from the OT, the so-called Ark of the Covenant.

This name, which occurs in the Deuteronomistic literature, is certainly, the earliest, one designations being apparently ‘Ark of Jehovah,’ ‘Ark of God,’ and ‘Ark of our God.’ But the word ‘God’ (Greek θεός, when used in the genitive, may have the sense of ‘the Deity,’ may be either possessive or adjectival: in the latter case denoting connexion not so much with the one true God as with the class or order of supernatural beings. The word is used in passages such as 2 K. 19:17; Zech. 4:6, where the Specification of ‘Ark of God’ may mean either ‘God’s ark’ or ‘ark connected with God.’ In cases where it is used to denote the Ark, the two renderings, while there may be a God, ‘Ark of God’ may mean ‘Ark of the Deity.’ If, however, he habitually uses the same word, as ‘Ark of God,’ the only possible translation of the phrase is ‘the sacred ark.’: for a Hebrews, unlike an English writer, does not attempt to vary his style by the use of synonyms. But in the case of the Ark of Jehovah, the mere mention of the name Jehovah would be sufficient to show the sacred character of the ark, and the phrase ‘Ark of Jehovah,’ i.e., ‘Ark of Jehovah’s ark,’ would naturally be used.

To explain the objection may be made that in two passages (2 S 8 and 1 K 11:19) the term ‘Ark of God’ seems to be used as a synonymous genitive, for an indefinite expression is not to be thought of in the case of the Ark in the earlier part of the OT. But the expression of 2 S 8 and 1 K 11:19, as synonymous names of the Deity is so un-Hebraic that it is scarcely possible to imagine that the text has in these instances come down to us as it left the hands of the original writer. It is noteworthy that the messenger who in 2 S 11 tells Eli the event which occurred in 2 S 11, says ‘Ark of Jehovah;’ it is therefore not impossible that 2 S 11 a late addition by a writer to whom 1 K 11:19 and 1 K 11:19 were in interchangeable synonyms. II. 3:1 has undergone considerable editorial modification, for neither the diction of 1 K 11:19 nor the fact that the lamp had not yet gone out has anything to do with the theology of the Samuel code. In any case we are certainly not justified in setting aside a well-marked rule on the strength of these two passages.

What purpose would such an Ark or chest serve? Surely there is no implicit statement or the subject in any early passage of the OT, the assertion that the Ark was the receptacle of the Tables of Stone being first found inD 10. On the one hand, the oldest documents of the Pentateuch, J and E, in describing the Tables of Stone, make no mention of any receptacle for them; and, on the other, the oldest passages outside the Pentateuch which mention the Ark give no hint that it was regarded as a receptacle for a sacred Law, but imply rather that it was regarded as containing the ark of Jehovah Himself. Thus, to quote Cheyne, ‘the Ark was not a symbol of the revealed Law, but the focus of Divine powers.’ The formula given in Nu 10:24-27, and similarly the account of the capture of Jericho, implies that the Ark was regarded as the visible symbol of Jehovah’s presence. Still more striking is the narrative of the capture of the Ark by the Philistines. On hearing of its arrival in the camp of Israel, the Philistines exclaim (1 S 44), ‘Who shall deliver us out of the hand of this power?” and the Ark was regarded as the visible symbol of Jehovah’s presence.

Still more striking is the narrative of the capture of the Ark by the Philistines. On hearing of its arrival in the camp of Israel, the Philistines exclaim (1 S 44), ‘Who shall deliver us out of the hand of this power?” and the Ark was regarded as the visible symbol of Jehovah’s presence.

In 1 S 6 it implies the virtual identification of the ark with Jehovah (cf. 64). Similarly, the language of 2 S 27, where David’s dwelling in a house of timber is contrasted with the dwelling of the Ark within curtains, appears more natural if the Ark was regarded as localizing the Deity than if it merely contained the tables of His Law. It is noteworthy also that David’s dance before the Ark is described as performed ‘before Jehovah’ (2 S 6). Professor Cheyne (EBI i. 302) considers it probable that in the earlier form of the story of the Tabernacle and the Ark, the whole shrine, not merely the Ark, was in the temple. It is very probable that the earlier form of the story stated that the Ark was in the temple, not merely the Ark, was in the temple. It is very probable that the earlier form of the story stated that the Ark was in the temple; perhaps in the earlier form of the story the Ark was in a temple. In any case, since the Ark was regarded as the focus of Divine power, the presence of the contents of the Ark was necessary for its efficacy.

Attention has already been drawn to the fact that the early references to the Ark imply that it contained some symbol of Jehovah, and it is now

ARK 791

The writer of the present article has occasionally used it in connection with the photographs in his book The development of the text of the Greek philosophy down to Aristotle, which he contributed to the Cambridge Companion to Greek Studies.

HENRY JACKSON.

The Deuteronomic writer, who supposed, reasonably enough, that what was on the first table, less the sacredness of the Ark must have been due to the sacred character of its contents. In this connexion, since his religion forbade him to think of any idol, the objects which would naturally occur to his mind would be the sacred Stone Tables. It has been suggested that the Tables of Stone were originally holy, possibly meteoric stones, or, according to Professor G. F. H. Moerbeke, 5s. 6. The supposed physical basis of the Ark of God, by taking which with them the Israelites were assured of the protection of God, has been sought away from His holy mountain. But of such portable stones we have no other example in Israel. Moreover, the difference between the two tables in shape and in the order of the Ten Commandments and fastish stones is so great that it is difficult to suppose that the latter could be the only basis for the story of the former. A discussion of the origin of this form of the Ten Words would be out of place in the present article; but it is by no means improbable that in time, with the words of the Ark, the mention of the name of Jehovah would be sufficient to show the sacred character of the ark, and the phrase ‘the Deity’s ark, i.e., the Ark of Jehovah’s ark,’ would naturally be used.

To explain the objection may be made that in two passages (2 S 8 and 1 K 11:19) the term ‘the Deity’s ark’ seems to be used as a synonymous genitive, for an indefinite expression is not to be thought of in the case of the Deity. The earliest form of the OT, the assertion that the Ark was the receptacle of the Tables of Stone being first found inD 10. On the one hand, the earliest documents of the Pentateuch, J and E, in describing the Tables of Stone, make no mention of any receptacle for them; and, on the other, the oldest passages outside the Pentateuch which mention the Ark give no hint that it was regarded as a receptacle for a sacred Law, but imply rather that it was regarded as containing the ark of Jehovah Himself. Thus, to quote Cheyne, ‘the Ark was not a symbol of the revealed Law, but the focus of Divine powers.’ The formula given in Nu 10:24-27, and similarly the account of the capture of Jericho, implies that the Ark was regarded as the visible symbol of Jehovah’s presence.

Still more striking is the narrative of the capture of the Ark by the Philistines. On hearing of its arrival in the camp of Israel, the Philistines exclaim (1 S 44), ‘Who shall deliver us out of the hand of this power?” and the Ark was regarded as the visible symbol of Jehovah’s presence. Still more striking is the narrative of the capture of the Ark by the Philistines. On hearing of its arrival in the camp of Israel, the Philistines exclaim (1 S 44), ‘Who shall deliver us out of the hand of this power?” and the Ark was regarded as the visible symbol of Jehovah’s presence.
freely admitted that idol images of Jahweh were formerly common in Israel. It is natural, therefore, to regard the Ark as the portable shrine or receptacle of some such image, which upon this supposition must have been deposited by Solomon in the Temple of Jerusalem.* Have we any indication of the existence of such an image? This point is difficult to be thought of, for there is no evidence that Jahweh was ever worshipped under this form among the Leveh tribes; since it must be remembered that the original image at Dan, if it really was in the form of a calf—which is generally admitted—was made not by Jonathan the Levite, but by Michah the Ephraimitic.

But at Jerusalem there was an image of Jahweh to which sacrifice was offered, viz., the bronze serpent, or, to call it by the name by which it is generally known, the brazen serpent, which, in the age of Hezekiah was believed to have been made by Moses (2 K ~; cf. Nu 21:9), and may therefore be supposed to have been as old as the Ark. It is therefore a not unlikely inference that it was for this image that the Ark was made. It is noteworthy that the only two objects, traditionally connected with the worship of Israel in the wilderness, of the existence of which there is any evidence in the period of the Kings.† The traditions which assigned the making of the first golden calf by Aaron; and the brazen serpent given to Aaron and Moses respectively are of the utmost importance; for the fact that the essential part of these traditions—viz., that images were made—survived even the iconoclastic commandments shows how deeply rooted must have been the traditions themselves. And if, as will generally be admitted now, the narrative of Nu 21:9 is the attempt of a later age to explain the origin of an object which seemed inconsistent with its iconoclastic law, and if the brazen serpent really was an image coming down from the time of Moses, or at least from the days of the Israelite conquest of Palestine, it is reasonable to suppose that the history of the brazen serpent was identical with the history of the Ark. But if the brazen serpent really existed in such an early period of Israelitic history and both the Ark and Kings. And if the iconoclastic zeal of the reforming party in the days of Hezekiah destroyed the brazen serpent, the Ark, if this was the shrine of the serpent, would have shared the same fate.

Objection may perhaps be made to this theory, on the ground, first, that the narrative of Nu 21 implies an image which could not have been contained in the Ark; and, secondly, that it is always spoken of as of sacred, no reference being made to its contents.

In answer to the first objection, it is sufficient to say that the conventional representation of the serpent was in the form of a pole with two serpents twined about it, pole is not necessitated by the language of Nu 21:9, which merely states that, in order that the serpent might be spared, it was placed upon a standard (either it is not necessarily a 'pole' in Ex 17:1: it is used of an altar). The second objection may perhaps be made, but when we remember the awe with which serpents in general, and the brazen serpent in particular, were regarded, it is by no means unlikely that men spoke of the Ark, because they shrank from mentioning the sacred object within it.

But the question may still be asked, Why should a box have been necessary at all, since there existed a tent in which to keep the idol? In the case of a large image (and the writer of 1 Sm 18:21 speaks of the thought of the teraphim as being the size of a man), a box would perhaps not have been necessary, though it might have been convenient for carrying the image about in time of war; moreover, the size of the Ark, of which the later tradition was, dimensions as 2 x 1 x 1 cubits, would have been unsuitable to such an image. A comparatively small object, however, such as we must suppose the brazen serpent to have been, would certainly have needed some sort of case to preserve it: the more so when being carried about in war. It is perhaps probable that the origin of the Ark may be due to another cause. The worship of a brazen serpent doubtless had its origin in the worship of a living serpent, for which some sort of receptacle would, of course, have been necessary. Religious ritual would preserve this, even after the substitution of a metal serpent for a live one.

It is not necessary to suppose that a live serpent was reverenced in the time of Moses. The substitution of the metal image for a god may have taken place long before the age of Moses. There are, however, parallels which seem to point in this direction. Thus, among the Ptolemies at the British Museum (B. M. Cat. E 419) there is a representation of the story of Erichthonios, which is reproduced by J. E. Harrison (Prolegomena to the Study of Greek Religion, p. 133): 'The sacred chest stands on rude piled stones that represent the rock of the Acropolis, the child rises up with outstretched hand, Athens looks on in dismay and anger, and the bad sisters hurry away. Erichthonios is here a human child with two great snakes for guardians, but what the sisters really found, what the godlike really carried, was a snake and symbols like a snake.' Additional evidence for the same practice of carrying sacred images (and perhaps also the class of coins known as cistophoroi, of which a representation is given by J. E. Harrison (Prolegomena, p. 402).

For the existence of snake-worship in Palestine, there was, until recently, no evidence apart from the OT. But in 1908 Mr. A. Stewart Macalister, in the course of his excavations at Gezer, discovered a 'Place of the Serpent.' It was an enclosed structure 13 feet 8 inches in diameter at the floor level . . . surrounded by a rude wall now standing to a height of 6 feet.* Within this structure, among a number of broken pieces of pottery, there was 'found a small bronze model of a cobra, midly but unmistakably portrayed' (see J. E. Harrison, on the Excavation of Gezer, PEFQS, July 1903, p. 222). Although the discovery at Gezer did not include anything of the nature of an ark, it is not impossible that it may throw light on the ræon d'etre of the prototype of the Ark. Mr. Macalister's discussion of the place of the discovery is so suggestive that it may be quoted in extenso. 'The structure in which the serpent was found completely puzzled me, but an ingenious suggestion was made by Mr. J. B. Black, when a visit to the excavations—namely, that it was possibly a pit for keeping live serpents. The building is as suitable for such a purpose as the one in which bears and other animals are kept in a modern zoological garden. In such a case the fine broken pottery and the bronze model might be in the nature of votive offerings. We are reminded of the practice of keeping sacred serpents at Greek shrines, notably at the temple of Asclepius at Epidaurus, where they were in some way involved in the miracles of healing there wrought (see House, Greek Votive Offerings, pp. 193-203; see also p. 209). It is not inconceivable that among the orgies or rites with which high places of Palestine some form of snake-churning was included, and that the snakes required for the purpose were kept in this enclosure—perhaps specially prepared poisonous serpents, with the fangs extracted. The tricks of modern holy men with serpents, which, if it be not misstated, was noticed by Baldensperger in the Quarterly Statement some years ago, may be a survival of such rites' (PEFQS, July 1903, p. 223).

It is possible, however, that this objection may perhaps be made to the idea that the Ark may have contained the bronze serpent, on the ground that the method of carrying the Ark is at variance

* On the other hand, it is urged by Schwyzer (Samt. Krönze. Allteister, p. 10) that it is not necessary to suppose that the Ark contained the bronze serpent.† The mention of the holy vessels and the tables of stone in 1 K ~ is due to the Deuteronomist editor.

** The alternative is to regard the brazen serpent as a distinctively Judæan idol, which existed in Judæa long before David gained possession of the Ark. It is, however, to be noted that the majority of the brazen serpents are assigned to the Epzamitic writer E (see Carpenter and Bottariy, Hezechiah, 11. p. 222), while the reference to the Ark in 1 Nu 14:4 appears in its original form to belong to J.
with any such supposition. It is a safe inference from 1 B 67, 2 68a-2, 793 that the recognized method of carrying the Ark in early times was in a sacred cart (i.e. a cart that had been used for no other purpose) drawn by cows or bulls. The use of horses, however, possibly denote that the Ark was in some way connected with lunar worship; in any case, however, they probably imply that the god contained in the Ark was regarded as the god of fertility (see Frazer, Adonis, Atis, Osiris, pp. 46, 80). At first sight it is difficult to suppose that a serpent could be elevated as a god of fertility, but whatever the origin of serpent-worship may be—and we need not assume that it has been everywhere identical—there can be little doubt that in some cases, at all events, it is celebrated with a view of ensuring fertility thereby. On this point the statement of the scholiast on the History of Lucian, quoted by J. E. Harrison (Prolegomena to the Study of Greek Religion, pp. 121, 122), is very suggestive: ἄνωφρων δὲ πάνταθρα ἡρπετόν ἐτος ἐκ τοῦ καρποῦ, μμομομα δράκων καὶ δράκων σεμνών.

But whether the view here advocated that the Ark of Israel originally contained the brazen serpent be correct or not, it is at any rate certain that the texture of the Ark, as mentioned by Herodotus was originally in the form of a box, or cart, and contained relics, or relics as the sacred object which symbolized Jehovah to His worshippers. On this point the evidence which we possess concerning similar arks among other peoples is conclusive (cf. Schwally, Semit. Kriegsaltertumer, i. 147). The name Arminiya (Old Pers. Arminia, New Sus. Arminiya) is first met with in the Bab. and Pers. cuneiform inscriptions of the Achemenian age, and may be connected with the Vannie armani, written tal. The country had been previously known to its southern neighbours as Aruratu (Heb. Ararat), which the Babylonian scribes explained as a compound of Ur-Uru or 'Highlands.' Uru is the name of the district near Lake Erivan in a Vannie inscription of Sarduri II. (Sus-yan, ixxi. 5), though in the bilingual inscription of Topazawa Urartu is the Assyrian representative of the Vannie Lulus. The usual title assumed by the Vannie princes was 'king of Bia'nas' or 'Bianas,' the district in which their capital Šūpās (Tasp), the modern Van, was situated. Bia' nas is the Buana of Ptolemy (v. 13), now Van.

The Vannie inscriptions, which extend from about B.C. 840 to 640, are written in the cuneiform characters of Nineveh, but in a language which is neither Indo-European nor Semitic, and is believed to have been spoken by some school of the Armenians of the close of the 7th cent. B.C. Kretschmer (Einleitung in die Geschichte der griech. Sprache, pp. 209-11) brings them from Ormien in Thessaly by way of Armenien, near Sinope (cf. Hirt, Die Indogermanen, 130.; Prasse, Gesch. der Meder und Perser, i. 147). The idea that the Ark could be carried only by hand may have arisen from the fact that it was so carried into Zion (2 8 39). There is no mention on that occasion of any priest other than the king himself. The adjective Lulus of the Ark in the Book of Joshua belongs to a later development of the religion of Israel.

The god of fertility is not, however, incompatible conceptions (see Frazer, Adonis, Atis, Osiris, p. 297 ff. and cf. De 33 19).
Vannic divine hierarchy, and the conception of which may have been borrowed from Babylonia. Below the triad came the multitudinous deities of inferior rank, including even the 'Khaldis-gods,' or local forms of Khaldis. A long list of these, with the offerings to be made to them, is engraved on a rock called Meher Kapussi, two miles east of Van (Sayce, v. 13). Among them is Seladis the Moon-god, as well as the gods of various cities and countries incorporated into the Vannic kingdom by conquest or otherwise. Most of these deities were merely deified States, and consequently had no individual names of their own; it was only when they were within the limits of the district originally inhabited by the tribe whose supreme god was Khaldis that they properly became forms of the national god, and could be called 'Khaldis.' As the Vannic kingdom extended, however, and the area of a common nationality grew stronger, the deified State, even if originally outside 'the land of Khaldis,' tended to pass into a Khaldis; thus the deity called at Meher Kapussi 'the god of the city of Ardis,' (the Muzair of the Assyrians), became the god of Saris himself a 'Khaldis.' Only one goddess is mentioned in the inscriptions, and since her name, Saris, seems to have been borrowed from the Assyrian Istar, it is possible that she was of foreign instead of Vannic origin. The inscriptions, which bring Semiramis into the plain of Van are possibly an echo of the fact.

How far Vannic religion, as it comes before us in the inscriptions, may have been influenced by Assyro-Babylonian, it is impossible to say. Teisbas, however, who was afterwards united into a triad with Khaldis and the Sun-god, appears originally to have been the god of a tribe or nationality which was distinct from that of the Vannic 'Khaldis,' while among the neighbouring Hittites each city had its Sun-god, who was identified with the deified State. The conception of gods in the Assyro-Babylonian sense may have been due primarily to contact with the cultivated lands of the south, like the titles 'lord of multitudes' and 'faithful shepherd,' mankind' given to Khaldis. At all events, underneath the divine hierarchy of the official cult we find clear traces of an earlier phase of belief, in which the material fetish takes the place of the god. Sacrifices were made to Khaldis, but incidental to Khaldis, and not to the gods of the temple, as to the gate of Khaldis, 'the gate of Teisbas in the city of Eridias,' 'the gate of the Sun-god in the city of Usias'—all of which are carefully distinguished from 'the Khaldis-gods of the door' or 'the Khaldis-gods of the temple,' as well as to 'the shields of the land of Khaldis,' and even to 'the foot-soldiers of the land of Khaldis' and 'the foot-soldiers of Teisbas' (Sayce, v. 13). These foot-soldiers were the temple-guards, armed priests, and attendants, who were called Seluans, Urbikans, etc. A prominent object of veneration was the vine, the sacred tree of the Vannic people, which was sometimes planted by the side of the temple of Khaldis (ib. v. 30, 31, lxxvii. 10), sometimes in a sacred enclosure of its own. Sar-duris the great deity of the Vannic kingdom (ib. l.,) describes his endowment of one of these vines, which he had consecrated and named after himself on the north shore of the lake of Van. The vine was often planted in the middle of a garden which was sacred to the temple, and the temple-buildings of which from Toprak Kaleh are now in the British Museum, were hung up on either side of the entrance to the temple, large basins of bronze or terra-cotta, on stands, being placed in front of the temple and used for ablution.

The endowments made to the temples usually took the form of provision for the sacrifices and offerings, which were numerous and plentiful. The great inscription of Meher Kapussi gives a long list of the sacrifices to be offered to each deity and sacred object recognized in the vicinity, on every day of the month. Thus 6 lambs were to be offered to the Vannic triad, 17 oxen and 24 sheep to Khaldis, 5 to Teisbas, 3 to the moon-god, and 8 sheep to the Sun-god, 1 ox and 2 sheep to the gate of the land of Khaldis, 2 oxen and 4 sheep to the foot-soldiers of the land of Khaldis. Libations of wine were also to be poured out, the wine being made, it would seem, from the fruit of the vine. Considerably few, however, of the vast herds of oxen and sheep presented to the gods could actually have been offered in sacrifice; according to the inscription of Kelishin (Sayce, livi.), 'when the gate of the land of Khaldis was dedicated to Khaldis, 112 oxen, 9020 sucklings and lambs, and 12,490 sheep were presented to the god. Most of these must have been intended to serve as a source of income. Similarly the prisoners who were devoted to Khaldis would have been given as temple slaves. In the case of the 'Sun-god,' the god, we are told, 'laid sixtieth of the spoil' (ib. xiii. 16). The temples, of which there were several varieties, probably possessed festival halls, in which we hear of sacred feasts in honour of the gods.

A. H. SAYCE.

ARMENIA (Zoroastrian).—The sources of our information for the earlier epoch of Armenia's religious history are the Urartie or Vannic inscriptions (see preceding art.). For the Indo-Germanic period down to Christian times the most important native sources are Agathangelos (5th cent., ed. Venice, 1862), Moses of Chorene's History and Geography of Armenia (6th cent., ed. Venice, 1865), Faustus of Byzantium (5th cent., ed. Venice, 1889), Eznik (6th cent., ed. Venice, 1826), Anania Shirazag, (7th cent., ed. Patkanaq, St. Petersburg, 1877), and the numerous anonymous works of the 6th and 7th centuries in the Persian version of the OT. We also gather short but valuable notices from Xenophon's Anabasis, Strabo's Geography, and the works of Dio Cassius, Pliny, and Tacitus. Considerable as the material is, it is not uniform. Many of the authors, and is, therefore, very fragmentary. We may, however, hope for important additions to our knowledge of Zoroastrianism in early Armenia from the critical study of Armenian folk-lore and popular superstitions, when enough shall have been collected for the purpose.

Originally there was nothing in common between the Iranian races and the ancient inhabitants of Armenia, who were probably connected with the Hittites in the West and the Caspian races in the North (Jensen, Hittiter und Arm enhier, Strassburg, 1898; Messerschmidt, Die Hittiter, Leipzig, 1902, p. 10; Winckler, 'Westasien' in Helmolt's Weltgeschichte, Leipzig, 1901, ii. 125 ff.; Hommel, Grundriss der Geog. und Gesch. des alten Orients, Munich, 1904, pp. 37 ff.; Prâsek, Gesch. der Meder und Perser, Gottho, 1906, i. 57, 65). But Armenia, owing to its geographical position, was destined to come into contact with Iranian politics and civilization when the Medes began their political activity, and the period of anarchy the Armenians seem also to have entered the epoch of abolution for their name (Hirt, Die Indogermanen, Strassburg, 1905-07, p. 138). Meanwhile the Medes had begun
their national career not long before 935 B.C. (Justi, 'Gesch. Irans' in Geiger-Kuhn's Grundriss der Iran. Philologie, Strassburg, 1904, ii. 404-408), and the Median empire had been founded, probably in 678-677 B.C. (Präsch, op. cit. i. 108). From that time Iranian influence was strongly felt in the Palatine, and the successors of Armenia, and the Iranian religion, with its terminology, names of divinities, and many folk-beliefs, permeated Armenian paganism. How far the resultant religion may be treated as Zoroastrian will become clear from the study of the material available, which may most conveniently be arranged under the main rubrics of Zoroastrian theology.

1. CELESTIAL HOSTS.—1. Ahura Mazda.—The chief deity of ancient Armenia was Aramazd, the Zoroastrian Ahura Mazda (seeORMAZD). In Agathangélus, the historian of the conversion of Armenia, King Tiridates calls him 'the maker of heaven and earth; father of all the gods, especially of Anahit, Mihr, and Nab; giver of abundance and fatness' (Agathangélus, pp. 58, 61, 108, 690, 691, 593); while Moses of Chorene incidentally remarks: 'There is no such thing as Aramazd; but among those who would be Aramazd, there are four who bear the name and who claim to be the true Aramazd' (cf. Moses of Armenia, p. 31). It is uncertain whether this refers to the Greek Zeus or to the Iranian Ahura Mazda.

In the first case it might mean the 'bald (phalakrus) Zeus'; in the second, mardt might be translated 'brave.' 'Strong' (Strassburg, 1887, p. 131). The name Aramazd appears in Armenian Old Persian inscriptions, rather than of the Avesta or Pahlavi forms Ahura Mazda or Ahrūmazd, Ormazd (cf. Armenian. ORMOS). There is another important passage in Agathangélus (p. 629) about Aramazd, which may be tentatively translated thus: 'In the season of the god of the New Year, (who is) the bringer of new fruits, of the festivities of the hospitable god.'

The later Greek translation reads: εις τα μυθηματα της θεος δωδεκα επερετων τους ανθρωπος θεος τους, της αινωνιας της τον ανθρωπος θεόν ουκ εγνωμονεσται παντων, της αινωνιας τους ανθρωπος θεος δωδεκα επερετων τους. (LX and X). This translation shows that the Gr. supposes a different, but none the less obscure, Armen. recension. The text must have become corrupt in early times, and yet St. Clair-Tisdall (Conversion of Armenia to the Christian Faith, London, 1896, p. 50) sees in it a new deity Amenazd, who had for a title Amanor ('New Year'). Others recognized Vanatur, 'hospital,' as a separate deity, and Amanor hospitalia (Gelnz, Zürich, Armen. Gotteterlehre, pp. 135, 146) or 'Lord of Van' (Hommel, op. cit. p. 39). Moses of Chorene, however, in his allusion to this festival (ii. 60), treats Amanor simply as a common noun; nor does a title or a title to mention Agathangélus as it stands, either here or elsewhere, make it necessary to take either Amanor or Amenazd as the name of a deity.

As for Vanatur, it would no longer we find it mentioned (Armen. tr. of 2 Mac 6° LXX, Διώσ Ζεώλ, Vulg. Iovis hospitalia), it is used as an adjective qualifying Aramazd. We can, therefore, infer that it is simply the Greek Zeus Zeéros (see also Alishan, Ancient Faith of the Armenians, Venice, 1895, p. 256), whose functions were transferred to Aramazd under the Hellenizing influence of the Seljuks, or of Tirgines the Great Prince, celebrated probably on festival of Amanor or Navasard, which is poetically described as a fête champêtre (Grigor Magistros), was celebrated in honour of Amanor, who was the lord of the New Year, quite as the sixth day's celebration of the Zoroastrian New Year began on the 9th of Ahuramazd of the month Fravarti in honour of the creation of the world in six days by Ahura Mazda (Mar. 15; cf. al-Biruni, op. cit. pp. 199-204).

Navasard fell, according to the later calendar of pagan Armenia, in August, when the new fruits began to be gathered; and the Armenians still perpetuate the memory of this early autumn celebration by distributing and eating fruits on New Year's day.

The most prominent sanctuaries of Aramazd were in the ancient city of Ani in Daronali, the burial-place of the Armenian kings (Agathangélus, p. 590), as well as in the village of Bagavan in Bagravan (ib. p. 612), and on Mount Palat or Pahavân Rîm, the 'Mount Tirgz' (The 'mount Tirgz' in Alishan's Hapagatan, Venice, 1901-02, p. 79).

It is not to easy to determine what the Armenians understood by the fatherhood of Aramazd, as no godless is mentioned as his consort, not even 'his hospitable,' or 'Ormazdak to, from ignorance that a late martyrlogy (quoted by Alishan, Ancient Faith, p. 260) calls Anahit the wife of Aramazd, she being rather his daughter (see below). The fatherhood of Aramazd, however, is not altogether foreign to the Avesta, which presents him as both the father and the husband of Spenta Armaits (Yašna xiv. 4, xxxix. 10; Yasht xix. 16), as well as the husband of other female divinities (according to the Pahlavi commentary on Vendidad xi. 5, of the Fravashis; cf. also Yašna xxxvii. 1; Ysperad iii. 4), and the parent of Asha Vahishta (Yašna xvii. 2), Sraosha, Rashnu, Mithra Asht (Yasht xvii. 16), Atarash (Yašna xxxvi. 3, etc.), Haoma (Yašna xi. 2), and, indeed, of all the Amesha Spenta (Yasht xvii. 2).

On the whole, therefore, the fatherhood of Aramazd agrees quite well, in the little that we know about him, with the Avesta Ahura Mazda. The father of the Armenian of the 5th cent. Ormazd, the variant form of Arzamazd, generally refers to the Great Name, the 'Creator,' being the term somewhat used to the adjective Ormazdakon, 'Ormazdian,' may also have been in use in reference to the Armenian Aramazd and the Greek Zeus.

2. Amesha Spenta.—Of these Zoroastrian archangels (see art. AMEBA SPENTAR), only Spenta Armaits is unmistakably present in the Armenian pantheon. Her name appears in two forms, Spandaramat and Sundaramat, with a difference of meaning, the former denoting 'abys,' 'Hades,' and the latter 'heaven,' 'heavenly.' Hübgeschmarr, Armen. Psychol. Strassburg, 1897, i. 73-74; but Spandaramat new occurrences in the abstract theological meaning that the Avesta attached to the Indo-Iranian spirit of the earth and the keeper of vineyards (cf. the Pahlavi Shdyasat-lâ- Shdyasat, xv. 5; cf. Gray, ARW vili. 364-371). It is owing to this fact that we find a Spenta Armaits, however, that the Armenian Christian writers of the 5th cent. used her name to translate Διώσ Ζεώλ in 2 Mac 6°, although, by a strange inconsistency, they translated the same name by Omrazdak en gad, 'Ormesian, Byzantine' (Yasht 15, 14° and 3 Mac 29°). Spandaramat in the form of Sundaramat, as already noted, came to be a synonym of Hades, and was very frequently referred to in theological books and in the Church.
hymnary. This sense is not altogether foreign to
the Avesta itself, where, from being the genius of the earth, Spenta Armaiti gradually becomes the earth itself, with the dark, woeful under world.

'The darkness of Spenta Armaiti' (Vendidad iii. 35) is a well-known expression of the Avesta, which has this in common with the Bab, theology, though it is not identical with it contains, and that the powers of Hades have something to do with the fertility of the ground and with agriculture (Jeremias, Hölle und Paradies bei den Babylonier, Leipzig, 1900, p. 19; for references to the Avesta see Lagarde’s Purim, Göttingen, 1887, p. 42).

Besides Spandaramet, we probably see the traces of the Annesla Spenta Haurvatat and Ameretat (‘health’ and ‘immortality’) in the Armenian haurosmaurot, the name of a flower (haya, racemozus Dodonaei), first mentioned by Agathangelos, p. 480 (cf. Abeghian, Armen. Volkslaube, pp. 62–63).

In the Qur’an, ii. 96, Harut and Marût are mentioned as the names of two Syrian masters, according to Muslim tradition, having shown themselves impotent with human siftness, were sent down to earth by God to assume human flesh and to live with mortals. They could not, however, withstand the temptations of lust, and were condemned to stay on earth, mixed with the demons. In the Arabic story of Bulūqīya, with the story of the Hahm bin-ad-Din in the Arabic Nights (tr. Payne, v. 75–76; cf. Horovitz in ZDMG xxx. 1887, p. 134), and in Tbilis, Ameretdt, and Timlit, are mentioned as the first inhabitants of hell. Burton and Ed. Nestle (ZDMG iii. 629) identify these with Harut and Marût, which have long been recognized as the Pahavai Horvadac (or Khûrdâ) and Amerodâ (or Amûrds), or the Ameretat and Harut. The Muhammadan legend respecting these fallen angels has many parallels in Rabbinical literature, and the whole is, ultimately, a Rabbinical elaboration of the marriage of the absent god and the daughter of men (Gen 6:4; cf.iger, Was hat Mohammed aus dem Judentum aufgenommen? Bonn, 1834, pp. 105–106; Hirsch in B. v. Strack, i. 283). How the Zoroastrian archangels were drawn into the Rabbinical legend of the Qur’an, and by what curious accident, instead of the later Pahavai forms, we have Harût and Marût, which find their parallel only in the Armenian name of a flower, is very problematical. Either Harût and Marût are Parthian, or even Syrian, corruptions of the archangels’ names, and found their way both to Armenia and Arabia, or they are purely Armenian forms, and reached Muhammad from the north.

At all events, Harût and Marût were not remembered in Armenia as angels. We know, on the other hand, that the two Zoroastrian archangels in question were associated at the vegetable world (Darnesteter, Haurvatat und Ameretat, Paris, 1875, passim), and two flowers were respectively consecrated to them—the Lily and the Lotus (ii. 54; cf. the Miditaq Ghahviharsh, pass., and Champsli); so that Haurvatat and Ameratat may once have been known in Armenia as tutelary deities of plants.

According to Strack (p. 512), Omanos (Vohn Mshasht Ameratat), with Anaita (Anâhîta) as a chief deity, formed a triad in Zela—a cult which has not yet entirely disappeared (Geler, Za, 1875, 14 ff.). This peculiar cult, however, had probably spread northward from Cappadocia, where there was a purer type of Mazdaism than in Armenia (Cumont, Les mystères de Mithra, Brussels, 1902, ch. i.).

3. Vayandas.—The Zoroastrian vayandas, or angels, are better represented in the Armenian religion than the Zoroastrian, and Sost, al. Aspar, are in the order adopted by Jackson in Grundriss der Iran. Philologie, ii. 640–645.

(1) Altar, or fire.—We cannot tell whether fireworship was a part of the ancient cult of the Unbâd, or was first introduced in Iranian times. Moses of Chorene (ii. 77) mentions a fire-altar in Bagavan, upon which Ardashir, after the conquest of Armenia, commanded that the fire of Ormazd be kept unquenched. Anania Shiragaci, in his discourse on the Cross, speaks of a hurbak in Pahlavi, and in Haurvatat (Haurvatat Festival) (from Armen. Gravavany, i. 181) rightly interpreted as a loan-word from the Pahlavi frōbag (Avesta haurvī-bavā, ‘fire of divine glory’), a fire established, according to Iranian tradition, in Chorassania, and later removed to Kabul (Bundāshhā, xvii. 5–8). In the hagiography called the ‘Coming of the Rhipsimean Virgin’ (Alishan, Hayapatam, p. 79), wrongly ascribed to Moses of Chorene, we read that on the top of Mount Pašat (?) there was a house of Aramazi and Astålek (Venus), and on a lower peak, to the south-east, there was ‘a house of fire, of inflammable fire, the god of incessant combustion.’ At the foot of the mount, moreover, there was a mighty spring. The place was called Buth. ‘They burnt the Sister Fire and the Brother Spring.’ In the caves of the mountain dwelt two dragons, devilish and black, to which young men and young virgins were sacrificed. And the devils, gladdened by this bloodshed, produced, by means of the altars of the fire and the spring (‘), terrible sights, lights, and rolling thunder; and the deep valley was full of snakes and scorpions.’ Elsewhere we read: ‘Because they called the fire sister, and the spring brother, they did not throw the ashes away, but they wipped them with the tears of the brother’ (‘Story of the Picture of the Holy Virgin’ in Moses of Chorene, i. 135, ed. Pashvian). This form of fire-worship in a volcanic region has hardly anything in common with Zoroastrianism, though we have a true remnant of fireworship, even in modern times, in the annual bonfire kindled everywhere by Armenians on the festival of Saint Stephen, the 26th of December, and the day of the Blessed Virgin Mary (Feb. 13–25), when the fire is kindled from a candle on the altar. It is an occasion of rejoicing and good augury. The festival is called in popular language Turnts, and in the Church calendar the commemoration is called the Zoroastrian Festival, ‘Presentation of the Lord’ (Abeghian, op. cit. p. 78).

It seems that the ashes of the sacred fire were also honoured, and the Christian writers love to remind their readers of the times when their ancestors were ash-worshippers (Agathangelos, p. 77; Anania Shiragaci, Praise of the Cross, quoted by Alishan, op. cit. p. 45 ff.); while Thomas Arsuruni applies this name to the Zoroastrians (Hist. i. 9–10). Nevertheless, vestiges of ancient fire-worship are still to be found among the Armenians of the interior (Abeghian, op. cit. pp. 66–74).

It is quite possible that two types of fire-worship existed among the Armenians—one, older and more primitive, in which fire was a feminine principle, and stood in close association with water, as a masculine principle; the other type similar to the Zoroastrian.

(2) Water.—Water was honoured in Armenia as a masculine principle. Many rivers and springs were sacred, and endowed with beneficient virtues. According to Tanits (Araxes, vii. 31), the Armenians offered horses as sacrifices to the Euphrates, and divined by its waves and foam. Sacred cities were built around the river Araxes and its tributaries. Even now there are many sacred springs which play a part in the public life of the people; and these are said to have a certain veneration towards water in motion.

Transfiguration Sunday in the Armenian Church was amalgamated with an unmistakably pagan water-festival, during which the people amused themselves, as they still do, with throwing water at each other. A similar custom connected with New Year’s Day is reported of the Persians (Alishan, op. cit. p. 305; al-Birunî, Chronology, pp. 199, 203). The Armenian water-day, or feast of the Transfiguration, is called vardavar or ‘rose of the water’ (from the ancient Persian name vardavar, ‘day of the rose’). The festival is celebrated during the last days of the year, according to the ancient Armenian calendar (Alishan, op. cit. pp. 283, 305).

On water and fire as brother and sister see Abeghian, op. cit. p. 67. Lazar of Pharse says (ed. Veniamin) that they are called the (sacred) brother and dashed it into the water, as into the bosom of its brother, according to the saying of the false teachers of the Persians.”
The great Zoroastrian water-god Anahit, however, do not seem to be connected with water-worship in Armenia, even when they have a place in the Armenian pantheon. Of these yazatas we perhaps recognize Apam Napat in the name of Npat, the Mount of Strabo, a sacred mountain of Bagravand, Npat being also the designation for the 20th day of the Armenian month, which was consecrated to the mountain.

(3) Anahit. This goddess, doubtless an importation from Persia, was the most popular deity of Armenia. In Agathangeles she is called 'the priestess' (p. 52) 'through whom the country of the Armenians exists and has life' (p. 61), and she is 'the mother of sorcery, the benefactress of all mankind, and a daughter of Amazan' (p. 52). She is invoked, in an edict of Tiridates, to protect and watch over the country (p. 106). She was also called the golden mother (p. 607), and statues of massive gold were consecrated to her (pp. 591, 607), one of which (at Erez) was captured by the soldiers of Antony (Pliny, HN xxx. 24).

With this may be compared the description of Ardv Sura Anahita in the Avesta (especially Yasht v. 84, 78, 101-102, 123, 126-129), 'who purifieth the sanctuaries': who parts of the wombs of all females for birth; who maketh all females bear with ease; who giveth all females meet (and timely) milk' (Yasna lxxv. 2 = Yasht v. 2), besides multiplying herds and lands (Yasht v. 1). Although the Iranian texts nowhere mention the daughter of Ahura Mazda, she is 'in his only water' (Yasht v. 5); and the epithet 'golden' of Agathangeles is paralleled by her Avesta attributes, 'laced with gold' (Yasht v. 64), 'wearing a golden kerchief' (Yasht v. 85), 'golden earrings' (ib. 97), and 'with a golden diadem' (ib. 128); for further details, cf. Windschmann, Die Perser. Andhita oder Anaitis, Munich, 1856. While the sacrifices offered to Anahita as described in the Avesta (e.g. Yasht v. 15, 21) are quite conventional, the Armenians offered her green branches and white heifers (Agathangelos, p. 49). Lucullus (Plutarch, Lives) saw in Yazdiant (3) herds of these heifers, which were used only for sacrifices, at all other times being kept up and driven, as the mark of the goddess, a torch, branded on them. Anahit was sought also in cases of great sickness (Moses of Chorene, ii. 60).

Three elements are to be distinguished in the Armenian worship of Anahit. 'She is a planet (Venus), a goddess of the fertilizing water, and a presiding over the birth and nursing of children, and the increase and maintenance of all things. The Armenian Anahit is pre-eminently a goddess, with no reference to a planet or water. The fact that in Erez this goddess admitted of obscene forms of worship, such as are generally associated with the orgiastic nature-cults of Asia Minor, must be explained by the proximity of Akolisse to Asia Minor, as well as by the part which the Avesta plays in human conception. Strabo says of this special cult (p. 532):' * Both the Medes and the Armenians honour all the sacred mountains, but above everything the Armenian honour Anahit, to whom they erect temples in other places, and specially in Akolisse [Ekales]. There they consecrate to her servants, male and female,' and this is not surprising; but the most illustrious men of the nation give to her their virgin daughters, who, according to custom, give themselves up to fornication near the goddess, after which they are given in marriage, and none thinks it unworthy to live with them. *

We have absolutely no proof, however, that this sacred prostitution was characteristic of the Armenian Anahit throughout the country, especially as native Christian writers do not mention it, although they might have used it to great advantage in their attacks upon the old religion.

Besides the great sanctuary in Akolisse, which was also called the Anahitian district (Dio Cassius, xxxvi. 88), Anahit had temples in Artashat (Aratxata) (Agathangelos, p. 584) and in Yash- tisht (p. 606), which, a mountain, was difficult to identify, was called the throne of Nahat (Faustus of Byzantium, v. 25), probably owing to the presence of a great sanctuary of the goddess there.

An image of Anahit is said to have existed in the district of the Avakas near the 'Stone of the Blacksmiths,' where, as in Buth, there was a mixed worship of fire and water, along with magical practices (Alisian, Hayagpatum, p. 50).

The great festival of Anahit was celebrated, according to Alisian (Ancient Faith, p. 299), on the 15th of Navasard with processions and rejoicings. The 19th day of every month was also consecrated to her (Tcherpet, 1820, quoted by Alisian, Ancient Faith, p. 143).

(4) Sun and moon—Moons of Chorene makes repeated allusions to the worship of the sun and moon in Armenia. In oaths the name of the sun was almost invariably invoked (ii. 19), and there were also altars and images of the sun and moon (pp. 124-125). But the oldest witness is Xenophon, who notes that the Armenians sacrificed horses to the sun (Anabasis, iv. 5. 35; Weber in his Die kathol. Kirche in Armenien, Freiburg, 1903, p. 28, understands this ονοι as 'worship at Mithras'). The golden earrings (p. 507), and the twelfth festival of the Armenian year and, what is more significant, the first day of every month, were consecrated to the sun and bore its name, while the first day of the Persian month was assigned to Anahamzad, the eleventh day being given to the sun in the Zoroastrian calendar. The twenty-fourth day of the Armenian month was consecrated to the moon, as was the twelfth in the Avesta system. The Armenians, like the Persians and most of the sun-worshipping peoples of the East, prayed to the rising sun, a custom which the early Church unconsciously adopted. To this day the Armenian churches are built and the Armenian dead are buried toward the east, the west being the abode of the devil (see below). As to the moon, Anania Shiragatci says in his Demokratia- zon (ed. Patke, a fac-simile) that 'through her the nurse of the plants,' an idea which has its parallel, and probably its source, in the short Māh-yasht of the Avesta, particularly in that vegetation grows best in the time of the waxing moon (Yasht vii. 4; al-Birūnī, Chronology, p. 219). Ohan Mantaguni (5th cent.) combats the general belief that the moon presides over the plants (Discourses, Venice, 1860, pp. 198-199). The Armenians also shared the superstitions about the eclipse of the sun and moon current among the Persians, who held that these phenomena are caused by two dark bodies, 'offspring of the primeval ox, revolving below the sun and moon, and occasionally passing between them and the earth' (Dāstān-e-Zanjan, bix. 2; Shīkmān gomānī Vījār, iv. 46). It was, moreover, a popular belief that a sorcerer could bring the sun or moon down from heaven by witchcraft (Eznik, Refutation of Sects, p. 217), though this does not find a parallel in the extant Zoroastrian writings.

No doubt the Persian worship of the sun and moon found a similar worship of long standing in Armenia, that of the Urartians (see preceding...
798 ARMENIA (Zoroastrian)

art.), and could do little more than influence it to a certain extent.
It has been suggested, with some plausibility, that the famous hymn to Yahagyn, quoted by Moses of Chorene (i. 31), sounds like a sun-hymn:

'The heavens travelled; the earth travelled;
Also the purple sea travelled;
And in the sea
The red reed grew;
From the stem of the reed there arose a smoke;
From the stem of the reed there arose a flame;
From the flame ran forth a young man.
He had heavy hair;
He had a beard of flame;
And these were suns.

Both sun- and moon-worship have left deep traces in the popular beliefs of the present Armenians (see Abelian, op. cit. pp. 41-49; Tcheraz, 'Notes sur la mythologie Arménienne,' in Teutsche, of 9th Internat. Congress of Orientalists, London, 1892, iii. 628 ff.).

In the Armen. writers from the 11th to the 14th cent. we may find allusion to the god Tishtrya, the name of which is given to the sun-worshippers of the 8th cent. by Stackelberg in his Annals of Armenia. They are the so-called Parsi, and are documented by records as having been forced to accept Christianity. In the 8th cent. the ambition of the Sassanian emperors made them abandon the worship of the fire-god and place their hopes in the Christian faith. The Persians in the 8th cent. were compelled to worship the Sun of the Sun (see the evidence of the Bundahishn of the 9th cent.).

The name of Tishtrya, the sun-god, is not quite certain. In Egypt this god had his parallel in Thot, the moon-god of Chemun (de la Saussaye, i. 207). In the Parsi this is identified with the god of the planet Mercury, and to this day certain Armenians (see the evidence of the Bundahishn, (v). 1) Tishtrya was opposed.

In Armenian mythology also we find a Tir or Tior, who has often been wrongly identified with Tishtrya, but who is, in reality, another divinity altogether. The Armen. Tir (which Jensen, Hiiltier und Armenier, pp. 186-187, endeavours to derive from Armenian, apiir, 'writer,' scriber,' which would be a title of the Bab.-Assy. Nabu, who was both the scribe of the gods and the planet Mercury (cf. presentation of Tir, among the Thangarians, p. 325 ff.), and who was widely known and honoured as an independent deity, being probably identified with the planet Mercury, although Tir is not found in this meaning with this.

Both in Cappadocia and in Armenia the four months was consecrated to this Tir; and this was also true of the Parsi calendar, although, for theological reasons, the Parsi later made Tir the equivalent of Sisht (cf. Bundahishn xxiv. 3, with Apringas iii. 8). The Armenian Tir was famous as the 'interpreter of arts and learning,' as the tutelary deity of arts and learning, and as the scribe of Ormizd (Agathangelos, p. 584). Among the Armenians of modern times 'the writer' (very probably Tir) has much to do with human fate and death. The writer also is known as 'the author of human happiness.'

Tir is, therefore, the god of the Armen. Nabu, and there can be little doubt that the description given of him by Agathangelos whose Greek translator equates Tir with Apollo (Lagarde, Gesammelte Abhandlungen, Leipzig, 1866, p. 284), agrees, in the main, with that given by the Nestorian and other Oriental nations about Tir. In fact, the planet Mercury also is known among the Persian poets as 'the writer' (Steckelberg). The expression 'Scribe of Ormizd' applied to Tir in Agathangelos has a Persian tinge, for the Armenian very seldom used the name Ormizd for their own Aramazid.

(6) Mithra. — Last, but by no means least, among the Zoroastrian yazatas is Mithra, the genius of the light of the heavens, and the god of light. The Zoroastrian calendar is reckoned by the thirtieth day of each month to Tishtrya (Avesta) or Tir (Pahlav. opp. cit., i. 13, ii. 13; Yasna xv. 4, with Bundahishn xxvii. 24). That Tir or Tishtrya refers primarily to the planet Mercury (Sirius), is confirmed by al-Biruni's statement, in his account of the Tishtrya, celebrated on the day of Tir the month of Tir (Chronology, p. 200-200), 'The name of this day is Tir or Mercury, who is the star of the scribes.' The difficult problem of the replacing of Tir by his opponent Tishtrya (cf. Spiegel, Avesta Erzeroum, Leipzig, 1893, 128); Noldeke, loc. cit.) is perhaps best explained by Justi, op. cit. p. 296: 'Da wir den Planeten spater als bezeichnet... war der Mithras oder Schutgenius des 4. Monats und des 13. Monats- tages durch den Tishtrya (seinen Gegner ersetzt; in Alltemuth als Tir als gutes Genius, wie die Tischtrisikos des Neften- Thell seine Name bildet, beweisen.' 'The derivation of Tir, or Mercury,' is uncertain.—Louise H. Gray.

1 Cf. also Abelian, loc. cit. and the 'writers,' as spirites of disease (op. cit. pp. 122-123). The words Tir and Tishtrya were also used as exclamations: 'Tir!' and 'Tishtrya!' in their relation to the deity's name, however, is not quite certain.

2 In Egypt this god had his part in Thoth, the moon-god of Chemes (De la Saussaye, i. 207).
of truth and faithfulness, whose praises are especially celebrated in the tenth yasht. Derzna was the centre of Armenian Mithra-worship, and he also had a famous temple in the sacred village of Bagayarin (Agathangelos, p. 515), although we have no proof whatever that Mithraism had obtained any foothold in Armenia proper. Mithra, the Armenian Mithra, was specially called the son of Aramaz (Agathangelos, p. 593; cf. Yastith xvii. 16); but, owing to the strong worship of the sun and Vahagn among the Armenians, he does not seem to have become as prominent as in Persia, his place seeming, indeed, to be usurped by Vahagn (see below). Nevertheless, his name occurs frequently as a component part of many proper names of persons, such as Mihram, Mihrmat (Mithridates), and Mehrum (Hübschmann, Armen. Grammatik, i. 52-54), while the Armenian mehecan, ‘pagan temple, idol, altar,’ has also been traced to the same source (cf. Hübschmann, op. cit. i. 194). The seventh month of the year and the eighth day of each month were his; and in the Zoroastrian calendar the seventh month and the sixteenth day were consecrated to him. We know nothing, however, of the functions or other duties of the Armenian Mithra.

Chief god of the Zoroastrian fravashis (lower angels), is Verərghəshah, the genius of victory, to whom the Avesta consecrates the fourteenth yasht. Like Mithra, he is of Indo-Iranian origin. In Pahlavi times his name was that of Varərghəshah, of Persian kings, and in Armenian to Vəhrəm and Vəram. It is also very possible that Vərənəs, the name of the second son of Gregory the Illuminator, reflects the Parthian form for Verərghəshah. Since he has been called as Vəhrəm, the Armenian Vahagn, probably the god of war and victory (Agathangelos, p. 106), with Verərghəshah. According to Armenian phonetic laws, this is quite possible, although the termination -ərm and the complete disappearance of both r's constitute a difficulty. There was, moreover, a noble family called the Vəhrənunis (Eliseus, pp. 70, 127, 160, 172); while the list of the Armenian nobles in Mesrop's Life of St. Nerses gives (p. 39), his father below it adds the Vahuni (p. 34) as a different family. Moses of Chorene (i. 31, ii. 8, 12, 88) knows a priestly family of the name of Vahuni, whom he makes descendants of Vahagn. Probably in all these cases the tutelary god, and the first syllable of his name was treated as independent.

Although in the ancient Armenian triad of Aramaz, Anahit, and Vahagn (Agathangelos, p. 106), Vahagn has the place of Mithra in the Old Persian triad (Art. Susa, a, 5; Ham. 6), he must be interpreted, despite the minor phonetic difficulties already mentioned, from the Avesta Verərghəshah. Essentially a deity of victory, the latter fittingly declares: ‘I will conquer the malignancies of all the malignant: the malignancies of demons and men, of keraps and witch-doers, of keraps (Yastith, xiv. 4), while the very form of his name recalls its Sanskrit equivalent vy̱ṛta, the Vedic epithet of Indra as the slayer of the cloud-demon Vṛtra. The reflection of his career in the Avesta is seen in the statement that he ‘Verəm the victorious is the stimulator of the warlike’ (Shayat-ła-Šayat, xxii. 20), although the Iranian texts preserve no tradition of his conquests over dragons in the strict sense of the term. On the other hand, the Vahagn was compared with Herakles, and called the dragon-killer (Agathangelos, p. 606), while the Greek Agathangelos translates Vahagn as Ἡρακλῆς, and, reversing the process, the Armenian version of 2 Mac 4* renders Ἡρακλῆς by Vahagn. Ancient Armenians told, moreover, of Vahagn's stealing straw from Barsham (the Syrian god Baal-Shemah, 'Lord of Heaven'), which he let drop on the way, thus forming the Milky Way (Anania Shhiragaci, p. 48; cf. Abeghian, Armenischer Volkskunde, pp. 49-50). The Vahagn-song, the parallelism of Vahagn with Herakles, and his relations to Mithra and Barsham, tend to create the presumption that he was also a sun-god. The most famous temple of Vahagn was in Yashtishat in Taraun* (Faustus of Byzantium, i. 14; Agathangelos, pp. 606-607), where he was known as the lover of Aisma, the Syrian Aphrodite (Agathangelos, p. 607; Moses of Chorene, p. 88).

ii. Infernal Hosts.—1. Ahriman.—Ahriman (Armen. Ārman) is never referred to in connexion with ancient Armenian paganism; but the absence of his name may be easily understood when we remember that, while Christian writers had a reason for arguing against the ancient deities, Ahriman (q.v.) and his retinue naturally coincided with Christian demonology. Other Zoroastrian evil spirits were known among the Armenians, however; and Ahriman could hardly fail to be known as their chief. Alishan (Ancient Faith, p. 210) suggests, with some plausibility, that he is -the same as Čeșn, a word which is frequently found in that sense in Armenian theological writings and old popular spells. Besides Ārman, the forms Haprami and Khara- mani were also current in Armenia, Haprami being apparently formed from the younger (Sasanian) form (Hübschmann, op. cit. i. 28-27); so that the pagan Armenians possibly used Haprami to denote the Ahriman of their religion. Haprami is used as an epithet of snakes by Ahrang; tendency to regard the serpent as an emblem of evil is common to both Avestan and Zoroastrian sources.

2. Demons.—Of the six Zoroastian archdemons there is no mention. The Asmodæus of the Book of Tobit (3* etc.) was transfigured by the Armenians as Asmod, which plainly shows that the name supposed nothing familiar to us. The word dev (Avesta điva), ‘demon,’ was current among the Armenians, although they had also native words ozi. The dev preferred rocky places (Moses of Chorene, ii. 55) and ruins (Eznik, p. 98). They appeared as serpents (Faustus of Byzantium, v. 2) and in many other monstrous forms (Eznik, p. 98); some of them were corporeal, others incorporeal (ib. p. 97).

The drusas were lying, perjuring, harmful spirits, probably believed to be feminine, like their Avesta counterparts, the drusas. They were regarded in regard to their third mode of self-propagation—by the semen emitted in the pollutio nocturna (Vendidad xviii. 45-52)—seems to have been a current belief among the Armenians (Eznik, p. 178; Abeghian, Armen. Volkskunde, pp. 35-36). The yātsus, ‘sorcerers’ of the Avesta, who were able even to slay men (Vendidad vii. 3), are well known and much feared among the modern Armenians as jataks. The părăkis (Armen. parik), ‘constructors of demons, kari, and karaapa’ (Yastith, xiv. 4), while the very form of his name recalls its Sanskrit equivalent vy̱ṛtahram, the Vedic epithet of Indra as the slayer of the cloud-demon Vṛtra. The reflexion of his career in the Avesta is seen in the statement that he ‘Vṛtram the victorious is the stimulator of the warlike’ (Shayat-ła-Šayat, xxii. 20), although the Iranian texts preserve no tradition of his conquests over dragons in the strict sense of the term. On the other hand, the Vahagn was compared with Herakles, and called the dragon-killer (Agathangelos, p. 606), while the Greek Agathangelos translates Vahagn as Ἡρακλῆς, and, reversing the process, the Armenian version of 2 Mac 4* renders Ἡρακλῆς by Vahagn. Ancient

---

* This temple was called the ‘eighth sanctuary’ (Agathangelos, p. 606), possibly because Vahagn-worship, and especially this temple, rose to importance late after the seven main sanctuaries (Agathangelos, p. 54) had established themselves.

† It should be noted that the divergences between the Armenian Vārām and the Avesta Ārman, ‘demon of wrath,’ are so great that the usual view that the two are identical is not free from suspicion (cf. Ginsberg in J.B. ii. 219).—(Louis H. Gray).
Adahak is, in Armenian, the same as Visap. The latter word is, it should be noted, a loanword from the Avesta ārāz yāθριον πιθα, 'whose saliva is poison,' used as an epithet of aži, 'serpent,' in Nirangastān 48. The story of the war between Adahak of Media and Tigranes I (A.D. 24–30) probably contains traces of an old dragon-legend. In a later chapter Moses states that Adahak was fettered and imprisoned in Mount Dembavat by Hrudan, escaping only to be recaptured and guarded by his conqueror in a cave of the same mountain; just as, in Zoroastrian legend, Dahakka, after a reign of 100 years, was enchained by Thraetaona (Armenian, Hrudan; Pahlavi, Frētūn) under Dimavand, whence he is to arise at the Last Day and be slain by Sāma Keresaspā (Bandūrshān xxix. 9; Dājīstān-i Dēnīg xxxvii. 97; Dīn-i Mainōg-i Khrat xxii. 38–39; Dīnket vii. 1, 26). Moses likewise records that Adahak was kissed on the shoulders, and that from this kiss sprang serpents, which were fed on human flesh. Tho' the extant Avesta does not note this, Aži Dahakē there being hardly anyone uncorrupted (p. xii, x. 8), the Dājīstān-i Dēnīg (loc. cit.) alludes to it in describing Dahak, 'on whom most powerful demons and fiends in the shape of serpents are winged.' The legend is further elaborated by Fir-dost, in which, at a later date, Aži Dahakē, said to have lived 57,000 years, was enchainèd by Thraetaona, 'on whom most powerful demons were winged' (loc. cit. 25, 28, 99–30, 144; 35, 12–14), according to whom the kiss was bestowed by Iblis. The legend of Aži Dahakē was also treated at length in the twentieth section of the lost Sāhār Nask of the Avesta (Dīnket xix. 21).

The višaps (Eznik, pp. 102–107) were corporeal beings which could appear both as men and as serpents, and could soar in the air by the help of oxen (7). They were fond of carrying the grain away from the threshing-floor, either by assuming the shape of mules and camels, or by real mules and camels of their own. In such cases, the Armenians called 'Kal! Kal!' 'Stop! stop!' Eznik, p. 103). They also sucked the milk from cows (Valarmatartab 13th cent., quoted by Alisian, Armanin lih, p. 172). The višaps, according to Darnesteter's note, ad loc., on the palace of Aži Dahakē. They kept royal princes and heroes captive (Eznik, p. 100). Among whom were Alexander the Great and Artavazd, king of Armenia (p. 105). They sometimes appeared enormous, and compelled men to worship them (p. 105). They entered into human beings; their breath was poisonous (p. 107). There was a whole colony of them at the foot of Masis (Moses of Chorene, i. 30), with whom Vahlang fought (ib. i. 31; Agathangelos, p. 607), and who later stole the child Artavazd and left a dev in his stead (Moses of Chorene, i. 61; cf., further, on the višap, Abégjian, op. cit. pp. 78–83).

Closely connected with the višaps were the nhangs (Eznik, pp. 102–107)—a term borrowed from the Pers. nhang 'alligator, crocodile.' They lived chiefly in the rivers (Eznik, p. 108). According to Eznik, both višaps and nhangs appeared in deceptive forms, but the former were 'personal' (spirit-like), whilst the latter were not so (p. 102), so that he specifically declares: 'There is no personal nhang' (pp. 103, 107). Although they could assume different forms, they had no body. Preferably they appeared as women (mermaids?) in the water (p. 106); but at other times they became seals, and, catching the swimmer by the feet, dragged him to the bottom (ib.). An unpublished manuscript of the Geography added to Moses of Chorene in like manner reports the general belief that there were nhangs in the Aračani, a tributary of the Euphrates, as well as in the Euphrates itself. They used their victims for their lust, and then sucked their blood and left them dead. The Armenian translators use the word nhang for 'hippopotamus' and 'crocodile.'

The šakapes, or 'protectors' (cf. Avesta vandarapaiti, 'protector of the homestead,' Skr. katra-pali, 'lord of a field'), are mentioned in Agathangelos as the protecting genii of graves (p. 56). They appeared in the shape of men or serpents, like the višaps (Eznik, p. 106), and kept the vines trim and the grains plentiful. The ancient Armen. tr. of St. John Chrysostom on Isaiah.

Another class of fabulous monsters which seem to have a Persian origin is that of the hambarus. According to von Stackelberg, hambarusa in Persian means 'genius of houses,' but we know little as to how the hambarus were imagined. In the Armenian tr. of the LXX Is 34' the word is used to render epopèw (Vulg. draconum). They were female beings, had a body, and were probably thought to live on land. They were born and died (Eznik, p. 99), and were sometimes engaged along with yukšaparikēs and parikēs. The yukskapan, or 'as-parikes' (cf. Pers. wūšk, 'asā'), used to render δεινόσαύρα in LXX Is 139' 34-11', lived chiefly in ruined places (Eznik, pp. 97–98), while the parikes, to whom the parikes, to whom the yukskapan and the yukskapan were seductive female demons, living not only in the water, but also in forests and meadows, as well as on the banks of streams. They are, primarily, water-deities, and correspond closely to the European mermaids, whom they also resemble in their frequent intrigues with mortal lovers. This erotic trait is an evident reminiscence in Armenia of the seductive parikēs of Zoroastrism (see above); cf. also Abégjian, op. cit. pp. 103–104). Eznik (p. 99) likewise mentions the corcusa, or 'sea-bulls,' which lived in lakes, propagating through kine, they themselves being born of cows. He also alludes to pāys, which were born of men (pp. 98–99), and must doubtless be distinguished from the parikes. All these beings, as we have seen, were held to be generally invisible, though occasionally they were seen of men (Eznik, p. 99). There are, moreover, other classes of demons in Armenian faith, such as the yavvarshorsūns, kajēs (husbands of the parikes), mardvajāis ('werewolves'), als (corresponding roughly to Littlef) or disease-demons of various sorts (cf. Abégjian, op. cit. pp. 102–110, 118–127). Another clear survival of Zoroastrism is the horror felt towards snakes, frogs, and ants (Abégjian, op. cit. pp. 30–31; cf. Vandelid, xiv. 5), and the cat's note, ad loc.; Herodotus, i. 140), while the cat is an uncanny object, as in Parsi belief (Darnesteter, loc. cit.; SBE xviii. 419, where a demoniac father is attributed to it.)

III. DEATH AND THE FUTURE LIFE. — The abode of evil spirits and of the wicked dead was called Dūkkhā ('Pers. Dūnkāh,' and perhaps also Sandaramet (see above). We have absolutely no description of the Armenian Hades or Paradise; and the Avesta garvā-mānā, 'house of song, paradise,' appears in Armenian in the loan-word garmakān, 'grave.' After death, the soul lingered around the body until the corpse was buried, after which it remained in the vicinity of the grave or of its former dwelling for a year, though in later Armenian belief it passed to the future world within a day after burial (Abégjian, op. cit. p. 18). Its way, as in Iranian eschatology, the soul had to...
cross a hair-bridge; if righteous, it reached the opposite shore in safety; if sinful, it dropped down into the stream of hell-fire. There was a middle place for those that were neither good nor bad (Abeghian, p. 20).*

We find absolutely no trace, however, of dakhmeh, nor is there any mention of sacrifices or the burnt offerings of exposing bodies. On the contrary, there were great masoleums for kings in the ancient city of Ani, and graveyards outside the cities. We also know that the Achemenian kings did not obey the Avesta injunction concerning the exposure of dead bodies; while, according to Herodotus (i. 140), the Persians covered the corpse with wax and then buried it.

The Armenian ritual customs seem to have been more akin to the ancient Babylonian (Jeremias, Hölle und Paradies bei den Babylonern, p. 104 f.). The friends and relatives of the deceased, the priests (Faustus of Byzantium, iv. 7-16), and at the funerals of the rich, professional mourners were employed (Moses of Chorene, ii. 88), led by the 'divine' women, who in the mythology of the life and death of the deceased, while the nearest relatives tore their garments, plucked their hair and screamed (Faustus of Byzantium, op. cit.). They cut their arms (? and?) faces (ib. v. 31). During the funeral they had music, produced by horns, violins, and harps. Men and women danced facing one another, and clapped their hands (ib.). Johannes Garneq (quoted by Abeghian, op. cit. p. 415) says: 'Forbid wailing (over the dead). . . cutting of the hair and other evil things.' When this was increased was a sign of the identity of the deceased, or a great personage, servants and slaves committed suicide over the corpse (Moses of Chorene, ii. 93). Ancient grave-sites are found in the shapes of horses and lambs, perhaps symbolic of sacrifices for the dead. The modern custom of distributing bread and raisins and strong drink after the burial, moreover, is probably a survival of an ancient sacrificial meal (cf. Abeghian, op. cit. pp. 99-100). To this day it is quite customary to make two holes on the graves.

Death was a decree of fate (Eznik, p. 153), inevitable (p. 161), and foreordained (p. 182). In fact, the whole life of man was thought to be led by God (Manig, quoted by Abeghian, op. cit. p. 411). Later Armenians also spoke of Hogar, the ‘soul-taking’ angel, who is frequently identified with Gabriel (Abeghian, op. cit. p. 17).

There is little to be said about the eschatology of the Armenians, although they certainly believed in resurrection and immortality.

There is an ancient Armenian legend about the end of the world. Artavazd, son of king Artashes, seeing that people committed suicide over his father’s grave, said, ‘Though I did depart, and随时随事 the whole country. Shall I rule over such a death? Therefore put his father cursed him, saying:

'When thou goest a-hunting up the venerable Mana, may the k'aj's seize thee and take thee up the venerable Mana! Then goest thou will have no light.'

Artavazd is said to have perished, while on a hunting party, by falling with his horse from a high precipice. One Armenian legend is also chained in a cave of Mana, and when drug was gnawing at his chains, he tried to set him free in order that he may bring the world to an end. The chain becomes very thin about the season of Navaran (New Year's festivities in August). Therefore, on those days the blacksmiths used to strike a few blows with their hammers on their anvils in order to strengthen Artavazd's chains and save the world, a custom which was continued even into Christian times (Moses of Chorene, ii. 61; Eznik, p. 103). This legend seems to be a sort of affinity with that of Biarasp Ablashak, which Moses of Chorene gives at the end of the first book of his History of Armenia (see above).

IV. WORSHIP AND CEREMONIAL. — There were probably temple-books which Christianity systematically destroyed. The temples were numerous, both in the country and in the cities; and there were also special temple-towns, such as Bagavan and Yashtishat, containing several important sanctuaries. Christian churches and monasteries were often built on and joined with those belonging to the ancient sacred sites. Of ancient open-air worship we hear nothing, but there were sacred places on mountain tops, like the throne of Nahata (Faustus of Byzantium, v. 25). Besides the ordinary temples, the Armenians boasted, like other neighbouring and distant nations, seven main sanctuaries (Agathangelos, p. 34), which were often the scenes of great concourses of people gathered there for worship and religious festivities.

*He commanded to seek the seven great altars of Armenia, and he honoured the sanctuaries of his ancestors, the Arcasids, with white bullocks, white rams, white hogs and fourteen gold and silver ornaments and gold embroidered and fringed silk coverings, with golden wafers, silver sacrificial basins, desirable vases set with precious stones, splendid garments, and beautiful ornaments. Also he gave a fifth of his booty and great presents to the priests.'

In Bayazid (the ancient Bagavand) an old Armenian relief was found with an altar upon which a strange animal stands, and on each side a man clothed in a long tunic. One is beardless, and carries a heavy club. The other has a beard. Their head-gears, Phrygian in character, differ in details. Both of them raise their hands in the attitude of worship (Abeghian, op. cit. p. 161).

The prevalent word for a pagan priest in Armenian, K'arm, is a loan word from the Syriac verb *kārmār,* 'priest,' although many gigantic Phrygian characteristic, have also been used. The place of sacrifice was perhaps called spandaran (connected with Avesta spenta, 'holy'), a word which is now current only in the sense of 'slaughter-house.' This makes it possible that originally slaughter-houses were of a local character. Christianised away with all impure rites and human sacrifices which were of a local character, but animal sacrifices survived the fall of paganism (Conybeare in A.J.T.A., vii. 1903, p. 63).

In many of the sanctuaries, which, like the modern monasteries, were also places of religious hospitality, particularly in the country, sacrifices were distributed to strangers (Moses of Chorene, ii. 60). Besides animals, flower-wreaths and green twigs (the barson of the Avesta) were offered (Agathangelos, p. 49), and probably also fruit and money.

The priesthood must have been hereditary in a well-organized caste. There was a high priest, sometimes of royal blood (Moses of Chorene, ii. 55), and the Yahunu are mentioned as a priestly family by Moses of Chorene (ii. 8), while another priestly family was perhaps that of the Spandun. The priests were probably very numerous in temple-towns, and they certainly possessed great wealth and extensive property. Many of them were later confiscates for the benefit of the Christian Church (Agathangelos, pp. 586 ff., 599, 600, 610). Of native Armenian magi a caste

* Sacrifices were occasions of great rejoicing, and it would seem that not only the flesh of the animals, but also their blood, was consumed (Agathangelos, pp. 73-74; Faustus of Byzantium, iv. 4).

VOL. I. — 51
we have no record, although we read of magians (Moses of Chorene, ii. 48). The existence of priestesses in ancient Armenia is not absolutely certain, although we have the old compound armenanish meaning 'priestess.'

A critical study of the Armenian Church calendar and chronology probably can be referred to the pre-Christian ritual. During Lent, for example, the morning service is opened with an abjuration of the devil and all evil—an elaborate formula, which is recited while the whole congregation turns their backs to the altar and look toward the west, with arms hanging rigidly at the sides. Although the abjuration is usual in the baptism of all ritualistic churches, this particular form may have been derived from some of the countries.
in particular, it is said to have been preached by Apostles or disciples of Apostles, such as St. Bartholomew and St. Thaddeus. But it has been proved that these legends did not appear till late in the literature of Armenia, and that they were borrowed largely from the literature of Greece. Christianity was probably introduced to Armenia by the disciples of the Apostles, such as St. Thaddeus himself. The church festivals are many, and among the chief are the Assumption, the Exaltation of the Holy Cross, and the celebration of the Sabbath in memory of the Descent of the Holy Ghost. In the 6th century, the Nicene Creed was adopted as the basis of the Armenian Church. It was a compilation of formulas borrowed from various creeds, and was current until the middle of the 19th century. The religious heads of the Armenian Church several times formulated professions of faith intended to complete, explain, and fix the meaning of the Armenian Creed. We must mention the profession of faith addressed in 1166 by Nerses Shnorhali to Manuel Comnenus; that presented to Pope Innocent IV. by Abgar, the Ambassador of the Catholicos Michael of Etchmiadzin (1652–1653); that of the Catholicos Azarios of Sis (1858); that addressed in 1671 by David, the Armenian archbishop of Ispahan, to Louis XIV.; those addressed to the same king by Stephen and James, the Armenian archbishops at Constantinople (1671), and by Gaspar, the Armenian bishop of Cairo. On the other hand, the Roman Curia imposed on the Armenian Church two professions of faith: (1) the constitution of Eugenius IV., Exultate, n. 1873; (2) the creed of Urban VIII., intended for all the Christians of the East.

**II. EXTENSION OF CHRISTIANITY IN ARMENIA.**

—St. Gregory the Illuminator. —Gregory the Illuminator belonged to the royal race of the Arsacids. When young he escaped the massacre of his family (A.D. 288), and took refuge in Roman territory and lived at Cæsarea, and returned to Armenia when the kingdom was re-established under Tiridates II. (A.D. 261). After being persecuted for his faith, he attained to honour, and baptized the king and a large number of his subjects. He went again to Cæsarea, where he was consecrated bishop by Bishop Leontius, thus forming the link of spiritual connexion between the Cappadocian metropolis and the young Armenian Churches. When he was made bishop, he fixed his residence at Yashbashat, and had a church and an episcopal palace built there. He substituted Armenian for Greek as the language of the liturgy, in order to have easier access to the masses of the people, and created twelve episcopal sees, at the head of which he placed, as titulars, converted pagan priests. He instituted ecclesiastical offices, making them hereditary in the scerotal families, and he created in his own family the supreme office of Catholicos. At first this title designated only the principal bishop of the country; later it came to mean an independent patriarch. The Gregorian and national Armenian Church, founded afterwards, lived its own autonomous life, while recognizing for some years a sort of supremacy in the mother Church of Cæsarea. The Armenians in the 13th cent. took the place of the Nicene Creed. In the 14th cent. another creed was much in use in the Armenian Church. It was a compilation of formulas borrowed from various creeds, and was current until the middle of the 15th century. The religious heads of the Armenian Church several times formulated professions of faith intended to complete, explain, and fix the meaning of the Armenian Creed. We must mention the profession of faith addressed in 1166 by Nerses Shnorhali to Manuel Comnenus; that presented to Pope Innocent IV. by Abgar, the Ambassador of the Catholicos Michael of Etchmiadzin (1652–1653); that of the Catholicos Azarios of Sis (1858); that addressed in 1671 by David, the Armenian archbishop of Ispahan, to Louis XIV.; those addressed to the same king by Stephen and James, the Armenian archbishops at Constantinople (1671), and by Gaspar, the Armenian bishop of Cairo. On the other hand, the Roman Curia imposed on the Armenian Church two professions of faith: (1) the constitution of Eugenius IV., Exultate, n. 1873; (2) the creed of Urban VIII., intended for all the Christians of the East.

**III. THE GREGORIAN ARMENIAN CHURCH.**

1. Doctrine. —The creed of the Armenian Church is identical with the pseudo-Athanasian Creed which was introduced into Armenia by the Syrians, and

The consecration of bishops is reserved to the Catholicos of Armenians.

Women are not excluded from the functions of the deacon. In Anatolia the Catholic Armenian priests are generally married; elsewhere they observe more closely the law of celibacy, which is not obligatory on them. When a priest has to say Mass, he passes the preceding night in the church. When a priest who is already married has to receive ordination, he spends forty days in the churches in penitence, during which the wife of the priest sits on a stool, and keeps her mouth, her eyes, and her ears shut, as a sign of the reserve which she exercises with regard to the functions of her husband.

7. The Council of Chalcedon (A.D. 451).—The Council of Chalcedon (A.D. 451) was held in response to a crisis in the Church and in order to define the relationship of the Christian faith to Judaism. The council was called to address the issue of the nature of Jesus, who was believed to be both human and divine. The council adopted the definition that Jesus was both fully human and fully divine, which was later referred to as the Chalcedonian Creed. This decision was significant because it helped to establish the orthodox definition of the Christian faith and to differentiate it from heretical views.

After the council, the Armenian Church adopted and propagated this definition. The Armenian Council of 813, held in A.D. 813, also adopted the Chalcedonian Creed. This decision was significant because it helped to establish the orthodox definition of the Christian faith and to differentiate it from heretical views.

The Armenian Church has had a history of Councils that have been significant in the development of its doctrines and practices. These councils have been held in various locations, including Harput, Gurgush, and Vagharshapat. The council in Harput in 1896, for example, was significant in its decision to adopt the principles of the Chalcedonian Creed. This decision was important because it helped to establish the orthodox definition of the Christian faith and to differentiate it from heretical views.

Armenia (Christian) 805

Sunday of Pentecost. The day before Ascension the young girls of the village meet together and choose several of their number to organize the festival. The members of this committee take a pitcher made of baked clay, fill it with water drawn from seven springs or seven wells, and close the mouth of the pitcher with flowers gathered from seven fields; then each of the girls throws an object into it (bracelet, ring, button, bead from a rosary, etc.), wishing at the same time some good wish for her father, brother, or sweetheart. They have to shut their eyes while throwing the object into the pitcher and meditate deeply on their wish. On the Wednesday or Thursday night they hide the pitcher in the corner of a garden in the open air, to expose it to the influence of the stars, and they watch that it is not taken by the boys, who prowl about there all night, and try to discover it and carry it off. If the young men succeed in taking it, they give it back to the girls only in exchange for a large quantity of eggs and olive oil, which they have to offer. If, on the other hand, the young men do not succeed in getting possession of the pitcher, the girls sing songs in which they are made fun of (A. Tchobanian, Chants populaires arméniens, pp. 57–58; M. Abeghian, Armenischer Volksliedschatz, Leipzig, 1898).

Marriage, baptism, and burial are family festivals which are the occasion of special ceremonies and customs in Armenia.

(a) Marriage.—Among the Armenians, children and betrothals from their earliest youth, sometimes when only three years old, sometimes as soon as born. When the mothers on both sides have agreed to marry their son and daughter, they propose the union to their husbands, who always sanction the choice of the wives or the mothers of the bride. The boy then goes to the friends of the girl, with two old women and a priest, and presents to the infant maiden a ring from the future bridegroom. The boy is then brought, and the priest reads a portion of the Scripture, and blesses the parties. The parents of the girl make the priest a present, in accordance with their means, refreshments are partaken of by the company, and this constitutes the ceremonies of the betrothals. Should the betrothals take place during the intermediate parties, and even should twenty years elapse before the boy can claim his bride, he must every year, from the day he gives the ring, send his mistress at Easter a new dress, etc. (Jones, Finger-ring Lore, History of the Greek Finger-Ring, p. 516).

It frequently happens that the bridegroom-elect does not see his betrothed during the engagement. On the marriage day a priest and a sub-deacon go to the house of the bride. The bridegroom arrives there with great pomp, and receives for that day the title of king, while the bride is called queen. The latter is then veiled, the priest says some prayers and blesses the young husband and wife, and then they set out for the church, where the ceremony is performed. It should be noted that the ceremony is sometimes held on Thursday and the next day. The priest places on the head of each a crown, which they retain for three days a week. The company sing wedding hymns on the way to and from the church. After a few days the priest goes and receives back the crowns, and then the young people's married life begins. Marriage cannot be celebrated during fasts or the dominical festivals, of which there are about 260 in the year.

(b) Baptism.—A short time after the birth of a child, the parents and the godfather carry him to church. They stop at the entrance, and the priest recites some prayers, after which they go into the church, making as many genuflections as the number of days of the child's life, and the godfather makes confession. Then the infant's clothes are taken off, and he is immersed three times, his head turned towards the west, his feet towards the east, and his face towards the sky. After the baptismal water the priest anoints the child's head several times with holy oil, and clothes him in a linen robe. The child is then made to adore the Cross, and is taken home in state.

(c) Burial.—The day before that on which the body is to be carried to the church, the relatives, neighbours, and friends of the deceased meet in the house, each bringing a lamp with three or seven wicks, which they arrange, all lighted, round the coffin, and then they begin to sing in turn some funeral hymns. On All Souls' days (Christmas, Easter, Assumption, Transfiguration, Invention of the Cross) the families invite a popular poet to sing over the grave at the cemetery the praises of the person who has just died (A. Tchobanian, op. cit. p. 119). For some days after the funeral ceremony the priest goes to visit the relatives of the deceased; then on the Saturday of this week of mourning the relatives and friends meet and take part in a service of repentance, which is the only one distributed among the poor.

4. Saints of the Armenian Church.—A glance at the Armenian Monologo will suffice to show that the Armenian Church has adopted a large number of the saints of the Greek and Latin Churches. It has, besides, its national saints, for whom it has naturally great veneration. The principal of these are St. Hripsime and St. Gayane, who fled from Rome to avoid the carnal desires of the Emperor of the East. They lived in the woods where their blood was shed for the cause of the gospel; the saintly translators, Moses of Chorene, David the Philosopher, Enzik of Kolb, Eliseus the Vartabed, St. Mesrop; and St. Sahak, St. Leo, St. Nerses Shnorhali, St. Nerses of Lambron, St. Gregory the Illuminator, and St. Nerses I. the Great. St. Vardan is the national saint and patriarch par excellence. When Armenia was struggling in the 5th cent. against Persia and the introduction of Mazdeism, Vardan Mamikonian became the moving spirit in a general insurrection and in the struggle of Armenian Christianity against the Zoroastrian religion. He perished at the battle of Avarair; but the agitation for independence started by him (1877. p. 516) was taken up by Sarkis (Sargis or Sergius) is the saint invoked by prisoners, captives, those with difficulties to face, and especially by young girls in order to obtain a handsome sweetheart. If it snows at the festival of St. Jacob or St. James, it is said that the heart of the saint is falling on the earth. St. Karapet (John the Baptist) is regarded in Armenia as the most influential of the saints. His seat is at Mush, where his relics are found in the church named after him, which and Mass are celebrated. The priest places on the head of each a crown, which they retain from three days to a week. The company sing wedding hymns on the way to and from the church. After a few days the priest goes and receives back the crowns, and then the young people's married life begins. Marriage cannot be celebrated during fasts or the dominical festivals, of which there are about 260 in the year.
ishment for her presumption (V. Langlois, Collection des historiens anc. et mod. de l'Arménie, i. 348, 362 f.). St. Karapet is the patron of the barbs (trouvéres), who go on pilgrimage to ask him to heighten their poetic imagination.

5. Sects.—Armenian Christianity, in the course of the centuries, has had to struggle against the assaults of different sects and heresies in order to maintain its orthodoxy. Most Armenians believe that a process of crypto-orthodoxy was introduced into Armenia in the 2nd cent.; Marcionism also crept into the Armenian Church and was refuted by Eznik (Des Wardapat Eznik von Kolb, wider die Secten, tr. by Joh. Michael Schmid, Vienna, 1800, p. 172). About the same time are found traces of the Boroniani and the Messalians, of which sects the Paulicians seem to be a continuation through the Middle Ages. Mention is made also of the existence of Adoptionist churches as early as the 3rd century. The most important sect was the Ages, who, like the Paulicians, became famous for their struggle against the worship of images. It has been established by Conybeare that they were Adoptionists. They believed that Jesus was born a man, and that He became Christ at the moment of His baptism; but they did not regard Him as equal to God the Father. The Paulicians practised adult baptism. The Thondracians, a sect founded about A.D. 830 by Smbat, rejected infant baptism, the worship of the saints, of the Virgin and of images, purgatory and the hierarchy. A few are still the Caucasion or Caucasian, some adherents of this sect. The Areovardians ('Sons of the Sun') are met with in the 12th cent.; their doctrine recalls the old ideas of ArmenianPanism.

6. Superstitions and Peculiarities.—The Armenians, although Christians, have, like other Christian peoples, certain beliefs and superstitions which have passed down through the ages. The peasant women believe that there exist three spirits of childbirth—the spirits of the evenings of Tuesday, Thursday, and Saturday. The first two are virgins and sisters, and the third is their young brother. If the wives have not spent the evenings of Tuesday, Thursday, and Saturday with their husbands, these spirits aid them in childbirth. The Sunday spirit remains near the door of the birth chamber and fulfils all his sisters' orders; he carries water and eggs, makes the fire, etc. The two sisters take the child, bathe it and prepare the omelet for the mother; and sometimes they present a gift to the newly-born child. But these spirits are also vengeful and when a woman does not respect them, they avenge themselves by tormenting her, and sometimes by killing the baby (Rèume des traditions populaires, x. [1892] 2).

Each child has from its birth a guardian angel who protects him against evil spirits. This angel's duty is to cut the child's nails and amuse himself with the golden apple which he holds in his hand. When the child is old enough, the guardian angel goes back to heaven. The child smiles to him and stretches out his little arms (ib. x. 4). The Armenians also believe that spirits of disease exist. They are small in stature and wear triangular hats; and they hold in their hands a white, a red, and a black branch. If they strike any one with the white branch, he will fall ill, but will soon recover; if it is with the red, he will have to stay in bed for a long time; but if it is with the black, then it is all over with him, and nothing will cure him. The spirits have books in which are written the names of all the women who must die or fast, and the appointed days; and the spirits act according to these books. The people believe also that there is a spirit called the 'Writer' (Grot), who writes men's names and the date of their death in a book called the 'book of the dead'.

The devs are tyrants possessing seven heads. They can throw the largest rocks a great distance. Their wrestling is like the shock of mountains, which causes lava to pour forth. The female dev is about the size of a hill; she throws back her left breast over her right shoulder, and her right breast over her left shoulder. The devs prefer to dwell in very thick forests or deep caverns. They are very rich in gold and silver, and possess horses of fire which enable them to travel over the greatest distances. The two children of the devs covet the company of young women of the human race, to whom they grant everything they ask. The young men are continually at war with the devs in order to get back the women, who show the men how to carry out ruses by which they may become the masters of the devs, who are ignorant, cowardly, boastful, and narrow-minded (RTP x. 193-196; Grikor Chalatian, Märchen und Sagen, Leipzig, 1887, pp. xiv-xx). The witches are old women who have a tail which is not visible during infancy, but which develops with age. They can become invisible when they wish, enter anywhere, and cross the world in a few minutes. They mount on earthen jars, take in their hands a serpent which serves as a whip, and, flying to the seventh heaven, pass over all the universe. They act chiefly in love intrigues. Their ordinary business is to enchant the heart of a young man or woman, carry off a young girl in spite of her parents, and kill the irreconcilable rival or make him fall asleep (RTP x. 190). There are also good sorcerers, who are disposed with the aid of supernatural powers, to render service to human beings (G. Chalatian, Märchen und Sagen, p. xxi f.; F. Macler, Contes arméniens, Paris, 1903). The Armenians believe also in the existence of dragons, and possess an ancient legend which refer to these supernatural beings. The Armenians, especially those of Eastern Armenia, make great use of rolls of prayers containing magical or talismanic formulas, intended to protect them against the evil eye, slander, the anger of enemies, against sorcerers and enchanters, as well as false love, and the bite of serpents, to conciliate lords, kings, generals, and the great, and to exorcize demons and other impure beings. These rolls of prayers are called kripanios, or rather gripanos, because they included the name of the St. Cyprian. They are generally ornamented with vignettes, which belong to somewhat rudimentary art, but are very much used by the people (see Amulette' and 'Cyprianus-Buch' in F. Jacobus Dabian, Catalog der armenischen Handschriften in der Mesehthorstenbibliothek zu Wien, Vienna, 1895; Macler, Nos. 97-102).
only in a sporadic and casual way until the time of the Crusaders, when the Armenians of the kingdom of Cilicia, or Lesser Armenia, were in constant contact with the Crusaders, and consequently with the Roman Curia. Later, in the 14th cent., Dominican missionarites founded influential communities of disciples in Armenia. These were the class of native missionarites known as ‘Uniters’ (unitores), and had as their first superior John of Kerni (or of Khrna). He had a translation made of the works of Bartholomew of Tolomea, who was sent to Armenia by Pope John XXII, in 1318 (Macler, No. 149). Subsequently, especially in the 17th cent., other orders established missions among the Armenians, particularly among the Armenians of Persia: the Augustinians at Isfahan, the Jesuits at Isfahan, Julfa, Erivan, etc. The French Lazarists settled at Tauris and at Isfahan. Soon all the communities extended their ramifications into all the principal Armenian centres of the East—Isfahan, Ormuz, Shiraz, Banderabas, Hamadan, Shamakhs, Erzerum, Tabriz, etc.

Until the middle of the 18th cent., Catholic Armenians did not form an autonomous community; now they have a hierarchy of their own, a recognized religious autonomy, and a patriarchal constitution at Constantinople. At these results is to be ascribed, in part at least, to the missions of the Armenians to the East—Isfahan, Ormuz, Shiraz, Banderobas, Hamadan, Shamakhs, Erzerum, Tabriz, etc.

We may note especially the quarrel of the Hessianists and the publication of the Bull Perturis.

VI. ARMENIANColonies.—There are Armenian colonies spread over all parts of the world; for example, in Europe: Poland, Sweden, Denmark, Holland, Russia, Turkey, Bulgaria, Transylvania, Roumania, Lower Danube, Dalmatia, France, Italy, Spain, Portugal, etc.; in Asia: Persia, Afghanistan, India, Japan, Palestine, China, etc.; in Africa: Egypt, Ethiopia; in America: United States; the English and Dutch Indies, Batavia, etc. These colonies generally lose their nationality, and adopt that of the country in which they are living; but they remain faithful to their religion, which is now the bond of the Armenian nation, since they no longer have a political autonomy.

LITTÉRATURE.—L. Alisian, Süssmen (Venice, 1890).

ARMINIANISM.—I. Occasion of Arminianism.—Arminianism was a revolt against certain aspects of Calvinism, of far-reaching importance in the history of the Reformed Theology. It took place in the dawn of the 17th century. Against the Catholic absolutism of the external Church, Calvinism had set the absolutism of the eternal decrees. The situation was rigid with a new dogmatism. A revolt was inevitable. Many symptoms of discontent were manifest before Arminianism arose as a definite reaction. After Calvin’s death, the more rigorous Calvinistic divines, including Beza, asserted that the Divine decree to salvation, being antecedent to the Fall, required for its
accomplishment the decree to sin. Sin was ordained not as an end, but as a means; it is here because there was something that God could not accomplish without it. What is first in the Divine intention is last in the Divine execution.* The primum or desired is the decree to save. But if man is to be saved, he must first be lost. He who first was condemned was not the Fall was decreed as a consequence of a decreed salvation. Those who held this position were Supralapsarians. It is doubtful whether Calvin himself held it. More moderate exponents of Calvinism connected the Fall with the permission of God, and the decree of sin was still connected with His holy way. The Divine decree takes the existence of sin for granted, deals with man as fallen, and elects or rejects him for reasons profoundly indifferent to human judgment. This was the Infralapsarian position.

An unequal rivalry between the exponents of these two schools was the immediate occasion of the rise of Arminianism. In Holland, which, in the 17th cent., owing largely to the immigration from France of Protestant theologians of distinction, had become, more than Switzerland, the centre of thought, the supremacy of Calvinism and the success of the Supralapsarians found much favour. An acute and effective criticism was directed against them by James Arminius (Jacobus Arminius or Jakob Harmensen or Van Herman; also known as Vetus Amstelodami or Oudewater, the name of his birthplace). Arminius, who was born in 1560 and died in 1609, was a scholar of considerable reputation. He had studied at Leyden, resided at Geneva, and travelled in Italy; he was a learned and popular preacher at Amsterdam, with a pastoral career marked by fidelity and benevolence; eventually he became, in 1603, professor of theology at Leyden. Even his enemies testified to his blameless and noble character. He was a consummate controversialist and a lucid expositor, with a remarkable gift of method. Trusted by the Supralapsarian leaders, he was requested in 1589 to answer Theodore Koomerth, of Amsterdam, who had attacked the high Calvinistic doctrine of Beza and the Geneva school, of which Arminius had been a distinguished disciple. Others had already replied to Koomerth, who were disposed to surrender Beza's extreme position in favour of one equivalent to Infralapsarianism. In preparing his reply, a process of doubt culminated in Arminius embracing the tenets he had undertaken to refute. He clearly rejected the doctrine of the absolute decrees involved God as the author of sin; that it unworthily restrained His grace; and, leaving myriads without hope, condemned them for believing that for them there was no salvation either intended or provided in Christ. He saw, moreover, that it gave to those who believed themselves to be the elect a false security based upon no sufficient ethical principle. Arminius' conversion was succeeded by cogent criticism and controversy by which, during which he was led by successive and careful stages to a luminous and impressive constructive exposition of those theological positions antagonistic to Calvinism which have since been associated with his name. Though it is probable that Arminius himself was less Arminian than his followers, yet the most distinguished of these, Episcopius (his successor at Leyden), Uyttenbogaert (his close friend), Limborch and Grotius, who most ably elaborated his positions—all men of great talents—one only carried his conclusions to issues which the early death of Arminius probably prevented him from reaching. Arminianism spread amongst the clergy. Political differences and difficulties confused the purely doctrinal issue. Great statesmen, like Olden Barneveld, advocated Arminianism and Republicanism, as Calvinists preferred Supralapsarianism and Maurice, Prince of Orange. The martyrs for Arminianism probably suffered for political rather than for doctrinal heresy. From the beginning the Arminians were greatly outnumbered by their opponents. Their main strength lay in the genius and eloquence of the leaders; theologically they were victors; ecclesiastically and politically they were vanquished. With their defeat came many disabilities and some temporary persecution.

2. Doctrinal positions.—The creed of the Arminians was set forth in the Five Articles of the Remonstrance addressed in 1610 to the States-General of Holland and West Friesland, from which fact its adherents received the name of Remonstrants. The articles were drawn up by Uyttenbogaert and signed by forty-six ministers. The Remonstrance is first negative, stating the five Calvinistic articles in order to reject them, and then positive, stating the five points of the Arminian position. Briefly summarized, the following are their positions. The first asserts conditional election on divine foreknowledge by God of faith in the elect and of unbelief in those who are left in sin and under condemnation. The second asserts universal atonement in the sense that it is intended, although it is not actually efficient, for all. The third asserts the inability of man to exercise saving faith, or to accomplish anything really good without regeneration by the Holy Spirit. The fourth declares that the grace of God is indispensable in every step of the spiritual life, but that it is not irresistible. The fifth asserts that the grace of the Holy Spirit is sufficient for continual victory over temptation and sin; but the necessity of the final perseverance of all believers is left doubtful. This last article was afterwards so modified by the followers of Arminius as to assert the possibility of failing from grace.

Gomarus, the university colleague of Arminius, but his chief antagonist in personal controversy, now engineered a counter-Remonstrance drawn up in less moderate terms. Negotiations for peace failed. An embittered controversy became involved with political intrigue. The famous Synod of Dort was assembled (1618–9) more to exercise ecclesiastical discipline than to reconcile the disputants. The Arminian theologians were excluded, and refused to submit their brethren to judgment. The Arminian articles were condemned, their preachers deposed, and recalcitrants banished. The Synod promulgated five heads of doctrine of its own, which present Calvinism in its unadulterated but not in its extreme form. Within the Arminian system process of development set in, all moving in the direction of liberalism and comprehension. These will be noted in their place. Our present interest is with the leading principles of Arminianism. These are: (a) the universality of the benefit of the atonement, (b) a restored freedom of the human will as an element in the Divine decrees and in opposition to the assertion of the absolute sovereignty of God. Apart from these and kindred questions involved in the problem of predestination, Arminianism has no definite theological distinctness. It attempts no fresh statement of the doctrines of God and man. These were accepted as they stood in the recognized creeds and confessions of Christendom; as the general theologic system was that of the orthodox Protestant Churches. Its specific contribution was of sufficient importance to rank it amongst the few really outstanding and permanent developments in theological thought. The three fundamental terms of theological definition and discussion—God, Man, and the essential re-
lations between them—are represented in the three great controversies of historical theology by the names of Athanasius, Augustine, and Arminius. Athanasius represents the movement which gave specific definition to the Church’s doctrine of the Divine nature. Augustine stands as the great exponent of the inner moral significance of human nature and of the relation of the individual to the race. Arminius found his place as the interpreter of the ethical relations between God and man. His system recognized and expounded the development in the Divine God of a race, which the Church had long accepted as established positions, but which her theologians had never satisfactorily related. Calvin had revived Augustinianism, and had pushed it to further logical issues. He made much of God, as Pelagius had made too much of man. Both gave isolation and distance to terms that could be completed only in mutual relations. Neither provided a scheme of reconciliation. The aim of Arminius was to express with dialectic vigour the only doctrinal position consistent with the necessary relations between God and man. This relation within the sphere of the provision and administration of redemption provided the points of controversy between his system and that of the Divine nature missionism. Arminianism was to show how God could be what the Church taught He was, and man what the Church declared him to be, at one and the same time. The mode of re-adjustment of the disturbed and abnormal relations between God and man in that adjustment was the central point of Protestant theology generally; the announcement and the ethical interpretation of the significance of the mutual relations between God and man in that adjustment was the concern of Arminianism. Its system is a via media; it strove to avoid sources of inevitable and historical error arising from the tendency to magnify either of the related terms by the virtual or formal suppression of the other. The exaltation of the Divine agency to the complete suppression of the human in that adjustment issued in simple Determinism; the exaltation of the human in complete suppression of the Divine in the same sphere led to the extreme missionism, implied by the system which we have stated, for the first time, with scientific care a balanced judgment on those relations of God and man in which their harmony and mutual recognition could be stated as a working principle, which is justified by experience.£

To appreciate the theological value of Arminianism, it is important to review and interpret the points which differentiate it from Calvinism. To estimate its influence philosophically, it is needful to state and illustrate its two great principles—its ethical recognition of justice, and the emphasis it lays upon the human in the redemptive relations between God and man.

3. Criticism of Calvinism. — Arminianism regarded the Calvinistic position as open to attack on two sides. It was the side of God. Its treatment of these was considered to be disproportionate and ethically unfair. The sphere in which God exercised His will was the soul of man. That will, therefore, concerned man and his acts. If such acts were performed solely because God had so determined, two consequences followed:—the acts would reveal the quality of the will, and man would not be consciously free; he would know himself as an instrument rather than as an agent. Calvin’s system was regarded as man’s own, in the interest of man and of morality as of theology. In fact, Arminianism was at the bottom an attempt to formulate a protest against Calvinism from an ethical standpoint. It used much circum-

ception in the attempt. It carefully rejected, with Calvinism itself, the pagan leaven, which had lingered in the old Church, in the form of reliance placed upon human nature alone. But it renewed the sense of reality to human responsibility, and emphasized the moral conditions of reward and penalty. At the same time it sought to give psychological consistency, especially by its great doctrine of prevenient grace, to the common Protestant principle that man is entirely dependent, in all that concerns his salvation, upon the grace of the Spirit of God. The task undertaken by Arminianism was to re-state what was regarded as the primitive and Scriptural view, held by the Church before Augustine, concerning the relation between God and man in the work of salvation; and in this view the sole responsibility of man for his own damnation was evident. The criticism of Calvinism, therefore, found centres of attack in the following five points:

(1) Predestination.—This the Calvinist held to be absolute and unconditional. The decree of elect was without forethought of faith or of good works. In its operation the Divine will was unmodified from without, moved only from within, either by the grace or by the necessity of the Divine nature to provide for the reappearance of the saved, conditioned by no specific demerit of the reprobate. He was not distinguished in or by his personal sin. His reprobation was simply because of sinfulness of nature or habit, which, being common to all mankind, involved judgment was universal. No ethical difference was discernible between elect and reprobate. The Arminian criticism insisted on the ethical incompleteness of this view. The principle of the election of grace is maintained. But the Divine will, in Arminianism, had supremacy; it was not more bound to punish than to forgive. The Divine decree, whether elective or reprobatory, is conditional throughout. God elected to salvation or to reprobation only those whose faith or final disbelief He foresaw. The Divine foreknowledge logically precedes the Divine volitions; it is not an inference from them; it is intuitive, but not necessitative. What God knows, though its issue is absolutely certain, is not as certain as it is a foreknowledge.

(2) Atonement.—The Calvinist held the Atonement to be strictly limited. Its relation to the non-elect was incidental; its intention was for the elect alone. For them its efficacy was absolute. It satisfied Divine justice on their behalf that they could not fail to be saved. The non-elect, for whom the penalty of sin would be twice inflicted—once upon Christ and again on the sinner for whom He had died. This was a thing impossible to Divine justice. The Arminian held that the Atonement was universal. It was of infinite value, designed for all, accomplished for all. It made the salvation of no man actual, but rendered the salvation of all men possible, the result being in every case conditioned by faith. Christ died for all, but only the side of man.

The character of Arminian theology is illustrated in one of its most important writings, the treatises of Grotius on the Satisfaction of Christ, written in opposition to Sothism. He develops the doctrine towards an issue not strictly in harmony with the position of Arminius, by stating what is known as the Governmental Theory. Both aimed at mediating between the rigorous Anselmian view of a satisfaction which is the substitution of a strict equivalent for the penalty due to sin and the Sothistic rejection of all vicarious substitution. The result was that the atoning reparation satisfied not the rigorous exaction of Divine justice, but chiefly the joy and compassionate will of God, emphasizing the love of God and the love of man. His views are illustrated in the Atonement. The death of Christ is not the payment of a debt to a creditor, but the fruits counted sufficient by God the Father for a judicial penalty. Grotius emphasized the relation of God to man as a Ruler, and carried out the Arminian conception of the goodness regulated by wisdom. He regarded the motive of the Divine government as the desire and provision for the happi-
CALVINISM maintained the grace of God to be irresistible. The calling of God was both effectual and efficacious, and due to the immediate operation of the Spirit of God upon the soul. The Arminian asserted that the Divine action was mediate, through the truth, and thus moral and persuasive, as distinguished from physical and necessitating. Moreover, the grace which is effective to the processes of repentance and renewal may be finally resisted. The firm maintenance of universal redemption by Arminianism naturally affected its theory of justification, according to Episcopius, whilst his position, in common with the Reformed standards generally, that Christ's obedience is the only meritorious cause of justification, and faith its sole instrumental cause, and that good works have no kind of merit, Arminianism did not distinguish between the active and passive obedience of Christ. Gradually also it denied the direct imputation of Christ's righteousness. Faith came to be regarded as justifying, not as an instrument uniting the soul to Christ, but as an imperfect righteousness, which is insufficiently accepted by God; or if it were perfect. Whilst maintaining the view that works merit salvation, the Arminians asserted that the faith which justifies is regarded by God as a faith which includes obedience. This is the position both of Arminius himself and of his followers. It is allied with a tendency distinctly marked, to define faith in terms of intellectual assent rather than as trust. It became a simple reception of the doctrines and laws of revealed religion. The influence of grace was by no means merely of a moral nature: It accompanied the word of God. Its influence therefore, whilst supernatural in its character, was in its mode of operation analogous to the natural power of all truth. This tendency to invest faith with merit as a means of justification was suspected of co-opting ultimately the Roman doctrine of merit by works on the one side, and of favouring the antinomian tendencies which had been condemned as inherent in Calvinism, on the other. A fair criticism of its attitude applied to it the term Neonomiasm, because of the introduction of a new law—the law of grace—according to which the legal righteousness for ever impossible to man finds a human substitute in an evangelical righteousness accepted of God, though imperfect, for Christ's sake. This tendency set the perilous tendency, which the later history of Arminianism did not escape, of the notion that Christ has lowered the demands and standard of the moral law.

Methodist Arminianism met these tendencies in two ways:
1. It declared that, though God requires faith, it is also His gift. He does in Christ pardon the imperfection of the good work wrought by faith, but He does not repute it as perfect so far as concerns our justification. This would be the imputation of righteousness to the believer himself. It is the faith of the ungodly which is reckoned for righteousness, even before it can produce its first act towards good works.
2. There was the admission of a definite insistence not in themselves, as in the case of the antinomians, but in addition to, as well as the possibility of entire sanctification. This teaching formulated and urged the demand that faith must be justified by good works. It protest will be regarded as unable to cooperate of itself with the Divine law. The Arminian of Methodism reverted to the earlier position, holding that the cooperative freedom of the human will—its ability or its choice—is the issue of redemption. No ability remaining in man to return to God. The cooperation of grace is of grace. The Augustinian idea of 'common grace' is rejected in favour of the co-ordinating of the universality of grace with the individual perfection of the people of God. Conscience, which is essentially God's gift of grace, is held by its own judgment to be a faculty of a purified spirit, not by the will to be a voluntary act for or against God. Such virtues are a universal experience of the race. If Adam became regenerate through the fall, he is brought back upon the actual life, not as a mere individual but as an effect of grace. The doctrine of infant baptism is held upon the universal justification and a universal seed of life.

(4) Conversion. Both Calvinist and Arminian regard this as the work of the Holy Spirit. But

Pope, Comp. Christ. Theol. ii. 322.
love, and to evangelical perfection. Arminius writes: 'While I never asserted that a believer could perfectly keep the precepts of Christ in this life, I never denied it; but always left it to be decided!' (Works, i. 386). The vital question of the abolition of sin was never, either by Arminius or his successors, decided upon. His protest against ultra-Calvinism was taken up by the German Pietists, and, in pursuit, by the English Platonists, who prepared the way for the Mennonites, sectarians of all kinds, as spokesmen, which was both mystical and ethical. Its chief contribution was the emphasis laid upon entire sanctification of the believer, as a portion of the grace of God, directly administered by the Holy Spirit, in response to faith—a faith working by love, and retained by constant union through faith with the living Christ (edification was).

(5) Final Perseverance.—The Calvinist held the indefectibility of the saints. Men unconditionally elected, absolutely purchased by the death of Christ, and irresistibly called out of their depraved and lost estate by the direct operation of the Holy Spirit, could not possibly fall from grace. The Arminian criticism hesitated at first to meet this position by a direct negative. But such a position was speedily seen to be inevitable. And, as a result of its other doctrinal positions, the possibility of a true believer falling from grace was declared. This found warrant also and verification in examples and personal experiences that could not easily be mistaken. Moreover, as the Arminianism revealed, grace is not a priori, but the authority of the Symbolical documents, it was easy to assert that the Calvinistic position professed not so much to be based upon direct Scripture support, as to rest upon the necessary principles of the so-called Covenant. It was presumed that the provisions of this imaginary compact between the Father and the Son, before time began, in respect of the certain number to be redeemed and given to the Redeemer, as the reward of His sufferings, was the idea of a fixed and unalterable division of mankind. To this canon every Scripture must be made to conform. It was easily shown that no Scripture evidence of such an unconditional covenant existed. The failure to appreciate this position accounts for the frequent and grave misunderstanding of Arminianism, and for the natural ease with which its delicately balanced judgment has declined, in the last hundred years, from the ground, on the right of theological positions with which it had no true affinity. These have been chiefly Socinianism and Pelagianism—systems due to an over-emphasis upon the human. Much that in certain periods passed for Arminianism was really a modification of one or other of these systems, which a true Arminian justly repudiates. In Holland, Arminianism, gliding by almost imperceptible degrees, ultimately reached a position with little to distinguish it from Socinianism. In England, where there was a presage of Arminian thought long before the time of Arminius and his system, its principles found an interesting development, and their profession an unusual environment. The influence was seen in the ambiguity or comprehensiveness of the Articles of the English Church. Latimer and Hooper, Andrews and Hooker might with propriety have been called Arminians, if Arminianism as a system had been in vogue when they trod it. Arminian teaching by John Prynne of Divinity at Cambridge, we rise to the Lambeth Articles also. But Arminianism became a political question, with the singular result that, through the influence of Laud and Juxon, it became allied with the side of the King, whilst it was the Calvinists, with the distinguished exception of John Goodwin, one of the ablest defenders of Arminianism, who stood by the Parliament. But the Arminianism of Laud was not the Dutch Arminianism. Arminius would have denounced its sacramentarianism as superstition. With the issue of the Civil Wars, Arminianism suffered eclipse, but it returned with prelacy at the Restoration; and for more than half a century its influence was supreme in the Anglican Church. But the later divines of this school depreciated the doctrines of grace, dwelling more upon the example of Christ than upon His atoning work, and the Arminian principle persisted mainly as a negation of Calvinism. Udolph, Jeremy Taylor, Tillotson, Chillingworth, Stillingfleet, Burnet, Pearson, Whitby, and others, down to Copleston and Whately, were Arminian theologians of eminence in the Church of England. The positive temper of Arminianism, however, suffered under their treatment of the system. Its fine balance between Calvinism and Pelagianism was lost. It was blended with tendencies to Latitudinarianism and Rationalism; and became a negative rather than a constructive or mediating system. It was from this setting, however, of the non-juror and the sanctuary, that the restored Arminianism of Arminius, with its emphasis on the grace of God, emerged into strength in England in the Evangelical Revival of the 18th century. The Wesleys were strong adherents of this type. And probably the ablest expositions in English of the Arminian system are to be found in the writings of John Wesley, John Fletcher, Richard Watson, and William Burt Pope, the Wesleyan system, through which, with the exception of the Calvinistic Methodists in Wales, who represent the Calvinistic attitude of Whitefield, who withdrew from co-operation with the Wesleys on this ground, are convinced Arminians, who profess to adhere to the original Arminianism of Arminius and his followers of the earlier type before it approximated to the rationalistic temper of Socinians or Latitudinarians, or was merged in the prevailing tendencies of Restoration theology or Arminian Unitarianism. The Scottish type of Arminianism, with its Evangelical note, is at present the most influential. It has spread widely throughout the British Empire and America, and is based upon the conviction that the Calvinistic positions are incompatible with the equilibrium of a sturdy Calvinism, with loyalty to the doctrines of grace is the best vindication of Arminianism from the common charge of Pelagianism and Socinianism. Lacking the doctrinal loyalty and the Evangelical vitality of the Arminianism of Methodism, Dutch Arminianism is a dwindling force. The inclination towards freedom of speculation, the rejection of all creeds and confessions, a preference of moral to doctrinal teaching, Arrian views respecting the Trinity, the freedom that the doctrines of Original Sin and imputed righteousness, and the depreciation of the spiritual value of the Sacraments, have resulted in the gradual reduction of Arminianism in Holland to a negligible theological quantity, and to the dimensions of an insignificant sect, numbering only some twenty congregations.

4. Underlying principles.—The supreme principle of Arminianism is conditionalism. It provides a philosophical via media between Naturalism and Fatalism. As an active criticism of Calvinism it is based upon two positions—the restlessly and dominant demand for equity in the Divine procedure, on the one hand, and such a reference to the constitution of man's
nature as will harmonise with the obvious facts of his history and experience, on the other.

It sought to construct a system which should be dominantly ethical and human throughout. It contended, therefore, that moral principles and laws consistently condition the manward activities of the Divine will, and set human limits to the libertarian. The Calvinistic conception of justice was based altogether on the supremacy or rights of God; Arminianism so construed justice as to place over against these the rights of man. Sin, it declared, had not so transformed human nature as to render it unconditioned. It became the form of reprobation... 

Fairbairn, Christ in Mod. Theol. p. 170.

The Creator owed something to the creature. He had fashioned it in the image of the Son of God; and these obligations did not cease because the first man had sinned. In a perfectly real sense sin had only increased the obligation of God to be just. If original sin was what Augustine had stated it to be, Arminianism had to admit that, and the punishment for the wrong that was committed, then it would be truer to the facts it involved to speak of it as a radical wrong from which man unjustly suffered. The race had not been constituted by the first man; in no true sense was he the representative of the individual members of the race; for they had no voice in his appointment, and no veto upon his acts. By every law of justice, therefore, they were to be regarded as objects of commiseration rather than persons to be blamed for what they had suffered, since they suffered as the consequence of the first man's sin, altogether apart from their own voluntary acts of kindred disobedience. And although Arminianism retained the federal principle, and held that the federal relationship had resulted in a weakened will for the individual, and had afflicted him with a bias towards evil, it urged that it was difficult to conceive anything more nearly approaching infinite injustice than allowing such a relation, of itself, to involve millions of men of every age and in every condition, and in its judgments, and that it had an equal right to be considered in the provision and administration of any redemptive processes that might be operative. The introduction into these relations of the Arminian principle resulted in a criticism that seemed irresistible; for the moment the idea of equity was admitted to a place in the consideration of the relations of man and God, the old absolute unconditionality became untenable. If justice reigned, and its principles were common to God and man, it meant that God must be just to man, even though man was disobedient to God; and justice could not tolerate the condemnation of man for a sin which was committed without his personal knowledge or responsibility, any more than it could approve of a master who had no regard for the personal will or choice of its recipient.

Arminianism was always most successful when its argument proceeded upon principles supplied by the moral consciousness of man. This recognition of the value of the testimony and of the entire contents of human consciousness was the correlate in Arminianism to the idea of equity; its exposition of the idea of man provided the second of its two main principles. It regarded man as free and responsible, and did not destroy either his reason or his freedom. By the one he had the ability to believe, by the other the ability to choose. Even if the racial connexion had weakened or perverted these faculties in the individual, the result was not incapacity to act, because the racial connexion with the second Head was intact and operative in the communication of the energy of prevenient grace. In justice, therefore, God must deal with man as possessed of such co-operation with the Divine activity the results in salvation or reprobation depended. Thus the free will of man was regarded as conditioning the absolute will of God. In the realm of nature His physical attributes ruled; His omniscience was involved in His moral pre-eminence. In the realm of mind and will His love and moral attributes governed, and their rule was conditioned. Man was not a part of physical nature merely, or a mechanism involved in the impersonal or unmotivated motion of non-moral creatures. His destiny could not therefore be deduced by logical processes from the premise that God is the Sovereign Will, which can do as it chooses; for He has chosen to create man free and responsible; and His attitude and conduct towards man will consequently be conditioned. If it had been His good pleasure to create man moral, it will not be His will to deal with him as if he were merely physical. If Creator and creature are alike moral in character, it follows that necessitating action on the one side, and necessitating contemplation on the other, are both excluded. By His own voluntary act God has limited the range and exercise of His physical attributes, and so the terms which express His relations to man must be those of reason and freedom, not duty. Arminianism maintains no disparagement to grace in general, and deepens the emphasis on prevenient grace in particular. But whilst the peculiarity of Calvinism is found in holding fast to the absolute idea of God in opposition of all 'idolatry of the creature,' the centre of gravity of the Arminian system is found in the sphere of anthropology. Its doctrine of man probably differentiates it more definitely from Calvinism than its doctrine of God.*

5. Theological and philosophical influences.—The twofold emphasis of Arminianism on the ethical and human elements in its system declares the sphere and defines the source of the modifying influences it exerted on subsequent theological and philosophical thought. These influences were both direct and indirect. They reached the sphere of philosophical speculation chiefly through theology. But the leading principles of Arminianism were potential in both spheres, in the succeeding periods of intellectual revival. It is well to keep in mind the fact that, in the history of European thought, the 16th cent. was great in theology rather than in philosophy, and that the 17th was great in philosophy rather than in theology. But without the religious thought of the earlier century, the latter would have been without its problems, and therefore without its thinkers. The pre-eminence of the one in religion involved the pre-eminence of the other in philosophy. In this influence of theology upon philosophy, and, later still, upon more distinctly ethical thinking, Arminianism had a considerable share. Although questions directly upon ultimate philosophical principles were, on the whole, not in the spirit and thought of the age of Arminianism, yet Arminianism, as a more general value of the entire contents of human consciousness, was distinctly more open to the access and authority of the modern spirit than Calvinism. By its underlying principles of equity and freedom it was more perfectly fitted than its rival for intellectual transition. It became the form of Re...
ARMINIANISM 813
formation theology which most easily allied itself with the advance of knowledge, and with the humanism of the new learning. The Cartesian philosophy, which was bringing about a gradual transformation of theological views, especially in the Netherlands, where already a liberal spirit was showing itself in protest against the yoke of the Symbolical documents, found especial favour with the Arminians. They had also within their ranks many eminent men, who were progressive thinkers and leaders of thought outside a distinctly theological circle, who excited a beneficial reaction upon Protestant theology by their thorough scientific attainments and the mildness and toleration of their views. Arminianism stood generally for the strengthening of the scientific temper and for the principle of moderation, which represented dawning methods of far-reaching importance in the intellectual life of the modern nations. On the other hand, this attitude favoured the growing tendency towards Rationalism and Latitudinarianism into which Arminian theology frequently drifted. But that the rationalist representation of any necessary effect of the Arminian movement is disproved by the fact that it was the Arminian system of thought which lay at the theological sources of the great Methodist revival in the United Kingdom during the 18th cent., whose leaders re-stated Arminianism in modern theology in its purest form, and vitalized it with the warmth of religious emotion and the joyous assurance of the Evangelical spirit. Arminianism in the glow of the spiritual enthusiasm of the early Methodist evangelists has been truly described as 'Arminianism on fire.'

The Arminians were the fathers of toleration. Among its earliest representatives are found stalwart advocates of religious freedom, who were willing to suffer for their views. Within the sphere of opinion Calvinism did not spontaneously incline to toleration; it was inflexibly dogmatic; its instincts and ideals were aristocratic rather than democratic in relation to ethical authority. It is curious to note, however, in spheres more purely political, that an interesting reversal of the natural order of the two systems occurs. As in England the Laucilians were Arminian, and the Parlia-
member of the Latinist, and the Jesuit Arminian. The natural tendencies of Arminianism to toleration may be instructively traced in the Latitudinarian teaching of the Cambrighe Platonists, who were guided by the example of Arminian scholars, particularly those of Epicoicus. They pleaded for liberty of conscience, and studied to assert and examine the principles of religion and morality in a philosophical method; they de-
claimed equally against superstition on the one hand and enthusiasm on the other. Moderation was the first law. They were conspicuous for their advocacy of freedom of inquiry, their tolera-
tion of diversities of opinion in non-essentials, the respect in controversies, and the bringing about a reconciliation between theology and philosophy, their recognition of religion as less a doctrine or a ritual than an inward life, and their strong purpose to establish a rational theol-
yogy, which should avail as a reply to the athe-
istic pantheism. Arminianism, however, made com-
mon cause with all religious parties in resisting the dogmatism of the philosophy of common sense, which was declaring open war against the belief in the positive authority of Revelation. And the arianism got its name not out of a tyrannous spirit, but because of the supposed common fundamental ground in the appeal to reason, may be regarded as an unwarranted exaggeration of the Arminian emphasis on the human. Arminianism could be under no necessity to deny or depreciate the supernatural. By the time the age of speculative criticism and of the antagonism between faith and knowledge was reached, Arminianism as a distinctive doctrinal position had been estab-
lished and its peculiar contribution made to Sys-
tematic Theology. Its influence on such later controversies is only indirect. That the influence was real cannot well be doubted, because of the emphasis on moderation and the more genuine welcome afforded to the products of modern specu-
lation by Arminianism. Whether its influence, through its demand for the recognition of the authority of reason in the theological sphere, affected the philosophical thinking which resulted in the rationalism of Kant, or in its reaction in the subjective theories of Herder, or in the theol-
ogy of Jacobi or Schleiermacher, it is difficult to say. Certainly Kant's doctrine of the Practical Reason, with its claim for the recognition of the ethical constitution of human nature, was developed in obvious harmony with the Arminian emphasis on the authority of the moral faculty as the moving factor in the interpretation of the relation of God to man. Schleiermacher's doctrine of absolute de-
pendence had definite relation to Calvinism. Only in the place he gives to religious feeling is affinity with the Arminian principles likely to show itself. With the distinct problems of modern speculative thought—'creation', 'immanence', 'mind and matter'—Arminianism, like the other Protestant the-
oologies, had comparatively little concern. The theistic position of the creative act, with its impli-
cations, was generally accepted; there was no suf-
cient evidence, from the scientific study of nature, to suggest irreconcilable differences from the tradi-
tional view. In this point, at least, Arminianism was peculiar. It laid special stress on creation being the work of the Father as distinct from the equal creative activity of the three Persons in the Trinity. The movement of Arminian thought was set in a framework of political, social, and eco-
nomic changes which cannot be dissociated from its influences without missing their complete signi-
ficance; but these are obviously beyond the scope of this article. One fact of importance ought, however, to be the dawning of the demand for 'natural rights' and the distinction between jus naturale and jus gentium, which had been raised by the philosophers and jurists of antiquity, passed, as a result of the Renaissance, from the sphere of academic speculation into political politics, the transition was accomplished through an Arminian channel. Grotius was the first to start the question of the distinction be-
tween natural and conventional rights, and was thus the father of the modern exponents of the 'Philosophy of Law.' How profound was the in-
fluence of this transition upon the course and char-
acter of modern systems of Ethics will be obvious. It is here that we come into the presence of one of the less appreciated, but very influential services ren-
dered by the Arminian definition and advocacy of its fundamental principles—equality and human freedom. These principles represent the prevail-
ting tendency of the leading ethical theories of the present. Without them the advance beyond the ethics of Stoicism would have been impossible. Calvinism missed them, and, in doing so, missed the opportunity and the possibility of becoming the basis of an intellectual statement of ethical obligation satisfactory to the modern mind. Although the Calvinists and the Lutherans, as being based upon the individual rather than upon the institutional principle, was essentially different from that of Rome, the Calvinistic ethics is, nevertheless, based upon outward author-

the authority of a truly organized Church and of the Scriptures truly interpreted by such a Church. This position was not accidental; it was of set purpose. Calvin deliberately subordinated ethics to dogmatics. From the Protestant point of view this was fundamentally reactionary; it was Scholasticism under another name. The true ethics, and the only ethics consistent with the essential Protestant principle, must be based upon the inward compulsion of conscience, not upon any external authority. External authority could result only in casuistry. This was the Roman method and principle. The state of the Church, as Ignatius Loyola expounds a closed system given in the teachings of the Church; the ethics of Calvinism expounds a closed system given in the written Word. 'For true ethical development there is no more room in logical Calvinism than in logical Romanism.' 

Ethically, Calvinism and Jesuitism have a common foundation in that they depend upon external standards and sanctions. On this account Calvinism has not, as a matter of history, contributed to the development of ethical theory or to an understanding of the nature of human responsibility and freedom. The influence of Calvinism has been generally as a religious force. It is beyond question that, as an inspiration to high ethical endeavour, Calvinism has produced types of sacrificial devotion to right conduct which have frequently touched a larger and more universal strain of the human heart than has the influence of the teachings of communities in which its doctrinal system has been dominant. Yet it must be acknowledged that the influence of Calvinism, as a system, in the philosophical reconstruction of modern ethics has been reactionary. The expansion, on the other hand, of the fundamental principles of Arminianism has wrought harmoniously with the processes of ethical development, which are based upon the manifold ideals and constraints of the moral consciousness of the individual. It was the Christian emphasis and abstract form of the ethical and spiritual development of the individual which Calvinism found its advantage. This stress on the place and functions of human nature in the interpretation of, and cooperation with, the Divine mind was the distinctive characteristic of Arminianism. 

Arminianism was the medium by which the humanistic spirit of the Renaissance was translated into the theological and exegetical sphere. Its great men—Grotius, Episcopius, Limborch, Brandt, Le Clerc—are all men of literary faculty and humanistic temper. In Calvinism the spirit is more distinctly speculative and scholastic, and the intellect deductive and constructive. Its great men—Calvin, Zanchius, Gomarus, Tixeae, Rutherford—are all men of speculative genius. It thus easily happened that the tendencies of Arminianism were often—and sometimes rightly—suspected of affinity with Pelagian and Socinian views. These affinities were strengthened by the mingling with the Arminians of Socinian scholars returning from exile; and in many cases Arminianism merged its identity in these phases of thought. It is well known that the exaggeration of Subordinationism by the Remonstrant divines, especially by those of the Italian school, was based upon a misunderstanding of the Arminian position. They denied the aseity of the Son, which Calvin had taught. His subordination to the Father, as the Spirit is subordinated both to the Son and the Father, was urged. It was held that, though the Divine nature belongs to the Son and the Spirit, the Father is first in dignity and power. Arminian leaders also favoured the Nestorian conception of the Person of Christ. The agency of the Logos was regarded as a 'special influx' or 'operation' of the Divine nature. It is an assistance of God, involving a communication of Divine presence and power to the Logos. Much more recently the influential Unitarianism of America has succeeded the lingering Arminianism of the New England States, as a one-sided development of prevailing ethical principles respecting the responsibility of man and the enthusiasm for his prerogatives and rights.

Arminianism arose historically in the great age of Protestant Symbolism, which succeeded the period of the earlier expositions of the Reformation theologians, who had based their authority more simply upon the appeal to spiritual experience and its warrant and confirmation in the Scriptures. It was the age of Protestant dogmatics, of which the characteristic was the substitution of creeds and the compulsion of confessions in place of the personal contact of the individual mind with the inspired Word of God. The formal system, the Protestant dogmatics, has succeeded the writings of inspiration. Arminianism strove to emancipate exegesis from the thraldom of dogmatics. It resisted the tendency to erect every where a formulated creed into the position of a Supreme Arbitrator of Truth. The formal system, the authority was denied the first place. Ecclesiastical theology had tended to become dominant over Biblical theology. The Bible was looked upon as an authoritative text-book from which doctrines and proofs of doctrine were to be drawn with little or no discrimination as to the use to be made of the different sacred books. The Word of God and the Bible were identical. No critical distinctions were tolerated. Divines had not to reason their systems, but to unfold them from certain fixed and unquestioned postulates. In the Reformed Church predestination was accepted as the initial principle for the systematic exposition of the Christian religion. Disent upon any point was treated as heresy. There was no antagonism in Arminianism to the formal principle of Protestantism—the immediate relation of the religious consciousness to Christ—or to the ultimate authority of Scripture. What Arminianism suspected and resisted was the prevailing tendency, which was far from the inception of the original authors of the Symbols, to assign to the Symbolical books of the Protestant Churches the same authority over faith which had been ascribed to tradition in the Roman Church. The Arminians sought to preserve a moderate and less dogmatic orthodoxy, and to introduce generally milder features into the prevailing finality of doctrinal systems. At the same time Arminianism, although apparently less intensely antagonistic than Calvinism to Rome, because of the emphasis it laid upon the value of the human in religion, was in every point more truly Protestant in its principle of the authority of tradition in its Protestant guise of authoritative Symbols. For similar reasons Arminianism was a protest against the mystical principle of interpretation which insisted upon the supremacy of the internal word as a sufficient exponent and infallible judge of the external. Constantly discounting dogma and mysticism alike, the Arminian divines appealed to the analogy of faith, to experience, to reason, to the aid of the Holy Spirit, as essential elements in the interpretation of Scripture. Arminianism was a protest against the principle that the Scriptures contain the truth, but are not of themselves the truth—gave considerable impulse to the
Arminianism 816

speculative treatment of theology, and, through the writings of Grotius and Episco- pius, issued in methods of theological discussion which gradually extended to the whole Evangelical Church.

The Arminian effort to meet 'the idolatry of Scripture' by the exaltation of the authority of the moral consciousness occasioned the charge against Arminians of laxity in views of inspiration. Their position was confused with the Socinian method of subordinating the authority of Scripture to that of reason, and of making its interpretation depend upon the so-called truths of reason. Here again, however, pure Arminianism is the mediating position. While disagreeing with Luther's position that reason is blind in spiritual things, it resisted the Socinian extreme, as it resisted the rigid and narrow adherence to the letter of Scripture which marked later Protestant theologies. Some of the later Arminians added the canon that Scripture cannot contradict reason. The general position, however, was that reason must be followed in literal speculation; that the foundation of religion, on its intellectual side, should be in personal thought and investigation; that neither antiquity nor universalism was a proper or sufficient ground of belief; and that every branch of Scripture must be considered separately and in its historical setting and limits. This appeal of Arminianism from the Symbolic methods to the critical treatment of the text and substance of Scripture was a precursor of the method of exegesis of the last century, and of their issue in the restoration to authority of Biblical as distinguished from Systematic and Dogmatic Theology.

The reaction from the hardening processes of the Lutheran and Calvinistic divine upon the views, generous for their time, of Luther and Calvin, respecting the human and fallible element in Scripture, which were illustrated in the terms of the Helvetic Formularies and in the Buxtorf's irrational contention for the inspiration of the Hebrew vowel-points, was inevitable. It was initiated by the Arminian writers, who reserved the direct action of the Holy Spirit for matters of faith, and left historical research and the memory of places to their credit. Arminianism thus asserted positions in Biblical interpretation which have proved a basis and authority for the methods now known as the Higher Criticism. Sanctions were also provided for the science and truth of natural and Christian history, as afforded by Arminian principles to an atmosphere of freer inquiry into the preservation and historical growth of the received texts of the OT and NT.

The Arminian principles of human freedom and personal responsibility, with the humanitarian spirit they tended to evoke, gave a new impulse to the awakening movement towards Foreign Missions, which succeeded the era of rationalistic influence in the Protestant Churches. If the Awakening of the universe had the whole race, the sense of responsibility for making conditions the possibility of salvation, and a note of urgency was added to the claim for the expansion of Christianity. Moreover, the weak place in the great Protestant confessions had been the anthropological. One of the many effects of this deficiency was seen in the judgment of the Church in respect to the heathen races, which was obviously prejudicial to aggressive enterprise. Calvinistic theology led to the clinging to the Deism of the age, and the application of Arminian principles was among the earlier signs of the dawn of a new light upon the nature and history of the races of mankind, and upon their religious possibilities, which has since broken in the ethical results of the kindred sciences of Anthropology and Comparative Religion. And the system, amongst the Protestant theologies, least discredited by the new light, is Arminianism.

Reference must be made finally to a great service Arminianism has rendered to theological thought generally. This is discovered in the subtle influence it has exerted in the gradual softening and humanizing of the harsher forms of theological definition. As a separate and separable system, either ecclesiastically or theoretically, its result was brief; as a genial and vitalizing influence, suffusing itself through all the discussions of the relation of God to man, its authority is ageless. It has wrought, often secretly and unacknowledged, towards the approximation of the position of modern theology respecting Predestination to that which was held by Catholic Christendom before the age and teaching of Augustine. Substantially the Churches of East and West were united, before his time, in the holding the primitive and Scriptural view of the relations between God and man in the work of salvation, and of the sole responsibility of man for his own damnation, which it was the effort of Arminianism to restore. How far the discussions of the Church on these relations, brought about by the revived and intensified Augustinianism of Calvin, has been re-effected by the influence of Arminianism, is as present only partially discernible. It is, however, certain; it has greatly modified the specific views which were the objects of its original contention, as they are now held by Calvinistic theologians; it has also become a dominant factor in the current re-statement, to the present generation of the discussion of the reduction of the area of Calvinistic influence, and its partial disintegration in communities where it had long been established, are facts that cannot fail to challenge attention. When Arminianism arose, very early in the 17th cent., the Calvinistic creed prevailed largely in Bohemia and Hungary; it was supreme in Switzerland, Holland, the Palatinate, and in the Protestant Churches of France, Scotland, and England, where, until the instance of Elizabeth, it was the prevalent theological influence; and shortly afterwards it grew to strength in the Puritan settlements of America. Over all these areas a steady disintegration of its force may be traced. Many factors have co-operated towards the secular influences which may be regarded as both ethical and historical, the active principles upon which Arminianism insisted have been prime causes.

In France an early and interesting illustration of the modifying influence of Arminianism occurred in the theology of the school of Saumur, associated particularly with the name of Amyraut (see Amyraldism), and later with that of Pajon. Amyraut endeavoured to mitigate the harsh re-enactment of the doctrine of election by his theory of hypothetic universal grace, which was substantially equivalent to a doctrine of universal atonement. God, in some more or less desire that all men should repent and be saved. In case all should repent, no purpose of God would stand in the way of their salvation; but the indispensable means of repentance—regenerating grace, following election—is not bestowed upon them. In the order of nature the decree of election follows the decree providing the universal atonement. The notion that the intrinsic possibility of Pajon's attempt to blunt the edge of Calvinistic particularism was his conception of regenerating grace. The Spirit uses the truth of the Gospel as its instrument in effecting the antecedent intellectual change; but He also uses all the circumstances
and providential environment of the individual. To this aggregate of objective influence, which is not the same in different individuals, regeneration, where it takes place, is due. It is the act of God because the antecedent circumstances are the effect of God's ordering, and are adapted by Him to produce the result. Pajonel reasserted the widespread interest in the French Church.

In Germany the strength of Lutheran influence was already in sympathy with the Arminian movement. Its influence was also strong, though silent, in the bosom of the Reformed Church itself; and in the whole of the Western Church, the Reformed dogmatics were moving from the doctrine of the absolute decrees. Amongst the English-speaking peoples, in addition to the influences, already referred to, which strongly modified the theology of the great school of Anglican divines, the influence of Butler became a powerful ally of Arminianism. His doctrine of probation was not the Calvinistic doctrine of the probation of the race, but the Arminian insistence on the probation of the individual in his unshaped and unshareable relation to God.

In the Methodist revival Arminianism became aggressive. Associated with the renewed vitalities of personal godliness, the Arminian theology, carried by singers and preachers, passed swiftly across the Atlantic, and the earliest settlers as they moved, from east to west, across the continent. In the newer British Colonies at the Antipodes a similar influence has wrought, until, at the present day, Arminianism, as understood and taught by Methodist preachers, dominates what is probably the largest Protestant Church in the world, reckoning some thirty millions of adherents. In America the matchless intellectual gifts of Jonathan Edwards were consecrated to the task of checking and destroying the forces of Arminian doctrine. But the ultimate results were disappointing to Calvinistic theologians. The New England theology, where it has not passed under Unitarian influences, has revealed a persistent modification of the Calvinistic position. The distinctly Calvinistic formalities of faith in Great Britain and America have undergone revision, mostly at those precise points which were the objective of the Arminian attack.

Modern theology in general has tended to forget the solemnness and absolutism of doctrinal statement, without surrendering the deeper significance of the ultimate supremacy of the Divine will. And this position was the original idea and ideal of Arminianism. There is a deep and almost universal dissatisfaction with the declaration and issues of a limited Atømtenon, which was a main element in the Arminian objection to Calvinism; and a strong conviction prevails that the salvation of the non-elect is an object of sincere desire to the mind of God. Yet it is obvious that it is not the doctrine of Predestination per se, in which Calvinism has enclosed the realms of nature and providence in a network of teleology, that excites the strongest repugnance to the system against which Arminianism rose to protest. For Determinism in philosophy and Selection in biological science are still acceptable and popular equivalents for Election in the realm of grace. Differentiation is a basal principle in each of these spheres; but differentiation involves inequality; and inequality involves preference; for it is admitted that the differences are original, so far as individuals are concerned. Biology postulates differences in the single cell. Psychological ethics starts the career of individual character with differences ab initio. Popular influences assume that the difference between Cain and Abel, or between Esau and Jacob, is an illustration of the same principle that differentiates the hawk from the dove or the hart from the swine. It is rather towards the Calvinistic eschatology that the antagonism is most keenly felt. The injustice and cruelty which this element in the Calvinistic system wore to the early Arminians, it wears to the modern mind. The humanity of God has become an element in the standard of judgment applied to the Divine activity. Fatherhood has dispelled Sovereignty, and a Deity has modified transcendence. When to such tendencies is added the momentum of the critical and exegetical methods which prevail in the modern interpretation of Scripture, to which Arminianism gave countenance and impetus at their origin, it may be possible to show some justification for the claim, made by the advocates of Arminian principles, that they possess the requisite possibilities of adaptation for the re-statement of the doctrines of grace demanded by the appeal to the conditions of modern thought.

LITERATURE.—(1) FOR LIFE AND TIMES OF ARMINIUS.—His funeral oration by H. B. Jacob, in the Rev. J. Arminii Oratio; Caspar Brandt, Historia Vita J. Arminii (Amsterdam, 1754) (reprinted and annotated by W. J. Neander, 1877); and Tracts on the Life of Arminius (Edinburgh, 1814); John Guthrie, 1854; Bangs, Life of Arminius (New York, 1843).

(2) FOR EARLY PERIOD OF CONTROVERSY.—Writings of Arminius (mostly occasional tracts drawn from him by controverbal enthusiasts) collected and published at Leyden in one quarto vol. 1831 (Eng. tr. by Nich. vol. 1 in 1826 and ll. in 1829 by J. Nichol.; and vol. iii. in 1876 by Wm. Nichol.; later edition, with vol. iii. by W. B. Baggall, in 1835; Aetn synodi nationalis Dordrechts (Dordrecht, 1620); Aetn et scripta synodi Dordrechts (Hardenberg, 1633); Saffo, Oeclus of Chris- tianoder (New York, 1817); resp. vol. iii. 560-587; Upten- bogaert, Eerelijcke Historie (Rotterdam, 1647); Gerhard Brandt, Historia der Reformation, vols. i. and 2 (Rotterdam, 1648); Chamberlayne, 4 vols. 1700; Limbirech, Historie Voca Sim. Episcopii (Amsterdam, 1701), and Relatio Historiae de Origeni et Progresso Controversi oris, and an English edition of his Theologia Christiana, 1714; Episcopius, In- stitu. Theol. 1650. For valuable list of other writers see Cat- ochigraph, Bibliotheca Scriptorum Arminianorum (Amsterdam, 1728).

(3) FOR PERIOD OF DEVELOPMENT.—Bunnet, Repr. of Thirty-nine Articles; Browne, On Thirty-nine Articles (1864); Laurence, Bampton Lecture, 1804; Whyth, Discourse on Five Points (London, 1817); Nichol., Calvinism and Arminianism Compared (2 vols., London, 1824); Playfere, Appeal to Gospel for True Doctrine of Predestination (pub. in Cambridge Tracts, 1717); Heard, God's Love to Mankind, etc. (London, 1833); Neander, Hist. of the Dr. , vol. ii. 678 ff; Gess, Gesch. d. prot. Dogmatik, cap. i. 379 ff; Ebrard, Christl. Dog- matik, §§ 9-43; G. S. Fricke, Hist. Dogm. Armin., (Kiel, 1814); Schenk, Hist. of Dr., Br. iv. ch. vii, Br. v. ch. vi; Wagenaar, Hist. of Dr. (Eng. tr. by Fisher, Hist. Christn. Dr. (Edin. 1828); Conolly, Hist. of Dr. 373 ff; A. M. Fairban, Christ in Med. Theol. (1894) 109 ff, 431 ff; Cambridge Mod. Hist. (1893) vol. ii. 717; Arminius (Bib. Repos., Andover, vol. i. 1832); Orr, Progress of Brev., 293 ff; Cunningham, Essays on Theol. of Reformation (1859); Girard, Theol. Dogm. Arminius Compared (Columbia, 1890); Curtiss, Arminianism in History (Oklahoma, 1894).

The religious art of savage and barbarian races
constitutes a field of inquiry the limits of which
are exceedingly difficult to trace with any accuracy.
There seem to be no doubt that among some tribes
religion dominates almost the whole of individual
as well as of social life. The Pueblo Indians in
Arizona and New Mexico may be quoted as an
example of such thoroughly religious peoples.
The customs of their beliefs have been known, the more evident it has become
that even the apparently most trivial actions are
to them associated with religious feelings and
ideas. From birth to death the Pueblo Indian,
actively or passively, partaking in an almost
continuous act of religious worship. In the
art production of these tribes the religious purposes
are naturally apt to become almost exclusively
predominant.

It is true that the Pueblo tribes appear to be
quite exceptional in their inclination towards
pious practices. But if the word 'religion' be
taken in its widest sense, as including magical
ideas and superstitious beliefs, there might easily
be found many other tribes among whom religion
exercises an all-pervading influence on art
production. And the field of religious art becomes
further widened if, as has been done by several
authors, traditionalism is included under the head
of religion. Among almost all uncivilized nations,
every act that has been handed down from religious
to descendents is treated with a respect
which closely resembles religious feeling. And in
art, even if the products we meet with be of recent
origin, the methods employed in production have
almost everywhere been transmitted from earlier
generations.

It is only natural, therefore, that several authors
should have been led to consider all ethnographic
art as essentially religious. This opinion is repre-
sented by some of the most eminent German
ethnologists. According to Dr. Gerland, the
Distinguished continuator of Waitz's Anthropologie
der Natuvölker, dances, pantomimes, and dramas,
had been meaningless they may now appear, have
always originally been connected with religious
ceremonies. The articles of dress and ornament
with which primitive man decorates his body are,
by ethnologists of this school, interpreted by pre-
ference as magic signs or religious symbols. And in
works of art, such as rock paintings and engravings,
the sacred and serious meaning has been taken
for granted.

Against this line of thought, however, a reaction
has set in among other German ethnologists. In
his remarkable essay on petroglyphs (Ethnographi-
tische Kunst) Andree has branded as a learned
bias the general tendency to look for some sacred

meaning in all ancient drawings, many of which
may have had their origin simply in the impulse
of the idle hand to scratch lines and figures on
inviting surfaces. Other ethnologists have pointed
out how easily the simplest dances and songs are
to be explained as outbursts of an emotional
pressure, which in itself has nothing to do with
religious feeling. And it has been urged that
the religious sections of primitive traditions
upon all ancient customs, does not in itself give
us any information as to the real origin of these
customs.

However sound in its principle, the reaction
against the religious interpretation may, never-
theless, easily lead to a too radical scepticism.

The case of the carved ornaments of the Hervey
Islanders is most instructive in this respect.
Notwithstanding the deriding strictures originally
passed in the name of common sense, the
symbolic interpretations of Stolpe and Read, an
unbiassed examination can lead only to the
conclusion, that in these apparently meaningless figures
we really meet with a symbolic art which is full
of religious significance (Stolpe in Trans. of the
Rochdale Lit. and Scient. Soc. 1891).

By such examples it is proved beyond question
how impossible it is to uphold any a priori asser-
tions as to the religious or non-religious character
of primitive works of art. In order to estimate
with exactness the influence exercised by religion
on the earlier stages of aesthetic development, it
would be necessary to examine in detail and from
a philosophical point of view the artistic productions
of all tribes of mankind. Such an examination
has as yet been undertaken with regard to only
a few tribes: the Hervey Islanders, the inhabi-
ants of the Torres Strait regions, the Dayaks of
Borneo, the Pueblo Indians, and some others.

In an article for an Encyclopedia, there could in no
case be any question of endeavouring to supplement
these gaps in our knowledge. The only thing
therefore that can safely be done is to interpret,
at the risk of incompleteness, such works and mani-
festations alone as display their religious character
on the surface. And it will be necessary, in order
to keep the survey within reasonable limits,
to exclude all works the origin of which is to be found
in an exclusively magical purpose. Thus the
various kinds of dramatic rain-making rituals, and
the magically-medical curers, although generally
executed by the religious profession, will not be
treated of in this connexion (see MAGIC).

1. Dramatic art.—The simplest of all forms of
religious art, from a theoretical point of view,
are those dances and songs which are resorted to
in order to bring about exaltation. These
 ceremonies of the Muhammadan dancing and howl-

VOL. I.—52
ing dervishes and of many other well-known sects, might be quoted in proof of the fact that, among civilized as well as among barbarous peoples, a highly strung emotional state, even if produced by purely physical agency, is considered as a religious feeling. And it is significant that this emotional manifestation, which has been observed among the lowest of all savages—the wood Veddahs of Ceylon—consists of an exalted dance, which has justly been compared with the antics of the Siberian shamans and with the performances of the howling dervishes. As to the religious significance of the dance, travellers do not all agree. Some take it to be intended as a kind of propitiation, addressed to the divinity of the arrow—an arrow being always stuck in the earth in the centre of the dancers. According to others, the dance might be explained as a kind of thanksgiving; others again see in it a rite, aiming at the expulsion of demons. But however much these interpretations may differ, the religious character of the ceremony has been taken for granted by almost all the different authorities. And their descriptions of how the dance is accompanied by dance-coincide at all important points (P. and F. Sarasin, Naturwiss. Forsch. auf Ceylon, iii.; Emerson Tenney, Ceylon; Hoffmeister, Travels; Deschamps, Au Pays des Veddas; Schmidt, Ceylon).

The scene is set in the presence of all men. At the outset, they advance slowly around the arrow without touching each other. Every dancer turns round on one foot, whilst performing some spasmodic movements with the free leg. The arms describe circles in the air, and the head is thrown backwards and forwards, to make the long, entangled hair stand out like a brush from the crown. The music is a simple melody, which is sung, or rather howled out, by the dancers. The time is marked by strokes of the hand on the nude belly. All this is begun in relative tranquillity. But gradually the time grows quicker, the movements become more violent, and the howling louder. Thus the dancers work themselves up to the utmost frenzy, and finally, one after another, fall to the ground in exhaustion. Some of them lie on their backs 'as stiff as a fallen tree,' whilst others, continuing the howling, tremble in convulsive vibrations.

This 'arrow dance' is typical of a large class of dances, examples of which are most numerous amongst the lower races, sometimes as mere amusements, but more often as religious rites. The means employed in order to bring about the exaltation and the convulsions may, indeed, be more complicated than those resorted to by the Veddahs. Thus, among some North American Indian tribes (cf. Schoolcraft, Indian Tribes, v.): the dancers prepare themselves for their performance by some days of fasting, and increase their state of exaltation during the dance by partaking of drugs or inhaling them. The clappings on the nude belly are, at higher stages of culture, replaced by the sound of some instruments capable of a greater suggestive power. But the spirit of the performance is none the less the same all over the world. Whether the dancers belong to the Ainus, to some of the aboriginal tribes of India (Aquis, Kurs, Santals), or to some South or West-African race (Basutos, Tshi-speaking peoples on the Gold Coast), their chief endeavour is always to throw themselves, by violent movements and sounds, into a state of exaltation which borders upon, or really passes over into, insensibility and unconsciousness; and it is the same endeavour which characterizes the celebrated performances of the tribes of Northern Asia (cf. e.g. Radloff, Skiriies; Mikhailovsky in Journ. Anth. Inst. xxiv. 62, 126).

In the shamanistic rites, however, we meet with one important feature that is not represented in the Veddah dance. In this example, the frantic scenes seem to be over at the moment unconsciousness is attained. In the higher developments of the arrow-dance type, however, it is from this moment that religious interest is awakened. And what follows, far more than the dance itself, is apt to give a religious character to the rite.

It is well known that on the lower stages of culture lunatic ideas are generally considered as possessed by some divinity, and are consistently treated with a kind of religious respect. It is only natural that the same attitude should be upheld in those cases where the mental disorder is acute instead of chronic. And the shamanistic psychosis is the more liable to be interpreted in a supernatural way, since the shamans, in accordance with the traditionally-fixed programme of their performances, invariably astonish the bystanders by jugglery and feats of insensibility, such as eating fire, lacerating themselves with knives and needles, etc., made possible by their exalted and anaesthetic condition. The presence of a true divinity in the case of the convulsive dancer, together with the apparently supernatural power he exhibits, must necessarily lead the primitive spectators to the inference that a divine personification has taken hold of the dancing man, and that himself is endeavouring by all means in his power to confirm the spectators in this belief. He delivers oracular utterances in a mystic voice, which is taken to be the voice of the god, or he keeps up long dialogues with the divinity, who is supposed to be visible to him, but is audible only to the bystanders. We have not in this connexion to decide whether these representations are wholly fraudulent, or whether they may have their origin in some visual and auditory hallucinations of the shamans. The important fact, from our point of view, is that in either case the orastic and, so to say, lyrical dance, which forms the beginning of the shaman performance, has passed over into something which, in its effect, if not in its intention, is to be considered as a work of dramatic art.

2. Pictorial art.—In these dramatic representations we meet with an expression of the belief—which may partially have been prompted by the faces of shamanistic possession—that the priests are, or may for a time be, possessed by the divinity. If, as primitive peoples seem to believe all over the world, the priest really is a kind of 'god-box' (to use the picturesque expression of the Polynesians), then it is evident that the actions he is representing must impress his pious spectators as an eminently religious drama. But even if there had been no belief in a particular class of 'god-boxes,' dramatic representation would still have acquired a religious importance, on the ground of the belief in the magical effects which imitations of things and movements are supposed to exercise upon the things and movements that have been imitated. According to this belief, the god may be conjured to take up his abode in the body of the performer, who imitates what are believed to be his appearance, movements, and behaviour. And the artistic production, which has been called into existence by this principle of sympathetic magic, does not restrict itself to the department of dramatic art. It has attained a great importance within the domain of pictorial imitation.

The transition from dramatic to pictorial art is marked by those masks which, in many tribes, such as the Bellacoolas, the Melanesians, etc., are worn by the dancers in religious dances (cf. Boss, Dall, Woldt, on the Bellacoolas; Haddon and Cod
rington on the Melanesians). The effect produced
on the spectators by these painted faces is partially
dependent upon the dramatic acting—the singing
and the movements—of the performers. But the
masks themselves are, no doubt, apt to awaken
fanciful sensations and awe. Among all primitive
tribes they are regarded as sacred things,
scarcely less holy than the religious paintings
and statues venerated by more developed nations.

Among the most primitive tribes, however, one
scarcely meets with any pictorial representations
of the deity. This, probably, has less to do with
the technical inability of the lowest savages than
with the deficient anthropomorphism in their
notions of the deity. Where a god is imagined as
some vague and formless being, certain rude and
shapeless fetishes may be considered as satisfactory
representations or vehicles of the Divine power.
But as soon as a god has taken the form of animal
or man, pictorial art will be resorted to as a means
of facilitating—by virtue of sympathetic magic—
communications between man and the divinity.

The images and statues of primitive man must
not, however, be interpreted as in any way similar
to those pictorial representations of which bar-
barous races sometimes even civilized—men avail
themselves in order to heighten the magic or
illusion. It seems, on the contrary, as if
similarity and lifelikeness had not even been
aimed at in the idols and ancestral statues of the
lowest savages. And what we know about the
way in which these have been fashioned—can be
imagined. When the Negroes wish to transplant the wood
deity from his original home to their towns
and villages, they construct a wooden doll of branches
taken from the tree in which he is supposed to
live. The god, no doubt, believed to feel a
special temptation to take up his abode in the idol
made in his own likeness; but it is evident that the
material link established by the choice of the wood
is thought of as being of no less, perhaps even of
greater, importance than the resemblance to the
ancestral god, or the zoomorphic
form of the divinity. (De Clercq in Schmitz, New Guinea;
Brenner, Kannibalen Sumatras). When the cannibals of
Sumatra prepare their celebrated richly-sculptured
magical staffs, they always enclose in the head of the
uppermost figure of the staff the brain of a young
man who has been killed for the purpose (Brenner, Lc., cf. also
the author's Origins of Art, p. 291). It is probable that whatever
power such images are possess of is given to them
chiefly by their material contents. The worship
and respect shown to the statues are developed
out of a worship of skulls, and the statues them-

selves have originally been considered, not as
images of the body, but as receptacles for some
part of the body itself. The more, however, the
totemism order of the statues are developed
more there must also arise a subjective
illusion, which to the primitive spectators brings the image
into connexion with the imitated reality. The
chord character of savage statuary is no obstacle
to such an illusion, as in primitive peoples the
want of technical ability is counterbalanced by a
naive suggestibility. And as soon, on the
other hand, as the image itself—as image—has
acquired a magical or religious efficacy, there will
also appear an endeavour to heighten the
suggestive effect by increasing the lifelikeness and
the resemblance of the statues. These superstitious
and religious motives will tend gradually to incr
the artistic value of the religious images.

The religious statues of the Melanesians and the
idols of the West African Negroes, for instance,
undoubtedly owe something of their wild and
fantastic lifelikeness to an attempt to awaken an
intense impression as possible of the divine
powers which they are intended to represent. At
somewhat higher stages of evolution, on the other
hand, as, for instance, among the Pueblo Indians,
religious motives tend to restrain the impress-
iveness of pictorial representation within some
traditionally-fixed limits.

However crude and simple an idol may be, it
will none the less, by virtue of its mere existence,
bring about some important changes in man's
attitude towards his god. By the idol a divinity,
who has originally been considered as distant or
vaguely localized, becomes concentrated in an
apprehensible, some object. The people acquire a
fixed object for their worship. And the
holiness of this object makes it necessary to shelter
it from the environment. Thus, around the idol,
there naturally arises a temple.

Among the lowest tribes these temples have no qualities entitling them to be enumerated
among works of art. But at a somewhat higher
stage of development, the house of the god is often
decorated in a most gorgeous way. The ancestral
decors in the literal sense of the word—display, especially among some Malay-
sian and Melanesian tribes, a wealth of ornamental
art (see Temples). (See, further, 'Note on the Use
of Painting in Primitive Religion,' following this
article).

3. Propitiation in art.—In order completely to
explain the motives which have led to these archi-
tectural constructions and decorations, it is not
sufficient to appeal to those philosophical and
superstitious ideas which have here been men-
tion. In the foregoing we have devoted our
attention exclusively to man's endeavour to
create, by dramatic or pictorial art, a representa-
tion of the god—a receptacle, so to say, of the
divine spirit—of the divine spirit that can be
entranced. This effort has naturally become more and more marked
the more the idea of God has become localized,
fixed, and vivified through artistic representa-
tion. Thus the ornamental art which is lavished
on the decoration of primitive temples may in
younger and most cases be described as the purific-
tion of the god who is believed to inhabit the temple or to visit it.
But the tendency to flatter and propitiate is by no
means dependent upon the degree of development
reached by the idea of God. It manifests itself
among tribes who conceive their divinity as a
vague, unlocalized, and impersonal being, as well
as among tribes who have adopted anthropo-
morphic or zoomorphic religions. Those of its
manifestations, however, that are most important
from a general point of view cannot possibly
be treated of in this connexion. For there is
nothing artistic in the various forms of material
sacrifice—with the exception, perhaps, of the
sacri-

ficial vessels, which, in virtue of their religious
purpose, may be elaborated and decorated with a
greater care than ordinary vessels. On the other hand, the dramatic and poetic forms of sacrifice—prayer and homage—afford us an ample store of examples which exactly fall within the scope of the present article.

A kind of sacrificial purpose may indeed be discerned in those shrines to which the deceased is imagined to ascend after his death. To the superficial observer they appear to have their only motive in the desire to bring about a state of exaltation. As every effort is taken to be agreeable to the divinity, the dancers may in many cases nourish a hope of softening the hard heart of their god. But it is by no means clear that the intention of explaining and illustrating the facts of religious history. In such dramatic representations, for which the religious tradition offers a welcome justification. Thus it is more than difficult to decide in individual cases whether the artistic manifestations fulfill a religious, a magical, or a purely aesthetic purpose.

The same doubt exists when we have to do with purely lyrical and poetic forms of art, through which the performers express their gratitude and devotion to the god. Psychologically there is an easy transition from the feeling of joy—when it is pure and complete—to the feeling of loving thankfulness. The fulness of the emotion seeks expression, and the expression seeks some one to whom it may address itself. Thus in happiness we experience a desire to imagine a god who may receive our gratitude. And among peoples who are expected to consider every dance and dramatic performance as a manifestation of the god, the pleasure which has been especially accorded to them by the divinity, pleasure will easily cause some manifestations which express both emotions in one common expression. As the most typical and best known example of religious pleasure, we may quote the song and dance of the Israelites after having passed the Red Sea (Ex 15). It is true that in this case the poetic and orchestral hymns were called forth by an exceptional and unique occurrence. But there are always some regular events of happy importance in the life of a primitive man which will tend to make thanksgiving ceremonies fixed institutions. Thus the return of the spring will be saluted with dance and song among the nations that have been suffering from long and hard winters, e.g. the Eskimos, the Chukchis, etc. Among agricultural nations the occasion of a bountiful harvest will give rise to some joyful festivals, in which the participants amuse themselves at the same time as they pay homage to their divinities. Such festivals seem to be essentially frequent among the North American Indians.

The dances performed at these ceremonies, as has already been mentioned, closely resemble the manifestations of pure and simple joy. But there are some gestures which, although originally connected immediately with the simple feeling, may gradually become peculiar to the religious ritual. Thus hand-clappings (which, as is well known, accompany states of great joy both among savages and among children) have, among Polynesians as well as among the ancient Egyptians, acquired the sense of a pious and reverential gesture, by which the adorers manifest their love and thankfulness towards the god.

4. Ethical instruction in art.—The facts hitherto quoted have raised the invisiblespirits of the dead, who are believed to endeavour to possess themselves of his body. Sometimes one may even believe that the survivors try to frighten the spirit itself away from their homes by terrifying dances and pantomimes. Lastly, it is probably in the endeavour to exert a sympathetic influence upon the combatants which the deceased has to undergo before he can attain his peace and rest, that survivors hold magic war-dramas (e.g. slaying of giants and tussle of war) over his grave.

When—as has probably been the case in some tribes—the cult of some individual ancestor is transformed into a cult of a general divinity, and, in consequence thereof, the small spirit-house above the grave is replaced by a temple, some of the ancient funeral performances may still be kept up as religious observances. Although their original purpose is forgotten, their character will scarcely become changed. When magical ideas have died out, magical ceremonies will still survive as a means of religious homage. And when, at a later stage of development, the notion of a divine spectator has been forgotten, the same ceremonies may be performed as mere amusements, for which the religious tradition offers a welcome justification. Thus it is more than difficult to decide in individual cases whether the artistic manifestations fulfill a religious, a magical, or a purely aesthetic purpose.

The same doubts exist when we have to do with purely lyrical and poetic forms of art, through which the performers express their gratitude and devotion to the god. Psychologically there is an easy transition from the feeling of joy—when it is pure and complete—to the feeling of loving thankfulness. The fulness of the emotion seeks expression, and the expression seeks some one to whom it may address itself. Thus in happiness we experience a desire to imagine a god who may receive our gratitude. And among peoples who are expected to consider every dance and dramatic performance as a manifestation of the god, the pleasure which has been especially accorded to them by the divinity, pleasure will easily cause some manifestations which express both emotions in one common expression. As the most typical and best known example of religious pleasure, we may quote the song and dance of the Israelites after having passed the Red Sea (Ex 15). It is true that in this case the poetic and orchestral hymns were called forth by an exceptional and unique occurrence. But there are always some regular events of happy importance in the life of a primitive man which will tend to make thanksgiving ceremonies fixed institutions. Thus the return of the spring will be saluted with dance and song among the nations that have been suffering from long and hard winters, e.g. the Eskimos, the Chukchis, etc. Among agricultural nations the occasion of a bountiful harvest will give rise to some joyful festivals, in which the participants amuse themselves at the same time as they pay homage to their divinities. Such festivals seem to be essentially frequent among the North American Indians.

The dances performed at these ceremonies, as has already been mentioned, closely resemble the manifestations of pure and simple joy. But there are some gestures which, although originally connected immediately with the simple feeling, may gradually become peculiar to the religious ritual. Thus hand-clappings (which, as is well known, accompany states of great joy both among savages and among children) have, among Polynesians as well as among the ancient Egyptians, acquired the sense of a pious and reverential gesture, by which the adorers manifest their love and thankfulness towards the god.
ART 821

tions as, for instance, the great Kachina dance of the Zuñi Indians, this didactic tendency seems to be especially prominent. In masquerades of the type represented by the Mumbo Jumbo dance in Central Africa and the "Kinias" of the Fuegians, we meet with the moral, or pseudo-moral, motive of terrorizing women and children into subjection by showing them the awful aspects of the gods. Finally, in the dramas, songs, and dances at the initiation of boys and girls into maturity, magical, didactic, and moralizing purposes are combined, with the religious significance, to the most splendid and wonderful manifestations which are to be met with in the department of primitive art. It is true that the instruction conferred at these ceremonies refers chiefly to practical utility. But even among peoples at so low a degree of development as the Australian aborigines, religious and, one might say, philosophical doctrines are expounded to the young men. Thus in a kind of miracle play, to which some curious analogies have been found among the Fijians and the East Africans, the old men enact before the boys a representation of death and resurrection. Although less elaborate in dramatic detail and stage-management, the fragmentary dramas in which the American Indian shares, as among the animistic peoples, are killed and recalled to life present to us a scarcely less interesting illustration of the same great thought. There are indeed, especially in this last example, good reasons for assuming that the simulated death and resurrection scene — in a magical way, some kind of spiritual regeneration in the novices on whose behalf the drama is performed. But while admitting this, we may nevertheless take it for granted that an exorcism to which are coupled the sacramental quantities of the primitive rite may be combined with the magical rite in question. And similarly with regard to analogous ceremonies in other tribes, we feel justified in assuming the presence of a didactic purpose. The more the dogmatic system becomes fixed and elaborated, the greater need will there ensue of affording these doctrines a clear expression in the objective forms of art.

It is evident that poetry more than any other art can serve such a purpose. In fact, among several tribes at the stage of higher savagery and barbarism there have been found some more or less complete mythical poems. These songs, however, will be more properly treated of under the headings MYTHOLOGY, CHARMS, and HYMNS.

NOTE ON THE USE OF PAINTING IN PRIMITIVE RELIGION.—Besides the realistic and symbolic representation of his divinities or of his religious conceptions and aspirations by means of various art methods—images or statues, carvings, sacred dances, sacred hymns and chants—painting has been employed by it to the service of religion by primitive or savage man, as well as by his more civilized successor. The purpose of this note will be sufficiently fulfilled by reference to such painting in the Stone Age, among the rudest savages, and with a semi-barbaric people. In all alike the ends aimed at are precisely the same as those intended by the image or carving—the obtaining of power over or from the being represented, the vivid depicting of the worshipful object or person so that the worshipper, by means of the picture or symbol, may have his religious sense re-awakened, or may also be brought into contact and communion with the divinity. In the first example to be referred to—that of the Palaeolithic cave-artists—the paintings are not those of divinities but of animals. Even if these had no totemistic significance, there could also be no doubt that they played a highly important part in the magico-religious ceremonies which, as hypothesis, were performed before them.

Within recent years, French archeologists have discovered the existence of engravings and paintings of animals on the walls of caves in Périgord and the Pyrenees. Similar paintings were, almost simultaneously, found in grottoes at Altamira in Spain. They are executed on rocks in the darkest part of the caves, far from the entrance. Artificial light must therefore have been employed in signing them, as is proved by the discovery of a stone lamp ornamented with an incised figure of a reindeer, and thus dating from the Reindeer age of the Palaeolithic epoch—the age of simple painting of the great majority of the Quaternary times terminated. Probably these wall engravings and paintings belong to this closing period also. The animals represented are mammoths, reindeer, bison, oxen, horses, goats, saigas, etc. Of these being engraved, have the outlines filled in with reddish-brown colour, or, in some cases, bluish-black, exactly as totemic grave-posts used by the American Indians have incised figures painted over them by means of some primitive brush. Or, besides, the outlines, being having the coloration of the thin band of colour. Frequently a design is outlined in black, and the surface covered with red ochre. We are yet ignorant how the colour was applied; it may have been daubed on by means of some primitive brush, or blown from the mouth, as is in the case with some Australian rock-paintings. The interest of these paintings, for us, consists in the theory regarding their purpose enunciated by a French savant, M. Salomon Reinach. He postposes the idea that these paintings, as well as Quaternary art in general, are a sort of borrowed from the animal world the most numerous, and that the animals represented are those which form the food supply of a nation of hunters and fishers. The savages, in fact, among several tribes at the stage of higher savagery and barbarism there have been found some more or less complete mythical poems. These songs, however, will be more properly treated of under the headings MYTHOLOGY, CHARMS, and HYMNS.
character, are painted on rocks, and are tabu to women and children.

M. Reinach notes the fact that the Quaternary paintings are executed on the walls of caves far from the entrance and at the end of corridors difficult of access, as if with a view to secrecy. Not only so, but the caves are in total darkness, and the paintings must have been executed and looked at by means of artificial light. Hence the impossibility of assuming that they were executed for mere pleasure. They must have had a religio-magical character, and their purpose, why they were painted, is left a spirit child practices in the multiplication of the game on which depended the existence of the clan or tribe. Ceremonies, in which adults alone took part, were performed with that end in the darkest part of the cavern, entrance to which was forbidden to the profane. 1 These paintings formed the object of the cult, addressed not to the individuals represented, but to the species, over which the worshippers had influence by reason of the individual being thus depicted. The animals, as a result of these ceremonies, would manifest themselves to them. They would find them. The various sculptures and engravings of the Reindeer age may have had such a purpose also, while the so-called bôtas na commandement doubtless played their part in magical and totemistic ceremonies. As M. Bernardin says, the engraved designs of the rock deposited in 1876 at Repou Septentrion, Feb. 1875. Thus the art of the period was neither a luxury nor an amusement, but the expression of a rude yet intense religion, based upon magico-religious practices having for their object the attainment of the food supply. While we cannot admit that Palaeolithic man's artistic powers were used only for magico-religious purposes—the beauty of some of his designs, and the care in reproducing exactly what he saw, suggesting the artist pure and simple—it could not fail that they should be frequently employed in such ways as M. Reinach has suggested. Everywhere else this has occurred, and art has been freely enlisted in the service of both religion and magic.

In the times of transition to the Neolithic age, though the brilliant art production of the earlier period is unknown, art was again used in the cult. This, already shown by the symbolic engravings and markings on rocks, megalithic monuments, etc., is further suggested by the painted pebbles found by M. Piette at Mas d'Azil. Some of the designs represent numbers, others are alphabetiform signs corresponding to the letters of the later Aegaean and Cypriote syllabaries; others are photographs, with or without a symbolic meaning. It is in these last that we may find the use of painting as an accessory to the cult. Among them are the cross by itself or within a circle, a circle with a central dot (solar symbols, some of which occur as engravings on the megalithic monuments of the times of age), the serpent, tree, etc. All are painted with vermiculite upon white pebbles. Later, the carved symbols of the Neolithic period, e.g. the symbolic axes and female figures (divinities) on the walls of the grottos of La Hougue, have been covered with colour, like the carved images of later ages.

For the cave paintings see L'Anthropologie, 1902; Revue mensuelle de l'école d'anthrop. 1902. M. Reinach's paper with illustrations in Arch. de la Soc. l'Ant. Ath., p. 527. See also his Story of Art, throughout the Ages, p. 1. M. Piette's discoveries are described in L'Anth. vii. 856, xiv. 643 f. For the symbolic carvings of La Roque, see M. d'Azil. La Roque-Préhistorique, 244 f.; Baran de Baye, L'Archéologie préhistorique.

Some Australian instances of the use of painting for magico-religious purposes have already been referred to. Among the Northern tribes of Central Australia similar paintings are used in the totemic ceremonies. The men of the Thalamiil or Black Snake totem, when they perform the Intichiuma rites for the purpose of increasing the numbers of this snake species, paint partly symbolic and partly imitative designs on the ground with red ochre and other coloured earths and charcoal. These depict the mythic history of the ancestral snake, which is also dramatically represented by Spencer-Gillen, Northern Tribes of C. A. 302, 737.

Similar ground paintings are used in the Wallunqua snake totem ceremonies. Each one represents, or rather was associated with, the various spots at which the animal stood up, performed ceremonies, and laid the object used by the spirit child during the initiation ceremonies, whose purpose is usually the healing of disease, and which are characterized by great elaborateness.
and length. As practised among the Navaho Indians, the ceremony continues for nine days, and is conducted by a theurgist and several assistants. Every part of the ritual has a special significance, and must be performed with the strictest attention to traditional detail, lest fatal consequences should ensue from the least infringement of it. Several men personate the gods and goddesses and take part in the ceremonies; each day's proceedings include pantomimic action, symboliser, offerings to the gods, singing of sacred chants, and prayers, and the whole ends with a elaborate dance. The whole ceremony is known as yebitchai, a word meaning 'giant's uncle,' and, as in several Australian mysteries, it is used to awe children, who, on the eighth day, are initiated into the ceremony, and discover that the men personating the gods are their fellow-tribemen. The paintings are made with dry sand and pigments of various colours sprinkled on a ground of yellow sand with the thumb and forefinger of the operator. The colours used are yellow, red, white, black, and a blue prepared from a mixture of charcoal with white, red, and yellow sands. These colours, as well as the pictures themselves, are made according to instructions given by the gods, as the Navaho myth of 'The Paintings' relates. All the paintings represent gods and goddesses, usually about three feet in length, and depicted in a somewhat conventional manner. Face, arms, and legs are carefully done; the body is long and narrow; each divinity is usually drawn with various emblems: a god is denoted by a round head, a goddess by a rectangular head. Considering the method in which the colours are employed, the resulting picture is a marvellous piece of art work, full of minute details, with four lines in the dress and each decoration of the divinities are like threads. The first sand-painting is made on the fifth day of the ceremony, and represents three divinities; in the painting of the sixth day, there are four pairs of divinities, male and female, each sitting on the limb of a cross, with their appropriate emblems: outside the painting are four gods, one on each side, and the whole is surrounded by the rainbow goddess. The seventh day's painting represents fourteen divinities in two rows, main surrounded by the rainbow goddess, 25 ft. in length. Twelve divinities are shown in the eighth day's painting; in their midst is a huge picture of a corn-stalk, the main subsistence of life; a square base and triangle represent clouds, and three white lines the roots of the corn. The rainbow goddess again surrounds this picture. A detailed account of this last picture will show its symbolic nature. The divinities are the Zenichi, who live in a rock, represented by a long black parallelogram. Those parts of their bodies and faces which are painted red, denote red corn; black signifies black clouds. Zigzag lines on the bodies mean lightning; certain black lines surround the head, zigzagged with white, are cloud baskets holding red corn.

These paintings are arranged on the floor of a medicine-lodge in which are assembled the invalid, the theurgist and his assistants, and certain privileged spectators. In each case the sick man is seated on the central figure of each painting, having previously sprinkled the design with sacred meal. Several ceremonies, chants, and prayers follow, during which one of the representatives of the gods touches the feet, heart, and head of each figure respectively with his right hand, each time touching the corresponding other side of the whole body. This appears to be the vital part of the ceremony, bringing the sick man into relation with the gods through their pictures and by their representative, thus transferring their power to him so that his disease may be overcome. This seems to be certain, as, before the pictures are obliterated at the end of the day's proceedings, the people crowd round to touch them, and then, having inhaled a breath over their hands, rub their bodies so that they may be cured of any malady, moral or physical, by the divine influence. The sacred pictures in the American Indian ceremonies are believed to have been originally given by the divine manitous (see BE, Fourteenth Annual Report, p. 91).

James Stevenson, Ceremonial of Haajett Datija and Mythical Sand Paintings of the Navaho Indians, with Illustrations of the paintings, in BE, Eighth Annual Report, 1891. Reference may also be briefly made to: (1) Zodi religious paintings on vessels, representing the Creation and other myths current among the people. The colours themselves are symbolic (see Cush. Study of Phalic, op. cit., 1889). (2) Painting or tattooing the body (d) for magical purposes, as among the Arakan hill tribes and Burman (St. John, J.A. ii, 391; Stevenson, Essay to on Am. Ant., p. 312, and others); (3) with totem designs, e.g., a few years ago Mr. Haddon, of Malacca (Hadd., Anm. Arch., p. 312), had certain ceremonial occasions, as with the Australians (Spencer- Gillen, op. cit.); (4) for mourning.—(3) Painting the bodies or the parts of the dead. (Red, brown, or black), may be found among savages—Australians, American Indians, etc. (Cartailhac, La France primitive, p. 107). (5) In the art of painting the divinities in religious mysteries and as mnemonic symbols among the American Indians (BE, Fourteenth Report, p. 107); see also Tatting, Totemism. consequently they stand the chance of no further interest being taken in them; whereas, ... influences of the evil eye in Morocco. Silver amulets and numerous objects of everyday use are decorated with crosses, and.

Apart from the foregoing and the utilization of decorative art as an exhibition of wealth or for social distinction, we find that magic and religion have exercised a preponderating effect on the native peoples. The surpising, as though it were due to the vast importance they play in the life, thought, and feeling of mankind. From the nature of the case that aspect of sympathetic magic known as 'homopathic' lends itself to artistic treatment rather than does the 'contagious.' The representation of an object is as effeclual as the object itself; and as there is virtue in words and power in a name, so there is efficacy in a pictograph, which, after all, is a graphic as opposed to an oral or written expression. According to von den Steinen in Unter den Naturvélker im Blosse (Mallery, Fourth and Tenth Ann. Rep. Bureau Eth.). The pictorial blazings or notice boards of the Alaskans get definite formation to friends and travellers (Mallery, I. e.).

For the art, and, in the absence of other records, we therefore find a preponderating effect on the native peoples. The surpising, as though it were due to the vast importance they play in the life, thought, and feeling of mankind. From the nature of the case that aspect of sympathetic magic known as 'homopathic' lends itself to artistic treatment rather than does the 'contagious.' The representation of an object is as effeclual as the object itself; and as there is virtue in words and power in a name, so there is efficacy in a pictograph, which, after all, is a graphic as opposed to an oral or written expression. According to von den Steinen in Unter den Naturvélker im Blosse (Mallery, Fourth and Tenth Ann. Rep. Bureau Eth.). The pictorial blazings or notice boards of the Alaskans get definite formation to friends and travellers (Mallery, I. e.).
groups of five knobs or two intersecting squares; all these indicate the five fingers or finger-tips, which are employed in a gesture to throw back the harmful gaze of those who possess an evil eye. Similar designs and representations of eyes, often as triangles, decorate saddle-cloths, pottery, money-boxes, leather pouches, etc., and are embroidered upon or woven into the garments of the people, so that at all times and from all points they, their animals, and their personal effects may be protected from premeditated or casual harm.

Profof Lartigau says of the decorative art of Ancient Egypt: 'The object of decoration was not merely to delight the eye. Applied to a piece of furniture, a coifin, a house, a temple, decoration possessed a certain magical property, of which the power or nature was determined by each word inscribed or spoken at the moment of consecration. Every object, therefore, was an amulet as well as an ornament.' (quoted by Goodyear, The Architectural Record, iii.). The lotus is the parent, writes Hamlin (Architect. Rec., vi.), of a greater number and variety of ornament-forms than any other motif known. It was the most conspicuous and beautiful flower known to the Egyptians, and its intrinsic decorative value, as well as its importance in their mythological symbolism, gave it an extraordinary vogue as an ornament. Associated as it was with Horus and Osiris, with the idea of Nature's reproductive power, with the life-giving Nile, and with all the solar elements of Egyptian mythology, its use as a universal symbol is not surprising, when we consider that it underwent the operation of that universal law by which ornament forms lose in time their original significance and receive new and diverse applications. Hamlin also states that symbolism alone does not sufficiently account for the fact that four-fifths, perhaps nine-tenths, of the ornamental patterns of Egyptian art are based upon the lotus; the real reason for the extraordinary vogue of this single motif is to be found in the decorative possibilities of the type itself. The lotus as a flower has been and is still found in the vegetable kingdom, and it was also largely employed in funeral rites, and also symbolized the resurrection; but this latter idea was associated in the Egyptian mind with reproductive power. As the intensely religious and superstitious Egypian, in common with the problems of death and elevated by the prospect of immortality, it is not surprising that the flower which symbolized the resurrection should be depicted in such profusion in their tombs and elsewhere. How the Grecian artists borrowed this motive and transfigured it, how it was still further modified by the Romans, and how it spread to the British Islands through Celtic and Scandinavian channels, has been described by Gombrich (Architectural Aspects of the Grammar of the Lotus), Hamlin (loc. cit.), Colley (Journ. Roy. Soc. Ant. Ireland, 1894-1895), and Haddon (Evolution in Art).

Whereas, for our present purpose, magic may be regarded as a direct action by means of which man endeavours to accomplish his desire, religion is the recognition of some outside power or entity who can give aid directly or indirectly, or with whom an emotional relationship has been established; though it is not always easy to distinguish between magic and religion. In a paper on the decorative art and symbolism of the Araucanos, who are typical Plains Indians of the W. Algonquin linguistic stock, Kroeber informs us (Bull. Am. Mus. Nat. Hist. xviii. pt. 1 [1902]) that the closeness of the connexion between the symbolism and the religious life of the Indians cannot well be over-estimated by a white man. Apart from the decorative symbolism on ceremonial objects, the making of what have been called tribal ornaments is regularly accompanied by religious ceremonies. Some of the types of patterns found on these ornamental and pfeifaches ('rawhide bags') are very old and sacred, because originating from mythic beings. A considerable number of objects are decorated according to dreams or visions. Finally, 'all symbolism, even when decorative and unconnected with any cult ceremony, tends to be to the Indian a matter of a serious and religious nature' (Kroeber, loc. cit. p. 150).

While totemism is largely a social factor, it has a religious aspect which is often not far removed from magic. When a people is in the totemic stage, the human members of the kin or clan are prone not only to carry about with them or portions of their totem, but to mark their body by paint, scarification, or tat with realistic or conventional representations of their totem. Not only so, but they may decorate their personal belongings with their totem (cf. Spencer and Gillen's Native Tribes, and Northern Tribes, and the Reports of the Comb. Anth. Exped. to Torres Straits, vols. 1-2, 1898-1901). The totem, like the totemistic people, frequently engrave bamboo, tobacco pipes, drums, and other objects, representations of their respective totems; almost without exception the latter are animals. Not only the totem animals themselves are pictured, but also objects connected with them, as well as of which there is no evidence that they ever were totemic. In this case it would seem that the habit of animal-drawing has been extended from totems to a few other forms. On the adjacent mainland of New Guinea, and in the islands of Melanesia, totemism, or 'system of descent' as it is called, as well as of which there is no evidence that they ever were totemic. In this case it would seem that the habit of animal-drawing has been extended from totems to a few other forms. On the adjacent mainland of New Guinea, and in the islands of Melanesia, totemism, or 'system of descent', is carried on with just as much frequency as in Australia. In the Fly River, plant totems greatly preponderate, and certain pipes and drums brought from some little distance up that river are decorated solely with plant motives. It is only when we come to the opposite extremity of British New Guinea—the Milne Bay district—and the neighbouring archipelagoes, that we again meet with animal forms, more especially birds, frequent in decoration, carved reliefs of them, and also represented as human figures. The representation of animals occurs (Stephen, Südsee-kunst, 1907). It would be safe to say that where totemism exists there is usually an expression of the cult in decorative art; but it would be very rash to assume totemism wherever we find representation of animals or plants.

Throughout the greater part of America the belief in guardian spirits has led to representations of the ma'at, warahi, okki, sulen, maguy, or by whatever name it may be known, is this the case along the North-West Coast, where blankets, boxes, hats, spoons, pipes, as well as the so-called 'totem posts,' are decorated or carved with representations of the guardian spirit of the owner or those of his ancestors. Though highly esteemed and jealously guarded crests and emblems originated among the Sulich, according to Hill-Tout (Trans. Roy. Soc. Cornwall, sect. ii. 1901), from two sources. The crest springs from pictographic or plastic realization of the sulen or 'dream-totem,' and the other set of insignia are symbolic records of some event or adventure more or less mythic in the life of the owner or of his ancestors from whom he inherits them. In neither case do they regard themselv-
as descendants of their ‘totems.’ Speaking of the more northern of the North Pacific group of peoples, Boas says (Rep. U.S. Nat. Mus. 1895–1897) that each man acquires a guardian spirit, but he can acquire only such as belongs to his clan; thus a person may have the general crest of his clan, and besides use as his personal crest such guardian spirits as he has acquired by his own efforts. This explains the great multiplicity of combinations of crests on the carvings of these people.

Totemism frequently gives way also before an ancestor- or a hero-cult, and thus the human form must be invariably attended by a symbol or a totem. In the Papuan Gulf district the great bulk of decorated objects are ornamented with representations, sometimes highly conventionalized or degraded, of the human face (cf. Dec. Art Brt. New Guinea). In this district, at the imitation ceremonies, masks are worn to simulate the ancestral gods, and build-roarers are whirled; these and other ceremonial objects, as well as the carved wooden belts that only warriors may wear, are decorated with faces or figures of the same apotheosized ancestors. It is a fact that the only region of British New Guinea where ‘gods’ have been evolved (Holmes, JAI xxxii. 429 ff.) and at the same time it is the only district where the human form or face enters at all prominently into the decorative art of the natives, but here the human face is the dominant motive. It is interesting to note that, while animal forms are common in art in the extreme west and east of British New Guinea where totemism is rife, and the human face in the Gulf district where there are ‘gods,’ in the central districts, where, so far as is known, there is no religion as defined above, the decorative art is devoid of animal or human representations, and is characterized by ‘geometric’ designs. While an ancestor-cult may develop into the worship of gods, the same result may be arrived at by other roads. In Torres Straits a hero-cult, presumably introduced from New Guinea, had invaded the original totemism, and we can trace the amalgamation of the old cult with the new, and its final disappearance, and replacement by the higher religion. In the intermediate stage we are thus faced with an amalgamation of the totem animal with the human hero. In the ritual this was symbolized by the wearing of masks of animal form, or of part animal and part human form. The same occurs also in the Papuan Gulf district, where animal and human attributes are represented pictorially. There does not appear to be any record of a totem animal actually becoming metamorphosed into human form. It may have occurred, but, judging from the Papuan evidence, it is more probable that a substitution took place owing to contact with an ancestor- or hero-cult, and during the transition the demi-god would partake of his double ancestry. In this way we can explain the beast-headed deities of ancient Egypt and the religion of ancient Greece had its origin in totemism may be admitted. The ox, the mouse, wild beasts and birds, and similar associates of the Olympian hierarchy, whatever they were to the enlightened pagans who endeavored to rationalize and even to spiritualize them, are to us milestones which mark the road traversed by Hellenic religion; the Egyptian had been petrified at an earlier phase. When gods had been evolved, it was very important for men to retain the remembrance of those family ties between themselves and mankind which were in danger of being snapped through the length to which they were drawn and the degree of attenuation which consequently ensued. The traditions of statement as to the descent of mortals from gods are reinforced by the representations of artifices of the unlettered races, just as they are enshrined in the written cosmogonies of more cultured folk, the main difference being that anybody may understand the one if he knows the written characters, whereas the other is practically a pictograph, and requires the interpretation of the natives who have the traditional knowledge of the symbols. We are probably justified in assuming that very early in the history of the custom, and partly accounts for the great multiplicity of combinations of crests on the carvings of these people. Gill states that significance is usually attended by a symbol or totem. In the Jotings from the Pacific, 223). Several investigators have studied the peculiar wood-carving of the Hervey Islanders (Haddon, Evolution in Art), and many of the designs can be shown to be modifications of the human figure. Stolpe says: "Ancestor-worship is a characteristic feature of Polynesian religion. The souls of the departed become the guardian spirits of the survivors. Their worship demanded a visible form . . . it appears to me that the peculiarly hafted stone adzes of the Hervey Islanders are significant, and are especially connected with ancestor-worship, and that they were probably the very symbols under which this worship was performed" (Tamer, 1890, 232, 234). Colley March first suggested that the carved shafts of the sacred paddles and adzes were pedigreed-sticks, the patterns being the multitudinous human links between the divine ancestor and the chief of the living tribe (JAI xxii. 324). This seems to be a probable explanation of these beautiful carvings, which thus illustrate the origin of man from his god, and his continued connexion with and dependence upon him. What more can religious art teach?

Symbolism is a universal method of religions expression, and most of the decoration in connexion with shrines and altars has this significance. Primitively this was entirely the case, and may be seen from the researches of Cushing, Fowke, Voth, Stevenson, and others on the religion and ceremonies of the Pueblo Indians of New Mexico and Arizona (2, 15, 21, and 23 RBEV; Field Columb. Mus., Anth. Ser. iii.; Journ. Am. Eth. Assoc. Arch. i.-iv.; Ancestor-worship, and JAI, various vols.). The sand-paintings, decorated tablets, and other ornamental ceremonial objects appear to be not merely representations of the desires of the worshippers, or pictures of the gods and their attributes, but practical instances of actual pictorial prayers. The Huichol of Mexico also spends a great part of his life at ceremonies and feasts, many of which are for making rain. Very important in the religious life of the Huichols is the use of the hikuli, a small cactus known in the south-western United States as 'mesal buttons.' The plant is considered as the votive bowl of the god of fire, who is the principal god of the Huichols, and it has to be procured every year, or there will be no rain. Hence conventional representations of the producing plant are placed on ceremonial objects or painted on the face. There are numerous other gods. Religious feeling pervades the thoughts of the Huichol so completely that every bit of decoration he puts on the most trivial of his everyday garments or utensils is a request for some benefit, a prayer for protection against evil, or an expression of adoration of some deity. As Lamboltz says (Unknown Mexico, 1903, ii. 294 ff.), the people always carry their prayers and devotional sentiments with them in visible form. They are as much as they are considered as rain-serpents, are in themselves prayers for rain and for the result of rain, namely, good crops, health, and life; also the designs on these objects may imitate the markings on the backs of the real reptiles. Of
similar significance are patterns composed of representations of conventionalized or vestigial double water-gourds, or of the tire-steel which represents the great god, or of the toto flower which grows during the wet, corn-producing season, and therefore becomes a prayer as well as a symbol for corn. The eye is the symbol of the understanding unknown things, and 'god's eyes' are commonly combined with other designs in woven patterns, in order that the eye of the god may rest on the wearer (Lamboltz, Memoire Am. Mus. Nat. Hist. iii.). Thus these people are literally clothed in prayers.

ART (American).—The art of the American Indians, like their architecture, is of many varieties and widely scattered. The chief forms are weaving, basketry, pottery, carving and sculpture, painting, metallurgy and jewellery, and mosaics, which may be taken up in the order named.

Weaving.—The art of weaving is found among many American tribes, particularly in the south and west, although some, such as the Apaches, are unacquainted with it. The material for the loom is very divergent in character. The Menonim, an Algonquian stock, form their thread from the inner bark of young basswood sprouts, while the southern and south-western tribes use cotton, and the KwakiiUtis of the north-west coast employ wool, hair, and even birds' feathers. The fabrics produced by the looms of the American Indians are of extreme closeness, and the colours are very gaudy, although the blankets for ordinary use are dark blue and white, or black and white, or are even left the natural colour of the wool. The figures, both in the Navaho blankets and in the closely related Hopi work, are frequently elaborate, and the effect is pleasing. It is among these two tribes, indeed, that weaving is best developed in North America. The native colours of the Navahos, who are fond to make the blankets of personal adornment impervious to rain, are red, yellow, and black, but here, as in the Orient, chemical dyes have largely impeded the excellence of native workmanship. Most of the weaving is done by the squaws, who make up their designs largely by lines and straight lines, as they go along, occasionally tracing model patterns in the sand. Considerable symbolism attaches to the designs. The square with four knot corners represents the four quarters of heaven and the four winds, thus corresponding to the use of the svastika in America; while the two crosses is a symbol of protection and a prayer to the Great Spirit. A spiral is said to typify the purified soul and a double spiral the struggles of the soul. The ear, if like man, may have a religious significance; so that black is the symbol of death (as indicated by wavy lines), or the female principle, and red the sign of fire, the male element. The Chilkat blankets of the Alaskan coast, woven in elaborate and artistic figures, with a warp of cedar-twine and a woof of mountain-goat wool, are also important in this connexion. The designs on these blankets, as might be expected, are very like those on the totem-poles and other carvings of the north-west coast. The natives of the Aleutian islands were also acquainted, and even made cotton puppets in which the bones of the dead were placed. Among the Aztecs weaving was highly developed, a conspicuous part of the adornment of the warriors being mantles of woven feathers, decorated with the art which was a national characteristic of this marvellous people.

The most striking remains of ancient American Indian weaving, however, which even include lace and drawn work, are those preserved in the great Peruvian necropolis of Ancon, near Lima, where the elaborate forms of Peruvian civilization and richness of the colouring surpass all other examples of American textile art (see W. Reiss and A. Stuber, The Necropolis of Ancon in Peru, tr. by A. H. Keane, 3 vols., Berlin, 1880-1887).

The general course of development of weaving designs among the Peruvians is thus summarized by W. Reiss and A. Stuber (Art, 1893, pp. 222-268): 'Les têtes les plus simples ont pour ornements de simples lignes droites parallèles ou des lignes croisées. Cependant ces deux développements, bien que d'abord les lignes croisées, et puis petit à petit nous trouvons la reproduction de motifs, de poisons et d'animaux, pour être élever finalement à la représentation de l'homme. C'est ainsi que le crâne devient une personne à gradins, que l'ail devient un rhomboide, le nez un triangle, la bouche un quadrilatère.' Yet, despite the restrictions necessarily imposed on Peruvian art by the demands of large conical objects, they have a distinct charm, and frequently suggest in many respects the products of the Orient.

Mention should also be made, in connexion with weaving, of the bead-work of the American Indians. The primitive bases of this form of art in many tribes have been pebbles, seeds, nuts, claws, teeth, and similar objects of adornment, which continued to be employed side by side with the more artistic beads. 'Beads of marine or fresh-water shells were made by grinding off the apex, as in the case of dentalium, or the unchanged shells of bivalves were merely perforated near the hinge. Pearls were bored through the middle, and shells were cut into disks, cylinders, spheres, spindles, etc. In places the latter are removed and pierced through the long diameter for stringing. Bone beads were usually cylinders produced by cutting sections of various lengths from the thigh or other parts of vertebrate skeletons' (Mason, in Hodge, Handbook of American Indians, i. 138). Ivory and amber beads were used by the Eskimos, while turquoise was carved into ornaments in the south-west, in Arizona, and in New Mexico. The principal uses of beads were for the decoration of vessels and of articles of dress, as insignia of office, as records of intertribal treaties and other important events, and as money. In the last two uses the strings of beads are known as wampum. The value of beads naturally varied considerably. Pink shells were especially prized, while in New England dark purple wampum was made from the small round spot in the inside of the quahog shell. The northern Pacific tribes affected dentalium shells. But here, as in blanket weaving, the invasion of the whites brought modification, and glass beads and silver coins (the latter particularly among the Navahos) are now extensively worked up into ornaments. Woven beadwork is found among the Sioux, Winnebagoes, Apaches, and other tribes, the latter being more profuse in design, while the Winnebagoes and others are noted for their designs of flowers and animals. Closely akin to beadwork is quillwork, especially among the Plains Indians (now done in its purity in the north-west coast, and the northern Athapascans), which, in its turn, is supplemented by featherwork, the latter carried, as already noted, to its highest perfection among the Aztecs.

Basketry weaving is largely the work of women among the American Indians. Its forms are classified by Mason ('Aboriginal American Basketry,' in Report of the United States National Museum for 1895, pp. 222-258) into
woven and coiled. The former is subdivided into checker-work, twilled, and wicker-work, wrapped, and twined, the latter further occurring as plain twined, twilled twined, crossed or divided warp with twined work, bird-eye weaving, and various forms of three-strand twining. Coiled basketry includes only basketry, and work without foundation, simple interlocking coils with foundation, single-rod foundation, two-rod foundation, rod-and-splint foundation, three-rod foundation, splint foundation, grass-coil foundation, and Fuegian stitches (the buttonhole stitch). The forms of the Pomo or basketry may be various, ranging from flat trays, as among the Tules of Central California or the Hopi food trays, which are little more than woven mats, to the elaborate water jugs of the same Hopis. The baskets are richly adorned with shells, beads, feathers, and the like, as well as coloured with dyes and painting, and interwoven with materials of different colours.

Basketry is used in America for the most varied purposes, as for transportation, cradles (especially on the Pacific coast), amour (as among the Massa-womekuk of California). Particularly the baskets of the Thilkinets, Huayas, and Hupas of the west coast), preparing and serving food, building (as among the Pomo of northwestern California), furniture, trapping, general use in burial, and so on. Basketry plays an important part in the ceremonial of the Hopis, as in the 'basket-dances,' the same tribe also including among its masks some made of basketry. The decoration on North American basketry is reduced by Mason (op. cit. p. 206) to the following motifs: lines in ornament, squares or rectangles, rhomboidal figures, triangles, polygonal elements, and complex patterns. Here the type of weaving adopted necessarily conditions the general style of decoration, the simplest being that obtained from checker-work, and perhaps the highest being such coiled basketry as that of the Salishans and Tules. The decoration thus obtained may be heightened by the use of colours and by the addition of feather-work, bead-work, shell-work, and the like. But to convey an idea of the vast variety of design and colour of American Indian basketry without several hundred illustrations would be impossible, and reference can therefore only be made to the monograph of Mason already cited. Bank (op. cit. pp. 545-548), as well as to his Indian Basketry (2 vols., London, 1905).

Allusion has been made to the fact that basketry is employed in ritual, particularly in the Hopi women's festivals, celebrated in September and October respectively, of Lalakonit and Owakonit (Fewkes, in 21 RB EW pp. 22 f., 83). Symbolism in American Indian basketry is now confined to the northern part of the continent; yet, even among these tribes and stocks which now show merely decorative designs in their basketry, symbolism still exists, 'for with Algonquin, Siouan, Kiowan, the substitutes for basketry, rawhide receptacles, as well as mocassins, cradles, and objects in three dimensions, are covered with idealism in painting and embroidery' (Mason, op. cit. p. 318). The chief modern symbolic basket-makers are the Hopis, the Thilkinets (cf. the similar designs on the Chilkat blankets), the Salishans, and the tribes of the northern California and southern Oregon. It must be borne in mind, however, that the same design may represent totally different conceptions among different tribes, and that the conventionalization is carried to such an extent that only the makers themselves can truly interpret them, for 'to a Chilcotin symbolism fully one must know the sign, hear the story, and then study the skies, the landscape, and the social environment. To attempt to discover an alphabet in this primitive art would be useless, for each tribe adapts old and new standard forms to its own concept myths' (Mason, p. 315). From the wealth of symbolic baskets allusion may be made to representations of the Corn Maiden (Palalakoa manu) on Hopi pottery, and the various birds and flowers depicted on trays of the same marvellous people, as well as to Navaho baskets with four crosses which give a double symbolism of the four cardinal points. Here the colours also are symbolic, and it is interesting to note, in this connexion, that according to J. W. Hudson (quoted by MS. Mason, op. cit. p. 328), the following colour symbolism: red, bravery, pride (personified by the woodpecker); yellow, amatory success, gaiety, fidelity (lark); blue, demoniac cunning, prudery (jay); green, astuteness, discretion, watchfulness (duck); black, conjugal love, beauty (quail); and white, riches, generosity (wampum). The ovastika and labyrinth motifs are also found.

The relative perishability of basketry is obvious; and it is equally apparent (particularly in the northern) that it was far more widespread in America than the extant remains would imply. It existed, for example, among the Pequots of Connecticut and the tribes of Virginia; fragments are found in the mounds of Ohio; and the means of its existence in the Mississippi valley will be noted in the following section. Baskets were likewise known, according to the early explorers, among the Antillians, some of them so interwoven with leaves as to be water-proof. Not only were baskets used in many religious ceremonies, but, like the Orinoco tribes, the Antillans often preserved the skulls of the dead in baskets made specially for the purpose.

Throughout South America basketry is found. Thus, the Indians of Guiana make excellent baskets, which they adorn, as in North America, with geometrical figures. Along the Amazon the baskets receive their ornamentation primarily from the rectangles formed in weaving—another interesting proof of the influence of the older on the younger art. Of these designs, which are noted, are extended to painting and drawing, and are apparent even in the drawings of men, fish, and birds made by the Indians of this region (Schmidt, Indianerstudien in Zentralbrasilien, by Pirro, 1903, pp. 65-69), while some of the wooden masks of the Amazonians resemble those in their ornamentation obvious analogues with the more primitive woven masks. Of Peruvian basketry many specimens are known, particularly from the great necropoleis, but they present scarcely any features not already known from North America.

3. Pottery.—The first utensil for holding water, grains, etc., at least in some cases, was the gourd, which was often slung in basketry for convenience, as in the South, reinforced with thongs of sinews, or, in the North, with earth or clay. It is not impossible that when these clay-covered gourds were left in the sun, the gourds were found to crack, while the clay became hardened. For a time pottery was accordingly made by covering gourds and basketry with clay, the former being destroyed by heat, and the latter retaining, in its hardened form, its original shape and the markings of its former mould. Still later, the mould was no longer used, since clay containing sand, or particles of shell could easily be formed into the familiar shapes, and baked to the requisite firmness. It is significant, in this connexion, that the Navahos still term earthenware pots kle-it-tsa, or 'mud baskets,' thus recognizing the fact that American pottery is a direct development of basketry. In the further course of development, resoundous gums were put on the
clay vessels while still hot, thus forming a glaze which enabled the otherwise porous receptacles to hold liquids. As pottery gradually evolved, moulds were dug in the ground, and clay ovens were constructed in the hill-sides. The coiled basketry, noted above, also finds its application in pottery, as among the Hottentots, who both coil ropes of damp clay around a wicker nucleus and construct similar vessels by freeland modelling.

It has already been stated that basketry was more wide-spread in America than the extant remains would indicate, and proof of this is afforded by many specimens of the pottery of the Mississippi valley, where casts taken of the clay vessels reveal the pattern of the basket shell on which they were constructed. There is, however, no decisive evidence that the potter's wheel was known in aboriginal America.

Pottery was primarily used for storing, cooking, and transporting food and water, later being used in religious ceremonial, and formed into various fancy shapes, as masks, gaming implements, and even toys. Burial urns are also found in the Mississippi valley, and clay pipes are common, particularly among the Iroquois. In general, it may be said that the pottery of North America developed, in its distribution, in relation to local and ceremonial uses, as one goes north toward the east, until among the Eskimos it is represented only by lamps of the rudest description. The farther south one proceeds, on the other hand, the more abundant and diverse the pottery becomes, thus further exemplifying the fact that the peoples of Mexico, Yucatan, and Peru stood at the acme of all pre-Columbian American civilization.

Pottery is a characteristic, moreover, of a sedentary people, and would be found less, of course, among the comparatively nomadic stocks and tribes of the northern parts of the American continent.

The shapes of the pottery of North America are numerous and, in many cases, artistic. Vases, dishes, and cups occur with especial frequency, either plain or with handles, the vases being both completely open and partially covered at the top. Bottles have also been found, as in Arkansas, and early writers on America relate that they saw earthenware drums in use, these, as far as can be ascertained, were made by the earthenware rattle used in the ritual, as by the Pueblo peoples. At least one case of earthenware burial-caskets is known from Tennessee, and funeral jars with obvious death-masks are not uncommon in the Mississippi valley. The ethnical values of the pottery needs no comment. Frequent and most interesting forms of pottery are the figurines of fish, turtles, birds, and animals. It is noteworthy that these figurines are restricted to Pueblo Indians, who, indeed, represent the zenith of American pottery north of Mexico. It would be impossible within reasonable limits to give any detailed account of the forms of either construction or decoration of American pottery, whether in the northern or southern aspect. Primitive specimens of North American pottery there were merely marks of the wicker mould. The early ornament of the coiled clay vessels was, as might be expected from their form and method of construction (see above), a direct imitation of the patterns of the basketwork vessels. With further progress the impress made by the fingers of the designer gradually came to have regular modifications, which resulted in producing artistic patterns of more or less regularity. The rope coils, as first pinched involuntarily, were later purposely thus modified into regular designs, a Pueblo pot, for example, having the pinch marks so obliterated as to leave rows of triangles attached to each other at the corners. Various tools were likewise employed, pointed ones for incising and gouges for scraping, as well as many varieties of stamps for impressing designs upon the clay before baking.

Examples of fictile ware have been found, especially in Arkansas, engraved, after being burned first, with designs of true artistic merit.

The most common mode of decorating pottery, however, was to give the vessel a wash of fine clay, which was painted in various colours and designs, as well as polished, before the pottery was finally burnt. This was particularly the case among the Pueblo and Arkansas Indians. There is a wide range of colour, especially white, black, red, brown, yellow, and green. The designs are so numerous as scarcely to admit of classification; but as the material of baskets led most easily to the production of right-angled decoration, so in the pottery circles and curves form a prominent feature. At the same time, angular designs are not uncommon, doubtless derived from basket patterns; and both angular and curved decorations appear with great frequency on one and the same specimen. While many of the patterns are purely ornamental, and while representations of birds and animals seem, at least in many cases, to be simply decorative, other figures on Pueblo pottery show a high degree of symbolism. The chief symbols used by the Indians of life occur, for instance, on a food bowl from Chevelon, which site also shows raincloud symbols on another bowl. The raincloud symbol, indeed, is well-nigh as important on Pueblo pottery as in the ritual of the ancient kindred tribes. The chief raincloud symbols in the modern Hopi ritual are the rectangle (usually appearing as a stepped triad), the semicircle (also usually in triads), and the triangle. These and similar symbols occur less commonly among the comparatively nomadic tribes of the northern parts of the American continent.
was apparently made with the same instrument as the line itself; or it was sometimes slightly separated from the end of the line' (Fewkes, in *Z 1901* p. 180). Pottery from St. Kitts, on the other hand, shows red ware with a fine superficial polish and incised lines filled with white pigment. Among the tribes of this region, the most famous are those known among the South American Indians of the central Andes and Guiana, the latter tribes adorning their pottery with juices extracted from the bark of various trees, thus making crude designs of animals or geometric figures in red, brown, black, and other colours.

Carving was carried to its highest development among the Aztecs, Zapotecs, Mayas, and kindred peoples. There not only vessels of various exquisite shapes and of a noteworthy degree of finish were made, but also elaborate funeral jars and water-pipes, and life-size figures of terra-cotta. Some of the Zapotec funeral urns are 20 inches in height, and are fashioned in the conventional forms of the sculpture of this region—a feat all the more difficult when the material used for the modelling is borne in mind. Among the Aztecs elaborately finished ware is found in Peru. Dishes and vases of all shapes, some of them of great intricacy of design and decoration, are found in large numbers. The forms of various fruits, animals, birds, reptiles, and fish are represented among the terra-cotta and clay vessels in human shape abound. The most important of the latter class are those which represent the head only; and while many are evidently conventional, others are plainly intended for portraits, and are thus valuable for a study of ancient Peruvian physiognomy. Groups were also represented; and fidelity to nature, which was the aim of the ancient potters of Peru, was increased by making some of their vessels a kind of mechanical toy, which could give a sound imitating the cry of the animal or bird represented, similar figures also being found in Central, and even in North America. A noteworthy form of Peruvian pottery was the water-jar, an article of prime importance in so arid a country. One of the chief forms is the twin bottle; and it has been suggested that one reason for the intricate shape of many Peruvian jars was the desire to prevent insects, etc., from finding their way into the interior. The pottery was often painted or engraved just as it was to be carved; after the clay had been mixed with powdered ashes, carbon, or graphite, while in more common ware chopped straw was also employed. The decoration was, for the most part, purely conventional, although important exceptions are not lacking. The symbolism, which may well have existed, is not as yet worked out.

4. Carving and sculpture. —The carving and sculpture of the American Indians are still more limited than pottery in territory. This is but natural, in consideration of the fact that wood and stone are far less tractable than the clay of the potters. Excepting on the north-west coast, sculptured figures are rare, although a few rough heads have been found as far east as New Jersey. Among the so-called 'mound-builders' the tobacco-pipe attains a considerable degree of artistic development, and among the Eskimos rude carvings on ivory, copied in the scrimshaws of the whalers, frequently represent the forms of animals and other objects with remarkable fidelity. In the Mississippi valley gorgets have been discovered, which, in some cases, are curiously similar to Aztec work. Rude shell masks are also found, some as far east as Virginia. The most important specimens of North American Indian carving, however, are found among the tribes of the north-west coast, such as the Haidas, Thlottcns, and Kwakitts, who are also skilful engravers on slate and metal. The totem-poles of these tribes are most elaborate, and are sometimes covered almost to their full height, which frequently reaches 50 feet, with representations of totemistic animals, birds, or fish. In addition to the totem-poles, the posts of the houses on the north-west coast are also elaborately carved, and in the South-east are sometimes gaudily painted in red, yellow, black, and other primary colours. Here, too, belong the wooden masks of the same tribes, which, like the totem-poles and the carved posts supporting the main rafter of the house, have religious significance, and suggest in this connexion the Totem poles of North America and the Chillkit blankets. The Haida canoes are also elaborated, carved, and decorated with totemistic and other religious designs. The Pueblo Indians, so advanced in other respects, were singularly deficient in carving and sculpture, and there is a wide extent of territory from the Haidas to the Aztecs (except for a few stone whale-killer figures among the Santa Barbara Indians of the southern California coast) before any real examples of these arts are found. Only the Toltecs, Zapotecs, and Mayas, moreover, that any carving or sculpture is found actually to be artistic. The elaboration of the Aztec calendar stone and of the sculptures of Palenque, Chiriqui, and Copan are unsurpassed in any part of the American continent, being unequalled to Peruvian art. Individualistic statues, likewise, occur in these regions, and the walls of temples are elaborately sculptured. The close connexion between sculpture and painting is exemplified in the resemblance of the carved figures to the pictures in Aztec and Maya manuscripts. Carving in wood was known in ancient Mexico, but naturally few examples of it have survived. Large stone figures are found from Mexico to Nicaragua, terminating, towards the south, in the idols of Zapatero and Penasco and elsewhere, some of them 12 ft. high. They are, however, rude in structure, and far inferior to the polished productions of the Mayas. The archaeological remains of Porto Rico and the neighbouring islands, which have become known from the more recent excavations, for example (Hulse, in 1904 (contained in his 'The Aborigines of Porto Rico and Neighbouring Islands,' in *Z 1901* pp. 3-220), give some striking contributions to American art from a region hitherto imperfectly understood. In the former, the clay of the Guarico is used, and it is thought, as in South America, for pillar stones (generally with rough and grotesque attempts to represent the human form), and rude wooden idols (some possibly imported by the Spaniards from Africa for the negro slaves), there are three classes of sculpture which are apparently peculiar to this region. These are three-pointed stones (either plain or with faces of birds, beasts, reptiles, or men, restricted thus far to Porto Rico and the eastern end of Santo Domingo), stone 'collars,' and 'elbow stones.' The first are regarded by Fewkes as 'clan images of tutelary totems, fastened to some unknown object; and the third class may have been connected with the 'collars' (op. cit., pp. 173-174). There thus remain the 'collars,' which are either massive ovals or slender ovates, and either partially decorated or plain
Their use is entirely problematical (cf. Fewkes, op. cit. pp. 167-172); but similar objects have been found in Totonac ruins in eastern Mexico. They are accordingly held by Fewkes (22 REEL, pp. 251-201) to be connected with the Aztec 'sacrificial yokes,' which he seems inclined to regard as fertility symbols (cf. the more conventional view advanced, perhaps incorrectly, by the present writer in art. ALTAR [American], above, p. 336). At all events, the problem of the real meaning of these 'collars,' which measure as high as 19 by 17 in., can as yet scarcely be said to be solved.

Turning to South America, one finds rough carvings on trees among the Indians of Central Brazil, while their chairs are made in the shape of birds, and they have vessels in the form of various birds, lizards, fishels, and tortoises. On the Chaco, on the other hand, art consists only in scratching natural objects roughly on gourds and making rude topographical scenes (Grubb, Among the Indians of the Paraguayano Chaco, London, 1903, p. 98). Among the most remarkable sculptures, if such they may be called, of the South American Indians are those of the natives of Guiana. One of the most typical of these is on Temehiri Rock in the Essequibo, and in height must be better feet in length, by five feet seven inches in width. The carving represents a number of figures of men, monkeys, snakes, and the like, and also has simple combinations of two or three curved lines. The figures are in all cases extremely crude and sculpture, and though they are sometimes painted instead of carved. Some of these carvings are of comparatively recent date, for one at Ilia de Pedra in the Rio Negro represents a Spanish galley (cf. Im Thurn, Among the Indians of Guiana, London, 1883, p. 390-400). The sculptures of the ancient Peruvians, although naturally superior to any others of the South American continent, were, as already noted, far inferior to the work of the Aztecs and their neighbours. Expert cephaohoeceans though they were, they were but indifferent sculptors, and even the few specimens of wood carving which are still extant are but rough work. Like the Central Brazilian Indians, the Peruvians paid considerable attention to their pottery, and much has been preserved which are supported by figures of some artistic merit. Chairs of similar form are also found in Nicaragua and Porto Rico. A few admirable granite heads have been found, as at 'Yasha'; and the fountain of Quonmacha, is, according to the traditions, a raft of which the head and foundation is raised as a pyramidal idol, now at Collo-Collo, and the shapelessness of the granite statues of Tiahuanaco, when contrasted with the Maya sculptures of Copan, bespeak most clearly the inferiority of the Peruvians in this form of art. The elaborate sculptures on the buildings, moreover, are far less frequent than among the Aztecs and their congeners.

3. Painting.—This art, at least in its crude forms, doubtless prevailed throughout most of the North American continent; but the best modern examples are to be found among the Indians of the West. The tribes of the west-coast, where, as just noted, carving in wood is relatively highly developed, paint their totem-poles, canoes, chests, batons, and other objects in gay colours, while the Hopis and other Pueblo peoples are also acquainted with this art, as is shown by the masks, often of leather or basketry, and garments used in the personations of the gods in their great winter festivals. In like manner, much of the pottery discovered in the 'cliff-dwellings' is painted, frequently in conventional designs of pleasing effect and with the general systems of symbolism noted above (p. 829). Among the Aztecs and related peoples the manuscripts still extant are painted with considerable skill, but with the high colouring characteristic of so much of early art. As to stone for their somewhat curious deficiency in painting, however, the inhabitants of ancient Mexico were noticeably for their skill in making pictures of trees and flowers, and even copies of European paintings, in mosaics of feathers, with a degree of excellence which aroused the admiration of the Spanish invaders (see above, § 1, and cf. Hodge, in Hodge, Handbook of American Indians, i. 455 f., and the bibliography there given). The Peruvians also possessed the art of painting; but among them, as among the Aztecs, it was undeveloped as compared with their achievements in other departments of art. Their representations of the human form, however, as is clear from their vase-paintings, were far superior to those of the Aztecs, and the same statement holds true in general with regard to all ancient Peruvian painting. The problem of symbolism here, as elsewhere throughout America, must be solved together with the interpretation of the pottery, basketry, and kindred arts. Outside the empire of the Incas painting seems scarcely to occur in South America. This, however, is by no means a pre-eminently a sessile art, and one which requires a considerable degree of civilization before it can be acquired with any measure of real merit. It is less utilitarian even than carving and sculpture, and though it is a later product, while it is still more tardy in development as compared with weaving, basketry, and pottery, and for a like reason.

Certain special forms of painting among the American Indians call for notice in this connexion. Of these the first is 'dry-painting,' which is practised especially by the Navahos, Apaches, and the Pueblo tribes of Arizona and New Mexico, and in ruder form by the Chichennes, Arapahos, and Siskalas. These paintings are used exclusively in religious ceremonies, as in the Hopi altars (see ALTAR [American], p. 336), and seem to be most highly developed among the Navahos. Here the paintings are sometimes 10 or 12 ft. in diameter, and are drawn on a rectangular board or upon the walls of a kiva. Working from the centre and according to the plan prescribed by the ritual (except in a few definite cases), the artist, in applying the pigments, * picks up a small quantity between his first and second fingers and his opposed thumb and allows it to flow slowly as he moves his hand. . . . When he makes a mistake he does not brush away the coloured powder, but obliterate it by pouring sand on it, then draws the correct design on the new surface . . . When it is finished, ceremonies are performed over it, and then with song and ceremony it is obliterated. When no semblance of it remains, the sand of which it was made is gathered in blankets and thrown away at a distance from the lodge. In the ceremonies of the Pueblo Indians a picture is allowed to remain seven days' (Matthews, in Hodge, Handbook of American Indians, i. 403 f.). The Hopis, unlike the Navahos, begin their dry-paintings at the periphery, commencing with the north; and when the painting is effaced, pinches of sand are used in its composition are deposited in certain spots prescribed by the ritual.

A sort of heraldry was perpetuated by means of painting, particularly among the Plains Indians. This applied especially to the *tipis and shields.
and involved certain tabus, while the basis of the design was drawn from the visions obtained by the young braves (cf. Communion with Deity [American Indian]). As in many other lands, the painting of the face and body was and is common among the American Indians. This may arise from the belief that, in some instances, or in certain parts of the country, it may have symbolism relating to religion, war, or social status. Thus, the Mandans often painted their bodies reddish brown and drew red or black figures on their arms, while their faces were coloured vermillion or yellow. These designs, being merely ornamental, might be painted at any time, but the transition from the ornamental is shown by the practice of the same tribe of painting the entire face black after performing an exploit (Maximilian von Wied-Neuwied, Travels in the Interior of North America, London, 1843, pp. 340-389).

Heardson (Exploration of the Valley of the Amazon, Washington, 1853, i. 201) describes a Conibo dandy as ‘painted with a broad stripe of red under each eye; three narrow stripes of blue running over the head from one ear, across the upper lip to the other—the two, and the one upper bordered with figures. The whole of the lower jaw and chin were painted with a blue clay-work of figures.’ Ritualistic face-painting is exemplified among the White Earth Ojibwas, of whom a description is given in Hearndon’s (American Anthropologist, 1888, pp. 209-229) account of the Ghost Society being indicated, according to Hoffmann (American Anthropologist, 1888, pp. 377-388), by a red stripe across the face from near the ears to the tip of the nose; the second by a similar stripe plus another across the eyes, temples, and root of the nose; the third by painting the upper half of the face green and the lower half red; and the fourth by painting the forehead and the left cheek green and impressing four vermilion spots on the brow and four on the cheek. The ‘war paint’ of the American Indians is, in general, either red or black, or a combination of both, and the same colours are frequently used for mourning (cf., in general, on American Indian face-painting, Mallory, in 10 RBEW pp. 619-634).

All clays could also be made into the pictographs which are scattered over North, Central, and South America. Since these are in great part mnemonic, chronological, or historical in purpose, or are intended to convey messages, notices, and the like, they will be discussed in connection with the subject of Writing (American Indian). Here, however, it may be noted that the artistic powers evinced in these pictographs (which are mainly petroglyphs) are decidedly primitive. Their interpretation, when they are not mere ornaments or idle graffitis, is often problematical, and requires, in many cases, a knowledge of traditions, local surroundings, and the like. An important class of pictographs is given in the representations of tribal designations (cf. the list in Mallory, 10 RBEW pp. 377-388) and see in general on this subject his ‘Pictographs of the North American Indians’ in 4 RBEW pp. 13-255, and ‘Picture-Writing of the American Indians,’ in 10 RBEW pp. 26-829. Illustrated for Porto Rico by Fewkes, in 25 RBEW pp. 148-169. They likewise symbolize personal names (Mallory, in 10 RBEW pp. 442-460), and religious symbolism is also prominent, being found not only in the Mexican pictographs from Cojiminojuk Lake, Nova Scotia, but also among the Ojibwas, Dakotas, and Haidas (Mallory, pp. 461-512). More than this, there are well defined pictographic signs for the mossatika, the sky, the heavenly bodies, day and night, lightning, eclipses, and meteors, and representations of figures (for the warlock) are also found (Mallory, pp. 694-735). The older American pictographs are naturally on stone and uncoloured; but bone, skin, gourds, copper, wood, and textiles also bear like figures, frequently in colours.

6. Metallurgy and Jewellery.—The Indians of North and Central America were acquainted with copper, silver, gold, iron, galena, lead, and tin, and the knowledge of the last two being restricted to the Aztecs, Toltecs, and Mayas. Nevertheless, the use of metal in personal adornment was comparatively rare in North America, shells, beads, and the like being used instead, although bracelets of copper were frequently worn and were highly valued, in spite of the difficulty of mining the metal in pre-Columbian days. The metals were worked chiefly by cold-hammering and grinding, but there is no evidence of a knowledge of casting. Silver is now worked with considerable elaboration among the Navahos, and bells of copper have been found in Tennessee, while elaborate sheet copper repoussé figures occur in the Etowah mounds, Georgia, and the Hopewell mounds, Ohio; and the copper ‘tokens’ of the north-west coast are famous in many ceremonies. The Aztec peoples were expert metallurgists, and their gold vessels and adornments were the marvel of their conquerors.* They imitated the forms of animals and birds, and manufactured personal Jewellery, often enhanced in beauty by gems. They likewise worked metal with hammer, anvil, and tin, thus forming a bronze of considerable hardness, while specimens of copper plating are known from the mounds of Florida, Alabama, and Ohio. Gold ornaments are also known from Florida and the West Indies. The metallurgical remains of the Peruvians include silver bracelets and collars; gold, silver, copper, and bronze vessels; and animals and birds, such as jaguars, deer, monkeys, and parrots, in copper, bronze, and silver, as well as human figures. Apart from this, however, South America falls behind the northern continent in the amount and excellence of metallurgical products and jewellery, as it does in nearly all other requisites and tokens of human progress in civilization.

7. Mosaics and Minor Arts.—The art of making mosaics was known especially in the Pueblo regions of Arizona and New Mexico and among the Aztecs. The modern products of the former region are much inferior to the ancient specimens, ‘which consist of gorgeous designs of birds, animals, and ...’ Turquoise was the favourite material, but bits of shell and various bright-coloured stones were also employed. The foundation form was of shell, wood, bone, and jet and other stone, and the matrix of gum or asphaltum. Although the work is neatly executed, the forms are simple and the designs not elaborate (Holmes, in Hodge, Handbook of American Indians, i. 947). Rude mosaics have been found in graves in southern California. One of the most interesting mosaic objects north of Mexico is a shell used as a pendant and found by Fewkes at Chaves Pass, Arizona, in 1896. This is a frog formed by inlaying turquoises in pitch on the shell of a Petenius giganteus, with a small rectangle of red Jasper set in the centre of the back (cf. Fewkes, in 22 RBEW, pt. 1, p. 86f.). Mosaics from Mexico have long been known, particularly a knife with a blade of semi-translucid chalcedony, the handle being a crouching man, clothed in an eagle’s skin, his head being formed from the beak, Manomina, Dakota, and Haidas (Mallory, pp. 461-512). More than this, there are well defined pictographic signs for the mossatika, the sky, the heavenly bodies, day and night, lightning, eclipses, and meteors, and representations of figures (for the warlock) are also found (Mallory, pp. 694-735). The older American pictographs are naturally on stone and uncoloured; but bone, skin, gourds, copper, wood, and textiles also bear like figures, frequently in colours.

The gold was an alloy of copper, varying from almost pure gold to almost pure copper; and to almost pure gold; and it was frequently coated (plated?) with pure gold. The technical processes used were exceedingly skilful, but what they were is uncertain.
double jaguar now in the Berlin Museum für Völkerkunde. This is described by Lehmann (in XV. Congress international des Américanistes, Quebec, 1907, ii. 340–344) as follows:—The figure is carved of tough reddish brown wood, 32 cm. long, 10 cm. high at the head at each end, one of which is turned towards the spectator and the other averted. The belly, which has no mosaic work, is painted with black and bluish green. The bed for the mosaics is a dark brown resin 3 or 4 mm. deep, and the stones themselves are either or greenish black or blue malachite, their shapes varying between polyhedrons, rectangular, and round, and all carefully polished. The neck and the extremities are almost covered with turquoise, and rossettes of the same material are evidently intended to represent the jaguar's spots. Rows of turquoise alternate with rows of obsidian on the body, and the ornamentation is enhanced by mother-of-pearl and bits of white, yellow, red, and violet mussel-shells. It would also seem that the eyes and nose were originally covered in part with gold-leaf (see in general on Mexican mosaics, Globus, 1906, pp. 318–322).

The account thus given of American Indian art, like that of the architecture of the same people, cannot pretend to be exhaustive. Besides the large categories here outlined, there were other arts, such as bark-work. This was used for cord, mats, receptacles of all kinds, dishes, canoes, and houses: for relics and for clothing, and for writing-tablets; and for religious dances regalia and masks (cf. Mason, in Hodge, Handbook of American Indians, i. 130–132, and the literature there cited). Among the more northern tribes of the Pacific coast bone is always regarded as important as bark, being used not only for personal ornamentation and as household utensils, toys, and fetishes, but even for weapons and in the construction of dwellings, canoes, and the like. Bones were elaborately carved, and were also inlaid by the ancient Pueblo Indians, while even a copper-plated bone has been found in a Florida mound (cf. the summary of Holmes, in Hodge, i. 159 f.). Horn was likewise sometimes employed, and remains of such objects are well known among the Spanish vessels.

The present writer’s thanks are due Mr. F. O. Von Arkel of Newark, N.J., for private information especially concerning pottery.

LOUIS H. GRAY.

ART ( Assyro-Babylonian).—The religion of the Babylonians and Assyrians, which, according to the received opinion, was animistic in its origin, may be regarded as going back to between 4000 and 5000 B.C. This long period, added to the nature of their faith, has supplied us with an enormous amount of material illustrating their religious art, which the student can trace, in all its variant styles, through the ages of its existence, noting the changes in religious thought which it reflects, and the reaction of its influence on the people themselves.

Before B.C. 4500 (as far as at present known) no monuments exist, so that there is practically no record of that animistic period in which the religion of the Babylonians had its origin. A wide gulfi

must therefore exist between the religious conceptions of the simple-minded savages of early Sunnernian and Semitic times and those of the men of even the remotest civilization of Babylon when works of art are found.

Babylonian religious art therefore comes before us only when it had attained a certain measure of perfection. It is true that a number of comparatively rude examples have come down to us, but such are a specialty of no particular age, and at all periods excellent examples, principally in stone, exist, amongst them the engraved seals, mostly cylindrical. Many good bronzes, too, have been found, some of them being as early as the 3rd millennium B.C.

In all probability the art of Babylonia is best divided into periods, though the schools of the various States (Ur, Erech, Akkad, Babylon, Lagas, etc.) could also be taken into account if we had sufficient material. With our present knowledge, however, it is often difficult to place the examples, and even the estimation of date is not without difficulties, as the chronology does not admit of a clear line of demarcation in the matter. The divisions, therefore, can be only roughly determined, somewhat as follows:

(2) Until the end of the dynasty of the Land of the sea (c. 1700 B.C. = Babylon, Sippur, Erech).
(3) The Kassite period (c. 1700 B.C. — 1100 B.C.).

(4) From c. 1100 B.C. until the downfall of the Babylonian empire (c. 530).

2. Assyria.

The artistic period may be regarded as extending from the 9th cent. or earlier (we await the results of the German excavations at Adur until about A.D. 2000 B.C. for this period). Though, like the art of Egypt, that of Babylon comes before us only when it had attained a certain amount of perfection, it is, in a way, more interesting than that of Egypt, in that it shows a much greater variety of styles; and the Assyrian school, when it comes into existence, has a distinct stamp of its own. We have also to distinguish, besides the perfect and artistic, the amateurish (which is sufficiently rare) and the rough and unfinished—generally cylinder-seals 'dashed off' by the hand of one accosted to do such work, and probably to be regarded as cheap productions from lower classes, who naturally needed things similar to those required by the well-to-do, though they could not pay the price. At all times these classes of religious artistic productions had existed, and among the perfect and artistic are now and then to be found things of noteworthy beauty of workmanship, due, doubtless, to the presence of artist-workmen of wonderful talent.

1. Babylon.—(1) Among the best of the earliest examples of Babylonian religious art are the very interesting cylinder-seals impressed upon tablets found at Tel-loh (Lagas) in S. Babylonia. They show a man and a woman, nude, the former struggling with a stag, and the latter with a bull, whilst the two lions, whose bodies cross each other, as in the case of the lions. The wide-open mouth of the man, the closed mouth and the large ear of the woman, suggest that we may have here primitive representations of the deities Nebu, 'the proclaimer,' and Tammuz, 'the bearer'; but the crowned with points which the woman wears is rather against this identification, on account of analogies elsewhere. Concerning the art here revealed, a few words may be said. The
animal-forms, especially the heads, are good, and the manes of the lions are well treated, but the human forms are less satisfactory, the body of the man being thick, and the arms in both cases abnormally thin. The head of the man regards the spectator, and, though too large, is more successful than that of the woman, which has the same length of neck and the same pointed nose, which makes the figure grotesque. The close-shut mouth (the line of the lips is invisible in the impression) and the abnormally large hair tuft on the crown and the wide-open mouth of the man, shows that the design has a deeper meaning than appears at first sight. This seal belonged to En-gal-gala, the superintendent of the women's house during the reigns of Lugalanda and Uru-ka-gina, about B.C. 4600.*

* Scenes similar to this are common, though no woman is shown as one of those struggling with the animals. From the same site, Tel-loh, de Sarzec expedition † obtained a very fine seal showing a bearded man struggling with a bull, and a bearded woman pulling on the hair of a lion. These animals cross each other like the lions in the other design, and the bull-men beneath the inscription of En-gal-gala's cylinder are replaced by two human-headed bulls, one of which is held by and the otherdivision by a bearded man, a bearded man. There is shown for an eagle, occupying the space between them. If the short inscription Nin-in or Ni-in, close to the crowned personage, refers to him, it probably represents the ancient deified king Ninus, who, with Semiramis, is said by Diodorus (i. 8, 6) to have been represented on the walls of Babylon in enamelled brick, hunting the leopard and the lion.‡ The objects here described suggest that there was not only a legend referring to the goddess Nina, patron of Nina on the Esphirates and of Ninisina in Assyria, but also a male deity of similar name. Semitic influence, with its veneration for the male, is probably the cause of the substitution of the male deity for the hearing but silent female.

The occurrence of these early designs on cylinder-seals reminds us of an important fact in connexion with Babylonian art, namely, that in Babylonia there is neither building-stone nor even blocks in any number suitable for sculpture either in relief or in the round. It is therefore impossible that the earliest works of art were those attempts at engraving, first as charms, and afterwards as charms and seals combined, on the cylindrical beads which were for many centuries the favourite forms of seal in Babylonia and Assyria, and which afterwards travelled to the extreme west of Asia and Egypt.

Presenting a large surface in a small space, these cylinder-seals became suitable for all kinds of pictures, and we find engraved thereon the Babylonian legends with which we have become familiar from the tablets. Thus it happened that, in a scene showing a nude bearded figure struggling with a bull which is being also attacked by a lion, we see a representation of a boat as a weapon, in the manner of which is generally supposed to show the Babylonian Noah in the ark. Several copies exist also of that exceedingly interesting scene which shows Etanna riding in the air upon an eagle, whilst people on the ground interrupt the holy work by gazing upon them.* Another noteworthy example is well known as a possible Babylonian picture of the Fall. It shows two personages seated one on each side of a palm-tree bearing fruit, and stretching forth their hands as if to grasp it, whilst behind the figure apparently representing the woman a wavy serpent raises himself. The work is rough, but implies some technical skill.†

Noteworthy are the early engravers' attempts to cope with the scene representing the overthrow of the dragon Tiamat by Merodach. The best is one figured by Haddan-Su of the wide-open mouth of the Babylonian pantheon is seen striding or running along Tiamat's wavy body, and thrusting his weapon into her mouth as she turns her horned head towards him. Two of Merodach's helpers seem to follow behind. Another picture of the same, which apparently of late date and Assyrian workmanship, shows the dragon with a long and straight, but apparently scaly, body, erecting herself at an angle where the feet spring forth. She does not turn her head towards him, and the god attacks her from behind with thumming weapons. The scene, although it is now understood before him, seems to partake; and on the left another deity bending down a tall thin tree apparently to conceal a goddess and a (? child) deity coming forth from its trunk (cf. the classical story of Adonis [Ovid, Metem. x.]). All the figures on this cylinder-seal (even that of the owner) wear the horned hat indicating divinity.

The design in the right-hand division, which shows the owner of the cylinder before the god whom he worshipped, is probably, in its various forms, the commonest found, especially in the period preceding 2000 B.C. The deity is generally seated, and often holds a cup in his right hand. Before him is sometimes a vase, and the worshipper (the owner of the seal) is led into his presence by a divine personage. A divine attendant sometimes brings up the rear.* The worshipper is generally bare-headed and clean-shaven, the latter peculiarity probably indicating his priestly office.** Variants of this oft-repeated design are found; one, which is regarded as exceedingly ancient, is a fragment of a last-relief †† showing a seated deity in his right-hand, and wearing on his head a hat with two horns, one at the front and the other at the back, instead of one or more on each side, as in the later designs. The work is rough and primitive, the artist having apparently found his material not altogether satisfactory (it is a calcarceous limestone, probably of sufficient hardness to make its working difficult).*

‡ L. W. King, Babylonian Religion, p. 102.  
§ Découvertes en Chaldée, pl. 50 bis, 157. It is not exactly known why the Babylonians and Assyrians represented their deities wearing horned hats. The primitive sign design above (p. 253), the demons or bull-men have horns placed directly in their heads. Perhaps this is an artist's device to show who, among the figures in the picture, are gods and who are men, just as the star placed before the names of deities in the inscriptions is not an indication that the deities are stars (though some of them were so regarded), but an indication that the gods belonged to the place where the stars are, namely, the heavens.

** Numerous representations of this kind will be found in the Amhert Tablets, vol. i. pp. 40, 65, 83, 141, 158, 190, etc.  
†† Ib. pp. 20, 170.  
†† A very fine but fragmentary relief, showing Gudes (c. 2600 B.C.) brought before his god by two introducers, is given in Mayer's Nummern und Sammeln vor Babylonien (Königliche Preuss. Akad. der Wissenschaften, 1906), pl. vii.

†† Découvertes en Chaldée, pl. i. No. 1.
The deities at this period are represented wearing mantles which recall, in a measure, the sacred animal, sewn together in long strips giving the appearance of flounces. This costume distinguishes divine personages, or those who claimed divine kinship. A squat little figure in alabaster, standing naked, wearing flowing robes reaching a dress of this kind, the head bound round with a fillet crossing behind the long carefully-arranged hair, may be a divinity, or the priest of a god.

It is noteworthy that though, in the archaic fragments above described, and on the cylinder-seals, the deities are represented in profile, in bas-reliefs of somewhat later date they are often shown front-face. Whether front- or side-face, however, the horns on their hats, which vary from two to eight in number, are shown as if the head-dresses were towards the spectator. Goddesses are shown dressed similarly to the gods, in horned hat and robe of skin, but the right shoulder is covered as well as the left. One small fragment shows an attendent wearing a single horn on each side. Her head descends in graceful curves upon her shoulders, necklaces adorn her neck, upon which is also a triple row of beaded work which disappears beneath the low-cut neck of her goat-skin robe, over which are thrown a robe with a single horn descending from each side. She holds in her hands a vase from which flows a twofold stream of living water. Here we have something really good and artistic—almost aesthetic. The work is so dignified, the idea intended to be conveyed (of a beneficent goddess bearing the water of life) so well expressed, that the spectator realizes that he has before him the work of a people who knew what they wished to express, and had skill to express it.

After that, the picture of a god, apparently of the same period, is disappointing, though even this has its excellences. Its shortcomings are probably due mainly to the damage which the stone has received. A deity, front-face, bearded, and horned, seems to be seated on a low-armed chair with a high and slightly bent back. He wears the usual robe of skin, and hair falling upon his shoulders. In spite of the damage to the stone, the dignity of the face is striking. Reliefs in terra-cotta, apparently those of divinities, also occur. A very good example shows a male figure nearly nude, wearing a horned hat, and plaited hair descending to each side of his longish beard, where it ends in two tightly-arranged curls.

The bronzes, though not numerous, are excellent of their kind. They represent casephoria (priestly rulers as bearers of gifts to the temple), human figures and seated bulls, on a kind of tang for insertion in a socket, and the well-known kneeling figured lions and bulls; the unflanged hats (regarded by some as the god with the fire-stick). They are of the nature of votive statuettes, and were used as the bearers of stone inscriptions detailing the building of temples.

(2) With the advent of Semitic influence (c. 2100 B.C.) there is a change in the representation of certain of the deities. The horned hats and skin robes are found, but in the case of what may be regarded as the warrior-gods, short tunics and thick-brimmed hats appear, and the deity grapples with a horned goat, reaching to his feet, and wearing a thick-brimmed hat. His right shoulder is bare, and his hand is raised as if addressing the deity. The sun-god, heavily bearded, wears a flounced robe without any indication whatever of a hairy surface. Upon his head is a pointed hat, with four horns curving upwards in front—eight in all. Wavy rays proceed from his shoulders. His seat has four superimposed recesses, such as are often found both in bas-reliefs and in designs on cylinder-seals.

His right shoulder is bare, and in his hand he holds a staff and a ring, emblematic of his endless course and his authority as judge of the world. The work is good and well finished, but wanting in lightness and detail. The bronzes of this period seem to have been more copiously ornamented than those of the preceding period show. One, probably now in private hands, is a good reproduction, in the round, of one of those divine attendants so often shown in the cylinder-seals as a graceful female, with long curly tresses, wearing a robe of skin, holding up her hands with the palms facing each other. When the deity and the owner of the seal are absent, these attendants are sometimes shown in the same attitude of adoration before the divine name contained in the inscription.

(3) In the Kassite period we meet with another style for the cylinder-seals, the work being exceedingly plain and flat, and wanting detail. The designs are, moreover, confined to single figures, either sitting or standing, and accompanied by some emblem—a cross, one or more birds, etc.; and in one case even a fly, suggesting that the deity may have been the Babylonian Beelzebub. Various of these designs or symbols occur. It is to the later Babylonian style of art, in which the robes are likewise very plain; but the work, which seems to fall off somewhat during the Kassite period, later assumes remarkable accuracy and finish.

It is to the Kassite period, however, that the boundary-stones which have come down to us belong. These objects (generally inscribed with grants of land) are sculptured with the signs of the gods as a protection against the wrongful alteration of the boundary or changing the conditions of the deed, etc. Those found by the de Morgan expedition at Susa are of special value, as they have sometimes short inscriptions which enable the signs upon them to be identified. The sun is represented by a disc having a flaming star and crescent within; the month gods, horned goats; Nusku ('the light of fire') by a lamp; Gula, godess of healing, by a female figure in horned hat and robe of skin, etc. We see also the fish-goat, the scorpion, and the bull emblematic of Adad (Haddad). The signs vary on each stone, and the work is seldom really well finished, that of Nebuchadrezzar I. in the British Museum being in all probability the finest specimen.

(4) Comparatively early in the latest period (c. 900 B.C.) comes that magnificent specimen of Babylonian art, the sun-god stone, found beneath the

ART (Assyro-Babylonian) 835
pavement of the temple of the sun at Abu-habbah by Mr. H. Rassam. It shows a design derived from the early cylinder-seals. The sun-god sits in his shrine, wearing horned hat, robes of skin, and long beard. In his right hand he grasps his staff of justice and the circlet of his everlasting crown. At the top of the shrine two little figures, personifying righteousness and justice, guide with cords the great disc of the sun erected on the table below. A divine personage leads Nabû-Abâ-iddina, the king who had the stone sculptured, into the presence of the god, and a divine attendant in the usual attitude of veneration, and beard, are behind. The ground consists of wavy lines (the waters above the firmament) with stars below, pointing to the probability that the scene is laid in heaven. The figures are a little too broad, but the work is excellent, and may be regarded as maintaining all the traditions of Babylonian art.

Figures of deities during this late period are rare, but there is evidence in the antiquities found that they did exist. On the cylinder-seals emblems similar to those found on the boundary-stones of the sacred object, surfacing in the sun's disc and the moon's crescent mounted on a tall object set on square corniced and panelled plinths. A burly clean-shaven priest stands before the emblems in an attitude of adoration. The fish-figures and deities copied from the boundary-stones also appear.

2. Assyria.—But it is Assyria, from about B.C. 885, that furnishes us with the greatest wealth of material for the study of Assyro-Babylonian religious art. In the sculptures of that date (time of Assur-nasir-apli) the king is represented as the great high priest. Assyria being a country possessing stone, the sculptors were not dependent on such chance fragments as they could get, and magnificent bas-reliefs indicate what her artists were capable of. The examples from Ninurta (Calah) show us the king, clothed in garments splendidly embroidered with representations of all kinds of mystic emblems and ceremonies, himself engaged in ceremonial acts, surrounded by his eunuchs and drinking from the sacred cup, while winged genii offer him the divine pine-cone, or something of similar shape. In other sculptures we see him worshipping before the sacred tree, above which hovering the winged disc representing Assur, the chief god of the Assyrians. Fauxiliar to all the reliefs showing the adoration of the sacred tree, and the winged figures carrying offerings of flowers and young animals. An admirable example of religious art is the sculpture from the entrance of the temple of Ninip, representing the expulsion of the dragon of evil from the building, which was repeated on the other side of the doorway. As a testimony to the divine status of the king we have the image of Assur-nasir-apli as an arch-headed monolith, and the sacrificial altar which stood opposite before it at the entrance to the temple. Though the figures are too thick-set, the work is excellently finished, and the details carefully indicated. This applies also to the winged bulls and lions of this reign, though they were wanting in vigour. The effect is somewhat marred by the long inscriptions which are carved across the sculptured work of this reign.

Based upon these or similar models are also the religious sculptures of Tiglath-pileser III., Sargon, Sennacherib, Esarhaddon, and Assur-bani-apli; but though they belong to the same school, the improvement in style can easily be traced, until we reach the delicate perfection of many of the sculptures of the last-named. While the sculpture of Assur-nasir-apli give us the Assyrian idea of the sea-god Ea (Synec. Chron. 28; Euseb. Chron. 5, 8), who was clothed with a fish's skin, Dagon, according to a sculpture of Sargon from Khorsabad, was shown as a deity with a horned hat, carefully-curtained hair and beard, and he is reaching to his waist, where the scallop lower part, ending in a fish's tail, begins. To the stump of Dagon, AV 'Vam 'the fishy part'. Noteworthy, though clumsy, are the statues of Nebu standing in what is regarded as an attitude of meditation. On a cylinder-seal, apparently of the time of Assur-bani-apli, and bearing a dedication to Nebu, is shown a divine figure holding two winged bulls by one foreleg, whilst they incline their heads gracefully towards him. If this be Nebu, and the design have a mythological meaning, then the engraver has wisely done to rise to the strong. Securing to the bas-reliefs of Assur-bani-apli, we may note the scene where, to the sound of zithers, the lion, which the king has killed in the chase are brought home, and before a sacred temple and a pair of deities he pours out an offering of wine over the beasts lying on the ground. This is in the best Assyrian style; the figures of Assur-bani-apli and brother of Babylon as basket-bearer at the restoration of the temple Khaza there, though good, fall somewhat short of the sacrificial scene.

Whether it is votaries or ministering spirits in the form of Istar or of Mah (Merodach's spouse as she who presided over births) who are represented by Assur-nasir-apli as making offerings before the sacred tree, or whether the round cylinder-seal, whose myths demons with snarling lion-heads, sea's ears, and eagle's claws, are shown. Sometimes they threaten each other with dagger and mace; at other times they raise their weapon menacingly against a person unseen. But they are powerless in consequence of the protecting spirit in the form of a man in front, who with mystic sign casts an unseen spell. In some cases there is also a bearded and ringleted spear-bearer, similar to the nude figures on the Babylonian cylinder-seals of B.C. 2550, showing how long these things persisted.

No artistic remains from Assyria later than the reign of Assur-bani-apli are known.

There is hardly any doubt that the high level of Assyro-Babylonian art is due to the deep religious feeling of the two nations. Their sincerity is re-

flccted in their work, which, if the nations pro-
duced it had continued to exist, might have
attained a perfection which would have rivalled
even the art of Greece and Rome. How far the
influence of their art extended, it is difficult to say.
Connexion with that of Phoenicia may be traced,
to some extent, from the 10th to the 14th cen-
tury. If the empire of the Phoenicians existed,
the faith of their god, El, was probably wor-
dowed in a similar manner to that of Phoenice,
some of these gods being identified with the
Greece, and some with the Olympian deities.

trated Library), London. T. G. PINCHES.

ART (Buddhist)—ART (Celtic)

ART (Celtic).—The article 'ART (Christian)' is
designed to bring into view the various forms in
which art in the modern era has been made the
expression of religious feeling. Special attention
is given to that phase of Christian art in which
the geographical, social, and ethical conditions
of Non-Romanized Celtic lands, or, in other words,
the art of the British isles, is to be studied.

Definition and scope.—By Celtic art is meant, of
course, the art of the British isles, and the style
are developed, perhaps more perfectly than
the art of any other time or people, and this
is one of the reasons why it here receives a special
mention. The spirit of monastic craftsmanship,
in all the monasteries of the British isles, is
never seen in such purity as in the monasteries
particularly of the Celtic manuscripts, or the exquisite ecclesiastical art which
had been formed in the art of the early Middle Ages.

Monastery the home of ecclesiastical art.—Celtic
monasteries of the kind indicated existed not only
in Ireland but in Scotland, in Wales, and in other
parts; but it is in the first-named country that
they have left the clearest record of their
artistic character. Even as early as the time of
Patrick—those first half of the 5th cent.—Irish men
and women were devoting themselves with ardour
to the religious life, and the sites of ancient settle-
ments are almost innumerable. Those in the
remoter and less accessible regions, such as
the islands and rocky headlands of the
Atlantic, off the coast of Kerry. Here, at the
height of some six hundred feet above the sea,
we find on a terrace, sustained by a magnificent retaining
wall of dry, i.e. uncut, stone-work,

*C For pre-Christian Celtic art see CELTIC RELIGION.
half a dozen or so of hermits' cells and two or three tiny oratories used for service and private prayer. The cells, and all other structures except one of the oratories, are constructed of the same dry stone-work, and according to methods that carry us back directly to pagan times. The terrace wall is of precisely the same construction as the very small ramparts that form the successive encirclement around the stoneworks of unknown date and origin on the headlands and islands of Galway or Kerry. The cells are round or oval in plan, and are of a beehive form, the layers of flat stones of which they are built being alternately laid horizontally and vertically, and a dome-like finish terminates the whole, an opening being left for the egress of smoke. This method of construction also is pagan, and may be found in the central stone chambers of the great prehistoric burial tumuli at Newgrange, Dowth, and other places beside the Boyne. That the cells on Skellig Michael are Christian is proved by the fact that over one of the doorways white quartz stones have been set in the form of a cross. The smallest of the little oratories is one of the most interesting of early Christian structures. Its interior length is only about eight feet, and it has a door at one end and a window over the altar at the other end, which is turned towards the east. The construction is similar to that of the cells, but the round windows, which are not circular, and the windows converge till they meet in a ridge at the top. The little oratory stands apart from the rest of the structures of the settlement, on a jutting corner of the terraced platform, and we may well fancy it a place where the worshipper might tarry awhile and meditate, in this almost inaccessible oryie between sea and sky.

Such meditations availed much for Christendom at large, for these small hermit monks were at the same time the most indefatigable of missionaries. That passion for solitude which drew the Celtic Christians away from the world was only one of the tendencies in their emotional piety, and is balanced by quite the opposite passion for wandering and evangelizing activity. To carry on this work successfully they seem to have needed to subdue themselves from time to time to certain spiritual influences, which should act on their inner nature and charge them as it were with an electric force that radiated with irresistible potency when they journeyed forth as missionaries. It was in places of solitude and retirement, like Skellig Michael, that the saint was kindled and fanned to burst into the proselytizing fervour of a Columba, an Aidan, or a Billfrith. Here were the source of a stream of Christian influence that flowed with beneficent effect over all the island of Britain and far across the Continent of Europe. Ireland gave her mission, Scotland, Norway, and from Northumbrian Lindisfarne proceeded the effective conversion of the Angles, while some of the greater Continental centres of the religious life looked to Celtic missionary saints as their founders.

The foregoing details are germane to the purpose of this article, for we have to note that the arrangement and the life of the Celtic monastery had great influence on the forms and aesthetic character of Celtic ecclesiastical art. It is not pretended here that all the artistic activity of the early medieval period was centred in the monastery. The monastic craftsmen plays a prominent part in the artistic history of the time, but he had no monopoly. Among the northern peoples in the pagan period, the fabrication and adornment of weapons, implements, and objects of personal wear, gave employment to artistic workmen whose skill and taste are in their way unsurpassed, and there is no reason to believe that the introduction of Christianity broke this tradition. In Ireland the Tara brooch, in Scotland the Hunterston stone, dating about the 5th century, are productions of secular art, and we need not credit them to the monks. On the other hand, as the mediæval period advanced, sacred art undoubtedly preponderated over secular, and sacred art was specially cultivated at the monasteries. In time, as Mr. Romilly Allen has remarked (Celtic Art in Pagan and Christian Times, 1904, p. 171), 'The priest took the place of the warrior as the patron of the fine arts, and monopolized all the available time of the metal-worker and enameller in making beautiful vessels for the service of the Church.' In periods of political unrest, such as on the Continent followed the breaking up of the Roman provincial system, art might be profusely be regaled and the artistic production of the time that had an ecclesiastical purpose, and it will lend force to this statement to quote the nearly contemporary record as to the making and putting forth of one striking monument of Celtic art, the so-called Gospels of Lindisfarne or of St. Cuthbert, a manuscript dating from the end of the 7th or beginning of the 8th cent., and now one of the treasures of the British Museum. In an Anglo-Saxon colophon of the 10th cent. appended to St. Cuthbert's Gospels, it is told that 'Eadfrith, bishop over the church of Lindisfarne, wrote this book in honour of God and St. Cuthbert, and all the company of saints in the Island; and Ethelwald, bishop of Lindisfarne, made an outer case and adorned it, as he was well able to do, and Billfrith and the metal-work of the ornaments on the outside thereof, and decked it with gold and with gems.' The fact that Billfrith is called the anchorite ('se oncras') shows that fine metal-work with the setting of gems was carried on by the solitary recluse in his cell. The extreme minuteness and elaboration of this is, in fact, just what we should expect in work executed under these conditions; and this applies with even greater force to the manuscripts, wherein ingenious planning of ornamental schemes and faultless execution of multiform convoluted detail must have made the hours long pass lightly away.

Celtic ecclesiastical art in general was of a kind that could be carried out single-handed and in small interiors. Work that needed the co-operation of many hands and large spaces was little in vogue. In the Benedictine monasteries of the Continent the dominant art was architecture, and vast buildings for the accommodation of communities were envisaged, but this was not achieved by the inmates in person. Romanesque architecture is in the main monastic, and the great abbey church is its crowning achievement. In Ireland and other Celtic areas early conventual buildings were, as has been seen, smaller and simpler; and though they may possess a great constructive interest, little pains have been taken with their ornamentation. From the traditional dry-stone building, illustrated on Skellig Michael, there were evolved on the one hand certain striking features in the monastic church, and on the other some interesting forms of vault construction. The single-celled oratory was enlarged by the addition of a second cell, also rectangular, forming when smaller than the first a presbytery or chancel, and when larger a nave: and this type of church plan, differing from the type with apsidal termination which belonged to the Roman tradition, appears in England after its conversion by the Celtic evangelists, who may thus have contributed towards the establishment of certain preferential forms for square-ended churches. The most striking peculiarity of Celtic church architecture in early medieval times is the detached round tower, abundant in Erin, though represented by only a few stray examples in other parts of these islands. These towers are always connected with religious establishments, and it is now acknow-

ART (Celtic)
ledged that they were primarily designed as towers of refuge, though also employed as belfries. The dangers against which they furnished temporary security were the Viking inroads with which from the beginning of the 9th cent. onwards the country was beset. It is stated by Miss Stokes in her *Early Christian Art in Ireland* (ii. 67), that, in the entries in the Irish annals, regarding the attacks of the Northmen from 729 to 845, it is recorded that the clergy fled for safety into the woods ... but in the year 850, and for two centuries later, we read of the "clochetich," house of a bell, as a special object of attack to the Norsemen. Exhibitory inscriptions quoted thence speak of the erection near a church in that Celtic region of a "little round tower ... wherein to deposit the silver-plate and the treasure." The same church, and the same hands of the barbarians, should they wish to plunder it.

The construction of the extant round towers bears out this evidence of their origin and intention, for in almost every instance the doorway of access to them is at a substantial height above the ground, and was accessible only by means of a ladder, which could be drawn up when the temporary garrison was housed within it. The interiors had wooden floors at different stages reached by ladders, and in the uppermost was the place for the bell.

The features here described are specially not exclusive to Ireland. In other central, north-western regions which were practically outside the Empire, and to which the influence of the ecclesiastical Rome did not penetrate till a later date, we find specimens, or at any rate relics and traces of them. Scotland, especially in the north and west, is well supplied; for example, the "Isle of the Saints," Eilean na Naomh, not far from Mull, has a group somewhat similar to that on Skellig Michael; but Wales and Cornwall have very little to show in the way of substantial and western Roman Conquest. In Ireland such structures are at once more numerous, more clearly marked, and better preserved than they are elsewhere. The plainness of these early Irish structures has already been noticed, and is remarkable in a country where the arts of ornament were flourishing in the Pagan period, and were destined to develop for Christian service into forms so elaborate and beautiful. The rude stone building gave place to cut stone-work, and to the use of lime and ornamental stone; but the simple character of plainness prevailed till about the year 1100, when a rich and somewhat fantastic style of architectural embellishment came into vogue, with which was mingled the undoubtedly Norman element in all monuments. With the development of this so-called Irish Romanesque Celtic architecture loses that special character it had derived from the primitive methods of dry-stone construction, and comes into line with the other local styles of Western Romanesque. The subject need not therefore be further pursued.

1. **Stone-Slabs, Crosses, etc.**—If the earlier Celtic masons did not carve ornament on the stones of their religious buildings, they made up for this by considerable activity in sculpture of and upon the crosses and carved stones-slab and crosses, a monumental form of Celtic art represented by abundant examples in all the Celtic and also in the Teutonized parts of the British Isles. No complete comparative survey has yet been made of the whole body of monuments, but there exist monographs on the various groups, the most complete and elaborate of which is the ponderous volume issued in 1903 by the Society of Antiquaries of Scotland under the title, *The Early Christian Monuments of Scotland*. The subject is a very large one, for the monuments in question in the Scottish area alone number about five hundred, and it can, of course, only be touched on here.

In the matter of distribution, we may distinguish the following provinces in which the monuments occur in groups large or small. (1) Southern, eastern, and midland England. The monuments here are sporadic, and some regions are bare of examples, though in other parts, such as Derbyshire, they are well represented. (2) North-eastern England and the same side of Scotland up to the forth, the region forming the ancient kingdom of Northumbria. Here the monuments are very numerous and of great artistic merit. In point of art they show a combination of Celtic elements with those derived from classical sources, and especially partly in runic characters derived from Scandinavia. (3) Galloway or south-western Scotland, the scene of the ministrations of Ninian to the southern Picts, represented by some interesting early monuments of a Gallo-Roman type. (4) Cumberland and the Isle of Man, and in part Lancashire, where the art of the stones betrays a Scandinavian influence. (5) Eastern Scotland north of the Forth and south of the Moray Firth, known to historians as the ancient 'Kingdom of the (northern) Picts'. The stones here exhibit certain devices peculiar to this region that are for the most part unexplained, though probably Christian in significance, but in the main their art is of the Celtic type. (6) In the far western provinces of Scotland the Celtic art prevails with a certain Scandinavian admixture. (7) Wales, a region specially well represented by monuments of this class, in which the art is Celtic, the epigraphy partly Roman, and partly in ogham script, of native Celtic style of writing answering to the Teutonic runes. (8) Cornwall and Devon, the monuments of which on the whole resemble those of Wales. (9) Ireland. This region, with parts of north-western Ireland, is very rich in stone monuments, native Romanized; and here the art, with the language, and to some extent also the epigraphic character, of the inscriptions, is almost wholly Celtic.

Of these provinces all but the first and second are entirely, or to a preponderating extent, Celtic, for the 'Pictish' element in (5), though very remarkable, does not affect the general character of the monuments. The ancient Northumbria, (2), was Teutonic in government and (with of course the admixture of Teutonic in the pagan) in art, as was preponderatingly Celtic. That this region was effectively Christianized by Celtic missionaries from Lindisfarne has already been noticed, and it is highly significant that one of the most important exhibits in the recognized Celtic style of manuscript illumination was produced there by Anglian hands at a time when the Celtic monks had already retired from the island. The existence of this datable monument, noticed in this article on p. 836* (the Gospels of Lindisfarne or of St. Cuthbert), shows that we might expect the same Celtic style in other monuments of the region; and this we accordingly find, mingled with other elements, in the early sculptured stones now under consideration. This may be fairly held to represent the prevailing kind of Celtic art, as well as an attractiveness for the Teutonic population. In view of it, it will not be surprising to find that the monuments scattered over the rest of England, (1), exhibit also a prevailing Celtic character, which reminds us that it was influenced in almost every part by Celtic missionary activity. We are therefore justified in regarding the whole body of these monuments as so far Celtic that they cannot be excluded from any general survey of Celtic art.

It is with the art of the stones, not their epigraphy, that we are here concerned; but the inscriptions cannot be entirely disregarded, for they often afford valuable evidence of the nature and provenance of the monuments. The questions that
have to be considered concern (1) the character, (2)
the form, (3) the ornamentation of the stones.

1. Character.—The inscriptions show that the
majority of them are sepulchral, and as such they
represent a form of monument that has been in use
since Neolithic times. At the single site of Clon-
macnoise in Ireland, there are nearly two hundred
of the early Christian inscriptions, all by inscribed, and many orna-
mented. This religious establishment beside the
Shannon, a place of surpassing interest, was founded by St. Ciaran in the middle of the 6th cent.,
and an Irish poem thus celebrates 'the peaceful clear-
streamed place':

'Ciaran's city is Cluain-mic-Nos,
Nobles of the children of Conn
under the liffey, brown-peopled cemetery;
A knot, or ogham, over each body,
And a fair, just, ogham name.'

Of ogham inscriptions on these stones only one has
been known in modern times, and the rest are in
Roman minuscules. Among the names that can be
read upon them is that of Suibine, son of
Maellhumal, of the latter part of the 9th cent.,
celebrated as one of the most learned Churchmen
of his time. Inscriptions, however, also show that
many of these stones were not sepulchral but
commemorative, or devised for other purposes.
Thus at Kells in Co. Meath there is a cross
with the inscription, 'The cross of Patrick and
Columba,' which was erected centuries after the
death of the same person it commemorates.
Most of the so-called 'High Crosses' of Ireland—
elaborately sculptured stone monuments of the
10th cent.—were apparently of this commemora-
tive character. In Northumbria we know, from Simms of
Durham (Hist. Reg. § 30), that two
sepulchral crosses stood at Hexham at the ex-
tremities of the grave of Bishop Aces, who died in
740, but the Ruthwell Cross is shown by its
inscription to have been a memorial of the sacrifice
of Christ. We are told in the Life of Kentigern,
by Joceline of Furness (late, but based on older
materials), that the saint was accustomed to erect
'the triumphant standard of the cross' to com-
memorate any marked successes in conversion; and
in Wesssex we have evidence (Acta Sanctorum, Jul. 1, 1229) that the isle of the Holy Cross was
up to mark a place of Christian assembly before the
building of a church. Again, some crosses were
terminal, that is, they defined a boundary by
a landmark which religion made inviolable. An
Irish fragment stone at Kilmanus gigant., Co. Armagh,
proclaims that the place which it marked was
under the protection of St. Peter, while one of
the interesting early stones at Whithorn in Gallo-
way, Ninian's missionary centre, is inscribed 'The
Place of St. Peter,' and was evidently a boundary
mark.

2. Form.—In the matter of form, the earliest
class of stone monuments are pillars unshaped by
the tool, after the fashion of the pre-historic
mounds, and correspond to the rude stone building
of the early Christians inherited from their
pagan forefathers. These pillars have on them
inscriptions in one or other of the languages and
characters noted in the enumeration of the
provinces, and sometimes incised crosses or sacred
monograms. These last, though in themselves,
from the aesthetic standpoint, negligible, become
important as the origin of the form of the shaped
free-standing crosses of later times. In Galloway
there are upright pillar-stones with Latin inscrip-
tions, and the Chi-Rho (urtles) monogram in
different forms which are early, but probably not so early as
the time of Ninian himself. This monogram
appears within a circle, in which we may see a
reminiscence of the wreath that enclosed it on the
original labarum, or standard of Constantine,
described by Eusebius; and this wreath, or circle,
becomes later the stone ring, which in the well-
known 'Celtic' form of the monumental cross is
seen connecting the arms. The Chi-Rho monogram
changes into the form of a cross by the addition of
a horizontal bar across the upright stem of the
original Rho (urtles), and the arms of the cross,
though originally enclosed within the circle, come
afterwards to protrude beyond its circumference.
This transformation can be seen in progress in a
half-developed cross at Penmon Priory in
Anglesey.

The untooled pillar-stone does not of course itself
change directly into the free-standing cross, though
the incised monogram it bears has influenced the
development. The actual process was as follows:
The pillar-stone corresponds, as we have seen, to
the rude stone building. When this gives place to
the construction with cut stone and cement, the
former is similarly changed to a dressed monument,
which may be recumbent, in the shape either of a
flat slab, which is par excellence of the Irish
inscription, or of a 'coped' or 'hog-backed' stone, such as occurs chiefly in the
north of England, and is more probably of
Anglian or Scandinavian than of Celtic origin; or
there may be upright, in the form of what is
like a modern tombstone. The flat recumbent
Irish slabs are adorned with incised crosses, the
upright slabs with crosses in relief. From
these latter were developed the free-standing crosses by
the following stages. When a cross head contained
within a circle is carved in relief on a slab, the
upper part of this may be rounded off to follow the
curve of the circle, as on a stone from Papil by
Shetland, in the Edinburgh Museum of Antiquities.
Next, the part of the slab below the head of
the cross is cut in a little to correspond with the form
of the comparatively slender shaft, and we obtain
the shape known as the 'wheel cross'—a shape con-
-fined to the Isle of Man, Wales, and Cornwall.
The background may now shrink in still further
length to the outline of the shaft, and the contrary
process, the arms of the crosses are allowed to
protrude beyond the circle which has enclosed
them, and the final step is taken when, as it has
been said (Romilly Allen, Celtic Art, p. 186), 'the
portions of the background of the cross between
the quadrants of the ring are cut away, and a
right through the slab, thus giving us the "four
hole" cross of Cornwall and the typical High Cross
of Ireland,' in which the outline of the stone
corresponds with the outline of the Cross.

3. Ornamentation.—That subject of the orna-
mentation of the slabs and crosses cannot be
discussed without reference to Celtic decorative art
in general. The forms in which this expresses
itself, apart from the carving on the stones, are
practically confined to five—work and the
illumination of manuscripts, for in extant elem-
ents of the Celtic Christian period, productions in
other materials, such as wood, ivory, or textiles,
are so rare as to be in the meantime negligible.
On stone, metal, and the parchment of books,
Celtic artistic feeling externalized itself in elaborate
and varied ornamental patterns, the design and
technical execution of which have excited the
wonder of all subsequent ages, from the time of
Giraldus Cambrensis in the 12th cent. downwards.
The same patterns and methods of ornamentation
appear in all three forms of art, and some of the
best authorities treat the stone carving as later in
date than the similar work in the other materials.
It is a curious fact that certain details of the
Irish High Crosses have no meaning in stone-work, while
there is a technical reason for them in work in
metal, and this would indicate the priority of the latter. Again, the similarity between richly decorated cross-slabs, of which Scotland is the home, and the emblazoned pages of ornament in Celtic manuscripts, cannot fail to strike the observer. It was maintained that the styles of artistic treatment which are in question here were first evolved on the pages of books or in metal, and then transferred to stone; and Mr. Romilly Allen believes (Celtic Art, p. 171) that the book-work was prior alike to that on metal and on stone. At first sight this seems contrary to natural likelihood, for there is much elaborate and beautiful Celtic metal-work of pagan date and also a certain amount of decorative carving in stone, whereas manuscript writing and illumination came in as a totally new form of craftsmanship with the introduction of Christianity. Irish experts converted to the new faith could continue for Christian service their metal-work or stone-carving, while it would take them a long time to learn the new art of calligraphy and illumination. The first books used in Christianity would be imported, and would only very gradually be supplanted by those of native production. Hence we should expect to find Christian metal-work and stone-carving earlier than the same is the case with books.

Here, however, we are met by rather a curious fact. Christianity at its first introduction did not seem to inspire the Celtic artist, but rather to repress his activity, so that, as Romilly Allen states (p. 164) about A.D. 600 'it is impossible to say that Christian art existing in this country' (op. cit. p. 165). He accounts for this on the theory that the introduction into the British Isles of Christianity itself was much later than is generally supposed, and suggests A.D. 450 as the date of this innovation. The negative evidence of the dearth of really early Christian monuments in this country had so impressed him that he has called the significant and quite unquestioned notice of the presence of three bishops of Roman towns in Britain at the Council of Arles in A.D. 314 one of 'the vague and unsatisfactory statements of the mythical period' (op. cit. p. 164). Archaic evidence, however, must be weighed along with literary, and not allowed to swing the scale as yet. If we were left only to literary evidence for the condition of the earliest Christianity at Rome, we should probably believe that art was at that time tabooed. Monumental evidence, however, as shown in Figure 2 (next page), certainly Celtic, but at the earliest Christian Church at Rome not only accepted art as part of its external dress, but soon began to use it for definitely Christian purposes. Conversely, if we were left to monumental evidence alone for Christianity in early Britain, we should believe that it hardly existed, for Romano-British Christian monuments are extremely rare, and those belonging to the 5th or 6th centuries are few and artistically simple and even rude; yet the Romano-British Church had progressed so far by the early part of the 5th cent. as to have a flourishing Pelagian hierarchy, and after the Saxon conquest it is clear that the large and active Christian community in Wales was this Romano-British Church, and not a new foundation in the 5th cent. from Gaul. Why it was that the earliest Celtic Christianity did not at once employ the native artistic resources available is a question which cannot be entered on here; it is a fact, however, that the Celtic ecclesiastical art on stones and manuscripts is of this form of幼稚 from the middle of the 7th cent. onwards, used motives that were not originally Celtic, but are found also in 'Merovingian' work in Gaul and in that of the period of the Teutonic migrations in general, and hence it is reasonable to refer the great unfolding of Celtic artistic activity in this period to the impulse which came in from England and the Continent as soon as the conversion of the pagan Saxons opened the door once more to intercourse between Celtic lands and Western Christendom.

The following are the ornamental motives that occur in the decoration of the carved stones, the objects in metal, and the manuscripts: (1) the human figure, (2) leaf-ornament, (3) animals, (4) geometrical ornament, consisting in: (a) step-and-key-patterns, (b) interlacing- or knot-work, and (c) spirals.

(1) Celtic art proper has no place for the human figure; and where this is treated in native fashion, as in some of the Irish manuscripts, it is reduced to a decorative pattern with no more resemblance to nature than have the figures on court-cards. Wherever the figure is reasonably well drawn or modelled, there influence from the side of classical tradition is at work. The best figures on monuments of any rate partly Celtic character are those on the Ruthwell and Bewcastle Crosses, and they are accompanied here by vine-foliage enclosing animals which is of distinctly classical type. The High Crosses of Ireland, which date from the 10th cent., exhibit a remarkable art which is all due to Continental inspiration, and need not here be described.

(2) Leaf-ornament is also foreign to the Celtic style proper. There is hardly a trace of it in the manuscripts, but it is very occasionally on the stones in the purely Celtic areas of Ireland, Wales, and northern Scotland. In the ancient Northumbria, on the other hand, it is abundant, and is clearly of classical origin, for the vine is almost always the motive employed. The vine scrolls and some so-called 'Anglian' crosses, such as that of Acock, now at Durham, and the one at Bewcastle, are as charming as any decorative foliage in existence.

(3) Animals.—Like the human figure, animals, such as the horse, the deer, the dog, occur, naturally treated in some abundance; and it is of course a well-established fact that the unsophisticated artist is always better at animals than at men. There are hunting scenes on the battle-scene crosses or their sculptured bases, and on a certain class of sculptured stones in Scotland animals are represented truthfully in a very telling and artistic fashion. There is nothing here, however, that is especially Celtic. On the other hand, the conventional treatment of animal forms for ornamental purposes is a very important element not only in Celtic, but in all northern decoration. There is no attempt in this to give the animal its specific character, or even to preserve elementary truth in anatomy and proportion. The creatures barely preserve so much zoological character as resides in the possession of a head and limbs, and their bodies are elongated and flattened till they are nothing but bands. All parts that can be extended, such as a limb, a tail, an ear, or a tongue, a lip, are drawn out and twisted into elaborate convolutions, and are intertwined as if the artist wished only to produce the effect of complex knot-work. Though birds are sometimes introduced, the beast is generally intended to be a quadruped; but it is drawn out to such a length and tenacity as to justify the epithet 'lacertine,' or lizard-like, which is generally applied to it. There is no question which has been more discussed than that of the origin and history of ornament among the Teutonic and Celtic peoples. The latest and most elaborate work on the subject, Bernhard Sain's Allgermanische Theiorornamentik (Stockholm, 1904), favours the view that the animals in northern art are ultimately derived from classical models, but that the northern
people generally made the motive their own, and worked it out with extraordinary ingenuity and patience. A close comparison of the animal ornament in Irish manuscripts and metal-work and that on objects of Teutonic provenance indicates that Celtic zoomorphic forms are of Germanic origin. These forms are very rare in the Celtic pagan period, and do not occur in Ireland, so that a foreign origin is in accordance with likelihood.

(4) In the geometrical ornament, in all its forms save the spirals, the same derivation seems now accepted.

(a) 'Step' patterns occur in the cloisonné setting of Teutonic jewels. Moreover, these patterns in the manuscripts, such as the Book of Durrow, are shown in white lines on a dark ground, and the background has been laboriously filled in so as to leave the lines the colour of the light vellum. There may be in this somewhat artificial process an attempt to imitate the damascening in lines of silver on iron, common on buckles and similar objects found in Germanic graves. Key patterns, the first developed of a line in such a fashion as is typical, are very abundant both on the sculptured stones and in the manuscripts, but are not much used on metal. They are unknown in pagan Celtic work, and their prevalence in that of Christian date is probably due to Continental influence. The Christian artist, in fact, copied such patterns directly from the art of the Oder and Elbe to Scandinavia, where we find it developed in the Bronze Age to the utmost possible perfection. From Scandinavia it is thought to have passed over North Britain to Ireland, where it appears carved on a great stone at the mouth of the pre-historic royal burial-place at Newgrange by the Boyne. In all these cases we have to deal with regular closely-coiled spirals, which look as if they were derived from the coiling of metal strips or wire, though there is evidence that they were not. Now, however, that the Iron Age of Celtic art, spirals of a different and more elaborate kind become the predominant ornamental form, and produce what are sometimes called 'trumpet' patterns. These are formed by double lines which are coiled round one another and produce a shape like the mouth of a trumpet. These coils and expanded offsets are ingeniously connected together, so that they can be made in combination to fill with ornament any given space. It has been argued very forcibly by Dr. Arthur Evans that these late Celtic scrolls, which are sometimes called 'flamboyant,' are in fact derived, by a process of conventionalizing, from the 'honeysuckle' patterns or acanthus scrolls of Greco-Roman classical foliage. As used in Ireland and Scotland in early Christian times, the spirals are partly closely coiled and partly flamboyant, and we may regard them as representing a combination of these classical derivatives with the older and more severe forms of the Bronze Age spirals, the origin of which can be traced to Mycenaean Greece and to Egypt. The use of this primeval motive for the purposes of Christian decoration is a fact of much interest, to which attention was called in a previous part of this article.

We are not concerned with archaeological questions of origin so much as with those of the artistic use made of these various motives, and of the place of this artistic activity in the life of the Celtic Church as a whole. It has been well said by Dr. Joseph Anderson:

From whatever source or sources the different elements of the composite style of decoration of the Christian period may have been derived, the style itself belongs specially to the period of the early Saxon Church, especially in Northumbria. In each of these areas it produced a remarkable development of monumental sculpture; and whether we consider their manuscripts, metal-work, and monuments collectively as one great comprehensive manifestation of Celtic ornamentation of the early Christian period, or take them separately as national developments of a common style, it is equally true that, considering the work and the time, it presents a manifestation of artistic culture altogether unparalleled in Europe (The Early Christian Monuments of Scotland, c.).

The first point to notice about the artistic use of this decoration is the method of its distribution over the surface. The Sassanid ornament does not meander at will, but is confined to strictly defined spaces; and these spaces, which may be termed panels, are arranged in a carefully thought-out scheme of composition. The finest examples of this are the pages devoted to ornament in the Irish manuscripts, and the large
cross-slabs which are best represented in Scotland.

ii. Manuscripts.

Of the Irish manuscripts now extant, the earliest is probably the Book of Durrow, and the most elaborate is the Book of Kells, both in the Library of Trinity College, Dublin; while the Gos¬pels of Corpus Christi College, Cambridge, comes next in age to the former, and the Gos¬pels of Lindisfarne, in the British Museum, is only second in beauty to the latter. This book, moreover, possesses the unique element of value that it is dated, and that in this way it can be fixed in point of time. But it has no other examples not only in illumination but in metal-work and carving can be grouped. It was written within a few years of the date A.D. 700, and is earlier in style than the Book of Kells though not so early as the other two. Hence the Book of Durrow may be assigned to a date in the 8th century, the Book of Kells to one in the 8th cent.; and it is satisfactory to know that Bernard Salin endorses these dates as a result of his elaborate and detailed comparative study of the ornaments which occur in them. The decoration in these books is not more sumptuous and minute in its execution than it is clear and bold in its distribution. Leaving out of sight the figure-work, and taking only the ornamental, it is found that the first word or too of each Gospel occupies a page, the initial letter spread from top to bottom and the range of the letters of the first word filling up a good part of the page. A border is designed to combine with the initial in framing the whole composition. If this page be a recto, the verso of the previous folio, which is the bottom of the page, is treated in a sheet of pure ornament, the object being that the book shall present a sumptuous and beautiful appearance when placed open at the beginning of a Gospel on a reading-stand upon the altar. The scheme of design for such a page is generally based upon the form of a cross, which appears as the centre and support of a composition of variously-shaped panels filling the rest of the sheet. These panels, as has already been explained, are them¬selves numerous, with various ornamental devices, and are enumerated, while a border encloses the whole. As has been well shown by Mr. Johan Brun, the general arrangement of these show-pages of initials or pure ornament provides spaces or panels varying in size, shape, and decoration. These were usually used as complementary fillings for the big initial letters are often of curved outlines, while those connected with the cross opposite are commonly rectangular, or at any rate symmetrical in contour. In the decorative enrichment of these different fields, patterns of various kinds are selected.

Spirals (and we may add zoomorphic patterns) were chiefly used to fill in the irregular sections of the body of the letter and its curvilinear enclosed spaces, where, owing to a certain freedom in fixing the centres of volutes of varying size, they were easily adapted and in keeping with the flowing calligraphy and the ornamental motives. Interlacings, on the other hand, were more rarely used outside of the spaces allotted for oblong panels, for which they were naturally suited. Thus the disposal of the various designs was ruled by taste, and it is evident that the combination of contrasting elements in a graceful scheme (An Enquiry, etc. p. 29).

We may connect this decision and self-control, in the matter of planning out and distributing enrich¬ment, with the severity of the monastic discipline that in the period of the insertion of the Book of Durrow in this work had its home. The spirit of order and obedience to rule was as strong in the Celtic establishments as in those organized on the Bene¬dictine plan, and the Irish regulars were not only among the most learned, but among the best-living in Christendom. And if we discern their mental rectitude and respect for law in these well considered and justly balanced schemes, in the actual execution of the ornament we are brought into contact with their intensity of devotion to the allotted task, and the infinite patience to which they were schooled by the seclusion and monotony of their daily existence. The little cells where once they sat at work are places as holy to the pilgrim of art as to the religious devotee, and we can realize there how this element of dainty love¬lines and the gracefulness in line and hue, this ingenious scheming, this minute accuracy in measurement, must have humanized and brightened spirits that might otherwise have become numbed in ascetic rigour, while an education of conscience must certainly have resulted from their scrupulous logic and exactness in pattern making. Prof. Westwood and other experts have examined Irish manuscripts with a glass 'for hours together, without ever detecting a false line or an irregular interlacement. In the interlaced work, Mr. Romilly Allen reports that every cord laps under and over with unflagging regularity . . . and all the cords are joined up so as not to leave any loose ends.

The details of the spiral-work are suggestive of care, and there is never a broken line or pseudo-spiral. In the zoomorphic designs the beasts are all provided with the proper number of limbs and Evangelists, and in every respect down to the smallest detail (Celtic Art, p. 259).

No mere description can give any idea of the variety, minuteness, and unflagging consistency of this decoration, which can now be judged of from accessible photographic reproductions which greatly exceed, as those in Stanford Robinson's Celtic Illuminative Art. As regards colour a word may be said, because it is noteworthy that the Irish scribe produced the effect of sumptuous splendour on his ornamented folios without any use of gold, olive, the Continental miniaturist so largely depended. This is at first sight surprising, for Ireland produced a good deal of gold; and this was not only used in her native metal-work, but, it is believed, exported to other lands such as Scandinavia. Trinity College, Dublin, possesses a magnificent and weighty gold fibula of native metal and workmanship, but the manuscripts in the library are destitute of gliding. The colours employed are bright, clear, and harmoniously blended, but the best effect is gained by the free use of black, of which the script is large and self-sufficient. II. Metal-work.

The fine Celtic metal-work was, as we learn from some special cases, also a monastic craft in the hands of ecclesiastics. It was applied to the embellishment of the manuscripts either at once in the form of covers, such as that adorned by Billirch at Lindisfarne, or later on in that of the shrine or box, called in Ireland cumdach, made to contain and preserve the precious volume (p. 833). These cumdachs are peculiar to Ireland. Shrines of a similar kind, also of a later date, were intended to protect, were made for the early hand-bells connected with the names of famous saints, which are in themselves objects of the highest interest, and may in some cases really have belonged to the saints with whom they are traditionally associated.
Their simplicity and even rudeness agree with an early date. The most primitive are four-sided, and these are sometimes ornamented. There are early bells of the kind in Scotland and Wales as well as in the materials of two bell-shrines, the rest being Irish. Celtic metal-work of early Christian date is perhaps most largely represented by the enriched penannular or annular brooches, of which the Tara brooch in Ireland and the Hunterston brooch in Scotland are the finest examples. As the ornamented metal shrines and their contents, it may be sufficient to refer to four fine examples in this class, the Ardagh Chalice and the Cross of Cong in Ireland, and the Monymusk reliquary and crozier of St. Fillan in Scotland. They are all works of great interest either from the historical or the artistic side, and the first named is one of the most beautiful and elaborate examples of fine metal-work extant anywhere in the world.

The Monymusk reliquary is described by Anderson as a wooden box (it is about four inches long), hollowed out of iron plates of pale bronze and with plates of silver. . . Its ornamentation is that peculiarly Celtic form of interlacing zoomorphic decoration, united with coloured designs of diverging spirals and trumpet shapes, the primary subject of this decorative art of the Celtic manuscripts and memorial stones of the early Christian time. It is jewelled and enamelled, and its engraved and chased designs are characterized by such excellence of execution that it must be early in date (Scotland in Early Christian Times, p. 249). The special historical interest connected with the reliquary resides in the fact that there is some reason to believe it a relic of St. Columba, and a cresset, or battle charm, which, like the Ark in ancient Israel, was borne out to battle with the Scottish host. It is preserved at Monymusk House, Aberdeen. The crozier of St. Fillan is an example of a specially Celtic form of ecclesiastical object. It is really a shrine of fine metal-work, made in the shape of a case enclosing the head of the pastoral staff of wood traditionally belonging to an early saint. The form of the crozier is exclusively Celtic, and differs from the form that such objects take on the Continent, and in the case of that of St. Fillan and others is a relic on which oaths of a peculiar solemn kind could be taken, while it is surmised that it was borne as a cresset into battle at Bannockburn. It is preserved in a damaged condition in the Museum of Antiquities at Edinburgh.

The Cross of Cong, at Dublin, is the one surviving example of a procession cross of the early Celtic Church. It measures 2 ft. 8 in. in height by 1 ft. 6½ in. across the arms, and is 1½ in. thick. It is constructed of oak, and was supposed to contain its centre, under a boss of rock crystal, a portion of the true cross. On the exterior it is all covered with metal plates of copper which are adorned with silver mouldings and plaques, with panels of fine gold work and gilded bronze, and with bosses of coloured enamel. The panels are ornamented with gold filigree work and zoomorphic patterns, and the effect of the whole is rich and artistically pleasing. It can be dated in the first half of the 13th cent., and is a striking proof of the long survival of the characteristic Celtic work in Ireland. As a rule the other objects, such as the cumbachs and the bell-shrines, though the style of the enrichment remains the same, are comparatively coarse in execution, but the Cross of Cong has fine technical qualities.

Lastly, in the Ardagh Chalice we come back to the period of the most perfect design and workmanship, of about the 8th cent., and to a master-piece of unique value. It is a large two-handled bowl on a low stem, and will hold as much as three pints of liquid. In its construction and ornament the materials are least freeman, bronze, copper, silver, glass, amber, and mica; and the ornamental patterns include interlaced-work, step-patterns, key-patterns, spirals, zoomorphs, and scrolls, arranged in panels after the fashion represented in the manuscripts, and of the finest period of the style.

What is chiefly remarkable about the Ardagh Chalice is not the elaboration or variety of its detail, but the almost classic nobility of its general design. As a rule, in all barbaric enrichment, whether Celtic or Teutonic in origin, the tendency is for the ornament to cover practically the whole surface of the object under treatment, while it is only very rarely that we find that contrast between plain and richly adorned passages on which so much of the effect of classical decoration depends. The chalice, like some other objects of the pagan period in Ireland, is perhaps imitating, or being an imposing largeness of style, due to the simple contours of the plain polished silver bowl, in contrast with the bands and medallions filled in with panels of delicate ornament and studded with small bosses of variety. The most striking part of the base, which would be visible when the chalice was raised to the lips of a communicant.

Conclusion.—It has been seen that in the manuscripts all the kinds of ornament already enumerated are used freely in conjunction, while in the metal-work zoomorphs are conspicuous, and interlacing patterns are less used than the others. Turning now to the sculptured stones, we find interlacing patterns most prominent of all, so that they sometimes form the sole ornamentation of a monument. As the forms of the slabs or crosses differ in the various Celtic or Celtaicized districts, so do the kinds of ornament with which they are adorned. Decoration in tastefully distributed panels is everywhere the rule, and in Kells churchyard, Ireland, there is an unfinished cross, on which the panels are marked out and carefully squared, though there is no carving on them. The panels, however, are differently filled according to the localities. In Ireland, where the antique or pre-Christian elements are largely retained, the figure subjects greatly preponderating over ornament; and the same may be said of the free-standing Scottish crosses of the same type, though the subjects in Ireland are more generally Scriptural than in Scotland, where hunting scenes and the like are more common. In Wales and Cornwall, on the other hand, figure sculpture of all kinds is subordinate to ornament. In the matter of ornament, spirals of good design and zoomorphs are frequent in Ireland and Scotland, but are very rare in Wales and Cornwall, and are concerned, in the Isle of Man. The Irish and Scottish stones have also as a speciality that kind of knot work where curved lines are most in evidence.

The varieties of interlacing patterns in Scotland and Wales are astonishing, and these have all been analyzed with extreme ingenuity and care by Tomy Allen in The Early Christian Monuments of Scotland, where the subject occupies 150 quarto pages. Since these slabs and crosses were, as we have seen, not works of technical character as the manuscripts and much of the metal-work, it is not necessary to postulate the monastic craftsman as in their case the sole executant. Yet the loving care and the single-minded devotion to a laborious task of which they give evidence are just the qualities which the monastic life developed in its votaries; and though the designer of some of the
elaborate cross-slabs of Scotland may have helped himself by appropriating compositions and motives from the manuscripts, yet he could never have carried out the work with such perfect execution had not his whole nature been brought into accord with the spirit that inspired it. Celtic art, as the expression on the exterior of the person and the intensity of a wonderful religious life, without which the Christian Church would have been greatly poorer, was a possession of the people at large, and is a democratic art practised alike by the very rich and by the most learned scholars in Christendom.

G. BALDWIN BROWN.

ART (Christian).—Introduction.—The limits of this article permit of the treatment of the subject only in one or two selected aspects. There can be no attempt to enumerate the various forms of Christian art, still less to trace out their history. For this purpose a useful collection is that in the Encyclopaedia. The noblest and most important form of Christian art, architecture, furnishes the subject of a distinct article. Illuminated manuscripts are dealt with in next article. For art as a class of Christian art, as ivory, or ecclesiastical metal-work, information will be found in Dictionaries of Christian Antiquities, or in compendia like Dom Leclercq's recent Manuel d'Archeologie Chretienne.

(a) Space.—The scope of the present article must necessarily be a narrow one, and the main object of it is to take the most characteristic forms of Christian art as we meet with them in successive ages, and consider how far each of them expressed the religious ideal. In considering with these historical phases we shall keep in view the two main questions: (1) That of the relation of art and the element of beauty generally to the religious life, and (2) that of the actual attitude of the Church at large, and of sections of it, towards art and beauty.

(b) Definition.—It is necessary to understand at the outset what is meant by 'Art.' To the majority of people a work of art means a picture or a piece of sculpture, and such works are generally regarded as the point of contact with nature, and of the intrinsic character of the person or scene or object delineated. Art is, however, something far wider, and it is taken to embrace the element of beauty wherever this appears in the works of man. The tasteful embellishment of buildings and of objects of utility is just as much art as the painting of a picture, and such decoration can be in the highest degree artistic even though the representation of nature plays little or no part in it. Where the representation of nature does form an important element in the effect of a piece, this may be a very beautiful and precious work of art, though the aspect of nature it presents is comparatively trivial, whereas a markedly inferior work of art, like some modern religious pictures of the 'Doré' type, may have for its theme a subject of highest import. In this article the subject and the religious intention of a work are not reckoned as in themselves competent to give it its rank, and only those works are regarded as illustrating the subject of Christian art that express Christian ideas in an adequate and beautiful artistic form.

(c) Misconceptions concerning Christian art.—These considerations may help us to get rid at the outset of certain popular misconceptions, such as the notions that in early Christian days pagan art was deeply tainted with impurity; that the Christians were in consequence opposed to art, and that the earliest manifestations of Christian art assumed a symbolic or didactic character as a sort of apologia or explanation. It is true that there was an immense amount of art in the pagan world of a decorative kind that filled life with beauty, but did not obtrude upon notice any special representations of mythological personages. In cases where these figures were actually in evidence, there was, as a rule, nothing in the way they were displayed that would necessarily offend the eye. As a fact, the works of the Greek and Roman chisel and brush are so far from being tainted with impurity that it is difficult to pick out from existing galleries of antique sculpture more than one or two works that are in any way suggestive or ignoble. Antique works compare quite favourably in this respect with those that figure yearly in European exhibitions of contemporary art. It is true we are told of some great painters of antiquity that they exercised their skill occasionally on licentious themes, but this is a fact also about certain prominent Italian painters of the present day. The extant works of painting, apart from a few examples that were never meant for public view, we find nothing displayed on the plaster of Pompeian walls that is not perfectly innocent. There may have been no fear of being taxed by lubricity, but they were specially executed to suit the taste of the Athenian jeunesses d'ore, and any one can see that thousands upon thousands of painted vases on view in the museums of Europe are as chaste as a child's picture book. A false impression arose when the Christian Fathers applied somewhat uncritically the OT category of 'idol' to the classical gods and goddesses, and were prompt to note the scandalous appearances made in pagan literature. As the early Greek philosopher complained, while the gods commit all the disgraceful acts repudiated among men, but the artists steadfastly refused to lend themselves to any such degradation of the religious ideal. In sculpture and painting the behaviour of these mythological beings is in almost every case exemplary. In their persons and conversation the artists exhibit nothing but what is ethically noble. Hence the spirit of pagan art, literally interpreted, was not anti-Christian; and of art as such must be adapted to Christian purposes without any marked incongruity.

Again, the existence of a vast number of works of art, often of an elaborate kind, dating from all the Christian centuries, is enough to show that there has been no general opposition to art in the
minds of Christians. There are, it is true, statements which have been interpreted as implying a condemnation of all forms of art. The statements are, however, primarily concerned with the making, embellishing, and setting forth of images connected with the pagan religion. This sort of work was naturally forbidden to the Christian and still is, save that, in the Christian church, it has gone so far as to eavel at the making of the similitude of any natural object, on the plea that it might conceivably become an object of adoration. On the other hand, he points out (De idolatria, ch. viii.) that the Christian and ultimately the Jewish artist should not be prevented from exercising his art. Moreover, even on work which had no connexion with the pagan religion; and the 11th Canon of St. Hippolytus allows the craftsman to supply ordinary social demands for artistic work. Hence there is no reason to doubt that Christian houses were as pleasingly adorned, to the measure of the means and the taste of their owners, as pagan ones; but the art thus applied was of a light and decorative kind, not depending on formal pictures or statues, which probably would not make their appearance at all.

1. Before Constantine.—The earliest existing examples of Christian art are applied not to houses but to burial-places, wherein the classical fashion is followed of giving them the same sort of adornment as the abodes of the living. The earliest known of these are decorated in the same fashion as contemporaneous Roman tombs, such as the well-known ones on the Via Latina. The style is bright and cheerful. Pure landscapes are not unknown. Wreaths of fruit and flowers play a considerable part, and there occur also figure motives of a classical kind, in the form of two-winged genii, often engaged in vintage operations, personifications of the seasons, Cupids and Psyche, and the like, wherein the innocent classical convention of the nude is wholly repudiated. To these purely decorative shapes there were added from the first certain others of a religious significance. The simplest of these is the Orant, a female figure with arms raised in an attitude of adoration. In the case of more distinctive personages, as the Canon of the NT was at the time only in process of formation, the representations are drawn mostly from the OT. Jonah is the favourite, and is evidently accepted, in the spirit of Mt 12th, as the type of Christ. Moses striking the rock, Daniel in the fiery furnace, and Susanna, also occur, and the choice seems determined by lists of typical worthies of the Old Dispensation such as those in the Epistle of Clement of Rome to the Corinthians, or in liturgical documents such as the Commendatio Animae quando Infirmus est in Extremis.

The figure of Christ appears early, but in a disguised form as the Good Shepherd, or as Orpheus who exercised a controlling charm over all living creatures. Occasionally He is presented in His own person, but occasionally the personage chosen is one in which He appears as worker of wonders. The 'Raising of Lazarus' is specially favoured. Save in one exceptional scene of the 'mocking,' the suffering Christ does not appear, and still less the Just Judge. Such are characteristic subjects in the 1st and 2nd centuries, while occasionally in the 3rd, and more often in the 3rd, we meet with representations of a more or less doctrinal kind, such as the faithful round the table of the Lord, on which is placed for food the mystic fish, the symbol of Christ. It is remarkable, however, that historical representations from the actual life of the Church, especially scenes of persecution and martyrdom, are wholly absent.

In all this work we have from the present point of view to note: (1) that it is in the main decorative, the artist being more concerned to cover bare spaces and to dispose symmetrically his representations than to inculcate by them any doctrinal lesson; and (2) that classical influence remains strong, even when we have passed from the earliest period of almost exact correspondence between pagan and Christian decorative schemes. As Dom Leclercq has recently shown, many of the OT figures were modelled on pagan types, while the earliest and best plastic representations of Christ as the Good Shepherd not only reproduce the familiar classical motive, but show a grace and elasticity in form and pose not unworthy of a fairly good period of classical art. Moreover, the Christian artist, if he be not a true Christian, is represented as youthful and beardless, with something of the attractive calmness of an Apollo. It is impossible in face of these facts to believe that there was any general sympathy among the early Christians with the extreme views expressed by Tertullian when he objected to any representation of figures or natural objects; or that there was any reason why Christians should turn with repugnance from the classical art that was all about them.

The OT and NT scenes that begin to appear in the catacomb frescoes of the 3rd cent. are repeated on the carved sarcophagi of the 4th and 5th. On some of these we find the same idyllic scenes of genii vintaging, the vine being, of course, in this case the True Vine. We have the typical decorative motives which we meet with in the earliest frescoes; but the OT and NT scenes form the staple subjects of sarcophagus art, and Jonah, Abraham, Moses, and Daniel are seen side by side with Christ raising Lazarus, healing the blind, or touching with a magic wand of power the water-pots of Cana. If the crowning scenes of His life are touched at all, there is no attempt to deal with the deeper Christian mysteries of suffering and sacrifice. The march to Calvary becomes a triumphant procession, with the Cross borne forward as a banner; the crowning with thorns is envisaged as a royal honour.

2. After Constantine.—The next epoch of Christian art, after the time of Constantine, introduces us into quite a different scene. In the 4th cent. Christianity has become the religion of the State, and confronts the world as a regularly constituted power. The artist needs no longer to hint but can assert, and there is demanded from him a certain amplitude and majesty in his work.—(a) Mosaic Art. The characteristic form of artistic expression for this period is the monumental mosaic. The artist's operations are no longer confined to the narrow limits of a burial chamber or the side of a sarcophagus. He has to cover with decoration the vast interior wall surfaces of the great basilican churches and the stately though much smaller baptisteries. His style changes with his task. If the bright unpretending catacomb pictures seem to have a literary counterpart in the Passion scenes of the 4th cent., the severe and imposing mosaics possess a certain epic grandeur. The subjects of the mosaics are not, as a rule, historical or directly doctrinal, and there is the same reliance in the avoidance of those Passion scenes in the life of Christ in which He is represented as suffering or in humiliation. The aim of the mosaic artist is to present in majestic and simple forms the heroes of Christianity. It is not the adventures of the saints that attract him so much as the dignity of their presence as they stand at the foot of the cross, or in Roman garb as the Roman emperors. He is represented as suffering or in humiliation—lords in heaven and earth. It is the Presence of Christ, rather than His mortal deeds and sufferings, that he strives to bring before the spectator.

The early Christian mosaics from the 4th to the 6th cent. at Rome and Ravenna are as great in their illustration of the principles of design as in
their technical excellence and their artistic beauty. They adopt in the main the principle of the world-famous frieze of the Parthenon at Athens, and offer an ideal presentation of actual scenes of which the building they adorned was the theatre. One of the earliest and quite the finest of the mosaics, that in St. Phidias at Rome, is in respect of its main scheme canonical. In the apse of that church the stately form of Christ enshrined as teacher occupies the central position, while on a lower level and on both sides of Him sit the twelve Apostles. The arrangement transferred to the basilica of Ravenna, in which the church in the centre behind the altar, with the attendant priests on the stone bench round the curve of the apse on either side of Him, Christ, behind whom in the mosaic rises a jewelled cross on a hill in the midst of a city, Jerusalem, in the invisible ideal president of the daily assembly; the spirit of the Apostles is ready to inspire the clergy. The work, which may date within the 4th cent., is notable for the classical feeling in the characterization of the Apostles, reminding us of the heads in some of Raphael's cartoons. Equally dignified, equally well chosen, is the scheme for the decoration of the Church of the Holy Apostles, Ravenna. In the centre of the dome is a noble picture of the ideal consecration to ministry, the Baptism of Our Lord, at whose feet the gaunt but imposing forms of the twelve Apostles are preparing to lay down their crosses. More explicit is the display in St. Apollinare Nuovo at Ravenna, where the worshipper on entering sees represented in mosaic, on the side walls of the nave above the arcades, on the one side a portion of Ravenna itself, and on the other the City of Jerusalem, as well as of the Imperial city. From each there issues a procession of saints, male on the right, female on the left, who are represented advancing towards the altar end of the church, bearing crowns which they will lay at the feet of an enthroned Christ and an enthroned Mary with the Child, at the end of the nave. Here again is idealized the bodily movement of the actual worshippers from the door of the church to its altar, or from their city homes to the heavenly mansion for the dead. The spiritual movement of the heart from earthly to celestial preoccupations. Above these processions, between the clerestory windows, stand single figures of white-robed saints, which carry out better than the church organs that could be the idea before noticed of the monumental presentation of heroic forms of epic simplicity and grandeur. Highest of all comes on each side a series of historical pictures in mosaic from the life of Christ—the first example of such representations that Christian art has to show. On the one side there are scenes from the miracles and discourses, very simply but effectively designed, and showing the protagonist of the youthful Apollo-like met with in catacomb art and on the sarcophagi. On the other side the chief periods of his life, the most coeval times a Passion series, but the actual scenes of the final tragedy are as a fact selected on early Christian principles, with a truly classical avoidance of anything painful, or of any situation in which the Lord would be shown as suffering humiliation. Thus there is no scouring, no crowning with thorns, no crucifixion, no taking down from the cross or burial, and the scene in which Christ, a heroic figure, at Ravenna, in the making of the triumphal procession towards Calvary, is followed immediately by that of the Marys at the empty sepulchre. In the pictures of this second series Christ is represented as older and is bearded, and the marked difference in His personality in the two closely related sets of pictures is enough to show that there can have been no authentic tradition of His actual physiognomy.

(b) Historical or symbolic representation.—From this same period of the 5th and 6th centuries we can date the beginning of the most conspicuous but not always the most artistic form of Christian art—the historical or symbolic representation, of an edifying and often a didactic character. There is an often quoted saying based on Quintilian, which occurs in many early Christian writings, to the effect that the pictures are the books of those who cannot read. To the ecclesiastical mind this gave a religious justification for the pictorial embellishment of the walls of public buildings, which had previously been a matter of tradition inherited from classical practice. In the middle of the 5th cent. we find St. Nilus laying down the principle that the inner walls of a church should be covered with scenes from the Old and New Testaments from the hand of a first-rate artist, in order that those who are unable to read may be reminded of the Christian virtues of those who have served aghit the true God, and be inspired to emulate them. In the 6th cent. Gregory the Great recommended the use of paintings in churches in order that the illiterate might have something to look at in what they were not able to read in books. On this idea was based a scheme of decoration which remained in use throughout the medieval period. At the altar end of the church was displayed the figure of Christ enthroned, as teacher or judge, and the faithful were to be inspired by the sight to strive for the joys of Paradise. Along the side walls were exposed historical pictures from OT or NT or from the lives of saints, in which instruction might be conveyed to the unlettered convert. The subjects would be chosen, and the figures, actions, and details as a rule settled not by the artist himself, but by the ecclesiastical authorities. Gregory of Tours gives us a charming picture of the wife of a bishop of Clermont in the 5th cent., sitting with her Bible in her lap in the church, and directing the operations of a company of painters who are frescoing the walls. The western entrance wall was not at first included in the scheme as well as the eastern, but from the 9th cent. onwards it was utilized for a display complementary to that of the glories of Paradise over the altar. This was the Last Judgment, often with the connected scenes of the separation and after-disposition of the monks of earth and of Paradise. In the later medieval period the Inferno was made especially prominent, with the avowed intention of affecting the souls of the worshippers by salutary terror as well as by hope. Of the subject of Christ in glory the finest examples by far are in the early Christian mosaics, but the historical scenes were not displayed in adequate artistic form till the development of the Italian schools of mural painting in the 15th century. The most impressive rendering of the scene of the Last Judgment is to be found in the Campo Santo at Pisa, which used to be ascribed erroneously to Orcagna. The treatment here is truly dramatic and moving, and is marked by a fine reticence. Later representations of the theme, such as the famous ones by Luca Signorelli at Orvieto, offend through their over-insistence on the terror of the scene, and especially on the physical torments inflicted by the demons on the lost spirits who fall into their clutches. The scene may thus be made to convey the idea well thus to damn the sinner and to harass the feelings of the impressionable, but the artistic result is nothing less than deplorable. Both in these scenes, and in the representation which became very popular of Christ suspended in suffering or
the Cross, the painters of the 12th and 13th centuries, especially in Italy, offended against all laws of good taste and of beauty, and prostituted art to the service of a gloomy religiosity.

From these false ideals representative art in the West was saved by certain religious revivals, especially in the person of St. Francis of Assisi, and in Germany in the mystics of the school of Cologne. In both cases pictorial art showed itself responsive to the religious impulse, and the artistic revivals connected with the names of Giotto of Florence and Meister Wilhelm of Cologne, were distinct. In fact, the view they thus adopted about works of art, were not regarding the matter from an aesthetic, but rather from a doctrinal standpoint; but we are fortunate in possessing medieval productions that do not depend for their artistic value on anything that they return us the consciousness of the medieval opinion that are more satisfying to those aesthetically minded.

2. Theophilus on Art.—Among the most interesting documents that have come down to us from the Middle Ages is a treatise, written about the year A.D. 1100, by a German Benedictine monk whose name in religion was Theophilus. The author, a practical expert in line metal-work and other artistic processes and materials, has prefixed to the three books into which his treatise, De Diversis Artibus, is divided, Introductions in which he discourses at large on the whole question of art and the cultivation of the beautiful as a part of the religious life. The view Theophilus advances is that of the Middle Ages in general, and thus gives the modern reader a very pleasing impression of monastic culture, which he will probably have been taught to believe was slavishly narrow and ascetic.

Theophilus bases his apologia for the practice of the arts on the part of those vowed to the religious life on a view of human nature that can be thus paraphrased:

Man was made in the image of God, that is, as Theophilus implies, in the similitude of the Divine image, in the world, and he is bound to make his resemblance to the Divine as real and effective as he can. It is true, that by the machinations of the evil one this Divine image was obscured at the Fall, but it was not so far effaced that man cannot through care and thought win back something of the ancient heritage of art and of learning. Wherefore, he writes, the loss devoted of the faithful should not neglect the knowledge which the prudent will and the skilled person holds for himself and his fellows. For which reason, Theophilus declares, he is ready to offer to all who desire humbly to learn, as freely as he has himself freely received it, all the gift of the Lord, which being the knowledge of the technical processes of the arts which he then goes on to unfold. In addition, he discourses in the same strain, and urges the artist to believe that the spirit of God has filled his heart, and will direct him by the seven gifts of the Holy Ghost. Then, he says, the gifts embrace the special qualities of skill and taste and industry which are requisite for the practice of the arts. The spirit of Wisdom teaches that God is present in each gift, and without Him there is nothing,—this is the principal lesson. Next, the spirit of Understanding gives to the mind the capacity for discerning the right order, measure, and distribution of parts which should be applied to the work in hand. The spirit of Counsel teaches us not to hide the talent which has been given us by God, but to display it openly, with all humility, in word and act before those who are desiring to learn. Through the spirit of Might the artisan will throw courage into the weakness of the weaknesses, and will begin his work with vigour and carry it through with all his energy and power to the end. The spirit of Knowledge, which has been granted to him, will multiply his means, and present him with abundant stores, over which he presides, and which he must produce with all boldness before his fellows. By the spirit of Piety he will rightly judge upon what object, for whom, and when, and how much, and in what manner he shall spend his labour, and will guard against that insatiable greed and greed by a most scrupulous moderation in estimating the value of what has been done. Finally, as the great lesson of the whole, the spirit of Justice teaches us that the artisan can do nothing of himself, that all he possesses or desire comes from God, and that he must attribute all the goodness of the Divine mercy all that he knows, or is, or hopes to be.

3. Art in the monasteries.—The existence of artistic practice as an institution of the cloister may in itself surprise, for it seems to us moderns to belong to a side of life from which the ascetic recluse would turn rigidity away. We may, how-
ever, repeat here what was intimated in connexion with the fact, to some almost equally surprising, that artistic practice existed among the earliest Christians. Art, regarded as an element of beauty attaching itself naturally to the works of men, and touching life at every point, the modern cannot really understand, because with us this element of beauty is something artificial and extra, for which we have to make a special effort. This was not the case in old time, when it would have needed a special effort, not to procure, but to exclude this element. The earliest Christians decorated their tombs, the Christians after Constantine their churches, because not to do so would have been a forced act, for which, as we have already seen, there was no real reason. The artistic tradition, thus maintained from the first by the Church at large, was in Eastern Christendom never broken, and the Greek Church, while stereotyping the forms of its expression, has held it continuously in honour. In the West the Teutonic inroads broke up the fabric of antique culture; but though the classical tradition in art was thus in a measure severed, the barbarians were in their own way just as artistic as the Greeks or Romans, and the medieval civilization of the West, partly classical and partly Gothic, derived its beauty from both these sources. Hence, when communities of monks and nuns were formed, alike in the Celtic and the once-Romanized parts of the West, the arts quietly made their appearance within the hallowed enclaves of monastic, collegiate, or religious communities, was in theory self-supporting, and all sorts of operations in harnessy and in the mechanical crafts had perforce to be carried on by the inmates, whose bodily and mental health was greatly improved thereby. Of the Celtic monastery at Bangor, near Chester, Bede tells us that the two thousand inmates all lived by the labour of their hands. The rule of St. Benedict, in the 8th cent., provided that when abbeys entered the Order they were to be allowed to continue working at their crafts, though they were not to take any personal pride in their productions. The quiet and order of a monastery must have been congenial to the artist, and Ordoennis Vitalis tells us that, when the first monks entered a certain hermitage, 1 they gathered about him freely craftsmen both in wood and iron, carvers and goldsmiths, painters and stonemasons, and others skilled in all manner of work. (St Beneict, vii. 27.)

The mere practice of the various crafts, artistic as well as utilitarian, in the medieval convent is, however, one thing, and the religious enthusiasm with which Theophilus seems to regard artistic pursuits is quite another. It is this that constitutes for us the interest of the Schedula. The religion of Christian art was evidently sincere and fervent, and it seems to him to find a natural, even a Divinely ordained, outcome in art. Though he does not always understand the purpose of art as we do now, and indeed he often holds the artist up to the same standard as himself, this is not greater than this simple reminder that the love of what is beautiful is a part of human nature, or, if we take still higher ground, the more august assertion that the creation of what is beautiful is part of the law of the universe at large.

1 Look around you, you can hear Theophilus saying in effect to his brother, ‘and survey the fabric of creation. It is the work of an artist, of the Supreme Artist who has made all things beautiful in their beauty.’ He has given you too with a particular gift of His own nature and has formed you an artist, and you are bound in service to Him to exercise your creative power and make the most of your affinity with what is beautiful. In the name of religion take up the brush and tongs and mallet, and spare no cost or labour till the House of God that you build shall shine like the very fields of Paradise.

These last words are used by Theophilus in a passage in which he forebodes the concrete realization of the promise of the microcosm of an Abbey church, which is an image of the vast microcosm of the universe. The church, he says, must be adorned, not decorated on canvas, where the artist is free to use whatever material his fancy dictates. The ceiling will be flowered with an embroidered role, the wall to resemble a garden, the windows to be filled with coloured light. After the decoration of the fabric will come the provision of fittings and apparatus, including all the vessels for the service of the sanctuary, the ceremonial and embellishment of which he describes in the technical chapters in the body of his treatise. There, the workshop and among the appliances and tools which the monkish craftsman has to build and fashion for himself, we are invited to see the gold and silver and bronze, the coloured earths, the glass stained with metallic oxides, all taking shape in dainty and beautiful forms, till the mire matter, the raw material, has become spiritualized through its consecration, in a shape of beauty, to the service of the Most High. For with Theophilus the preoccupation always is with the technical manipulation of the material so as to combine with it an effect of beauty. From end to end of his treatise there is comparatively little about art as representative. The art he most highly esteems is decorative. It is something that corresponds to the more prosaic visions of the Fathers and bishops, to whom the lessons to be drawn from the presentation of holy persons and scenes make up the chief value of art. Of course, aware that the beautiful forms he conjures into life under a hammer or the glass of the ceiling or the walls of the church are not infrequently used only for the sake of art, and not because the effects thus produced are beautiful, he feels that to the spectator will take help from the thought of the artist’s good action, and be terrified at the remembrance of his sins.

Though Theophilus troubles himself little about symbolism, there was no doubt a symbolic intent in many of the decorative forms employed in medieval art. On this subject a word must be said, because it is one that is often misunderstood. There is no mystery about Christian symbolism, because it is almost entirely based upon Scripture. We are familiar with that type of art in which animals and plants stand for personages and qualities, and know that there is little consistency in the use of these. Thus the lion is at times a type of Christ, as the ‘lion of the tribe of Judah’; but at other times he may represent the evil one, who, ‘as a roaring lion, walketh about, seeking whom he may devour.’ In plastic or graphic art the lion may conceivably stand either for the ideal of good or the ideal of evil; but there is commonly, too, a third alternative, that the creature is purely ornamental, and may have been copied as a mere decorative motive from some different source, such as an Oriental figured staff. The whole subject of SYMBOLISM is dealt with in another article, and it is mentioned here only for the sake of warning the reader writers who have descended on the praises of art from the moral and religious standpoint, there is a breadth and dignity about the thought of the 11th cent. monk that puts him above them all. There is, indeed, no more effective apology for the cultivation of art than this simple reminder that the love of what is beautiful is a part of human nature, or, if we take still higher ground, the more august assertion that the creation of what is beautiful is part of the law of the universe at large.

ART (Christian) 848

VOL. I.—54
The difference was that, while the theologian saw, in the shape, say, of a dragon, a reference to mystic stream of thought, it was necessary here to emphasize the natural and concrete symbolism of the forms of Gothic architecture, which raises the soul in aspiration, while the sense of mystery, of the beyond, is instilled by its multitudinous eloquent details, its perspectives, its magic of light and shade. Of course, an elaborate symbolic interpretation was given all the parts and fittings of the church and the apparatus of the altar. In this way, too, beast forms in art were credited with moral and religious meanings that were interpreted according to schemes of beast symbolism embodied in the so-called bestiaria. That beast forms in medieval art were commonly symbolical is, however, rendered extremely unlikely by the fact that reforming churchmen of puritanical tendencies are found inveighing against such symbolism as common in 12th and 13th centuries. The word *classicus* occurs in the writings of St. Bernard, in the 12th cent., who protests against the foolish and wasteful display of these monsters on carved capitals and friezes, without any suggestion of their symbolic significance. Significantly later writers draw a distinction between pictures of the sufferings of Christ and the martyrs, which he praises as 'books of the laity,' and animal representations, for 'what have lions to do in a church, or dragons, or all the rest of these beasts?' (Schmitz, *Geschichte der bildenden Künste*, iv. 272).

These passages draw attention to the fact, which must not be passed over, that within the monastic system itself there was not perfect unanimity in regard to this lavish display of art in connexion with religion. There was a puritan vein in monasticism that led to protests against what was regarded as over-exuberance in the use of the element of beauty in the furnishing forth of sacred structures. The so-called reformed Benedictine Orders, beginning with the Cluniacs of the 10th cent., took, as a rule, this view, and a striking illustration of its working is to be found in the attitude of the Cistercians towards stained glass. The magnificent display of colour and imagery in the windows of the 12th and the 13th centuries, such as those at Chartres, they considered too sumptuous for the House of God, and substituted geometrical patterns in grey and yellow. Figure sculpture on the façades of their churches they also repudiated. It is, however, significant of the hold that art had obtained over the religious community in this advanced medieval period, to note that there was no real opposition to art even among the severest of the reformed Orders, for Cistercian architecture, as the ruined abbeys of England and France prove, though sparsely adorned, is of extreme beauty, and its ornamentation, with conventional foliage, is of utmost delicacy and grace.

4. Gothic Architecture. - We find, then, in the *Scholastica* of Theophilus the conception of Christian art as a display of beautiful things carefully and cunningly wrought, that were offered as the homage of the mortal artist to the great Artist of creation. This conception was actually realized, with a completeness and splendour of which a monk of the 11th cent. could have no idea, in the fabric and fittings of the French Gothic cathedral of the age of St. Louis. This is the most perfect embodiment of Christian art that the world has seen, that representative element, though present and recognized as it was by Theophilus, was subordinate to direct artistic expression, first in the forms of the architecture, and next in the sumptuous display of detail and colour in the stone and wood carvings, the gilt and enamelled shrines, and, above all, in the 'storied windows richly dight' that are the glory of the Gothic fane. The subject of Christian architecture receives this treatment, and it is necessary here only to emphasize the natural and concrete symbolism of the forms of Gothic architecture, which raises the soul in aspiration, while the sense of mystery, of the beyond, is instilled by its multitudinous eloquent details, its perspectives, its magic of light and shade.

In this way, and in the general artistic effect of these vast structures at the time of their glory, when the interiors, often now cold and bare, were glancing with gold and colour, and were hung with gorgeous Eastern stuffs, we can form but an imperfect idea; but it is probable that nothing more artistically beautiful has ever been seen. The spirit of the work was still the spirit of the earlier religious decorative art of which we read in Theophilus; that is to say, it was impersonal work, unmarred by any touch of personal display, a work in art, sincere in intent and execution, and offered in an act of devotion for the service of the sanctuary. The representative element was at the same time present in the art, but it kept its place as on the whole subordinate to the general effect. For that very reason we find in it a charm which more advanced representative work has often lost. It is the charm of naïveté and freshness due to the artist's unsophisticated delight in nature, and at the same time to the clearness of his mental vision, which gives him ease and assurance.

The decorative figure sculpture on the great French cathedrals, such as Chartres, Amiens, and Rheims, is really one of the most perfectly satisfactory forms of Christian art. It is a direct expression of the thought and feeling of the Gothic epoch, as they were embodied in the character and work of St. Louis, the typical man of his age. In St. Louis medieval religion took on a new character, for his was no cloistered saintliness, of what may be termed a professional type, but the saintliness of a man versed in secular affairs though viewing them always from the standpoint of a childlike but cheerful piety. The forms of Christ and of Mary, of the Apostles and prophets, of saints and of angels, that cluster about the spreading portals, or take their station on pinnacles on the upper stages of the buildings, are so fresh in their naturalness, so graceful and elastic in pose, so full of brightness and tenderness in expression, so pure and holy of aspect, that we feel that we never met with a company that seemed to realize better what is meant by 'the body of Christian fellowship.' On the intellectual side we trace in the figures and reliefs the working of ideas beyond the mental horizon of the carvers who actually achieved the work. At Amiens, for example, the subjects in the reliefs of the pinnacles that support the noble figures of the Jewish prophets, on the western front, are drawn from the prophetic writings, and evince a knowledge of the Vulgate text that betokens the trained theologian; but if we take the sculpture as a whole, we cannot doubt that the minds of the carvers were just as alert as their hands, and that the qualities in the work which we most admire are due not to the ecclesiastical directors of the undertaking, but to the devotional feeling, the sense of beauty, and the freshly kindled love of nature, that in the France of that favoured epoch were so widely diffused throughout the community of artists. It needs hardly to be said that the same qualities mark Gothic sculpture in other lands, and they are very apparent in the beautiful recum-
bent effigies in stone or bronze in which English craftsmen of the 14th cent. achieved so much success. The 'Queen Eleanor' of Westminster Abbey and the 'Edward ii.' at Gloucester are among the best of these. English and German churches of the period are adorned with beautiful decorative sculpture, but the displacement of such a display of Gothic sculpture, laid stress on physical suffering. This applies chiefly to Italy, where in the early part of the 13th cent., while French and English Gothic art had unfolded itself in forms so varied and beautiful, little was being produced but unattractive and coarsely executed pictures, on which the historians of Italian painting lavish all the terms of degradation they can muster. The Gothic spirit is one of humanity and brightness, and it was the spread of this from central France to Italy that led to the revival of art in the Peninsula. This Gothic spirit became incorporated in St. Francis of Assisi. As Sabatier puts it:—

'S. Francis is the friend of nature: he is the man who sees in every object a hint, an adumbration of the infinite beauty, the essence of the eternal beauty . . . hence at the voice of the Umbrian reformer Italy began to recover herself; she found again her sense and her good humours; she put away those ideas of pessimism and of death as a healthy organism gets rid of the principles of disease. A lifting himself as by the standard of the wing to the religious life, Francis caused suddenly to shine forth before the eyes of his contemporaries a new ideal, in presence of which there disappeared all those strange and perverted sects, as the birds of night fly before the first rays of the sun' (Life of St. Francis, London, 1807, p. 40).

The beneficent influence of the genial creed of S. Francis, so that Tintoretto in the Italian painting is well understood, and in Giotto and Simone Martini, who at Florence and Siena respectively represent the coming in of the Gothic spirit of humanity and tenderness, we find this influence at work. It is worth noting also that a similar influence at a rather later date was exercised upon painting in Germany, and led to the beautiful art of the early school of Cologne. German representative art has often shown a tendency towards what is grotesque and terrible, and the popular example of Death of the Good Will, or of the dead, are proof of this. In marked contrast to this tendency we find at Cologne in the last part of the 14th and beginning of the 15th cent. a school of painting marked by the most delicate idyllic grace and tenderness by a pure, solemn, dignified, few Italian pictures can match. The art is really inspired by the so-called German mystics or 'Gottesfreunde,' a body of men who without forming any sect or order felt themselves impelled to a religious life of more intense zeal than was shared by their fellows. Still remaining, like the early Franciscans in Italy, true sons of the Church, they sought to make religion consist in a more intimate personal relation between the soul and God. When this religious devotion was established, there was filled with an ecstatic love that was not only the love of God but also the love of one's neighbour, so that the perfectly holy man, it was said, might desire the Kingdom of heaven for his fellow-man even before himself. In this mood the mystics were visited by visions, but visions that presented only forms of beauty. The fantastic and the grim, which have exercised such fascination over the Northern imagination, seldom appeared before the eyes of Heinrich Suso or his fellow-seers, but their dreams were of loving rides on flowery meads, and even of celestial maidens to whom they were fain to offer adoration. Schmauss was perfectly right in connecting with this religious revival of the 'Gottesfreunde' the Cologne school of idyllic religious painting associated with the names of Meister Wilhelm, Hermann Wynrich, and Stephen Lochner, the painter of the famous 'Dombild.'

5. Development of Christian art from the 13th to the 16th cent.—We thus see in Italy and in Germany alike that the artistic revivals of the late 13th and 14th cents. were preceded by and based upon certain religious movements that set in in the direction of humane and tender feeling. The influence was essentially the same as that which formed the inspiration of Gothic art in France in the century before; but whereas Gothic art is mainly decorative, we begin at the end of the 13th cent. to watch the development of painting and sculpture on their representative sides till they become capable of expressing the deeper emotions with dramatic force and verity. Up to this period the artist had never disposed of adequate means for the representation of nature. However pure in feeling, however devotional, had been the art of the catacombs, or of the monastery, or of the Gothic church, however noble the single forms, however lively in action the groups, in the mosaics or in the historical pictures from the lives of Christ or of the Saints, the delineation was always summary, the rendering of light and shade and perspective from the 14th cent. onwards two centuries are occupied with the development of painting and sculpture on the technical side, till they become in a true sense mirrors of nature and clear expressions of artistic thought. This is the epoch of what is called 'excellence' Christian art, and lies between the end of the 13th and the close of the 16th cent. in Italy, between the end of the 14th and the middle of the 16th in Germany and Flanders. From Giotto and Taddeo Gaddi, from Lippo Lippi and Domenico Veneziano to Quinten Massys of Antwerp in the other, painting and sculpture are Christian, in the sense that religious themes are preponderant, and that spiritual ideas are conveyed in a more or less distinct and convincing form. It would be a mistake, however, to use the term 'Christian' of this art in too absolute a sense, for the power which the artist gradually obtained over his materials he exercised on a realistic rendering of nature that resulted in a progressive secularizing of the spirit of the art. While the influence of the religious or of the 15th cent. acted potently in the same direction. All through the periods indicated, however, art that was in a strict sense Christian was being produced, though not by every artist, nor, with certain exceptions, by every feeling at every time.

The lives and works of the leading representatives of art in the periods indicated are so familiarly known that it will be sufficient for the purpose of this article to indicate in a few sentences the most prominent instances in which these artists embodied distinctly Christian ideas in their productions.

(a) Italian Schools.—The artists of the school of Florence, with the exception of one or two of prominent French, such as Simon Marmion and Luca della Robbia, with others like Lorenzo di Credi and Fra Bartolommeo who were directly influenced by the revivalism of Savonarola, took their subjects as a rule from the human side, and are noted for characterization and for the dramatic presentation of scenes of interest rather than for pious preoccupations. These scenes are of a sacred character, but they are generally envisaged in their human aspects, as is notably the case with the greatest of the early Florentines, Giotto and Masaccio. Some of Giottos scenes from the Passion of Christ at Padua, and Masaccios magnificent designs in the Carmine at Florence, are in the truest sense spiritually elevating: but the effect is that of the sublime in art generally, and they are com-
parable with fine scenes in Shakespeare or Aeschylus rather than with religious discourses. The same applies to some of the technically perfect achievements in religious art of the masters of the 16th cent., who bowed before Masaccio's genius in creation through they disposed of far more advanced techniques. The Francia, in its degree, to tend to. The most notable of these works from this ethereal standpoint are Leonardo da Vinci's 'Last Supper' at Milan, Michelangelo's frescoes on the roof of the Sistine Chapel at Rome, some of Raphael's less academic compositions, numerous works by Titian, and the aforementioned Luini's. The largest part of the work of Tintoretto. The single figures by these masters have the epic grandeur of those in the finest Christian mosaics, though we see them no longer in monumental repose, but alert and mobile and actuated by noble passion. The sacred scenes in which they figure are re-constructed on an intelligible scheme, though the deliberate intention of all the actions and details is often so much in evidence that we are chilled by a certain made-up look in the composition. The Venus of Raphael or Titian in giving to these scenes a convincing air of reality, because they see them from the first as a whole instead of building them up piece by piece in conscious fashion. Perhaps the best of all these efforts for itself is Titian's religious impression is Titian's comparatively unpretending picture at Dresden known as the 'Tribute Money.' Christ, tempted with the insidious query about the lawfulness of paying tribute to Caesar, has asked to see the penny, which is brought to Him by His interlocutor, and the painter has emphasized the contrast between the noble, and at the same time tender and sympathetic, lineaments of the Lord and the screw-ed up cynical features of the weather beaten Pharisee, who peers cunningly into His countenance. The Hand of Christ, one of the most beautiful in art, contrasts effectively with the gnarled paw that is holding out the penny at which He points. The realization of the Christ of the Gospels and the creation of the adequate and beautiful type represent one of the triumphs of pictorial art. The imaginative power shown in some of Tintoretto's vast sketches in oil, from religious themes, in the Scuola di San Rocco at Venice, has never been equaled, and Raphael's cartoons are in comparison commonplace. The great 'Crucifixion' of the former artist at San Rocco, and the 'Christ before Pilate' opposite to it, are sublime creations.

The Italian painters of the first rank may be said to transcend the limits of an art that may technically be termed 'Christian,' and to present the sublime of human nature in such a way as insensibly to raise the mind of the spectator to Divine things. There were, however, many artists of the second order whose devout feelings found a more direct expression in works to which the adjective just used may with strictness be applied. The typical artist of this order was Fra Angelico, and the same spirit that animates his holy and beautiful paintings runs through the productions of the early Siennese and early Umbrian schools as a whole. Angelico's religious frescoes in the cells of the dormitory at San Marco, Florence, afford us the most perfect example of an art wholly devoted to the purpose of lifting the soul of the beholder on the wings of aspiration. Every figure, every composition, was a warning to leave the scenes of earth, and to join the celestial company around the Risen Christ, whose visionary form lie constantly present. There is more power, more intensity, in his works in the freshness of the Siennese and early Umbrian painters, who in purity of soul and in simple piety are his counterparts. To match the religious design of Angelico, we must pass over a generation of artistic advance in technique, when we find in the fully accomplished painting of Francia and of Luini a devotion equal to his own, joined with powers of execution to which he could lay no claim. The well-known 'Pieta' by Titian, in the National Gallery, is a perfect piece of religious art, while the fragments of Luini's frescoes have filled the corridor of the Brera with some of the loveliest shapes of virgin and saint and angel that Christian art has to show.

(b) German and Flemish Schools.—Turning now from the religious art of Italy to that of the early German and Flemish schools of the 16th cent., we find the fresh and innocent idyllic design of the early school of Cologne soon beset and overcome by the realism and the ugliness to which northern art has all along been ready to surrender itself. Out of this at the beginning of the 16th cent. Albrecht Dürer with difficulty fought his way, and created an art in which deep feeling and philosophical thought triumphed over the characteristic defects of Teutonic design. Many of Dürer's religious allegories, in which the suffering Christ are profoundly impressive, and were recognized by the Italians of his day as possessing qualities in design superior to those of their own productions. Dürer's finest works, however, such as the 'Lame Youth' of Dürer's first visit to Munich, and the world-famed engravings 'Melancolia' and 'The Knight and Death,' are, like Michelangelo's 'Prophetas in the Sistine chapel, ethically great but not inspired by any sentiment that is distinctly Christian. It is worth notice that though Dürer remained all his life a medi~

ist and a faithful son of the old Church, he held strong views about Papal abuses, and expressed the greatest admiration for Luther and some others of the Reforming party. We find proof of this in his writings as well as in some of his paintings. Once he addresses Erasmus as the 'Knight of Christ,' and bids him 'ride on by the side of the Lord Jesus.' There is a reference here, no doubt, to the figure in his own 'Knight and Death.' We find it hard to imagine Erasmus in mail and on the war-horse, and Luther's would have been a better name to invoke! The 'Four Apostles,' in the exaltation of Paul and John over Peter, betrays Lutheran prepossessions. In much of Dürer's work the German instinction with the weird and terrible interferes with our appreciation of its contemplation, but his woodcuts from the Apocalypse, where these qualities were in place, are charged with imaginative power. The pictures of the early Flemish religious painters, on the other hand, though in artistic rank they do not equal the masterpieces of Dürer, perpetuate in some degree the idyllic charm and tenderness of the early Cologne masters, while in the work of Rogier van der Weyden and some others there is distinct de~

 ногательствование языка в тексте в первоначальном виде.
Before passing on to the subject of Christian art under Protestantism, a few words may be said as to the later developments of religious painting on the older or pre-Reformation lines. We have seen that such painting in the Italy of the culminating period of the art tended to assume the form known as the ‘Biblia pauperum’, in which the scenes and personages are represented in a somewhat ‘made-up’ fashion, and fail to impress us with any sense of reality and power. This form of religious art maintained itself through the 17th and 18th cents., especially, of course, in Catholic countries, but not in these alone. In Spain, though the greatest master of the age, Velazquez, rarely exercised his genius on religious themes, painting of an ecclesiastical kind was necessarily much in evidence, and Murillo (1618-1682) is a very prolific and, on the whole, sympathetic representative of this form of art, on a somewhat popular plane. In the Catholic Netherlands, Vandyke, who is more refined in his characterization than his master Rubens, painted some very good religious pictures of the conventional type, while his contemporary Eustache Le Sueur in France (1617-1655) is one of the best of many artists of the second rank who exercised their talents on the familiar themes. Indeed religious painting was abandoned, and the kind of art which was painted, in the 17th cent. by Isaac Fuller, and in the 18th by Hogarth, who covered some very large canvases with religious compositions, the best of which is the ‘Pope of Bethesda’ on the subject of the greater promiscuity of the soul, was the Church of the Reformation; and this same style in decoration spread to other church interiors of the 17th cent., with a result which visitors to Rome, Ravenna, and other places never cease to deplore.

Anton Springer has well characterized the style as one that ‘brought architecture of its fitting reposes, and by the introduction of figures posed in startling attitudes, aroused or confounded by confusion and confusion, instead of straight lines, of applied upon pillar, substituted a turbulent unrest. Not,’ he says, ‘that the style (called generally Baroque) was with us. It was with us; but by a disposition of detail, a feeling for vastness and pomp, together with an internal decoration which spared neither colour nor costly material to secure an effect of dazzling splendour such are the distinguishing attributes of the Baroque style as in Rome it has been on every hand.’

It is interesting to compare the spirit of ecclesiastical decorative art of this artificial kind with that of the sincere, unpretending, though in its way equally elaborate art offered by the medieval monkish craftsman for the embellishment of his belovéd Church. On a superficial view the motives may be held to be the same, but now the difference! It is this substratum of ethical interest belonging to the history of the arts that gives this subject its importance to the student of the successive phases of human culture. It is noteworthy how much more is made of the evidence of art in historical and sociological studies on the Continent than among ourselves. The British mind is unfortunately possessed with the idea that the arts are merely separable accidents in the ornamental dress of our lives, and not, as was really the case in the past, modes of intimate expression in which the ideas of an age or a community found embodiment.

III. POST-REFORMATION PERIOD.—It was inevitable that the Reformation should bring about a considerable change in the forms and the character of Christian art. Assuming the least possible alteration, let us see what would necessarily follow from the rejection of the Roman ecclesiastical system. We will suppose that the Protestant continued to recognize, as he recognizes to-day, the value of the element of beauty in human life, and the suitableness of art as a form for the expression of religious ideas. The Saints would none the less all disappear from view, and with them would go their altars and altar-pieces, as well as the picturesque and varied scenes which had supplied artists for centuries past with unnumbered themes. In some respects the situation of the iconoclastic period was repeated, and representations, such as that of the crucified Saviour, or the enthroned Madonna, which had attracted something like worship, would be banished at once from the churches. The cessation of any demand for the large scenic paintings of the Last Things may at first sight seem surprising, but the interest in the Church of the Reformation became of far greater relative importance under Protestantism, which refused to recognize the competing claims of Mary and the Saints. As the Bible was freely perused, the literary treasures of the Old Testament were revived, and particularly the works of the Old Testament, and the prospective artist would in this way find ready for him in the bosom of the Reformed Churches a range of noble subjects of an absorbing religious interest. It must be noticed at the same time that, though sacred altar pieces and mural pictures went out of fashion, a new form of religious art grew up in the Germany of the Reformation period and spread to other lands, in the shape of the engraved plates which were abundant in the earliest printed Protestant pamphlets and in pious books of other kinds. Lucas Cranach illustrated Luther’s Bible; and Holbein, who in this aspect of his art was a child of the Reformation, has left us classical examples in the Homes Historic and Writings of Bible illustrations—and plates such as the ‘Christ the True Light,’ of 1527. This was a very cheap and popular form of art, and made up to some extent for the loss of the monumental works. In all these Protestant designs it would be natural, though not inevitable, for the subjects to be approached from the human side. So much had been made of the mystical element in religion in the older system, that the Reformers, though untouched by rationalism, might be disposed to keep the miraculous in the new form.

It follows that under an enlightened Protestant régime there might be as much expenditure in architecture and on decoration as before, and the meeting-house of the Reformed congregation would have just as much right to ‘shine like the fields of Paradise’ as the monastic fane of four centuries earlier, while representative art possessed in the life of Christ upon earth, and in the doings of the Old Testament worthy, a range of subjects the value of which ranks with that of the pictures of Paradise. The words of Luther are in this connexion very significant, when he said that he wished to see all arts, especially music, in the service of Him who had created and had granted them to men, and repeated the old arguments in favour of pictures
as more suitable for the instruction of simple folks than discourses. As a fact, however, the alteration brought about at the Reformation was far greater than we have just assumed. In Switzerland, for instance, in Luther's time pictures were condemned and banished as idolatrous; while in Germany, he take another example, the reaction of the Reformation period went so far that under the title 'monuments of superstition' artistic treasures of indescribable beauty and perfect innocence were ruthlessly destroyed. Between the first onslaught upon ecclesiastical property on the side of the Pope and the edicts of the state that tried to put a stop to further vandalism, the loss to art was incalculable, and from this point of view those years of desolation and waste are among the darkest in our national annals. So richly equipped, however, were our English churches, and so well established had been the pre-Reformation tradition of beauty in the apparatus of worship, that, as in doctrine so here, a compromise was arrived at, and Christian art still recognized the Episcopal churches and cathedrals as its own. Here, at any rate, we could dream of peace till the Gothic revival of the early part of the 19th cent. fostered in it a new growth. It was among the non-Episcopal sects in England, and especially in Scotland, that religious art, in the truest sense of the word and as the expression of a true religious consciousness, was brought to the test of the letter of Scripture, and those parts of Scripture that were held at the time in special honour had little to say for it. A Biblical justification for art had always existed in the accounts of the Jewish temple and its ritual, and to these the lovers of art in mediæval days had appealed. Now, to the Presbyterian and the Independent, descriptions of temples and altars and priestly vestments and all the apparatus of worship did not appeal, for all these things they could not away with, while of specially Christian or NT justification of art there was but small trace to be found in the Gospels. Their teaching however broad it may be, ignores almost completely this side of life, which indeed would not naturally appeal to the Founder of Christianity in the temperal conditions under which His life was passed. His justification of the use made of the 'alabaster censer of ointment of spikenard very costly' (Mk 14:3) is in this respect notable, as it can be traced into the service of artistic theory. Some of the recorded sayings of Christ encourage a feeling for the beauty of natural objects, but the only one in the Synoptic Gospels bearing definitely on art is of rather the opposite character. 'And as he went forth out of the temple, one of his disciples saith unto him, Master, behold, what manner of stones and what manner of buildings! And Jesus saith unto him, Seest thou these great buildings? there shall not be left here one stone upon another, which shall not be thrown down ('Mk 13:2').

The going forth from the Temple of the Founder of Christianity is a genuine one, was past the immense and splendid Hellenistic triple portico of Herod—the finest, Josephus says, in the world—and out under the vast substructures of the Temple area; so that the pride of the disciple in these glorious structures must have been not a little disconcerted at the response. It was thus possible at the Reformation to find Scriptural justification of a negative kind for a starred and narrow view of art and beauty, as well as for one contrivingly both narrow and liberal, and it is interesting to note that the following out of the first view led to the extremes of rigid Puritanism, best to be studied in the Scotland of the 17th and 18th centuries; while on the second was based, as we shall see, in Holland, a phase of religious art that is one of the glories of Protestantism.

1. Narrow view of art.—Edicts for the destruction of works, which the early Reformers, like the Byzantine iconoclasts, stigmatized as 'idolatrous,' were not confined to Great Britain, but were necessary consequences everywhere of the revolt from Rome. How far they were in each land actually carried was a matter of degree; but the causes. The destruction has been comparatively thorough in Scotland, but it must be remembered that that of the South, to the fashion, this pulling down and breaking was due quite as much to the constant English ravages as to Scottish iconoclasm.

The views of the First Scottish Reformers may be gathered from the so-called Duke of Discipline of 1560, where under 'The Third Head, touching the Abolishing of Idolatrie,' we read as follows:

'As we require Christ Jesus to be worshipfully preached, and his holie Sacraments to be yeichly ministered; so can we not cease to require Idolatrie, with all monuments and places of the same, as Abbeys, monasteries, freires, nunres, chapells, chan
trea, cathedrall kirkes, channounnresses, colledges, uthers then presentlie are paroche kirkes or Scullia, to be utterlie suppressed in all boundes and places of this Realm. And for Idolatrie may be removed from the presence of all persons of quhal seast or conditions that ther ever be, within this Realm.'

By Idolatrie we understand, the Messe, Invocation of Sanctis, Adorations of Yeas, and the like, and of all such other and allutirlie subvert all moniments of ydolatre, and namelie the odious and blasphemous mess' (Register of the Privy Council of Scotland, i. 556). That this intention was not at the time fully carried out we may judge from the Acts of the General Assembly' under date July 28, 1640, where at a meeting in Aberdeen there was passed an Act anent the demolishing of Idolatrous monuments' that is worded as follows:

'Forasmuch as the Assembly is informed that in divers places of this kingdom, and specially in the North parts of the same, many Idolatrous monuments, erected and made for religious worship, are yet so profusely and inconscionably adorned, that the same, and saints departed, ordaines the said monuments to be taken down, demolished, and destroyed, and that with all convenient diligence' (Acts of the General Assembly, Edinburgh, 1643, p. 44).

It is to be remembered that in Scotland it was not a question merely of the Reformation, but of a long continued and embittered warfare with the Papacy, that everything that savoured of Popery, and in the course of this a good deal that might well have been saved was suffered to perish. Thus, the Ruth
cell Cross was thrown down and broken in 1642.

2. Broad view of art.—It was noticed above that on a broad and liberal Protestantism was based a phase of religious art that is among the glories of Reformed Christianity. The reference is to the Scriptural pictures produced in the Holland of the first half of the 17th cent., especially in Rembrandt and some of his scholars. Holland is the one country that developed a national art as an immediate sequel to its adoption of the principles of the Reformation. Protestant Germany might have done so, but, owing to wars and the impoverish
tment of the country, art after the time of Dürer ceased almost to be cultivated, and Dürer's younger contemporary, Holbein, left his native country for England, which on her part, by her contented utilization of his services, showed her own indifference to the work of the artist. In Holland, a country both wealthy and energetic, art was national and at the same time Protestant, and in the latter aspect it was incorporated in Rembrandt.

A very large number of the drawings, etchings, and pictures by this master are on religious themes,
drawn from both the Old and the New Testaments. Many of these, such as the "Passion" series at Munich, are treated in a cold, almost academic fashion, though by no means on the conventional Italian lines; but, on the other hand, there exists a body of his work on these subjects that is as fresh, as warm, as dramatic as it is rich and masterly in execution. Rembrandt, whose work in this kind, it must be confessed, stands almost alone, has shown us here how it is possible to treat the person and the acts of Christ in a spirit as far removed from mysticism as it is rich and masterly. His Divine majesty is as convincingly apparent as His homely aspect, His friendliness, His intimate sympathy with human joys and sorrows. The writer may be pardoned here to quote a sentence or two from a work of his own on the master.

"It is instructive to take the central figure of the Christian story, and to note the different situations, idiomatic, epic, and dramatic, in which Rembrandt has portrayed Christ in the light of human feeling. He has invested the spirit of an infant or a suffering youth, makes holy by His presence the simple incidents of family life; how He rises to the height of epic dignity when Christ speaks, a nature and heroic form through the acts of earthy ministry; with how intimate a sympathy he withdraws that sense of awe and agog, and displays the Lord Soverign a sublime though pathetically human figure in the tragedy of His Passion; and finally, how he invests the risen Prophet with the grandeur of presence that have been made piercing through weakness and suffering, and completes the picture by embodying the eternal love that Christ revealed, in the father of the Baptist." (Rembrandt, London, 1907, p. 289)

There is no need for any extended description of these masterpieces by Rembrandt, which we must remember as fine in colour or light and shade and in technical execution as they are in the intellectual and ethical qualities of their design. A word may be said on one of the less known pieces, the "Christ and Mary Magdalen" at Brunswick. We all know the "Noli me tangere" by Titian in the National Gallery. It is a fine picture, but how unconvincing! There is no mystery, no appeal to the imagination. The figures, while sympathetically rendered, are posed for purposes of composition; the scene is full of daylight, and there is a glare close by on the hill. In "Christ and Mary Magdalen" at Brunswick in the mysterious garden where the risen Lord meets with Mary amidst the gloom of rocks and trees, a touch of light on the clouds above heralds the coming morn, but the shades of night cling as Christ, whose body emits a faint ghostly radiance. His hand plucks away the robe to which the adoring Magdalen would cling; but the tender though reserved inclination of the head towards the woman, and the sympathetic gesture of the other hand, are loving-kindness embodied. We are there in the garden with the pair, and they both live before us. This, we feel, is how they looked and acted. In the Louvre picture of "Christ at Emmaus," where He is breaking of bread, an equally imaginative treatment invests the figure with an unearthly charm, that drew from the great French critic Fromentin some of the most eloquent sentences he ever penned.

"Has any one ever yet imagined Him thus, as He sits facing us there and breaks the bread as He broke it on the night of the Last Supper, so pale and so thin, in His pilgrim's robe, with those eyes which have suffered, which have left its traces; the large soft brown eyes whose full gaze He has directed upwards...a living, breathing being, but yet one who is above the gates of death. The attitude of this divine visitant with that intense ardour in a face whose features are hardly to be discerned, and displays in the movement of the lips and in the eyes—these traits inspired from what source one knows not, and produced one cannot tell how, and all of value inestimable. No other has produced the like; no one before Rembrandt, no one after him, has made us understand these things" (Matres d' Aurores, Paris, 1890, p. 381).

The homely warmth of feeling in Rembrandt's "Holy Families," and in OT or Apocryphal pieces, such as those from the story of Tobit, of which he was especially fond, is just as satisfying in its way as the imaginative power just illustrated. There is also an intellectual side to his religious art, and we have the sense in looking at some of his pieces that he has thought out the subject and consciously arranged it, though this never results in that academic coldness which is the fault of so many accomplished Italian designs. The chief example is the famous etching called the "100 Florin Plate" or "Christ Healing the Sick." This is one of Rembrandt's greatest masterpieces, and is well known though not always rightly interpreted. Sick persons, it is true, figure in the plate, but Christ is not healing them. The truth is that there is a great deal more in the piece than the descriptive title suggests. It is really an illustration of Mt 19, and brings together a number of distinct persons and incidents, a unity being secured for the whole by the commanding dignity and beauty of the central figure. The words at the beginning of the chapter, 'and great was the disorder followed him; and he healed them there,' are the motive for the introduction on the right of the etching of that wonderful throng of the maimed and feeble and sickly that Rembrandt has rendered with such pathetic and intimate feeling. 'and there came unto him Pharisees, tempting him,' accounts for the company of the well-to-do on the left, whose shrewd and cynical faces and expressions of inquiry suggest the insidious queries with which they have come to beget profit. However, in the centre is attending to neither group, but is holding His hand in encouragement to a woman before Him who clasps a child in her arms, while Peter, by His side, is seeking to thrust her away. This is, 'under the little children, and forbid them not,' of the middle of the chapter; while in the richly clad figure of a youth, who sits musing with his face partly hidden by his hand, we recognize the young man 'that had great possessions.' The justice of the characterization throughout the piece makes it a real commentary on the passages illustrated, and the actual situation is brought before us in the lifelike impression groups.

It may cause surprise to find that Rembrandt's treatment of these sacred themes is so broad and genial, because the Holland of his day was strongly Calvinistic, and religion were generally a garb of austerity. Now, we possess a contemporary notice, according to which Rembrandt had left the religious sect called Mennonites; and as the best of these Mennonites were on the whole Broad Churchmen of the Arminian persuasion, Rembrandt's upbringings may have given him liberal views on theology which will account for the comprehensiveness and charity which breathes from all his scriptural pieces. His very last picture, a large and solemn canvas at St. Petersburg, represents the "Return of the Prodigal Son," and in this glowing presentation of the wanderer as he buried his shame-stricken face in the bosom of the father whose compassion fails not, we read the artist's belief in an all-embracing Divine love. The effacement of the personality of the hapless truant has concentrated all the interest of the scene on the father, who presses him to his heart and gazes down on him with infinite pity and tenderness. He is not only the father of the parable, but the Eternal Love incorporate; and Rembrandt's design in the best sense an embodiment of the higher Christian thought our betrayer.
revived in various experimental but interesting forms nearer our own time.

IV. Modern Times. The 18th and the whole of the 18th cent. produced practically nothing in this style that was not a mere bloodless simulacrum of the academic art of the old Roman schools. An exception may be found at the close of the 18th cent., in the work of William Blake, who had genius enough in art and literature to have achieved true greatness, had that genius been trained and directed aright. Blake was exceptional, in his art a romanticist later welcoming the revivals of the century, of the Coleridge rather than of Pope. Earlier in the same century, it is worth notice that even Hogarth in his religious pieces did not attempt the homely intimate style in which he might have succeeded, but adopted the conventional types of the Italianizing figure painters of the time. The revived religious art of the 19th cent. is the child of the romantic movement. This was a reaction against the predominant classicism of the latter half of the 18th cent., and took the form partly of a return to nature in the Roussian way; and partly in a revived interest in what was medieval, which began in Germany and spread to Great Britain and to France. In Germany medievalism was a natural product, for her traditions of the Middle Ages were not the Middle Ages, and even a classicist like Goethe paid homage to these romantic bygone glories. A curious result in the sphere of religious art of this return to the Middle Ages has made itself seen in our own time in the pictures from the life of Christ by Eduard von Gebhardt, in which the costumes and the scene en scène are taken from the Germany of the 15th century. What we know in our own country by the name of the 'Gothic Revival' —a movement that led to the restoration of medieval features in innumerable English churches and to the establishment of something like a cultus of the romantic in art—was at the basis of the very interesting artistic experiment known as pre-Raphaelism, while the earlier religious painting of the German so-called 'Nazarenes' was founded rather on the national self-consciousness of the German people firmly braced by the struggle against Napoleon; mediævalism, at any rate, played no part in it, for the Nazarenes lived and worked in Rome. Both these and the German Nazarenes were sincere and earnest, even to the extreme of fanaticism, but the aesthetic result was in neither case wholly satisfactory.

1. Nazarenes. — The name 'Nazarenes' was applied in good-humoured banter to a company of young German painters who in the early years of the 19th cent. settled in Rome in an abandoned monastery, where they sought to re-establish the life and work of the painters of the earlier religious schools. They were romanticists of the type that surrenders itself to idealism but recognizes no attraction in nature and the things of the real world. Hence their art draws its motives not directly from nature, but at second hand from the works of the older masters. This secured a certain look of style in the compositions; but, on the other hand, the figures lacked individual character, and the colouring was pale, flat, and conventional. One good piece of work the Nazarenes accomplished early in their career, which has laid modern art under an obligation. In 1817 they re-introduced the technique of fresco painting, which had been abandoned since the death of Raphael Mengs in 1779, and with the aid of one of Mengs's old journeymen executed successfully in the true technique a fresco in a room of the Casa Bartholdi on the Pincian at Rome. These paintings are from the story of Joseph, and have been removed to the National Gallery at Berlin, where they are in a good state of preservation. Cornelius, Overbeck, Schadow, and Veit collaborated, and the works are among the best from an artistic point of view produced by the school. Modern German monumental wall-painting, which has flourished through the whole of the century, began in the early schools of Sienna and of Cologne. 'Art is to me,' he wrote once, 'a harp on which I would fain hear always sounding hymns to the praise of the Lord.' The comparative absence from his works of the qualities of colour, light and shade, and handling, which are essential to the beauty of a modern picture, makes it unnecessary from the point of view of this article to consider them further. Cornelius (1783—1867) was a far stronger artist than Overbeck, and covered vast wall spaces in Munich and other towns with compositions by learning and vigour, but lacking in warmth of feeling or aesthetic charm. His great fresco of the mediæval subject of the 'Last Judgment' in the Ludwigskirche at Munich, painted in 1840, may count as his masterpiece.

On the same plane of art as the Nazarenes are a once esteemed painter of religious themes, the Netherlander Ary Scheffer, and the accomplished Frenchman Hippolyte Flandrin, a pupil of Ingres, who executed beautifully drawn figure compositions on religious themes on the walls of Parisian churches, which are, however, tame in effect and wanting in charm of colour. Of all this set of artists no one had in him so many elements of true greatness as the Aberdeen painter, William Dyce. Had he been born in a time and in surroundings favourable to the development of monumental figure painting, he would have been a great artist, for there is in his design an originality and an intimacy of feeling, in his execution a firmness, that strike us at once as exceptions in this phase of art. Born in 1806, he met and was influenced by Overbeck in Italy, and Richard Muther in his Modern Painting reckons him 'with the Flandrin-Overbeck family,' though he notes that 'where the Nazarenes produce a pallid, corpse-like effect, and deep and luminous quality of colour, there is life in Dyce's pictures.' He is finished in grace, and with this grace he combines the pure and quiet simplicity of the Umbrian masters. ... There is something touching in his madonnas. ... A dreamy loveliness brings these heavenly figures nearer to us' (ill. 5). The 'St. John leading the Madonna to his Home,' in the Tate Gallery in London, is a good specimen of his art.

2. Pre-Raphaelites. — The religious art of the 19th cent. recognizes no attraction in nature and the things of the real world. Hence their art draws its motives not directly from nature, but at second hand from the works of the older masters. This secured a certain look of style in the compositions; but, on the other hand, the figures lacked individual character, and the colouring was pale, flat, and conventional. One good piece of work the Nazarenes accomplished early in their career, which has laid modern art under an obligation. In 1817 they re-introduced the technique of fresco painting, which had been abandoned since the death of Raphael Mengs in 1779, and with the aid of one of Mengs's old journeymen executed successfully in the true technique a fresco in a room of the Casa Bartholdi on the Pincian at Rome. These paintings are from the story of Joseph, and have been

ART (Christian)
ultimately included seven members, and the fact that two or three were writers explains the fact that the movement was from the first as much literary as purely artistic. The three original members, Dante Gabriel Rossetti, Holman Hunt, and William Holman Hunt,  were the only ones who need be mentioned here. Their intense earnestness, combined with their study of the early Italian masters, led them to religious themes, though these were not exclusively their objective. Indeed, they were before all things romantics, and may be claimed by the Gothic Revival as its spiritual offspring. They were devoted to the poems, and some of the best things they accomplished in art are the illustrations to Tennyson's Poems published by Moxon in 1857. In Rossetti this tendency was particularly marked, and he ultimately combined himself as a painter to the romantic field, in the cultivation of which he was followed by Edward Burne Jones. This romantic and poetic vein kept their devotion to the facts of nature from falling into mere realism, so that in their pictures we discern a curiously matter-of-fact rendering of accessories, while the whole scene may be a fairyland of a poet's creation.

Of the distinctly religious pictures of the school, the best example of the earliest. In 1849 and 1850 Rossetti exhibited the quaint but fascinating 'Girlhood of the Virgin Mary,' where the figures are portraits of the painter's nearest relatives, and the 'Ecce Ancilla Domini' which has now happily found a home in the permanent collection of the Victoria and Albert Museum, 1850, 'The Child Christ in the Workshop of Joseph,' a far more ambitious piece, is perhaps, artistically speaking, the best religious production of the school; for Millais, as his after career showed, was far more highly endowed as a practitioner than any of his associates. Holman Hunt's universally known 'Light of the World' appeared in 1854, and this artist has maintained throughout his long and honourable artistic career the same religious earnestness possessed with that peculiar fulness in details.

In the whole history of art there are no religious pictures in which uncompromising naturalism has made so remarkable an alliance with a pictorial depth of ideas' (Nutter, Art in England, ii. 129).

From the artistic point of view it should perhaps be pointed out that the plan of copying nature in a picture detail by detail does not really secure the truth aimed at, and with the pre-Raphaelites its adoption was due to intellectual rather than to purely artistic considerations. The experiment was of value in its time as a protest against the vague conventional rendering of nature with no true knowledge behind it, which was then the fashion in England. The non-artistic the principle will always seem attractive because of its ethical sense, but, as Horace says in the Ars Poetica (line 31):

\[ in vitam ducte usque tangis, si carus ars, \]

and the way to represent nature truthfully in the artistic sense is not to copy bit by bit, but to render the general feeling of aspects in their true relations of tone and colour. This is the real difficulty of painting, and an impressionist study that secures absolute truth in these relations is at once far more difficult, and far the most elaborate rendering of individual details with meticulous exactness. An English painter, possessed of a shrewd wit, tried the pre-Raphaelite method about 1850, but gave it up, saying, 'This cannot be right, it is too easy!' Hence it has come about that many a pre-Raphaelite painter who has carried this principle of work has been, as Horace goes on to say:

\[ intellis operis summa, quia ponere totam | Nescis. \]

Moreover, exact piece-by-piece rendering leads too often to a handmade effect. This is a defect of pictorial effect, and when this is combined with crude and inharmonious colouring, the result from an aesthetic point of view may be disastrous. At the same time, though pre-Raphaelite pictures vary greatly in their artistic value, they are always to be respected for their earnestness and sincerity, and some of those on Biblical themes will ever remain prominent and justly-honoured representations of an interesting modern phase of Christian art.

3. Modern experiments. — One last phase of Christian art remains to be noticed, bringing us quite to our own day. The reference is to certain endeavours to secure convincing verisimilitude in the pictorial representation of Biblical scenes by the abandonment of all the time-worn conventions of academic design, and by the use of local types, costumes, accessories, and setting. This experiment has been tried in various forms, and always with sincerity and devout feeling. So far as these qualities are concerned, the work of the German von Gebhardt, whose 'Last Supper,' painted in 1870, is well known in this country, is equal to the best; but his curious convention of a 15th cent. mise en scène gives them a position apart. One form in which this work has taken is to place the events of the life of Christ in an Oriental setting, carefully elaborated from a study of the Palestine of to-day. The idea was first started earlier in the 19th cent., when the attention of artists The early Millass of, 'The Child Christ in the Workshop of Joseph,' a far more ambitious piece, is perhaps, artistically speaking, the best religious production of the school; for Millais, as his after career showed, was far more highly endowed as a practitioner than any of his associates. Holman Hunt's universally known 'Light of the World' appeared in 1854, and this artist has maintained throughout his long and honourable artistic career the same religious earnestness possessed with that peculiar fulness in details. In the whole history of art there are no religious pictures in which uncompromising naturalism has made so remarkable an alliance with a pictorial depth of ideas' (Nutter, Art in England, ii. 129).

From the artistic point of view it should perhaps be pointed out that the plan of copying nature in a picture detail by detail does not really secure the truth aimed at, and with the pre-Raphaelites its adoption was due to intellectual rather than to purely artistic considerations. The experiment was of value in its time as a protest against the vague conventional rendering of nature with no true knowledge behind it, which was then the fashion in England. The non-artistic the principle will always seem attractive because of its ethical sense, but, as Horace says in the Ars Poetica (line 31):

\[ in vitam ducte usque tangis, si carus ars, \]

and the way to represent nature truthfully in the artistic sense is not to copy bit by bit, but to render the general feeling of aspects in their true relations of tone and colour. This is the real difficulty of painting, and an impressionist study that secures absolute truth in these relations is at once far more difficult, and far the most elaborate rendering of individual details with meticulous exactness. An English painter, possessed of a shrewd wit, tried the pre-Raphaelite method about 1850, but gave it up, saying, 'This cannot be right, it is too easy!' Hence it has
admire in Rembrandt than that of any of the other moderns. There is no attempt here at archaical correctness, and the idea of an Oriental setting never crosses the artist's mind. On the contrary, he takes the actual scenes in town or village or country of the Germany of his own day, and imagines Christ introduced into them, and dealing with those He met with His fellow-countrymen in Palestine. In 'The Sermon on the Mount' Christ is seated on a modern wooden bench in the fields, and is discoursing to a group of German peasant women and children, on the outskirts of which hang the implements with which their workmen make their tools over their shoulders. Suffer little children to come unto me,' at Leipzig, shows us the interior of a modern schoolroom in a small town, where the master stands in the background, while a group of children of all ages are gathered somewhat timidly near the chair on which a stranger, who has just entered, has taken his seat. This stranger is Christ, and we are made to see that He is gradually drawing the little ones to Himself by the magnetism of His personality. In other pieces we see Him entering and leaving a room with His friends, as at the Last Supper; or, again, with a frank acceptance of the mystical, the artist has given us the scenes of the Annunciation or the Nativity. The pictures are always serious, devout, and at the same time very human, and often touched with idyllic charm. Their quality as works of art gives them an equally high place with that which they claim as achievements in religious design.

The name of Rembrandt was mentioned above in connexion with these homely renderings of sacred scenes. Rembrandt, like von Udhe, in the best of his pictures took the setting from his own surroundings, though he indulges not seldom in Oriental vestments and in Jewish types. These surroundings are, however, in the first place, very much generalized, so that they might do for any age and country; and, in the second place, they are as unfamiliar in the eyes of 20th cent. Brion's as if they were genuine Oriental transcripts. Hence the setting of Rembrandt's pictures takes them to that distance from us which is necessary in order to let the imagination have free play. In the paintings of our own time, on the other hand, both the Oriental backgrounds and the modern ones are too real and too familiar, and the appearance of the spirit of Christ could be forced and almost theatrical. If we recognize who the sacred personages are, they do not appear to live in these surroundings, but to have come in a disguise, and we half expect their interlocutors to be finding them out. On the other hand, if we accept them as modern Oriental or modern Europeans, we cannot readily realize their unique character and greatness. They have been brought down too effectively from the ideal to the actual sphere.

Summary.—In the foregoing an attempt has been made to describe and to analyze, from the points of view indicated at the beginning of this article, the chief phases of religious art as they have been the tradition of the Christian centuries. There have been two sides to the activity of Christian artists, each of which may here suitably receive a final word.

(1) On the one hand, their activity has been essentially religious and devotional, and in that sense it has been that of the monkish craftsman of the 11th, the Gothic mason and carver of the 13th centuries; all they could make or do they were zealous to offer on the altar of Christian service. Thiers was they a grateful rendering back of the boon so lavishly bestowed, the gift of skill and care to the Lord of

the inventive brain and cunning hand. How far, we may ask, can we in these modern days enter into the spirit of those medieval craftsmen, and turn any artistic gifts we may possess to this high service! Unlike the men of old, we have in these days almost to justify the bare existence of the art of beauty and of art, for these are not a natural and necessary part of our lives. We have seen how the practice of the arts in early Christian and monastic surroundings followed inevitably from the fact that life without this element of art was in those days impossible. With us it is some sequence challenged to give an account of itself. That idea of an opposition between the life of art and the practical life of service to one's fellows, which underlies Tennyson's 'Palace of Art,' is not justified by the facts of the world. It is perfectly possible, as we can learn by looking around us, to combine the practical with the contemplative life, and to exercise the aesthetic faculties without any withdrawal from the sphere of the actual. It is true that there are those who do so withdraw themselves, but that does not arise by the allurements of the imagination. It may very well be that they are morbid and self-absorbed, and if a field of activity did not offer itself in the aesthetic sphere, their life might decline to a much lower level. The pleasures of art were once enjoyed, and if they do not necessarily ennoble the character, they at least refine the taste.

We saw that the medieval artist-monk exalted the practice of the crafts that produce beautiful things as not only a function of human nature but a law of the universe at large. There is a narrow religiosity that is afraid of a human nature so amply endowed, and would confine its activity within much closer limits. In the churches of to-day, however, this timid creed is already an anachronism, and most of those who have Puritan traditions at their back accept to-day the broader view to which, at any rate, the student of the history of Christian art must feel himself forced. And if this energy of art is not only wholesome, but even in a sense enjoined, in what can it be more fittingly expended than in that service to which we have seen it devoted through the centuries? The time is now past when the square barn-like meeting-house, the bare walls, the homely fittings, could satisfy the cultured worshipper.

It is true, and must never be forgotten, that the outward show is as a mere nothing to the 'truth in the inward parts,' which is demanded as much from churches and congregations as from individuals; and if worship were less sincere in a beautiful and richly adorned fane than in a simple room, it is the art that would have to be sacrificed. It is true also that in parts of our own country a sacred tradition of unsullied piety, of heroic endurance, clings to the walls that for generations past have looked down on the defenders of a creed for which they were ready at any moment to give up their possessions or their lives. The Church at large could ill spare the Puritan spirit, and must strive to retain what is best in this, while contesting some of its negations. The introduction of instrumental music into the act of worship, and of the element of art and beauty into its material apparatus and its spiritual life, is in principle conceded almost everywhere by Christendom, and there is every reason why the medieval tradition should be revived, and these things not merely accepted as a fashion, but embraced with the godly joy and pride of the older days.

(2) On the other hand, the activity of Christian artists has been exercised not merely on the
creation of what is beautiful, but on representations of sacred scenes and personages, or symbolic shows that had a didactic purpose. This work, as we have seen, has taken several different forms. We may distinguish here: (a) the liturgical, devotional, or narrative composition, which began, as we saw, in the catacombs, and flourished greatly, in the form especially of the pictures of the Last Things, in the later medieval period; (b) the devotional picture, represented centrally in the work of Fra Angelico, in which the specially Christian Virtues of humility, devotedness, self-abandonment, are brought to view and their practice inculcated; (c) the historical representation from the life of Christ or of OT or NT worthies—a form of art that we have come across in many shapes, and in which at one time the mystical, at another the human, element is most apparent; and (d) the great work of art in which a supreme master like Michelangelo has created types that are profoundly ethical, though not in the distinctive sense Christian.

How is each of these forms of religious art related to the Christian thought of enlightened Protestantism?

(a) The first kind of picture has ceased for Protestantism to have any didactic or specially religious significance, and is regarded rather from the intellectual point of view as an embodiment of poetic thought. The designs of William Blake are of this kind, and a good modern instance may be found in the expression of the conception of the woman of the Apocalypse. In the strength of faith, in the chastening decorativeness, Mrs. Traquair has executed in the 'Song School' of St. Mary’s Episcopal Cathedral and the Catholic Apostolic Church in Edinburgh, as well as in other buildings. Such works belong more to the domain of the artistic than of the religious, and mysticism than to that of religion in the strict sense of the term. They answer to a special phase of artistic feeling both in the creator of them and in the spectator, and, in fact, they repel some sincere lovers of art just as strongly as they attract others. So long as there are artists and lovers of art, the temperament of some of these will turn them in the direction of works of the kind. This phase of religious art is illustrated also by some of the productions of G. W. Muther, who was meant to be a great painter, but was drawn aside from the direct course by the copiousness and insistence of his intellectual ideas.

(b) The time will never come when we shall consider the devotional works of the High in the latter part of the devotional pictures of the early schools of religious art in Germany and in Italy. So far as they express the specially Christian temper of humility and dependence, and reveal to us innocence and love and the spirit of service embodied in the Virgin mother, in saint, and in angel, they will always have a message for those religiously susceptible. The harsh theological words 'Hagiology,' 'Mariolatry,' and the like need not disturb our contemplative enjoyment of these simple and sincere expressions of a faith in which the great essentials was the same as our own. The works are, at the same time, removed into the historical region by the fact that the whole religious milieu which conditioned them at their forthcoming is so different from ours. We regard them with interest and affection, but recognize them as not belonging to our own time or our own range of religious ideas.

(c) The historical treatment of the life of Christ in the scenes of the OT is a matter that concerns us in these days and in Protestant surroundings far more nearly. It corresponds with the modern interest in the facts of the past, and with the (partly rationalistic) tendency to emphasize the human side of Christianity. Notice has been taken in what has gone before of the many attempts which have been made in art, throughout post-Reformation times, to bring home with convincing force to the spectator the personality, and the significance of the acts, of Christ. The difficulty has always been, on the one hand, to avoid what is mystical, and on the other, the attempt to prevent such a modernizing of the mise en scène as may destroy the air of remoteness from the ordinary world and of ethical supremacy, which should belong to the person of the protagonist. Rembrandt, as we have seen, has succeeded here where many have failed; and when the whole body of his work on religious themes is placed in accessible form before the public, as has been proposed, he will probably be recognized by all as the greatest religious artist of whom the history of painting bears record.

(d) The impression of the Sublime, when conveyed either by the appearances of nature or by those of art, is always in one sense a religious impression, for it implies a chastening, and, in the Aristotelian sense, a purifying, of the individual emotions by the recognition of what is transcendently great. This greatness is not hostile or terrifying, for the aesthete of the Sublime is not so much destroyed as shaken or cowed through fear, but it represents, as it were, a challenge, to which we respond by bracing up the powers, and by measuring ourselves with it in the strength of our intelligence, and with a certain confidence that does not preclude humility. So the human spirit, in the contemplation of the Divine, is not crushed, but raised and strengthened. Now, of all the functions that the arts of form can exercise for the higher service of man, none is greater than that of presenting human nature before us in aspects of such grandeur that we feel in a measure brought into contact with the Divine. The ordinary levels of human greatness are transcended by these exceptional creations of art, and our spirit is uplifted in response. The impression thus produced is religious, but it is quite apart from any particular creed. It takes us into a region where all creeds are merged in the one all-sufficient artist of God, who is in the head, supreme in goodness as in power. It follows from this that all art which rises to this ethical level is religious art, whatever the creed of its creator; and from this point of view the masterpieces of Rembrandt have been brought by the side of the designs of a Michelangelo, or of any other creative artist of the Christian period. The impressiveness of a great work of art depends largely on the simplicity as well as the force of its message, and it is not by inculcating any special doctrines of religion but by raising the whole being into communion with the highest that art may best serve the spiritual needs of mankind.

G. BALDWIN BROWN.
There is no form of Christian pictorial art that has come down to us from the Middle Ages in such abundance, in such variety, and in such a genuine and unaltered condition, as the art of miniature-painting for the illustration and decoration of manuscripts. Isolated examples dating from the 4th cent. to the 6th are found scattered through the vast libraries of Europe, while others from the 9th cent. onwards exist in considerable numbers, not only in public libraries but in many private collections — and this in spite of the enormous destruction that has been subsequently wrought upon them by fire or in the course of time. Yet little can be said for, or liturgically out of date, or the objects of fanatical hatred. There is no doubt that the manuscripts thus destroyed must be numbered by hundreds of thousands. At the same time, it must not be concluded that the majority of these, or even a large percentage, were as attractively written and illustrated as the precious volumes exposed in our museums. A glance at the contents of any considerable medieval library, like those of Hereford Cathedral and some of the Colleges of Oxford and Cambridge, shows us that dull and full of tiresome contractions was the everyday scholar's book, and that in nine cases out of ten the loss of them would not be a matter for artistic regret. The richly painted manuscripts on the other hand were usually kept as furniture for lesten and altar, in keeping with the other splendours and adornments of a great church, or for the use of wealthy laymen and ecclesiastics, who sometimes read them as little as a modern student reads his editions of Tasso. The fact that he buys of princes that he has learned to love in a homey setting. St. Jerome, in his preface to Job, makes light of such possessions. ‘Let those who care for them,’ he says, ‘own books that are old, or written with gold and silver on purple skins. All I need is a good text.’ This sentence shows that the spirit of the fastidious book-lover was already abroad in the 4th century. It is perhaps a matter for congratulation that not every one had so austere a taste as St. Jerome.

The earliest examples of painted books that have survived in Europe are two Vergils of the 3rd or 4th cent. in the Vatican Library; but these do not come within the scope of the present article, which deals only with this branch of art in the age of Christianity. Nearly all the earliest Christian manuscripts that exist are either Bibles or portions of Bibles, beginning with the Vienna Genesis of the 5th cent., which contains eighty-eight miniatures, and leading to the Ashburnham Pentateuch, written at Tours in the 7th cent. and adorned with nineteen large pictures. This is now in the Bibliothèque Nationale at Paris. Of the same century is the famous copy of the Gospels known as the Book of Kells at Trinity College, Dublin. This book, which is at once the earliest and the finest of the Celtic manuscripts, was written by a scribe or scribes of the most accomplished, and ornamented with initials and other larger decorations of miraculously interwoven lines. The Irish decorators, however, while gifted with a sureness of hand that is almost beyond belief, were totally lacking in the higher qualities of imagination, and when confronted with a subject like the Crucifixion, showed as lamentable an inability as the vilest savage to draw and combine forms. The work of Cimabue after the Book of Kells the best-known example of this style is the Lindisfarne Gospels at the British Museum (fig. 1, p. 890), which, though not executed in Ireland, belongs to the same Celtic tradition and to approximately the same date. All subsequent examples, which do not owe a new development to external influences, show a falling off from this high standard. There was, in fact, in the system of the Celtic draughtsmen no human element or element of growth, and when once they had achieved the mathematically perfect, only decadence and repetition lay before them. Nevertheless, their consummate skill in ornamentation leaves them a tough and picturesque history of book-decoration, and was not without some effect on later schools in other countries, though always in subdivision to the more emotional impulses derived from Rome and Constantinople.

Pictorially the school exhibited in the paintings of the Cysters, bequeathed but little that we can admire to the book-decorators of the Middle Ages, though as late as the 10th cent. books were illustrated with pictures, usually dead both in colour and expression, that differed scarcely at all from their classical prototypes. The Byzantine pictures in copies of the Greek Gospels and Lives of Saints written at Constantinople, full of Oriental blendings of gold and brilliant colour, and with a seriousness of intention quite absent from nearly all illuminated MSS. in the West, produced a more vivid and more vivifying influence on the art of the West. Under Roman and Byantine influences, either separate or combined, a series of sumptuous books, usually copies of the Latin Gospels, and often entirely in gold and jewels, were produced on the Continent between the 8th and 12th centures. By the latter century, Byzantine art, having reached an academical stage which allowed of no further evolution, was, as it were, frozen and crystallized into forms which in Russia survive unaltered to the present day.

Meanwhile, in England, and especially at Winchester, a notable school of book-decoration had arisen. The most famous example of this school is a Benedictine belonging to the Duke of Devonshire, which was written at Winchester for Bishop Ethelwold between the years 963 and 984. A similar Benedictine, written a few years later for Archbishop Robert of Jumièges, is now in the public library at Rouen. The British Museum is rich in productions of this school beginning with King Edgar's Charter of Hyde Abbey (fig. 2, p. 890), written entirely in gold in 968 and enriched with a beautiful frontispiece, in which the figures are drawn with much animation and clasp in the glittering drapery of the English miniaturists of the 10th and 11th centuries.

During these centuries and for some time longer, it is not too much to say that English book-illustration was the finest in Europe. Until the end of the 13th cent. Italian pictorial art was much less inventive and energetic than that of England and France, while Germany was likewise under a weight of conservative Byzantine tradition, which seems to have prevented its producing more than a trifling number of books of notable merit between the 12th cent. and the invention of printing. In the monasteries of Flanders, Hainault, and Artois, many stately books were written and illuminated, but in the reign of St. Louis the fame of the University of Paris attracted scholars and artists from all Christendom, who thenceforth made Paris the intellectual centre of Europe. In their train came a body of writers and illuminators, independent of the monasteries, who shook off the Byzantine fetters before Giotto had done, and produced work of an extraordinary and almost feminine refinement of execution, which is no less attractive than the manly vigour which is more especially English (fig. 3, p. 891). For a while the two countries ran an even race, but by the middle of the 14th cent. the French illuminators had gone far beyond their English rivals, and in the second half of the 16th

ART IN MSS (Jew.) see p. 872a.
cent. English patrons were so ill-served by their countrymen that they had to send to Bruges and Paris for their painted prayer-books and romances. To the Italian scribes of the 15th cent. belongs the distinction of having discarded the Gothic or book-letter, which by that time had reached a cramped and ugly stage, in favour of the more rounded and legible forms of the 11th and 12th cents., *littera antiqua* as it was called when reintroduced, *Roman letter* as we now call it (figs. 4, 5, pp. 891, 892). This revival was soon seen to be reasonable, and was adopted in all literary countries except Germany, which is only now coming into line with her Western neighbours. It was under the influence of the Renaissance that the finest illuminated books were produced in Italy. These were largely copies of the Latin classics; but many exquisite prayer-books were written, especially in Florence, Naples, Ferrara, and Venice, for members of the great families. Of Spanish illuminated books not many have survived, and these usually owed everything to artistic influences from Naples or Bruges. In the latter city enormous quantities of dainty prayer-books were manufactured towards the end of the 15th century. The chief features of these were the use of natural flowers and foliage in the borders, and the delicacy of the landscape backgrounds to the pictures. Dutch books are remarkable at once for their great dexterity of execution and for a bluntness of conception which prevented their ever being in the first rank as works of art.

And now as to the types of manuscripts that were most frequently illustrated. With few and mostly fragmentary exceptions, all liturgical books earlier than the 13th cent., having been worn out, or cast aside on account of changes of fashion and of textual arrangement. It is certain that none of them were habitually so richly decorated as the early copies of the Gospels already referred to. These were always adorned with four frontispieces, usually representing the Evangelists in the act of writing, opposite the four opening pages of the Gospels, on which the text was written in large ornamental letters within an elaborate border; the principal list of a later date, of which there are many illuminated examples, are Pontificals, Missals, Breviaries, Graduals, and Antiphoners. The great choir-books, such as are shown in the Convent of St. Mark at Florence and in the Duomo at Siena, bountifully illustrated in quantity in Italy and Spain, where they may still be seen in use. These often contain initials painted by artists of note, but they are for the most part not earlier than the 15th century. Choir-books of Northern origin, especially those of the fine period, are exceedingly rare. The best that exists is an Antiphoner in three volumes written in 1290 for the nunns of the Cistercian Abbey of Beaupré near Gramont (fig. 6, p. 892). This formerly belonged to John Butkin, and is now (1908) in the collection of Mr. John Thomson.

The Vulgate Bibles that have survived from the 12th cent. are usually large folios in two or three volumes, with historiated initials at the beginning of each book, and decorative initials to the numerous prologues. One of the finest examples, a book of natural surpassing beauty, is in the library of Winchester Cathedral. In the 13th cent., the size of Bibles was reduced, and they were written in enormous numbers and with astonishing skill in *voce commune* from the 12th cent. and In. (fig. 11, p. 894). The entire Bible, including the Apocrypha and perhaps a hundred and fifty painted initials, was often on so small a scale and on vellum of such astonishing thinness as to fit comfortably into the pock

ERS OF THE DAY. SO GREAT WERE THE OUTPUT AT THIS
time, that it seems almost to have sufficed until the invention of printing, as Bibles written in the 14th and 15th cents. are comparatively rare. Besides plain texts, portions of the Bible with extensive marginal commentaries were often finely written and illuminated for purposes of monastic study; and in England especially there were produced in the 13th cent. a number of splendidly illustrated copies of the Apocalypse, either in Latin or in French, and usually with an Exposition taken from the Morimond text of the Epistulae. It is easy to see how the strange visions of St. John kindled the imaginations of the creative artists of this time, and with what zest they sought to interpret them (fig. 8, p. 893). In France, at the same period, a type of sumptuous picture-book was evolved, known as the *Bible moralisée*, in which the text is altogether subordinate to the almost countless illustrations. Two copies are in the Imperial Library at Vienna, while a third is divided between the Bodleian Library, the Bibliothèque Nationale, and the British Museum (fig. 9, p. 894).

From an early period the chief book of private devotion was the Psalter. In the 12th and 13th cents., every rich and devout layman seems to have owned one of these books. The Psalters which were invariably added certain Canticles, the Athanassian Creed, the Litany, and a small number of Collects, sometimes followed by the Office of the Dead. It was on these books that the miniaturists, in what was certainly the most elaborate period of their art, lavished their utmost skill. To the more elaborate copies it was usual to prefix a series of illustrations of the Old Testament, from the creation of the world to the coronation of Solomon, and of the New Testament, beginning with the Last Judgment, which series varied in length according to the wishes and purse of the individual who gave the commission; while the initials of certain Psalms—in early Psalters only Psalms 1, 51, and 101, marking the three divisions into fifty Psalms, and in later Psalters also Psalms 26, 38, 52, 68, 80, and 97, being (with Psalm 1) the first Psalms of the Office of Matins on the seven days of the week, and Psalm 109, being the first of the Psalms for Sunday Vespers. The other Psalms were generally omitted, and the rest, and usually historiated with a more or less fixed sequence of subjects. Early in the 14th cent., Psalters of great size and magnificence were written in England. Among these must be named the Psalter of Robert of Holmby (fig. 10, p. 895), now in the Bodleian Library, and two superb Psalters, both connected with Gorleston, near Yarmouth, one in the Public Library at Douai, and one in the library of Mr. Dyson Perrins.

As early as the 11th cent., certain private offices, the most important being the Hours of the Virgin, the Hours of the Trinity, and the Hours of the Passion, were added to a few Psalters. Later, these accretions came to be written separately, probably in the first instance for the use of women. Their portability and general character, which this detached form led to their being adopted in place of the Psalter as the devotional book of the literate layfolk; and although there are but few separate Books of Hours of the 13th cent., and not many of the 14th cent., they were produced in enormous numbers in the 15th cent., and copiously illuminated with pictures which in the main illustrate the text (fig. 11, p. 894), but not seldom seem to have been calculated to withdraw the thoughts of the owner from the contemplation of heavenly things. The popularity of these painted prayer-books, of which the greatest number were written in Bruges, Paris, and Florence, was so great that they continued to be produced until long after the invention of printing.

SYDNEY C. Cockerell.
ART (Egyptian).—The religious aspect of art in Egypt includes almost all that is known of it. The earliest sculptures are tombstones and tables of offerings for the benefit of a deceased person; the earliest statuary is of figures in which the soul of the deceased might reside, made as lifelike as possible, in order to give him satisfaction; the hawks with outstretched wings, which or else of serpents, cultivate the ground, were for service in the next world; the whole of the tomb sculptures, paintings, and furniture—carved coffins, canopic jars, tableaux, and all else—resulted from the religious aspect expected from them. The buildings that remain to us are nearly all temples; the colossal which stand in these were habitations for the many *ka*-souls of the king; and even the battle scenes on the walls are all part of the display of religious fervour, and culminate in the triumphal processions of captives dedicated to the god, or led by the god as his appanage to be entrusted to the king's administration. The civil life of the lay Egyptian has almost vanished, the palaces and towns are nearly all below the plain of Nile, but it is only the sepulchral and religious remains that—being placed on the desert—have thus been preserved to us. Here we must notice only the main principles and examples of religious ceremonies. The page of examples given (p. 891) will illustrate the more important points.

1. Symbolism. This begins with the rise of art, as seen on the slate palettes. The various tribes engaged in the conquest of the country are designated by their emblems, the hawk, lion, scorpion, jackal, or pelican. The actions of the tribes are represented by the animal holding a stick and digging through the walls of a town, or by a human arm projecting from the standard on which the animal is, and clutching a cord or grasping a bound captive. The king is represented as a strong bull—as he is called in later times—trampling down his enemies; or the figure of a fish, used to write the name of a king, has two arms grasping a stick to smite his enemies; or the royal hawk has a band which holds a cord put through the lips of the captive. In these instances it is seen how early symbolism was established and an elaborate means of historic expression. It is not surprising that in the subsequent times it should be commonly used. The kings are shown adored by the gods, who also teach their hands to war and their fingers to fight; standing behind the king and holding his arm in drawing the arrow; the gods place the crown on the king's head, and pour purifying water or blessings over him (see figure of Rameses IV.); the goddess Hat-hor, as a woman or as a cow, is shown suckling the young king; and Sethket-abu, the goddess of literature, writes the king's name on the leaves of the Pease tree. The limits between symbolism and sigma pass the critical stage altogether in the Tombs of the Catherines. In these instances it is reached in the other world in which there is no distinction possible.

Special emblems of ideas became so common that they were used almost mechanically, like the cross in Europe. The sun and wings are noticed under Architecture (Egyptian). *Decoration.* And groups of hieroglyphs, such as the ankh for life, the was for power, the sad for stability, the girdle of Isis, and other emblems, were carved as freestones to stiffen furniture or form a trellis to windows.

2. Divine forms. — The compound theology of sacred animals and deities resulted in a variety of strange combinations. The animal element is always the head, placed upon a human body for a deity; a human head upon an animal body is used only for a sphinx, emblem of a king, and for the ba-bird, emblem of a soul. The combination of animal heads on human bodies is found in the second dynasty (Set, on seals of Perabesen) and the fourth dynasty (Thoth, on scene of Khufu); and it became very usual in later times. The combination is skilfully arranged, so that it scarcely seems monstrous; see the scene given (p. 896) of Horus and Thoth, which appears almost as expected from them. The building forms best known are the ram-headed Khnum and Hershefi, lion-headed Sekhmet, cat-headed Bastet, jackal-headed Anubis, crocodile-headed Sebek, ibis-headed Thoth, and hawk-headed Horus and Mentu. Besides these, there were many compounded divinities in Ptolemaic and Roman times, formed of a deity and three or four animal parts; usually it is Ptah-Sokar who is thus elaborated. These combinations have none of the convincing dignity of the early animal-headed gods.

3. Dress. — The gods are usually clad in the oldest form of close-fitting waist-cloth; it is always older forms of dress that are thought appropriate for religious or artistic purposes, and in Babylonia the oldest figures of worshippers are entirely nude. The gods never wear the projecting peaked waistcloth common in the Old and Middle Kingdoms. Another primitive piece of costume was the animal's tail, hung at the back from the belt. This is shown as a bushy tail, like a fox's, on the archers, hunters, carved on a slate palette. It appears on all kings from the first dynasty onward (see the figure of Rameses IV. [fig. 2, p. 896], and the kneeling Hathshepsut, where it is brought forward). And it gradually becomes almost universal for gods after the early ages. Here it can be seen on the figures of Horus and Thoth, in the long form, and thinner than usual.

The principal religious dress was the leopard skin, as on the priest in the scene of sacrifice (fig. 1, p. 896). It was worn from before the first dynasty (Narmer), and is seen not only on scenes, but also on statues in the nineteenth dynasty. It is shown on the priests when seated, or standing giving directions, or making offerings; it might be worn over a short kilt or over a long muslin dress.

4. Ceremonies. — Four ceremonies selected for illustration (p. 896) are Sacrifice, Offering, Laying on of Hands, and Purification.

(a) Sacrifice, as among the Semites, was the ceremonial killing of an animal for food; but there is no trace of the burning of the fat, or of the other form of whole burnt-sacrifice. In the early sculptured tombs the sons of the deceased are shown as trapping the birds, and sacrificing the ox, for the festival in their father's honour. It is rare to find representations of sacrifice later, such as this example of the thirteenth dynasty. Burnt-sacrifice was a foreign importation, and is only known in picture at Tell el-Amarna (eighteenth dynasty), and in description at the Ramesseum (twentieth dynasty).

(b) Offering is the most usual religious subject. The offerings are heaped together on a mat, a slab on the ground, or a pillar-table; in this case a mat is represented, bound with thread at the middle and the two ends, a form which originates in the third dynasty or earlier. Upon the mat is a layer of round thin cakes, much like the flap bread, with two circles of seeds stuck in each. A layer of joints of meat (?) follows; then three wild ducks; above, a row of gazelle haunches, upon which are three plucked geese. The whole is covered with a bundle of lotus flowers and a bunch
of grapes. The queen is pouring out a drink-offering from a small spouted vase in the right hand. Such drink-offerings were of a great variety of wines and beers, as also milk, and water. In her left hand she holds an incense-burner. The Egyptian never burnt incense on an altar, but always in a metal censer held in the hand. It was a long metal rod, with a hand holding a cup for the burning incense at one end, and a hawk's head at the other end; in the middle of the length was a pan or box in which the pellets of incense were kept ready for burning. The heat requisite to light it was obtained by using a hot saucer of pottery placed in the cup, on which the resin fused. When the incense was burnt, the saucer was removed and thrown away, and thus no cleaning was required for the metal cup.

c) Laying on of hands was represented as being done by the gods, in order to impart the _sa_. This was a divine essence which the gods drank from the heavenly 'lake of the _sa_,' and which the earthly images of the gods were painted with and to priests who knelt before them. The benefit was not ceaseless, but required renewal from time to time. The same form of laying on of hands was used, as in our illustration, for conferring the _ke_ or inscription. This giving of the kingship of both banks of the river, the complete office, to his daughter, Maat-ka-ra' (Hathepsut).

(d) Purification was a very important idea to the Egyptian. A whole class of priests were devoted to the purification of persons and things; and it was always represented by a stream poured out. Personal cleanliness was strictly observed by the priests; and the purifying of the king was performed symbolically by the gods, as shown on p. 896. A model of a half sunk vessel on which pours a stream over the king. It is stated that Ramesu 'is purified with life and power.'

5. Furniture. The main object in a temple was the sacred boat of the god, one of the best examples of which is shown on p. 896. The boat was a model intended to be carried on the shoulders of the priests; it rested, therefore, on two long poles, and when stationary was placed upon a square stand, so as to allow of the priests taking their seats under the shade. [The _Egyptian_, § 5, where the boat and shrine are described.] This boat was probably made of wood, plated over with sheets of electrum or gold. The extent to which gold was used is hardly credible to those who know the cost of gold and the trouble required for gilding. Even in the 11th cent. the Countess of Sicily had the mast of her ship covered with pure gold; and the Egyptian often describes large objects as covered with gold, which was usually of considerable thickness. The reliefs were usually worked in hard stucco and then thickly gilded and burnished. The art of high burnishing upon a stucco base was kept up till Roman times. The sets of vases for the purification ceremonies and further libations of wine, kept in stands, as shown below the boat. At the side of them is a stand with water jars, covered with lotus flowers, and with bunches of grapes placed below it. On another stand at the extreme left is a figure of the king kneeling, offering a large _s母公司_ or sign of life; this is crowned with flowers, and has convolvulus and vine growing up beneath it. Another stand at the extreme right has a figure of the king offering a large bouquet of flowers. A main part of the religious art was spent on things of this inscription trade. Goods of all kinds have been accumulated upon ramparts, hills, and terraces, and the objects left on them are of all kinds. For life—cereals, baunka, or dog food; for the soul—a great variety of offerings. Unhappily all this wealth of figures has perished, and only a few fragments remain to give reality to the innumerable pictures of the temple riches shown upon the walls.

W. M. FLINDERS PETRIE

ART AND ARCHITECTURE (Etruscan and Early Italian)—One can hardly speak of Italian art in connexion with the rude products of the Stone Age, even though some of the Neolithic weapons and implements in polished stone show a high degree of perfection in their way; the beginnings of a higher civilization appear more or less simultaneously in the whole country, varying in type according to the different races that inhabited the peninsula. The chief types are as follows:

1. The ‘terramare’ of northern Italy. These are villages built upon platforms supported by wooden poles sunk into the muddy earth, a type of dwelling created for marshy districts, and frequent upon the shores of the lakes of Central Europe. From there the type spread not only down the marshy valley of the Po and its tributary rivers, but also farther south to the confines of the Emilia, and even, if we may judge by an isolated example, as far as Tarentum. What had originally been a method of building called for the conditions of the soil was preserved and followed with religious care even in dry and mountainous regions. An invariable rule, evidently sanctioned by the religion of these ‘terramarici,’ in whom we may see the first Italian race on Italian soil, regulated the shape and disposition of these villages. A rampart was formed by a rampart of earth and a moat, carefully orientated, accessible by a single bridge; the round huts inside were disposed in blocks, intersected by two main paths running at right angles to each other and to the main wall, while, on the eastern side of the village, a rectangular space was reserved, evidently for the dwelling of the chief and the sanctuary or altar of the gods. The close resemblance of these arrangements to the shape and orientation of the settlements of the Dorian race is evident, and speaks for community of race; but the ‘terramare’ are many centuries older. The refuse accumulated under the huts contains rude pottery, numerous stone and bone implements, but only a few rare objects of bronze, which was evidently far from common at that time. The bronze fibulae, found occasionally, allow us to assign to these primitive villages, roughly speaking, a date between 1500 and 1000 B.C. The tombs and cemeteries are the peculiar characteristics of the living tribe’s dwelling—miniature villages guarded by moat and rampart—ruddy earthen jars filled with the ashes of the dead taking the place of the huts. We find abundant traces of agriculture, a little commerce, and—perhaps a touch of irrigation. All this is really akin to the northern settlements, evidence of relations with the _Egean_, in the shape of Mycenaean sherds and clay idols. No trace of writing has been discovered.

2. At about the same time, a more highly developed civilization was spreading through _Sicily and southern Italy_. We know these tribes, the Sikels, chiefly through their tombs, which are usually small chambers cut into the living rock. They often repay one word on their dwelling, either round or oval huts or square houses of wood or bricks and stone. Remains of some stone houses and even of a large building, evidently the seat of some powerful chief (at Pantalica west of Syracuse), have been discovered; and as the tombs were abundantly furnished with the necessities of life—clay vases often delicately painted, weapons and implements of stone and bronze, and even some ornaments and jewellery of bronze, silver, gold, and ivory—we are able to re-construct, to a certain extent, the picture of the life of the people through several periods of its development. The presence of Mycenaean vases in some of the tombs fixes their date approximately. But the Sikels have no connexion with the contemporary, very much ruder, civilization of the ‘terramare.’ The
advent of the Greek colonists, after the decline of the Mycenaean sway, early in the first millennium b.c., almost stifled the local art of southern Italy and Sicily, which may be considered, after the 8th cent., simply as a province of Greek civilization.

3. An analogous development of local handiwork appears in the rock-cut tombs of Sardinia. One of these gravevaults, at Nuraxi, near Codrongianu, has been reached by Sardinia always retains one distinctive feature of architecture, the ‘nuraghe,’ curious buildings of bee-hive shape, made of roughly hewn stones, sometimes fortified and walled, and often crowned with internal rooms and winding passages in several storeys. The date of these buildings has never been sufficiently cleared up, nor is it decided whether they served as dwellings or tombs, or perhaps for both uses. It is, however, undoubted that the older ‘nuraghe’ must be placed rather early in the first millennium b.c.

4. In northern and central Italy the ‘termarame’ do not disappear towards the beginning of the first millennium b.c., and are replaced by villages of rude huts, which have been called the civilization of this period merely by its cemeteries, the first of which was excavated at Villanová near Bologna, and has given its name to this civilization. The ashes are buried in clay vases, as in the tumulus at Sickell, but not hewn with their incised geometric ornaments, far more elaborate than the rude pots of the ‘termarame’; they also contain, besides smaller vases, a number of weapons, implements, and ornaments far in advance of anything yet known in those parts of the country. Stone implements disappear; iron is used besides bronze—an immense step forward on the path of technical development; amber and ivory ornaments proclaim commercial relations with the north and east. Instead of the usual ossuaries, we often find the ashes of the dead buried in small clay imitations of the living men’s huts, which appear to be considerably larger and better built than the primitive dwellings of the ‘termarame.’

But, in the older Villanová period, there is not yet any trace of writing, of stone buildings, or of Greek vases. These appear among the natives a few generations later, with the advent of the first really developed civilization in Italy, the Etruscan.

5. The origin of the Etruscan is shrouded in mystery. Fulfilling almost universally accepted by ancient authors and corroborated by the archaeological evidence, we assume them to have reached Italy by sea, about the 9th cent. B.C., subduing the native races of central Italy, especially the Umbrians, and founding a number of fortified towns, whose confederacy formed a powerful State. An entirely new era begins with them. The villages of rude huts are superseded by strongholds on the hills, protected by strong walls of polygonal or isodome masonry, which are still standing in many places in Etruria. The mighty walls of Caere, Cosa, Vetulonia, Volterra, Perugia, and other towns, belong to different periods, the oldest dating back as far as the 5th–6th cent. B.C. They have been constantly repaired in the course of ages, and a later date have occasionally, as at Volterra and Perugia, been provided with vaulted gates adorned with sculptured heads or the figures of tutelary deities in relief. Within the walls, the houses were built much more solidly and we have therefore preserved them. But the tombs give us a faithful representation of the household during the first century or two of Etruscan sway in central Italy, the ancient shape of the round hut still forms one prototype of the tombs. But, like the Etruscan ‘bee-hive’ tombs, whose influence they seem to show, these Etruscan sepulchres are spacious cupolas of stone, provided, not for the ashes of a pea-soup like the rude Villanová (Umbrian) ossuaries, but for families of wealthy warriors and merchants, whose corpses were buried in state, unburnt and surrounded by all they needed in the under world. The finest of these cupolas are found at Vetulonia, south of Pisa—some of the oldest and richest Etruscan cemeteries — at Volterra, and one specially good specimen at Quinto Fiorentino. Other tombs of the same period, instead of the cupola, consist of rectangular vaulted chambers, either built of huge stones or cut out of the living rock. The most famous of these is the tomb of the Necropoli Regia, at Veii, near Caere, whose astonishing wealth of gold jewellery, precious vases and implements, is in the Vatican Museum. A fine example of the rock-hewn tomb was discovered near Veii; it is adorned with the oldest frescoes we know in Italy. These graves are doubtless important. They are the earliest monuments that we can prove by their inscriptions to be undoubtedly Etruscan; by the Egyptian and Phoenician and Greek objects found in them, their date is fixed in the 5th–6th cent. B.C. The rectangular chamber is also seen in the house of wood or sun-baked brick, a slightly younger type (7th–6th cent.) introduces us to roomy mansions. These latter tombs are always cut into the rock, and their central hall and side-chambers, with their ossuaries, are surrounded by doorways, with couches and chairs hewn out of the rock, give a vivid conception of what an elegant Etruscan dwelling of the time looked like. Nay, in some cases, at Caere, for instance, we find two storeys above each other. The tombs built of stone blocks are simpler in design, consisting of one, rarely of two rooms, and occasionally, as at Orvieto, grouped in streets and blocks, just like real towns. The architectural forms and mouldings are of the simplest, and betray the imitation of wooden houses in stone. One detail—the doorways narrowing towards the top and surrounded by a rectangular moulding—seems to denote Egyptian influence.

These tombs are without sculptured decoration inside, except in the outer lintels and gates upon the doors or the ceiling (chiefly at Corneto, the reliefs showing animals, fabulous creatures and hunters; and some funereal statues in a tomb at Vetulonia); but the mound or tumulus which covers the grave usually bears either a sculptured ornament or a stone stele with the image of the deceased (standing upright in armour or reclining at a banquet), mostly accompanied by an inscription. Lions carved in stone often guard the entrance to the tomb. The walls of the sepulchral chambers are often gaily painted, and these frescoes demonstrate the development of Etruscan art, from the 6th to the 2nd cent. B.C. They and the sculptured sarcophagi also show the preponderant influence of Greek art over Etruscan; for the commercial relations between the two nations were continuous, and the Etruscans, who do not seem to have possessed a strong individual artistic genius, not only bought Greek vases and bronzes by the thousand, so that no tomb, however poor, is without its Greek objects, but also copied these imported works, more or less freely and successfully. Thus, the frescoes of the oldest painted tomb of Veii, mentioned above, show the meaningless medley of animals, fabulous creatures, and human beings which the Greek vase-painters of the 7th cent., especially in Corinth, had borrowed from the contemporary carpets and tapestries. The 6th cent. frescoes of Cere and Corneto show banqueting and hunting scenes, with an occasional marine monster and once a mythological scene, conceived in the style of Ionic art. The same art, debased by provincial Etruscan painters, appears...
upon some terra-cotta slabs with paintings of sacrificial and funeral rites, which adorned the walls of a tomb at Cære. Occasionally, towards the end of the 6th cent., the banquet (they are the Etruscan banquet of the happy dead) are replaced by frescoes showing funeral rites, dances, mourners, games, and figures, in which local Etruscan customs are rendered in a debased Greek style. These frescoes, especially those of a tomb at Chiuse, are full of interesting details—wrestlers and acrobats, dwarfs and tame animals. Early in the 5th cent., Attic models take the place of the Ionic or Corinthian ones; Attic vases of the red-figured style illustrate this new fashion in Etruscan painting. Banqueting and funeral scenes continue to be in vogue. In the 4th cent., still under Attic influence, the frescoes take more religious subjects. A tomb of Corneto shows us the trembling soul in Hades, amid the terrific images of the famous sinners of Greek mythology, bearing their eternal torments. The kinder artist of a tomb of the 4th cent., in a rapid and hunter, of a sumptuous banquet in the very palace of Hades, who presides with Persephone, before a sideboard laden with golden vessels. The gods and heroes are Greek, even to their names, which can easily be recognized in Greek to the 3rd cent.; the style is wholly Greek, and it is only in certain ritual details, in the winged Pates (Lasa) who call the dead to Hades, in the curious monstrosity of Charun (=Charon), the infernal boatman, that the Etruscan artists have abandoned their slavish imitation of Hellenic imagery. The same dependence is apparent in the sarcophagi which contain the corpses, where these are not simply stretched upon rock-hewn benches. In one tomb, the sarcophagus of a man and his wife reclining together on their couch at dinner, according to Attic custom, and in a style copying the Ionic. A century later, upon a stone sarcophagus from the Chiusi district (in the Florentine Museum), we see the same couple, Attic in style, the wife sitting at the feet of her reclining husband, as was the custom for a proper Attic lady. The old Umbrian custom of burning the dead, which lasted, hence, the whole of the Etruscan period, entirely, during the first five centuries of Etruscan sway, again became nearly universal with the end of the 4th cent.; the long sarcophagi for the outstretched corpse are replaced by short square urns, very like the large funerary urns of Athens, and while the figures reclining upon these urns are merely hideously deformed pieces of provincial work, the reliefs which adorn the front copy Attic paintings, of which little sketches must have been brought to Etruria in great numbers; this explains the contrast between the fine composition and the rough execution, so noticeable in the reliefs of these urns, and also the preference for Greek mythological scenes, some of them local Attic in flavour, but whether the native art or his clients can have understood. The painted tomb of a noble Etruscan man, in his later life, in the manner of a Carpeaux, with his shield and bow in the Saracen style, was found in the Roman tomb of the 5th cent., Etruscan bronze, attracted considerable interest in the 19th cent., and the tomb of the Etruscan merchant who traded with Etruria hailed from the Ionia colonies of Asia Minor, and their intimate connexion with the Phoenicians explains the presence of numerous Syro-Phoenician objects—vases, ornaments,
and scarabs—in the oldest Etruscan tombs, since no direct connexion between Phoenicia and Etruria has been proved. In the later period, Attic influence again predominates, and is especially noticeable in the very numerous engraved mirrors and circular cists (toilet boxes) of bronze, some of them very beautiful, which are most neatly akin, in the style to the later styles of the later cinerary urns, though superior to these. Etruscan jewellery, at least in its older stages, is a great deal more independent. In fact, Greece offers nothing comparable, in technical skill and delicacy, to the work of the Etruscans, the gossamer-like filigree work, the microscopic granulations, of the bracelets, necklaces, ear-rings, and fibule of the oldest Etruscan tombs. The more recent ornaments show a stronger Hellenic influence, and a less perfect workmanship. Ceramic art is always more or less subservient to the more valuable metal vessels. Thus, the shapes of Etruscan clay vessels reproduce bronze models, and as these models are more or less copied from Greek originals, the same imitation is apparent in the cheaper terra-cotta ware. Of these vases we may be certain that they are independent; they are fashioned in black clay, called bucchero, adorned with incised or relief ornaments or figures; and though this technique is not infrequent in Greece, and again more especially in the colonies of Asia Minor, yet its predominance in Etruria is so great that only a slight Greek influence upon a strong local industry may here be granted. Painted vases are rare in Etruria, and are no more than poor copies of Ionic originals, or Attic originals; but bucchero will be credited with many an achievement.

Very little can be said of decorative work in ivory, or of engraved gems. Here again foreign, and chiefly Oriental, influence predominates, and the Etruscan artists have added little of their own. Even the types of their coins are merely derivatives from the superior Hellenic art.

Etruscan art and science were paramount during the earlier centuries of Roman history, throughout the whole of Latium, and even as far south as Campania. When the Greek colonies of Magna Graecia grew strong enough to hold their own, and the Etruscans were driven from Campania, towards the end of the 5th cent. B.C., their intellectual sway over Rome diminished steadily as they declined. After the losses of the Etruscan cities had been subjected to Rome, their peculiar civilization winded and disappeared rapidly, and it would be difficult to find a characteristically Etruscan work of art later than the 1st cent. B.C.

V. "VILLANOVAS OR UMBRIAN CIVILIZATION: a series of articles by Balduzzi, the discoverer of Villanovas; the results collected by Montelius, op. cit. (1894), and by Di Cesare, Rome, 1893, p. 221, where this civilization is claimed for the Etruscans (erroneously, in the opinion of the present writer).

VI. "CIVILIZATION:" a series of articles by P. Giardina, in La Civilisation, the discovery of Villanovas; the results collected by Montelius, op. cit. (1894), and by Di Cesare, Rome, 1893, p. 221, where this civilization is claimed for the Etruscans (erroneously, in the opinion of the present writer).

ART (Greek and Roman).—The history of Greek art, in relation to religion, passes through three phases which correspond more or less to its three periods of rise, perfection, and decadence. During the first period, art is subjected to religious influences, and frequently tampered with by religious conservatism; during the second, art is independent, and art, drawing its highest inspiration from religion, and itself contributing to the dignity of religious ideals, so that it was said of the Olympian Zeus of Phidias, "cuius pulchritudo adiciase aliquod etiam receptam religione videtur"; during the third, religion supplies numerous themes to the artist; but these often tend to be regarded, mainly or in part, as affording an opportunity for his skill in characterization or execution; and even when this is not the case, he often repeats the conventionalities of earlier artists rather than the religious idea. It follows that the history of art in Greece is, throughout the course of its development, closely bound up with the history of religious thought—more so, perhaps, than in the case of any other nation, but the relations of the two vary considerably at different periods.

1. Pre-Hellenic Art.—Before dealing with Hellenic art, it is necessary to say something of the art which preceded it in Greek lands, and which is conveniently named Aegean, so as to include Crete and the Archipelago, as well as the mainland of Greece. Our knowledge of the Aegean religion (q.v.) is gained almost entirely from the remains of early art in these regions. The chief branches of this art consist of gem-cutting, the art of the gold and silver smith; painting on terra-cotta collars and vases, and in fresco on the walls of houses and palaces; and sculpture, or rather modelling in terra-cotta and other materials, including life-sized coloured reliefs in gesso duro. Early Aegean art in all these branches shows a strong and characteristic native development, though it owes something also to foreign influences, notably to that of Egypt. It is marked by much naturalism in detail, especially in plant and animal forms, together with a curious conventionalism, especially in the treatment of the human figure, with its unusually slim waist and elongated limbs. The article AEgeAN RELIGION shows what subjects are treated in the art of the time. We find representations of shrines and altars, and of aniconic symbols of worship, such as the double axe and the horns of consecration, and an almost realistic rendering of landscape in the representations of sacred mountains and trees. Grotesque animal forms and monstrous combinations are a favourite subject, especially in gems, and have, for instance, been found by L. Pigorini in the caves of Paestum. AEgeAN art shows that the skill of the artist is not sufficient to indicate any difference between these and human figures, except by signs or attributes. Rudely-fashioned images of terra-cottas, which are almost certainly to be regarded as figures of deities, are found in Crete, and are also common at Mycenae and elsewhere in Greece.

2. The 'Dark Ages.'—Art in Homer.—Between this early AEgean art and the rise of the arts which we properly hold to be the art of classical antiquity, there is an interval of time; nor is it possible, except in a limited degree, to trace any direct connexion between the two. The two chief qualities of the earlier work are beauty of decorative design and a close observation of nature, within certain limits. In both these respects its facile and even decadent
quality, in its later examples, offers the strongest contrast to the uncouth but promising beginnings of Hellenic art. Without discussing the complicated question of the racial changes that had taken place in the interval, we may admit that the innate artistic genius, of which we see the products in early Egyptian art, may, after long dormancy for a time, have contributed its part to the later development, but in conjunction with new elements which entirely transformed its character. In this connexion it must be remembered that the first and earlier stages of the development of early art in Crete and the Aegean islands go back to at least the third millennium before our era, and that the flourishing period of Cretan art ends with the destruction of the palace at Knossos about b.c. 1400, though at Mycenae and elsewhere on the mainland of Greece a kindred art survived for two more centuries in vigorous condition, and considerably longer in a decadent stage. The rise of a strong and independent Hellenic art cannot be dated earlier than about the 7th cent. B.C. The five centuries or so which intervened are sometimes called the 'dark ages' of Greece—a time of invasions and migrations, when the old civilizations were overwhelmed, and the country was for a time a barbarous barbarism, so far as the external surroundings of life were concerned. It was during this time that the Homeric poems were composed; and in them there is no certain reference to any work of sculpture in the round, or to any figure or relief in stone or wood, with the exception of a doubtful passage in Iliad, vi, 92 and 303, where the Trojan matrons place a robe 'upon the knees of Athene.' Some authorities regard this as implying the existence of statues; others, that it refers to purely metaphorical one, it is the only example of any such thing in the Homeric poems. Though temples are often mentioned, no images of the gods are referred to. Art in Homer is purely decorative, and is not distinctively Hellenic; many of the objects of finest workmanship are attributed to the Phoenicians. When scenes of an elaborate nature are described, as on the shield of Achilles, there are none of religious significance among them, though they do represent war as appearing in a battle scene. Here, however, it is the gods themselves that are thought of, rather than artistic representations of them.

3. Beginnings of sculpture. Many primitive images were in the Hellenic age ; an example is the Palladium stolen by Odysseus and Diomed from Troy—a tale told in the 'Little Iliad,' of about the 7th cent. B.C. Some of these may have been survivals from pre-Hellenic times; others were probably wrongly assigned to so early a date. Some of them were attributed to Dedalus, an artist whose historical existence is doubtful, but whose reputed attainments summarize the sudden advance in the art of sculpture which seems to have taken place about B.C. 550. Dedalus is said to have invented the image of the gods, sometimes, apparently, as a new departure, sometimes to replace a primitive or aniconic object of worship. Such families of artists existed in Chios (Melas, Micceidas, Arachermus) as workers of marble, and in Samos (Rheneus, Theodorus) as workers in bronze. In the Peloponnesse, many statues of the gods were made by Diphæus and Scyilla, Cretan 'Dedalids,' and by their countrymen, known as 'jailed Amazons,' who were almost as much as statues of the goddess Hera at Samos was replaced by an image made by Smilis of Ægina; the Apollo of Delos was made by Tecteus and Angelion, said to be pupils of Diphæus and Scyilla; and probably most of the other early images of the gods in human form were made in this period. From this time on we hear of numerous statues of the gods, made by almost all the chief sculptors; some of these were intended to replace more primitive images as objects of worship, others merely for decoration. In the former case the artist would in most cases be bound by religious conservatism, not to depart too far from the accepted type. An example is the Black Demeter of Phigalia, whose primitive image, with a horse's head, had been destroyed; the sculptor Onatas of Ægina is said to have replaced it with remarkable fidelity, with the help of copies, and even of a vision. This is an extreme instance, but in many other cases the artists had to satisfy the religious scruples of priests and others, as well as the growing desire for a more artistic representation of the deity. In the case of dedicated statues he would naturally have a freer hand. Here the limitations would be imposed by his art. We have many statues of early Greek workmanship preserved, and these show that sculpture was confined to a small number of clearly marked types, which served for representations alike of deities and of human beings. The commonest of these types represented a fully draped seated figure, a nude standing male figure, or a female figure; these were used alike for figures of the dead set up over graves, for figures of worshippers dedicated in sacred places, and for images of the gods. The artist devoted his skill to perfecting these types, to getting more natural expression on the face, to improving the shape of limbs and hands and feet, to observing and recording correctly the position of bones and muscles in the body. He was too much taken up with these matters to give much attention to the Individuation, much less of a worthy ideal of the god, though he was by his work that the tradition was being built up which enabled the masters of the 5th cent. to progress in this direction. Some other early types, however, offered an opportunity for a more direct and simple expression of divine energy. Sometimes swiftness was shown by wings, usually borrowed from decorative Oriental models, and by a position which looks like kneeling, but is meant to represent running or sitting; but the god or goddess was shown striding forward rapidly, with an attribute of power—if Zeus, a thunderbolt; if Poseidon, a trident; if Athene, a spear—in the raised right hand. Such purely external expressions of the divine essence have been derived from primitive images, which were incapable of expressing it in any subtler manner; and although some examples of this type were made, usually to carry on a religious tradition, even in the 5th cent., it gradually became obsolete as the artist acquired facility in expressing the character and power of the god under an intellectual and moral rather than a merely physical aspect. When this change had come about, the relations of art and religion were revolutionized. The sculptor no longer found himself confronted with the technical problem of providing a statue suitable in age, sex, and attributes to the requirements prescribed by religion, but was himself able to contribute something to the ideal conception of the deity.

4. Decorative and minor arts. So far we have considered only sculpture in the round, having as its province the making of independent statues. Minor works in bronze and terra-cotta, which were abundant on all Greek sites, naturally followed the course of the development had served, perhaps, even anticipated it; but what is said of sculpture applies to them also. It is otherwise with reliefs and other decorative works, whether in wood, stone, marble, terra-cotta, bronze, or other metals. So far as their religious signif-
cance is concerned, this group of objects goes with painting, especially vase-painting; it deals with the same kind of subjects, and treats them in the same manner. This decorative art affords a link, such as is missing in the case of sculpture, with the earlier periods; for it continued to be practised to a large extent during the dark ages between Mycenaean and Hellenic art; it transmitted some inherited types, and it borrowed many others from Oriental or other foreign sources. It is also of considerable importance for the study of religion and mythology, since the means at its disposal enables it both to represent the gods and heroes, to record or to illustrate stories about them, or scenes connected with their ritual. It is to be observed that descriptions of decorative reliefs in the Homeric poems—notably that of the shield of Achilles, which, even if later than the rest of the Iliad, is earlier in date than the rise of Hellenic art—do not refer to mythological scenes, but to incidents of daily life. On the other hand, the Hesiodic 'shield of Hercules' has a whole series of illustrations of mythical tales, such as the battle of the Centaurs and Lapiths (from the Gorgons). In this respect it resembles actual works of decorative art that are recorded for us by ancient writers, such as the throne made by Bathycles of Magnesia for the Apollo at Aegina, 'the chest of Thyestes' (from Cephalus, dedicated in the Heaenum at Olympia. And the subjects recorded both on the imaginary and on the actual reliefs are just the same as we constantly find upon extant early works of decorative art—both reliefs in marble or stone or bronze or terra-cotta, and paintings upon vases. It appears, therefore, that, while the art referred to in the Homeric poems has nothing Hellenic about it except the poet's imagination, the references to works of art in Hesiodic poems and in later literature are closely in touch with the actual development of art in Greece.

The relation of art to popular belief and to literature, in its treatment of religious or other mythological subjects, is somewhat complicated. The decorative artist was extremely conservative and imaginative in the use of his available répertoire of groups and figures. Free invention was hardly ever resorted to, except in cases where no already familiar type could be borrowed or adapted. For the judgment of form is an inherent part of art, a theme for invention, and we find it so treated on later vases; but in early art it always takes the form of a procession, with the figures more or less differentiated; and this form is borrowed almost without modification from the procession of dancing women, headed by a musician, which is a common subject on the most primitive vases. Such mechanical repetitions may appear at first sight to preclude any strong influence of art on mythology; but in some ways their cumulative effect was greater than any that could have been due to originality of treatment, for it became almost impossible for people to figure these scenes or events to themselves in any other way than the conventionally accepted. And, moreover, the same conditions tended towards the assimilation and even identification of legends originally distinct, and so facilitated the systematization of Greek mythology. Again, the tendency of early Greek art to adopt rather than to invent led to many mistaken identifications that had great influence, not only on later art, but even on later belief. Thus the gorgon, the sirens, the sphinx, and other such monsters probably had no distinctive form in the eyes of those who first told tales of them; certainly the distinctive form is indicated in the Homeric poems. But the early decorative artists borrowed from the East many monstrous forms of winged and human-headed beasts and birds which had probably no particular importance to those who first adopted them as decorative elements; and these forms came to be identified with the creatures of Greek myth so completely and so finally that we at the present day cannot think of them as separate in their form. The fact that both these fantastic figures appear as symbols of death upon tombs in Greece, in Lycia, and possibly elsewhere also, has further complicated the influence of the borrowed type, so that, in these cases and in others like them, it is now almost impossible to disentangle the relations of art and of myth to the common conception.

5. Vase-painting.—The more technical side of the early development of decorative art in Greece concerns us here mainly as it affects the gradual acquisition of greater power of expression. In this matter sculpture in relief has much the same history as sculpture in the round, so far as the execution of individual figures is concerned. Vase-painting, on the other hand, has an independent development. It is impossible here even to sketch the development of vase-painting; it is possible only to mention those classes of vases which are of most importance for the representation of mythological scenes. (1) The geometrical class, which succeeds the Mycenaean in Greece, frequently reproduces scenes of Mycenaean origin; these vases are of the kind of Lacedaemonian and of those from the Dipylon vases of Athens, on which we see elaborate funeral processions, scenes of seafaring and combat, and classic dances; but few, if any, of these can be given any mythological significance. (2) The geometric period is succeeded by that of oriental influence in various parts of the Greek world. On the coasts and islands of Asia Minor, especially in Ionia, Samos, and Rhodes, we find various classes of vases, which have certain characteristics in common, as well as clearly-marked local variations; and about the same time we find a similar development in some of the chief manufacturing centres in continental Greece, mainly at Corinth and Chalcis; and colonies such as Daphne and Naucratis in Egypt, and Cyrene in Libya, have early vases that are Hellenic in evidence. Athens also has its own pottery at this time, in succession to the Dipylon ware. The technical development varies considerably, but in all alike the tendency is towards an improvement both in the quality of the ground and in the pigment in which the figures are drawn. As a rule the ground is buff, brownish or white, and the pigment is of a dark brown colour, varying from red to dull black. In late examples, and, above all, in Attic pottery, the ground tends to assume the beautiful reddish terra-cotta colour which is characteristic of Greek vases of the best period, and the pigment to take the form of lustrous black varnish. The monstrous forms, many of them winged, and the other fantastic beings or their characteristic parts, become gradually to be replaced by scenes of some mythological meaning, or, if retained, to acquire a mythological significance; and the human figure, at first introduced as a decorative type like the rest, gradually assumes its supremacy in interest. The treatment of myths upon early vases becomes, so to speak, stereotyped along certain lines, the same figures or compositions being repeated again and again with slight variations to illustrate the same myth, or adapted to the rendering of another myth that lends itself to a similar treatment. In this way the vasa-painter contributed in no small degree to the uniformity and systematization of mythology. (3) About the middle of the 8th cent. B.C. the Attic potters, assisted by the excellent clay of the Attic ceramics, surpassed all rivals. This is the age of what is called black-figured.
ware, the figures being drawn in black silhouette, and details added in incised lines, with touches of purple or white. We have many vases signed by potters of this period, as well as of the next, which begins in the latter part of the 6th cent., and continues until the date of the Persian wars and a little later. (4) This next period, which overlaps the preceding, is known as the early red-figured style, the same pigments being used, but the figures being reserved in the terra-cotta colour of the clay, and the background filled in with the black silhouetted outline of the subject. We find in the works of Praxiteles and Scopas, who came to Athens and decorated the Painted Stoa and other buildings about this time.

In Athens the work of Polygnotus consisted partly of historical paintings, such as the battle of Marathon; at Delphi his most famous works were the Charioteer of Troezen and the 'Land of the Dead,' and by these he probably exercised great influence on his contemporaries and successors. He was specially noted for the ethical character of his subjects. His paintings have not been preserved, but from imitations on vases and from descriptions of ancient writers, we can infer that they consisted of simply-grouped figures, arranged without perspective, and probably conventional in colouring. But the grandeur and nobility of his conception probably contributed to an unusual degree to the ideals of Greek art in the 5th century.

6. Sculpture of the 5th century.—The development of sculpture was at this time very rapid. The great struggle between Greece and Persia led to a new consciousness of Hellenic unity and a new pride in the superiority of Greek over barbarian; and at the same time, the spoils of victory and the offerings to the gods in thanksgiving for the great deliverance afforded both opportunities and themes for the influence on copies of the great works of Persia. The full effect of these influences was hardly felt at once, and they were combined, in their most splendid manifestations, with the glory of Athens, which, taking the lead at the time of the Persian wars, became the leading part of Persia and the majority of all that was best in Greece. The immediate predecessors of Phidias, though they produced works which were admired by posterity, seem still to have been mainly occupied with the study of the type and the perfection of technique and mastery over material. A statue like the 'Discobolus' of Myron is characteristic of this age; and however great the skill of the artist in dealing with a difficult subject, it is to be noted that he does not go beyond the expression of physical life to the expression of the character of the Polemarch; or of a wounded man, and of a wounded Amazon; he also made the portrait of Pericles, of which copies survive, and which is a typical example of the early portraiture which treats its subject as the individual. In all these works we can see the character of the art of the 5th cent., which expressed, as ancient critics tell us, σωφροσύνη rather than νομική, fixed type of character rather than varying passions and emotions.

7. The 4th cent. justified the assurance that he went beyond his contemporaries. It was reserved for Phidias to fill the forms that had already reached so high a degree of perfection, with an inner life and meaning. His colossal gold and ivory statues have not survived, but we have some copies of them, and probably of others of his statues, and the descriptions of ancient writers; and we can also see the reflexion of his influence in all contemporary and later work. From this evidence we can infer that his statues of the gods did not merely represent the perfection of the human form in face and figure, but embodied all that was noblest in the Hellenic conception of the gods. He is even said to have gone beyond this, and to have added somewhat to the received religion in his statue of Zeus, which was so worthy of the gods he represented that he was burdened in soul, who has experienced many misfortunes and sorrows in his life, and from whom sweet sleep has fled, even he, I think, if he stood before this image, would forget all the calamities and troubles that befall in human life' (Dio Chrys. Or. xii. 51, tr. Adam). The Zeus at Olympia was the father of gods and men, full of power and benignity, the common god of the Hellenes. The Athené Parthenos at Athens represented the more intellectual conception of the goddess of Athens, the embodiment of the artistic and literary genius of the people. Statues like these doubtless transcended the ordinary notions of the gods; but they were no mere allegories or personifications; they had the conceptions of the ideas of beauty and perfection and contributed in no small degree to purify and ennoble these ideals. This new influence of art upon religion came just at the time when the accepted views about the gods and the tales that were told about them were being questioned, and Phidias and Pericles were in sympathy with the most enlightened views; it can hardly be doubted that both artist and statesman had it as their aim to represent the gods to the people as they should be worshipped, with the beauty and majesty that characterized the temples of this period, above all from the sculpture of the Parthenon, we can learn the beauty and nobility of type and the unrivalled skill in execution that supplied the means whereby such an artist as Phidias could express his ideas.

In the latter part of the 5th cent. B.C. there were several other sculptors who followed more or less closely the tradition of Phidias, and made statues of the gods, which, like his work, had a great influence on their successors. The full effect of these influences was hardly felt at once, and they were combined, in their most splendid manifestations, with the glory of Athens, which, taking the lead at the time of the Persian wars, became the leading part of Persia and the majority of all that was best in Greece. The immediate predecessors of Phidias, though they produced works which were admired by posterity, seem still to have been mainly occupied with the study of the type and the perfection of technique and mastery over material. A statue like the 'Discobolus' of Myron is characteristic of this age; and however great the skill of the artist in dealing with a difficult subject, it is to be noted that he does not go beyond the expression of physical life to the expression of the character of the Polemarch; or of a wounded man, and of a wounded Amazon; he also made the portrait of Pericles, of which copies survive, and which is a typical example of the early portraiture which treats its subject as the individual. In all these works we can see the character of the art of the 5th cent., which expressed, as ancient critics tell us, σωφροσύνη rather than νομική, fixed type of character rather than varying passions and emotions.

8. The 4th cent. justified the assurance that he went beyond his contemporaries. It was reserved for Phidias to fill the forms that had already reached so high a degree of perfection, with an inner life and meaning. His colossal gold and ivory statues have not survived, but we have some copies of them, and probably of others of his statues, and the descriptions of ancient writers; and we can also see the reflexion of his influence in all contemporary and later work. From this evidence we can infer that his statues of the gods did not merely represent the perfection of the human form in face and figure, but embodied all that was noblest in the Hellenic conception of the gods. He is even said to have gone beyond this, and to have added somewhat to the received religion in his statue of Zeus, which was so worthy of the gods he represented that he was burdened in soul, who has experienced many misfortunes and sorrows in his life, and from whom sweet sleep has fled, even he, I think, if he stood before this image, would forget all the calamities and troubles that befall in human life' (Dio Chrys. Or. xii. 51, tr. Adam). The Zeus at Olympia was the father of gods and men, full of power and benignity, the common god of the Hellenes. The Athené Parthenos at Athens represented the more intellectual conception of the goddess of Athens, the embodiment of the artistic and literary genius of the people. Statues like these doubtless transcended the ordinary notions of the gods; but they were no mere allegories or personifications; they had the conceptions of the ideas of beauty and perfection and contributed in no small degree to purify and ennoble these ideals. This new influence of art upon religion came just at the time when the accepted views about the gods and the tales that were told about them were being questioned, and Phidias and Pericles were in sympathy with the most enlightened views; it can hardly be doubted that both artist and statesman had it as their aim to represent the gods to the people as they should be worshipped, with the beauty and majesty that characterized the temples of this period, above all from the sculpture of the Parthenon, we can learn the beauty and nobility of type and the unrivalled skill in execution that supplied the means whereby such an artist as Phidias could express his ideas.

In the latter part of the 5th cent. B.C. there were several other sculptors who followed more or less closely the tradition of Phidias, and made statues of the gods, which, like his work, had a great influence on their successors. The full effect of these influences was hardly felt at once, and they were combined, in their most splendid manifestations, with the glory of Athens, which, taking the lead at the time of the Persian wars, became the leading part of Persia and the majority of all that was best in Greece. The immediate predecessors of Phidias, though they produced works which were admired by posterity, seem still to have been mainly occupied with the study of the type and the perfection of technique and mastery over material. A statue like the 'Discobolus' of Myron is characteristic of this age; and however great the skill of the artist in dealing with a difficult subject, it is to be noted that he does not go beyond the expression of physical life to the expression of the character of the Polemarch; or of a wounded man, and of a wounded Amazon; he also made the portrait of Pericles, of which copies survive, and which is a typical example of the early portraiture which treats its subject as the individual. In all these works we can see the character of the art of the 5th cent., which expressed, as ancient critics tell us, σωφροσύνη rather than νομική, fixed type of character rather than varying passions and emotions.
may in some cases have brought the character of the gods home to men by an intense and vivid realization of their personality; but in making them so human these sculptors may have made them less divine, and have opened the way for successors who regarded even statues of the gods as a mere theme for the exhibition of their artistic skill. In the 4th cent., however, the assistance from a considerable example of a tendency of which traces may be seen earlier—that to personification. A group by Cephisodotus represented Peace nursing the infant Wealth; and later on allegorical figures such as these were adopted by sculptors. The imagination seems to have usurped much of the worship that formerly belonged to the Olympian gods. But the statues of Scopas and Praxiteles were for the most part taken from accepted mythology, though the subjects selected were no less characteristic of the time than the manner in which they were treated.

The most famous works of Praxiteles represented Aphrodite and Eros; and he set the goddess before mortals with her beauty entirely unveiled; her nudity is not natural and unconscious like that of many of the Greek and Roman statues, for it was exalted by water supplied in preparation for the bath. He was also famous for his representation of Dionysus and his attendant satyrs; and from extant copies we can estimate the skill with which he characterized the soulless, half-human creatures of the woods. In the Hermes of Praxiteles, of which the original is happily preserved, we can see the mythological conception of Hermes as the protector of youthful life in a genial and individual embodiment. The marble was said to have been dug up on the spot, and sculptors of this kind followed Praxiteles. Scopas, and a number of other sculptors, were also noted for their figures of gods and heroes, as for their portraits of the family of Philip and Alexander in gold and ivory for the Philopappos at Olympia—works which exemplify the tendency to represent men in a manner hitherto reserved for the gods.

The great painters of the 4th cent. are known to us only by literary records; and in this case we cannot, as in the earlier age of Polygnotus, expect direct evidence from the works of art. From the descriptions of the poets we learn that the painters of this age often chose dramatic or sensational subjects, and their power of rendering individual character and passion was probably comparable with that of contemporary sculpture. Of all the painters of the 4th cent., Apelles was, like Lysippus, noted for his portrait of Alexander; and he was also fond of allegorical subjects, such as his group of Calumny, of which a detailed description is left us.

5. Hellenistic art.—In the Hellenistic age Greek art followed the conquests of Alexander to new centres in the East; it is no longer to Athens or Argos or Sicyon, but to Alexandria and Antioch and Pergamos that we look for its most characteristic products. The beginning of the Hellenistic age is marked by the defeat of Philip, and by the fact that Hellenistic art had changed the relations of East and West, and Greek civilization was henceforth the prevalent influence in western Asia. His career, which might well seem more than human, induced the Greeks to accept the Oriental custom of the deification of kings; and his features came to be repeated in the types of the gods. His head, too, was placed upon coins—an honour hitherto reserved for the gods alone. And his successors, with a less justifiable arrogance, claimed even higher privileges. But the old types and conventions were mostly repeated, either in mere repetition or in eclectic imitation. Certain schools, inspired by the dramatic power of Scopas, infused some new life into the old forms, notably the school of Pergamos. On the great altar in that city was a frieze with a representation of the procession of the gods 'Demeter and Ceres', and on which the sculptures were devoted to a complete representation of the Greek Pantheon in action against their wild adversaries. But the extraordinary dramatic power of the sculptors, and the fact that it is more or less an artificial creation, not a spontaneous embodiment of the people's belief, while philosophers turned to a more or less abstract and monothetic conception of the deity, which was out of touch with art, the people often turned to a more direct and intelligible worship, such as that accorded to the 'Fortune' of Antioch, embodied in a graceful representation of the city, seated on a rock with a river-god at her feet, which was made by Eutychides, a pupil of Lysippus. The representations of rustic subjects showed a reaction against the artificiality of city life, parallel to the literary development of the pastoral. Statues of the gods were still made, but were mostly mere repetitions of established types, though occasionally we find examples of great dignity and beauty, such as the Aphrodite of Melos or the colossal works made by Damophon in Messene and Arcadia. In the inadequacy of contemporary art, we find, often in an age of decadence, return to the character and even to the mannerisms of early art; in extreme cases this leads to an affected archaistic work which is easily distinguished from that of the early sculptors whom it imitates. The same time, dramatic vigour and scientific study were still kept up in some schools; and in Rhodes, in the middle of the
ART (Jewish) 871

1st cent. B.C., there were still sculptors capable of producing such a masterpiece as the 'Lacoon.'

9. Graeco-Roman art.—Graeco-Roman art—that is to say, the work produced for the Roman market by Greek artists—belongs for the most part to the more conventional and less powerful survivals of the art of Greece. There was an immense demand in Rome for the decoration of public buildings and of private houses, gardens, and libraries with the products of Greek art; and this was met partly by the spoliation of Greek shrines, partly by the gods follow or new work past the old nearly enough to please the taste of the patron. Even the statue of 'Venus Genetrix,' set up by Julius Caesar in his forum and made by Aesopus, the most famous sculptor of the day, was a mere repetition of a type which goes back to one of the masters of the 5th century. Under such conditions there was not much scope for originality or for a fruitful relation between religion and art.

10. Roman art.—Roman art had more originality, and made some technical advances even on the Greek models; but, from the religious point of view, these do not much concern us. They are best seen in portrait, historical reliefs, and decorative work. The old Italian gods did not as a rule resemble themselves in artistic treatment. There were, indeed, old terra-cotta images of the gods, made in Rome under Etruscan influence, which Caton and other conservatives regarded with veneration, and preferred to the imported products of Greek art. These may have had a certain vigour of individuality and realism which affected later art in Rome, and more especially portraiture. But in the art of Rome, as known to us in Imperial times, there presentations of the gods were of the types and conventions borrowed from Greece. There were indeed certain figures, above all that of Rome herself, which were new creations; but these followed the lines of impersonation common in Hellenistic art.

The art of the Augustan age, though characterized by an austere beauty, was academic and classical in character. Perhaps the finest extant figures of the gods in Roman art are those on the arch of Trajan at Beneventum, which are beautiful and dignified, but not so lifelike as in the earlier art. They presuppose an interest in the action portrayed as to seem full of life. In the deification of the Emperors we also find an incentive to ideal portraiture which did something to counteract the realistic tendencies of Roman art. The types thus acquired thus suppleness to the general history of art, and even to the transmission of religious ideas. In historical reliefs on columns and arches—above all, in the Trajan and Antonine columns—we find a continuous method of narration which lent itself admirably to the records of chronicle or story; and this method was continued, for didactic purposes, into early Christian and medieval art. In the sarcophagi we also find a great wealth and variety of resource in the renderings of mythology, often combined with historical allusion; and the types and patterns thus adopted and handed on the classical traditions to later art. Types, such as that of Orpheus, also acquired a new significance in Christian art. The Greek traditions, in varying form, survived both in Rome and in Asia Minor, and through them were transmitted to the modern world. The relation and the spheres of influence of the Eastern and Western branches constitute one of the most difficult and disputed problems of modern archaeology.

E. A. GARDNER.

ART (Jewish).—1. The arts in which the ancient Hebrews excelled were poetry and music. There are no remains, whether in literary sources or in the actual results of excavation, to vary the belief that there was in any real sense a native Hebrew painting or sculpture. There are extensive stores of Hebrew pottery, but the shapes and styles are derived from Phoenician and Egyptian types, and show an oriental artistic influence. Thus, again, the same imitativeness appears. Phoenician and Hebrew seals are much alike in shape, script, and ornamentation (Benzienger). The Phoenicians, too, excelled in metal-working; and the Hebrews, while they do not seem to have early acquired the art of metal-casting, were skilful adepts in the process of overlaying wood with metal plates. This skill presupposes some aptitude for wood-carving, but sculpture as such was not one of the Hebrews. It is remarkable how few inscribed stones of Hebrew provenance have thus far been discovered. Religion, which is usually the most powerful aid and stimulant of art, had the very opposite effect in Judaism. The prophetic attack on idolatry carried with it an objection to images, and the representation of any form of animal life was forbidden in the Decalogue. Thus, on the one hand artistic incapacity, and on the other pietistic asceticism, were combined to nullify with an interest in the art portrayed as to seem full of life. In the deification of the Emperors we also find an incentive to ideal portraiture which did something to counteract the realistic tendencies of Roman art. The types combined thus suppleness to the general history of art, and even to the transmission of religious ideas. In historical reliefs on columns and arches—above all, in the Trajan and Antonine columns—we find a continuous method of narration which lent itself admirably to the records of chronicle or story; and this method was continued, for didactic purposes, into early Christian and medieval art. In the sarcophagi we also find a great wealth and variety of resource in the renderings of mythology, often combined with historical allusion; and the types and patterns thus adopted and handed on the classical traditions to later art. Types, such as that of Orpheus, also acquired a new significance in Christian art. The Greek traditions, in varying form, survived both in Rome and in Asia Minor, and through them were transmitted to the modern world. The relation and the spheres of influence of the Eastern and Western branches constitute one of the most difficult and disputed problems of modern archaeology.

Artists of the Bible:

1. Type of Art:

- Hebrew:
  - Poetry
  - Music
  - Pottery
  - Seals
- Greek:
  - Pottery
  - Metal-working
  - Wood-carving
  - Sculpture

2. Influence:

- Phoenician and Egyptian influences

3. Prophetic Influence:

- Opposed to representation of animal life
- Opposed to idolatry
- Combined with pietistic asceticism

4. Religious Art:

- Hebrew art was not influenced by the arts of the biblical period
- Greek art influenced the Hebrews, but the Hebrews did not seem to have early acquired the art of metal-casting

5. Transmission:

- Greek traditions survived in Rome and Asia Minor
- Transmitted to the modern world

6. Cultural Influence:

- Mediterranean influence on early Christian and medieval art

7. Future Studies:

- Further investigation of the cultural influence of the Bible on art

---

The text discusses the arts in ancient Hebrew society, contrasting with those of ancient Greece, highlighting the primary focus on poetry and music, and the influence of Mediterranean art on Early Christian and Medieval art.
3. But in some directions a specific Jewish art was developed. In mediaeval times the Jews acquired great repute as silk-dyers, as embroiderers, and as masters of the gold- and silver-smith's art. The worship of the synagogue and the home required the use of many objects in which artistic taste could be displayed. The Ark, or receptacle of the Law, the mantles in which the scrolls were wrapped, the crowns and bells with which they were adorned, the lamps for Sabbath and Hanukkah, the cups for the sanctification over the wine, the spice-boxes (mostly of a cestellated shape) are among the articles, to which the artist has taken delight in multiplying the folds of the scrolls could and of the Law, the manuscripts, which are displayed. At the close of the Sabbath, the Seder-dishes which were used in the home on the Passover Eve—these are among the most important of the articles which the Jews loved to ornament. Beautiful embroideries were also required as curtains for the Ark. Many fine specimens of all these were exhibited at the Anglo-Jewish Historical Exhibition in 1887, and the Catalogue of that Exhibition remains a valuable source of information on all these matters. An édition de luxe of the same Catalogue was illustrated by photographs by Mr. Frank Hara. Throughout the volumes of the JE will also be found many pictures of the objects briefly described here, as well as of another branch of art in which Jews excelled.

4. This branch is the illumination of manuscripts. As writing was carried on in the western world, in which Jews were highly skilled, and in the illumination of initial letters and the painting of marginal ornament and grotesques, they acquired considerable proficiency. Though there is no specific Jewish art in manuscript illumination, there are original Jewish elements; as Mr. G. Margoliouth well puts it, the Jewish spirit makes itself perceptible to the eye. In classifying the Jewish illuminated MSS, Mr. Margoliouth takes first the Bible, with its marginal illuminations, in form of designs, and (b) pictorial and marginal illuminations. Of course all these ornaments are confined to codices or MSS in the form of books; in the form of the scroll (except in the case of the Roll of Esther) the Bible was never illuminated. The treatment of the use of an ornament, which does not cover the face, of punctuated or ornamented scrolls. The illuminated Esther rolls were hardly meant for use in Divine worship. The usual Hebrew book for illumination was the Passover Service, or Haggadah. This is of course a book without miniatures, initials, and full-page pictures. Less common are illuminated Prayer-Books. But all Hebrew books might be illuminated. The Code of Maimonides exists in many beautiful specimens. A very common object for illumination was the Kethubah, or Marriage Contract.

It must be added that in recent times many Jewish artists have attained to fame.

LITERATURE.—Besides the works referred to in the course of the preceding article, see: the publications of the Gesellschaft für Sammlung von Kunstdenkmäler des Judentums (Vienna, 1897 ff.); die Mittheilungen der Gesellschaft zur Erforschung jüdischer Kunst (Frankfort, 1900 ff.); Die Umgangsgeschichte von Sarajevo, ed. Müller and Schlosser (Vienna, 1886); Glanz und Staat der Ornamentik Hibern (Berlin, 1906); E. J. Solomon, 'Art and Judaism' in JQR xxii. 655; G. Margoliouth, 'Hebrew Illuminated MSS' in JQR xx. 118; and D. Kauffman, Gesammte Schriften, vol. i. 1938.

I. ABBRAMS.

ART (Mithraic).—Oriental monuments of the worship of Mithra are as yet almost entirely wanting. The beautiful sculptures discovered at Sidon (1869, ci., fig. 21) of some of them iv. (Marquand, 1906, No. 46 ff.) date from the 3rd cent. of our era, and cannot throw any light on the first productions of the devotees of the Persian god. We must, accordingly, confine ourselves to studying Mithraic art in the Latin-speaking provinces of the Roman Empire, where a very considerable number of its remains have been discovered. In time they range over about two and a half centuries. The most ancient monument, which is now in the British Museum, dates from A.D. 104 (Cumont, Mon. myst. Mithra, No. 65; cf. vol. ii. 546; CIL vi. 30725), and the last of them belong to the middle of the 4th century. These constitute a group whose limits in space and time are small, and whose character can be accurately described. It must be admitted that their artistic merit is much less than their archeological interest, and that their chief value is not aesthetic but religious. These works are, however, precious, in that they destroy all hope of finding in them the expression of real creative power or of tracing the stages of an original development. It would, however, be unfair, acting under the impulse of a narrow Atticism, to confound them all in a common depreciation. Some of the groups in high and low relief (for the mosaics and the paintings which have been preserved are so few and so mediocre that they may be disregarded) hold a very honourable rank in the multitude of sculptures which the age of the Empire so splendidly bequeathed to posterity.

The bull-slaying Mithra.—The group most frequently reproduced is the image of the bull-slaying Mithra, which invariably stood at the background of the temples (see art. ARCHITECTURE (Mithraic)), and specimens of which are to be found in all the museums. The sacrifice of the bull recalled to the initiated the history of the creation and the promise of a future resurrection. It can be proved (Cumont, op. cit. ii. 180 ff.) that these representations of Mithra, whose sacred type was fixed before the spread of the Persian mysteries into the Latin-speaking world, are replicas of an original created by a sculptor of the school of Pergamos, in imitation of the sacrificing goddess Victory which adorned the baustrade of the temple of Athena Nike on the Acropolis (Kekule, Die Reliefs des Tempels der Athena Nike, 1881, pl. vi.). The Asiatic adapt has merely clothed the Persian god in the half-conventional Phrygian costume which was associated with a number of Oriental personages (e.g. Paris, Attis, Pelops, etc.), and has given the face an expression which more nearly resembles that of the celebrated 'dying Alexander.' 'The emotion that pervades the features of Mithras is rendered with almost Skopian power' (Strong, Rom. Sculp. p. 311).

Certain sculptures discovered at Rome and at Ostia, dating from the beginning of the 2nd cent., still reflect the splendour of that powerful work of Hellenistic art. After an eager pursuit, the god, whose mantle flutters in the wind, has just reached the sinking bull. Placing one knee on its crupper and one foot on one of its hoofs, he leans on it to keep it down, and, grasping it by the nostrils with one hand, with the other he plunges a knife into its side. The vigour of this animated conception shows to advantage the agility and strength of the invincible hero. Once the bull has been pierced, the suffering of the victim breathing its last gasps, with its limbs contracted in a dying paroxysm, and the strange mixture of exultation and remorse depicted in the countenance of its slayer, throw into relief the pathetic side of this sacred drama, and even to-day arouse in the spectator an emotion which must have been keenly felt by the worshippers.

This work of the Alexandrian period lies, moreover, been affected by the Roman schools of art. In Rome, as often is the case, the balance was in a more or less felicitous manner the care for details which is characteristic of the works of the Antonine period, e.g. in a group from Ostia (Cumont, op. cit. p. 79, fig. 67) which dates from the reign of Commodus, and a bas-relief from the Villa Albani (id. p. 55, fig. 45). The artist has taken delight in multiplying the folds of
the garments and in rendering more intricate the curls of the hair, merely to show his skill in overcoming the difficulties which he himself had created. A small piece of sculpture discovered at Aquileia (ib. p. 116, pl. iii.) is distinguished in this respect by a bewildering cleverness of technique. The deliberately carved figures are almost completely detached from their massive block base, to which they are connected only by very slender supports. It is a piece of bravura in which the sculptor displays his skill in producing a brittle substance the same effects as the chaser obtains in metal. But these comparatively perfect works are rare even in Italy, and it must be acknowledged that the great majority of these remains are of discouraging mediocrity, which becomes more and more widespread towards the 4th century.

The Dadothori.—The group of the bull-slaying Mithra is almost always flanked by two torch-bearers, or dadothori, who were called Cauti and Castopat. Dressed in the same Oriental garb as Mithra, one of them holds an uplifted, and the other an inverted, torch; they doubtless personify the sun at the equinoxes. The original of these two youths can be traced back, like that of the bull-slaying god, to an unknown sculptor of the Early Roman period who had already adopted the still more ancient models (Cumont, op. cit. i. 208 ff.); but this hieratic work, which did not afford scope for the expression of keen emotions, is of much less artistic worth. Yet, in the better specimens at least, one may notice, which the artist has been able to derive from the Phrygian dress, and the way in which he has been able to emphasize the different emotions of hope and sadness depicted on the faces of the two youths who are mutually contrasted, is a most remarkable reproduction of which we possess this divine pair: one statue found near the Tiber, one of which has been taken to the British Museum, while the other is in the Vatican. They certainly date from the time of Hadrian (ib. 57 and pl. ii.).

The Mithraic Kronos.—The origin of the subjects just mentioned is to be found in ancient Greek art, but there is another Mithraic work which is certainly derived from an Oriental archetypal: the world god, who is a serpent, and who personifies Eternity—the Zoroastrian Akrana of the Persians (see art. MITHRAISM), to whom the adherents of the sect used to give the Greek name Kronos, or the Latin Saturnus. The most striking type is in the Vatican (Cumont, op. cit. 80, fig. 68). Like the majority of his compere, this animal-headed monster is an exotic creation. His genealogy would carry us back to Assyrian sculpture (ib. I. 74 ff.). But the artists of the West, having to represent a deity entirely strange to the Greek pantheon, and being untrammelled by the traditions of any school, gave free course to their imagination. The various transformations which this figure has undergone at their hands were actuated, on the one hand, by religious reasons, which explains the symbolism of this deified abstraction and to multiply his attributes; and, on the other hand, by an aesthetic solicitude which tended to modify as much as possible the grotesqueness of this barbarous figure, and to humanize it. Ultimately they did away with the lion's head, and contented themselves with representing the animal at the feet of the god, or with placing the head of the beast on his breast. This lion-headed god of Euraspilo, who had originally been of Oriental stock, is in the Vatican. The animal of Mithra is often represented in the guise of a divine bull, with the head of a bear or a wild boar, or the horse-headed god of Egypt, as appears from the representations of the Roman period, or even from the most ancient. But if it is entirely destitute of charm, the grotesqueness of its appearance and the suggestive accumulation of its attributes arouse curiosity and provoke reflection.

We have, so far, confined our attention to the remains found in Rome and Italy, the artistic finish of which surpasses the average of the Mithraic ex-votos. But when we pass to the provinces of the Empire, we find there elaborate works of a very different kind. It is generally agreed that, during the Empire, a great number of the sculptures intended for the provincial cities were made at Rome, or by artists who had come from Rome (Friedländer, Sittengeschichte*, iii. 280 f.). This is probably the case with certain of the sculptures we are considering: they come from distant studios, either those of the capital or even of Asia Minor or some other province. There is no doubt that certain tablets discovered in Germany were brought from quarries in Pannonia (Cumont, op. cit. i. 216). Nevertheless, the great majority of Mithraic remains were undoubtedly executed on the spot. This is obvious in the case of those which were sculptured on the surface of rocks, which had been smoothened for the purpose; but with regard to many, local workmanship is proved from the nature of the stone employed. Moreover, the style of these fragments clearly reveals their local personify. The discovery of so many Mithraic works has thus great importance for the study of provincial art under the Empire. The most remarkable of these works is to be found, both in Gaul, or, more precisely, on the Rhine frontier. It seems that the whole of this group of monuments must be ascribed to that interesting school of sculpture which flourished in Belgium in the 2nd and 3rd cents AD, and which advantage which the artist has been able to derive from the Phrygian dress, and the way in which he has been able to emphasize the different emotions of hope and sadness depicted on the faces of the two youths who are directly contrasted, is a most remarkable reproduction of which we possess this divine pair: one statue found near the Tiber, one of which has been taken to the British Museum, while the other is in the Vatican. They certainly date from the time of Hadrian (ib. 57 and pl. ii.).

If we subject all these scenes and symbols to an analysis in detail, we can show that the majority of them are modifications or adaptations of old Greek subjects. Thus, Ahura Mazda destroying the demons is the prototype of Osiris destroying the monstrous Typhon, in the British Museum (ib. i. 157). The poverty of the new conceptions which Mithraic iconography introduces is in startling contrast to the importance of the religious movement that inspired them. At the period when the Persian mysteries overspread the West, the art of sculpture was too decayed to be revived. Whereas, during the Hellenistic period, sculptors were able to conceive novel forms for the Egyptian divinities (Isis, Serapis, etc.), happily harmonizing with their chase to complaisance with these gods, in spite of their strong-marked nature, were obliged to assume, whether appropriate or not, the form and dress of the Olympian deities to which they were assimilated. The art, accustomed to live by plagiarism, had become incapable of original invention. But if, without analyzing each scene and personage in detail, we contemplate the total effect of the work, we receive an impression of something entirely new to the world. The art of Mithraic art; and if it is entirely destitute of charm, the grotesqueness of its appearance and the suggestive accumulation of its attributes arouse curiosity and provoke reflection.

We have, so far, confined our attention to the sculptures that have been brought to light in Rome, not only all the deities of the Mithraic pantheon; but the history of the world and of Mithra as creator and saviour, was a truly sublime idea. Even before this time, especially on the sarcophagi, we find a method employed which consists in representing...
the successive moments of an action by pictures superimposed on one another or drawn on parallel surfaces; but we cannot mention any pagan monument which can be compared in this respect with the great Mithraic bas-reliefs, especially those of Neuenheim, Hedderenheim, and, above all, Osterburken (C. 185, 295). To find a single attempt we have to come down to the long series of subjects with which Christian artists in mosaic adorned the walls of churches.

If we wished to criticize the details of these sculptures, it would be easy to censure in them the composition of certain combinations of some movements, the stiffness of some attitudes, and, above all, the confused impression arising from the superabundance of personages and groups. This last fault of overloaded composition is one which the Mithraic monuments share with the contemporaneous sarcophagi.

But in criticizing these remains, it must not be forgotten that painting came to the aid of sculpture. The strong contrast of colours emphasized the principal outlines, and threw accessory parts into prominence. Often the face was, in addition, indicated by the brush, and gilding was used to set off some subsidiary parts. Without such a brilliant combination of colours the piece of statuary would have been almost invisible in the deep shadow of the subterranean cave. Such, moreover, was one of the traditions of Oriental art, and Lucian (Jup. trog. 8) had already contrasted the simple and graceful forms of the Greek deities with the startling gorgeousness of those imported from Asia.

In spite of the numerous suggestions which it has borrowed from the treasury of types created by Greek sculpture, Mithraic art, like the mysteries of which it is the expression, remains essentially Asiatic. The idea with which it is mainly concerned is not to produce an aesthetic impression; it aims principally at arousing religious emotion, not through the perception of beauty, but rather by recalling to the mind sacred legends and teachings. Faithful to this point of view, the ancient East, it confines itself to relating and instructing. The medley of personages and groups with which some bas-reliefs are thronged, the host of attributes with which the figure of Eternity (see above) is overloaded, show us that a new ideal was born with the new religion. These ungraceful and pretentious symbols, the actuality of which is attested by the monuments, did not charm, their elegance or their dignity; they fascinated the mind by the disturbing attraction of the Unknown, and aroused in the neophyte a reverential fear in face of a tremendous mystery. They were, as St. Jerome says (Epist. 107 ad Letaem), "portentosa simulacra."

Here, above all, is to be found the explanation why this art, extremely refined as it was, in spite of all its imperfections, has exercised a permanent influence. It was linked to Christian art by the natural affinity, and the symbolism which it had helped to make popular in the West did not perish with it. Even the allegorical figures of the cosmic cycle, which the devotees of the Persian god had reproduced with such abundance (for they regarded the whole of nature as divine), were adopted by Christianity, although really opposed to its spirit. Such were the images of the earth, the sky, and the ocean; the sun, the moon, the planets, and the signs of the zodiac; the winds, the seasons, and the elements; which occur so frequently on the sarcophagi, the mosaics, and the miniatures. Even the mediocre compositions which the artists had conceived to represent the incidents of the Mithraic legend were able to inspire Christian artists. Thus the figure of the sun raising Mithra out of the ocean served to express the ascension of Elijah in the chariot of fire; and, down to the Middle Ages, the figure of the bull-slaying Mithra was perpetuated in the representations of Samson rending the lion.

**Litterature.** — F. Cumont, Textes et Monuments figurés relatifs aux mystères de Mithra, Brussels 1909, p. 213-220 and passim; E. Strong, Roman Sculpture from Augustus to Constantine, 1907, p. 398 f.

**ART (Muhammadan).** — 1. Introduction. — Our researches into Muhammadan art are as yet entirely in their infancy. So far, the historical inscriptions are only being collected, and this understanding, upon the whole, is only just beginning. It is, however, necessary that we should have some notion of the nature of the art which we are studying. The worship of Allah, homosexual in its devotion, and the absolute truth of his teachings, is in itself a condition of all historical study in this field. It is much to be desired that, by way of supplementing this, some one would group together the literary sources which bear upon graphic art in Islam. The bibliography at the end will show that, although we possess several comprehensive writings in this department, we have very few such treatises upon Muhammadan works of art as are serviceable for scientific investigation. The present position of our researches is consequently that of an attempt to make himself proficient in the department of graphic art, while the three or four historians of art who deal with Islam at all, have only the most meagre acquaintance with the language and culture of its adherents. In the circumstances, it is expected that the present article should do more than acquaint the reader with the outstanding facts of the subject in their relation to religion and ethics. The writer, indeed, feels more inclined to point out the lacunae than able to fill them up. His purpose is not so much to supply adequate information upon the subject proposed, as to provide the reader with a general conspectus of Muslim art.

2. Pre-Muhammadan Data. — The most important of these is the action which forms the inevitable adjunct of the Muslim's every prayer, viz., the turning towards Mecca. It does not fall to the historian of art to establish the origin of this custom of turning in a certain direction, or to decide whether it was not simply a transference of the practice of orientation by the sun, as was observed also by the Christians, to the new religious centre. So long as Muhammad had regard to Jews and Christians, it was towards Jerusalem that he turned; it was only at a later stage that he made Mecca the cynosure. We speak of Mecca therefore as pre-Muhammadan only when having been a religious centre, and not because the Muslim turns his face towards it during prayer.

Mecca can hardly be said to have any further significance in regard to graphic art. As the Ka'ba lies in the centre of the temple-enclosure, viz., and has not, like the mosque, a definite direction at one side, it naturally dropped aside as a pattern for the mosque. On the other hand, we may surmise that in this most important focus of pilgrimage in Arabia, some kind of monumental relic must have existed from the earliest times, even before Muhammad's day. We may imagine it to have been something analogous to the Qubbat as-Sahra in Jerusalem, i.e. a centrally situated cupola-shaped building. At the present day the temple appears as a quadrangular open court, in the middle of which stands the 'Cub' with the Black Stone. Around this there has been laid out a circular area in the court, which may indicate the form of the earlier cupola-shaped structure. The Qubbat as-Sahra is surrounded by a surrounding quadrangle.

3. Muhammad. — Had Muhammad not been forced to flee from his native city, it is probable that the mosque would have taken a form somewhat different from that which prevailed before the emergence of the madrasas, and apart from the influence of Christian architecture as applied to
churches. As Muhammad, however, established
his place of prayer in Medina, and was also buried
there, this most unpretentious beginning gave the
initiative to the architecture not only of places
of worship, but also to some extent of tombs. Sam-
hual, in his History of the City of Medina (ed.
zu Göttingen, ix. [1860] 60), tells first of all how
Muhammad obtained the site for his mosque, and
proceeds as follows: 'Upon this the edifice
of bricks was built, palms were used as columns,
and a wooden roof was fixed above.' This mosque
had three entrances—one at the back, which was built
up when Muhammad began the practice of turning
to Mecca instead of Jerusalem, the others being the
Gate of Mercy and the prophet's private door.
After the conquest of Kairbar the mosque was
entirely re-built, being enlarged to twice its former
size. Some idea of the interior is given by the
position of the column beside which Muhammad
prayed: it 'was the central column of the mosque,
the third forward from the minbar, the third from
Muhammad's tomb, the third from the south side,
the third from the main road before (as Ibn Zubára
states) this was widened by the space of two pillars'
(Wüstenfeld, 65). The columns fell into a state of
decay after the murder of St. John, who was killed,
and it was they had them replaced by fresh palm trunks. The
most
notable restoration—or re-construction—was that
made by Walid I., who was supplied by the
Emperor of Greece with Greek and Coptic artisans,
as he was building a new mosque. The columns
and capitals were built with hewn stones of equal
size, and cemented with gypsum; decorations of
shell-work and marble were introduced, while the
roof was constructed of palm and coated with
gold-colour. When Walid inspected the com-
pleted work in 93 A.H., he exclaimed, 'What a
contrast between our style of building (i.e. in
Damascus) and yours! ' to which the reply was,
'We build in the style of the mosques, you in
that of the churches.' Beyond this single reference
we have nothing from which to form an idea of
the mosque of Muhammad as a whole, or of its
imitations. We shall presently return to this.
Of the sacred accessories belonging to the interior
of the mosque, of which we speak, as the mihrab,
the platform (dikka), etc., the only one which we
can trace to Muhammad himself is the minbar, or
pulpit (Becker, in Orientalische Studien Nöddecke
gewidm. 381 f.). In ancient Arabia the minbar
had been the throne, but as it was removed from
the position of judge to that of ruler, this
originally very simple piece of furniture with its
two steps became more and more of a throne.
A fresco on the inner front wall of Qasair 'Amra
represents one of the first Khalifs, or perhaps
Muhammad himself, seated on a throne. As this,
in view of the command against images, may well
give rise to fruitful discussion, we give a reproduc-
tion of it (fig. 1, p. 897). Over the enthroned
illusion is laid a caricature of the Khalif, which is
unfortunately so much abraded that only the
'coning words are now legible: 'May God
grant him his reward, and have compassion
upon him!' The personage thus pictured—with red
beard, and the saint's nimbus about his head—
must accordingly have been dead, and cannot have
been, as one might naturally think, the Khalif then
reigning. The figure beside the throne holds the
lance—a recognized emblem in Islam to the present
day; a woman with the nimbus is represented on
the left, and another from which no such emblazoning.
This may be traced to the Christos-Pantokrator;
in this case it will then be the Qurán, not the
Gospels, upon which the left hand is placed.
Beneath the great throne is seen the barge of the
dead. At the time when this fresco was introduced,
art (Muhammadan)
of this, extends the entrance wall, beside which large chandeliers are suspended between the columns, the mid-passage running thence to the qibla. The arches run parallel to the line of this passage; in this instance they are rounded, though as a general rule they are pointed, and disproportionately high. The various moulded capitals are linked together by arches while a wooden roof is placed over the whole. Such was the prevalent type of the Muslim place of worship in early times.

From the 1st cent. A.H. come other two buildings. One of these, situated in Jerusalem, has long been known to have been recently discovered by a Austrian research party. The first, the Qubbat as-Sahra upon the Temple hill, is not a mosque, but a memorial edifice. Above the rock with its caves rises a dome supported by four pillars, between every two of which stand three columns. Two circular passages with eight pillars, and two columns between each pair of these, lead over to the octagonal surrounding wall. Of the original fabric erected by ‘Abd al-Malik in A.H. 72 (A.D. 691) very little remains; the columns still retain vestiges of the Carolingian capitals, and have been taken from some Christian building, while the exceedingly valuable mosaics of the passage are of Persian origin.

On the other hand, the second monument referred to in a.d., which has been known as Qasr ‘Amra, and situated in the desert adjoining Moab, is pure Syrian in character. Attached to a small bath is a hall roofed with three parallel tunnel-vaults, and showing on the south two apsidal chambers, the niche between them, having a straight front, not directly opposite the entrance. The structure as a whole recalls the type of tunnel-vaulted churches indigenous to the interior of Asia Minor. The paintings are most instructive, as has already been shown in the case of the fresco of the enthroned figure illustrated in fig. 1 (p. 897). They exhibit the Umayyad art in the full current of the Hellenistic style; the frescoes of the bath-chambers might well be counted as ancient. The pictures in the hall are of far-reaching significance, furnishing the best exemplification of the tendency which, while opposed to all worship of images, was again adopted by the image-breakers in Constantineople, and which, after the example of the Assyrian relief, became associated rather with the portrayal of hunting and fishing scenes, instances of these being found likewise in the early Christian art of Syria and its offshoots.

We must now call attention to the fact that in ‘Amra, among scenes of hunting, fishing, and bathing, there have been introduced two pictures which, from the standpoint of religion and ethics, may well evoke much controversy in the future. Upon the front wall of the niche, opposite the entrance, appears the figure of the man seated on a throne. But it is the other picture which calls for especial attention. At the top of the arch, decorating its subject is the princes overthrown by Islam, viz., the Emperor of Byzantium, Chosroes of Persia, the Negus of Abyssinia, and Roderick of Spain. How are these pictures to be brought into accordance with the interdict against graphic representation, and in what sense are we to interpret them? The picture of the Khalif upon the throne undoubtedly gives the impression of its being a devotional piece, but that of the conquered princes can scarcely be excluded in a similar way.

The Umayyads have also in recent times been spoken of as the builders of a number of large and beautiful castles in the desert, situated in the neighbourhood of ‘Amra, but more towards the inhabited country. These have been made known chiefly by the large Moshiit façade which the Emperor of Germany received as a gift from the Sultan and placed in the Berlin Museum. This publication illustrates the present writer discerns structures so unmistakably of a Persian character as to suggest conditions which would allow of a closer connexion with Hira or North Mesopotamia. Both Mesihiyy and Qasr-at-Tuba are immense fortified royal seats, surrounded by groups of plots, and resembling those found in the Sasanian fabrics of Mesopotamia. Both are unfinished, and their respective porticoes bear the same kind of decorations, amongst which the Persian wing-palmette amid vine-tendrils characteristically recurs.

5. The Abbasids.—The shifting of the centre of the Muslim world from Damascus to Baghdad had very important consequences for the development of graphic art, as the Syrian, i.e. the Hellenistic-Christian, factor now fell into the background, while the Oriental came to the front. In the latter, it is true, there is always a double strain: on the one hand the Assyro-Sasanian tradition, and on the other a drift in part still older, which may possibly have come in with the Parthians, and certainly found a channel in the immigration of some of the offshoots of Turks from Central Asia to Persia and Baghdad.

For the remote part of Western Asia this drift has all the significance of a barbarian invasion of a long established civilization, such as was experienced by Rome at the hands of the Germans. The Turks and the Germans were in fact the emissaries of an inchoate ‘Hinterland’ culture, which had been quite overshadowed by the hothouse growth of Egyptian, Babylonian, and Greek art, but which, when the representatives of the older refinement began to flag, came once more into the foreground. We must likewise bear in mind the gradually weakening influence of early Christian art, as also the growing potency of the Chinese factor.

(a) Persian elements. A wholly unique type of mosque is found in Mesopotamia. Here again, indeed, we have the arcaded court, with the open hall lying towards Mecca, but, in keeping with the nature of the country, the supports are formed of columns instead of pillars, and are ornamented with vine-tendrils. The walls are covered with an latticework, the mosque assumes a most characteristic appearance, known to us until recently only from a mosque in Luxor erected by the Emperor Théodoric, who came from Baghdad to Egypt. It has lately been shown, however, that the mosque of Ibn Tulun was built upon the model of the mosque of Samarra, as had been stated by early Arabic writers. Moreover, in Abu-Dilif, 16 km. to the north of Samarra, there still stands a mosque which agrees with that of Ibn Tulun even in the number of its supports. Of this example of the unique character of Mesopotamian mosques we give an illustration from the survey of General de Beylié, which shows the eastern facade of this mosque, which is surrounded by pillars. Here we see pillars composed of brick, with hewn-out ornamental niches, and united by arches, the springers of which still remain. The side arches leave the view open towards the surrounding wall of the mosque, and through the central arch appears the spindly-like minaret.

Even this peculiar and fantastic minaret at Samarra has been copied in the mosque of Ibn Tulun at Cairo by the erection of a winding staircase on the outside. Elsewhere the stair is for the most part on the inside, which is used for calling to prayer, is outwardly smooth, whether rounded or quadrangular. In the period of the Fatimids, buildings were constructed not only in the older style prevalent along the Mediterranean seaboard, i.e. with columns (al-
The minbar has always been constructed of wood, essays in marble or other substance being of the rarest occurrence. By 132 A.H., when all the provincial mosques received their minbars, it can hardly have been a primitively formed type. We were richly endowed with ornamentation. The oldest surviving minbar, that of the great mosque at Kairwan, is of plane-tree, brought from Baghdad by Ibrahim Ibn al-Aghlab in 242 A.H. (fig. 4, p. 899). In the minbar a different form of the art of decoration as practised by the Abbasids in Mesopotamia could achieve, we give an illustration of the façade of the al-Aqmar mosque in Cairo, as discovered in recent years and restored (Ar. Jahrb., p. 900). According to the inscriptions, it dates from A.D. 1125. Here we already see the arrangement which also prevailed among the Seljuks of Asia Minor—a central risalit which stands in front of the two wings, and derives its principal emphasis from the platform and steps which really do not as yet know the source of this design. It is all the more striking as we have before us only a false façade, which has no inner apartment corresponding to it, but which is simply a high wall of stone. On this, though, the greater interest is the ornamentation upon the wall-surface. This contains designs which in all probability were originally naturalized in the Orient as stucco-work, but which are here, in Egypt, transferred to the stone in common use. The portal-niche is connected with two smaller niches on a level with the ground-floor; all three display in their arches shell-like tori of luxuriant outline. Here too appears, fully developed, one of the main elements in Moorish decoration, theunnah, and the risalit. We find stucco-work upon the side portals, taking the place of mussel-panelling, and also as a surface-decoration above the little niches beside the main porch, while they appear in their proper and original function on the corners of the building, where in two rows of niches one above the other they form a beak. In the design of the niche with inserted columns is often applied to the upper wall; the little columns on the central risalit already show the bell-form which has retained its primitive form and was brought from Persia to Egypt. Along the upper extremity of the façade, which is filled out with ornaments of rosettes and lozenges, runs an inscription-frieze.

The present writer regards these stuccoites as a characteristic deposit of Muslim ethics in the field of graphic art. In them constructive restraint, i.e. the best and obligatory design, is surrendered in favour of a freakishness capable of endless variation, which becomes all the more interesting by reason of the limitations laid down by the spatial form. The stuccoite, rightly regarded, is of purely constructive origin. It served originally, as a single niche, the same purpose for which the Byzantines used the so-called pendente, i.e. the filling-out of the corner which remains open when a round cupola is placed upon a square substructure. For this later Hellenistic architecture had a definite, mathematically accurate, solution in the sector of the vault of the circumscribed circle; in Persia, on the other hand, the custom was to place a niche in the angle. Instead of the single niche, however, we occasionally find three, combined as already noticed in the case of the al-Aqmar mosque, or, more frequently, in the inverse position, one below and two above. Next a further row, of three, came to be added, thus making a group of six; then a row of four, making ten, and so on. This embellishment of the cupula-wedge was transferred to portal-niches, then to surfaces, and in this way was obtained an ornamentation which always indicates a terminal line or a transition (cf. on this point the Stiburtus) which is certain in the present case—certain elements are grouped by the imagination to imitate nature, and for this end new themes are introduced, with which, as with conventional numbers, endless combinations may be made. As to the date of the minbar, we refer to the Jahrb. d. preuss. Künstlervereinigung, xxv. (1904), p. 327 ff., the arabesque takes its inception from the Hellenistic vine-branch. In the later period of ancient art this became the most popular pattern for stuccoed or superficial decoration. The development towards the arabesque begins when the artist divests the vine-leaf of its natural form by superimposing other leaves, or a triad of globules, upon the diverging point of the ribs, or when, further, he makes it into a three-lobed or five-lobed. But the actual transformation consists in the application to the vine-leaf of the lobate form which may really be described as the artificial flower of West-Asiatic art, i.e. the palmette. The vine-tendril motif and the five-lobed arabesque. The development proceeds in virtue of the fact that the palmette can be split up either into halves or into single lobes; while each of these lobes again may be expanded, and give rise to new ramifications. The façade of A.D. 1125, in its details, furnishes illustrations of the initial stage of this whole development: here the branch shows more of the Persian than of the Arabian form. On the other hand, fig. 6 (p. 900), representing a wooden minbar in the K. Frieden, is attributed to A.D. 1188; it is imposed to date from A.D. 1125, exhibits all the stages side by side—the five-lobed vine-leaf with and without the grape-cluster, the trifolium, all kinds of ramifying palmettes, and also the palmette itself with ornamental branching. In this tablet the divided palmette in the centre is surrounded by a ten-pointed star which obtrudes itself into the marginal bands both above and beneath. This brings us to the third class of specifically Muhammadan ornament, viz., polygonal lace-work. It is a development from the burnt sponge ornament of the Cairo façade of A.D. 1125—appearing as stiariated decorations in the lozenges of the surface-niches, above to the left; but here they show rather the older double-stripe design which was common also in ancient and Christian art. The
distinctively Muslim variety, as we think, shows in its origin the influence of the development of Muslim art by religion and ethics. We find, in fact, that the ornamentation of sacred buildings embraces no representation of living objects. The wondrous Mesopotamian type of decoration consists in over-laying the walls, pillars, and arches with stucco ornamentation, which hardly instance anything whatever in which this architectural decoration contains the figure of man, animal, or bird. The mosque of Ibn Tulun in Cairo; the Church of Abbot Moses of Nisibis in the Syrian monastery of the Nizir desert, which was stuccoed by Mesopotamian artists; Maqâm 'Ali itself, on the Euphrates; Samarra—in none of these have we a trace of a living creature figured as an ornament. In this period, therefore, the commandment against the use of figures in sacred buildings would seem to have been fully complied with. The ornaments are composed of half or whole palmettes, which are connected with one another by spiral designs, and thrown out by indentations so as to form independent configurations. To these again are added designs which are traceable in the main to the stucco-technique in its capacity to suggest the dark effects of depth. Symbolical figures, such as were favoured by Sassanian and Christian art—the crescent, the star, the wing, etc.—are entirely absent so far as religious art is concerned. If we would adequately appreciate the authority thus attaching to the precepts of religion in the sphere of graphic art, we must keep before us the delight which the Orient has always found in the mystical and symbolical use of animal forms, as is in fact exemplified by the extreme frequency with which such figures are employed in the secular art of Islam itself.

(b) Turkish elements.—One of the most singular notions still current, and one to be explained only on the ground that our vision has been deranged by our immemorial habit of seeing everything in the light of Greco-Roman institutions, is that the migratory races, whether Germans or Turks, were destitute of art. This is to forget that the Turks, when they came to Italy a highly-developed culture, acquired upon the Greek coast of the Black Sea; and the like holds good of the peoples who forced their way from Central Asia into Persia, and who had thus passed through, or temporarily settled in, the long-civilized region beyond the Caspian Sea. Think of the discoveries in Hungary, telling of the time when the Magyars took possession of the country. This equestrian people came from the territories lying between the Altai and the Ural without coming into contact with the Roman people, and yet the ornamentation was well developed. How much more are we entitled to look for aesthetic proficiency amongst the peoples who had not only lived at close quarters with the Samanids or the Ghaznivids, but whose own culture was highly as well as themselves masters of their lands before they conquered Persia and Asia Minor. In Egypt the new conditions were ushered in under Saladin, and continued during the period of the Turkoman and Mongol Turks, until 1517, the Turks proper gained the upper hand.

It is worthy of remark that with the advent of the Turkish tribes the four main types of building of which there are no surviving examples from the Abbasid times; the large cupola-domed mausoleum and a new type of mosque—school, the madrasa. As regards the mausoleum, there is no doubt that it had already been rooted—by Constantine or even before his day—with cupola. But a gigantic fabric of brick, such as the tomb of the Sultan Sanjar in Merv, dating from 552 A.H. (A.D. 1157), is, of course, hardly to be compared with the finely articulated edifices of Abbasid times. We must not forget, however, that the tombs of the Umayyad caliphs were decorated by the fanaticism of the Abbâsids, or that the only tomb known to exist in the neighbourhood of Baghdad, that of Zubalâda, the favourite wife of Harûn al-Rashid, bears a curious niche-pyramid, of which no comparison can be made with the tombs of the Umayyads. It is true that pyramids are found also upon the mausoleums erected in A.D. 1162 and 1186 by Seljuq Atabeks in Nakhshvan, on the Perso-Armenian frontier, but these are supported by a dome-shaped vault, the walls of which are embellished with polygonal ornaments of mosaic work in stucco bricks. One of the far-famed sights of Cairo is the Necropolis, the so-called Tombs of the Khalifs and Manûlîks (fig. 7, p. 901), which in their picturesque construction invite comparison with the massive forms of Egyptian and Coptic pyramids. The ornaments are composed of half or whole palmettes, which are connected with one another by spiral designs, and thrown out by indentations so as to form independent configurations. To these again are added designs which are traceable in the main to the stucco-technique in its capacity to suggest the dark effects of depth. Symbolical figures, such as were favoured by Sassanian and Christian art—the crescent, the star, the wing, etc.—are entirely absent so far as religious art is concerned. If we would adequately appreciate the authority thus attaching to the precepts of religion in the sphere of graphic art, we must keep before us the delight which the Orient has always found in the mystical and symbolical use of animal forms, as is in fact exemplified by the extreme frequency with which such figures are employed in the secular art of Islam itself.
This remarkable construction impresses the native of the West as being more decidedly Oriental than even the mosque. Picture these huge tunnels, vaulted mostly in the pointed style, and strengthened by the schools built into the corners like immense supports, and yet without anything to sustain; it is the spirit of the stalactite without architectonic motive, and of the vine-branch without the link with nature. Further, in Egypt at all events, there is something which must cause the utmost amazement, viz. the façade already by partially touched. The niche of the mosque of Sultan Hasan in Cairo, built in A.D. 1356-1359, c. 26 metres in height, has been cut out of a wall which rises 37.70 metres above the level of the street, and is not accommodated to the main feature of the edifice as a whole, i.e. it does not correspond with the gibla, but has a relation to the line of the street, being placed in a corner obliquely to the longitudinal wall, so that any one entering the vestibule can reach the central court only by way of various narrow passages. We might make all the more expect to find an axial design in the main ornament, viz. that of the porch, as the immense dome of the builder of the mausoleum towers aloft exactly in the axis behind the minbar. This work is peculiar to Egypt, and is not found, so far as the present writer knows, in other Muslim lands, while, especially in Asia Minor, the madrasa is always arranged symmetrically about the central axis.

Moreover, in lectures regarding other innovations, which make their appearance subsequently to the ascendency of the Central Asiatic element in the Muslim world. The astonishing growth in the popular use of polygonal ornament, only a few decades before this time, may possibly be attributed to the preference for geometrical decoration which is characteristic of nomads. Even upon the minbar of Kairwan, constructed probably in Baghdad in 242 A.H. (fig. 4, p. 899), the double-striped lace-work in straight or curved lines so largely predominates that we can scarcely reconcile its vogue with our wonted conceptions of Sassanian and early Muslim art, in which it is rather the palette that prevails. But, by the time when the Chinese re-emergence is in which it had been embedded for centuries, Hellenistic art must already have returned, more decisively than ever, to the style of the geometrical lace-work. This reversion to the primitive, then, finds ample and early development among the Perso-Muslim breeds of Central Asia, whose taste was still in thrall to the lace-work, as to the material generally, and to caprice.

Since, in the art ancilliary to the cultus, lace-work takes the place of animal ornament, it demands some notice at this point. As an illustrative example, we reproduce a detail of the minbar (A.D. 1168-1169) of the al-Aqṣā Mosque in Jerusalem (fig. 9, p. 902). Here we have a piece of work in wood and ivory, by an artisan from Aleppo, so complete and its contents so intelligible to Europeans. We perceive arabesques of ivory in the middle of both the vertical moldings. On either side are polygonal decorations, composed of purled moldings in wood and fillings of ivory. From the corners which form the foci of the main lines we may be able to infer the class of polygon upon which any particular play of lines is designed — whether it is the hexagon, the one mainly resorted to, or some other fundamental figure. The distinction is this: every motif gives us the key; the endlessly varied ways in which the purled fillers intertwine and intersect, leaving, in ordered repetition, free spaces, which in turn are filled up with relief arabesques or coloured inlaid work, can scarcely be resolved. All this is an expression of the same exultation in elaborating designs obtained mathematically or fortuitously as was to be seen in the case of the stalactite. The fly-leaves of the Qur‘ān exhibit first-rate examples of such arabesque. Here, indeed, they are in their right place, as in them and in the calligraphic amplification of the writing is the compensation had to be found for the absence of the human form.

(c) Chinese elements. — We are not accustomed to regard China as the source of a contribution to Muslim art. This is a mistake, for we already have found admission in Syria, as they certainly did, more powerfully, in Persia, and finally, in all probability, through the influence of the on-coming Turks. From early notices of silk as a Chinese product, and of silk materials in Egypt and in mediæval Europe, it is easy to show that in the late ancient and the Christian period there was commercial intercourse between Syria and China. In Persia during the Abbāsid dynasty the influence of China begins to be felt even in architecture, and unmistakable evidences of this influence are seen in the Talisman Gate of Baghdad, completed in 618 A.H., as well as in two reliefs of winged figures dating from about the same time.

There are both religious and other motives for these works of fact which were afterwards made plain by the Oriental carpet. Thus both the examples just cited as bearing upon the field of architecture and their immediate explanation in the enormous Oriental carpet now in the possession of the Emperor of Austria and known as the 'Vienna Hunting Carpet.' The illustration of this (fig. 10, p. 902) shows, in the borders, winged genii, and, in the angles of the inner field, the Chinese dragon struggling with the phoenix, or, rather, in which the plant-designs and the Chinese cloud-design are worked out leave us in no doubt regarding their origin. Yet the carpet was manufactured in Persia, as is evinced, to say nothing of the workmanship, by the hunting scenes in the inner field, where Persians with turbans and hero-feathers are shown on horseback engaged in the chase. Chinese traits are visible also in the drawing of the figures.

This brings us to the most interesting fact of all in the Chinese contribution to the re-assertion of the representation of the human form, the resurrection of figure-representation as a result of Chinese influence. Reference has already been made to the illumination of Qur‘ān manuscripts, from which figures are entirely absent. This does not entitle us, of course, to an argument based upon other classes of literature. There exist, however, a few miniature manuscripts which are decorated in the style usual in Armenian and Coptic writings. But the great majority of Persian illuminated manuscripts, and precisely those which are most valuable in an artistic sense, display alike in landscape and in figure the identical type of representation which, judging from the earliest Japanese and Chinese works of art of the class that imitates nature, we recognize as belonging specifically to the Far East. Most of its content is intelligible to Europeans. We recognize arabesques of ivory as motifs in the Middle of the vertical moldings. On either side are polygonal decorations, composed of purled moldings in wood and fillings of ivory. From the corners which form the foci of the main lines we may be able to infer the class of polygon upon which any particular play of lines is designed — whether it is the hexagon, the one mainly resorted to, or some other fundamental figure. The distinction is this: every motif gives us the key; the endlessly varied ways in which the purled fillers intertwine and intersect, leaving, in ordered repetition, free spaces, which in turn are filled up with relief arabesques or coloured inlaid work, can scarcely be resolved. All this is an expression of the same exultation in elaborating designs obtained mathematically or fortuitously as was to be seen in the case of the stalactite. The fly-leaves of the Qur‘ān exhibit first-rate examples of such arabesques. Here, indeed, they are in their right place, as in them and in the calligraphic amplification of the writing is the compensation had to be found for the absence of the human form.

The case is somewhat different in regard to the portrayal of animals and animal fights, hunting
ART (Muhammadan)

and drinking scenes, planets, Alexander upon the dragon-chariot, and the like, as seen upon the so-called Mossul-bronzes, from the middle of the 12th cent. and onwards. It is possible that the technique seen in those vessels derived its inspiration from Central Asia, while Chinese designs like the dragon, the phoenix, and the like, the design of the apartments of Muslim princes. Consequently, the figures portrayed must be interpreted, not in the ethical spirit of Hellenic-Christian symbolism, but as decorative. The primitive Oriental interpretation of the animal figure, as symptomatic of the conflict between good and evil, is simply lost.

6. Later developments.—The great mass of the Muslim memorials of art emanates from the period after the Turkish tribes gained the absolute lordship of the civilized regions originally permeated by Persia, is a parkian spirit more devoted than ever to purposes of representation and embellishment. It is therefore very remarkable that what have come down to us from this relatively late epoch are mainly mosques and mausoleums, not, as in the case of so many other features of Muslim art, transoxiana. There, in Samarcand and Bokhara, the most marvellous erections of the Mongols are found standing to this day.

An altogether peculiar position in Muslim art was taken by the Ottomans, from the time that they obtained possession of Constantinople, which was the Church of St. Sophia that roused them to rivalry, so that in Stamboul we meet for the second time with mosques of Christian design, as Damascus furnished us with the earliest examples. The Ottomans, in fact, bring to completion what had been aspired to by the great architects of Asia Minor in the inception of antique art at Constantinople, viz. the construction of edifices on a scale of ambition hitherto unknown. We feel unable to ascribe all of the later intensity of religious emotion that gave the incentive to the stupendous domes in Stamboul, rising above enclosures that yield a total impression of such magnificence as is unparalleled in the Renaissance and Barocco structures of the West. We may assert without misgiving that the mosques associated with the Church of St. Sophia exhibit that ideal form which, since Bramante’s time, has been sought in the all-round effect of stately interiors. The fatih at length achieved what lay originally far beyond its reach; it gave the crowning touch to the development of the art of architecture which had evolved its designs from a Hellenistic foundation.

A second triumph was won for Islam by the too little known memorials of art in India. Here again Muslim art accommodated itself to the indigenous forms—a process rendered all the more easy as the ground-plan and elevation of the mosque, and even the fantastic play of ornamentation, had already been fully evolved in pre-Muhammadan India, though, naturally, in a style different from that of Western Asia. The magnificence of the plan arrangement in the Indian mosques is almost without parallel. It is also in India that we find palaces of vast configuration dating from Muhammadan times, and thus furnishing the necessary supplement to the secular art so sienderly represented in the Mediterranean region.

The Alhambra of the Moors, the Europeans the Alhambra represents the sun and substance of Muslim art, and, in point of fact, it is really such, so far as the province of secular art is concerned. There is one thing, however, which we must not forget—a fact of decisive import for the ethical value of the whole structure, viz. that the Alhambra must be regarded, not as an independent work of architecture, but as a component part of the natural environment, which is always taken into account in the secular art of Islam, and which, in the case before us, forms probably the whole of the picture except the main hill. We may gain an idea of the wide expanse sometimes given to such enclosures from the Conca d’oro beside Palermo, where the palace-gounds embrace the chateaux of Zisa, Badia, Favarà, not alone or only one of its class. It would appear that at this time places of worship alone were built for eternity, i.e. of durable material. In the Seljuk kingdom of Konia in Asia Minor this material was principally stone. The mosques and madrasas of Konia and Sivas have magnificent facades of the same, or of an incomparably richer, style than the facade of the al-Aqmar mosque given in fig. 5 (p. 900). The madrasa approximates more to the type of the arcaded court. In Persia the predominant building material was brick. The result was that every variety of the art of facing was resorted to, the walls being veneered with stucco or many-coloured bricks, or covered with faience mosaics. The native soil of such things was not Mesopotamia or Iran alone, but, as in the case of so many other features of Muslim art, transoxiana. There, in Samarqand and Bokhara, the most marvellous erections of the Mongols are found standing to this day.

The inscriptions of the Alhambra reveal a surprisingly intimate relation between spectator and ornament. Just as the Turks had the faculty of giving individuality to each one of a long series of fountains, so the Moors must have had a fine sense of the last intensity of ornamental expression, in inscriptions pertaining to the various portions of the great fabric, as well as to the various ornaments, furnish suggestive introductions to these. Thus, for example, upon a niche at the entrance to the Hall of the Ambassadors appear the words which Schack has translated thus: 1

Und mir das Diadem besetzt mit blitzennden Geschmucke; So wie der Thron der jungen Braut strahlt ich in hellem Schimmer.

Doch bringe höhres Glück als er, es weicht und wechselt zimmer.

Such facts of observation prompt the inquiry whether the ethical significance of Muhammadan decorative art is not of a higher order than we commonly suppose. It is our hope that the scientific research which is now being vigorously applied to the field of Muslim art in general,
may in course of time yield fuller information on
the subject than we have been able to give here.

LITERATURE.—I. COMPREHENSIVE WORKS: Manuel d'art
musulman (1.—5. H. Saladin, L’Architecture; 6.—7. G. Migeon,
Les arts en Perse et Turquie, Paris, 1907).

II. ARCHITECTURE: Franz Pascha, Die Baukunst des Islam
(Darmstadt, 1891); Saladin, L’ornement en Perse a Eirouan
(Palestine, 1891); Pliny (ibid.); Benfey, Art in Persia
(1900); Sarre, Persische Baukunst (appearing); the Russian
works of O. O. Sarre and G. A. Naunmann; A. F. Caivert, The
Alhambra (London, 1896); and the recognized older literature.

III. DECORATION AND ORNAMENT: Strzygowski, ‘Mechastia’
in L’iconographie de la Mosquée de Boukchir (1904); the various works
of H. Wallis, Martin, Schmoranzer, and others, which are found
well arranged in Migeon’s Manuel. Inostranzeff and Smirnov
have published a collection of materials for a bibliography
of Muslim architecture, St. Petersburg (1898).

J. STRZYGOWSKI.

ART (Persian).—Persian art has developed more on
the utilitarian side in connexion with the manufacture of
rugs, draperies, embroideries, pottery, brass-work, and decorative tiles, than along the
more purely aesthetic lines of sculpture and painting.
Sculpture, in fact, had no chance to develop
further in Persia after the Muhammadan conquest,
for the teachings of the Prophet, even as modified by the Shi’ite views, to which the Iranians adhere,
are adverse to representing objects that have ani-
mal or plant forms. The Quran expressly forbids the
making of graven images (cf., however, preceding art., esp. p. 875 f.). In respect to sculpture, therefore,
the Arab invasion marks a sharp line of division between the old regime and the new; but whether we entertain the hope that Persian art may be traced with a fair degree of continuity
for nearly twenty-five centuries.

The chief era in the national history of the country, which it is found convenient to follow in
this article, is to pass already before us in the characteristic article ARCHITECTURE (Persian) as: Early
Iranian and Median period (before B.C. 550), Achaemenian (B.C. 550-330), Seljuk and Parthian
(B.C. 530-A.D. 224), Sassanian (A.D. 224-651), and
Muhammadan (A.D. 661 to the present day). As sculpture practically died out with the Muslim
conquest, it may be appropriate to treat its history first, and then take up metal-work, the fictile or
ceramic arts, arts in textile fabrics, decorative painting and pictorial representation.

1. Sculpture and carving.—(a) We know nothing definite in regard to sculpture or the state of the
plastic art during the Early Iranian period, that is to say, prior to the 7th cent. B.C. Even if it was
true that the Avesta is a manner representation of such that antiquity, we shall not be able to
find in it no specific allusions to sculpture, unless we are to accept the theory, which has been advanced by some scholars, that images of the
divine beings Yahu Manah (the Zoroastrian arch-
angel of Good Thought) and Ardv Satra Anahita,
or Anaitis (goddess of the heavenly waters), may possibly be referred to in Vendidad, xix. 20-25,
descriptive of cleansing, and Yazdât, v. 126-129,
describing the appearance of the divinity. Such an interpretation was approached of trepang (especially in the former of the two passages), is more than doubtful, even if we concede that images of these divinities were known in Strabo’s time (Geog. xv.
114). It is indeed possible that some of the bronze
figurines and small terra-cotta images that are now and then found in primitive burial-places, and
unearthed in such excavations as those by Dian-
lafroy and de Morgan at Susa (J. de Morgan, Mémoires—Recherches archéologiques, i., viii., Paris,
1903), have not completely disappeared from the Early Iranian age, but no truly authentic sculpture of any sort has yet been found.

(b) A similar uncertainty prevails with regard to kindred objects attributed to the Median
age, and also with regard to the huge stone lion at Hamadan. This statue is executed in the
round, like the bull at Babylon and the teo-
Its age is a matter of debate. A thousand years ago Mas’ûd (d. 951 A.D.) ascribed its origin to Alexander the Great, while Yaqût (c. 1250 A.D.) placed it much earlier; and a number of modern
scholars are inclined to assign the statue to the
Median period (Jackson, Persia Past and Present,

(c) The oldest identified sculpture of the Ache-
menian period is the bas-relief figure of Cyrus the
Great at Murgab, the ancient Pasargadæ. This image (which Weissbach claims to be a representa-
tion of Cyrus the Younger) must certainly have been prior to B.C. 500, when Darius succeeded
Cambyses, the son of Cyrus, and transferred the
royal capital to Persepolis. The figure is carved in
low relief upon a large monolith slab, and is
conspicuous both by reason of the curious crown,
with Egyptian affinities, that surmounts the mon-
arch’s head, and because of the four magnificent
wings that rise and drop from the king’s shoulders
—a feature borrowed from Assyro-Babylonian art.
The image of Darius sculptured above his own
inscription at Bistân, or Behistun, may be dated to
some time before B.C. 500, and the panel on which it is
it is carved likewise represents figures of the
king’s two chief retainers, together with portraits of
Gomates, or the pseudo-Smerdis, and the other
eight pretenders to the throne. Above the head of
Darius floats an image of the Aryan goddess (Ormazd)
representing him with the circle of sove-
reignty, or the guardian spirit of the king, as the
modern Parsis prefer to interpret the image.
The god is represented as a bearded figure, wearing a
gigantic cylindrical head-dress, with horns, surmounting the
the disc of the sun, and as swinging in a huge
circle from which proceed rays of light (King and
The whole device shows the influence of Babylonian and
Assyria. Of similar character are the carvings
around the tomb of Darius at Naksh-i-Rustam, and
and upon the palace walls at Persepolis and Susa.
In several of these the king is represented in the
attitude of adoring Anbarmesh, or Anahita, but he is
supported by subject nations; but the most spirited of the bas-reliefs are those which portray Darius
in combat with real or mythical monsters—a motif
borrowed, in like manner, from Assyro-Babylonian
art. The same departure from the standard type of
the hero with a bow and sword is seen in the
artxerses i., ii., iii., and Darius ii., iii. (so far as we
can identify them); but the finest of all the speci-
mens of the sculptor’s art under the Achaemenians
is the frieze of the stylobate of Xerxes’ audience-
hall at Persepolis, representing the vassal nations
bearing tribute to the Great King. Of imposing
grandeur, likewise, are the gigantic winged bulls
with human faces, in Assyrian style, guarding the
Portal of Xerxes through which his audience-hall
was reached (Jordan, vi., pl. i.). The influence that was exercised in general upon
Persian art by Assyria and Babylonia during the
Achemenian period may be seen at a glance by
looking over the illustrations in the standard works
on Persepolis and Susa mentioned at the end of
this article.

(d) In the interregnum, or Seljuk period, that
followed after Alexander’s invasion (B.C. 330-260)
and during the Parthian period, little progress was made in sculpture, save that the Greek impress
supplanted the Assyro-Babylonian, and the panel on which it is
is evident from the Greco-Roman tendency seen in the
bas-relief heads on the pilasters of the palace-
temple at Hatra, and in certain characteristics of the
carved bases of the columns at Kangavar, if that
temple be ascribed to the Parthian age—a

vol. i.—56
matter that is doubtful. The principal piece of Parthian sculpture, however, belongs to the middle of the period, and is that chiselled on the panel of king Gotzarzes (A.D. 48–51) at the base of the Behistun Rock. Its mutilated condition, due to the fact that at some time in the first half of the 19th. cent. a battle between the behistunians and Parthenians occurred, renders it difficult to judge of the workmanship, but the style and execution appear to show distinct traces of Roman art.

4. Under the Sasanian dynasty (A.D. 224–651), Persian sculpture received further inspiration from Hellenistic and Parthian art, through the Byzantine craftsmen, and gave no mean promise of higher development; but this was abruptly cut short by the iconoclastic Arabs when they swept over the land with their Muslim hosts. In style, Sasanian art is bold, thorough, like that of its predecessors, and is marked by a superabundance of decorative motive's, especially in the form of cramped streamers floating from the shoulders of some of the figures, or hanging from chaplets held in the hand. The examples of Sasanian sculpture are very numerous, and the best are found in the series of seven massive bas-reliefs carved below the Achemenian tombs at Nakh-i-Rustam, or again at Nakh-i-Rajab near Persepolis, at Shapur in the south of Persia, at Susa in the south-west, and at Taq-i-Bustan in the plain of Salmias in the north-west. The finest among them are the carvings in the grottoes at Taq-i-Bustan, near Kermanshah. They represent scenes from the life of Khosru Parviz, or Chosroes II. (A.D. 590–628), and are ascribed by popular tradition to the hand of Parhad, the royal sculptor, whose love for Shirin, the king's beautiful favourite, brought ruin upon the gifted artist. At Taq-i-Bustan and in two of the Persepolitan Sasanian sculptures, it is thought that the figure of the god Ormazd, or possibly of the female divinity Anahita, is represented.

(f) From the middle of the 7th cent., when the Sasanian power fell before Islam, Persia produced no more sculpture, although there was an attempt at a revival of it in the beginning of the 19th cent., when Path Ali Shah (1790–1835) caused himself to be immortalized in stone at Rai (near Teheran) and elsewhere. His sculptures show certain survivals of the style of Sasanian times, but they are thoroughly modern tracts. One of the two panels at Rai shows the king in the act of spearing a lion, and is spirited in execution. Unfortunately, it was carved over the space occupied by an old Sasanian sculpture, which was destroyed to make room for it.

2. Seals, gems, and coins.—Closely connected with the glyptic art in its larger application is the more minute skill shown in the cutting of seals and gems or the sinking of dies for coins. The use of seals and cylinders from the earliest times is unknown, and is sufficiently shown by the archaic finds made at Susa by de Morgan (op. cit. viii. 1–27); but if we are insufficiently supplied with evidence for the Early Iranian and Median eras, there are enough Achemenian seals and carved gems to show the height to which artistic execution in small carvings was carried in ancient days. The art has never been lost, for we can trace its development all the way through the Parthian and Sasanian ages, and no Persian to-day is without his signature handsomely engraved on a seal for ordinary use. A peculiar form of skill was needed in the cutting of dies for coins, as illustrated in the Achemenian period by the darics from the mint of Darius. The coins that were current under the Parthian rulers indicate to what an extent Greek influence affected Iranian art, and from that time onward the various changes may be traced by the issues from the mint of each successive ruler down to the present day, when the nickel shah (worth less than a halfpenny), inscribed on one side with the Lion and the Sun, as the national emblem of Persia, and on the other with a device in Perso-Arabic script giving its denomination, was very much in use. Its appearance as if it had been made in a European mint.

3. Metal-work.—Owing to the mineral resources of the kingdom, the art of the metal-worker may be regarded as one of the oldest in Persia (cf. Geiger, Ostasiatische Kultur im Altertum, Erlangen, 1862, pp. 145–148, 388–390). Many specimens have been preserved in sufficient number to show the development of this phase of art from Achemenian times, illustrated, for example, by the discoveries at Susa and the finds on the Oxus, down to the present day, when the brass-workers of Isfahan and the copper-smiths of Kashan turn out some of the finest examples of artistic workmanship in the form of lamps, trays, dishes, bowls, pitchers, or damascened armour, that can be found anywhere. The various pieces of Achemenian jewellery to be seen in the British Museum, are of hilted Parthian helmet, two beautiful cups of the Sasanian king Chosroes II. in the Cabinet des Médailles in Paris, one of them embossed in silver, the other enamelled with a very beautiful and coherent Persian-Sasanian metal-work of various ages to be found in the Hermitage at St. Petersburgh, may be cited as typical of the range and scope which Persia had in this branch of artistic production.

4. Fictile arts, porcelain, earthenware, and ceramics.—The artistic sense which Persia developed from the earliest times in fashioning and decorating earthenware objects, and in the making of beautiful tiles for practical and ornamental purposes, is worthy of high praise. In fact, it would be impossible to cite any rival for the wonderful frieze of archers, and the lion-frieze discovered by Dieulafoy at Susa, which show the height to which art in the making and colouring of tiles had been developed even in earlier Achemenian times. If kindred specimens of Parthian and Sasanian tiles are missing, it is only because they have not been preserved; for the art was not lost, as is proved by the beautiful turquoise tiles on the domes of the mosques from the beginning of the Muhammadan era down to the present time. Both the Achemenian and the Sasanian Persians possessed in imparting to their tiles and plaques a metallic glint or lustrous sheen, known as the réflet métallique, has unfortunately been lost, since it died out some time during the 18th cent., and attempts to restore it have thus far met with the poorest success. For that reason good old tiles and plaques that display the metallic lustre are rare, even though broken fragments are still being dug up in the ruins of Rai, the city which seems most of all to have developed this peculiar product.

With reference to the early development of the ceramic art in pottery and earthenware, it may be said that some of the crude jars and bowls exhumed from the ash-hills at Urumia (see Jackson, Persia, pp. 90–93), like those found by Henri de Morgan in archaic burying-grounds in Gilan and Talish (see J. de Morgan, Mémo. viii. 351–352), may date from the Early Iranian or Median period, or even earlier. The potter's art, moreover, is mentioned in the tablets of the Old Babylonian period. The jugs and fragments of earthenware vases, with coloured traçeries as a decorative design, have been found in abundance as specimens of fictile art in the Achemenian period. The same is true of the Parthian remains discovered at Warka; and noteworthy among these are the Parthian so-called ‘slipper-coffins,’ made
of a beautiful green glazed ware, and decorated with a somewhat stiff small human figure, repeated a number of times. The Sassanian fondness for elaborate decoration, as evidenced in the intricate designs and flower patterns on capitals of columns and in the ornamentations at Taq-i-Bustan, was shown also in their ceramic work; for it is still possible to pick up among ruins like those of the Sassanian fire-temple, or atash-Kadah, near Isfahan, pieces of jars and bricks with decorative markings that show an artistic sense; and the potter's art, well known to all through Omar Khayyam, is actively practised to-day.

During the earlier centuries after the Muslim occupation, Persia's art in faience (for, strictly speaking, there is no true Persian porcelain) is believed to have received considerable impetus through importations brought from China and through Chinese artisans settling in Iran. But, whatever may have been the extent of that influence — and the influence was not without reciprocity — Persian faience never lost its marked national characteristics in shape, colour, and design. In regard to glass, we know that the glass-worker's trade is referred to in the Avesta (Vend. viii. 85, yimad-pacicas), and specimens of glass, dating from a comparatively early period of Persia's history, have been found. Glass vials, thought to have been lachrymatories, were found among the Parthian ruins at Warka, and the glass portions of the gold-camelled cup of Chosroes II. show that the same uses of glass were known to the Sassanians; while the employment of tiny facets of mirror glass in the interior decorations of sumptuous houses has long been a favourite means of ornamentation in Persia. Glass bottles, vases, jars, and otherwise but mediocrité, are found in almost every age down to the present, although the glass that is used in Persia to-day is almost wholly imported from Europe.

5. Textile fabrics: rugs, draperies, and embroideries. — The art by which Persia is best known in modern times is the manufacture of beautiful textile fabrics — rugs, carpets, draperies, and embroideries. We may presume that the art of rug-making was fully developed in the Median and Achaemenian times, and is referred to in Themistocles (Themist. xxi. 3), when first presented before Xerxes or Artaxerxes, illustrated his meaning by a simile drawn from the intricate patterns of a Persian carpet; and there is little reason to doubt that rugs and carpets were of the court in ancient times, and that they were used in the carpet industry is to-day widely spread throughout Persia, and among the places that are thought to produce the best rugs, both in quality and style, are the districts of Kurdistan, Khurasan, and Kerman. Aside from Persia, the patterned designs of the national styles and designs are unfortunately finding their way in to corrupt the purity of this Oriental art, but a strong endeavour is being made to preserve its native integrity and ancient prestige — a prestige recognized in all the numerous works published in the West on the subject of Oriental rugs. Among Persia's textile arts is the weaving by hand of soft white and brown felts (Mod. Pers. namad) for mats, cloaks, and saddle-cloths. The art is as old as the time of the Buddha, and the people still carry on the weaving in many parts of the country, more especially at Hamadan, Isfahan, and Yazd. Mention should also be made of richly embroidered Persian shawls, delicate fabrics with elaborate designs in needlework, heavily embroidered brocades, ornamental draperies and hangings, and silks of various colours and fineness of texture.

Among the oldest specimens of such fabrics are the examples of Sassanian textile work in the Archbishops' Museum in Cologne, Germany, and in the temple of Horigata, near Kito, Japan (cf. Münsterberg, Japanische Kunstgewerke, Brunswick, 1907, p. 118, pl. 14). The introduction and development of the textile arts as well as other arts of Persia were ascribed by Ford abundantly to the legendary king Jamshid, who lived in the golden age of Iran (see Heyd, voll. 

6. Painting, decorating, designing, and the art of penmanship. — Although painting cannot be called one of Persia's special arts, the wonderful effects in colour and decorative design that were obtained by the Achaemenian artists, as shown by the tile-work discovered in ancient Susa, prove conclusively how highly developed in early times were their aesthetic sense and their productive skill. Allusion has already been made several times to the artistic manner in which they still know how to employ colour and ornamental patterns even in the decoration of ordinary objects, and that was perhaps, their aesthetic sense and their productive skill.

How far the painter's art had advanced in Sassanian times among the Manicheans (for Mani was a painter as well as the founder of a great religious sect) has recently been illustrated by the remarkable finds made in Turkestan by the expedition sent out from Berlin by the German Emperor William II. As a rule, the Persians do their best work when painting portraits and flowers, while their landscape work and perspective composition are mediocre to the best pictures, but on the small scale, like the miniature portraits on papier mache' writing-cases and lacquered boxes, or on the enamelled porcelain tops of tobacco pipes; or, again, in decorative designs of roses on book-covers, for the making of which they are especially noted.

One art, however, is carried to perfection in Persia; it is calligraphy, or the art of beautiful handwriting. Originally this accomplishment was an art that might owe to Plutarch's treatise on the Penatres, nowhere else are to be found such beautiful specimens of chirography, whether minute or large, as in Persia; and no other people are so skilled in using their alphabet for decorative purposes, as make the badges and floral ornamental hangings in the royal palaces at Persepolis and Susa. The employment, moreover, of archaic designs, handed down by tradition in the rug-maker's conservative art (for example, conventionalized forms of the tree of life), points back to the greatest antiquity. The carpet industry is to-day widely spread throughout Persia, and among the places that are thought to produce the best rugs, both in quality and style, are the districts of Kurdistan, Khurasan, and Kerman. Amidst the countries of Europe and Central Asia patterns and designs are unfortunately finding their way in to corrupt the purity of this Oriental art, but a strong endeavour is being made to preserve its native integrity and ancient prestige — a prestige recognized in all the numerous works published in the West on the subject of Oriental rugs. Among Persia's textile arts is the weaving by hand of soft white and brown felts (Mod. Pers. namad) for mats, cloaks, and saddle-cloths. The art is as old as the time of the Buddha, and the people still carry on the weaving in many parts of the country, more especially at Hamadan, Isfahan, and Yazd. Mention should also be made of richly embroidered Persian shawls, delicate fabrics with elaborate designs in needlework, heavily embroidered brocades, ornamental draperies and hangings, and silks of various colours and fineness of texture. Among the oldest specimens of such fabrics are the examples of Sassanian textile work in the Archbishops' Museum in Cologne, Germany, and in the temple of Horigata, near Kito, Japan (cf. Münsterberg, Japanische Kunstgewerke, Brunswick, 1907, p. 118, pl. 14). The introduction and development of the textile arts as well as other arts of Persia were ascribed by Ford (A.D. 1000) to the legendary king Jamshid, who lived in the golden age of Iran (see Heyd, voll. ...
she imparted to them in Central Asia much from her artistic taste, in the same manner as her art penetrated deep into Northern India. In the Europe of Chaucer’s time Persian blue in textile fabrics was sufficiently well known to be referred to as ‘pers,’ and the West-to-day acknowledges Persian blue as the basis of its art of rugs and carpets. In minor matters Persian art still exercises an influence on the Occident, but not without receiving some influence in return, and this gradual infusion of Western elements will doubtless tend to grow greater as time goes on.

**ART (Phoenician).**—To express the deity with the symbols of his majesty, as conceived by the worshipers in their own country, is the highest aim of religion, and it was apparently this that animated the Babylonians, Assyrians, Egyptians, Greeks, and Romans, all of whom have produced specimens of their skill worthy of the highest admiration. The Phoenicians, the other Semitic race, worshiped Baalim and Baalat, did not possess any deities sufficiently distinctive in their nature to lend themselves to representation in sculpture and painting. El, Adon, and Melek were in the same case with Baal and Baalat, as terms of much too general a nature. The Babylonian Tammuz, winged god, who became with the Greeks a simple hunter in Syria, and Ashtoreth, the Istar of the Babylonians, spouse of Tammuz, and goddess of the moon and of the planet Venus, form exceptions, and these, however, though they were not the chief divinities of the Phoenicians. When, therefore, they wished to represent the divinity, the emblem which they chose was in the form of a cone, of which numerous examples exist, not only in Phoenicia, but also in the countries that fell under its influence. The two Phoenicians of Malta, Abdoir and Osiramar, did not attempt a beautiful statue of their great national god Melqart, but contented themselves with a cone-crowned pylon which the first stone-cutter they met with was able to make.

Whether the Phoenicians felt that something better was expected, and even needed, than the commonplace, though mystical, emblem which they had adopted, is uncertain. Knowing, however, the art of Babylon from old time, they turned to the Egyptians for their artistic education. And here it is worthy of note that they did not borrow from them, as they might have done, the gods with the birds and all kinds of beasts, in which the Egyptians delighted, but also that these were taken from the human form. From every point of view this was an improvement, for they made their deities as frankly manlike as those of the Greeks.

The cone representative of the divinity is seen in the picture of Eblis (Beelzebub), towering high above the entrance of the great courtyard. This cone, though found in Carthage more often than in Phoenicia itself, must have been at one time very common as a symbol in that country. From regard it as phallic origin, but that seems to be doubtful. It is not impossible that it had some connexion with the small *cippi* with an ovoid top found at Sidon. These also recall the objects with pyramidal or hemispherical tops found at Tharros, one of which, adorned with the sun and the crescent moon reversed above it, is flanked by two truncated cones with mouldings at the top. In connexion with these cones, it is noteworthy that Esarhaddon possessed a large clay seal, formed like half an egg, upon the flat face of which the sun was surmounted by a globe, recalling the similar objects set up in the temples of Aphrodite at Cyprus. This, whilst showing a connexion between the cone and the hemisphere, at the same time suggests that they are of different origin.

Esarhaddon’s half-egg seal, besides giving the cone with the dove on it, has, on one side of that emblem, the sun as an eight-rayed star, and, on the other, the moon and seven globular objects, emblematic of the seven planetary bodies, which, in all probability, corresponded with the seven deities whom the Assyro-Babylonians called the Igi. As the sun and the moon are often represented on the votive inscriptions of Carthage, it is probable that these emblems also occurred very frequently in the art of the Phoenicians in their own country. Moreover, accom-pany them—the triangle emblematic of the cone, the top finished with arms (bent at the elbow and directed upwards), and a circle at the top of the cone representing a head; the raised right hand, the palm outwards, the oblong hands of Baalim and Baalat; the pyramid; the staff with a globe at the top surmounted by the broken ring emblematic of the crescent moon when a mere broken circle of light; the plinth with the three truncated cones (apparently simplified forms of the two with cornices, flanking as a pyramid on the top, already described). Such are the simple representations of the divine which the Phoenicians, apparently when uninfluenced by the nations around, produced. It is possibly an augmentation of the feeling of powerlessness in representing the deity which made their relatives and near neighbours, the Jews, go a step further, and seek to discard every image which might seem to recall idol-worship. Even a symbol derived from a living creature was to be avoided.

As a type of a male divinity more or less Phoenician in character may be mentioned Baal Hammon, who, in a terra-cotta figure belonging to the Barre collection, appears as a man in the flower of his age, with ram’s horns on either side of his head, his hands resting on the rams which form the supports of the arms of his throne. A terra-cotta figure seated on a throne seems to show Tanit, his consort, the Astarte of Carthage, holding a dove in her left hand. This is very roughly formed, and was apparently one of the little statues made in great numbers for exportation. A strange creation on the part of the Phoenicians was the pigmy-god—a little man with exceedingly short body and legs and a very large head; he was a thing to be avoided, a shield of curious shape. These are said to be the dwarf-gods which became the pigmys of the Greeks.

† Ib. fig. 56.

† Ib. fig. 56. Sometimes she is represented standing, wearing a pointed head-dress with thick plaits of hair descending to her shoulders, holding her robe with her right hand and the dove in her left (ib. fig. 142).

† Ib. fig. 55.
The inventive powers of the Phoenicians therefore tended towards the grotesque rather than the dignified and serious, and they were at their best as copyists. The upper part of the stele of Yehaw-melek, notwithstanding its weathered state, is a noteworthy specimen of their skill. It shows Yehaw-melek, clothed in a Persean costume, standing before Baalat Gebal, the 'Lady of Gebal,' offering a dish probably containing the precious things which he presented to her. The 'Lady of Gebal,' however, is in Egyptian form and dress, seated and holding a lotus-leaf. In her attributes she closely resembles the Egyptian Isis, and the style of the carving (relief within a sunken outline) shows Egyptian influence. At the top of the stele a mortice-hole indicates where the Egyptian disc with uraeus-serpents was placed (probably carved in metal), and from this point curved wings sweep down on each side, like a canopy over the god and the king. A very fine specimen of Phoenician bronze-work reproduced by Perrot and Chipiez\(^1\) seems to show the same goddess; the style differing somewhat from that of true Egyptian work. There is the disc, with the horns of the moon strangely shaped, surmounting her head, and the uraeus rises upon her forehead. Perrot points out that, just as the infant Ptah of the Egyptians was by the Phoenicians to represent their Khibres and pigmies, so they borrowed Isis-Hathor to represent Astarte.

The pigmy-god already referred to seems to be simply an exaggeration of the Egyptian Bes, which the Phoenicians had also adopted.\(^2\) A very fine piece of glazed earthenware is that figured by Perrot and Chipiez in their monumental work (p. 408); \(^3\) and if it really be Phoenician (it is found in Cyprus) it is probably a favourite subject, as the Phoenician artist might envy. Bes, with feathered head-dress, precisely as found in Egypt, is sitting astride upon a woman's shoulders. The latter, who holds him by the feet, stands upon a little lotus-pedestal, suggesting that the whole formed the top of a staff in the Egyptian style. In the opinion of Perrot, it is the woman's figure—naked, short, and broad—that stamps this work of art as being Phoenician rather than Egyptian.

But in all probability one of the finest efforts on the part of a Phoenician sculptor to produce the type of a divinity is preserved on the Stele of Amrit, in the de Clercq collection.\(^4\) The owner called it the 'Pheneico-Hittite Stele of Amrit,' on account of the group's likeness to certain rock-sculptures at Phinum, where a goddess is shown traversing the mountains while standing on the back of a lion. In this case it is a god wearing the crown of Upper Egypt with the ostrich feathers, and a close-fitting tunic in the Egyptian style, with a knotted girdle. In its left hand he holds by its hind legs a lion-cub, and in his right he raises a curved weapon like the so-called 'boomerang,' which the Assyrian hero of the sculptures of Khor-sabad, who grasps in his arm a lion, likewise carries. In the Greek art we often find, as in the Assyrian sculptures, and one foot is placed upon the head, and the other upon the curved tail, of the lion upon which he stands. The animal in question is represented walking over rocky ground, also indicated much in the Assyrian manner. Immediately above the deity's head is the crescent moon with the sun within; and forming an arch above his head, conforming to the shape of the stele, are the drooping plumes of the Egyptian winged disc. Except for the thickness of the legs and the shortness of the body, the human form is

\[\text{CATALOGUE MÉTODIQUE ET RATIONNEL, publié par M. de Clercq, tom. ii. pl. xxvii. Perrot-Chipiez, ib. pl. 283.}\]

well-proportioned, and the lion also is fairly good. It is therefore a good piece of work, and, whilst illustrating the art of the Phoenicians, is at the same time a symbol of their religion—a Phoenician idea on an Assyro-Babylonian foundation, and a Hittite design in an Egyptian dress. There is nothing Greek about it—perhaps it was before contact with that nation, as the early style of the Phoenician inscription which it bears seems to imply. According to Philippe Berger, the deity mentioned in the dedication is probably Shôrêbî—"a reading which is justified by the Ormuzdian, and the name admits as possible, although he himself is rather inclined to read Shadrapha (Satrape).

There is naturally some doubt as to how far the Phoenicians, when they came into contact with the Greeks, imitated their art. That there are objects in the Greek style which are due to Phoenicians is undoubted, but they may have been merely ordered from Greek sculptors. This is well illustrated by the coin figured by Donaldson in *Architectura Numismatica* (No. 20),\(^5\) where, in a Greek temple, a strangely un-Greek fan-shaped pediment, a winged Victory in purely Greek style, mounted on a pedestal, crowned with laurel a princely conqueror, equally Greek, holding a crozier. In fact, the whole coin may possibly have been by a Greek engraver. A votive stele representing a shrub,\(^6\) which was found at Carthage, and is now in the museum at Turin, is regarded as being purely Greek work. The goddess is Persephone Hera, veiling herself as a bride, and holding a bunch of pomegranates. In the pediment above is the panther of Dionysus. Though dedicated by Mekhiathon the Suffete, not only the art, but also the subject, is Greek. In Cyprus the story of Hercules was repeated with considerable artistic skill, but the statues are inferior, though some are not without merit.

The statuettes representing the worship of the power of reproduction are, as usual in the East, not in the best style of art. The mother goddess, as Perrot calls her, whether holding an infant or not,\(^7\) is usually represented as thick and hulking, pressing her breasts\(^8\)—"reproductions, perhaps of votaries of Astarte—are far from being equal to some of the figures of a similar nature found in Babylonia. Certain figures thought to be Phoenician prototypes of the Venus de Medici are regarded as ladies that the Greeks adopted, and therefore due to Greek influence. They show a female pressing one breast and hiding with the other hand the part which, in real Phoenician work, the artist intended to show openly. The best specimen\(^9\) is from Livadia, near Larnaca, and wears an Egyptian head-dress. In the purely Semitic figures, there is a direct and naively brutal allusion, as Perrot says, to the mysteries of fecundation and generation, but the thought which lies behind the latter wish to awaken was quite different; it was Venus athena—"the representative of woman.

Religious ceremonies are rare. One—that representing Yehaw-melek before the 'Lady of Gebal'—has already been referred to. Another—a mere fragment—seems to be simply a mural decoration.\(^10\)

It was found in the neighbourhood of Tyre, not far from Adlun, and represents a personage, seated on a throne, holding in the left hand an object which cannot now be determined. Before him is a candelabrum or stand surmounted by a pan in which a flame is seen, whilst beside the throne or seat is a head with Egyptian head-dress, evidently part of a statue-supporter. The border-ornament recalls some of the designs of Assyria. This piece is extremely good, and shows what the true Phoenicians were capable of. Of an entirely different style is the statue of the Sacrificer, in the Metropolitan Museum, New York.* This shows a beardless man, with plump cheeks (perhaps a eunuch, as the Babylonian priests seem sometimes to have been), carrying a ram for sacrifice upon his shoulders, the feet, which come down in front, being held tightly and determinedly with both his hands. The style is that of the artists of Cyprus.

Greatly affected by the religion of the nations around, the Phoenicians absorbed from them ideas which they carried beyond the limits of their own domain. Strangely susceptible, they in like manner were deeply influenced by the religious art of their neighbours, which, when they migrated, they carried to other lands and modified. A series of different styles was the result, and the task of studying and understanding these is a long and difficult one. Nevertheless, it is a branch of archaeology of considerable importance, though it must be admitted that the material from the various spheres of Phoenician influence is generally insufficient for a complete picture to be gained. The destruction of their temples and divine emblems and statues in Western Asia adds to the difficulty of the study; but the remains, such as they are, have a value quite their own, and reflect the religious feelings of a strong people who accomplished important work in their time. T. G. FINCHES.

ART (Shinto).—The genius of Shinto, like that of Islam, is adverse to the development of the arts of painting and sculpture. With few exceptions, no idols or paintings of the gods are to be seen in Shinto shrines. The deity is represented by a mirror, sword, stone, or other object, which is shut up in a box, and is never seen by the worshipper. In many cases the priest himself does not know what the box contains. In pre-historic times the practice of casting up a row of terra-cotta figures of men and animals round the tombs of Mikkado, in substitution for an older custom of burying the servants of the deceased and other victims up to the neck, and leaving them to die and be devoured by dogs and crows. Several of these figures have been preserved in the Imperial Museum at Tokyo, and there is one in the Gowland Collection of the British Museum. They are of an extremely rude and primitive workmanship. This practice, however, does not appear to have given rise in Shinto mythology to any case of worship directly associated with Shinto, which abhorred all connexion with death. In more modern times there is a custom of expressing gratitude to the Kami for answered prayer by making evoto or shrine offerings of pious pictures representing miraculous escapes from shipwreck, etc. Several of the more important shrines have galleries for the reception of such mementoes. They have no great importance in the history of Japanese art. Such galleries are called emado, or picture-horse hall, one of the most common pictures being that of a horse—in substitution for the real living horse, which is a favourite Shinto offering. The ‘seven gods of good fortune’ are a common subject for the Japanese artist, but here we are dealing with quite a modern development. Nearly all of these deities, though called Kami, are of Buddhist origin, and in their portraiture foreign influence is easily traceable. At the present day Shinte myth is not infrequently resorted to for subjects by the Japanese artist, more especially by the book-illustrator; and wood engravings, of no great artistic value, representing the gods are sold to the pilgrims to Shinto shrines for mementoes. ART AND ARCHITECTURE (Teutonic).—The antiquities from Northern Europe give evidence of a high artistic development from the Stone Age downwards, but few finds of earlier date from the Iron Age can with any certainty be connected with the religious life of their owners. Of the heathen period there are no architectural remains except the graves, and the structural forms of these do not appear to have had any definite relation to the religious beliefs of the different periods to which they belong. Sacred buildings of any kind came late into use among the Teutonic races, and the scanty knowledge we possess of their temples is derived entirely from literary sources, and refers only to the last few centuries of heathendom.

1. In the Stone Age the antiquities as a whole show a remarkably high development of art. The elaborate finish of the finest examples in both pottery and weapons may imply that they were not intended for ordinary purposes, but were reserved for religious ceremonies. Many of the axes found are obviously not made for use. Some are too thin, others too small, others have shaft holes only large enough to admit a cord, and miniature axes of amber are also common. All these are doubtless votive offerings of some sort, in all probability dedicated to the god of thunder.

2. The Bronze Age in the North is also distinguished by the artistic skill of its productions, but foreign influences may now be recognized. At first the types resemble those found in the Aegean area, and the spirals and zigzag lines so common in Mycenaean art are a frequent form of ornamentation. The most notable relic of this period is the ‘disc and horse of the sun’ from Norrland, Denmark, usually dated about B.C. 1000. It consists of a round bronze plate mounted on wheels and drawn by a horse also on wheels, and is, no doubt, intended to symbolize the sun’s passage across the heavens. The bronze disc is overlaid with gold and ornamented with spirals, and the figure of the horse strongly recalls the animals of the Dyonisian style of Greece.

At a later period of the Bronze Age there are evidences of Etruscan influences in the art, and many objects have been found that are clearly imported from Etruria. Among those of native character is a class of pyxides which seem too precious for private purposes, and were probably dedicated to religious uses. Such are the eleven gold vessels with long handles that were found at Römminge, carefully placed inside a large bronze vase, and the two gold bowls with similar long handles, terminating in horse’s heads, found with a couple of smaller gold bowls in Seeland. Other objects certainly connected with the worship of the gods are the little bronze cars on four wheels, apparently made to carry large sacrificial vessels, from Sweden, Denmark, and North Germany.

Religious symbols were frequently used in the ornamentation of the Bronze Age. The wheel cross, the symbol of the sun, occurs first in the Stone Age, and is found on many of the earlier objects of bronze. It is later replaced by the...
ART AND ARCHITECTURE (Teutonic) 887

Swastika, and the triskele also appears, both of which symbols are common to all the Aryan races, and are universally agreed to have a religious significance. These same sacred signs are seen on the rock carvings from Behistun and elsewhere, which belong to this period. The purpose of these carvings is not clear; they consist of geometrical figures, ships, weapons, and other objects, animals and persons, and it seems probable that at least some of these represent the gods and their attributes.

In the first centuries after the introduction of iron the grave finds are scanty, and there is a scarcity of gold objects. This is partly due, no doubt, to the fact that the tribes of the North were at this time subjected to a strong Celtic influence, and it was the universal custom among the Celts to bury little else with the dead than their mere personal equipment. This Celtic influence introduced foreign elements into the style of the art, but was soon almost entirely supplanted by the spread of the classical art, to a large extent as a result of the Roman conquests in Central Europe. Many of the finest antiquities from the graves and the bog deposits belonging to the first four centuries of the Christian era are unmistakably of Roman workmanship.

The most important of the native works of this earlier Iron Age appear to be connected with religion. Of these the earliest are the two four-wheeled chariots with long shafts, found in a bog at Deilg in Jutland. They are of oak made of ashwood, and the sides, shaft, and frame are richly adorned with bronze-work. The *swastika* is among the ornaments used. These cars are supposed to have been employed in religious ceremonies, and possibly to have been sacred, like the bull, of the gods, such as are mentioned later in the sagas. Fragments of a similar one, however, which had evidently been burnt, were found inside a large bronze vessel in a grave at Fynen, so that, in this case at least, the car seems to have been given not to the gods, but to the dead man for his use in a future life. Cars have been found under similar circumstances in Celtic graves in France and the Rhine country, so that the peculiar dispossession of the Fynen car may be due to imitation of a foreign custom.

Somewhat later in date, and showing a mixture of Celtic and Roman influences, is the beautiful silver bowl from Gundestrup in Jutland. This was, no doubt, a sacred vessel, like the gold bowls of the age already referred to; and we may compare in this connexion the statement of Strabo (p. 293), that the Cimbri sent their 'hollow bowl' to Augustus. Other bowls of similar shape to the Gundestrup bowl have been found, but although it was in all probability made in the North, it is quite un-Northern in both style and subject. The subjects are drawn partly from classical art (there is, for example, an obvious imitation of Hercules and the Nemean lion), and partly from Celtic sources, as the representation of the Gallic god Cernunos, with his stag-horns, ring, and serpent.

To the close of the Roman period, i.e., to the 4th century A.D., belong what are perhaps the finest of all the Northern antiquities—the two magnificent gold plates from Galgumma in Jutland. It is supposed that they were used as trumpets in religious services, and parallel instances can be quoted from many peoples of antiquity. Both the horns are of solid gold, and decorated with bands of carved figures; one has runes around the top, but these give only the maker's name. Both were incomplete when found. The significance of the figures upon them is not certain; various explanations have been given, and it seems probable that they have a mythological meaning, and refer to legends of the gods.

5. The later centuries of heathendom in the North may be divided into two periods: (a) a time very rich in gold ornaments of every kind, owing to the vast quantities of gold obtained from Byzantium; (b) the age of the Vikings, which saw the splendid profusion of silver ornaments to be seen in the museums of Copenhagen and Stockholm.

(a) In the first of these periods, i.e., from the 4th to the 6th century, A.D., the only objects that appear to have any close connexion with religion are the gold bracteates. These were worn as pendants and necklaces, and were originally copies of Roman coins of the 4th cent., although the types soon became greatly developed and the later bracteates appear to have a religious significance. The sacred symbols of the *swastika* and triskele appear on many of them, and when placed beside a human head may imply that a god is represented. The most common device is a head of a four-footed animal, and in some cases the latter seems to have a pointed beard and to be intended for a goat, an animal sacred to Thor. On others Odin is possibly to be identified, surrounded by snakes, or riding on his horse Sleipnir, with a sword in his right hand and a spear in his left, and fighting against the Midgard serpent. Other bracteates have interlacing designs ending in animal forms—which shows that the beautiful animal ornamentation, which ended later, was still in use at this time. This peculiar style of decoration, so characteristic of the later Northern art, seems not to have arisen from a desire to represent the animals sacred to the gods, but to be derived from creatures unfamiliar to the North, namely, the lions and griffins of classical art.

(b) When we reach the second, or Viking, period of the later Iron Age, we have evidence from literature, as well as from antiquities, of religion in its more secret aspect. Of the antiquities, the most important are the runic stones that were set up over the graves. On some of these are figures which appear to depict the gods; for example, a stone from Tjängvide shows a figure riding on a horse with eight legs, and probably intended for Odin, and another, the Sands stone there are three figures in a special panel, which have been interpreted as the three chief gods, Thor, Odin, and Frey. On many of these stones Thor is invoked in the runes, and his hammer is carved to consecrate and protect the grave. Little silver pendants in the form of hammers have been found, and were doubtless worn as amulets, but these do not appear until the 10th c., and were probably due to the influence of the cross-wearing Christians.

Under the heathen amulets may be reckoned the figure of a boar, which was frequently placed on the crest of the helmet for protection in battle. This custom is referred to by Tacitus (Germania, 45), and there are several allusions to it in Beowulf (e.g., 303, 1118). It should presumably be connected with the golden boars of Frey and Freya mentioned in the sagas.

Two warriors wearing helmets surmounted by figures of boars are represented on one of four small iron plates from a cairn in Oland. That these plates were used to adorn helmets is evident from the similar bronze plates on the helmets from Vendel. The examples from Oland, as well as the majority of those from Vendel, are supposed to portray scenes of Scandinavian mythology. Tha-
one of the Vendel plates shows a cavalier armed with shield and spear, preceded and followed by a bird, and attacking a serpent; this is interpreted as Odin with his ravens Hugin and Muninn, and may be compared with the gold bracteate described above.

Regarding actual idols our only information is derived from literary sources. From the sagas we gather that the figures of gods set up in the temples were life-size, made of wood, and richly adorned with gold and silver. Thus in Olaf Tryggvason's saga, when Gunnar fought with the image of Frey and drove out the fiend inhabiting the idol, 'nothing remained but the mere stock of a tree,' and Gunnar, dressing himself in Frey's apparel, was accepted by the people as the god. Again, in the saga of Olaf the Saint a figure of Thor is described as 'a huge man's image gleaning with gold and silver . . . he bore the likeness of Thor, and had a hammer in his hand . . . he was hollow within, and had a great stand on which he stood when he came out.'

Other images are described as wearing bracelets, necklaces, and similar ornaments. The different gods seem usually to have been invested with their own peculiar attributes—Thor with his hammer or with sceptre as chief god, and Odin armed with sword and spear.

We also hear of smaller figures of the gods, such as the image of Frey which Ingimund carried in his pocket, and the ivory image of Thor which Halfred was accused of secretly carrying in his purse.

6. Turning to the heathen architecture, what knowledge we possess of the temples is gleaned from the literature of the North. Until the last few centuries of heathendom, the Teutonic races appear to have worshipped in the open air, Tacitus (op. cit. 9) saying: 'The Germans deem it inconsistent with the majesty of their gods to confine them within walls.' The temples that we hear of in the sagas apparently consisted of two parts; an oblong hall, the langhus, with an ape-shaped building, the ofhus, at one end. It is possible that these two parts were originally separate, and that the round form of the ofhus is due to its having taken the place of the sacred tree that was, in earlier times, the centre of worship. In this case the langhus would represent the dwelling of the chief (who officiated as priest) beside the tree. This langhus appears to have been copied directly from the simplest form of dwelling-house, and was used for the sacrificial feasts, but possessed no great sanctity. The ofhus was the sanctuary proper, and contained the images of the gods, among whom Thor always occupied the chief place. Here also were the altar with the oath ring, the blood kettle, and the perpetual fire.

The temples were almost always constructed of wood, but the exterior as well as the interior was doubtless often ornamented. Adam of Bremen describes the chief temple of Sweden, that at Upsala, as a magnificent gilded structure. When Christianity finally drove out the old superstitions from the North, the temples were in most cases pulled down and destroyed; but the sanctity of the sites remained, and many Christian churches still mark the spots where the heathen gods were originally worshipped.
