Encyclopædia
of
Religion and Ethics
There is at the present time an unusual demand for works of reference. It may be
due partly to a higher general standard of education, increasing the number of
readers, and compelling teachers, whether they are writers or speakers, to 'verify
their references.' But it may be due also to the great increase of knowledge in our
time. We must possess ourselves of dictionaries and encyclopaedias, because it is
not possible otherwise to have at our command the vast stores of learning which
have accumulated.

But the enormous increase of knowledge in our time has not only created a
demand for general works of reference; it has also made known the necessity for
dictionaries or encyclopaedias of a more special character. Musicians have found the
need of a Dictionary of Music, painters of Painting, engineers of Engineering, and
they have had their wants supplied. The present work is an attempt to meet the
necessity for an Encyclopaedia of Religion and Ethics.

Scope of the Encyclopaedia.

The words 'Religion' and 'Ethics' are both used in their most comprehensive
meaning, as the contents of this volume will show. The Encyclopaedia will contain
articles on all the Religions of the world and on all the great systems of Ethics. It
will aim, further, at containing articles on every religious belief or custom, and on
every ethical movement, every philosophical idea, every moral practice. Such
persons and places as are famous in the history of religion and morals will be
included. The Encyclopaedia will thus embrace the whole range of Theology and
Philosophy, together with the relevant portions of Anthropology, Mythology, Folk-
lore, Biology, Psychology, Economics, and Sociology. It is a wide field, but its
limits are clearly defined. Only once or twice throughout the course of this volume
has the question been raised whether a particular topic should be included or not.

Subjects and Authors.

Very great care has been taken to make the list of subjects complete, and to
assign each subject to the right author. If mistakes have been made they will be
pointed out by readers and reviewers; and the Editor will welcome every suggestion
that is offered towards the improvement of the succeeding volumes. In order to
avoid overlapping, and yet to have every topic treated with sufficient fulness, the
method has occasionally been adopted of describing a subject comprehensively in one
general article, and then taking one or more particular topics embraced by the
general article and dealing with them separately and more fully. Thus there will
be a general sketch of the Socialistic Communities of America, out of which the
Amana Community has been selected to be separately and fully described. Again,
there are articles on Aphrodisia and Apollonia in addition to the general article on
Greek Festivals; and in the second volume there will be an article on the Arval
Brothers, while the Roman Priesthood will be treated comprehensively afterwards.

It is not necessary to draw attention here to the series of comparative articles
on such topics as Adoption, Adultery, Ages of the World, Altar, Ancestor-Worship,
Anointing, Architecture, and Art.

The important subject of cross-references is referred to on another page.

Editors and Assistants.

How can due acknowledgment be made to all those who have been counsellors
and colleagues, and have assisted so willingly to make the Encyclopædia of Religion
and Ethics an authoritative work of reference throughout the whole of its great
and difficult field of study? Professor A. S. Geden, Dr. Louis H. Gray, and Pro-
fessor D. B. Macdonald have worked over every article from the beginning. Next
to them must come Principal Iverach, Canon J. A. MacCulloch, Mr. Crooke, Professor
Rhys Davids, Dr. Grierson, and Sir C. J. Lyall. Then follow Professor Wenley, Dr.
J. G. Frazer, Mr. Sidney Hartland, Dr. Keane, Mr. W. H. Holmes, Mr. J. Mooney,
Mr. E. E. Sikes, Professor Riess, Professor Poussin, Professor Anesaki, Dr. Aston,
Mr. Cornaby, Professor Macdonell, Professor Lloyd, Mr. Nutt, Mr. Watson, Mr.
Cait, Principal Fairbairn, Professor Jacobi, Professor Takakusu, Professor Bonet-
Maury, Colonel Sir R. C. Temple, Bart., Professor Nöldeke, Dr. Moulton, Dr.
Macpherson, Baron Friedrich von Hügel, Professor Lawlor, Professor Schaff, Abbot
E. C. Butler, Professor Sanday, Professor Hillebrandt, Professor Seth, Professor
Sorley, Professor Woodhouse, Principal Stewart, Professor Swete, and Colonel
Waddell. These all have suggested authors, read manuscripts, corrected proofs, or
in some other way taken a helpful interest in the work. And the list could be
doubled without exhausting their number.

Acknowledgment is due also to the Right Hon. the Secretary of State for India
and the Librarian of the India Office; to Sir A. H. L. Fraser, K.C.S.I., LL.D.,
Lieutenant-Governor of Bengal; to the Right Hon. Sir Wilfrid Laurier, G.C.M.G.,
Premier of Canada; and to the Chief of the Bureau of Ethnology of the Smithsonian
Institution, Washington, for the use of valuable books.

After six years' exacting labour this first volume goes forth in the earnest
hope that it will be found worthy of a place among the rapidly increasing number
of books devoted to the study of Religion and Ethics, and that it will help forward
that study along the right lines. The work will consist of about ten volumes.
AUTHORS OF ARTICLES IN THIS VOLUME

ABRAHAMS (ISRAEL), M.A. (Lond. and Camb.).
Reader in Talmudic and Rabbinic Literature in the University of Cambridge; formerly Senior Tutor in the Jews' College, London.
Abbravanel, Acosta, Adultery (Jewish), Architecture (Jewish).

ACHELIS (HANS), D.Theol., D.Phil.
Professor der Theologie, Halle (a. Saale).
Agapetia.

ADLER (E. N.), M.A., M.R.A.S.
Member of the Council of the Jewish Historical Society; Corresponding Member of the Royal Academy of History of Spain and of the Jewish Historical Society of America; author of Jews in Many Lands.
Ages of the World (Jewish), Akiba ben Joseph.

ALEXANDER (HARTLEY BURR), Ph.D.

III. PERSIAN AND HINDUSTANI¹

The following in addition to the Arabic transliteration above

<table>
<thead>
<tr>
<th>CONSONANTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gutturals—k, kh; g, gh; ñ (=ng in finger).</td>
</tr>
<tr>
<td>Palatais—ch (=ch in church), chh; j, jh; ñ (=n in onion).</td>
</tr>
<tr>
<td>Cerebrals—t, th; d, dh; n (a sound peculiar to India).</td>
</tr>
<tr>
<td>Dentals—t, th; d, dh; n (=n in not).</td>
</tr>
<tr>
<td>Labials—p, ph; b, bh; m.</td>
</tr>
<tr>
<td>Semi-vowels—y; r; 1; v.</td>
</tr>
<tr>
<td>Sibilants—s or sh; š or sh; s.</td>
</tr>
<tr>
<td>Aspirate—h.</td>
</tr>
</tbody>
</table>

¹ The diacritical marks in this scheme are sometimes omitted in transliteration when absolute accuracy is not required, the pronunciation of $g$ being the same as that of s, while $z, ñ, ñ$, are all pronounced alike.

[A small superior number designates the particular edition of the work referred to, as KAT¹, LOT¹, etc.]
A AND Q.—1. The meaning of this phrase is expressed in Rev 21st 22ls as 'the beginning and the end' (Acts 2:42, xal &i xal aoe). The conception is to be traced to such passages as Is 44:6 44:6 44:6. And it would appear that the thought was taken from the Hebrew rather than from the Septuagint, for in the former each of the three passages expresses finality (rha), which is in accordance with Rev 21st 22ls; while in the Septuagint the Greek equivalent, though differing in each case, emphasizes the idea of something further (rha ήκεριμα, μερά ταύτα, είς τόν aoi). The point, though a small one, is significant, as it affords a piece of subsidiary evidence for a Hebrew original of the Apocalypse (see below).

2. The origin of the phrase is to be sought in pre-Christian times. Among the Jews, the first and last letters of the Hebrew alphabet, & & , were used to express totality; thus in Talmud Roshni, fol. 3. 3. 2, where the words of Gn 1:1 'the heavens' (כְּבָנִי n) are commented upon, it is said that & n, which includes all the letters, implies that all the heavens are meant, their beginning and their end; again, it is said that Adam sinned from & to n, meaning that he was guilty of every sin; or, once more, Abraham kept the Torah from & to n, i.e. he kept the whole Law.* There is a well-known Rabbinical saying, 'The seal of God is 'Emeth' (מָתַי חָשְׁו ו; and in Jerus. Sanh. i. 18a, 'Emeth is said to be the name of God, who includes all things: the beginning (n), the middle (c) is approximately the middle letter of the Hebrew alphabet), and the end (n). n.w. might then well correspond to the & n, μερά ταύτα, who is, who was, who is to come,' of Rev 1*. Logically, indeed, the order should be & n, etc.; but to a Hebrew (as the original writer of the book must have been) & n, as being equivalent to μερά (Jahweh), would probably on that account come first. The Hebrew n.w., being a well-known formula expressive of entirety, may therefore have been the prototype of & . It is, however, necessary to state that the phrase 'n and n' is never (in pre-Christian times) used of God in the way that & n.

3. It is noticeable that wherever the expression occurs in the Apocalypse it is written & από και τῷ ο, i.e. the first letter is written out in full, while the second is represented only by its sign; there must have been some reason for this, and possibly it is to be accounted for in the following way. It is generally held that parts of the Apocalypse were originally written in Hebrew; in this case the form of the expression would be μερά ταύτα. Now, the Hebrew characters, as used in the 1st cent., might well have appeared to the Greek translator as representing the 'Aleph written in full, and the Tau as the letter Omega. Thus, in 1st cent. script: 'A Κ; the similarity in both languages of the written first letter might have suggested that the second one was intended for an Omega. The phrase was thus imitated direct from the Hebrew manner of writing the equivalent expression. This would also account for the fact that in the vast majority of instances (certainly in all the earliest) the symbol was written Αω, i.e. an uncial Alpha and a curvate Omega.

4. Use of the symbol in the Christian Church.—A great variety of objects have been found with this symbol inscribed upon them; it figures on tombstones, as well as on other monuments, on mosaics, frescoes, and bricks, also on vases, cups, lamps, and on rings; it appears also on coins, its earliest occurrence on these being of the time of Constantius and Constantius, the sons of Constantine the Great.† These all belong to different ages and different countries; in its earliest known form (Rome, A.D. 292) it appears as 'ω Α; but this is exceptional, and is perhaps of Gnostic origin. The symbol in its usual form is found on objects.

* See Talm. Roshni, fol. 17. 4, fol. 48. 4, quoted in Schoettgen's Hebrew, Hebraica et Palæstina, p. 296, 167, and Yoma 60b, Sanh. 54a, Jerus. Yeb. xii. 15a, Jerus. Sanh. i. 15a, quoted in J.E. i. pp. 482, 439; also Sanh. 56a.

† See Cabrol's DACL, art. 'ΑΩ'.
belonging to the 3rd cent. in Rome and N. Africa; on objects belonging to the 4th cent., it has been found in Asia Minor, Sicily, Upper and Lower Italy, and Gaul; by the beginning of the Middle Ages it must have become known in most of the countries of Central Europe.

The combinations in which the symbol is found are very varied, and the most frequent being the following: with a cross, with a cross and the Christ-monogram (ᾲ Ω), surrounded by a wreath (symbolic of the victory over death), within a circle (symbolic of eternity), in combination with a triangle (the symbol of the Trinity). It will be seen, generally speaking, that the letters are combined with figures which have reference to Christ, not to the other Persons of the Trinity (but see below); so that they were clearly used as inculcating the doctrine of Christ's Divinity; for this reason the letters, in this form, were avoided, as far as our knowledge goes, by the Arians.

Among the Gnostics the symbol was used for figure-jugglery and for mysterious doctrines of various kinds; e.g., when written backwards, Ω and α have the numerical value 801, which is like- wise the sum of the letters of the word πατερέω (‘doe’); therefore, they taught, Christ called Himself α and Ω because the Holy Spirit came down upon Him at His baptism in the form of a dove.† This is doubtless the reason why Ω is found in combination with a dove; not infrequently two doves figure, one on each side of the letters. Examples of this are the two little golden boxes, found in Vatican graves, which have inscribed on them the device Α Ω and a dove (6th cent.).‡ The like device is seen on a silver copseis, found at Trèves, belonging to the 4th or 5th cent.; indeed, this combination would almost appear to have been the normal form of the symbol in Trèves, judging by the frequency of its occurrence there.¶

5. There is one other point that is worth alluding to. In the Apocalypse and Ω is explained as signifying ἡ ἀρχὴ καὶ τὸ τέλος, 'the beginning and the end.' (21) This is the simplest, and no doubt the earliest, form of explanation; in 22 the same form is repeated, preceded by a parable; 'the first and the last;' (ὁ πρῶτος καὶ ὁ τελευταῖος) these two forms of explanation agree closely with the OT prototype, as seen in Is 44 28; 3; the explanatory clause given in Rev 1; (ὁ πρῶτος καὶ ὁ τελευταῖος, ὁ παλαιός καὶ ὁ νέος, ὁ παλαιός καὶ ὁ νέος) is unquestionably a development, and therefore a later form. The title with its explanatory clause is applied to Christ, as indicating His eternal Being. Now, it must strike one at first sight as strange that a title should be used for this purpose which contains the idea of finality, the very reverse of eternal being. But on a closer examination of the passages 21-22 it appears that the phrase 'the end' is to be the herald of a new beginning. We have here, that is to say, the echo of the apocalyptic belief that the first times shall be parallel to the beginning. This idea is brought out with great clearness in a passage cited (from some unknown work) in Ep. Barn. 6:4. Behold, I make the last things as the first. (ὅτι ταῦτα ἔσται ταῦτα ἐν τῇ ἐκκλησίᾳ τοῦ Πάπα Ρομ. He, the Alpha and the Omega, the First and the Last, makes the

* See the exhaustive list of symbols in Cabrol, op. cit. i. pp. 7-23.

† Irenaeus, ad loc. Hier. t. xvi. 6, v. 1, quoted in PRR. In the Egyptian Museum in Berlin there can be seen, on both papyrus and parchment leaves, magical formulae in combination with ΑΩ and a cross; they were most probably worn as amulets.

‡ C. Gunkel, Schöpfung und Chaos in Urzeit und Endzeit, p. 303.

ABANDONMENT.—In considering the ethical and religious uses of this word, we have to remember that abandonment has an active, reflexive, and a passive meaning. It may signify (1) the action of abandoning; (2) self-abandonment, defined by Murray as ‘the surrender of oneself to an influence’; (3) the condition of being abandoned.

1. The abandonment of infants, sick persons, and aged parents, now rightly condemned, was not always prompted by motives of inhumanity. Westernmark (The Origin and Development of the Moral Ideas, 1906, vol. i. ch. xvii.) has accumulated a mass of evidence which proves that practices regarded by us as atrocious, are largely explained by the pitiful condition of the existence of a wandering life, and the superstitious opinions of ignorant men.” Amongst the testimonies cited, especially important are those which show that the most common motive for abandoning or destroying sick people seems to be fear of infection, or of demoniacal possession, which is regarded as the cause of various diseases. Abandonment often meant death, but not always; exposed infants were sometimes adopted into families, but they were also sometimes saved for a life of infamy. Justin Martyr, in his First Apology, charges (ch. xxix.) those who abandon children with the crime of murder, if the waifs ‘be not picked up, but die; he also dwells (ch. xxvii.) on the wickedness of exposing children to the peril of being kept alive for immoral purposes.

2. There may be an abandonment of self to influences good or bad, holy or unholy. Our language testifies against us when, without saying whether there has been surrender to virtue or to vice, we describe a profligate as an Abandoner, or a harlot as an abandoned woman. St. John (Paraph. xi. 476) calls Judas ‘an abandoned disciple,’ not because Jesus had abandoned him, but because the betrayer had surrendered himself to the evil one.

The Mystics understood by abandonment the complete surrender of the soul to the influences of the Divine Spirit, its entire absorption in the contemplation of the Divine glory, and its absolute devotion to the Divine will. In the dialogue narrated by Doctor Eckhart (Vossian. Monumen, the Mystics, bk. vi. ch. i.), a learned man asks a beggar, ‘Where hast thou found God? and the answer is, ‘Where I abandoned all creatures.’ To the scholar’s greeting, ‘God give thee good morrow,’ the poor man’s response is, ‘I never had an ill morrow.’ Whenceupon the scholar says, ‘But if God were to cast thee into hell, what wouldst thou do then?’ The beggar’s reply closes with the words, ‘I would sooner be in hell and have God, than in heaven and not have Him.’ Doctor Eckhart’s explanation is, ‘I have understood that true Abandonment, with utter Abasement, was the nearest way to God.”

3. When abandonment means ‘the condition of being abandoned,’ the reference is usually to the

ABANDONMENT AND EXPOSURE

The biographies of devout believers bear witness, however, to a sense of abandonment by some who can reproach themselves neither on account of their departing from God, nor on account of their doubting His faithfulness. Martensen (op. cit. p. 391 ff.) describes this condition as one in which ‘the individual is, in a relative sense, left to himself. In the religious life he distinguishes two states of holiness: one in which ‘the blessing of the Divine grace is perceptibly revealed,’ and another in which ‘grace, as it were, retires and remains hidden.’ The latter state is one of ‘inward drought and abandonment,’ and may be the result of bodily indisposition or mental weariness. At such times ‘we should hold to God’s word, whose truth and grace are independent of our changing moods and feelings; and remain confident that even in states of deepest abandonment God the Lord is with us, although with veiled face.’

A sense of abandonment by the Father was the experience of Christ during the darkness that enveloped Calvary; to this fact witness is borne in the earliest Gospel, for St. Mark records none of the Seven Sayings from the Cross save this: ‘My God, my God, why hast thou forsaken me?’ (Mk 15:34, Mt 27:46). Professor Schmiedel accepts this as ‘the first of the sayings of the Saviour (Is 53:11),’ and in the Gospel concerning Christ (EBi, 2nd ed. 1831). Bengel (Com. in loc.) lays stress on the preterite tense of ἐξελθομενεον, and renders, ‘why didst thou forsake me?’ In his view, ‘at that very instant the God-blessed God stood alone, in the deepest moment of dereliction He was silent.’ This suggestion need not be pressed; the cry itself testifies to an actual feeling of abandonment by Him whose spirit never lost its faith in God. The mystery is, unrelieved unless He who uttered it was the sinless Saviour, who in His infinite love was bearing ‘our sins in his body upon the tree’ (1 P 2:24). In a lucid exposition of this Word from the Cross, W. L. Walker says: ‘Our Lord felt Himself in this supreme moment forsaken, even by His Father. . . . We here see Christ suffering that which is the last consequence of sin—the sense of separation from God. . . . It is in entire keeping with, and indeed appears as the natural consequence of love’s great Works are often in life as “a ransom for many,” as a sacrifice for sin, or “a guilt-offering”? (The Cross and the Kingdom [1902], p. 138 f.). [See art. ‘Dereliction’ in Hastings' DCG]. J. G. TASKER.

ABANDONMENT AND EXPOSURE.

The most helpless of mankind are those who have just begun life, and those who, through old age or infirmity, are about to leave it. Unable to provide for their own needs, they are entirely dependent upon the love or the compassion of others. Individual cases of neglect of infancy and age are not unknown in any country, but in some cases this neglect passes beyond an individual idiosyncrasy and becomes a national custom. This neglect of children takes the form of removing them from the mother’s habitation and leaving them unprovided to perish by starvation, the elements, or wild beasts, or to be rescued by the chance passer-by, it is called Exposure. The similar treatment of the aged and infirm is called Abandonment.

1. Exposure.—For the exposure of children there are several causes, which require to be taken the Lord hath from the point of view. In the treatment of the case different causes often bring about the same result.

(1) In most countries the commonest cause of

* The words 'abandon' and 'abandonment' are not found in the RV, but the essential thought is expressed in such passages as are quoted above.

the exposure of infants is shame, the child being the offspring either of an unmarried woman or of a union not recognized as regular by the customs of her country. Less frequently, the shame may be occasioned by some malformation of the infant itself, the parents regarding it as a reproach to them to be associated with a monster. In the legends of most countries an individual is represented as having been exposed to conceal the shame of their mothers. The exposure may be the act of the mother herself, as in the case of Evadne exposing Iason (Pindar, Olympian, vi. 44 ff.; cf. the exposure of Ion in Euripides’ Ion, 18 ff.), or it may be ordered or executed by the parents of the mother. Acraeus, in the fragment of Simonides, sends Danas and Perseus together adrift; in Roman legend, Romulus and Remus, the twin children of Rhea Sylva, are exposed by the shepherds of the enemy, the children of Alaric. In cases of this kind children are exposed without regard to sex.

(2) Children are exposed from fear that the means of subsistence will not be sufficient to maintain a larger population. Here exposure is only
one of many methods of infanticide. The populations among which it is most common are those which live by hunting or as nomad herdsmen. posed in a ravine called Apothetae near Mt. Taygetus after they had been examined by the elders of the tribe (φωλιά) (Plutarch, Lycurgus, c. 16). A similar procedure is recommended by Plato in the Republic (461 C and elsewhere; see Appendix IV. to bk. v. in Adam's edition). In a state like Sparta, where, as Aristotle remarks, all its neighbours were enemies (Aristotle, Politics, ii. 9. 3), and where the Spartans proper were only a small governing caste amid a hostile population, the need for such a regulation in Roxana is less obvious. But in a less stringent measure the regulation no doubt existed in other States. At Athens, if the father did not celebrate the amphibidromia for his child, it was not reared. No State save Thebes, and this apparently only at a late date, forbade exposure (Aelian, Varia Historia, ii. 7). The child was to be taken to the authorities, who disposed of it to a person willing to undertake to bring it up as a slave, and recoup himself for his outlay by the child's services when it grew up.

(8) Luxury and self-indulgence. Although luxury is supposed to characterize only States which are highly civilized, selfishness can be found in all lands. Among the native Australians, where the children are often nursed for several years, it is improper for the mother to have a young child on her hands. Such a child is either killed immediately after birth or left behind when the camp is changed (Spencer and Gillen, Native Tribes of Central Australia, 1899, p. 51; Howitt, The Native Tribes of South-East Australia, 1904, p. 118). In many countries, ancient and modern, an improvement in the standard of living is accompanied by a disinclination to rear children. From the 4th cent. B.C. onwards, this was conspicuous in Greece and formed the theme of discussion for philosophers and satirists. How common the practice of exposure was, may be gathered from the frequency with which the heroines of the New Comedy, who come before us in the Latin versions of Plautus and Terence, are represented as having been exposed. They are, of course, recognized at the critical moment by the trinkets (cretundia) which were attached to the exposed infant. Under the Roman Empire, Masonius Rufus (p. 77, Hense) discloses that all the old under the Emperor Trajan were reared; and Pliny (Ep. x. 74 f.) tells the emperor Trajan as to the legal position of the exposed children reared by others (σπουδάζω) in his province of Bithynia. As the Roman comedy shows, the person to whom the reared exposed child was not moved by philanthropy; their aim was to make them slaves or courtezans (cf. e.g. Terence, Heautontimorumenos, 640; Plautus, Cistellaia, ii. 3. 543-630). Only when a child was exposed for superstitious reasons which made its death desirable, was it exposed where it was not likely to be found. As the Athenians exposed children in a pot (χιτμυρέω, ὑχυμυρέω), and as first-fruits were offered to the household gods in pots, it has been suggested that putting a child in a pot is a form of entrusting it to the gods. This is possible, but there is at present no sufficient evidence to prove it.

Besides these categories, exposure may be due, in isolated cases, to other causes, e.g. domestic persecution. This led to the expulsion of Hagar and her child from the family of Abraham, and her temporary abandonment of Ishmael (Gen 21:10). Temporary national persecution also may lead to exposure, as in the case of Moses (Ex 2:25). But neither is an example of a practice pursued by a nation in ordinary circumstances.

Literature.—Besides the works referred to in the text, there is much on the subject amongst the Indo-Germanic peoples in Schrader's Reassillexion der idg. Alterthumskunde (e.g. 'Aussetzung'), and a very full article in Darmst.; Diet., des Antiquite progres et romaines (e.g. 'Expostulo'). For general treatment of the subject see Platz, Gesch, des Verbrennens der Aussetzlinge (Stuttgart, 1876 [mostly modern tribal procedure]), and Laiimann, Hist. der Kinder der dons und deldten (Paris, 1856). See also Westernmarck, History of Human Marriages (1891), pp. 313-314; Flass, Das Kind (1834), vol. ii. pp. 243-276.

2. Abandonment.—Abandonment of the aged seems to arise simply from dread of the food supply running short, or the difficulty amongst nomad peoples of carrying about with them those who are no longer able to share in the work of the tribe or to shift for themselves. The practice, however, does not prevail amongst all wandering tribes. Among the native Australians the aged and infirm are treated with special kindness and provided with a share of the food (Spencer and Gillen, Native Tribes of Central Australia, 1899, p. 51). On the other hand, the natives of South Africa in their primitive state abandoned the old. 'I have seen,' says Moffat (Missionary Labours and Scenes in Southern Africa, 1842, p. 132), 'a small circle of stake consisted on the ground, within which were still lying the bones of a parent bleached in the sun, who had been thus abandoned.' Amongst the American Indians of the Pacific coast the old are generally neglected and when helpless are abandoned (Bancroft, Native Races of the Pacific States of America, i. pp. 129, 131, 205, 390, and elsewhere). Among many tribes the duty of looking after the old belongs only to their own descendants. Hence the aged of tribes pray for large families, in order that when old they may have some one to support them (H. Ling Roth, Benin, p. 47). In the Qur'an, Muhammad combines the injunction to be kind to parents with a warning not to cast them out of the house (Qur'an, xxi. 150). Amongst the Indo-Germanic peoples, abandonment of the old is mentioned in the Vedas (Rig Veda, viii. 51. 52 [1020]; Atharva Veda, xviii. 2. 34; Zimmer, Altindisches Leben, p. 327 f.). In ancient Persia and Armenia, cripples were left to shift for themselves; and Strabo, who is supported by other authorities, tells us that the Babylonians left the old and infirm to be eaten by dogs; and the Avestan itself recognizes the practice of setting a portion of food by the old, and leaving them to die (Strabo, xi. 11. 3; Vendidad, i. 18 [in this case a person ceremonially impure is thus shut up for life]; Spiegel, Eranische Altertumskunde, iii. p. 683). The Caspians allowed those who had reached 60 of human age to abandon their bodies in the desert to wild animals (Strabo, xi. 11. 3). Still more gruesome stories are told by Herodotus (i. 216, iii. 99, iv. 26) of the Massagetae, of the Padii (an Indian tribe), and of the Issedones. Even among the Greeks the removal of the old was not unknown. Most remarkable was the law of Ceos, which prevented 'him who was unable to live well from living ill.' By it all over sixty years of age were poisoned with hemlock (Strabo, x. 5-6). Amongst the Roman-Babarians are said to have been commonly cast over a bridge (the pons sublicus) into the Tiber ('Sexagenarii de ponte,' cf. Cicero, pro Roscio Amerino, § 100). The northern nations were equally cruel (Gummere, Germanic Orpina, p. 203). When, however, such a custom prevails in a nation from time immemorial, its action is looked upon as natural, and is borne with resignation. And even in Britain, till recent times, severity was regarded as extreme old age, and few reached it. In the New Hebrides, Tanna, the old were buried alive at their own request (Samoa, p. 335), and it was considered a disgrace to their family if they were not. Not infrequently persons in delirium or very ill are abandoned by their relatives (H. Ling Roth, Sarawak, p. 611), no doubt because they are supposed to be under
the influence of an evil power, generally a ghost (Codrington, The Melanesians, p. 194).

ABANDONMENT AND EXPOSURE (Hindu).—The ancient Sanskrit literature of India appears to have preserved some remnants of the time when the patria potestas gave the father a right to abandon and expose his children, especially daughters. Thus it is stated in the lawbook of Vasiṣṭha (xvi. 11. 44 ff.): also Schrader, Reall. del d. Alterthu- 

ABANDONMENT AND EXPOSURE (American).—1. The practice of infant-exposure was widespread throughout North America. The usual motive, especially in the North, was the lack of food, and the consequent difficulty of supporting a child. The practice became frequent among the Eskimos of Smith Sound in the extreme north-east of the American continent, where all children above the number of two are either strangled or exposed to die of hunger or cold, without regard to sex. Infanticide, both before and after birth, which is but another form of exposure, is also common, as when the women of the Kutchins, an Athapaskan tribe, kill their female children to save them from the misery which their mothers must endure (Ploss, Das Kind, ii. 541, 293). Among the Kusile tribe of the Pacific coast, boys were highly prized, but girls were often taken to the wilderness, where their mouths were stuffed with grass, and they were left to perish. Certain Columbia tribes usually treated both children and infants of both kinds similarly, yet abandoned and even killed them in time of dire need, while exposure was not uncommon among the Yulan tribe of Cochimia in New Mexico (Banerof, Native Races of the Pacific States, San Francisco, 1883, i. 81, 205, 533). That this practice is by no means modern, is shown by the fact that the Indians of Acadia in the 17th cent. frequently abandoned their children for lack of time to take care of them, and in Quebec orphans were often exposed. An interesting case is also recorded of a Huron mother who regarded the circumstances associated with her unborn child as uncanny, and therefore procured an abortion. The fetus proved, however, to be viable and later she took it back, although it grew up to be a "medicine-man" (Jesuit Relations and Allied Documents, i. 256, ii. 28, xiii. 196).

Abandonment of the sick and the aged, sparing neither sex, rank, nor kinship, seems to have been common among the American Indians of all times and localities. In Acadia (New France), those who were not abandoned in the age of their parents, were frequently killed, this act being deemed, as it doubtless was in many instances, a kindness. Old men were abandoned to die, especially when sick; but if they did not expire within three days, they were killed by sucking blood from incisions made in the abdomen, and then dashing quantities of cold water on the navel. During this process and at the first desertion the victims wrapped themselves in their mantles and formally chanted the death-hymn. Among the Hurons and Iroquois the sick were left to their fate, and in the Huron tribe the father and wife deserted each other in an illness deemed mortal. Old women were abandoned among the Hurons, and the Ahenakis deserted their medicine-men with equal readiness. The custom of abandon-

Among the Hurons and Iroquois the sick were left to their fate, and in the Huron tribe the father and wife deserted each other in an illness deemed mortal. Old women were abandoned among the Hurons, and the Ahenakis deserted their medicine-men with equal readiness. The custom of abandon-
parents, or the committing of some fault on the part of the boy. If some one else takes pity on the helpless child and brings him up, he is reckoned as his adopted child, though taking a rather low rank in the series of secondary sons. The palak-patra or foster son of the present day may perhaps be viewed as a relic of the ancient usage. On the other hand, there seems to have been a strong feeling against abandoning sons or other relatives without a just cause. Yajurveda (ii. 237) says: 'Whoever, being father and son, sister and brother, having had no other departure, the repudiation of a wife for any offence short of adultery is characterized as a practice no longer fit for the present (or Kali) age. The Hindu castes of the present day do not admit divorce or repudiation, or a very strong text, the repudiation of a wife for any offence short of adultery is characterized as a practice no longer fit for the present (or Kali) age. It is common enough among the lower castes, especially those of Dravidian origin, where the marriage tie is very loose. For the supposed abandonment and exposure of old people, Sanskrit literature seems to contain no other hint than a text of the Atharva Veda (xvii. 2. 54), in which the spirits of exposed ancestors are invoked side by side with those buried or burnt. However, the term 'exposed' (addhita) is ambiguous, and may range from death by burning as it is in the ancient texts, to the burning of hills or to those on trees, according to Persian fashion. Exposure of old people, in a certain way, may be found in the barbarous custom, suppressed by the British Government, of taking persons supposed to be dying to the banks of the Ganges and immersing them in water.

There is statistical evidence that in the Punjab female infant life is still culpably neglected in comparison with male, and that, using the term in a wide sense, female infanticide still prevails in that part of India on a large scale, chiefly among the Nials, mainly despite the prohibition of the Sikh teachers, especially among those of that caste who profess Sikhism.

A. H. ROSE.

ABANDONMENT AND EXPOSURE (Japanese).—There is no evidence of the existence in Japan of the custom of abandoning the aged. Isolated cases of the practice of exposure of infants occur in Japan, as in other countries, but it has never approached recognition as a general custom. From the myth of the god Hiruko (leech-child), it may be inferred that the abandonment of deformed infants was not uncommon in the earliest times. The Nihongi tells us that when this god had completed his third year he was still unable to walk. His parents therefore placed him in the rock-cave near them in order that he might die. We may compare the stories of Moses and Sargon.

W. G. ASTON.

ABANDONMENT AND EXPOSURE (Persian).—The data concerning the exposure of infants in Persia are scanty. According to the Avesta (Panditdād, ii. 29), all deformities were regarded as a bane to the Avesta (Panditdād, ii. 29), all deformities were regarded as a bane to

ABBOT

everything and man nothing. But man thus abased before God
is no proper or rational worshipper of Him. There is ... and the officiating bishop is assisted by two mitred
abbots.
The blessing of an abbess is permitted to a priest by Theodore.

Even those religions—those systems of aspiration and effort—which do not recognize this kind of dependency, would still find room for some abase-
ment in the recognition of the gap between what the individual wants and what God, from the point of view, why should not a man
pride himself on such good as he has already attained? Yet to the religious consciousness of many the presence of this pride would appear to
vitiate all. The theoretic justification for this moral conditionising is no longer made.

The first mention of an abbess (Abbatiessa) is said to be in an inscription set up by an Abbess Serena at St. Agnes extra muros in 514.

Some heads of communities have the title abbott general, archabbot, abbot president. The Abbot of Montecassino has the honorific title of
archabbot, and in the Middle Ages, when head of a
congregation, was called Abbas Abbatum. A new title, Abbas Patris, does denote something larger than himself, and, as it is the title of St. Anselmo, Rome (built by Leo XIII.), as presi-
dent of the new union of all black Benedictines.

The government of an abbey or an abbess is strictly monarchical. Before St. Benedict (c. 520) the abbess was the living rule, guided, if he chose, by the traditions of the Fathers of the desert, by the rules of Pachomius, or Basil, or Augustine, or by the customs of Lernins or Marmoutier. From St. Benedict's time (whose Rule was propagated in Italy by Gregory the Great, and became approxi-
mately universal soon afterwards) the abbess' govern-
ment is constitutional, for he is bound by the Rule (Regula, cap. 64), which was gradually supplemented by decrees of popes, and of councils, and by regulations like those in England of Lan-
franc. When a branch congregations were formed as Cluniacins, Cistercians, Camaldolese, etc.) of many
monasteries, or congregations of black monks (as those of Bursfeld, St. Justina, etc.), the Rule was supplen-
ted by constitutiones or commentaries on portions of the Rule, and by the regulations enforced by visitors or governors. All this applies also mutatis mutandis to the govern-
ment of the canons regular. But the supremacy of the abbess was never seriously weakened, and the monarchical character of abbatial government is the distinguishing feature of the older orders as compared with the later friars, clerks regular, brothers, etc.

As it gradually became customary for many monks to be clerics, it also became the rule for abbots to be priests—in the East from the 5th cent., in the West from about the 7th. A council under Eugenius II. at Rome in 639 made this obligatory for the Canons, Conv. iv. 8472, of the Roman Church, and the Canons
of St. Benedict meant the 'ordination', not the 'ordination', i.e.
the blessing of an abbess. St. Gregory the Great speaks of a 'blessing' an abbess (Ep. xii. 9), and also of the
decision as to the ordination of an abbess being made by the other of another monastery (Ep. xi. 7). The latter had changed his mind and appointed another man in the after-
noon of the same day. Gregory orders him to invite a bishop to ordain, i.e. 'the monk and as an ordination of an abbess.' St. Theodore of Canterbury orders that an abbess shall be 'ordained' by a bishop, who must sing the Mass, in the presence of two or three of the bishop's brethren, et domi et sacramento et pontifice. This is the
most correct form of the abbatial blessing, and the blessing of York (753-756) gives a consecratio Abbatiae vel Abbatissae.

There are now two forms provided in the Roman Pontifical for the blessing of an abbess, one for the blessing of an
abbess, the other for a mitred abbess. The former appears to be no longer used.

The latter is largely modelled on the order of consecration of a

The blessing of an abbess is permitted to a priest by Theodore.
ABBOT--ABBOT OF UNREASON

The form in the Pontifical is simple, but many abbesses have had, and still have, the privilege of being invested with ring and crozier. When temporary abbots were introduced in the 11th cent., the bishop was dispensed with, but Benedictine orders severely censured the omission to obtain the blessing on the ring and crozier of abbots elected for life.

At an early date abbots took an important place in ecclesiastical affairs. In the 5th cent. we find 23 abbots signing the condemnation of Eutyches at the council held by Flavian of Constantinople in 445, and these were probably regular members of the patriarch's eudes or envoys. In Spain and Gaul they appear at councils to represent absent bishops, but in 653 ten abbots are found sitting in their own right at a council of Toledo, and they sign before the representatives of absent bishops (Mansi, x. 1229). It became customary throughout the Middle Ages for abbots to attend councils. At the Vatican Council of 1869 only those abbots who were heads of congregations were invited, naturally without a vote.

Abbots, being the administrators of the temporal goods of their monastery, attained considerable worldly importance. They were often envoys of monarchs and of popes. They sat in Parliaments, ranking in England next after barons. In these parliaments abbots were originally called by the name of Parliament at the good pleasure of the king, but by custom a certain number gained the right of sitting. On the last occasion when the abbots as a body sat in Parliament (28th June 1399), 17 were present. At the Parliament of Elizabeth, however, Abbatt Becknam of Westminster had a seat and vote, since that abbey had been restored to all its privileges under Queen Mary.

The worldly grandeur assumed by abbots has been frequently censured,—for instance, by St. Bernard. In England their position as great landowners and peers of Parliament necessitated considerable influence. The sons of this nobility were sent to be brought up under their care. Monasteries were halls of learning, and many abbots entertained in the abbots' hall. The Abbot of Glastonbury administered a revenue larger than that of the Archbishop of Canterbury. The Abbot of Bury St. Edmunds had a mint of his own. Yet even this position was not incompatible with personal sanctity, as may be seen in the case of Richard Whiting (Gasquet, The Last Abbot of Glastonbury, 1895, p. 56 f.). This external state of abbots lasted in England into the 19th cent., and to some extent is still to be seen.

Exemption of abbots from episcopal control became the rule only when they were joined together in congregations, but it was not an exclusively English law. The first traces of it are found. A council held at Arles, c. 465, exempted Faustus of Lusina from the Bishop of Fréjus, so far as the government of his abbey was concerned (Mansi, vii. 907; Duchesne, Fautes eccl. i. 124). Westminster is said to have received the privilege from John xxII. (c. 670). Some of the greatest English monasteries were never exempt, as Glastonbury, and only five Benedictine houses had the privilege at the Reformation, apart from the Cluniacs, Cistercians, etc. Christ Church, Oxford, still retains its papal exemption from the bishop. Grants of Pontifical or episcopal ornaments, mitre, ring, gloves, and crozier were made by the pope to the principal abbots (e.g. to Westminster in 1736, to the Prior of the Cathedral Abbey of Ely in 1464). These graces eventually became general, but were limited by a decree of Alexander vii. in 1699. Since then further privileges have been granted or confirmed. In some cases a number of parishes are subject to an abbot, who acts as their bishop, as at Montecassino, Cava, etc. The small diocese once administered by the Abbot of Westminster is still under the dean and chapter, and is independent of the Bishop of London.

In the case of such abbots, who are called Abbatis nationes, they reside at the head of the administration and confirmation. Since the monastic state was anciently equated to the clerical, and the monastic tonsure to the clerical tonsure, it is customary to allow abbots to confer tonsure and minor orders on their own subjects, and this is still in force. The Second Council of Nicaea (787) permitted Abp. Agatound to ordain bishops in their own dioceses. Occasionally abbots were sometimes also allowed to give the subdiaconate, but this is obsolete. The institution of the Innocent vii. to the Cistercian abbots to confer the diaconate is too much opposed to the theological opinions of the period to be probably authentic.

The elections of abbots by their monks were often interfered with by the civil power. St. Benedict permits neighbouring bishops or laymen to interfere if a bad man is elected. Charles Martel gave abbots to his officers; even Charlemagne disposed of them at will. The king's conge d'elsé had to be obtained for an election in England. In France and elsewhere abbeys came to be in the royal gift. The habit of giving abbots to seculars in commendam in the 8th to 10th centuries, unhappily revived in the 15th to 18th. The goods of the community were usually already divided with the abbots, and the latter had nothing to do with the manner in which to receive guests. When these were in the hands of seculars, the monasteries were greatly impoverished, and suffered much in regularity.

The congregation of St. Justina of Padua (382) and St. Hildepode preferred to be governed by priors appointed by the abbot. The general chapter for the same reason. When it had become the rule for all ecclesiasties of good family to possess at least one abbey in commendam, it became customary to presume this in all ecclesiasties, and to address them as abbeys. Hence in France, and to some extent in Italy, even youths in seminaries, not yet in minor orders or not tonsured, are regularly addressed by the title, which in the Middle Ages had been considered only dignified for the superiors of the Carthusians or the Friars.

JOHN CHAPMAN.

ABBOT (Tibetan).—The head of the monastery in Tibet is called 'teacher' or k'han-po (the literal equivalent of the Sanskrit upadhyāya). He is superior to the ordinary monastic teacher or professor (lob-pön), and is credited with being endowed, by direct transmission from saints, with the three prerogatives for consecration, namely, spiritual power (dbang), thorough knowledge of the precepts (lung), and capability of expounding the same (krid), which confer on him the authority to empower others. He has under him all the common monks, scholars, and novices, and is the only one entitled to be called a Lama. The lady superior of a convent bears the corresponding title of K'an-mo; the most celebrated of these is the 'Thunderbolt Sow,' a Tibetan creature residing at Samdrubling on the Yangze, and early in the 19th century.

L. A. WADDELL.

ABBOT OF UNREASON.—This title was given in Scotland to one of the mimic dignitaries who presided over the Christmas revels. In England he had the title of Abbé or Lord of Misrule. In France the Abbé de Liecehe held the same office. The Abbé de Liecehe was the chief of a confraternity established at Lille. He was appointed by the magistrates and the people. He wore a cross of silver gilt in his hat, and was accompanied by the officers of his mimic household. A banner of rich silk was carried before him, and his duty was to leave the hall of festivities at Arras and the neighbouring cities at the carnival. Ducasen in his Glossarium says he also bore the titles of Rex Stultorum and Facetiarum Princes.

* It may be noted here that for centuries in Ireland the abbots had all ecclesiastical power, and the bishop was organized not by dioceses but by tribes, and the bishop was in reality a subject of the abbot.

† The 'Abbott' in Buddhism generally will be described under MONASTICISM (Bud.), and the Muhammadan Abbout under MUHAMMADAN.
'ABD AL-QADIR AL-JILANI

At Rouen and Evreux the leader of the frolics was called Abbas Conardorum. Another title was Abbas Juvenum. In certain cathedral chapters in France he was called l'Abbé des Fouz. He was the monastic representative of the Boy Bishop, or Episcopus Puerorum, whose office is recognized in the service "in die Sancti Innocentii" in the Sarum Processionale of 1553. In some cases he was styled Episcopus or Archiepiscopus Faturorum. In churches exempt from diocesan jurisdiction he had the exalted title Papa Faturorum.

In every case these mimic dignitaries represented the clergy in authority in the Church. They masqueraded in the vestments of the clergy, and exercised for the time being some of the functions of the higher clergy. The clergy themselves gave their sanction to the mimic rites: "Deinde episcopus puerorum conversus ad clerus elevat brachium suum diescens hanc benedictionem: Crucis signo vos consigno" (Sarum Process. fol. xiv).

In the York Inventory of 1350 a little mitre and a ring are mentioned, evidently for the Episcopus Puerorum.

These titles are all closely connected with the Festum Natalis Domini, the Feast of the Nativity of the Virgin, in the medieval Church. There is little doubt that their privileges go back to much earlier times. The standard authority for the whole subject is the treatise Memoires pour servir à l'histoire de la Fête des Fous written by Tilliot, who was elected Abbot of Lausanne and Geneva, 1741. Du Tilliot, with good reason, traces them back to the Saturnalia, the Libertas Decembria of which Horace (Sat. ii. vii. 5 f.) speaks when he bids his slave Davus exercise his annual privilege of masquerading as master: 'Age, libertate Decembri. Quando ita majores voluerint, utere, narrat.'

Du Tilliot says: "Comme dans les Saturnales, les Valets faisaient les fonctions de leurs Maîtres, de même dans la Fête des Fous les jeunes Cherces et les autres Ministres intérieurs de l'Eglise officiaient publiquement et solennellement, pendant certains jours consacrés à honorer les Mystères du Christianisme.'

The policy of the early Church was to divert the people from their pagan customs by consecrating them, as far as possible, to Christian use. The month of December was dedicated to Saturnus and the Saturnalia were originally held on Dec. 17. Augustus extended the holiday to three days, Dec. 17-19, Marcial (ob. 101) speaks of it as lasting five days. Lucian, in the 2nd cent., says it lasted a week, and that mimics were present. Duchesne (Origines, p. 265) allows that the Mithraic festival of Natalis Invicti, on Dec. 25, may have had some influence in fixing the date of Christmas in the Western Church. He hesitates as to the Saturnalia. Yet the Christianized festivities of the Saturnalia were probably slowly transferred to the Christmas season by the appointment of the Advent fast. A relic of this still lingers on in North Staffordshire, where the farm-servants' annual holiday extends from Christmas to New Year.

The Boy Bishop (Episcopus Puerorum) was elected on St. Nicholas' Day, Dec. 6, and his authority lasted till Chilidernas, or Holy Innocents' Day. Edward I., in 1299, permitted him to say vespers in the royal presence on Dec. 7. The Santa Claus of to-day still keeps alive the tradition of the Boy Bishop and the Abbot of Unreason.

The concessions of the early Church did not succeed in checking the abuses which had been associated with the Saturnalia. The 'Liberty of Drinking' at New Year and Epiphany, covering the whole of the Christmas festival, the 'Misrule' called forth constant protests. Pseudo-Aug. (Serm. 265) condemns the dances, which after- wards became a recognized feature of the Feast of Fools in the inns and inns of the inns, men in white tunics and scarlet waists, singing and dancing, sometimes singing and dancing, sometimes sent to Spanish Sanctuaries to see the feast and take away the relics.

Christianized diocesan and episcopal jurisdictions were continued in the same district to yield to the secular Church. The carnival connected with the Calendae Brumalia and other festivals were condemned in Can. lixi. of the Council in Trullo in 692. The mimetic paganism of bishop and abbot was especially censured in Sessione xxii. of the Council of Basel in 1439:

'Turpem etiam illum abusum in quibusdam frequentationibus ecclesiis quo certa anni celebratioibus nonnulli cum mitra, consulo, ac vestibus pontificibus etiam quotidie beneficientes Alii ut reges ac duces induit, quod festum faturorum vel Innocentium vel puerorum in quibusdam regionibus nuncupatur, ut Alii larvae et theatrales fecerunt.'

Tilliot also mentions the condemnation of these abuses by the Council of Rouen in 1435, Soissons in 1455, Sens in 1455, Paris in 1528, and Cologne in 1536. In England they were abolished by proclamation of Henry VIII., July 22, 1542, though restored by Mary in 1554.

In Scotland the annual burlesque presided over by the Abbot of Unreason was suppressed in 1555. The guisers, who in Scotland play the part of the mummers in the Christmas revels in England, were probably derived from the same Abbot or from the Abbots of Unreason. In fiction, Sir Walter Scott has left a vivid picture of the 'right reverend Abbot of Unreason in the Abbot'.

THOMAS BARNES.
Abd al-Qadir al-Jilani

He married and had many children—thirteen, according to a tradition reported by Depont and Coppolani (p. 298); forty-nine, of whom twenty-seven were sons, according to another tradition, which seems to be legendary. Many of his disciples were among the most notable of the Maqdisi order, to which he belonged in the earlier part of his life. He was during his lifetime, to preach his doctrine in Egypt, Arabia, Transoxiana, and India. He died at Baghdad on the 8th of the month of Rabi‘ ii., 561 A.H. [1166 A.D.]

Legend.—Besides the above facts, the numerous traditions which have been preserved concerning ‘Abd al-Qadir are for the most part of a legendary character. They deal with his austereities, his visions, and his miracles. Among them are the following:—His mother bore him when she was sixty years old. As a nursing he declined to take the breast in the month of Ramadān. When he came to Baghdad to study, the prophet Ḥādrī appeared to him and prevented him from entering the city; he remained seven years before the walls, practising asceticism and living on herbs. When he withdrew into the deserts around Bagdad, he was visited by the same prophet Ḥādrī, and was fed miraculously. He also received cakes, herbs, and water from the heavens, on his pilgrimage to Mecca. In the desert he was tormented by Satan, who came to him under the form of a great light, and fixed time to time his abode in the ruins of Alvān Kīrā, the famous palace of Chosroes (Le Strange, Eastern Caliphate, p. 34). One tradition makes him spend eleven years in a tower which even the wind could not lift up. He was also called Burj al-‘Ajamī, ‘the tower of the Persian.’ One day Satan tried to seduce him by a false vision. While he stood on the seashore with a great thirst, a cloud sailed towards him from which fell a kind of dew. He quenched his thirst with the water it contained. A great light appeared, and a form, and he heard a voice saying to him, ‘I allow thee that which is forbidden.’ ‘May God preserve us from Satan, the accursed one,’ replied the ascetic. At once the light gave place to darkness, and the form became smoke. He was asked later how he had recognized the deceitfulness of this vision. He answered: ‘By the fact that God does not advise to do shameful things.’ While he taught, he was often seen lifted up from the ground a few paces through the air and then return to his pulpit. Once, as he was speaking in the Niẓamiya school, a Jinnī appeared in the form of a snake, which wound itself around his body and exchanged a word with him. The river Tigris rose high, and the inhabitants of Bagdad, fearing that it would flood the city, came to implore the protection of the wonder-worker. Al-Jilānī advanced to the bank of the river, planted his stick in the ground, saying, ‘Thus far.’ From that moment the waters decreased. Many of these legends have a close resemblance to those of Christian hagiography.

Works.—Many works, mystical treatises, collections of sermons and essays are ascribed to him. Brockelmann (Arab. Litt. i. 435 f.) mentions twenty-four titles of his books still existing in MS. in the libraries of Europe. The two most important are:—Al-qānūna litābīt tariq al-ḥaqq, ‘Sufficiency for the seeker of the way of truth,’ and the Fudūt al-ghaib, ‘The conquests of the mystery.’ The latter work contains his mystical teaching, collected by his son ‘Abd ar-Razzāq. It was printed in Persian at Lucknow in 1880; in Arabic at Cairo in 1309 A.H. A collection of sermons (fudūt) and letters (ādāb) was printed at Cairo in 1302, a ḥīdab at Alexandria in 1304. In the language of the dervish orders, a ḥīzab is a kind of service composed in great part of passages from the Qur‘ān. Le Châtelier (Combr. Musul. du XIXe s., p. 22, n. 1) cites also a collection of prayers named in Turkish Ewawdī Sershif, printed at Constantinople in 1869 A.D. A word (pl. awrād; Turk. ewrād) is a short invocation. His remaining works include exhortations, prayers, a treatise on the Divine names, mystical poems, one of which is on the author’s being lifted up into the higher spheres. Ibn Taimiya commented on some of his maxims.

Teaching.—His teaching may be gathered from the above-mentioned works (cf. also the Lāwādī al-anwar of ash-Shaṭṭārī, ed. of Cairo, 1315, i. pp. 100-105) and from the tradition of his order. It is that of orthodox Muslim mysticism. None of his disciples, we may add, can be said about his symbolism, his asceticism, or his pattern of teaching. His teaching can be gathered from the above-mentioned works (cf. also the Lāwādī al-anwar of ash-Shaṭṭārī, ed. of Cairo, 1315, i. pp. 100-105) and from the tradition of his order. It is that of orthodox Muslim mysticism. None of his texts can be said about his symbolism, his asceticism, or his pattern of teaching.

It is a custom in Muslim mysticism to ascribe the essence of the teaching of the founder of an order to some anterior personages, by means of a chain of intermediaries who go as far back even as the pre-Islamic past. Thus cited, of al-Jilānī should be the famous ascetic Abū-l-Qāsim al-Junādī (died A.H. 288).

Certain traditions attribute to our mystic, especially while on his deathbed, some very profound words which contrast with what we have just said about his feelings and his doctrine. They are thus reported by al-Biqā‘ī (Goldziher, Muh. Stud. ii. p. 289): ‘The sun greets me before he rises; the year greets me before it begins, and it unveils to me all things that shall happen in it. I will then plunge into the sea of God’s knowledge, and I shall see God with my eyes. I am the living evidence of God’s existence ...’ Similar sayings are ascribed to many of the great mystics of Islam. It is probable that they are the work of enthusiastic disciples, and that they express only the close union of the mystic with God in a symbolic fashion.

Order.—The order, or brotherhood, founded by ‘Abd al-Qadir al-Jilānī bears the name al-Qādiriyah. It has great importance in Islam. After the death of its spiritual director it was divided among his sons and then by their descendants. The majority of his sons became disciples of their father, ascetics, missionaries, and men of learning like him. The eldest was ‘Abd ar-Razzāq (A.H. 328-603), the youngest Yalāyah (350-600). It was ‘Abd ar-Razzāq...
who succeeded his father in the leadership of the order, and who built over the tomb of the founder the mosque with seven gilt domes, once celebrated by historians and poets, but to-day lying in ruins (Le Strange, Baghdad, p. 348 f.). Along with the order the posterity of al-Jalānl's children have spread all over the Muslim world. Branches of the order can be found everywhere in Bagdad, Cairo, Hamah, and Yā'ā in the district of Aleppo. A Western tradition claims that one son of al-Jalān, 'Abd al-'Azīz (532-602), emigrated to Fes; but this is contradicted by another tradition (Qalidid, J. M., 235). According to a further tradition, 'Abd al-'Azīz emigrated only to the province of Jihāl. Bagdad has retained the moral centre of the order. But the jurisdiction of the mother-house does not extend beyond Mesopotamia, Syria, and Turkey. In the other Muslim countries the brotherhood went through a process of disintegration, and the congregations have ceased to be subordinate to the mother-house. The monastery (zāviyya) of Bagdad was destroyed by Shaikh Ismail, and restored by Sultan Sulaimā.

The boundaries of the brotherhood reach out as far as the Farther East, into the Dutch East Indies and Chinese Yunnan. In India there are many kinds of Qadīriyās. The Qadīriyā Akbariyya, the best-known, found at the end of the 16th cent. by Muhammad ibn al-'Arabi al-Kātими, forms a distinct order; the Bi Nawād or bega fiqra, recruited from the inferior castes of Muslims, and connected with the Qadīriyā. In Arabia the brotherhood is powerful. It possesses important zāviyyās in Jiddah and Medina, and has thirty mehrābān (motherhouses of congregations) in Mecca. In Constantinople it owns forty houses (takyas). It is widespread in Egypt, at Cairo, all along the Nile Valley; and its missions have advanced as far as Khartum, Kordofan, Darfur, Wadai, Bornu, and Sokoto. There are zāviyyās at Tripoli and Ghadames. In Algeria and Morocco the order embraces various decentralized congregations whose membership reaches a high figure. 24,000 are reckoned in Algeria (Depont and Coppolani), and in the province of Oraan alone two hundred chapels (gubbas), under the name of Sidi al-Jalān, are to be found (Rinn). The brotherhood makes great efforts to convert the Berbers to Islam.

The shirk of the order is nothing but the Muslim confession of faith: la ilāh illa llāh. 'There is no God but Allah.' But according to a usage, probably instituted by al-Jalān himself, these words are not always pronounced entirely. During the prayer in common, which is accompanied by motions of the head and of the body, and in which the dervishes endeavour to attain a state of ecstatic excitement, after having already pronounced the whole formula, they say only 'Allah, Allah!' and finally, when the rhythm becomes more rapid, they pronounce but la ill, the sound being sustained until loss of breath.

Many orders or brotherhoods have separated from the Qadīrite order. The most famous, besides the above-mentioned Akbariyya of India, are the Rifā'īyya, commonly called the 'Howling Dervishes,' founded by Ahmad ar-Rifâ' (died A.H. 570), a nephew of al-Jalān; the Bada-wiyya, an Egyptian order, and the Isāwīyya. The other orders are those of the Bakkā'īyya, Jabbā'īyya, Jibbutiya, Dāsūqiyā, Mu'āmliyya, Tawīlyā, Dālalya 'Amāmiyya (cf. Muhammadism, § viii.).

LITERATURE.—(1) ORIENTAL: Bahā' al-sarrār, by 'Ali b. Yūsuf ash-Shaṭṭūf (A.H. 647-713), Cairo, 1304; Qalidid al-Ḥuṣaynī, Ḥ., al-Qā'id al-Ṭālī, by Muhammad b. Yāhya at-Tādīfī (died A.H. 903), Cairo, 1308. These two are the most important. Brockelmann (A. Litt. l. p. 485) mentions three other biographies still in MS. Colas translated a MS by Shaikh as-San'ūsī, used also by Rinn. Rinn mentions also the Ansūr ad-ṣalātir, by 'Abd al-laṭif ibn Ḥāshimi. Cf.stairs Qard al-Yāfī (died 1367 A.D.) and Shihāb ad-Dīn al-Qāsīllānī (died 1517 A.D.) collected a number of interesting stories relating to the Qadīrites. The Nafīṣ ad-Dīn (Paris, 1866), lithographed at Fez, A.H. 1509, is translated by T. H. Weir in R.I.S. (1903, p. 156). His further work has not yet been commented on by D. S. Mārgoliouth in J.R.A.S., 1909, p. 297 ff.

On the mystics generally see the Naṣrūd Jāmī, Calcutta, 1859; the Wafqūd al-Ḥaṣan, Paris, 1859 (Eng. trans., Paris, 1842-1871); a recent Turkish work on the origin of the principal Muslim orders and their doctrines is 'Abd al-Qādiriyā wa-dar al-faṣūla (Kouluta, 1897). R. Rinn, Esfirades de Constantino, n.d.

B. CARRA DE VAUX.

'ABB AD-AR-RAZZAQ.—I. Life.—The well-known Sāfī, Kamāl ad-Dīn 'Abb ad-AR-RAZZAQ (GHĀNĪ'IM bi-NAJAM ad-Dīn b. Shulha al-Kashī, al-Kašānī, Kāshānī) was a native of Qāshān (Kāshān). He was born in 1873, and died in 1903; yet his book Nafāḥāt al-uns, Calcutta, 1888, p. 561. On one occasion 'Abb ad-AR-RAZZAQ was accompanying the Amir Iqbal Sīstānī on the road to Sulṭānīya, and asked him in the course of conversation what his shahīd—meaning Ahmad ibn Mustafā Rukan ad-Dīn 'Alā' ad-Daula al-Simnānī—thought of the celebrated Sāfī Muḥy ad-Dīn Iba 'Ārabī. The Amir replied that Rukan ad-Dīn regarded him as a master of mystical science, butbelieved him to be mistaken in his pantheistic doctrine touching the unity of the Divine substance, whereupon 'Abb ad-AR-RAZZAQ retorted that the doctrine in question was the foundation of Ibn 'Arabī's philosophy, that it was the most excellent he had ever heard, and that it was held by all the saints and prophets. These remarks were communicated by the Amir to his shahīd, Rukan ad-Dīn 'Alā' ad-Daula al-Simnānī—thought of the celebrated Sāfī Muḥy ad-Dīn Iba 'Ārabī as abominable and far worse than avowed materialism. 'Abbān has preserved the correspondence which ensued between 'Abb ad-AR-RAZZAQ and his adversary (Nafāḥāt, pp. 558-568).

This dispute enables us to fix the epoch at which 'Abb ad-AR-RAZZAQ flourished, since the shahīd Rukan ad-Dīn, his contemporary, was charged with a political mission to the court of Abū Sa'īd, son of Uljaitu, the Mongol sovereign of Persia (A.D. 1316-1335), and we know, moreover, that he composed one of his works, entitled the 'Istīlā (JA for 1873, p. 133). This book was read by 'Abb ad-AR-RAZZAQ, who addressed to the author a letter on the subject (Nūr Allāh of Shustar in the Maṣā'īl al-mu'āinnīn, ib. p. 135, also British Museum MSS. ad. No. 26,716, fol. 351 vo. and No. 23,541, fol. 364 vo.). This letter, with the answer of Rukan ad-Dīn, is extant in the library of Trinity College, Cambridge (Catalogue of the Arabic, Persian, and Turkish Manuscripts in the Library of Trinity College, by E. H. Palmer, p. 116). Consequently there can be little doubt that the closing years of 'Abb ad-AR-RAZZAQ's life fall within the reign of Abū Sa'īd, and he may well have died, according to the earlier date mentioned by Ḥāfiz Bālī, in A.H. 730 = A.D. 1329-30.

Concerning the outward events of his life we
possess scarcely any information. Jāmī states (Naḥafāt, p. 557) that he was a disciple of šayḥ Nūr ad-Dīn ‘Abd as-Šamād of Naṭanz, through whom, as appears from the articles on that šayḥ and his teacher, šayḥ Najīb ad-Dīn ‘All ibn Burghush (Naḥafdt, p. 546 ff.) he received his spiritual descent to the illustrious šīfā Shihhāb ad-Dīn ‘Umar as-Suhrwārī and Muḥy ad-Dīn ibn ‘Arabī. It is related by Yaḥyā (Raūd ad-rrayāshīn, 106th anecdote: p. 65 of ed. of Cairo, 1315) that one day while ‘Abd ar-Rāzzāq was dictating in the mosque at Medīna, a dervish among his audience withdrew into a corner and gave himself up to meditation. On being asked why he did not listen like the rest, he answered: ‘They are hearing the servant (‘abd) of the Provider, not His servant.’

2. Writings.—The most famous work of ‘Abd ar-Rāzzāq is his dictionary of the technical terms of the šīfā, Isṭiḥāāt as-Sūfīyya. It is divided into two parts, the first on the technical expressions (maṭālahāt), and the second on the so-called ‘stations’ (maqāmāt). ‘Abd ar-Rāzzāq states in his preface that he composed it for the instruction of his friends who, not being šīfā, could not understand the technical terms, at least some in some of his other works. The Isṭiḥāāt was largely utilized by Sayyid ‘Alī al-Jurjānī, the author of the Ta’rīfāt or ‘Definitions,’ a well-known treatise of the same kind, and the first part has been edited by ‘Iyāδ al-Sālīm fi šahādāt aṭīl-šān, of which Thouless has made a useful, is also devoted to explaining the peculiar Šīfistic terminology. Some account will be given below of the Rastalat fi l-qudūs wa l-qabd or Ta’rīf al-Dīn on Free-will, which has been published, analyzed, and translated by Guyard. ‘Abd ar-Rāzzāq wrote several books of less importance, such as his allegorical interpretation of the 38th chapter of the Qur’ān (Ta’rīfāt al-Qur’ān) and his commentaries on the Faṣaṣ al-Qaḥkām of Ibn ‘Arabī, on the Thāyiyyat al-Kubrā of Ibn al-Fārid, and on the Manṣūr as-sālīrīn of ‘Abd Allāh al-Anṣārī.

3. Doctrines.—Like the later šīfātīs generally, ‘Abd ar-Rāzzāq finds a basis for his system in Neo-Platonic philosophy as expounded to the Musliams by Fārābī, Ibn Sinā (Avicenna), and Ghazālī. He is a thoroughgoing pantheist, in the sense that he considers the whole universe, spiritual and material, to flow from God. From the Absolute Being, who alone exists, and who is known solely to Himself, there radiates a spiritual substance, the Primal Intelligence (al-‘Aql al-Aʿwaḍ) or Universal Reason, which answers to the esoteric Plotinus and the Nēsēs of Philo. This substance contains the types or ideas of all existing things, and by a further process of emanation these types descend into the world of the Universal Soul, the Plotinian ψυχή, where they become individualized and are transmitted to the mortal sphere. Here for his upward movement by which all individual souls are drawn back to the Primal Intelligence and ultimately reabsorbed.

‘Abd ar-Rāzzāq distinguishes three classes of mankind: the slaves of passion (aḥl waḥf) and sense, who are ignorant of God and of His attributes, and say, ‘The Qur’ān is the word of Muhammad,’ but are saved from hell if they have faith, secondly, the men of intellect (aḥl qalb), who attain to the knowledge of the Divine attributes by means of reflexion and meditation, and who, in the tradition (aḥl ratb), who pierce through the veil of plurality into the presence of the eternal Oneness and contemplate God as He really is (Naḥafāt, p. 559 f.).

Much of this doctrine is not peculiar to ‘Abd ar-Rāzzāq, but belongs to the philosophical school of Šīfism. His originality lies in the fact that he combined his pantheistic principles with an assertion of moral freedom which at first sight appears to be incompatible with them. His theory on this subject is set forth in the Rastalat fi l-qudūs wa l-qabd, (see above, vii. p. 125 ff.); and may be summarized as follows: Everything that exists in the terrestrial world is the manifestation of some universal type prefigured in the world of deities (qaddā), i.e. in the Primal Intelligence, and that gives rise to creation, development, and destruction which is pre-determined in every particular. How then, we may ask, is it possible for men to have any power over actions emanating from a Divine source, and governed by immutable laws? What is the use of commands and prohibitions, of rewards and punishments, if there is no liberty to choose good or reject evil? ‘Abd ar-Rāzzāq, diverging at this point from Ibn ‘Arabī, solves the difficulty by declaring that all actions are the result of direct or indirect causes, themselves predetermined, on which is Free-will itself. In other words, it is foreknown to God and inevitably decreed that every human act shall be produced by the united operation of certain fixed causes, in a certain form; but it is also decreed, no less inevitably, that the agent shall exercise his free choice (iṣṭiyār) in the production of the act. Therefore every act is at once fatal and free. The Qudarīs (Muʿtazilites), who maintain that men are the authors of their own actions, regard only the proximate causes; while the Jābarīs, who hold that all actions are created by God, regard only the remote causes (cf. MUHAMMADANISM, ii.).

Moreover, the distinction of good and evil is essential to the perfection of the Divine scheme, which demands all possible varieties of aptitude, disposition, and endowment. If the beggar were a sultan, and if the ignorant knave were wise and virtuous, the harmony of the universe would be destroyed. God is responsible for creating a world of mixed beings, some deserving, others undeserving, in which He is eternally punished and in whose case He adds the saving clause, ‘unless God will otherwise.’

ABDUCTION—ABBLARD

14

ABDUCTION.—In English law abduction is a term usually, though not exclusively, applied to the taking away or detention of a girl under fourteen or a woman against the will of her parents or guardians; or the taking away and detention by force of a woman of any age with intent to marry or carnally know her, or to cause her to be married or carnally known (Criminal Law and Procedure, p. 100; Legalizm, vol. ii. p. 186).

Hence the name by which he was called, Peripateticus Palatinus (John of Salisbury, Metal, ii. 10). In such cases the prosecution is upon the Crown, and the penalty is imprisonment for a term not exceeding fourteen years.

The growth of the ethical conception of marriage as a matter of free will and mutual consent on the part of persons who have arrived at the age of maturity, necessarily led to the repudiation of abduction as a matter of force and has given rise to a new form of pleading the abductees as those deprived of their liberty. The practice in law is attached to it by the criminal jurisprudence of civilized peoples. See also MARRIAGE, WOMAN.

ABELARD.—I. Life.—Master Peter, surnamed Abelard,* the commanding figure in the intellectual movements of the 12th cent., was born at Le Pallet (Palatinus)† in Brittany, a castle 11 miles S.E. from Nantes, about the year 1079. His parents were nobles, whose piety led them in later life to enter the monastic life. Abelard, though the eldest son, renounced his claims, that he might the better devote himself to learning. I prefer, he said, 'the style of a soldier to the trophies of war.' After studying for a while under the extreme nominalist Roscelin, probably at Lominiè near Vannes, and trying, though without avail, to learn mathematics under Theodoric of Chartres (Poole, Manuel..., etc., p. 366), he was introduced to the Notre Dame of Paris by the fame of its master, William of Champeaux, whose crude realism soon provoked Abelard, though not yet twenty, to open combat. The duel, protracted through years, resulted at length in the overthrow of the older man's reputation and the installation for a while of Abelard as an independent master. When expelled from the Notre Dame by the cathedral, authorities, at the instigation of William, Abelard took refuge first at Melun, afterwards at Corbeil, and finally at Sees. In this last situation he was the centre of the most intense attraction of the cathedral. This abbey of secular canons of somewhat lax life thus became the headquarters of philosophic teaching at Paris, round which gathered the next generation the famous University (Rashdall, Univ. in M. A., i. ch. 5).

The next encounter of Abelard with authority was even more revolutionary. Desirous of attaining distinction not merely, as hitherto, in dialectics, but also in theology, perhaps under the influence of the religious revival which marked the papacy of St. Lucina, whom he visited at this time, to withdraw from being a tolerated custom, descended to the position of a crime. In

See Ducange, s. v. "abiete" (Jouvenel, loc. cit., 366; and the pun on the Fr. abîte below). Of also Éménard, op. cit., 14 s.

* Hence the name by which he was called, Peripateticus Palatinus (John of Salisbury, Metal, ii. 10).

† This spelling would seem more nearly to correspond to the original form (see Poole, op. cit., 157 n.). For its proposed derivation see Ducange, s. v. "abiate" (Jouvenel, loc. cit., 366; and the pun on the Fr. abîte below). Of also Éménard, op. cit., 14 s.
into a nunnery, Abelard, at the age of thirty-four, put himself under the most famous theologian of the day, Anselm of Laon (c. 1113, Deutsch, op. cit. 30 n.). The venture, whether due to religious impulse or to ambition, was not a success. A few lectures convinced Abelard (that he would find little else from them) to go to the most famous theologian of the day, Anselm. ‘Anselm,’ continues Abelard, ‘was that sort of man that if any one went to him in uncertainty, he returned more uncertain still. It was too fearful to hear, but at once failed if you challenged him. He kindled a fire not to give light, but to blind the house with smoke.’ (Hist. Cal. cit. 3, 5).

Abelard soon shocked his fellow-students by expressing the opinion that educated men should be able to study the Scriptures for themselves with the help of the ‘glosses’ alone. (As a matter of fact, the ‘glosses’ in normal use was his tigna, Anselm’s amended form of the Glossa Ordinaria of Walafrid Strabo (c. 849) (Poole, op. cit. 135 n.). In proof of his view, he gave, at their request, a series of lectures on Ezekiel. Such was his success, that we may accept his own statement, that it was only by expelling him from Laon as an unauthorized teacher, as in theology he certainly was, that the authorities were able to check the rush to his class-room. ‘Anselm,’ says Abelard, in a characteristic sentence, ‘had the impudence to suppress me’ (Hist. Cal. cc. 3, 4).

On his return to Paris, Abelard resumed his lectures, whether in the cathedral or in St. Geneviève’s college. Scholars from every land (Peto, Ep. de et. hom. 1, 81. PL clxxvii. 371, gives an interesting catalogue) hastened to sit at the feet of the wise of the age—philosopher, poet, musician, and theologian in one. The Church smiled on his success, and appointed him, though not yet a sub-dean, a canon of Notre Dame (Poole, op. cit. 145 n.; Rémuas, i. 39 n.). Abelard had reached the zenith of his fame. Henceforth the story of his life is one of calamity, not the least element in which was his own moral downfall, the conscious deliberateness of which, however, in our judgment, he characteristically exaggerates in his later reminiscences (Hist. Cal. c. 6; cf. Rémuas, i. 49, as against Cotter Morison, St. Bernard, 263). Into the romance of his connexion with Heloise a canon of Laon (Rémuas, i. 39 n.) was not admitted. The repetition of this well-known story distracts attention from the real greatness of Abelard in the history of thought. In spite of the protests of Heloise that ‘Abelard was created for mankind, and should not be shut like a fig-tree in a garden,’ Abbot Ayoul privately married the woman he had seduced, and, when the secret was out, removed her to the convent of Argenteuil, the discipline of which was very lax. In Abelard’s opinion, as reported for us by one of his students, marriage was lawful for such of the clergy as had not been ordained priests (Sententias, c. xxxi.; cf. Poole, 147 n.). We draw a veil over the story of the revenge of Fulbert, his wife’s uncle. Abelard in an agony of soul and body retired to St. Denis to seek his peace. The demand, tried to transfer her passions to more spiritual objects, and took the veil at Argenteuil, choosing, as she did so, a verse out of Lucan’s Pharsalia (c. 1119). Their boy, to whom the parents had given the curious name of Astrolabe, was left with Abelard’s sister, Denys (Hist. Cal. c. 8. For his career see Rémuas, i. 269).

Abelard found the abbey of St. Denis worldy and dissolute. He retired in disgust to a cell of the house in Champagne, on whose request of certain monks to the abbey, he had demanded, tried to transfer her passions to more spiritual objects, and took the veil at Argenteuil, choosing, as she did so, a verse out of Lucan’s Pharsalia (c. 1119). Their boy, to whom the parents had given the curious name of Astrolabe, was left with Abelard’s sister, Denys (Hist. Cal. c. 8. For his career see Rémuas, i. 269).

be either to the Trinity, or to the Son alone' (Hist. Cal. c. 11). Abelard maintained strict order among his flock is shown, however, by a curious surviving fragment of verse (Rémusat, i. 111).

In 1125, Abelard was invited to be the abbot of the lonely monastery of St. Gildas de Rhuys, near Vannes, the oldest monastery in his native Brittany. He accepted, either urged by his fears of further councils (for Clairvaux, the monastery of the ever vigilant St. Bernard, was not at a great distance from Paraclete; while he dreaded also an attack from Norbert of Magdeburg, the founder of the Premonstratensians), or in one of his frequent illnesses. 'God knows,' he writes, 'that at times I fell into such despair that I proposed to myself to go off and live the life of a Christian among the enemies of Christ.' His life there for the next six, or possibly eight, years (Poole, 185 n.), was one of almost unrelieved misery. The abbot was poor in resources, shameless in its depravity; the monks unscrupulous in their determination to get rid of any reformer. They tried to poison Abelard, first in his food, then in the cup of the Eucharist. He was almost already a victim, but Abelard succeeded in flight. But Paraclete was no longer open to him. In 1129 he had formally handed it over—with the added sanction (Nov. 28, 1131) of a Bull, which he had obtained from Pope Innocent III.—as one of the overcrowded Benedictine houses, as the Paraclete was, to Heloise, 'the princess, and the other sisters in the oratory of the Holy Trinity.' Heloise had been expelled from Argenteuil in 1128 (Recueil, xii. 218) by the mingled rapacity and reforming zeal of Suger, who had made good at Rome the claims of St. Denis to the convent.

The movements of Abelard for the next three or four years are a little uncertain, the more so as he seems to have maintained the rank and title of abbot of St. Gildas. Probably he lived near Paraclete, engaged in collecting and publishing his writings, including his Historia Calamitatum, and in resolving for Heloise the various problems which arose in the establishment of Paraclete as a monastery. To this period belongs also his famous correspondence with Heloise. To pass from these impassioned letters to the scholastic trifling of many of the Problemata Heloissae is chiefly of interest as a study in repression. He resumed also his teaching at St. Geneviève, though perhaps in company with the enthusiasm with which John of Salisbury in 1136 we learn that the master had lost none of his power (Metalogicus, ii. 10, 'contuli me ad peripateticum palatinum'). But for this mention, Abelard's history at this time would be almost a blank. We know, however, that about this date Arnold of Brescia attached himself to Abelard.

When next Abelard appears before us, he is at fatal theological strife with St. Bernard, whom he had first met at Montrigui in quest of the papal grant of the Paraclete. The differences of the two men were fundamental, of the kind that no argument or personal intercourse can remove. That Bernard was a realist goes without saying. Realism in those days was as the supreme representative of the age of all that was best in the old faith; a reformer in morals and life, a rigid conservative in creed and ritual. Abelard, profoundly religious in his way, was the representative of a creed full of dry light sub-matter of that, but destitute of spiritual warmth; and which had shown, both at St. Denis and St. Gildas, little power in turning men from their sins to the higher life. With all his narrowness of intellectual vision compared with Abelard, put St. Bernard down at St. Gildas, and that abode of loose livers would have felt at once the purifying power of his zeal. Bernard's was that baptism with fire which not only cleanses but warms. The intellectual religion of Abelard knew little or nothing. To Bernard—'Faith is not an opinion but a certitude. 'The substance of things hoped for, says the Apostle, not the appearance of empty conjectures. You hear, the substance. You may not dispute on the faith as you please, you may not wander here and there through the wastes of opinion and the byways of error. By the name 'substance' something certain and fixed is placed before you; you are enclosed within boundaries, you are restrained within unchanging limits' (Tractatus de erroribus Abaelardi, iv. 9).

Abelard, on the contrary, argued that reason was of God, and had, as philosophy showed, found God. He argued that 'he that is lusty to trust is light-minded' (Sir 19). Conflict between the two was inevitable; it had already broken out. In one of his letters, Bernard inveighs with his customary rhetoric against: Peter Abelard disputing with boys, conversing with women; even as Moses did, towards the darkness in which God was, but advances attended by a crown of disciples' (Bernard, Ep. ccxxxi.). On his part, Abelard had attacked the saint for preferring the usual form of the Lord's Prayer to that in use at Paraclete, 'I want,' he wrote, 'nothing but the things which your translators call Agnus Dei, which Abelard translates supersubstantiam; see Abelard, Ep. x. in Migne, op. cit. col. 327).

Nor would the attachment to Abelard of his former pupil, the daring revolutionary Arnold of Brescia, tend to lessen the suspicions against him.

The two representatives of systems whose conflict from the nature of things is as inevitable as it is unending, were now to meet in fierce combat at Sens, in the province of whose archbishop both Paris and Clairvaux lay. The challenge to have come from Abelard; for we may dismiss as fiction the statement of Bernard's biographer, Geoffrey of Auxerre, that Bernard privately visited Abelard and secured his repentance (Recueil, xiv. 370). Abelard felt the need of publicly clearing himself from the charges of heterodoxy brought against him by William of St. Thierry in collusion, as some think, with Bernard himself (Bernard, Ep. ccxxvii.). In this challenge Abelard once more shows that neither misfortune nor years had abated the energy and desire to assert his authority where authority was supreme—in a general council. At issue with the deep devotional spirit of the age, he chose his time when all minds were excited by the most solemn action of devotion—the Crusade; he appealed to reason when reason was least likely to be heard (Milman, Latin Christianity, iv. 355). His one advantage would appear to have been that Henry le Sanglier, the archbishop of Sens, had a grudge against Bernard (Rémusat, i. 210—211). Perhaps for this reason Bernard waited till any threats were come to the duel. Such contests, he pleaded, were vain; the verities of faith could not be submitted to their decision (Ep. clxxxix. 4). At length Bernard yielded to the representations of his friends and the summonses of his metropolitan, and set out for Sens. Whitsonide 1141 (for date, not 1140). Poole, Rémusat, see Deutsch, Die Synode v. Sens, Berlin, 1889). Hardly had the council opened (June 4), and Bernard demanded the recital of Abelard's heresies, than Abelard, whether from characteristic irresolution, fear of authority, or desire to prove nerve, or revulsion of feeling, appealed from the very tribunal he had chosen to the judgment of the Pope, and left the assembly to mumble out over its wine-cups its condemnamus, already decided upon, it seems, on the previous day (Baranger de Poiri, Apologeticus pro Magistro in Migne, P.L
The folly of Abelard's appeal is shown by the haste with which (July 16, 1141) Pope Innocent II. ratified the sentence of Sens, largely as the result of the invectives of Bernard against 'the French heresy.' 'Goliath's weapon-bearer, Arnold of Brescia' (Eppl. clxxviii., cxxxvii.), eccles. xlvii., cccxxvii., Poole, 166 n.), who seems, in fact, to have appealed to the Pope, even before the condemnation of Abelard—a matter scarcely to the credit of Bernard (Rémusat, i. 325). For the condemnation see Migne, PL clxxiii. cols. 515-517. The records of Sens have not been preserved.

Abelard had appealed unto Caesar, but it was before a different tribunal that he was to stand. After lingering some days in Paris, he set off for Rome, but on his way old age came upon him suddenly; so in the monastery of Clugny, 'renouncing the tumult of schools and lecturers, he awaited the end.' Through the efforts of the abbot, Peter the Venerable, Abelard was reconciled to St. Bernard (see possibly his confessor Migne, op. cit. 105). His increasing weakness led to his removal to the dependent priory of St. Marcel at Clialons-sur-Siône. There, in the spring of 1142 (April 21), as the abbot wrote to 'his dear sister,' the sorrowing

Heloïse:—

'The advent of the Divine Visitor found him not sleeping, as it does many, but on the watch. . . . A long letter would not undo the humiliation and devotion of his conversation, nor impress it among us. If I mistake not, I never remember to have seen one so true in manners and habit. Thus Master Peter Serial said, his days, and he who throughout the world was famed for his knowledge persevered in meekness and humility, and, as we may believe, he praised to the Lord (Peter the Venerable, Ep. ad Heloisam, Migne, PL clxxiii. col. 347 ff.).

His body was secretly conveyed by Peter to the Paraclete, and buried in the crypt of the church. Before his death he had written to his deathbed near him; not, however, until Nov. 6, 1817, did they rest together in Père Lachaise ('de exequ. leguœ'), Rémusat, i. 268.

2. Influence. Abelard was no heretic, nor was he a deathbed repentance. He always maintained that he was the devoted son of the Church. He was, in the verdict of Peter the Venerable, 'ever to be named with honour as the servant of Christ, and verily Christ's philosopher' (Petrus Ven. ut supr.). It was Peter's duty to help Peter. Abelard did not know that he was 'not an Aristotle if this should keep me away from Christ' (Migne, PL clxxviii. col. 375).

He owes his importance not to his heresies, but to his demand for reverent, thorough, methodical analysis. He had made some excellent remarks in Fairbairn, Christ in Mod. Theol. 120 ff., on the contrast; cf. also Deutsch, op. cit. 172). It is the clear perception of this last that the true greatness of Abelard lies. Abelard's work, like Bacon's, was written as a preparation to memory to the next age, that age which he had done more than any man to usher in. The school in which he taught developed within a generation into the greatest university of Europe, largely through his influence. With Abelard also closes the first period of Scholasticism. In the next generation James of Venice translated the works of Aristotle, hitherto for the most part unknown, into Latin. Henceforth the 'New Logic,' the basis of which in many ways was the same as that which Abelard created, is the foundation of the Christian philosophy to the place of St. Bernard we have Aristotle as the only canonized leader of the Church.

In nothing is Abelard's influence more visible than in his scholars. Of his pupils, twenty-five, it is said, became cardinals, including Pope Alexander III., and more than fifty were bishops. Through Peter Lombard's Sentences, founded on the model of Abelard's Sic et Non, Abelard swayed and moulded the theology of the next three hundred years. As Abelard was the inventor of that spirit claiming for itself the freedom of thought, so in his pupil Arnold of Brescia we find the leader in the new claim for freedom of will in an ideal Christian republic. Another pupil, William of Conches, made a firm though ineffectual protest

The preface to his Sic et Non—a collection of contradictory opinions from the Fathers on all the leading disputes of theology, the prologue of which was probably written not later than 1121 (Deutsch, 462)—he lays down a defence of all criticism: 'By doubting we are led to inquire, by inquiry we perceive the truth.' Of those who argued that we must not reason on matters of faith, Abelard asks:

'How, then, is the faith of any people, however false, to be rebutted, though it may have arrived at such a pitch of blindness as to confess some idol to be the creation both of heaven and earth? As, according to your own admission, you cannot reason upon matters of faith, you have no right to attack others upon a matter with regard to which you think you have been unassailed' (Intro. Theol. ii. c. 3, Migne, op. cit. 1050).

The dilemma of unreasoning pietism has never been better exposed. The circumstances of the times flung Abelard into conflict with Bernard. Intellectually, the only foeman worthy of his steel would have been Anselm of Canterbury. At first sight there seems to be between these two philosophers an impassable abyss, unconsciously summed up by Anselm in the preface to his Our Deus Homo. Some men seek for reasons because they do not believe; we seek for them because we do believe! 'This is my belief, that, if I believe not, neither shall I understand (credendo ut intelligam). This is the exact opposite. He argues that men believe not because of authority but because of conviction. Doubt is his starting-point, reason his guide to certitude. But a deeper study reveals that the differences between the two may be exaggerated, as in Abelard's own generation they certainly were. Abelard owns that the highest truths of theology stand above the proof of our understanding; they can only be hinted at by analogies, as, for instance, the great favour of the seal and the Trinity. But through knowledge faith is made perfect (Deutsch, op. cit. 96 ff., 433 ff.). Anselm was no less anxious to satisfy reason than Abelard, only he wanted to make sure of its limits before he began. Thus the difference between the two great thinkers was one rather of order of thought than real divergence. If the chronological order be regarded, Anselm is right; if the logical, Abelard. In the order of experience faith precedes reason; In the matured had pleaded:

'I would not be an Aristotle if this should keep me away from Christ' (Migne, PL clxxviii. col. 375).

He owes his importance not to his heresies, but to his demand for reverent, thorough, methodical analysis. He had made some excellent remarks in Fairbairn, Christ in Mod. Theol. 120 ff., on the contrast; cf. also Deutsch, op. cit. 172). It is in the clear perception of this last that the true greatness of Abelard lies. Abelard's work, like Bacon's, was written as a preparation to memory to the next age, that age which he had done more than any man to usher in. The school in which he taught developed within a generation into the greatest university of Europe, largely through his influence. With Abelard also closes the first period of Scholasticism. In the next generation James of Venice translated the works of Aristotle, hitherto for the most part unknown, into Latin. Henceforth the 'New Logic,' the basis of which in many ways was the same as that which Abelard created, is the foundation of the Christian philosophy to the place of St. Bernard we have Aristotle as the only canonized leader of the Church.

In nothing is Abelard's influence more visible than in his scholars. Of his pupils, twenty-five, it is said, became cardinals, including Pope Alexander III., and more than fifty were bishops. Through Peter Lombard's Sentences, founded on the model of Abelard's Sic et Non, Abelard swayed and moulded the theology of the next three hundred years. As Abelard was the inventor of that spirit claiming for itself the freedom of thought, so in his pupil Arnold of Brescia we find the leader in the new claim for freedom of will in an ideal Christian republic. Another pupil, William of Conches, made a firm though ineffectual protest
against the growing neglect of literature (Johm of Salisbury, Metal. i. 24 in Migne, PL clxxviii. col. 856).

Of particular doctrines which illustrate Abelard's influence or drift, we select the following as of special theological interest:—

(a) Inspiration.—He limits inspiration to matters regarding faith, hope, and charity, the same not being suited for the ordainment or enlargement of the Church (see his Prol. in Ep. Rom., Migne, op. cit. 785). Even 'prophets and apostles may err' (Prol. in Sic et Non, Migne, op. cit. 1345), while a place may beyond this be found in the lineage and doctrine of revelation given to the heathen philosophers, especially Plato (Theol. Christ. lib. ii. passim, e.g. Migne, op. cit. 1179. Of epit. Theol. Christ. c. 11).

(b) The humanity of Christ.—This he claims to be essentially real. He goes so far even as to claim that it includes 'humana infirmitas veros defectus' (Epit. Theol. Christ. c. 23). In his emphasis on the real humanity of Jesus, Abelard is a complete contrast to his age.

(c) He claimed that the sin lies in the intention, the evil deed itself being an action which is not of itself evil. Virtue cannot be attained except by conflict. Ignorance in the case of the unenlightened does not constitute sin, and the Jews who ignorantly crucified Jesus must be judged accordingly. (A doctrine of the early church may now be best gathered from his Sitio te ippena, esp. cc. 2, 3, 13. Its very title shows the emphasis he places on self-knowledge or intention). Original sin is thus the penal consequence of sin and not its self. It is inconceivable that God should damn a man for the sin of his parents' (Epit. Rom., Migne, op. cit. 866 ff.).

(d) From this it is an easy transition to Abelard's moral theory of the Atonement—Christ's creating within us His passion a love which itself delivers from sin (Expo. Rom. in Migne, op. cit. 836, 839). He rejects totally any theory that makes the Atonement a redemption from the right of the devil (Epit. Theol. Christ. c. 23).

Abelard's influence in the field of Loge was very great, amounting almost to a revolution. He brought to the attention of the day the Conceptualism, midway between the Nominalism of Roscelin and the crude Realism of William of Champeaux. He held that we arrive at the general from the particular by an effort of thought. Thus a concept of the world and that these also of the universals, in so far, that as they were the necessary creations of the intellect. Abelard thus returned to the position of Aristotle, probably without any direct knowledge of Aristotle's arguments (Poole, 142 n.). Hence the reputation of Abelard in dialectics in the following centuries, when Aristotle had become dominant. (For a full discussion see Remusat, vol. ii., or von Prantl, or Ueberweg, i. 592 f.).

Abelard's versatility was very great. In dialectics and theology he was the master without a rival; he also lectured on the great classical lawtexts (Rashdall, i. 63 n.). His vernacular songs have perished; the religious hymns (in Migne, 1759 ff.) give little indication of the great power that he exercised in this matter. As a humanist, his qualifications, as also in the case of the Heidegger, have been exaggerated. His knowledge of Latin literature was considerable, of Greek slight, and of Hebrew nil (Remusat, i. 50; Deutsch, 68 ff.). Of all modern authors his influence is greatest. His citations from the Fathers are extensive (Deutsch, 69 ff.), as the reader may see for himself by turning over the pages of Sic et Non, though many no doubt are second-hand. His eloquence, wit, and charm of manner, added to a culture that sovered almost the whole range of knowledge as then conceived, were acknowledged by his enemies. To this we have the witness of his epitaph:—

'Est satiis in titulo: Petro hic jacet Abaelardus Hulc soli patuit scilicet quidquid erat.'

(Poole, 145 n.; for different and inferior reading, Migne, 138; Remusat, i. 258 n.).

But the truest estimate of Abelard's greatness is that unconsciously given by William of St. Thiiery in his invertebrate against himself.

14 His books pass the seas, cross the Alps. His new notions and dogmas about the faith are carried through kingdom and province; they are preached before and publicly defended, insomuch that they are reported even to have influence at the court of Rome' (Op. Bernard, Ep. ccxxvii).

Abelard's spirit is seen in the victories and movements of later thought.

LITERATURE.—A. The chief source for the life of Abelard will be found in his autobiographies, the Historia Calamitatum. In addition, we have some references in Otto of Freising's de Gestis Frederici (ed. Pertz, v. 29), esp. pp. 147-48, with reference to Synod of Mainz. The first life of Abelard's is the Abendlande (in Migne, PL v. 139, or Bouquet, Renouf, xiv), and, of course, the Letters of St. Bernard. We may add the A. b. Thierni (in Bouquet or in Remusat des Hist. des Gaules, xiv.), and Suger's de rebus in admin. sua gestis (in Duchesne's Script. Franc. iv.) which is the best sketch in English is by R. L. Poole in his Hist. of Hist. of Med. Thought (1884); Abelard's connexion with the University is considered in H. A. C. Littledale, in Theology and Philosophy of the Middle Ages, and in the edition of his works of Remusat. In German: Peter Abelard (1861) is the work of a partisan; the chapter on Abelard in Bernard (many eds.) is not altogether satisfactory. In French we have the admirable Abelard, 2 vols. (Paris, 1845), of Charles de Révus. In German: Peter Abelard (1865), has given us a thorough criticism of Abelard's theology which may be compared by the reader. H. H. deubert has added much to our knowledge of Abelard's closing years by his Die Synode von Berlin (1870). Adolf Hans-\footnote{Hans-Peter Abelard (Leipzig, 1869), had added much to our knowledge of Abelard's closing days by his Die Synode von Berlin (1880).} be's Aberalder als umstandsarener (Berlin, 1880). Of the works of Abelard we have the following editions:—Migne, PL v. clxviii. (1865), but without the Textus de Sententiarum, first published in 1849. On p. 276 of Migne's edition there is an amusing suppression of what would shock Catholic ears. Migne's edition contains the Sentium first edited in full by Hanke and Lindenau (Heidelberg, 1861), as also all the works of Abelard, for the first editing of which are indebted to Victor Cousin: Überzeugungen insbesondere: Leben und Wesen des Abelard (Paris, 1873); and, more especially for his Logic, von Prantl, Gesch. d. Logik im Abendlande (4 vol., Leipzig, 1860-1876).

On p. 276 of Migne's edition there is an amusing suppression of what would shock Catholic ears. Migne's edition contains the Sentium first edited in full by Hanke and Lindenau (Heidelberg, 1861), as also all the works of Abelard, for the first editing of which are indebted to Victor Cousin: Überzeugungen insbesondere: Leben und Wesen des Abelard (Paris, 1873); and, more especially for his Logic, von Prantl, Gesch. d. Logik im Abendlande (4 vol., Leipzig, 1860-1876).

ABEMENT.—In its most general sense 'abemtment' means encouragement, countenance, aid; but the word is now used almost entirely in a bad sense as encouragement, counsel, and instigation to commit an offence and to plot the offense, and to instigate any one 'directly or indirectly counsels, procures, or commands any person to commit any felony or conspiracy which is committed in consequence of such counselling, procuring, or command,' he is described in English law as an accessory before the fact (cf. Stephen, Digest of the Criminal Law). In most criminal codes an abettor or accessory is usually described as a person who has in some manner led to, or facilitated the execution of, an offence or who renders material or moral assistance. Without being present at the actual perpetration of a crime or an injustice, a man may be useful to the perpetrator of it by assisting him to plan it, or by placing information before him which will facilitate the offence or enable him to escape. Or an abettor may aid in the forces of the plan by whom any one could be guilty of counselling the perpetration of murder receives the same punishment (nämlich, dekaptention) as if he had committed it. (Cf. Letourneux, L'Evolution juridique, p. 169). In Roman law, in ancient German law, in old French law, and in
English and American law, no distinction is made, in cases of serious crime, between an accessory and a principal. ‘Each in English law may be indicted, tried, convicted, and punished as if he alone and independently’ (Stephen) had committed the offence (C.F. Post, Ethnological Jurisprudence, 1894, ii. 296 f.) In ancient Jewish law, any one inciting or seducing the people to commit idolatry was ordered to be stoned to death (Dt 13:1-11). Idolatry was regarded as an act of supreme treason against the theocracy, and every sort of incitement to commit it was visited with the severest penalties. In primitive penal law, abetment does not appear to have been a punishable offence (Post), and in Talmudic jurisprudence no cognizance is taken of incitement by thoughts or words (J.E., i. p. 54).

In recent years, certain Italian jurists (e.g. Sighele, Teoría positiva della complicita, Torina, 1894) have contended that no distinction should be made between accessories and principals, on the ground that a crime committed by persons acting in concert is more dangerous in character than an individual crime committed by a single individual, and that men united for the common purpose of committing a crime ought to share the responsibility for it in common. Habitual offenders, it is contended, frequently act together, even in a moral sense, and the possession of the facts shall be the actual perpetrator; therefore all of them ought to be held equally responsible. The supreme object of the law should be to strike at the association, and not merely at the individuals of which it is composed. It is the association that is the danger.

W. D. MORRISON.

ABHAYAGIRI.—Name of a celebrated monastery at Anurâdhapura, the ancient capital of Ceylon. It means ‘mountain of Abhayas,’ or one of the names of King Vaṭṭa Gamini, who erected the monastery close to the stūpa, or solid dome-like structure built over supposed relics of the Buddha. It was this stūpa that was called a mountain or hill, and the simile was not extravagant, as the stūpa was nearly the height of St. Paul’s, and its ruins are still one of the sights of Anurâdhapura.

There was considerable rivalry from the outset between monks at this establishment and those at the much older Mahâ Vihâra (the Great Minster), founded 217 years earlier. The rivalry was mainly personal, but developed into differences of doctrinal opinion. Of the nature of these latter differences there is no exact knowledge, and these were probably not of much importance. On one occasion, in the reign of Mahâsena (A.D. 275-302), the Great Minster was abolished, and its materials removed to the Abhayagiri. But the former was soon afterwards restored to its previous position, and throughout the long history of Ceylon maintained its pre-eminence.

ABHIDHAMMA.—The title of the third (and last) group, or pītaka, of the Buddhist canonical books; a name also for the specific way in which the Dhamma (doctrine) is set forth in those books. It is in that specific treatment, and not in any distinctive subject-matter, that the real use and significance of these books for early Buddhism are to be found. A myth grew up among 19th cent. Indologists, that the Abhidhamma pītaka was the repository of Buddhist metaphysics. Acquaintance with the subject is to know one’s of the Alâtipalled notion. There is, no doubt, an abstruse and abstract suggestiveness in the titles and opening sentences of the books and their divisions, giving a fictitious suggestion of originality and profundity. But, besides this, there is an ancient tradition of superior erudition and higher standing attaching to those of the Buddhist order who were Abhidhammikas, or experts in Abhidhamma. Thus, in the Mihintale rock inscription, dating from about the commencement of our Middle Ages, tithes from 12 villages or towns are allotted to the cave-rectories there who were Abhidhammiaks, as against tithes from 7 and 5 respectively allotted to experts in Suttanta and Vinaya (that is, in the Doctrine and in the Rules of the Order). And whereas mastery of these two was held to establish the expert in sīla and samâdhi respectively (that is, in conduct and meditation), knowledge of Abhidhamma involved the development of pāññā, — constructive imagination and comprehension,—which ranked among the highest virtues. Once more, in the ancient book translated as The Questions of King Milinda, the acquisition by the youthful genius Nāgasena of the contents of the Abhidhamma is acclaimed with wonder and delight in earth and heaven, while his rapid attainment of the remaining pītakas excites no such commotion. Finally, the title itself may have helped to mislead Western, and even Eastern notions. Abhi can mean sur, super, and hence suggests an analogy with Aristotle’s Physics and Metaphysics. But as the title, gives ati (‘beyond’, ‘above’, ‘to excess’) as the equivalent of the prefix, inasmuch as Abhidhamma goes beyond the Dhamma, and is distinct from it. But he proceeds to explain that this distinction is due not to any superior method, or nature of subject-matter, but to the more detailed analysis given to points of doctrine in the Abhidhamma as compared with the Suttanta methods. There was a legend in his day that the Abhidhamma was composed and dictated by the Buddha in the Tâvastima heaven, whither he had transported himself to preach the Dhamma to his deified mother and hosts of devas. It is not consonant with the Buddhist standpoint, that such an audience should be held capable of benefiting by disquisitions on philosophical problems which had been withheld from the stronger intellects of the Buddha’s chief disciples, whom he instructs in the Suttanta. In fact, the legend sprang probably from the orthodox anxiety to involve the disappointed, not inferior to that of the two earlier pītakas, a series of compilations which are manifestly of later date, and the work of elaborating scholiasts.

Let it, then, be clearly understood that our present knowledge of the philosophy which is held in the Buddhist Pâli canon would be practically undiminished if the whole of the Abhidhamma pītaka were non-existent. That philosophy is all to be found in the Sutta pītaka. The Abhidhammikas may nevertheless be held to have surpassed his Suttantika confrères in two ways. It should always be remembered (and the usually wearisome form of the Abhidhamma books never lets the reader forget it) that the canon was compiled, and an unceasing generations learnt, as an encyclopaedia. In the first two pītakas the memory is aided by episodes giving occasion for the utterance of rule, doctrine, or discussion, and also by frequent verse. The Abhidhamma gives no such aids. It helps only by catechism; in its last and longest books, not even by that. Hence the call for sustained reconstructive and reproductive effort must have been more severe. And, further, since the work is mainly a recount, with analysis and elaborations and comment, of Suttanta doctrines, the Abhidhammikas might be expected to involve a knowledge of the gist of the Sutta pītaka.

The burden, then, of Abhidhamma is not any positive contribution to the philosophy of early Buddhism, but analytic and logical and methodological elaboration of what is already given. As
such it might have almost equalled, in value to the
world, the contents of the discourses. As a fact it
is an anomaly of formalism. It is impossible to
estimate the extent to which the
exaggeration of the Indian temperament and the
temperance of the Greek temperament were due to
the absence and presence respectively, during
the lifetime of each, of the written book. Nor
where as in India do we find imagination so
elastic and exuberant, running riot through time,
space, and the infinite; and nowhere else is seen
such determined effort to curb and regulate it.
Abhidhamma training was one of the most
energetic and effective efforts that have ever been
made in this direction. It was specially calcu-
lated (according to Buddhistha, Athatsalini, p.
24) to check those excesses over the normal mind
(dhammachitta) which, in the Buddha's words,
tended to loss of balance, craziness, and insanity.
The chief methods of that training are: first, the
definition and determination of all names or terms
entering into the Buddhist scheme of culture;
secondly, the enumeration of all doctrines, the-
etorical and practical, as formulas, with co-
dordination of each as legal logical interrelated;
and finally, practice in reducing all possible heterodox
positions to an absurdity—a method which is con-
fined to the somewhat later fifth book, the Kathā-
vatthu. Even in these lofty aims, however, the
want of restraint, helped by the cumbrousness of
paradigm, tends to defeat the very objects sought.
The logic of definition is not the same as we have inherited, and the propositions
yield strings of alternatives that have often little
or no relation to facts.

Of the seven books of the Abhidhamma pitaka, the first five
have been published by the Pali Text Society, viz. Dhamma-
mandala, Pitakko-piṭaka, and Kathavatthu; the sixth, or Yanaka, is not yet edited; the seventh,
the Pathāna, in [1907] in the press. The first book has been trans-
lated by the present writer under the title, A Buddhist Manual
of Psychological Ethics, London, 1900. Besides these seven,
there still survive, in Chinese or Tibetan translations, other
seven books, which form the Abhidhamma literature of the
Sarvāstivādins—a school which split off from the original nucleus
of Buddhist culture, a very full index to the contents of these
seven is given by Professor Takaicus in JPTS, 1906. But the
books themselves have not as yet been edited or translated.
Their unsettled, or they are certainly
earlier than the Christian era. These works form the basis of
the celebrated, but as yet undiscovered, Abhidhamma-kosa, or
Dictionary written in Sanskrit, as well as of its Commentaries, and other cognate works, some of which
were in Sanskrit and others in Chinese or Tibetan versions,
and which carried on the development of Abhidhamma down
the 2nd or 3rd cent. A.D. Professor Buncy Nanjo, in his
course on the Buddhism of India, has said (see above),
the titles of no fewer than thirty-seven of these works still
exist. In the later developments of Buddhism in India, none
were called the so-called 'Great Vehicle,' the use of the term
Abhidhamma gradually died out. But in other Buddhist
countries, where Pali has retained the literary language,
books on Abhidhamma have continued to be written down to
the present day, the best known being the Abhidhammatha-
sagaka, published in 1884 by the Pali Society.

C. RYIE. DAVIDS.

ABHIDHARMA KOSA VYAKHYA.—One of the most important Buddhist texts preserved in
Nepal. It is a commentary, written by a scholar
named Yasomitra, on a classical account of Bud-
hist metaphysics: Abhidhāma-kosā, the ‘treasure
of Abhidhāma’. The Sanskrit original of the Kosā
seems to be irrecoverably lost; but there still exist
Chinese and Tibetan versions, which the Chinese
are the oldest. The earliest of these is the work of a Buddhist monk, Paramārtha, dated A.D. 563–567;
the second, being a revised translation, was made
by Hiuen-tsiang, the celebrated pilgrim, A.D. 651–
654. The author of the Kosā is Vasubandhu, one of
the most illustrious doctors of the Buddhist
Church, who flourished about the end of the 5th
cent. A.D.

The Kosā itself consists of two parts: (1) a
summary account of the doctrine in 606 verses (śākica);
(2) an illustrative commentary (ṣārīti) on these
verses. The subject-matter is discussed in eight
subjects, viz.: the principles (abhisamīya), the senses
(indriya), the worlds (lokā), the inclinations
(ansāsya), the saint (ārya pudgala), the science
(jñāna), the trance (samādhi), the individuality
(pudgala). Vasubandhu belongs to the school of
the Sarvāstivādins, who affirm the existence of
 elastic things—a school of the Hinayāna, or 'Little
Vehicle.' The Kosā has nevertheless been admitted
as an authority by all schools of Buddhism; the
author of the Vyākhya, Yasomitra, is a Sau-
trāntika, and Chinese and Japanese Mahāyānists
make frequent use of it as a text-book. It was
principally intended as a treasure of the literary
and critical culture of Buddhism.

SYLVAIN LÉVI.

ABHISEKA (literally ‘pouring upon’ [from abhi+sihū]).—A compound which, without
definite ceremonial implications, occurs several times in
the Aṭṭhārva Veda, but not in the Rig or the Śāma.
In the White Yajur Veda, and in the third Sadhīta
of the Black Yajur Veda, as well as in several Brāhmans and the śrauta ritual of all the four
 Vedas, we find abhishekaṃyai as the name of a rite
included in the rājasāyana, and the last book of the
Aitareya Brāhmaṇa has abhiseka itself for its main
topic.

The ceremonial sprinkling, anointing, or
baptizing of persons and things is a usage of such
antiquity and universality, that its origin and
significance could not methodically be made
the subject of an inquiry confined to India (see also
ANOINTING). If the earliest anointing was with
blood, and the object of it to confer vigour, the
evidence for the former truth must be sought out-
side India; and although an invigorating power
is in fact ascribed, we (see above, 2. 2.) to the rite, the Brāhmānical theologians were
quite capable of arriving at such a conclusion
without the help of an old tradition.

We may (A) begin by a statement of the actual
employment of such a ceremony, so far as it is
known to us from narrative sources, and then (B)
append an account of the Brāhmānical prescrip-
tions in connexion with abhiseka, vijayopaya,
and rājasāyana ceremonies, and the ritual appertaining
to them.

A. 1. Subjects of the ceremony.—The persons who
underwent the rite of abhiseka were in the first
place emperors. The Aitareya Brāhmaṇa (vii. 15)
states that the object of the rite the attainment
of paramount power, which it names with a
great amplitude of synonyms, and it annexes a
list of the famous rulers of India, who had been
so distinguished (vii. 21–23). In the Mahā-
brāhara we have two abhishekhas of Yudhiṣthira:
the first (Sabha Parvan, cc. 33, 45, esp. 45) is
preceded by victorious expeditions in all directions and
celebrated as part of the bhātāyya in the presence of
 subordinate kings, while the second (Sati Prayopaya,
c. 40) follows the conclusion of the great war.
The Buddhist emperor Aśoka was not crowned
until four years of conquest had followed his access-
in (Mahawamsa, Turnour, p. 52), and in the case of
ABHISEKA

Harsa Silādiṭya of Ujjain there was a similar postponement (Huen-tsiang, Si-Yu-Ki, tr. Beal, i. pp. 219-213). An imperial abhiseka occurs also in Kālidāsa’s Rāhuṣaṇa, sarga ii., and the inauguration of Naravāhandaättata in the different versions of the Bhṛhatkāthā (Ksemendra, xvii.; Somadeva, xv. 110, esp. v. 89) is that of a universal emperor; cf. also Epigraphia Indica, ii. 4; v. 16.

We have less testimony for the practice in the case of ordinary mahārājas or kings. But no doubt it would be usual with these also, so long as they retained any measure of independence. For in the first place, the line between kings and emperors would be very hard to draw, and the Aitareya Brāhmaṇa (vii. 14) plainly contemplates also the abhiseka of mere kings. Secondly, the Kauśika Sūtra of the Atharva Veda (xvii. 11–13, ap. Weber, ‘Ueber den Rājaśatra,’ p. 141) distinguishes the abhiseka of a simple king (śarājaṇa) from that of a higher (varṣyaṇa). The Mahābhārata (Śantī Parvan, v. 2486, ap. Goldstücker, s.v. ‘abhāsā,’) p. 280) speaks of the abhiseka of a king as the most essential matter for any country. The father of Harsa Silādiṭya, Pratāpaśrī, underwent the rite of abhiseka, although he was no universal emperor (Harsa-Charita, ed. Bombay, 1892, i. 132, ii. 9, 10).

See also Jātaka, Nos. 456 and 458; Jacobi, Erzählungen aus Mahābhārata, p. 56; Somadeva, iii. 112, 107 ff.; the various Rājābhisekaśuddhathās and prayogas, and esp. Brāhmaṇa Nīkantha’s Nītayāyukha, where a full rite is given (sub init.).

We may mention here that the Atharva Veda includes a coronation (svājāna) hymn (iv. 8).

The anointing of an heir-apparent (yuvārāja) by his father is supported by several examples from the Epics (Goldstücker, op. cit., p. 282), to which we may add the references in the Harsa-Charita, ed. Bombay, 1892, i. 91–94, and three in the Bhṛhatkāthā (Ksemendra, vii. 259; Somadeva, xv. 34, 107 ff.); Epigraphia Indica, iv. p. 120, l. 2, and Kalpasūtra (ed. Jacobi), p. 74, § 211.

The case of Rāma in the Rāmāyana, of which the Athyodhā-kāṇḍa (cc. 1–17, with Yuddhā-kāṇḍa, c. 119) supplies the fullest account of the state and circumstance of a royal inauguration, is peculiar in two respects—the inauguration was initiated as a yuvārājaabhiseka, though completed after Rāma’s accession, and an example of the pugyābhiseka, which we find fully described in the three texts, namely, Atharva Veda Parisiṣṭa, No. 4, the Brhaspatihīṭa of Varāhamihira, c. 48, and the Kālikā Purāṇa, c. 98. The special feature of this rite is that it took place at the conjunction of the moon with the asterism pugya (December-January), at which time, we are informed, Indra originally conquered the demons (Rāma, ii. 14, 46), while, according to the Buddhists, both the anointing of an heir-apparent and the abhispākramaṇa (cf. the Jaina ncmikābhiseka in Bhagavatī, ix. 33, p. 819, a ref. due to Prof. Leumann) of a Bodhisattva befal at the same hour (Mahāvam, vol. ii. pp. 158, ii. 2–4). This date is many times cited in the passages in the Rāmāyana (e.g. 2, ii. 10, 3, 39, 4, 40, 14, 46, vi. 112, 56, 70); which also mentions a specially adorned chariot (pugyārathra), described by Hemāḍri, i. 283, 284 (cf. Sīsūppalavadha, iii. 22, and Epigraph. Ind. ii. 71), and no doubt identical with the pjarva or pjarva (cf. Jātaka [Nos. 376, 445]). Taking the pugyābhiseka or pugyāṣaṇa, as described in the Kālikā Purāṇa and Brhaspatihīṭa, presents some very interesting features,—it is by no means confined to the inauguration of sovereignty,—and would probably repay anthropological investigation.

Anointing was also practised in the case of certain ministers of state. The Harsa-Charita speaks of ‘anointed counsellors of royal rank’ (mūrdhābhī ṣākta amātāya rājaṁanaḥ, p. 198, ll. 13, 14); and for the purohiṇa, or state priest, there was a special ceremony called bhṛṣaṇatiśaṇa connected, though somewhat indefinitely, with the vajapeya (Eggeling, Satapatha Brāhmaṇa, iii. p. xxv). The account of the purohiṇa, which in the Aitareya Brāhmaṇa (vii. 24 ff.), and Kauśika Śatapatha āranyaka, still follows abhiseka, seems not to include a mention of sprinkling. As regards the senapati, or commander-in-chief, Goldstücker has given (op. cit. p. 285) quotations from the Mahābhārata (Śalya Parvan, adh. 46, and elsewhere). These and other sources may we cite the case occurring in Prof. Jacobii’s Erzählungen aus dem Mahābhārata, p. 17, l. 29.

The anointing of images at the time of their inauguration (pratīṣṭhā), on occasion of festivals or of distress, or regularly, is a custom still prevalent among the Hindus in India and the Buddhists in Nepal. Rules for it are given in many manuals (Pāṇḍīvīdi’s and Pratīṣṭhāvīdi’s); an earlier allusion to it may be cited from the Harṣa-Charita, ed. Bombay, 1892, i. 171, l. 2). The fluid mentioned in this case is milk; but a variety of other substances, including water of various kinds, cow-dung, earth from an anthill, etc., etc., are named by the authorities whom Goldstücker cites.

Finally, the name abhisekabhaṇṭi is given by the Buddhists to the last of their ten bhūmis or stages of perfection (Mahāvastu, i. 124, 30). And further, the word abhiseka was applied to any ceremonial bathing, such as has always been, and still is, practised by Hindus at sacred fords, tanks, etc. etc. For abhiseka of neophytes, see Agnipūrāṇa, c. 90, Pousin, Études, 208 ff., and Rājendralal Mitra, Notices de Sanskrit BSS, No. 1568; of barren women, etc., Hemāḍri, Pratākṣāṇiā. 2. Ritual and occasion of the ceremony.—This is not the place for enlarging on the varying details of the inauguration ceremony as described in the Sanskrit literature. The reader will find in Goldstücker’s Dictionary, s.v. ‘Abhiseka,’ ample material, extracted from the Mahābhārata (Śantī Parvan, c. 40), Rāmāyana, Agnipūrāṇa (c. 209), and Mānasāra. Although in these works the special priestly aspect of the ceremony is little developed, Goldstücker (op. cit. p. 280) that the details as given in the Mahābhārata and Rāmāyana show ‘that the vaidik ceremony had undergone various modifications at the time of their composition,’ while (p. 282) ‘the inauguration ceremony at the Paurāṇic period has but little affinity with the vaidik rite; it is a series of proceedings which are founded on later superstitions, and reflect scarcely any of the ideas which are the groundwork of the ceremony of the Aitareya Brāhmaṇa.’ Such changes are, of course, far from unnatural; but there may also have been special causes at work, such as the neglect of the old śravaṇa ritual, or the necessity of providing new forms for rulers who were without title to kṣatriya rites.

The general features of the ceremony seem to be as follows: Prior to the rite (e.g. on the previous day) the king undergoes a purification, consisting of a bath, etc., no doubt analogous to the Vedic dīkṣā. Essentials are—(1) appointment of the various ministers of state (cf. Jātaka, Nos. 376, 445). The ceremony before or in the course of it: (2) a chariot, or the other royal ratnas, a queen, an elephant, a white horse, a white bull, a white umbrella, a white chowrie or two, etc.; (3) a throne (bhadrāsana, simhāsana, bhadrāpūṭa, parvamaṇa) made of gold and covered with a tiger-skin (4) a place * See Rāmāyana, i. 16, 15–12; Ksemendra, xvii. 38 ff.; Somadeva, xv. 119. 65 ff.; Jacobi, op. cit. p. 28, 11 ff.; Śantī Parvan, c. 40.
golden vessels (or one of them golden), filled with water of various special kinds, honey, milk, clarified butter, and other very miscellaneous ingredients. In the actual ceremony the king is seated with his queen on the throne, surrounded by his chiefs, and he is sprinkled not only by the *purohit*, but also by other priests, by the ministering *devis*, by the *sumaves*, and in the Mahabharata, Krsna is the first to sprinkle Yudhisthira, representing perhaps the *rajakartr* mentioned in the Aitareya Brāhmaṇa. The rite is performed with prayer to Indra, or after the manner of Indra's inauguration as king of the gods. The consecration, the king makes presents (cf. Harṣa-Charita, ed. Bombay, 1892, c. ii. p. 132, ll. 9, 10), and, of course, the officiating Brāhmaṇas receive their *daksinas*. According to the Agni Purāṇa and the Mānasūra, the king concludes by riding pradakśina-wise round his city. The liberation of prisoners mentioned by the Agni Purāṇa is an incident known in other connexions (e.g. the birth of a prince, Harṣa-Charita, i. p. 142, ll. 15, 19).

3. Time chosen for the ceremony and substances employed.—In the case of the recorded *abhiseka*, the temporal restrictions seem to have been, except as explained above, merely such as were necessary in order to ensure auspicious conjunctions: for details see Goldstücker, *op. cit.* p. 285. For the various substances and the order of placing there were, as we shall see, fixed periods in the year.

The substances, which varied in the different ceremonies, are mentioned under the several heads (*vid. supra* and *infra*). Water, milk, curds, and honey generally recur.

B. I. Turning now to the sacred literature, we find that only one Vedic work gives rules for a royal consecration as such. This is the Aitareya Brāhmaṇa, where we find distinguished two forms of *abhiseka*, namely, *punarabhiseka* (viii. 5–11) and *mahabhiseka* (viii. 12–20). As the former, which takes place after a sacrifice, has apparently no relation to the installation of a sovereign and refers probably to the *rājāśīya*, we may reserve it for consideration in that connexion.

3. Time chosen for the ceremony and substances employed.—In the case of the recorded *abhiseka*, the temporal restrictions seem to have been, except as explained above, merely such as were necessary in order to ensure auspicious conjunctions: for details see Goldstücker, *op. cit.* p. 285. certain order oblations from the surd-cup and pronounces a prayer for progeny of oxen, horses, and men.

3. The rājāsīya is an elaborate ritual prescribed for a kṣatriya king desirous of paramounctcy. It is brought into connexion with Varuṇa, the first emperor, and after him named Varuṇavatana. Like the punarābhisēka, it was applicable to an already consecrated king, although very likely the two ceremonies may have been susceptible of combination. The essential difference between the two is that abhisēka was a necessary act of State, including priestly rites, while the rājāsīya was an optional religious rite, undertaken with a certain object, and including a ceremony of consecration. In Sanskrit inscriptions the kings sometimes glory in having performed the rite, which they mention in connexion with the vajapeya, akṣamedha, etc. (Epigraphy Indica, iv. p. 196, l. 3).

Weber holds ('Über den Rājāsīya,' pp. 1-6) that the rājāsīya, like the rajaśeṣa, was originally a simpler popular institution, which subsequently found adhesion, with many elaborations, into the śrauta ritual, and Hillebrandt (Veitliche Oger und Zeremonien) agrees with him. On the analysis of the devahāna we may explain the word as meaning 'the rājāsīya ceremony (the word rājāsīya occurring in the ritual, see Weber, p. 51, and conclude, in accordance with primitive notions, that the inherent vigour of a king needed from time to time a reinforcement (see above, under punarābhisēka). In that case the rājāsīya may have been a regular repeated (e.g., annual), or an occasional quickening rite undergone by kings.

The actual rājāsīya consists of seven rites (pavātra or abhyāvahāra, abhisēkeni, daksāpeya, keśavapaniya, vyuṣṭi, dvairātra, kṣatriadhyayi), to which some authorities add (after daksāpeya or after kṣatriadhyayi) an eighth (saṅrāmani). Concerning the pavātra we need only say that it must be the day over the process of purificatory ceremonies, beginning in the month Phalguṇa (Feb.-March), and extending over a whole year. It is stated that according to the Māṇavas the rite took place in autumn. The keśavapaniya is the formal cutting of the king's hair, which remains unshorn for a whole year after the abhisēkeni, and the vyuṣṭi, etc., need not detain us. Of interest here are only the abhisēkeni with its preceding ratnāhavāni and the daksāpeya. With the month of the year commence certain introductory rites (stārīya, paṁchavāsīya, indratura, apāmārathaka, trīṇiyunakta ratnāhavāni), of which the last and most important is a series of sacrifices on 12 successive days in the houses of the king and his relatives, to which, as the whole of the above, are variously enumerated. The abhisēkeni, commencing on the first day of the month Chaitra (March-April), occupies five days. After the completion of the seven days ratnāhavāni comes the proclamation of the king by the priest, who, grasping his right arm, pronounces a mantra referring to Savitṛ, Agni, Brhaspati, Soma, Indra, Varuṇa, etc., and stating the name of the king, his father, and his kingdom. Next are the saṃrubā, mainly 13 forms of water, together with honey, embroiled water of a calving cow, milk, and clarified butter, each in a separate vessel of udumbara wood, and having sun-motes mixed with them. These are then transferred into a single udumbara vessel, which, together with four other vessels, of palāda (Butea frondosa), udumbara, nyagrodha, and abovatha, is set down before one of the altars. Next a day a tiger-skin is placed in front of the four vessels, into which the consecration liquid is poured. This is specially arrayed, with bow and arrows, and then announced to gods and people: to avert evil, a piece of copper is put into the mouth of an eunuch standing by. After taking a step towards each of the four points of the compass and also upwards (to signify universal dominion), the king kicks away from the tiger-skin a piece of lead; as he stands on the skin, a gold plate is put under his foot, and another, with 9 or 100 holes, upon his head, and he is made to hold forth his arms facing eastward, while with the four vessels severally he is anointed by the purohitā or adhvaryu, a king-man (brother), a friendly kṣatriya, and a vaisya. At this point (according to one account) is related to him the story of Sunāharma (a reminiscence of human sacrifice). He then rubs himself with the consecration fluid, after which he takes three steps (reminiscent of Viṣṇu's trīvikaḍāma) upon the tiger-skin. The remnant of the liquid, poured into the pālaka cup, he hands to his dearest son. The latter holds on behind to the adhvaryu, who pours the remnant upon the sacrificial fire, mentioning, and once intentionally confusing, the name of the king and his son. There follow: (1) a symbolic seizure of a cow, one of a hundred, belonging to one of the king's relatives, the king driving against them in a war-chariot and ultimately returning to the sacrificial edifice, where, after assuming of pig-skin, he dismounts; (2) enthroning of the king upon a seat of kāḍāra (acacia catechu) wood, placed upon the tiger-skin; (3) beating of the king (who holds five dice) by the priest in order to expel his sins, after which he is proclaimed as Brahmān, Savitṛ, Indra, and Rudra; (4) a symbolic game with dice, in which the king, his brother, his sūta (panceregist or marshal) or athepati (police magistrate), according to the Vedic ceremonies (village-headman), and a relative take part; (5) various minor ceremonies. On the seventh day of Chaitra the king takes place the daksāpeya, a ceremony in which 100 persons, including the king, drink in the same group of 10 and purificatory ceremonies are performed, the qualification being that each must be able to cite 10 generations of soma-drinking ancestors. A year later comes the keśavapaniya, etc.

The above account of the rājāsīya is taken chiefly from Egelgell's tr. of the Sūtraṭhapt Brahmāna and Weber's translation and exposition of the Kātyāyana Śrauta-sūtra ('Über den Rājāsīya'), which, as representing the part of the operant priests, is naturally the fullest Sanskrit authority. The śrauta ritual is the subject of a very learned and able treatise by Prof. Weber, in the main the punarābhisēka of the Aitareya Brāhmaṇa, though it has many common features, is distinctly simpler. But it does not follow that the additional matter of the rājāsīya is newer; its rastra (ritual of the above) are various forms of the rite appears from the Aśvalayana Śrauta-sūtra, which employs a plural—atha rājasīyaḥ, ib. 3. 8. 1. Weber, who has elaborately discussed the various incidents, regards the references to Varuṇa and Savitṛ as, from the point of view of Indian religion, remnants of antiquity. Similarly ancient must be the mimic tree-planting expedition, game of dice, and daksāpeya. A general anthropological interest attaches to (1) the association of the Puruṣa and the rains, and with the rain-water, (2) the notion of quickening the royal energy by means of the rite, (3) the reminiscence of human sacrifice in the legend of Sunāharma, which, in connexion with punarābhisēka, is also related in the Aitareya Brāhmaṇa and the Śāṅkalyāna Śrauta-sūtra.

4. The vajapeya, which is mentioned in the Atharva Veda (xi. 7. 7) and the Aitareya Brāhmaṇa (iii. 41. 1), and fully described in the śrauta ritual of all the Vedas, also includes a form of consecration. At the outset it presents itself with difficulty as to the object with which it was to be celebrated. The Aśvalayana Śrauta-sūtra (ix. 9. 1) prescribes it for 'one desiring supremacy' (dāhi-patyakāma); the Śāṅkāyana gives, instead, 'one desiring abundance of food' (annādya), explaining
ABILITY

The word vajapeya as meaning ‘food and drink’; the Lātyāyana requires it for one promoted by brāhmans and kings’ (yām brāhmaṇā brājaṇā chā puruṣakurvarān sa vajapeyā yajeyā), and forbids those who have celebrated it to rise before, salute, etc., those who have not; the ritual of the White Yajur Veda states that who sacrifices with the vajapeya wins Prajāpati, and so wins everything. According to Āsvalyāyana (ix. 9, 19), it is reserved for kings and brāhmans; Śankhāyana (xvi. 17.1–4) allows it to the three highest castes, the bhṛgaspati-saṅgamas following in the case of a brāhman; Lātyāyana (vii. 1.12) mentions a case that it might be preceded and followed by the bhṛgaspati-saṅgama; while Kātyāyana (xiv. 1.1), confining it to kṣatriya and vaisya, orders it to be both preceded and followed by the bhṛgaspati-saṅgama. According to the Satapatha Brāhmaṇa (v. 1.1), the rite originated with Indra and Brhaspati, who, both by the aid of Saviṭṭa, ‘won Prajāpati.’ The rank of the rite also is variously estimated: Āsvalyāyana (ix. 9.19) would make it a preliminary to the rājaṣiṣṭha (for a king) or bhṛgaspati-saṅgama (for a priest), while the White Yajur definitely places the rājaṣiṣṭha to follow, explaining that the latter is inferior, as the effect is to constitute a king, while by the vajapeya an emperor is constituted.

The most reasonable solution seems to be that of E. F. W. Thomas, that the vajapeya is originally general for all the ranks, which severally had more special rites, the rājaṣiṣṭha, bhṛgaspati-saṅgama, sthāpaṇa-saṅgama, grāmāṇa-saṅgama, etc. etc. The features of the vajapeya itself seem to point to the conclusion of Weber that it was originally a popular celebration of victory or promotion.

The most prominent of these features are (1) ēśī, a mimic race; (2) roha, mounting a post; and (3) the recurrence of the number 17.

The vajapeya takes place in autumn. There are preliminary divine sacrifices, etc., 17 cups of soma and 17 of surā being provided; and the gifts to the priest include 1700 cows, etc., 17 slave-women, 17 elephants, and so on. At the midday ceremony on the final day a racing-car is rolled into the sacrificial area, and to that the horses, which receive a specially prepared food. Sixteen other cars are arranged outside. Seventeen drums are beaten; the course is marked off by 17 arrow-shots, and an Udumbara branch serves as goal. The race takes place the sacrificer winds the horses of all the cars are fed and, with the cars, presented to the priest. After certain libations, the wife of the sacrificer is brought in and specially dressed. A ladder is placed against the sacrificial post, and the sacrificer, after calling to his wife, 1 comes, wife, ascend we to the sky; mounts until his head overtops the post; he looks forth in all directions, salutes the earth, and descends, alighting on a gold plate placed upon the ground or upon a gold skin. A coordinate priest covers a seat of udumbara wood with a cloth, and to it the wife’s arm, seats him thereupon, saying, ‘This is thy kingdom.’ A mixture of water and milk having been prepared in an udumbara vessel and poured in libations, the offering is sprinkled with the remainder, and thrice proclaimed with the words, ‘This man is Sāmrāj. ’ There follow 17 mantras of victory (uṣṭi).

For the 1. Lātyāyana, Asvāmيطiya Brāhmaṇa, vili. 5 f.; Mahābhārata Sahā Parva, 33–45; and Sāmkhyas. For the 2. Lātyāyana, 11. 3–13; Rāmaśaṅkha, in c. 18; and Athavādakārya, c. 139; Ātita Pāṇiniśastra, ii. 16; Upāpteśvara, ii. 16; and other works cited above, pp. 134–144; Goldsticke, Dict. der Sanskrit- und Zend-Inschriften, Berlin and London, 1856, s. n.; Rajendralāla Mīrā, Ind. Archeol. J. of G. W., i. 1–15, iv. 2–15, 10.

For the 1. Lātyāyana: Vajapeyasānī Sahākhād (xxi. 35–x. 34), Kātyāyana-S. (ibl. 6. 1–15, iv. 2–15, 10).

ABILITY.—Ability (Lat. habilitat-em, habiles) in its historical usage has two meanings. 1. It signifies material power, wealth, estate, or resources. In this sense it occurs in both the OT and the NT; e.g.: ‘They gave after their ability unto the treasure of the work’ (Ezr 29); ‘Then the disciples, every man according to his ability, determined to send relief’ (Ac 1129). Similarly, Shakespeare has—

‘Out of my lean and low ability
I'll lend you something’ (Twelfth Night, m. iv. 351).

In the same sense, the term is used in 16th cent. Poor Law statutes. Thus, by the Act of 1555 the lord magistrates were directed to ‘take in taking order of all of an overburdened parish by its wealthier neighbouring parishes, are directed to consider the estate and ability of every parish.’ The Act of 1601, too, provides for the taxation of every inhabitant of the parish ‘ according to the ability of the parish’—‘ability’ being interpreted to mean property. Later on, however, ‘ability’ or faculty came to be measured not by property, but by income or revenue. This is the measure adopted in Adam Smith’s celebrated maxim: The subjects of every State ought to contribute towards the support of the Government, as nearly as possible, in proportion to their respective abilities; that is, in proportion to the revenue which they respectively enjoy under the protection of the State. ’ (Wealth of Nations, bk. v. ch. iii. p. 2.) And since Adam Smith’s day, the adoption of the utilitarian idea of ‘equity of sacrifice, and the application of the ‘law of diminishing utility’—that the more wealth, cetarius paribus, a person has, the less, beyond a certain point, is the utility to him of successive equal increments. Consequently, the less the distality of the decrements caused by taxation—have led to income being accepted as the criterion of ability, for the purpose of taxation, subject only to exemptions and abatements at the one extreme, and progressive or graduated taxation at the other (cf. J. S. Mill, Principles of Political Economy, bk. v. ch. ii. §§ 2, 3; E. K. A. Seligman, Progressive Taxation). But, apart from this quasi-technical use of the term in economics, in all, taking in, giving, contribute, or ‘to pay’ is understood, the use of ‘ability’ is abandonment in the sense of wealth is obsolete, the latest literal instance being probably that in Goldsmith’s Vicar of Wakefield, ch. xiv.: ‘ A draft upon my neighbour was to me the same as money; for I was sufficiently convinced of this principle. ’

2. It signifies personal power, cleverness, physical or mental, and sometimes a special power of the mind, a faculty (usually, however, in the plural). This usage is also found in both the OT and the NT; e.g. such as ‘wisdom in them’ (Dn 11). If any man minister, let him do it as of the ability which God giveth ’ (1 P 4). So with Shakespeare—

‘Though it be fit that Camio have his place,
For, sure, he fills it up with great ability’ (Oth. m. iii. 347).

Again—

‘Your abilities are too infant-like for doing such alone’ (Cor. i. I. 2).
The use of 'ability' as denoting physical strength is now obsolete, save in Scotland; and, in its use with reference to mental power, 'ability' denotes active power, as distinct from 'capacity,' which signifies rather latent power or resources. In general, also, natural ability is to be contrasted with acquired skill. 'For natural abilities are like natural plants that need pruning by study' (Bacon, Essays: Of Studies'). The distinction is important in Economics, in which natural ability is regarded as yielding an income of the nature of rent, while acquired skill yields profits. 'Any general ability, natural or acquired, is often contrasted with specialized technical skill. With the growing complexity of industry and the increasing use of machinery, general ability, which is easily transferable from one trade to another, is yearly becoming a relatively more important factor in industrial skill (cf. A. Marshall, Principles of Economics, 1898, pp. 284–281, 331–342, 657).

In Theology, the terms 'ability' and 'inability' refer to mental power, or want of power, to do the will of God. 'Man by his fall into a state of sin hath wholly lost all ability of will to any spiritual good accompanying salvation' (Westminster Confession). Here the opposition is to be noted between one of 'origins,' as based on the Scriptures, and the 'plenary ability' of the Pelagians, the 'gracious ability' of the Arminians, and the 'natural ability' of the New School (or Edwardian) theologians (cf. A. H. Strong, Systematic Theology, 1898, pp. 342–345).

ARCH. B. CLARK.

ABIENESIS (I.).—Abiogenesis (from Gr. ἀβιοσ, 'without life,' and γένος, 'birth') is the theory of the origin of living from not-living matter. It was propounded by the 16th-century illustrious scholar Francesco Redi (1626–1689), and, like other methods which have led to momentous results, were simplicity itself. Observing how readily dead flesh, exposed to the air, swarmed with maggots, he put some pieces of meat into a jar which he covered with fine gauze, leaving other jars open. The maggots soon appeared, while, in the other, they were as numerous as usual. The inevitable conclusion was that the maggots were hatched from eggs deposited by blowflies on the dead stuff. A temporary reaction against Redi's disquisitions was brought about by Needham (1713–1781) and Buffon (1707–1788), who adduced the case of animalcules which, after a certain lapse of time, appeared in infusions boiled and hermetically sealed. But it was not until 1792 that the opinion that the air had not been wholly excluded from the infusions, the animalcules in which, by reason of inadequate heating, remained undestroyed. The discovery of oxygen (by Priestley, in 1774), the presence of which is essential to life, compelled the repetition of experiments 'under conditions which would make sure that neither the oxygen of the air nor the composition of the organic matter was altered in such a manner as to interfere with the existence and development of life.' The interrelation between living and lifeless matter is a fundamental canon of the theory of Evolution, which recognizes no break in continuity, and which also recognizes the ultimate mystery investing all phenomena, whether be defined in terms of mind or of matter. 'All our philosophy, all our science, all our art—Plato, Shakespeare, Newton, and Raphael—are potential in the fires of the sun,' said Tyndall; and Huxley, while holding abiogenesis to be unproved, added that 'if it were given him to look beyond the abyss of geologically recorded time to the still more remote period when the earth was passing through physical and chemical conditions which it can no more pass again than a man can recall his infancy, he should see evolved by a widely different living protoplasm from not-living matter' (Coll. Essays, viii. p. 256).

Hence, both physicist and biologist reject the theory of 'Vitalism,' or the existence of a vital principle or energy distinct in kind from other cosmic energies. The problem of abiogenesis is therefore narrowed to this—Given the origin of life from the not-living, do the conditions which resulted in that still prevail, or have they so far passed away that life is now derived only from pre-existing life?—as the phrase has been phrased by M. 30

Belief in spontaneous generation was unchallenged for above 2000 years. It was on the Ionian seaboard that speculation arose about origins and laws governing phenomena, hence scepticism as to the validity of old cosmogonies and legends. Anaximander (B.C. 610–547), the friend and pupil of Thales, appears to have been the earliest to speak of life as a product of 'the moist element as it was evaporated by the sun.' Aristotle (B.C. 384–322) accepted abiogenesis with limitations, applying it to parasites, certain invertebrates, and a few vertebrates, as cels (the mode of generation of which was, until recent times, a mystery), but not to animals in which sexual organs are apparent. Lucretius (c. B.C. 95–51) speaks of 'many living creatures, everywhere springing out of the earth and taking form by the rains and the heat of the sun' (de Rerum Natura, v. 795, 796).

It was not until the latter half of the 17th cent., nearly fifty years after Harvey's discovery of the circulation of the blood, that the doctrine of spontaneous generation was assailed, and that the only effective weapon—experiments. These were started by an Italian scholar-naturalist, Francesco Redi (1626–1689), and, like other methods which have led to momentous results, were simplicity itself. Observing how readily dead flesh, exposed to the air, swarmed with maggots, he put some pieces of meat into a jar which he covered with fine gauze, leaving other jars open. The maggots soon appeared, while, in the other, they were as numerous as usual. The inevitable conclusion was that the maggots were hatched from eggs deposited by blowflies on the dead stuff. A temporary reaction against Redi's disquisitions was brought about by Needham (1713–1781) and Buffon (1707–1788), who adduced the case of animalcules which, after a certain lapse of time, appeared in infusions boiled and hermetically sealed. But it was not until 1792 that the opinion that the air had not been wholly excluded from the infusions, the animalcules in which, by reason of inadequate heating, remained undestroyed. The discovery of oxygen (by Priestley, in 1774), the presence of which is essential to life, compelled the repetition of experiments 'under conditions which would make sure that neither the oxygen of the air nor the composition of the organic matter was altered in such a manner as to interfere with the existence and development of life.' The interrelation between living and lifeless matter is a fundamental canon of the theory of Evolution, which recognizes no break in continuity, and which also recognizes the ultimate mystery investing all phenomena, whether be defined in terms of mind or of matter. 'All our philosophy, all our science, all our art—Plato, Shakespeare, Newton, and Raphael—are potential in the fires of the sun,' said Tyndall; and Huxley, while holding abiogenesis to be unproved, added that 'if it were given him to look beyond the abyss of geologically recorded time to the still more remote period when the earth was passing through physical and chemical conditions which it can no more pass again than a man can recall his infancy, he should see evolved by a widely different living protoplasm from not-living matter' (Coll. Essays, viii. p. 256).

Hence, both physicist and biologist reject the theory of 'Vitalism,' or the existence of a vital principle or energy distinct in kind from other cosmic energies. The problem of abiogenesis is therefore narrowed to this—Given the origin of life from the not-living, do the conditions which resulted in that still prevail, or have they so far passed away that life is now derived only from pre-existing life?—as the phrase has been phrased by M. 30

Belief in spontaneous generation was unchallenged for above 2000 years. It was on the Ionian seaboard that speculation arose about origins and laws governing phenomena, hence scepticism as to
ABIOGENESIS
bridge, who stated that, as the result of experiments made with radium bromide (which appears to have a destructive effect on micro-organisms) and sterilized beef-gelatine in sealed tubes subjected to a temperature above the boiling point of water, there had appeared minute 'cultures' or growths of globe-shaped bodies, which, on reaching a given stage, Mr. Busk inclines to the conclusion that they are organisms on the border lines between microbes and crystals, and, provisionally, he names them 'radio-biotes.' But their organic character is not established to the satisfaction of Huxley. Mr. Busk
troleum identity of the living and the not-living being admitted (proof of advance thereto being furnished by the production of organic compounds from inorganic matter in our chemical laboratories, there is no warrant for the contention that abiogenesis is impossible in the present or the future. All that can be said is that the experiments which appear to favour the theory do not wholly exclude doubt as to complete sterilization, and consequent exclusion or destruction, of life-producing germs. In either case, they most probably are these micro-organisms in their innumerable myriads that has given impetus to antisepptic and prophylactic methods whereby unspeakable benefits have accrued to man and the lower animals. Louis Pasteur (1822-1906) was the benefactor not only of France, but of the world, in his application of remedies for diseases in plants and animals which threatened large industries with extinction. In the case of chicken cholera, he reduced the death-rate from ten per cent. to one per cent.; in that of anthrax or wood-comber's disease, which had killed off millions of cattle, the economic gain has been enormous; while perhaps his greatest victory was won in the treatment of those dread evils, rabies and hydrophobia. Lord Lister has acknowledged that Pasteur's germ-theory of putrefaction furnished him 'with the principle upon which alone the antiseptic system can be carried on.' Armed with antitoxins, the physician battles successfully with human ills, and one by one reduces the number of diseases hitherto ranked as inevitable and incurable. See also next art., and Biogenesis. EDWARD CLODD.

ABIOGENESIS (II.).—During the early phases of the earth's existence, before it cooled and consolidated, the conditions were such that no living creatures could have lived there. At an uncertain but inconceivably distant date, after the earth became fit to be a home of organic life, living creatures somehow appeared.

(2) Preyer and others have suggested that germs of life, confessedly unlike any we now know, may have existed from the beginning even in nebulous masses, and that the origin of life is as futile a question as the origin of motion. It was not, indeed, the protoplasms we know that was encrusted in the fire-mist; it was a kind of knowledge, a particular dance of corpuscles, different in its measures from inorganic dances. But there does not seem much utility in discussing a hypothetical kind of organism which could live in nebule; our conception of organic life must be based on the organisms we know. It is interesting, however, to note that Preyer strongly opposed the view that organic substance could arise or could have arisen from inorganic substance, the living from the not-living; the reverse supposition seemed to him more tenable.

(b) As far back as 1865, H. E. Richter started the idea that germs of life are continually being thrown off from the heavenly bodies, and that some of these found lodgment on the earth when it was ready for them. He also could not think of life beginning; his dictum was, 'Omne vivum ab aterrima e cellula.' To Helmholtz (1854) and to Sir William Thomson (Lord Kelvin) the same idea occurred, that germs of life may have come to the earth en-boseomed in meteorites. 'I cannot contend,' Helmholtz said, 'against one who would regard this hypothesis as highly or wholly improbable. But it appears to me to be a wholly correct scientific procedure, when all our endeavours to produce organisms out of lifeless substance are thwarted, to question whether, after all, life has ever arisen, whether it may not be as old as matter, and whether its germs, passed from one world to another, might find favourable soil. . . . The true alternative is evident: organic life has either begun to exist at some one time, or has existed from eternity.' On the other hand, we may note that the word 'eternal' is somewhat irreligious in its tenor. The hypothesis is, in the notion of such complex substances as proteins (essentially involved in every organism we know) being primitive is quite against the tenor of modern theories of inorganic evolution; and that, though we cannot deny the possibility, it is difficult to conceive of anything like the protoplasms we know surviving transport in a meteorite through the intense cold in space and through intense heat when passing through our atmosphere. The milder form of the hypothesis associated with the name of Lord Kelvin was simply one of transport; he wisely said nothing about 'eternal cells' or any such thing; he simply shifted the responsibility for the problem of the origin of living organisms off the shoulders of our planet.

So far, then, the suggestions are (a) that the physical basis of life is as old as the cosmos, and (b) that germs of organisms may have come from elsewhere to our earth. Apart from an abandonment of the problem as scientifically insoluble,—apart, that is to say, from the view that living creatures began first—there is the whole field of speculation to which it is hoped to formulate in terms of the scientific 'universe of discourse,'—there is but one other possible view, namely, that what we call living evolved in Nature's laboratory from what we call not-living—a view to which the whole trend of evolutionist thinking attracts us. There are few living biologists who doubt the present universality of the induction from all sufficiently careful experiment and observation—omne vivum e vivo; Dr. Bastian is practically alone in believing that creatures like Infusorians and Amoebae (highly complex individuals in their own way) can now arise from not-living material; but it is quite another thing to say that abiogenesis may not have occurred in the past or may not occur in the future.

But though many thoughtful biologists, such as Huxley and Spencer, Nägeli and Haeckel, have accepted the hypothesis that living organisms of a very simple sort were originally evolved from not-living material, they have done so rather in their faith in a continuous natural evolution than from any apprehension of the possible sequences which might lead up to such a remarkable result. The hypothesis of abiogenesis may be suggested on a priori grounds, but few have ventured to offer any concrete indication of how the process might conceivably come about. To postulate abiogenesis
ABIOGENESIS 27
as if it were a matter of course, seems to betray an extraordinarily easy-going scientific mood.

One of the few concrete suggestions is due to the physiologist Pflüger (1875), whose views are clearly summarized in Verworn's General Physiology. Pflüger suggested that it is the cyanogen radical (CN) that gives the 'living' proteid molecule its characteristic properties of self-decomposition and reconstruction. He indicated the similarities between cyanic acid (HCNO) — a product of the oxidation of cyanogen — and proteid material, which is admitted to be an essential part, at least, of all living matter. 'This similarity is so great,' he said, 'that I might term cyanic acid a half-living molecule.' As cyanogen and its compounds arise in an incandescent heat when the necessary nitrogenous compounds are present, they may have been formed when the earth was still an incandescent ball. "If now we consider the immeasurably long time during which the cooling of the earth's surface dragged itself slowly along, cyanogen and the compounds that contain cyanogen- and hydrocarbon-substances had time and opportunity to indulge extensively in their great tendency towards transformation and polymerization, and to pass over with the sun's heat of oxygen, and lastly into that self-destructive proteid, living matter.' Verworn adopts and elaborates this suggestion. Compounds of cyanogen were formed while the earth was still incandescent; with their property of producing on other hydrocarbon mixture and other such compounds had been brought into existence by those processes which culminated in the development of the first protoplasm, and it seems therefore likely enough that the first protoplasm, at that upon these antecedent steps in its own evolution.

Dr. H. Charlton Bastian suggests, in regard to the first origin of living matter upon the earth, that the nitrate of ammonia which is known to be present in all metamorphic ashes and many discovered in the thunder-shower, may have played an important part in the mixture of ingredients from which the hypothetical natural synthesis of living matter was effected. Mr. J. Butler Burke postulates original vital units or 'bio-elements,' which may have existed throughout the universe for an almost indefinite time, which are probably 'elements possessing many of the chemical properties of carbon and the radio-active properties of the more unstable elements,' and which, by interacting with other carbon and another such compounds, probably gave rise to cellular life as we know it to-day.

It must be admitted that, in spite of these and other concrete suggestions, we are still far from being able to imagine how living matter could arise from not-living matter. In postulating possible processes which may have occurred long ago in Nature's laboratory, it seems desirable that we should be able to back these up with evidence of analogous processes now occurring in Nature. In the usual mode of argument in evolutionist discourse, —but these analogies are not forthcoming at present. It is usual to refer to the achievements of the synthetic chemist, who can now manufacture artificially such natural organic products as urea, alcohol, grape sugar, indigo, oxalic acid, tartaric acid, salicylic acid, and caffeine. But three facts should be borne in mind: (1) the directive agency of the intelligent chemist is an essential factor in these syntheses; (2) no one supposes that a living organism makes its organic compounds in the way in which many of these can be made in the chemical laboratory; and (3) no one has yet come near the artificial synthesis of proteids, which are the most characteristic substances in living matter.

We are in the midst of comparing what man can do in the way of evolving domesticated animals and cultivated plants with what we believe Nature has done in the distant past. Why, then, should we not argue from what the intelligent chemist can do in the way of evolving carbon compounds to what Nature may have done before there was anything animate? There is this difference, among others, in the two cases, that in the former we can actually observe the process of Natural Selection by which in Nature takes the place of the breeder, while we are at a loss to suggest what in Nature's as yet very hypothetical laboratory of chemical synthesis could take the place of the directive chemist.

Thus Professor F. R. Japp, following Pasteur, pointed out in a memorable British Association address that natural organic compounds are 'optically active' (a characteristic property which cannot be here discussed), that artificially prepared organic mixtures were primarily 'optically inactive,' that by a selective process the intelligent operator can obtain the former from the latter, but . . . it is difficult to conceive of any mechanism in nature which could effect this. 'No fortuitous concourse of atoms, even with all eternity for while them to clash and combine in, could compass this feat of the formation of the first optically active organic compound.' 'The chance synthesis of the simplest optically active compound from inorganic materials is absolutely inconceivable.'

Not content, however, with indicating the difficulty which the believer in abiogenesis has here to face, Professor Japp went on to say — perhaps, in so doing, leaving the rigidly scientific position: 'I see no escape from the conclusion that when life first arose, a directive force came into play — a force of precisely the same character as that which enables the intelligent operator, by the exercise of his will, to select out one crystallized form from an amorphous mass.' After prolonged discussion, and in view of various suggestions of possible origins, he wrote: 'Although I no longer venture to speak of the inconceivability of any mechanical explanation of the production of single optically active compounds asymmetric always in the same sense, I am as convinced as ever of the enormous improbability of any such production under chance conditions.'

Apart, then, from the fact that the synthesis of proteins seems still far off, apart also from the fact that there is a great gap between the very simplest organism and the simplest organism, we have perhaps said enough to show that the hypothesis of abiogenesis is not to be held with an easy mind, attracted as we may be to it by the general evolutionist argument.

In thinking over this difficult question, there are two cautions which should be borne in mind. We must not exaggerate the apparent simplicity of the animate from the inanimate, nor must we deprecate it. On the contrary, we must recognize that modern progress in chemistry and physics has given us a much more vital conception of what has been labelled as 'dead matter'; we must not belittle the powers of growth and regrowth which we observe in crystals, the series of form-changers
through which many inorganic things, even drops of water, may pass; the behaviour of fermentative processes and many other dynamic phenomena. At the same time, we must not forget that we have to deal with phenomena of a totally different nature, such as some characteristics of living beings too, that are the fainest degree of life, serve to lessen the gap which seems at first so wide.

On the other hand, it is the verdict of common sense and exact science alike that living creatures stand apart from inanimate systems. The living creature feeds and grows; it undergoes ceaseless change or metabolism, and passes through a cycle of changes, yet has a marvellous power of retaining its integrity; it is not merely a self-stocking, self-repairing engine; it has a self-regulative development; it gives effective response to external stimuli; it profits by experience; it co-ordinates its activities into unified behaviour, it may be into intelligent deeds and rational conduct; even in very simple animals (such as copepods) there are hints of mind. Allowing for the gradual realization of potentialities in the course of evolution, we cannot but feel that if the living emerged from the not-living then our respect for not-living matter must be greatly enhanced. It is a matter of fact, however, we cannot at present re-describe any vital behaviour in terms of physical and chemical categories, and the secret of the organism has to be admitted as such whether we advance to a vitalistic statement of it or not.

Finally, let us suppose that some bold experimenter in the border-land between chemistry and biology, a man like Prof. Jacques Loeb of Chicago, succeeded this year or next year in making, not merely a corpse of proteid, but a little living thing, by some ingenious synthesis. That there are hints of mind, we may believe cosmic evolution to have been,—and the artificial production of a living creature would not enable us to make this assertion. What simplification of descriptive formula the future has in store for us no one can predict. We may have to simplify the conceptual formulae which we use in describing animate behaviour, and we may have to modify the conceptual formulae which we use in describing inanimate sequences, but at present the two sets of formulae remain distinct, and they would so remain even if a little living creature were discovered to-morrow. (c) If we discovered a method of artificially producing an organism, as Loeb has discovered a method of inducing an egg to develop without fertilization, it would render the hypothesis of abiogenesis more credible. We would then know, what present knowledge allows, however strongly he may believe it, that what we call not-living has in it the potentiality of giving origin to what we call living. But the hypothetical discovery would in no way affect the dignity and value of living creatures, or of our own life. (d) If it came about that we were able to bring materials and energies together in such a way that living creatures of a simple sort resulted, we should still have to remember that we had acted as directive agents in the synthesis. (e) Finally, if the experiment succeeded, we should not have arrived at any explanation of life, and we should be able to say that given appropriate conditions, certain consequences ensue, but we should still be unable to answer the question how or why. We should have a genetic description of an occurrence, but no explanation of it. For that is what science never supplies.

In conclusion, the author quotes Principal Lloyd Morgan, ‘Those who would concentrate the mystery of existence on the pin-point of the genesis of protoplasm, do violence alike to philosophy and to religion. Those who would single out from among the multitudinous differentiations of an evolving universe this alone for special interposition, would seem to do little honour to the Divinity they profess to serve. Theodore Parker gave expression to a broader and more reverent theology when he said: “The universe, broad and deep, and high, is one great mimic. He is the mysterious magic which possesses” — not protoplasm merely, but “the world.”'

J. ARTHUR THOMSON

ABIPONES.—A tribe of South American Indians, of Guaycuruan stock, who formerly roved from the head waters of the Rio Grande in Bolivia to the Vermejo in Argentina, although their central habitat was the Gran Chaco, west of the Paraguay River, in Northern Argentina and Paraguay. About 1780 the tribe numbered some 5000, but it is now supposed to be extinct, like the kindred Cadoves, Payaguins, Lenguas, and their own destroyers, the Mocovis (J. Deniker, Races of Am. Ind., London, 1892). Practically the only information concerning them is that given by Martin Dobrizhoffer, a Jesuit missionary who resided among them for seven years. They are described as tall and well formed, while in their native costume they looked very well clad, and were fond of adornment and of painting themselves. Both sexes were tattooed by pricking the skin with thorns and smearing the bleeding wound with fresh ashes, thus leaving an indelible black outline. The males were tattooed with a cross on the forehead, and the women with the cross, as well as an ornamental design, on the face, breast, and arms. This operation was performed at the age of puberty, and was designed to render a girl sufficiently attractive to win a husband. In old age (for in those days it was considered old at the age of seven) the women wore labrets, the most esteemed being of brass or (for the chiefs) of a sort of gum. These adornments came down to the breast; and both sexes distended the lobes of the ears until they almost reached the shoulder. Dobrizhoffer ascribes to them an ethical system of singular attractiveness. Their chastity was remarkable, and they observed the uttermost decorum and modesty in dressing, deportment, and conversation. Their courtesy was invariable; captives were treated with all kindness, and the torture of prisoners was unknown, although for trophies they cut off the heads or skinned the faces of those slain in war. Annual feasts in honour of victories were celebrated with merrymaking and copious indulgence in wine made of alfarooba or
ABNORMALITIES 29

honey, the only vice of the Abipones being intoxication. In temperament they were somewhat phlegmatic, not being reckless in war, despite their undoubted bravery. Their superb physique was due, in great measure, to the fact that consanguineous marriages were forbidden, and that early parental care was said to be unknown, while men did not marry under the age of thirty, or women under twenty. At the birth of a child the father practised the couvade (q.v.). Infanticide and abortion were common, each woman killing her children but two. The custom of infanticide was increased by the sucking of infants for three years, during which time the husband was denied all marital rights, and consequently often married again—marriage being terminable at his will. On the other hand, polygamy was rare, and even when practised the wives were not required to live together lest they should become jealous. Fidelity in marriage was almost invariable. A curious deviation from the ordinary usage of infants is found in the fact that girls were killed less often than boys, since parents received large sums for giving their daughters in marriage, while sons were required to pay heavy dowries to the parents of their brides.

Dobrizhoffer states that the Abipones had little taste for meditation, speculation, or reasoning, although they were cunning imitators. According to him, they had no word for God, but reverenced an ‘evil spirit’ (who seemed, to have the Abipones essentially evil). This deity was called Aharagichi or Quevec, and also ‘grandfather’ (Groaperike), and it was he who gave the Abipones valour and the Spaniards riches. Aharagichi was represented by the red deer, and the Abipones feared his touch. When disappeared from the horizon, the Abipones thought him sick and in danger of extinction; so they celebrated the rising of the Pleiades in May by feasting, dancing, and singing. The cult was maintained by priests (keebet), to whom Aharagichi had given supernatural power. These ‘jugglers,’ as the good Jesuit calls them, were much feared, since when angry they could transform themselves into invisible and invulnerable tigers. To the malice of the keebet was added delirium; an old man quately said that it were not for the keebet and the Spaniards, they would never die.

Thunder and lightning were supposed to be obsequies of a dead keebet, and bones and other relics of these men were also carried by the Abipones in their wanderings. In addition to thunder and lightning, comets and eclipses of the sun and of the moon were objects of terror. Besides the keebet, old women, who gathered in bands to perform secret rites with wailing and discordant drumming, were dreaded, especially as they were able to conjure up the dead.

Immediately after death, the heart and tongue of the deceased were boiled and given to a dog to eat, in order that the keebet who had caused the dissolution might himself reap his reward. All friends shaved their heads in sign of mourning, and the women wailed for nine days and nights, the nocturnal lamentations being restricted to those who were specially invited for the purpose. A woman might also wail whenever she remembered a dead ancestor, whereupon all other of her sex who heard her were expected to unite with her in howling lugubriously. All mention of the name of the dead was avoided; his house was destroyed, and his relatives and friends changed their names. The soul was believed to survive the body, although the Abipones had no clear idea of its fate. The ghosts of the dead, however, were the objects of intense dread, and were supposed to enter into small ducks called wildice, which fly in flocks by night, and have a doleful hissing note. On the grave were placed, for the use of the dead, a water-pot, a garment, weapons, and the bodies of his horses and cattle which had been killed at the time of his death. The graves of ancestors were venerated,—thus clearly implying the existence of ancestor-worship, which was often repeatedly exhumed by the Abipones in the course of their wanderings, and carried from place to place, until they could finally be buried in the family burial-ground which contained the bodies of their kin.

LOUIS H. GRAY.

ABNORMALITIES (Biological).—In biology, the term ‘abnormality’ is used in a comprehensive sense to describe forms of life, or parts or structures thereof, differing in appearance or constitution from such of their fellows as are shown by the statistics to be so closely similar that for general purposes they may be regarded as identical or, in other words, normal. It is now acknowledged that all organisms are variable, and that, while we tacitly ignore the smaller degrees of variation from the mean, yet we do recognize the higher degrees, and these we call abnormalities. Once again, abnormalities may be defined as the more aberrant of the variations to which every organism, and every structure, is liable or subject. The most extreme cases of abnormalities will be described separately as ‘monsters’ (cf. art. MONSTERS), though it must be remembered that no true line of distinction exists, and that, as has just been stated, they are really the extreme instances of abnormality.

With the exclusion of monsters, the field of our subject is somewhat narrow. It remains to review briefly the classes of these aberrant forms, and to indicate the importance of their study in biology. Abnormalities may be classified in various ways. One of the most comprehensive schemes is that proposed by Professor Macalister in his Boyle Lecture (1894). It includes nine categories or classes, viz.: the abnormalities of (1) quantity, (2) material, (3) repetition, (4) cohesion, (5) variation, (6) position, (7) series, (8) inheritance, (9) new formation. For present purposes it is, however, most convenient to review briefly (1) the origin of abnormalities, and (2) their transmission from parent to offspring.

1. Origin of abnormalities.—In some cases an origin can be discerned and a cause assigned. Thus (a) interference with the normal course of development is evidently the determining cause in certain instances. A typical example met with in medical practice is the individual in whom the development of the partitions within the heart has been affected. In such instances the blood is not properly aerated, and the patient has a ‘cyanotic’ aspect, i.e., he looks blue and cold. The study of the developmental history of animals and plants has shown that abnormalities often produce more profound and extensive changes when appearing in the earlier stages of growth than in the later period. And progress in embryological science has shown how some of the observed effects may be produced. Thus in the higher animals, for instance, an aberration of growth can be referred to defects in the body of the embryo itself, though in other cases the membranes immediately surrounding the embryo or the adjacent maternal tissues are capable, if themselves imperfect, of reacting on the embryo so as to modify its form. The effect may seem to be produced either directly or

* In a fuller discussion of this part of the subject, attention would have to be directed to the difference between what are termed respectively the ‘mean’ and the ‘mode’ of any series.
mechanically, or yet again, the result may be due to an indirect cause in turn determined by interference with nutrition. Again, (b) the nutrition, and the quantity and quality of the food, are alone capable, if altered, of leading to deviations from the ordinary course of events, sufficiently marked to come within the definition of abnormality. Cases of such an overgrowth, or gigantism, or their reverse, under this heading. (c) In other cases, no such obvious interference can be detected or held accountable. And among these, even if those examples are eliminated in which by analogy there is a reason for the production of the phenomenon itself, we still find it impossible to invoke causes of this kind. Pending the discovery of a more intelligible explanation, the only course open to biologists in such cases is to recognize in living matter an inherent power, or capability, of producing abnormalities, or, as they are sometimes termed, 'sports.'

2. Transmission from parent to offspring.—The transmission of abnormalities from parent to offspring is inconstant and uncertain. The study of this question is inseparably connected with that of the transmission of those more constant features which distinguish the normal individual. The discussion of this problem is beyond the scope of this article, and it will suffice to state that abnormalities can even be classified according as they are constantly transmitted, or not so constantly transmitted, from parent to offspring. It is thus possible to distinguish the former, or constantly transmitted varieties, from the latter, or the 'mutations,' from the latter, not so constantly transmitted, now called 'fluctuations.' The importance of this distinction depends on the relation of this subject to the problem of the origin of the species met with in organic nature. In nature the occurrence of abnormalities, and the difference (just remarked) concerning their transmissibility, are facts of observation concerning which there is nothing speculative. But, granted the production of abnormalities as the greater capability for propagation of some (through inheritance), with, at the same time, the lesser tendency to persistence shown by others, the ground is cleared for the erection of a theory of the origin of organic species through transmissibility. This seems to depend further upon the postulate that certain kinds of abnormality confer upon the individual exhibiting them an advantage not shared by his congeners. Hence, were the advantage to be maintained, the abnormal stock might in time outnumber the original stock. But the latter would then no longer be the normal stock, for by definition the normal must be in a majority, so that the type of the organism would have changed. Such a process, if it occurred on a large scale, would lead to the production of forms so different from their ancestors that they might well be classified as new species. It is not proposed to embark upon an examination of this position here, the main object in view being to draw attention to the importance of the study of abnormalities in biology.

LITERATURE (selected works in chronological order).—Darwin, Origin of Species, etc., 1859; Mendel, Experiments on Plant Hybridisation (tr. by Bateson in Mendel's Principles of Heredity, 1895); Darwin, Variations of Animals and Plants under Domestication, 1868; Bateson, Materials for the Study of Variation, 1894; Dr. Vries, Species and Varieties, their origin by Mutation, 1895; Punnett, Mendelism, 1907; Lock, Reversals in the Study of Heredity, and Evolution, 1906.

W. L. H. DICKWORTH.

ABNORMALITIES (Psychological).—Human abnormalities, psychologically considered, are included within the great class of mental affections which owe their origin to arrested development of the brain. The development of the brain may be arrested, as the result of congenital malformation, or from the effect of disease in the earlier periods of existence. As a rule, it is by no means easy to differentiate congenital defect from that arising from interference with the natural course of development immediately before or after birth, but there is reason to believe that congenital malformation accounts for much the larger number of cases of feeble-mindedness.

Congenital mental defect is wholly or in part correlated with the development of the physical organism, and this is evident from the fact that mental faculties are practically absent. There remains at the most a species of local memory, applicable to simple the brain. Studies of the nervous imperfections, it is acknowledged on all hands that the more grave the mental defect, the more numerous and the more grave are the physical malformations.

Besides the physical stigmata, there are certain well recognized mental stigmata, such as epilepsy, hysteria, alcoholism, chorea, and the various tics and obsessions which are the outward manifestations of underlying defects in the nervous system, and especially in the brain. Although we know that every functional peculiarity must have an underlying organic basis, we are still very far from a knowledge of the intimate correlation between structure and function. The most important attempt to correlate mental power with the structure of the cortex cerebri has been made by Dr. J. S. Bolton, writing in Mott's Archives of Neurology for 1903. His observations, as yet unconfirmed, show that the pyramidal layer (second layer) of nerve cells in the pre-frontal cortex varies inversely in depth with the degree of dementia present in each case. This is the only layer that appreciably varies in depth in normal brains; the degree of its development in normal infants and in congenital amentas (idiots) varies directly with the mental endowment of the child, and the degree of its retrogression in demented patients varies directly with the amount of existing dementia.

Idiocy and imbecility are abnormalities connected by gradation with the more pronounced class of human monsters which are either non-viable or, owing to defective organization, unable to survive for any considerable time after birth. As the non-viable monsters and those which, owing to imperfect development, are unable to live through infancy, are all mindless, a description of them does not fall under the scope of this article.

The present divisions of congenital mental abnormalities are (1) Idiocy, (2) Intellectual Imbecility, and (3) Moral Imbecility. It must be borne in mind that the following descriptions refer to types only, and that the forms of the various classes referred to merge into one another insensibly without any fast dividing lines.

1. Idiocy.—For clinical purposes and convenience of description, idiocy is frequently subdivided into (a) complete idiocy, and (b) ordinary idiocy.

(a) Complete Idiocy.—The great majority of the members of this group manifest scarcely any signs of psychical life. Their intelligence is of a very low order, and all the ordinary mental faculties are practically absent. There remains at the most a species of local memory, applicable to simple
habitual wants, and to the requirements of the moment. There is no will-power and no faculty of initiative. They have no command of articulate language, but some of them are able to make their few desires known by signs, cries, or sounds under- standing only by these in immediate attendance upon them. The presence of the ordinary instincts and sentiments is not revealed by such cases. Many of them do not appear even to be conscious of their own existence, much less of the ordinary feelings of pleasure, pain, fear, or love. In the great majority of instances the sexual desire is absent. The only instinct they exhibit is that of hunger, and it is expressed only when food is presented before them.

In the physical side, the facial expression is marked by the most complete hobeditude, relieved only by the occasional appearance of passing emotions of a superficial and vague kind. The general impression left upon the observer of one of these faces is one of a peculiar mingling of youth and old age. The form of the head is variable, being microcephalic or macrocephalic, and the size of the face is generally disproportionate to that of the head, being in the former case too large and in the latter too small. The lips are thin, and have a wax-like appearance, and the saliva constantly overflows. The skin has an earthy colour, and is covered with an oily secretion which gives off an offensive odour. Most of these idiots are unable to walk, and when they can do so, the gait is tottering and uncertain, and all the muscular movements are in-co-ordinate and ungainly. Among the disorders of motility to which they are subject may be mentioned: general and local spasms, chorea, and epileptic convulsions; while abnormalities of speech and of the local paralyses are very common. They exhibit in abundance the ordinary stigmata of degeneration, such as cleft palate, hare-lip, disordered and irregular dentition, and dwarfism.

2. Intellectual Imbecility. — It is often impossible to detect in early childhood any outstanding difference between normal and abnormal children. In many instances it is only when education begins to be communicated that a radical difference shows itself in the greater inaptness of the feeble-minded to assimilate ordinary elementary instruction. As imbeciles approach the age of puberty, many defects become more apparent; besides being slow of apprehension and dull-witted, they are deficient in ordinary interest, in judgment, and in common-sense. Listlessness, inattention, and a tendency to become absorbed in subjective thought—commonly called ‘day-dreaming’—are frequent symptoms of their intellectual feebleness, in addition to the symptoms which result from imperfect cerebral development. In a certain sense it may be said of them that they are at most a few years old, and when they approach adolescence they do so without any appreciable increase of responsibility. They remain childish, easily satisfied with trifles, and display an interest and curiosity in things which have long been usual to interest people of the same age. The sexual instinct is early developed, and often manifests itself as an exaggeration or perversion of the normal condition. Mental conceptions, the association of ideas, and power of initiative are slow and difficult. Within their somewhat limited sphere of reasoning, which never passes into abstraction consideration, they think and act in a normally logical manner; yet they lamentably fall either in foreseeing the consequences of their actions or in understanding the more complicated actions of their fellow creatures. The moral aberrations are as pronounced as the intellectual. Imbeciles are prone to be egotistic, vain, and sensitively proud. Family ties are apt to be loosely felt; the ordinary affection for relatives is generally feeble, and, although they may be capable of forming strong attachments to individuals, such feelings rapidly yield after short periods of separation. Religious and altruistic ideas as well as moral discrimination are not, as a rule, based upon conviction so much as upon habit and the discipline exercised by other people. Most imbeciles are untruthful and unreliable, more especially in small matters such as the appropriation of trifling articles, the property of other people. They are often irritable, and are subject to out-
ABNORMALITIES

bursts of rage or excitement, for inadequate reasons. Many imbeciles are able to earn a somewhat precarious livelihood by ordinary manual labour, or by working at some trade which they may have learned indifferently well, but the technique of which they are able to execute only imperfectly. Whatever work they do requires the active supervision of others, and the greater part of it is of a somewhat leisurely character.
The physical characteristics of imbecility are neither numerous nor important. The subjects are usually well developed, and their outward conformation is exempt from any of those deformities which in any way expose them as individuals. The facial expression, however, usually indicates a want of mental power; and certain speech-defects, such as lisping, stammering, and imperfect pronunciation, are common, to which may be added a tendency to misapplying the meaning of certain words, and to missing and misunderstanding the grammatical use of certain parts of speech, such as adverbs and the infinitive mood of verbs. The physical resistance is lowered, and the activity of the various bodily functions is much less vigorous than in normal individuals. Hence it is that imbeciles succumb more easily to bodily diseases, especially such as are of infectious origin, and that a considerable number of them die of phthisis.

3. Moral Imbecility.—Whether or not congenital mental defect can exist independently of intellectual defect is a disputed question. We have already seen that moral defect is a concomitant of congenital intellectual weakness; but there undoubtedly occur cases of moral non-development in which the intellectual faculties are as vigorous as, or even surpass, those of ordinary individuals. We are therefore compelled to admit that congenital per- version of the moral nature may exist without any apparent intellectual defect. But a closer observation of such cases shows not only that they are non-moral in one or more particulars, but that they also exhibit eccentricities of conduct or singular and absurd habits, or the tendency to perform the common actions of life in an unconventional manner. Moreover, a prolonged observation of such persons reveals a liability in them to various forms of intellectual perversions, such as unfounded suspicions, gross superstitions, obsessions, delusions, hallucinations, and even confirmed insanity.

In the more pronounced forms of moral imbecility without apparent mental defect we find a wayward and impracticable temper, an absence of social instincts and of normal affection, which may even express itself as a positive aversion to relatives and friends. Such persons are incapable of appreciating the value of truth, and become so notorious in this respect among the people who know them, that their statements on the most ordinary matters of fact are never believed. They steal systematically without shame, the only restraint being the fear of being found out. Perhaps their most prominent characteristic is their cruelty. It is not so much that they are ruthless in the pursuit of objects which they desire, as that they go out of their way to inflict pain presumably for the pleasure of witnessing suffering. They are, however, apt to be extremely resentful of injury to themselves, and seldom forget to avenge an insult. They are also vain, proud, and supercilious. They yield to the worst impulses of their lower nature without any evident desire to resist them, and they never express sincere contrition for any action. As might be expected, they cause endless grief and anxiety to their relatives, and their lives are lamentable failures; from the moral point of view of fully successful. Their intellectual faculties, often very acute, are exercised in the gratification of their selfish desires or in the justification of their conduct, rather than in the pursuit of any continuous honest endeavours. As a rule, their affiity for evil courses leads them to indulge in habits which tend to accelerate their degeneration and to terminate life prematurely.

In the case of children and young adolescents it is unsafe to pass too hasty a judgment, for it may happen that the moral sense is not absent but only tardily manifested. In such cases the children may be bright, intelligent, quickly receptive, often emotionally impressionable,—perhaps to a morbid degree,—but lacking in the very elements of moral perception. Many of these individuals, as they begin to mature, are possessed of such clear reasoning powers and self-control, that they successfully conceal their moral defect or irregularity.

Pathology.—In congenital mental defect, especially in its more pronounced forms, such as idiocy, the brain convolutions present a simple arrangement suggestive of a tendency to revert to the type of the higher mammals; thus they may either present few secondary folds, or be small, slender, and curling (microgyri). Arrested development of certain convolutions is frequently observed, especially in the frontal and parietal regions, which gives to the brain a peculiar and irregular appearance.

The size of the cerebrum relative to that of the cerebellum may be deficient, so that the latter is not covered over by the occipital lobes, as is the case in the carnivora and higher herbivora. Parts of the brain, most frequently the corpus callosum, may be absent, and many inequalities in the development of the two hemispheres have been recorded.

In the second and third layers of the cortex of the ape and in a similar situation in the cortex of the pig, Bevan Lewis (Text Book of Mental Diseases, 1899, p. 70) describes a perfectly globose cell, with a single delicate apex process and two or more, extremely delicate basal processes without any angular projection from the rounded contour of the cell. These cells occur in man only in cases of idiocy and imbecility. Hammarberg (quoted by Ireland, Mental Affections of Children) found the pyramidal cells fewer than in normal man. This confirms to a certain extent the observations of Bolton, referred to at the commencement of this article. If only small portions of the brain presented this paucity of cell development, while the remaining portions were normal, although having fewer cells than usual, the individual was, according to Hammarberg, not idiotic, but imbecile or weak-minded. Where the cells were not only abnormal in shape, but also, generally, very few in number, the idiocy was profound; where the cells were more numerous though at places globose, badly developed or degenerate, there was more intellectual development, though the individual was still idiotic. Concomitant with these arrests in the development of nerve cells there is a corresponding diminution in cell pro-
cesses, and consequently in the number of the nerve fibres of the cortex. We thus see that the essential pathological condition in idiocy and imbecility is an arrest in the development of the cortical neurous, and that the degree of mental weakness depends upon the extent of the imperfect development of these elements.

JOHN MACPHERSON.

ABOR, ABOR-MIRI.—A title applied to a group of hill tribes of the Mongolian type, on the N. frontier of the Indian province of Assam. The word Abor or Abor seems to mean 'barbarous' or 'dependent.' The Miris, according to Dalton (p. 22), are so called because of a custom of meditating on the more isolated Abors; and he suggests (p. 29) that the word is identical with the mira or mitia of Orissa, which, according to Notis, has acquired the title applied to the Mariah victims of the Kandha (which see). But this is more than doubtful; and Dr. Grierson, to whom the question was recently referred, with more probability suggests that the word is Miri, of which the first syllable in Tibetan means 'man,' and the whole compound may possibly mean 'nobleman' or 'gentleman.'

The Abors or Abars occupy a tract of country on both banks of the Dihang river, which is the upper course of the Brahmaputra. To the W. of this is the Miri country. Most of the Abors live outside British territory, within the Tibetan border, only 321 being recorded as British subjects at the Census of 1891, 53 as Buddhist, and the remaining 261 as Animists. Of the Miris, 46,720 persons were enumerated within British territory at the same Census, of whom about half represented themselves as Hindu and half as Animist. They seem, like the tribes which occupy the hills on both sides of this group, the Mishmis (wh. see) to the E. and the Daphilas (wh. see) to the W., to be little affected by either Hindustan or Buddhism, and to be in the main Animist in no small degree. The dead child has when the children are lost, probably being kidnapped by the Mishmis, the Abors attribute their disappearance to the wood-spirits, in whom they firmly believe, and to each of whom some particular department in the hunting and man is assigned. Each disease has a spirit of its own, and, as they have no medicine for the sick, the only remedy is a sacrifice to the spirit to whom the illness is attributed. The favourite haunt of these spirits is a mountain called Rigam, which is held in awe by all, and no one can return from it, hence its mysteries have never been disclosed. They acknowledge and adore one Supreme Being as the father of all, and have some vague belief in a future state; but their ideas on the subject are vague and confused. After death, Dalton, who was one, inferred that a Judge of the Dead under the name of Jom, who is clearly the Hindu Yama, reasonably inferred that much of this belief had been borrowed from Hindu sources. Needham (Assam Census, 1901, i. 48) adds that the chief of the malignant spirits whom it is the main object of their religion to propitiate, is called Apom or Epom, and his younger brother Pomsa, both of whom inhabit the rubber tree, and must be propitiated in times of sickness. This is a most maligned and uncanny spirit, who resides in unclean places, attacks people after dark, and causes stomachic pains and headaches. He is generally propitiated with an offering of some dry bones and spirits. Kula Delo, who represents the male and female earth spirits of the Dravidians (wh. see), live underground, and other field produce. A sacrifice of two cooked fowls, rice, and other delicacies must be offered to them under the farm granary. Nipong is an evil spirit to whose malignity all female diseases are attributed, and he attacks with rheumatism and colic, which cause the sufferer to roll about like a woman in travail. He is said to live in plantation groves or amongst stinging nettles, on the seeds of which it is believed that he exists.

Dalton notices one peculiarity in their sacrifices, that, when an animal is offered to the spirits, no one is allowed to have a share of the meat except the old and infirm, who may be regarded as being provided for in this way. They have no hereditary priesthood, but there are certain persons called toddars who gain the position after many years, from their superior knowledge of the science of omens. These officials practise divination by observing the entrails of birds and the liver of a pig.

One of these men informed Dalton that the whole human race is descended from a single woman, who lived under a bold hunter, the younger a clever craftsman and his mother's favourite. She married the Assamese chief of the W., taking with her and all the household utensils, arms, and implements. The people of the land who remained behind thus lost all knowledge of arts and handicrafts, and from them spring the present Abors. The Western nations, including the English, are descended from the younger.

The beliefs of the hill Miris closely resemble those of the Abors. But those who have migrated to the Assam plains have, to a large extent, abandoned the more savage beliefs of their kinsmen. They have now come under the influence of the Order of Gussins (wh. see) or of Brahman priests, who have induced them to adopt, in some degree, the ordinary Hindu beliefs; but they have not been weaned from their impure manner of living, such as eating fowls, pork, and beef, the use of intoxicating liquor, and a neglect of caste rules in the preparation of their food—all gross offences in the eyes of the Hindu, and much more dangerous than any heretical belief. Allen records that some Abors asserted that they believed in a future life, but that they were careful to add that they had never heard of a dead man who returned to this earth. Their belief in the survival of the spirit is shown by the care taken that the body shall be shipped for a long journey—with food, cooking utensils, arms, and ornaments suitable to his position in life, so that his rank may be made manifest to the Judge of the Dead. They also attach great importance to the burial of the corpse near the graves of its ancestors, and if a man of rank dies in the plains of a disease not regarded as contagious, they take pains to send his body to the family cemetery in the hills.

W. CROOKE.

ABORIGINES.—In the article ETHNOLOGY it is pointed out that the four main divisions of mankind have not then possessed their respective original homes, but have been subject to great fluctuations during historic times. But no rigid parting-line can be drawn between the historic and the prehistoric ages, which everywhere tend to merge imperceptibly one in the other. Hence the remark may confidently be extended to all times since early man first began those migratory movements by which he has replenished the earth. We know, for instance, that, during the Stone Ages, Europe was occupied by both long-headed and short-headed races, and Señor C. Outes has now shown that the same two types had already reached Austral-America in Pleistocene times (La Edad de la Piedra en Patagonia, 1908). It follows that the two primary divisions (wh. see) have always been intimately associated together for countless generations, and consequently that there are no more any pure stocks, except perhaps a few isolated groups, still surviving in some remote and hitherto inaccessible corners of this world, such as the Andamanese Islanders, the most civilized of the Toálas of Celebes, and the Fijian Kai-Colos.

The term 'Aborigines' is therefore generally to be taken in a purely relative sense, and the
ABORIGINAL CLAIMS

Claim often made by them to be regarded as true and unassailable must be unhesitatingly rejected. They are normally 'mestizos,' in whom the physical and psychic characters of two or more races are intermingled in varying proportions. But the psychic character of primitive peoples finds its chief expression in their religious concepts, since these races are almost exclusively controlled by their views regarding the unseen world. Put in this way, the statement that their religious systems have been influenced by foreign contact follows of itself, and the inference that, as there are no longer unmixed races, so there are no longer unmixed religions, becomes almost a truism. The inference is certainly not quite obvious at first sight, although the analogous somatic mixtures, as between whites and blacks, are often self-evident. But that is only because mentally are necessarily more subtle and elusive than material phenomena. The savage may hide his inmost thoughts regarding the supernatural, as he often does to casual visitors; but he cannot hide the constituent elements of his outward form from the more instructed observers and the missionaries.

1. Thus the main physical features of the Australian aborigines have long been determined, while the source of many of their religious ideas is still the subject of heated discussions between the Spencer, Gillen, Langas, Frazers, and other serious students of primitive psychologies. The Nurreri people of South-East Australia have a 'god' or mythical being, Nuruneri, who dwells in a shadowy Elysium in the far west; and to reach this abode of bliss the souls of the dead have to pass under the sea and over a fiery pit into which the wicked fall while the good escape. But such abodes of bliss and misery form no part of the genuine beliefs of the natives, who do not distinguish between morally good and wicked people; and moral inquiry has now shown that these are merely distorted reminiscences of the heaven and hell preached to the Nurriryeri tribe by the early missionaries.

The same god Nuruneri (Ngurrundere) plays a great part in the myths of the Ngarinyin and Wallagga people of the Lower Murray River, and also affords a curious illustration of the way in which the Biblical stories get perverted in the minds of the natives.

This great King of Yirr (Heaven) had two wives, who caught a fish, kept it, and gave it to him, and the little one. Discovering the fraud, he was very angry and said, 'You shall die for this, and all Tangamarn shall die; and there shall be fighting and sickness, and evil spirits until then.' Ngurrundere had created and done everything for them, giving them knowledge and skill in hunting, fishing, and fighting. But after the sentence of death for the trick played upon him by his wives, he took away their knowledge and sent them to the land of the dead. They became ignorant and blind, and lived like the beasts of the field for a long time, till a virgin was born a good and wise maiden Wyungara. She gave them back their lost wisdom and power, and taught them sorcery; and when he had regained his trinity, he took them to the heavens by Ngurrundere, and now reigns there as second King. And when a Tangamarn dies, Wyungara takes his spirit up to heaven, and gets him crowned in that place, through his influence with Ngurrundere. This might be called the Australian version of the doctrines of the Fall and the Atoneement.

The native account of the Creation of the first man is more detailed than that of Scripture. The people of the present Melbourne district say that Punji, Creator of all things, made two male blacks by cutting three large strips of bark with his big knife, and on one of them kneading a quantity of clay to the shape of a man; then he carried some of the dough to another of the strips, and began to mould it into a man, beginning at the feet and working upwards to the head. This he repeated on the third strip; and being well pleased with his work, he danced round about the two figures. He next made two female blacks, one for man and one for woman; and for the other; and, being again pleased with his work, once more danced round about them. After smoothing their bodies with his hands, he laid them on the grass, and blew hard into their mouths and nostrils until they stirred, when he danced round them a third time. He then made them speak and walk about, and they were finished.

The Dieris tell it differently. In the beginning Mora-Mora, the Good Spirit, made a number of small black lizards, and being pleased with them, promised them power over everything. He divided their fingers, and with his forefinger added nose, eyes, mouth, and ears. Then he stood one end on, but it toppled over; so he cut off its tail after which the lizard walked about like a man. He did the same with another, which happened to be a female, and so the race was perpetuated. After the first two were changed into numerous and wicked, whereas Punji, being angry, raised storms and fierce winds, which shook the big trees on the hillsides. And Punji went about with his black marafils again and way and that day, and men, and women, and children he cut into very little pieces. But the pieces were alive, and wriggled about like worms, whereupon great fear came over them about like snowflakes. They were wafted into the clouds, and by the clouds born five and fifty over all the earth, and they was mankind dispersed. But the good ones were carried upwards and became stars, which still shine in the heavens.

Death came in this way. The first pair were told not to go near a certain tree, in which lived a bat which was not to be disturbed. But one day two women were getting fuel, and were tempted to go near the tree. Thereupon the bat flew away, and so death came into the world.

It should be noted that all these Creation myths have been gathered from tribes which have long been in association with the whites, either at their own request or at the missionaries' urging. The local colouring would gradually be supplanted as the stories passed from tribe to tribe.

2. Similar Biblical legends are widespread among the Masai of East Africa, and here the parallaxes are so striking that Captain Merker can account for them only by supposing that the Masai nomads are a Semitic people who dwelt originally with the kindred Israelites in North Arabia, whence they migrated some 8000 or 9000 years ago, to their present domain east of Lake Victoria Nyanza. Surprising coincidences are pointed out between the traditions, myths, legends, and religious observances of the two nations. The Masai el-Eberi is equated with Eber (Gen.10:8); Haa, 'Great,' with Jahweh; Nob, with Abél; Narabá with Abraham; and it is shown that the Masai have also their ten commandments, the first of which is: 'There is one only God; heretofore you called Him E'magalamu, or Almaim; wateh, now you shall call Him Nga'; just as in Ex 6:3 Shaddai is replaced by Jahweh. Here we have unquestionably many Jewish religious notions superimposed on the primitive Masai animism. These were not, however, brought from Arabia thousands of years ago, but are of themselves and the Judaizing Falashas of the neighbouring Abyssinian uplands (cf. M. Merker, Die Masai, Berlin, 1904).

3. In Senaarr there is a curious intermingling of Muslim and animistic beliefs, which corresponds completely with the Negro and Semitic interminglings of its Punji inhabitants. These pass for fairly good Muhammadans; practise circumcise, make the pilgrimage to Mecca, have zealous faqirs and dervishes (who act as teachers and scribes in the towns), and conform very much to the other Qur'anic precepts. Yet beneath this thin skin they venerate these Negroid natives are still sheer pagans, firmly believing in the gross superstitions which are associated with the wer-wolf notions referred to, in art. ETHNOLOGY. Their much-dreaded sibkha (magicians) are credited with the power of transforming themselves at night into hyenas and hippopotami, which roam about seeking to destroy their enemies, and inflict injuries even on the most devout Mussalmans. The marafals, as the metamorphosed human presents itself, is called, hold unhallowed cannibal feasts in the recesses of the woodlands, indicating their presence by their terrible howlings, just as wayfarers were stricken with awe by the midnight roar of the transformed human jaguars amongst the Aztecs of pre-Columbian times. In the daytime the marafari again
ABORIGINES

assume their human form, but are still dangerous, since a glance from their evil eye suffices to wither the limbs, the heart, or the entrails of their victims, who thus perish in the most horrible torments. To counteract these dire machinations, the scribes wrote upon slips of the Qurān or slips of paper, which are then burnt, and the amulets prepared by those who suppose themselves threatened by the hostile sāhīras. It would be difficult to imagine a more complete fusion of higher and lower religious forms than this inrush of Qurānic texts against evil influences opposed to dravidic teachings (see E. Marno, Reisen im Gebiete des blauen u. weissen Nil, 1874).

Featherman aptly remarks that 'Muhammadanism, introduced by the Arabs, has been adopted by some of the Nigritian nationalities of higher mental capacities, but they are Muhammadans in their own way. Christianity has also made some converts in isolated localities, but they are Christians only in name' (Social History, etc., i. p. 12).

In some places, as in the West Sudan, the primitive pagan substratum has been partly overlaid by both of these higher religions, with the curious result that, for instance, some of the Senegal Wolofs have charms with texts from the Qurān which they cannot read, while others are superstitiously afraid and scapulars of the 'Seven Dolours,' or of the Trinity, which they cannot understand. Other violent contrasts are seen in the lofty conception of Zukhtar, 'god of justice,' associated amongst the most brutish Senewers with toying with images as the 'lizard, for whom the daily milk-bowl is set apart. Here again the fusion of higher and lower ideals is obvious enough, and so it is throughout Negroland, wherever the seething masses of both have been touched by higher influences.

4. Turning to India, in this fathomless ocean of heterogenous elements we are at once confronted with perhaps the saddest tragedy ever witnessed anywhere in the whole history of human development. Here are seen, not so much gross anthropomorphic systems leavened by contact with superior ideals, as the very reverse process of these ideals being themselves gradually contaminated and utterly debased by submersion in the great flood of savage beliefs and idolatries, which has elsewhere shown (East and West, April 1905) that the whole of the peninsula, from the Himalayas to Ceylon, was occupied by these aborigines —Kolars and Dravidians— ages before the advent of the Indo-Aryan, and their most peculiar tribes, who may have reached the Panjāb from the north-west, some 5000 or at most 6000 years ago. It is clear from the Vedic texts (see VEDAS) that these proto-Aryans drew their inspiration from above; that their deities—Varuna, Indra, Agni, Sūrya, Dyasus, the Maruts—were all personifications of the forces of the upper regions, and were looked upon in the main as beneficent beings, who associated almost on a familiar footing with their votaries, from whom they accepted mild offerings of soma and the fruits of the earth, without exacting any gross or cruel sacrifices. On the other hand, the Dravido-Kolarian aborigines drew, and for the most part still draw, their inspiration from below, and their chthonic gods were really demons, ever hostile to mortals, and to be appeased by sanctuaries and the sacrifice of everything most prized by the living. But, as the Vedic Aryans ranged farther and farther into the Indo-Gangetic plains, there took place those inevitable religious and racial changes which, so far as humanity generally is concerned, and the forms of religion which collectively we call Brahmanism or Hinduism. Over this monstrous system the triumphant Aryans spread the prestige of their language and general culture; but in the struggle they forfeited their heaven-born pantheon, which was replaced by the chthonic gods of the aborigines. As Græcia capta ferum victorem cepit, so here the Vedic Sun-god and Sky-god, Rain-god and Wind-gods were vanquished by the Dravido-Kolarian Vīsā, the Preserver, Mahādeva (Siva, the Destroyer, with his wife Durgā or Kālī), Bhūmā Devī (the Fire Goddess), the gross symbolism typified by the īṣa and the rest. However disguised by a Sanskrit nomenclature, the true parentage of these entities is clearly seen, for instance, in the siva of the later Hindu triad, who is evolved out of the later Vedic Rudra, the Roarer or Storm-god, who guides and controls the destroying cyclone. Thus was constituted the present Hindu system, in which, as we now see, the higher forms have been not merely influenced or modified by, but almost completely submerged in, the lower. Since the expulsion of Buddhism, which had prevailed for about 1000 years (B.C. 250 to A.D. 750), this exceptional process has again been reversed, and during the last 2000 years Brāhmanism has spread over the whole peninsula, absorbing or driving to the uplands all the primitive beliefs, and even attacking them in their last retreats in the Vindhyān ranges and the mountains of the Islands. Hence it is that even in these least accessible tracts unalloyed primitive forms are gradually disappearing. Still, enough remains to enable us to discriminate between the original Dravido-Kolarian and the intrusive Hindu elements. Thus Mr. A. Krishna Iyer writes that the Malayars of Cochin 'are pure animists, but, owing to their association with the low-caste men of the plains and their attendance at the neighbouring village festivals, they have been forced to adopt the higher forms of worship.' Of their six gods two are demioceleal (chthonic), and four are merely different names for the Hindu Kālī, who was originally borrowed by the Hindus from the natives. From the higher castes are also taken Bhagavati Bhadrakālī and Nagasāmī, who have penetrated into the neighbouring Kollenco forest, and are there worshipped with semi-Hindu rites, jointly with Maniṣpan and the other demon-gods, for all these demon-worshippers were worshiped by the aborigines. Other such demon-worshippers. But these demons themselves, as well as all preterrestrial beings, are really human like the suppliants, only invisible and more potent. Hence 'they are held in fear and pious reverence, and shed their benedictions on all (Iyer, MS. notes). Much the same account is given of the Eravallers of the Chittur forests, who also include Kālī amongst their demoniacal gods, and seek her protection with like offerings.

Amongst the Bhils, Kols, Gonds, and other Pahāriyas of the Vindhyān uplands, great respect is paid to Mahādeva, to whom have been consecrated the Mahādeo heights east of the Satpuras. He is even confounded with the chthonic Tiger-god, and associated with Bhīma, Arjuna, and other heroes of the Mahābhārata, and his demi-gods of the earth have almost Hinduized hillmen offered till lately human sacrifices to the various members of their limitless pantheon, which includes sun, moon, rocks, trees, torrents, the passing winds, and especially the departed spirits who return in the form of nightmare, sit on the chest, squeeze the throat, and suck the blood, like the vampires of the popular Slav legend (see ETHNOLOGY). So intermingled are the higher and lower forms throughout Gondvāna and the frontierland that the Census agents are often puzzled how to return certain ethnic groups, whether as outcaste Hindus or Hinduized outcastes.

5. But this new field of research is boundless, and we must hasten through Indo-China, where
the superficial Buddhism is everywhere intimately associated with the never-dying animism, eastwards to the Malay lands, where analogous associations crop out everywhere between Islam and the still rampant heathenism of Borneo, Celebes, Gilo, and Mindanao. Much light has recently been thrown on this religious syncretism in the authors’ own Islands by Professors F. and P. Sarmento in their Reisen (Berlin, 1905) the reader will find much instructive matter. The prevalent relations in the hitherto almost absolutely unknown island of Mindanao have also been revealed by N. M. Sales and Reisen in its Religion, vol. iv. of the Philippine Ethnological Survey Publications (Manila, 1905). Here the ‘authentic’ genealogies of the Moro (Muhammadan) dynastic families are interwoven with curious pagan elements, and we read of orthodox Sultans descended from unions not only with houris sent down from heaven, but also with a native princess found inside a bamboo stalk. This occurred at the time Tabunaway and Mamalu were cutting bamboo to build their fish coral. When the last two layers of high bamboo was cut, who was called by Puti Tunina, and whose little finger was wounded, the bolo having cut through the bamboo, and from her sprang Malang-as-Inang, third datu (king) of the Bwayan dynasty. The Mindanao Muslims have accepted similar folklore, and firmly believe in the Balbal vampire, a huge night bird, whose screech is supposed to be distinctly heard after sunset. It is really ‘a human being who transforms at night into an evil spirit which devours dead people,’ in this differing from other vampires, which come out of the dead and prey on the living. But so detested is the creature, that in the local Muhammadan code, here published in full, anyone calling another balbal is fined one slave or his value (p. 65). Thus in Mindanao it is again the higher Muslim system that is affected by the lower ideals of the aborigines, many of whom have withdrawn to the uplands of the interior, where interesting discoveries await future explorers in primitive psychologies.

The balance is redressed in Oceania, where the more civilized Eastern Polynesians have inoculated the Western Melanesian cannibal head-hunters with their mana and other subtle religious essences. But in the process modifications naturally take place, and the Maori mana is not, perhaps, quite the same thing as that of the New Hebrides savages. The Maori mana, brought from Hawaiki (Samoa?) to New Zealand by the kaka bird, is not easily distinguished from the forest, the human, and the other local mauri, and is generally defined as ‘power, authority, influence, prestige’ (A. Hamilton, Maori Art, p. 396). But the Melanesian mana is more spiritual, analogous to the Augustinian grace, without which no works avail, but which is the true end and aim of all. Thus a person may have mana, but is not himself mana,—a force which ‘is present in the atmosphere of life, attaches itself to persons and to things, and is manifested by results which can only be ascribed to its operation’; and again: ‘a force altogether distinct from physical power, which acts in all kinds of ways for good and evil, and which it of the greatest advantage to possess or control’ (Cldington, The Melanesians, pp. 118-119). But however homologous with, or divergent from, the Maori mana, this mana permeates all religious thought of the Melanesians, whose religion ‘consists, in fact, in getting this mana for oneself, or getting it used for one’s benefit—all religion, that is, as far as religious practices go, prayers and sacrifices’ (ibid.). And as the principle is admittedly derived from
originally distinct personalities, and are themselves a clear indication of the higher Aryan and Semitic influences brought to bear on the primitive religion of the Pelasgian aborigines. But these influences must not be pushed too far, as when Eduard Glaser imports the Vedic *Dyaus* into the *Ceto* (Maya) religious system, as well as into Israel (Jahweh). It is clear from the compound forms *Dyuyaspiter* (Vedic Sanskrit), *Zeō τρεπ* (Gr.), *Juwepatri* (Umbrian), *Dies-piter*, *Jupiter* (Latin), that this personification of strangers on the banks of the Ganges troubled and already found expression in the Aryan mother-tongue, and was consequently a common inheritance of all the proto-Aryans who, after the dispersion, brought it independently into their Indian, Hellenic, and Italic settlements. Thus we have here no reciprocal influence of Aryans upon Aryans; but as to the same root belong the Avestan *daeva*, the Lithuanian and Lettic *Dëwas, Dësas*, *God*, 'other' and other Western variants, it follows that the pantheons of the Iranian and European aborigines were enlarged and otherwise modified in remote prehistoric times by their proto-Aryan conquerors. What other early interminglings of religious systems may have taken place, as between Aryans and Ligurians in Italy (Celts) and Greeks and the British Isles, is a subject of too speculative a nature to be here discussed. One point, however, seems fairly well established, that the Semitic Phoenicians reached the far west with their Baal, who was one of their chief deities by the Ibero-Celtic peoples of Britain and Ireland. The expressions *Bal mātākₐr* art, 'may Baal prosper thee,' and *Bal Dzha dhuit*, 'God Baal be with thee,' were not so many years ago still addressed to strangers on the banks of the Tagus (see J. Bowick, *Irish Druids and Old Irish Religions*; H. O'Brien, *Phoenician Ireland*; D'Arbois de Jubainville, *Cours de Littérature Celtique*).

9. In the New World, effectively cut off from the Old most probably since Neolithic times, the interchanges of cultures and religious notions can have been only between the American aborigines themselves. But here also there were very great local developments, in virtue of which some, such as the Aztecs, Maya, and Iberians, of the Mayas, but, on the contrary, were absorbed by them (Mexican and Central American Antiquities, Washington, 1904, p. 642). It is also shown that the calendrical systems of the Maya were common to all Central American peoples, and that the Maya calendars, covering a period of 562 days, the period of gestation, originated by the use of the sign as slavishly copied by the Aztecs (p. 527; see also Keane's *Eng. ed. of Seker's Elucidation of the Aztec Tonalamatl*, 1901) contain the identical currents of Mind in the Zapotec domain (the present State of Oaxaca). Professor Seker shows that this culture nation drew many of its religious inspirations from the neighboring Aztecs. 'The most conclusive evidence is that the cosmogonic representations referring to Quetzalcoatl, the god of the West, as well as the Olympus with its various mythological figures, as the picture-writings, were not strictly national, did not have their roots in the Zapotec country, but represented a super- cposed culture which owes its origin to the Nahua tribes dating back to prehistoric times' (Wandmalereien von Mitla, Berlin, 1890).

On the other hand, the views advanced by the late Mr. Leland in *The Algonquin Legends of New England* regarding the old Norse origin of the north-eastern Indian mythology cannot be upheld. But although they are now shown to be untenable, later European influences have been at work, and as a result, Andrew Lang has found older traces of Irish, French, and a few Anglo-American strains in many of the Passemaquoddy legends. Still, Prof. J. D. Prince, of Columbia University, holds that what is genuinely native 'stands forth with undiminished lustre as the kernel of the tales,' that is, the witchcraft and other stories recorded in *Kulukap the Master*, the joint work of himself and Mr. Leland. A. H. KEANE.

**ABORTION.**—See FETICIDE.

**ABOULIA.**—A mental disorder characterized by loss of volitional control over action or thought. There are three general types of aboulia. (1) In aboulia the purely ideational field may be regarded as the loss of inhibitive powers or of control of attention. In such cases, when a motive or impulse appears in consciousness with a preponderating force, there is an ill-balanced tendency to immediate action. The suggestion is without natural check, and rash and inconsiderate execution of it follows. The limiting cases of such disorder (sometimes termed hyperbolia) are to be found in the obsessions of fixed ideas, in hypnotic suggestion, in the suggestion of voluntary writing, etc., to the extent that there is no consciousness of competitive motor impulse (and hence none of volition). (2) Distinguished from this, but still in the ideational field, is aboulia which takes the form of extreme hesitancy. Where a suggestion presented in consciousness as alternatives,—that is, with equal or nearly equal suggestive power,—the loss of ability to inhibit prevents selection, and irresolution and failure to act at all are the result. It is probable that conduct which is often interpreted as extreme scrupulosity, or conscientiousness in affairs of no real moral moment, taking the form of indecision, is merely a manifestation of this type of aboulia. (3) Aboulia due to ideomotor derangement should be sharply distinguished from the preceding cases, and is one not to failure to make rational choice, but to inability to execute the choice made. Its psychical form is failure of the kinesthetic equivalent, or motor image adequate to action, and its physiological basis is probably lesion or loss of tone in the association tracts. It shows itself in a sort of muscular stammering, repeated efforts being required to perform some ordinarily easy action. Aboulia is a characteristic neurotic ischemic condition, appearing in conjunction with multiple personality, automatism, etc. It is the natural pre-condition of excessive susceptibility to suggestion.

H. B. ALEXANDER.
ABRAHAM-MEN.—A class of sturdy beggars, who feigned to have been mad, and to have been kept in Bedlam for a term of years. 'Bedlam'—a lunatic asylum or mad-house—is a contraction for Bethlehem, the name of a religious house in London, founded as a priory in 1247, and in 1547 converted into a hospital for lunatics. Originally 'Abraham' men were not a new portmanteau social type, but an inmate of the lunacy ward under the patronage of the patriarch Abraham. On discharge from hospital he wore a badge for identification, and was formally permitted to roam the country as a 'Tom of Bedlam' and to solicit alms.

This character was personated by vagabonds and sturdy rogues, who wandered over England in a disorderly manner, feigning lunacy and preying upon the charitable. Hence the slang phrase, 'to sham Abraham.' Where begging failed they did not hesitate to turn to other, and, when detected in any deprivation, they would plead the immunities and privileges of a Bedlamite. The character is common in Shakespeare's time, and seems to have survived till the period of the Civil Wars. For a discussion on the character and uses of Abraham men, see speech of Edgar in King Lear, Act ii. sc. 3; for synonyms, see Rider's English Dictionary, p. 1196. See also Warming's Prefaces into the English Bible, 1654: 'And those, name what title ever they bear, Jackman, or Patrico, Cranke, or Clapper-dudgeon, Fox, and Abraham-man, I speak to all.'

Of A. W. Fowler's Fraternity of Vagabonds, 1655: 'An Abraham man is he that walketh bare-armed and bare-legged, and faynet hym, and carryeth a pack of wool, or a stycke with lock on it, or such kyke toy, and nameth himself "Poor Tom."' (ed. Edward Capel in Soc. p. 3). See also Dekker's Delmon London, 1605: 'Of all the mad rascal the Abraham man is the most pantastickt. The fellow that sat half naked (at table to-day) is a sort of Abraham, or a Lord of his own, for that ever came into my house, the noblest villain: he swears he hath been in Bedlam, and will talk frantickly of purpose: you see pinnes stuck in sundry places of his naked flesh, especially in his arms... only to make you believe he is out of his wits: he calls himself by the name of Poor Tom.' Of these Abraham men some be exceeding merry, and doe nothing but sing songs: some will dance: some will doe nothing but laugh or weep: other are dogged and sullen both in look and speech, that, spying small company in a house, they boldly and bluntly enter, compelling the servants through fear to give them what they demand, which is commonly bread or money that will yield ready money.

The great authority is Harman's Cautious, or Warming for Common Corrossors, 2nd ed., 1607.

W. W. FULTON

ABRAVANEL (or ABARBANEL), Isaac (1437-1508).—Statesman and author, Don Isaac Abra- vanel shared in the general exodus of the Jews from Spain in 1492. He had been in the service of the Infante Don Alfonso V., of Portugal and Queen Isabella of Castile, and after his banishment acted as finance minister in the states of Naples and Venice. His fame now rests chiefly on his Commentaries on the Bible. He wrote on the Pentateuch, the Historical Books, and the Prophets, but not on the Hagiographies. Among the characteristics of his Commentaries, mention must be made first of his general prefaces to the various books. In this respect he deserves to be considered 'a pioneer of the modern science of the interpretation of the Bible' (Ginzberg). In addition, his Commentaries are remarkable for the use made of the knowledge of the world which the author had acquired in the vicissitudes of his public career. He thus takes account, in his exegesis of the Biblical histories, of political conditions and social life, and attempts to explain within the standpoint of its actual contemporaries. In this respect, too, Abra- vanel was an innovator, for he anticipated the modern principle which relies not alone on literal exegesis, but calls into play all available material, whether historical and traditional. Again, Abra- vanel makes free use of Christian Commentaries; he quotes Jerome, Augustine, Nicholas of Lyra, Paul of Burgos, and others. Thus he deserves credit for believing that there is room for supplementing exegesis—for an exegesis which shall attempt to explain Scripture without theological prejudice.

In all these points Abra- vanel's services were appreciated by Christians as well as by Jews. 'No less than thirty Christian writers of this period—among them men of eminence, like the younger Buxtov, Buddeus, Carpzov, and others—occupied themselves with the close study of Abra- vanel's exegetical writings, which they commend as a fresh and original contribution to the world of Christian scholarship' (Ginzberg). Certainly Abra- vanel gains by compression, for his works are very prolix. They were often written in great haste. Thus his long Commentaries on Joshua, Judges, and Samuel occupied him only six months. Yet these Commentaries include some of his very best work.

The philosophical works of Abra- vanel are of less importance than the exegetical. His Zohar Amanah ('Pinnacle of Faith') is a treatise which aims at dissociating Jewish theology from philosophy; he upheld, against Maimonides, the view of miraculous inspiration. His Messianic books were very popular, and were often reprinted. In these he disputes alike the views of Christian and of Jewish millenarians. His Yeushuv ha-Mo'ed ('How and When the Messiah is to come') is a clear and full account of the Rabbinic doctrines concerning the Messiah. Abra- vanel himself claimed descent from the royal house of David.

ABRENUNTIO.—The renunciation of the devil at baptism is a custom which goes back certainly to the 2nd century. At first, as we see from the Patristic references, the renunciation was thought of as intellectual as well as moral, a renunciation of heathenism with its teachings as well as with its vices and abuses; while later, after the triumph of Christianity (and so at the present day), the renunciation is thought of almost entirely as moral, as a promise to lead a good life.

The custom of interrogating the candidate to see whether they really gave up heathenism and believed in Jesus Christ probably goes back to Apostolic times; it would be a necessary precaution which could scarcely be dispensed with. Perhaps the earliest reference to it is the gloss of Ac 8:37 AV, the confession of faith by the Ethiopian eunuch, which, though probably no part of the original text, is found in Irenaeus and Cyprian, and must therefore reflect the usage of at least the 2nd century. It is quite probable, however, that the 'interrogation (ἐρωτάσθη, not ἐρωτήσθη) of a good conscience' in 1 P 3:1 refers to the practice in question.

For our present purpose it is more important to know how the early Church interpreted 1 P 3:1 than how it was intended by its writer; but as to the early interpretation we have no evidence. The commentators vary in their views. Almost all take εἰρωτάσθη with εὐδοκέοντος διαλεκτικάν, the Paraphrase of the Peshitta (not washing away... but confessing God with a good conscience) and the Vulgate with transcendental bonus interrogatio in Deus'; some, like Alford, denying any reference to the baptismal interrogations, and rendering 'inquiry of a good conscience after the Bible' for the phrase, would expect εὐδοκέοντος; and others taking εὐδοκέοντος to be the baptismal questions, as (Eumenius 11th cent.), Hooker (Evangelical Pol. or Theocr.; vol. ii. 123), Estius (Comm. in I. P. vol. ii. p. 135), Dr. Bigg (ICC, in loc.) also holds the reference to the baptismal interrogations, but gives a strong argument for taking εἰρωτάσθη with εὐδοκέοντος, as corresponding to εἰρωτάσθη in Acts 9:18, where εὐδοκέοντος corresponds to εὐδοκεῖται. The translation in that case would be: 'that he may bring you safety through water, which also after a true likeness does now bring you safety to God, even baptism (not the putting away of the filth of the flesh, but the renunciation of a good conscience), through the resurrection of Jesus Christ.'

Turning to the Patristic evidence, we may notice that Justin Martyr speaks (Apol. i. 61) of those who are being prepared for baptism 'promising to
be able to live according [to the truth].' The first witness for renunciations, however, is Tertullian. He says (de Spect. 4):—

‘When entering the water, we make profession of the Christian faith in the words of its rule, we bear public testimony that we have renounced the devil and his angels. We do not enter the font in connection with idolatry, above all, that you have the devil and his angels? Our renunciation testimony in the laver of baptism has reference to the shape, which through their idolatry have been given over to the devil and his angels.'

Elsewhere (de Idol. 6) he says that idol-making is prohibited to Christians by the very fact of their baptism. ‘For how have we renounced the devil and his angels if we make them?’ In de Cor. 3, after describing the act of disowning ‘the devil and his angels,’ he says: ‘Hereupon we are thrice immersed, making a somewhat ampler pledge than the Lord has appointed in the Gospel.’ So in the Canons of Hippolytus, which probably represent Roman or Alexandrian usage early in the 3rd cent., the candidate for baptism turns to the West and says: ‘I renounce thee, Satan, with all thy pomp.’ He is then anointed by the presbyter, and before being baptized turns to the East and says: ‘I believe and the Holy Ghost, for the meaning of ‘pomp’ see below.’ Other 3rd cent. writers mention the interrogations, but not the renunciations in particular. Cyprian (Ep. lxxix. 2, [Oxford, lxxv.]) speaks of a prophetess in Cappadocia, 22 years before the Christianized baptism; making use of the usual and lawful words of interrogation. And Dionysius of Alexandria, writing to Pope Cyril (ap. Euseb. HE vii. 9), speaks of the questions and answers (τὸν ἐπιθυμήσαν τὸν ἀποκλύτων ἅμα). It is clear, then, that in the 3rd and probably in the 2nd cent. the candidates made an act of submission to God as baptism as well as a renunciation of the devil.

The same thing is also evident in the 4th century. The act of submission might be the recital of a creed (‘reditio symboli’), which had been taught to the candidates during their catechumenate (‘traditio symboli’); or it might be a simple formula, or both the formula and the creed. In Corpus Christiani (Cot. Lit. 4) we read that the candidate first facing West, because ‘the West is the region of sensitive darkness,’ and Satan, ‘being darkness, has his dominion also in darkness,’ whereas the East is ‘the place of light.’ He says, stretching out his hand: ‘I renounce thee, Satan, and all thy works, and all thy pomp, and all thy service (or worship, λατρείας).’ The word ‘pomp’ is explained as being the shows, horse races, hunting, and all such vanity; the word ‘service’ as idolatry, prayer in idol temples, etc. Then the candidate faces East and says: ‘I believe in the Father, and in the Son, and in the Holy Ghost, and in one baptism of repentance,’ and is anointed and baptized.

The renunciation and submission are pronounced in the outer chamber; the anointing and baptism follow in the baptistery, where the candidate is again asked whether he believes in the name of the Father, and of the Son, and of the Holy Ghost (xx. 4). It does not appear that at Jerusalem in Cyril’s time the Creed was recited at baptism in the 4th cent., but it may first cite the Egyptian and Ethiopic Orders, which are almost alike. The candidate says: ‘I renounce thee, Satan, and all thy service and all thy works’ (Ethiopic: ‘all thy angels and all thy unclean works’); he is then anointed, and a long creed takes the place of the formula of submission. Turning to the West and East is not mentioned in these two Church Orders. In the corresponding part of the Verona Latin Fragments of the Didascalia (ed. Huizer) there is a lacuna. In the Testament of the Apostles (ed. Duchesne) the candidate faces the West and says: ‘I renounce thee, Satan, and all thy service (lit. ‘military service’), and thy shows (lit. ‘theatres’), and thy pleasures, and all thy works.’ After being anointed, he turns to the East and says: ‘I submit to thee, Father, Son, and Holy Ghost,’ etc.* In the Apostolic Constitutions the form is somewhat different (vii. 41). The renunciation is: ‘I renounce (εἰσερχόμεθα) Satan, and his works, and his pomp, and his angels,’ etc. This is immediately followed by the act of submission: ‘I associate myself (συνάπτομαι) with Christ, and believe and am baptized into one unbegotten Being,’ etc. (a long creed); then come the anointing and baptism.

Turning to the West and East is not mentioned; but later, after confirmation, the neophyte is directed to pray towards the East (vii. 44). We have some confirmatory evidence from other 4th cent. writers.

Eusebius (Ep. ii. 8, 19) speaks of the neophyte having taken ‘the interrogations thus: ‘Dost thou believe in God the Father Almighty?’—‘Dost thou believe also in our Lord Jesus Christ and in His cross?’—‘Dost thou believe in the Holy Ghost?’ When the candidates were too young to make the answers to the interrogations and to say the renunciations themselves, this was done for them by the sponsor, or the parents, or a relation (Canons of Hippolytus, 113; Egyptian Church Order, § 48; Testament of our Lord, ii. 8; for sponsors see also Tertullian, de Bapt. 18, and the allusion to them—‘incipse suscepti’—in de Cor. 3).

The custom of renouncing the devil has persistently remained. Duchesne (Origines du culte chrétien, Eng. ed. Cot. Lit. 4) says: ‘At the time of the trial interrogation: ‘Dost thou believe in God the Father Almighty?’—‘Dost thou believe also in our Lord Jesus Christ and in His cross?’—‘Dost thou believe in the Holy Ghost?’—The candidate recited the Creed publicly, but in the 5th cent. the priest recited it for him.

In the Gallican use, the candidate, facing West, was asked: ‘Dost thou renounce Satan, the pomp of the world and its pleasures?’ The candidate replied, entered the font, and answered a threefold interrogatory on the faith with ‘I believe,’ and was baptized (Missale Gallicanum, see Duchesne, op. cit. p. 324).

In the Sarum Manual the renunciations were at Rome (see above); after the anointing the priest asks the candidate a threefold interrogatory which is a sort of the Apostles’ Creed, to each part of which he answers ‘I believe,’ and the baptism follows (Maskell, Monuments of the Sarum Rite, pp. 295, 296).

The custom in the Eastern Churches is much the same as in the West. In the Orthodox Eastern Church the renunciations come in the Order for

* In the Testament, the Verona Fragments, and in the Canons of Hippolytus, a form of the Apostles’ Creed is put before the candidates in the shape of three questions at the act of baptism.
Making a Catechumen, which is separate from the baptismal service. The candidate, or (if he be a ‘barbarian or a child’) his sponsor, is asked thrice:

1. ‘Dost thou renounce Satan, and all his works, and all his angels, and all his service, and all his pomp?’
2. ‘If so be.’
3. ‘Dost thou join Christ?’
The Nicene Creed follows here, and after some repetition of the same question the candidate says: ‘I bow myself to the Father, and to the Son, and to the Holy Ghost’ (Shann, Book of Needs, p. 19; Littledale, Offices of the H. E. Church, p. 134). In the Armenian baptismal rite the catechumen says: ‘We (sic) renounce thee, Sabbath, and all thy deceitfulness, and thy viles, and thy service, and thy paths, and thy angels.’

He is asked, with some repetition, if he believes in the Holy Trinity, and the Nicene Creed is said in full (Coneybear-Maclean, Ritualæ Armenorum, p. 92; Deninger, Ritual Orientalium, i. 385, also p. 298). The Armenian version of the Nicene Creed is:

The Coptic and Ethiopic customs are almost the same (Deninger, i. 196, 223; see a shorter form at p. 234, where the renunciation is explained as a purely moral one, without reference to heathenism or absolute Syria). The renunciation is preceded by a formula which does not require for its existence, or for its meaning, that supplementary facts or factors should be brought into consideration. And any one using the term will in general be satisfied to take it as simply equivalent to ‘without qualification,’ i.e., without positive relation to something which lies beyond what is described or stated, and limits or restricts its meaning. In such a case, what is spoken of as ‘absolute’ can appear in a variety of settings, and yet be unaffected by the process. This is always implied when the negative character is emphasized. What is absolute is not merely so at a given time and in given circumstances; but, however it is shifted about, it will remain permanently what it is, it will preserve its content, and defy interference by any other circumstances. ‘Absolute’ here means simply out of relation. An example is the expression ‘absolute freedom,’ as employed, e.g., by indeterminists. Sometimes this is true only up to a certain point; sometimes it is held to be true indefinitely. Thus, when it is said that such and such is an ‘absolute fact’ or is ‘absolutely true,’ it is not always implied that, no matter where the ‘fact’ is placed, it will remain unaltered, but that within a certain range of reality or range of truth the Norbians or Eastern Syrians appear not to have it. Their baptismal service is drawn up in a form closely resembling the Eschatological Liturgy, with lections, creeds, Surrsum Corda, invocation, etc., and presents many unique features. The Renunciation among the Norbians probably formed part of a separate office (as in many other Churches), and this office has now perished and the Renunciation with it. But the Nicene Creed, recited in the baptismal service on the analogy of the Liturgy, serves the purpose of a profession of faith.

A. J. MACLEAN

**ABSOLUTE.**—1. Meaning of the term.—The term ‘absolute’ (absolutum = ‘unrestricted,’ ‘set free’) can hence what can subsist by itself in that condition, what is complete as it stands (as used either as an adjective or as a substantive, and, in either case, takes on a variety of allied but distinct meanings. It seems probable that the adjective use is grammatically prior. One of the first writers to use the term is Cicero, who (in de Finibus) employs it to describe a characteristic of the blessed life, and also a form of necessity. As an adjective it may be predicated of any substantive which has or can have the qualification of subsisting by itself. This qualification may be given either negatively, in the form of the absence of all relation of dependence on anything else; or positively, when stress is laid on its internal coherence and self-sufficiency.

We find it employed, e.g., in biology, in science and in everyday experience. Characteristic uses in science are, e.g., ‘absolute temperature,’ ‘absolute alcohol,’ ‘absolute position,’ or again ‘absolute space.’ In common thought it is found in the expressions ‘absolute fact,’ ‘absolutely false.’ As a substantive it is primarily a philosophical term, and is in general used to designate the basis or fundamental principle of all reality, that which in some sense is or contains all the variety that exists. It is with the philosophical term that the present discussion is concerned, but it will be of service to introduce the discussion of its philosophical significance by a general analysis of its various meanings.

The meaning of the term may be brought out negatively or positively. Sometimes one is emphasized, sometimes another, as circumstances require. This is possible, because the term has, even etymologically, a negative nuance, and a negative qualification implies a positive ground. In general, it seems safe to say that the negative aspect is the more prominent. That is ‘absolute’ which does not require for its existence, or for its meaning, that supplementary facts or factors should be brought into consideration. And any one using the term will in general be satisfied to take it as simply equivalent to ‘without qualification,’ i.e., without positive relation to something which lies beyond what is described or stated, and limits or restricts its meaning. In such a case, what is spoken of as ‘absolute’ can appear in a variety of settings, and yet be unaffected by the process. This is always implied when the negative character is emphasized. What is absolute is not merely so at a given time and in given circumstances; but, however it is shifted about, it will remain permanently what it is, it will preserve its content, and defy interference by any other circumstances. ‘Absolute’ here means simply out of relation. An example is the expression ‘absolute freedom,’ as employed, e.g., by indeterminists. Sometimes this is true only up to a certain point; sometimes it is held to be true indefinitely. Thus, when it is said that such and such is an ‘absolute fact’ or is ‘absolutely true,’ it is not always implied that, no matter where the ‘fact’ is placed, it will remain unaltered, but that within a certain range of reality or range of truth the Norbians or Eastern Syrians appear not to have it. Their baptismal service is drawn up in a form closely resembling the Eschatological Liturgy, with lections, creeds, Surrsum Corda, invocation, etc., and presents many unique features. The Renunciation among the Norbians probably formed part of a separate office (as in many other Churches), and this office has now perished and the Renunciation with it. But the Nicene Creed, recited in the baptismal service on the analogy of the Liturgy, serves the purpose of a profession of faith.

A. J. MACLEAN
of relation whatsoever will alter its permanent independence. In the long run, as we shall see, this is the only consistent form in which the term can be used, and is indeed the basis for all other uses of it. But, when describing common usage, it is desirable to indicate other ways in which the term is employed.

This independence of alteration by external association, to which we have referred, already contains within its negative expression the positive character which the term 'absolute' also possesses, and which in certain cases is more particularly emphasized. By 'absolute' is then meant that quality in virtue of which an object can stand by itself, has an internal constitution of its own, is controlled and determined from within by its very nature. This positive character is really the ground of that negative meaning above described; and the latter is in strictness inseparable from the other. But for certain purposes it is of importance to lay especial stress on the positive character per se. In the case, the term 'absolute' refers to what is included rather than to what is excluded; to the inner nature of the object so qualified rather than to its possible relation to other objects; to its individual constitution rather than to its connexion with other individuals. Examples of expressing a relation as an 'absolute system,' an 'absolute unit,' 'absolute equality.' This positive significance may be taken in specifically different senses. It may refer simply to what, in virtue of the internal constitution of the object, is possible or hold good; and we may know its internal constitution so completely as to justify us in applying the term 'absolute' to it. This is one meaning of the expression, 'Such and such is an absolute possible absolute' in the absolute sense, the predicates we can apply to the object, are internally consistent. This is the least we can say of anything which we can think—its lowest claim to be something pers as. This is 'absolute' as opposed to 'relative.' On the other hand, we may mean that the object maintains its being, not in spite of relation to all other things, but in every possible relation to other objects in which it may stand. We may compare it with other objects as we please, may say anything concerning it, without its meaning unaffected. This is 'absolute' as opposed to 'comparative.' The expression 'absolutely possible,' in this sense, is the utmost we can say of anything when taken by itself. Other examples of the 'absolutely' are 'absolute dominion' over individuals in a society; 'absolute simplicity' of physical elements; an 'absolute subject;' i.e., a subject which, in every possible sphere, remains a subject, and cannot be a predicate of anything. Sometimes, indeed, we may use the term to cover simultaneously both of the forms of its positive meaning. But in general they would not be true together; for while, e.g., the least we could say of anything can also be said of it if we first state the most we can say of it, the reverse would not be true. Then it is not the Absolute Being, taken positively, is a case in point. Another, and an important positive use of the term, is when it is employed to designate not what has been simply by itself, or what maintains itself in every possible relation, but what is the ultimate ground of all possible relations. This is the meaning often attached to the expression 'Absolute Reality.' The use of the term 'Absolute Space' to signify that which is the ground of the perceptions, i.e., all things separate from us, is another example. Here 'absolute' is nearly equivalent to 'ultimate,' or the logical praevious. The object in question here contains all relations, and is absolute in that sense. In the other positive senses an object was absolute either as existing by itself in spite of relation, or as subsisting throughout all relation.

The foregoing analysis of the negative and positive significance of the term has already, no doubt, indicated that neither sense alone is really adequate as a complete expression of its meaning. Each is in strictness one-sided. Indeed, each implies the other, and is more or less consciously present when, for certain purposes, stress is laid on one side rather than another. It is clear that 'absolute' in the sense of 'outside of relation, without qualification,' is predicable of a particular object only in virtue of relation. A negative relation is still a relation, and a relation cannot exist unless both terms constituting it are affected and involved. Strictly, 'absolute' is never meant to convey that the object is really outside all relation; but either that the effect of the relation may be ignored or that the object has so secure a place in a general system, that the whole system stands and falls with its subsistence. Thus, when a particular statement is said to be 'absolutely true,' we shall find that one or other of these assumptions is made. But it is evident that 'absolute' in this sense really implies relations which are merely unconsidered, and which are never expressed. In a social sense, considered, means simply without the qualifications which specific relations would bring, these qualifications, and therefore these relations, must be there to give it its meaning. Relation thus enters into the constitution of the term in its negative aspect; and, with it, the positive content which the term related must possess to enter into a relation at all. In the limiting case, when by hypothesis there is no other term with which to constitute a relation, the positive absolute coincides completely with the negative. This is found when we speak of the 'absolute whole.'

Similarly, when we take the positive meaning by itself and apply it to a specific object, it contains, as a part of its significance, a reference to other objects. An object cannot be conceived as something in itself without ipso facto implying a distinction from other things. What it is in itself logically implies others from which it is at least distinct in some way; or it cannot be known at all. It is more obvious when, as in the case, e.g., of 'absolute simplicity' above mentioned, it is what it 'absolutely' is only through relation to other things. The same is true again when it is the ultimate in the order of things. In the one case it is positive explicitly coincides with its negative, when the reality contains all possible otherness, and is in itself, not through others, but through itself.

If, then, the negative meaning in this way implies the positive and vice versa, we seem forced to the conclusion that what is really involved in either use of the term is the whole which contains both aspects, and that this alone is truly absolute. For, between them, positive and negative in strictness exhaust the term; both imply the other. We cannot predicate the term 'absolute' positively or negatively, it is implied that there is no restriction as to what is excluded or included. Absolute in the sense of, e.g., without qualification, is in principle unrestricted in its range of negations. If, therefore, the positive, fully understood, involves the entirety of what is negated and conversely, this means that it is a whole, and one and the same whole, that is implied in every use of the term 'absolute.' This relation is that of 'absolute' in any given case refers to, and this alone is absolute. If this is not admitted, we are bound to conclude that the predicate 'absolute' is in every case through and through affected by relativity. But a relative absolute is a contradic-
tion in terms; and if this is meant, we must give up the use of the term altogether, except as a way of being emphatic. Otherwise we must accept the view that in every strict use of the term it is logically a single whole that is involved, and that this is alone absolute.

The above analysis certainly compels us to accept the term. If we admit it, we can at once give a logically valid meaning to the use of the term in its positive form and in its negative form. For in either case it means that the object so qualified has a necessary place in the one whole, and that without it all else would not make what it is. Or, in other words, the whole and the parts stand together. The predication of the term 'absolute' of any specific part is thus merely our way of affirming our conviction of its necessary place in the one totality, the one systematic unity. The whole being the absolute, each part, of whose place in it we are assured, can be 'absolutized.' And this is done by us in a negative or a positive way according to circumstances. If we apply this interpretation to any current use of the term, we also do not make any judgment or truth the meaning to the idea we have in mind. The denial of this view involves the denial of all absoluteness in experience. This is the position of those who maintain the doctrine of thoroughgoing Relativity. It is the case of a just term. So far as we have merely considered the various uses of the term, and have not considered the application of the conception of absoluteness to specific philosophical problems. There are two such problems which are historically important and philosophically fundamental: (1) the problem of absoluteness in human knowledge, which raises in part the question of the 'relativity of knowledge'; (2) the problem of the Absolute in metaphysics. We must deal with each of these separately, so far as they can be separated.

I. ABSOLUTE AS APPLIED TO HUMAN KNOWLEDGE.—There are two distinct ways in which the term 'absolute' may be applied to human knowledge. Both start from the position that in all knowledge we aim at an ideal, and that the summation of our knowledge would be the explicit articulation of that ideal in systematic form. The term 'ideal,' however, may or may not be used, and may be variously interpreted.

We shall call it 'complete' truth, and regard this as the complete 'agreement' of our thoughts with the 'nature of things.' If we attempt to express with systematic fulness what this ideal as such contains, to give in some sense the whole truth, the knowledge so supplied would be spoken of as 'absolute' knowledge. In general it is also implied that in such a case we are at the point of view of the whole ideal as such; that we do not rise to it gradually and give the content of the ideal at the end of our journey, so to speak, but rather that we start our journey at an ideal and the ideal not having at the outset the position of an absolute knowing mind. We interpret the ideal as an objective system of truth in virtue of our taking up an objective or trans-individualistic attitude, where the aspect of specific individual minds is eliminated. This point of view is essential, because an ideal of knowledge in this sense involves the disappearance of finite qualifications and reservations.

This conception of absolute knowledge may be regarded in two ways. (a) It has been taken to mean an exposition of the whole truth both in its general content and in its particular details—a system, in fact, not simply of principles, but of conceptions with their details in all their manifold form. Absolute knowledge in this sense has generally been considered impossible of achievement, and certainly there is no historical example of a single system which claims to give so much. These two senses of the term 'absolute knowledge' may be conveniently characterized in the language of recent philosophical work (Laurie's 'Synthesis') as, respectively, the one which gives a 'synthesis of the absolute,' and knowledge which gives an 'absolute synthesis.'

(b) Another use of the term as applied to knowledge is found when we speak of knowledge in a given case being 'absolute knowledge,' or conveying 'absolute truth.' This need not refer directly or even at all to any absolute system of knowledge. It can be applied to any case where, as we some times say, we are 'absolutely certain,' or where the judgment does not contradict itself or any other judgment; or most of the judgments making up our knowledge can be spoken of as absolute, whether the knowledge be given in the form of a scientific statement, like 'two and two are four'; or even in the case of a perceptive judgment: 'that is white.' The latter may be said to be as 'absolutely true,' to convey absolute knowledge of this specific area of perceptive experience, as the former type of judgment. Indeed, the assertion of any ultimate fact, from this point of view, becomes an 'absolute truth,' a case of 'absolute knowledge'; and all the steps in the attainment of the complete truth, the complete systematic ideal of knowledge, are at least capable of being characterized in this way, whether we ever attain to the complete system or not. Hence the term can be applied in this second sense to knowledge without any implication of the possibility of 'absolute knowledge' in the first sense. Indeed, it may be denied in the latter sense, and asserted only in the former.

In considering the question as to the possibility of the idea of absolute knowledge, we have to bear in mind this difference in the use and application of the term. It may, no doubt, be said with some truth that absolute in the second sense really implies in the long run the admission of absolute in the first sense. But, at any rate, that the idea is possible, and can be even fairly denied. This comes out in the controversy between 'absolute' and 'relative' truth. It is often held that all our knowledge is relative to us, and therefore absolute knowledge is impossible to man. By this is meant that the attainment of an 'absolute system of truth' is impossible, and not that our knowledge, 'so far as it goes,' is not absolutely true. Thus relativity of knowledge may be maintained along with the assertion that we do possess absolutely valid knowledge. This is in general the notion of the narrowly scientific mind. Relativity may, indeed, also be asserted of all forms of our knowledge. In this case absolute knowledge is denied in both senses of the term. Relativity, then, logically leads either to pure scepticism or to individualistic anthropomorphism. It is thus important, in discussing the 'relativity' of knowledge, to determine both what kind of relativity is asserted and with what kind of absoluteness it stands in contrast. Nothing but controversy, e.g., when defending relativity in opposition to absoluteness of knowledge, if one disputant is using 'absolute' in the first sense and the other in the second.

Justification of (a).—The argument in defence of absolute knowledge, in the sense of a complete
The first may, in virtue of the internal coherence of its content, hold a necessary and unalterable place in a series, or in a whole, from which it is inseparable; in the second, the content is incompletely determined, and therefore the judgment is only approximately coherent; its stability is liable to be disturbed by external agencies. The first may well be described as absolute, since, on the one hand, such judgments are not subject to alteration, but only to supplementation; and, on the other, it is out of such judgments that any system, even one claiming to be the complete ideal, has to be built up, if there is to be a system at all. Such judgments do not require to wait for the complete system to be evolved before claiming to be absolute, and hence, it is held, they possess that characteristic whether or not the system be ever arrived at. A type of these judgments is found in mathematical truth; but, indeed, any scientific judgment tends to claim this attribute. That such judgments may be absolute per se, can also be justified by pointing out that, even if it be a system that makes them in the long run absolutely true by giving them a place in the absolute system, then each is absolutely valid at least by means of it, and may therefore legitimately be spoken of as an absolute judgment. A systematic expression. It may very well be that we are incapable of exhausting its content in all its manifold detail. For the limitation of our command over the particulars of our experience is one form in which the individual thinker is limited. There be judgments which remain, however, the ground principles which constitute the general or typical forms in which the unity of knowledge is specifically realized. These we may grasp and systematically arrange. The individuality of general, of general, of few, as the growth of the various sciences and the advancement of human intellectual activity determine. But, as such, they are an expression in every case of the general forms in which the unity of knowledge contains, is always a possible achievement. That ideal unity is at once the logically implied basis of the final effects in the various forms. The knowledge of it is the self-knowledge of knowledge; and that is absolute knowledge in both the negative and positive senses of the term 'absolute.' This kind of knowledge may, in the general form, be supposed to possess with different degrees of success. These must always vary with the variation which is at once the privilege and the limitation of the individual thinker. But such peculiarities do not concern the question as to the possibility of truly achieving the result. What relation exists between the various forms which absolute knowledge in this sense has historically assumed, is a further question, which lies beyond that of the justification of its possibility. Justification of (6).—The position that knowledge can be characterized as the final effects in a time a finished system, or without at least waiting until a finished system is obtained, rests on different grounds. It is maintained that every true judgment is absolute as knowledge, just as it stands. An isolated judgment is absolutely valid without any other judgment being implied to guarantee or ratify its truth. The addition of other judgments may or may not modify its truth, but it will only be in so far as it is not true that it is capable of supplementation. And, at the worst, this will always leave what truth it does contain unaffected. It is maintained that this does not involve relativity in the sense of scepticism or individualism; for there is a distinction between a judgment which stands in a relation and judgment which is relatively valid.
term is; and obviously that meaning cannot be given in the mere description of the signification of a word, which can in point of fact be used by a great variety of theories. Indeed, to regard the term as wholly and essentially indeterminate, is legitimately possible only as the result of a thing.

When the Absolute, then, is said to be the object-matter of metaphysics, we have to understand the term as the designation of the one all-inclusive uniting principle of whatever experience contains. From the point of view of metaphysical knowledge it is, at least to begin with, little more than the existential counterpart of the unity of experience, which such knowledge postulates as a precondition of its progress, and the elucidation of which constitutes the achievement of the aim and ideal of metaphysics. It is therefore at the outset quite colourless; any more definite specification of its nature is possible only in virtue of a metaphysical theory. Thus for metaphysics it is simply a problem, and not an assumption, whether the Absolute is 'personal' or not, a real or another, or all or none of these. Only metaphysical inquiry can determine legitimately how far the Absolute contains any of these features, and which of them, if any, it is primarily. It is evident that this would be the case if it were not true, the mere meaning of the Absolute would give us no solution to all metaphysical questions. Certainly we sometimes find more, and sometimes less, imported into the idea. But if this is done before the inquiry, we must regard the fact as merely a peculiarity of the thinker, which does not affect the principle here laid down; while, if it is done at the end of the inquiry, that is quite legitimate, a necessary result, indeed, of having a theory at all.

If we bear this in mind, we can see at once the distinction between the metaphysical conception of the Absolute and the religious idea of God. The latter always involves personality—at least, spirituality in some form or other; the former does not. Both name the whole, and the same whole. But whereas religion is bound to do so by a certain category, to satisfy certain human needs, metaphysics is not committed to any category at all. It may well be that the legitimate conclusion of metaphysics satisfies the demands of religious consciousness. But it may not. Hence the possibility of conflict between the two, which we find historically as a fact. In the long run, the term 'God' in religion and 'the Absolute' in metaphysics must, if the religious mood is valid, be the same in meaning; if not, one of them will inevitably condemn the claims of the other, for both seek to express the same whole. But it has to be borne in mind at the outset, that while the God of religion must be the Absolute, the Absolute of metaphysics may or may not be conceived of as the God of the religious mind; that will depend entirely on how the Absolute is interpreted by metaphysics.

The metaphysical problem, then, regarding the Absolute, resolves itself into the question how to conceive the nature of the principle which is at once single and realized in the manifold ways that make up experience. The problem is one of interpretation, not of discovery; for it is assumed that knowledge by which we conceive and think of the nature of the Absolute itself falls within its compass. To try to demonstrate the actual existence of the Absolute, which a process of discovery seeks to do, is thus logically absurd. At the same time, since the knowledge, which interprets, falls by hypothesis within the one-all, the relatively subordinate question, regarding the relation between our knowledge and the whole which contains it, may well press for solution before the interpretation of the whole in the strict sense is given. Thus, in general, the metaphysical problem is found to have two parts—(1) The relation of our knowledge to the Absolute; (2) the nature of the principle constituting the Absolute.

(1) Relation of knowledge to Absolute Reality. — On this point different views have been held. We must be content here to indicate the source of these differences.

(a) In the first place, it is held that, because our knowledge fails within the whole, we cannot grasp it in, and works by its own peculiar conditions, it is not merely unequal to grasping the whole, but that it is logically meaningless to attempt the task. We can think it possible only by making the Absolute a part with which our knowledge, as another part, stands in relation. But the Absolute, being the whole, cannot logically be treated as a part in any sense. Or the same position is maintained when it is said that the unity of the whole cannot be itself an end in the same sense as ordinary knowing. The distinction between subject and object is fundamental for knowledge, and the object must in some sense be 'given' to the subject before it can be known. But a whole which includes by hypothesis the subject cannot be presented or given in this way. Therefore the Absolute cannot be known consistently with the nature and naming of knowledge. And since there is no other way of knowing than by way of a relation between subject and object, the attempt to know the Absolute in any sense is logically impossible.

The issue here is what may be called metaphysical agnosticism resting on the basis of epistemological criticism. A recent representative of this view is Adidasia (see Development of Modern Philosophy and other Lectures). It admits only empiricism or 'naturalism' and epistemology within the range of positive human knowledge. The line of argument against this position would be—(1) That the distinction and relation of subject and object must itself imply in some sense a unity between them, which is not simply imagined as outside the two terms, but is constitutive of this connexion, and necessary to it; (2) that the apprehension of this unity cannot logically be denied, asserted, or criticized by a religious process which this unity constitutes; (3) that the unity is, from our point of view, an ideal; and an ideal in the nature of the case cannot be given or presented as a fact, either at the beginning of experience as such, or even at the end as such; for it determines and embraces the entire content from first to last, and must therefore be grasped in that sense.

(b) Another view of the relation of knowledge to an Absolute which contains it, is that which regards the subject-mind and its part within knowledge, forming an ultimate element in the unity of the whole. The other element, in itself generically distinct from the former, may be described as the object world of 'nature' and natural processes. These two between them exhaust the content of the Absolute so far as our experience is concerned. The Absolute per se is not one any more than the other; it is both, but may be either one or other. In any case it is known only in and through these aspects or appearances; but it still has a nature of its own and the appearances, its being per se. Our knowledge belongs to and has to do with the sphere of appearances only. There is no ground for supposing it adequate to what the Ultimate Reality is per se; on the contrary, its origin and its processes necessarily
confine it to the phenomenal. Still, the absence of knowledge does not involve an entirely negative attitude to the Absolute. The mere fact that knowledge belongs to the sphere of appearance points the way towards, or indicates the need for, the actual existence of an attitude distinct from knowledge, and one which can be concerned with the Absolute per se. We may call this attitude belief, or mystical intuition, or what not, so long as we bear in mind that its purport is to deal with this Ultimate Reality. Hence, while from the point of view of the intuitive perception or knowledge in its various forms, scientific or otherwise, there is no approach to the Absolute, there is a way open in another direction, and this may constitute a specific mood of our lives, the mood, e.g., of religion.

This is the point of view of metaphysical agnosticism, which appeals for its justification to the anthropomorphic character of knowledge, and rests, on the one hand, upon a psychological analysis of knowledge, and, on the other, upon the necessary limitations of scientific reflexion by which alone knowledge is to be had. One of its best-known representatives in recent times in Spencer (see his First Principles). The argument against this view takes the form of showing (1) the radical contradiction of the twofold view of the Ultimate Reality, in the idea of appearances per se, which leaves the noumenal reality unrevealed, i.e. appearances of what does not appear; (2) that the Absolute is so far known in that it is conceived to be in a state of inactivity, and is, finally, to be related to its appearances in a certain way; (3) that the psychological history of knowledge, and even the essential anthropomorphism of knowledge, do not necessarily prove either that Spirit may not express itself in the Ultimate Reality more truly through Force, or that Spirit and Force have equal value as forms of the Absolute.

(c) A third view of the relation of knowledge to the Absolute finds a typical expression in the interpretation developed by Bradley in his Appearance and Reality. Basing his conception of knowledge partly on psychological, partly on logical and epistemological considerations, he insists that knowledge strictly understood is relational in character. In its operation it is detail切ing given, an existential fact over against thought or the ideal process. This antithesis and duality of the terms in the process of knowledge both create and limits the range of the value in experience of the notion of reflection per se. It can, for example, never exhaust the given, the 'that,' without ipso facto destroying the very condition of its own operation and so disappearing. If it had the 'that' within itself, the operation would be both unnecessary and impossible. Since this fails without itself, there always remains, so far as reflexive knowledge is concerned, a surd in our experience. The distinction between knowledge and the real never passes into an existential continuity of content. Knowledge is unequal to the real; it is not self-sufficient; it is an 'appearance' of the Absolute. Hence by reflexive knowledge the Absolute cannot be expressed. But just as psychologically there is an infra-relational level of feeling-experience out of which knowledge arises, by the development of the distinction of the 'what' from the 'that,' so there is a supra-relational level of experience which transcends knowledge. This supra-relational level is akin or analogous to the infra-relational level, in that there is both a direct continuity of experience, and negatively both are realized apart from the distinctions which characterize relational thought. But, while the former has the character of mere feeling, the latter consists rather of mystical insight or intuition. At this highest level the apprehension of the Absolute as such is possible and is attained. It does not abolish the distinctions determined by the procedure of relational thought; it retains them, not, however, as distinctions, but as elements or constitutents in the unique acts which characterize the intuitive apprehension of the whole as such. Hence, while the Absolute is thus beyond knowledge, it is not beyond conscious experience at its highest level. It gives us the Absolute with and in its appearances, and not apart from them.

The general objection to this view of the relation of knowledge to the Absolute is its emphasis on the discontinuity between relational and supra-relational 'thought.' It seems to refuse with one hand what it gives with the other. A supra-relational thought transcending the conditions of that critical reflexion which works by distinctions, lays itself open to the attack of sceptical negation by its very attempt to transcend it. Either it is justified or it is not. In the former case it cannot adopt the methods of systematic reflexion to defend its position; in the second, there is nothing to distinguish its attitude from caprice and mere dogmatic assertion. Moreover, even the apprehension of the 'higher unity' must prove itself coherent. But we may separate parts distinct from one another and claiming recognition as distinct. The privileges of mere mysticism are inseparable from the dangers of pure individualism. From mysticism, as the progression of negation of knowledge, the transition is easy to sheer scepticism, which makes the same profession.

(2) The nature of the Absolute.—The metaphysical interpretation of the Absolute is determined in the line of an array of the essential factors involved in the problem of construing its meaning. The factors are: subject in relation to object within a unity which holds those ultimate elements in their relation, whatever that relation be. The problem is to determine this unity with the elements which stand thus related. We shall merely indicate the different interpretations given, without developing those interpretations into any detailed system. The systems in all the various metaphysical theories which make up the history of philosophy.

(a) We may take our stand on the subject with its activity and processes, and from this basis show that the object-world falls within the range of the subject's activity, which by implication, therefore, also contains all that constitutes in virtue of which object and subject are bound up together. We may accomplish this result in various ways, but the essential principle is the same.

(b) We may so resolve the object into the being of the subject as to destroy even the semblance of distinction, and certainly all the opposition they may prima facie present. This is the position adopted by pure Solipsism. (b) We may again seek to secure to the object its claim to be distinct, but may endeavour to preserve the supra-relational distinctiveness which it possesses, falls within the scope of the activity of the subject and is determined by the action of the subject. This is the position of Subjective Idealism. It may take two forms. (aa) We may regard the objectivity of the object as a fact, and resolve its characteristic nature into ideal elements in the subject's life. This has been done primarily in the case of the external world revealed to 'outer' perception, which is the obstinate problem to Subjective Idealism. The historical representative of this form of Subjective Idealism is Berkeley. (bb) On the other hand, we may regard the objectivity as a result, and 'deduce' it from an ultimate act of spontaneity on the part of the subject. Objectivity
is here conceived in a much wider sense than that in the case of the external world. It embraces all forms of objectivity, that of other selves, and society, as well as the ‘outer world’ found by perception. The last, in fact, is merely a particular realization of a more fundamental objectivity which we meet with primarily in the subjective self. ‘Nature’ is the term for the union of the two. This more thorough-going and more comprehensive expression of Subjective Idealism is found in Fichte.

(b) Again, we may start from the basis of the object as such, and resolve the subject’s life, and will, in the same footing and object into the forms and processes of the object-world. Everything will here depend on what constituents of the object-world are regarded as ultimate and primary. This will determine the form assumed by the interpretation. The strongest case historically has been made for the theory which takes physical matter and physical energy as the fundamental elements with which we have to deal. The developed expression of this view takes the form of what is called variously Materialism, Nature Physicalism, or Natura Naturalis.

(c) Once more, we may start explicitly by laying primary stress neither on the subject nor on the object, but on their unity as such. This may take different forms. (a) We may take any case of objectivity to be of the unity of equal significance in its constitution. The unity being neither specially, is as such equally indifferent to each. But since these, nevertheless, are all it does contain, it is per se indeterminate; it is the indifferent neutrum in which both merely subsist. So far as any interpretation of it is to be given, we can express its nature either from the side of the object or from the side of the subject. Either point of view is equally valid, since a neutral unity, which is indifferently one factor as much as the other, is equally both. It must be expressible in either way, for, if it were neither, it would be nothing. This is in the main the position of Schelling.

(b) Again, we may start from the unity and develop an interpretation of it by taking the unity to be one factor more than the other. In this case there is for the unity an inequality of value between the two elements which constitute it. It is therefore not one as much as the other, and is indifferent to either. It is one more than the other. It is not a pure neutrum, but a concrete whole, of which each is a distinct mode or level of realization. It is not interpretable in two forms, distinct or even separate from one another, as in the former case; but in one form, and that form is adequate and complete as an expression of the entire concrete unity. From this point of view it is clear that there may be two ways of stating its meaning, according as we take the object side to be primary, or the subject side. Either view will be logical, but will interpret it in a different manner, and the dominant principle or category for determining the whole will be different. Starting from the object side, we will look on the whole as determinable by objective categories, and the kind of connexion amongst the parts of the whole will have the character which objective categories require. The supreme form of objectivity is what we call the order of ‘Nature’; the supreme objective category that of ‘Substance’; and the primary form of connexion is that of relation by external necessity. The unity will thus be conceived as nature in its totality, as working by natural processes of connexion, physical and spiritual—natura naturans. The various elements constituting it will be the realization of this supreme unity in its pheno-

menal character, as a product in natural form of natural activity—natura naturata. The subject world will be a mode of this realization—one way in which Nature is phenomenalized or made determinate. But Nature as such is, in its very meaning, a resolution of differences into a single continuous identity, the identity of the universal, the one ‘nature.’ Relatively to this all else is accident, an essentially negative moment, not a permanent expression. All explicit specific determination is implicit universal negation. There are no differences of degree in the contents; all are on the same footing and object, and thus relatively to one another. There are merely different modes of manifesting the one and only Reality. Inter se, these modes are generically distinct, and hence, in their modal manifestation of the one Reality, are merely side by side, parallel to one another, concurring only at infinity, where they disappear or coincide. The external necessity, connecting the parts in each mode and the modes in the whole, involves, and is merely a finite expression of, this essential continuity into which they are dissolved. This interpretation of the Absolute finds its great historical representative in Spinoza.

(c) But we may also conceive the problem in the same concrete way, and take the subject factor as primary, and point of view. Here we shall proceed by another principle, by another category, and by another method of connecting the elements involved. We lay stress, not on the impersonal attitude towards objectivity, which characterizes the physical and mathematical consideration of the object-world, and which dissipated the subject-life into its processes, but on the personal attitude, which is found in its highest expressions in morality and religion. In these the object-world, so far from being primary, is subsidiary to personal or spiritual ends. We shall therefore take the principle to be, not Nature, but Spirit. The ultimate category will be not ‘Substance,’ but ‘Subject.’ The essential method of establishing connexion with the whole will be not external necessity, but internal necessity, the necessity of ideas and purposes, which is Freedom. The process of connecting the factors inside the unity of the whole will be that which, accepting the ethical and religious insistence on the subordination of the object-world, shows the latter as the realization of the nature of Spirit, and shows Spirit therefore as at once arising out of, rising above, realizing and so retaining the true significance of Nature. This will be done by showing the content of the whole in its different moments to be simply the logically necessary evolution of the one final principle; which would not be itself unless it manifested itself in varying degrees of completeness of expression. These degrees form a distinct and seemingly separate areas of reality to finite experience, but to the Spirit they are merely stages in the realization of its single and self-complete spiritual existence. Such an interpretation, expressed essentially in the same general form by Plato, Aristotle, and Leibniz, finds its most impressive historical representative in Hegel.

These various ways of construing the meaning of the Absolute have doubtless each its value and place in the history of man’s higher spiritual life, and amongst them to exhaust the possible interpretations of the supreme unity of experience. It would be out of place here to try to consider their respective merits, since we are not concerned to give a metaphysical theory of the Absolute, but to indicate what theories have been propounded.
ABSOLUTE (Vedantic and Buddhist).—In India a broad conception of the Absolute is first met with in the Upanisads, compiled about B.C. 500. There Brahma, the All-pervading Being, is described as the One Reality, or the Absolute, who is self-existent and self-creating. He has no hands or legs, but He can catch and move; He has no eyes, but He can see, has no ears but can hear; He knows all things which are not known to Him, as well as the Good and Great Being. Upon Him the sun cannot shine, nor the moon nor the stars, nor the lightning cannot flash on Him, nor can the fire? They all reflect His radiant light, and through His light they are illuminated.

Since B.C. 500 the doctrine of the Absolute has been considerably developed in the Vedânta and Buddhist systems of philosophy. In the Brahma-sûtra, the first work of the Vedânta philosophy composed before the Christian era, Brahma is described as the Being who, associated with the principle of illusion (mâyâ), is enabled to project the appearance of the world, just as a magician is enabled to produce illusionary appearances of animate and inanimate beings.† When the veil of illusion is withdrawn, the phenomenal world, as Brahma or his manifestations, is seen for what it really is: the world of nature, which is nothing but the Self-existent Absolute Being. In the Vedânta philosophy the doctrine of the Absolute is styled monism (advaita-vada). It underwent further developments at the hands of the Sage Râmâyana (12th cent. A.D.), Madhvâchârya (13th cent. A.D.), Vallabhâchârya (A.D. 1479), and others.

But the philosopher who most firmly grasped the doctrine of the Absolute was Buddha-Sîkṣa-Sînha, the eminent founder of Buddhism, who flourished about B.C. 500. In the Sutta and Abhidhamma pîtakas of the Pali Scriptures, supposed to have been delivered by Buddha himself, the doctrine of the Absolute is designated as the philosophy of the Void (sunnata-sûtra) or the Middle Path (Madyâparâmitâ). This means that the Absolute is neither real nor unreal, nor both or neither.† In the Sanskrit works of the Mahâyâna Buddhists, such as in the Madhyamsa-Sûtra (of Nâgârjuna, about A.D. 200), Lâkâvatâra-Sûtra (about A.D. 400), Lâkâvatâra (about A.D. 100), Prajñâpâramitâ (about A.D. 200), etc., the doctrine of the Absolute has been further developed, and has often been styled the ‘phenomenal doctrine’ (maîrtamavada) or the ‘perfection of wisdom’ (prajñâpâramitâ).‡ These are the eight principal relative conceptions which are the fundamental faults of ignorant minds, from which most of our prejudices and wrong judgments spring. It is the task of the law of coming and going actually operated in the world, that there are in reality persistence and

* See Râma-dharma-Pravastu, p. 1.

sophers are mainly divided into three classes: (1) Realists (âstikas), (2) Nihilists (nâstikas), and (3) Absolutists (advayavâdins). Some sections of the Chârvâkas, who maintain that the world is not permanent, not real, and not existent,—that is, who emphasize the negative aspect of the world,—are designated Nihilists or Negativists. The propounders of the six orthodox systems of Hindu philosophy, viz. the Sânkhyâ, Yoga, Nyâya, Vaisêsha, Mimêma, and Vedânta, who maintain that the world is somehow permanent, real, and existent,—that is, who emphasize the positive aspect of the world,—are designated the Realists.

According to them, there is at least one reality on which all the fabric of the world stands. Thus the Nyâya and Vaisêsha hold that the material atoms, sky, space, and time, are the permanent entities in the external world, while the souls are the eternal realities in the internal world. The Sânkhyâ and Yoga maintain that nature (prakriti) is the permanent reality in the external world, while the souls (purusas) are the eternal realities in the internal world. The Vedânta school affirms that Brahma, the All-pervading Being, is the eternal reality in the external as well as in the internal world. So we find that the various branches of one Realistic philosophy, in which there are differences in other respects, agree in maintaining that there is at least one permanent reality on which the whole world hinges.

The Buddhists, who maintain that the world is neither real nor unreal, hold that it is neither an existence nor a non-existence, but transcends both,—that is, who emphasize neither the negative nor the positive aspect of the world, but go beyond both,—are designated the Transcendentalists, Absolutists, Phenomenalists, Voidists, Agnostics, or the Followers of the Middle Path.

The world, according to the Buddhists, is an aggregate of conditions or relations. Things come into existence in virtue of these relations or conditions. There are infinite kinds of relation, such as the relation of substance and quality, part and whole, cause and effect, etc. Taking the relation of substance and quality, we find that the substance exists only in relation to its qualities, and the latter exist in and of themselves in the composite whole. Take, for instance, a table. It has a certain weight, colour, taste, smell, size. The table exists only as the repository of these qualities, and the latter exist only as inherent in the former. We cannot become a composite as a result of such a relation. The composition, therefore, is dependent upon other factors.

But in the case of the fire, the fire exists in relation to the fuel, and the fuel exists in relation to the fire. Proceeding in this way, we find that the whole world is resolvable into infinite kinds of relation or notion. Hence all these relations or conditions themselves are dependent upon one another. The very notions of ‘existence’ and ‘non-existence’ are interdependent, for the one is possible only in relation to the other.

Origination and cessation, persistence and discontinuance, unity and plurality, coming and going—these are the eight principal relative conceptions which are the fundamental faults of ignorant minds, from which most of our prejudices and wrong judgments spring. It is the task of the law of coming and going actually operated in the world, that there are in reality persistence and
discontinuance of things, that things do really and essentially pass into states of origination and cessation, and that things are really capable of being counted as one or many; but they are wholly unconscious of the fact that all those ideas are limited, relative, conditional, and therefore not the truth, but merely the production of our imperfect subjective state. They deny those ideas as the principle of misery, and as the people cling to, their life is a perpetual prey to the changing feelings of excitation and mortification.

The world is nothing but an aggregate of conditions, the conditions themselves are not self-existent, but are dependent upon one another. Those which do not possess self-existence are not real, but merely illusory. Therefore the whole world, as an aggregate of conditions, is a mere illusion. To look upon the world as real is mere folly on our part.

Where conditionality is, there is no truth; truth and conditionality are incompatible. Therefore, to attain to truth, conditionality must be completely cast aside. The eight conditional notions mentioned above must be brought to nothing, and we should try to see the world as freed from all conditions. When our subjective mind is purified from the taint of conditionality, our ignorance will vanish away and the serene moonlight of 'Suchness,' that is, the transcendentally pure mind, otherwise known as the 'Absolute,' will illumine us.

Here questions may be raised as to whether there is actually anything called 'Suchness,' 'Transcendental Reality,' or the 'Absolute.' In answer to these questions, the Buddhists have said that 'is' and 'not'—that is, 'Being' and 'Non-being' or existence and non-existence—are concrete terms. The Transcendental Reality or the Absolute, which lies beyond all conditions, cannot be expressed in terms of 'is' and 'not.' The Absolute lies beyond both 'Being' and 'Non-being.' It is, in fact, the unification or harmonization of the two. As the Absolute cannot be cognized in terms of our notions of the sense, understanding, or reason, we must be satisfied with describing it in terms of a perfect language as 'Unnameable' and 'Unknowable' (avajñāya and avijnaptika).

The Nihilists, we have found, say that there is no permanent reality underlying the world. The Realists, on the other hand, affirm that there is at least a transient Reality which the world has emanated. The Buddhists, who abhor all sophisms, say that the Nihilists and Realists are holders of extreme views. The philosophy of 'is' or Being and the philosophy of 'is not' or Non-being are equally false. As the Buddhists avoid the philosophy of 'Being' as well as 'Non-being,' and choose a middle path, their ethical doctrine is often called the Middle Path Doctrine.

The Middle Path is to be understood from four standpoints: (1) the Middle Path in distinction to one-sidedness, (2) the Middle Path as the abnegation of one-sidedness, (3) the Middle Path in the sense of the absolute truth, and (4) the Middle Path as unity in plurality.

A Middle Path reveals itself when the two extremes are completely out of sight; in other words, the harmonization or unification of them leads to the perfect solution of existence. Neither the philosophy of Being nor the philosophy of Non-being should be adhered to. They stand on each other, and anything being conditional means imperfection, so the transcending of one-sidedness constitutes the second aspect of the Middle Path.

But when we forget that the doctrine of the Middle Path is intended for the removal of intellectual prejudices, and cling to or abhor the view that there is something called Middle Path beyond or between the two extremes of Being and Non-being, we commit the fault of one-sidedness over again, by creating a third statement in opposition to the two. As long as the truth is absolute and disbands all limitations, clinging even to the Middle Path is against it. Thus we must avoid not only the two extremes but also the middle, and it should not be forgotten that the phrase 'Middle Path' has, from the deficiency of our language, been provisionally used to express the human conception of the highest truth.

The final aspect of the Middle Path is that it does not lie beyond the plurality of existence, but is in it underlying all. The antithesis of Being and Non-being is transcended, and a conception of the Middle Path, which is the unifying principle of the world. Remove this principle and the world will fall to pieces, and the particulars will cease to be. The Middle Path doctrine does not deny the existence of the world as it appears to us; it condemns, on the contrary, the doctrine which clings to the conception of Absolute Nothing. What the doctrine most emphatically maintains is that the world must be conceived in its totality—in its oneness, that is, from the standpoint of the Middle Path.

Nirvāṇa, according to the Vedāntists, is the absorption of the self into the Absolute. The Absolute, we have found, is something which is free from all contradictions, and which cannot be of 'is' or 'is not.' The moment one reaches the Absolute, conditionality vanishes. This state is called Nirvāṇa. It is the harmonization of all contradictions. In this state, unity is harmonized with plurality, origination and cessation are assimilated and the same way, persistence is unified with discontinuity, and one and the same law operates in the acts of coming and going. It is, in fact, an unconditional condition in which Being and Non-being are unified. All conditionality having disappeared, our veil of ignorance is drawn. The fabric of the world, including that of the self, breaks up, leaving us to be identified with the Infinite, the Eternal, the Unconditioned, the Formless, the Void. This is the state of Nirvāṇa, or ultimate good. The mind altogether fails to comprehend this state, and no language can give accurate expression to it.

The philosophy of Being held by the Realists and the philosophy of Non-being held by the Nihilists are both of them one-sided and therefore imperfect, because neither the Being nor the Non-being is possible, independently of the other. The doctrine of the Middle Path stands free from one-sidedness, and it repudiates and avoids the two extremes of Being and Non-being. This is the first aspect of the doctrine.

S. Chandra Vidyabhushana
ABSOLUTION (religious and ethical value of).

1. The idea of Absolution, as it appears in the Christian Church, is closely connected with two other ideas—the idea of sin, and the idea of the Church as a society. It is maintained, and may be taken as the basis of the statements and associations connected with Absolution, that their origin is in a state of mind to which ceremonial uncleanness seemed the thing most to be dreaded; but this fact, if it be a fact, does not affect the Christian view of Absolution.

2. It is important that this should not be confused with the consciousness in the sinner that his sin is forgiven. The declaration of his freedom, however conveyed, may fail to carry conviction to his mind; or, again, he may have the strongest possible sense of forgiven sin without any decisive declaration of Absolution. An authoritative absolution and consciousness of forgiveness do not necessarily coexist: they may do so, but it is not necessary that they should.

3. It is obvious that, so far, we have considered only the relations of the individual to God. We have imagined the soul standing, as it were, alone in the world before the eyes of God, and receiving from Him the declaration of absolution. We have abstracted altogether this one relation from all others, and treated it as an isolated entity; and it is plain that this abstract isolation is not the normal condition of any human soul. Every soul has an environment, which it affects, and by which it is affected; and no question of guilt or innocence, forgiveness or condemnation, is limited to the individual by himself. This truth, which goes far back into the history of man's ideas about himself, is emphatically presented in the Bible. Thus Paul uses expressly the sense of personal guilt, also represents the sinner as born in a sinful environment: and again, Isaiah (69) is conscious not only that he is a man of unclean lips, but that he dwells among a people of unclean lips; not only that he acts in rebellion, but it produces a sinful atmosphere, a condition of alienation from God. In like manner, the absolution or declaration of freedom from sin cannot concern the individual alone: it must have an eye also to the society in which he lives and to his relations towards it.

4. We are not here concerned with the nature or process of forgiveness, or even with the conditions of it as regards God. The idea of Absolution brings forward only the place of sin and forgiveness in the Christian Society. It is the Christian Society to illustrate this from the NT. We may notice, at once, the following points:—(1) It can scarcely be questioned that the Christian Society set out with an ethical purpose. Admission to it was by repentance, and by assenting to the rule which figured forth the remission of sins; and those who had become members of it were expected to lead a new life, abstaining from the sins which beset them in their former conversation. It is but the corollary of the origin of the sin and of the motive, i.e., the principle upon which the society was founded, no less than an outrage upon the Divine Law. All sin is lawlessness, the breach of some commandment enacted by God; and sin within the Church is more than this: it is a wilful disloyalty to the gifts which come through union with Christ, and, if carried on persistently, may place a man outside the reach of the sacrifice for sin (He 6:4-6 10M. 27, 28). (2) It is not less plain that the existence of post-baptismal sin forced a problem upon the attention of the Church, and its solution its representatives. There is no weak link in the chain of thought, not slow to idea. In dealing with it, they doubtless rested for their authority upon words of Christ, such as we find in Mt 18:21-35 or Jn 20:23. The Epistles of St. Paul give instances of directions on disciplinary matters (1 Th 5:12, Ro 16:17, Col 3:12-13 and the like). So Paul clearly contemplates the action of the Society in repressing evil, and even excluding evil-doers. But, of course, the clearest and most fully described case is that of the incestuous man at Corinth (1 Co 5). Here we find that the Corinthian Church had at first shown laxity in leaving the sin unrebuked. St. Paul, in the most solemn way, announces his decision in the matter (1 Co 5:4); the Corinthians clearly give effect to it in some way not recorded; and St. Paul (2 Co 2:5-11) exults them to comfort and instruction in so reforming the offender on his submission. The language used by St. Paul is not free from ambiguity. Though absent, he claims to act as if present at Corinth in association with the Church as a whole. And his judgments as to deliver 'such and such' on other occasions (e.g., the corpse of the Lord's (1 Co 5) is not clear what exactly is meant by this delivery to Satan, either here or in 1 Ti 1; but in both cases it seems to have been intended for discipline—for reformation with a view to restoration, not a final severance from the Society. Though, therefore, we cannot give any detailed description of the disciplinary measures of St. Paul, it is perfectly clear that he claimed to act in the interest of the Society, and to act according to the co-operation of the Church, and that he regarded his judgments as valid: they are not merely strong expressions of reprobation, but judgments which will have consequences.

5. It has been necessary to approach the subject of Absolution indirectly as a special case of the exercise of discipline, because there is no direct discussion of it in Scripture, and the actual word never occurs. We do find, however, cases in which the Society exercises discipline, though not as those above alluded to, and these, when they take the form of a declaration of freedom from sin, correspond with the idea of Absolution. With these in view, it becomes necessary now to ask, what indications can they give that the acts of the Society are, in themselves, or in the work of the Spirit, effective, and have validity in the spiritual world. So much as this appears to follow from such words as Mt 18:18-20 and Jn 20:23: what is bound on earth is bound in heaven; whosoever sins the Society remits or retains, they are remitted or retained. It is true that the overt instances in the NT are cases as above; but in certain special social relations, not a loose aggregate of people individually in union with Christ, and casually connected in an outward society in the world. Such a division of the society, and the relations of members in it, is not Scriptural: the Church is a spiritual society of which the acts take place in the spiritual world: they have effect upon occasion in the world of sense, because they are already spiritually valid, not vice versa.
ABSTRACTION—ABSTRACTION

(2) The view of sin which makes the whole conception of Absolution possible is ethical and not legal. That is, the Church considers as requiring Absolution not merely overt acts which carry legal consequences in the State, but inward conditions, of which there is nothing more to be said than that they imply a tendency to rebellion against God. The State, like the Church, condemns thieves and murderers, because they are detrimental to its interests: the Church condemns also those who walk disorderly, who are proud, or impure in heart. If it were merely a casual aggregate of persons on its outward and social side, it could have no more concern with these things than the State; it claims that inward sins of the heart must be put away before the man can enjoy its privileges, because it is a spiritual society acting in the spiritual world.

(3) The exercise of discipline upon such conditions as these depends upon the voluntary acquiescence of the members of the Society. The Church is, no doubt, as liberty to say that it will not grant membership except upon condition of submission and accommodation, and would put that to the principle. But it must trust ultimately to the voluntary submission of its members to the rule. The mode in which the rule is administered may vary widely from time to time: it is carried out in the Church of the period of confessional and absolution, by a private particular confession to, and absolution by, an accredited minister, or by open individual confession and absolution in the public service of the Church. But the Church cannot, so long as it remains a spiritual society, claim or relinquish responsibility for the spiritual condition of its members.

It lies outside the scope of this article to consider the various casuistical questions which have arisen in the course of history over the will only admit that: (1) it is in no way conflicts with the view here adopted that absolution may be, and has been, fraudulently administered. The whole problem of the visible Church is, and has always been, to make the outward order correspond with the spiritual reality it expresses; and it has always been impeded by sin. The individual who seeks absolution without penitence, or the priest who fraudulently declares him absolved, commit a great sin. To Sapphira or Simon Magus consecrate a great sin. But the fact that mere penance or fraudulent absolution has occurred in the Church no more disturbs its general character and principles, than did the fraud of Ananias and Sapphira or the base motive of Simon Magus. The action of St. Paul in the cases of Ananias (Acts 5:1-11) or Simon Magus (Acts 8:19-24) both occasions show the place of such disorders in the outward history of the Church.

(2) It is impossible to deny that the greatest evils have come from the very power of the Church, essentially the result of a particular mode of administering it; and the existence of these has brought the whole subject into disrepute. At the same time, it is difficult to deny the existence of St. Paul’s St. Paul shows that the Church has no power to absolve or decide whether a person is innocent or guilty, and the particular form of discipline which regards the especially those chapters in which he lets us see into the internal conditions of the early Societies of Christians, without feeling how largely the Church depended for its advance upon a strong discipline, fearlessly exercised over its members. The case at St. Paul’s, which we have already referred to, was, we may hope, exceptional. Yet a very serious situation would clearly have arisen if it had not been for St. Paul’s action. The sin was one which public opinion among the pagans condemned (1 Co 6), but the machinery of the Church, as it was, provided apparatus for dealing drastically with it. St. Paul’s strong denunciation was required to cure the Corinthians of the necessary severity. It is easy to see from this, and the impression is continually confirmed by early Church history, that a weak discipline implies a feeble consciousness of the Church’s moral standard, and allows the existence within its pale of a variety of lower and more or less latent ideals besides its own. It would be difficult to deny that the almost total absence of discipline may be the main reason why modern Christian communities bear a strong resemblance to primitive society.

LITERATURE.—See under Confession and Penance.

THOMAS B. STRONG.

ABSTRACTION.—(a) In philosophical speculation: a method of interpreting reality which starts from the point of view of, and constructs a system by direct reference to, the complete unity of the whole. This self-contained unity is in metaphysics the Absolute (v. i.). (b) In aesthetics: a view of the nature of Beautiful as a constitutive character of the object as such, and in itself, independently of the judgments or emotions of the subject. This is ‘esthetic absolutism.’ (c) In politics, a form of political government from, or by means of, a single supreme source of authority concentrated in the will of a specific individual, and executing its demands from itself or itself, with or without the consent of the majority or the community. It is in the main identical with Despotism (see Government). J. B. BAILEY.

ABSTINENCE.—See ASCETICISM.

ABSTRACTION (abs-trâk-sher, ’to draw off or separate’) is the separation or detachment of one part or element in a total experience from the whole to which it belongs. To abstract is thus to isolate any portion of the content of experience from its setting, and to consider it for the time being as it is in itself, ‘loose and separate’ from the structural and functional relations which belong to it in the concrete conscious life. Psychologically, Abstraction is the necessary condition that mind must attend to one object of experience implies the withdrawal of attention from other objects.

Professor James (Princ. of Psychology, p. 140) says: ‘Attention is the taking possession by the mind of one out of what seem several simultaneously possible objects or trains of thought. Focalization, concentration, of consciousness is of its essence. It implies withdrawal of attention in order to deal effectively with others.’ Similarily, Sir William Hamilton (Log. Lect. vii.) writes: ‘The result of Attention is the concentrating the mind upon certain ideas, in this case to withdraw or abstract it from all else. In technical language, we are said to “present” the ideas exclusively. To present, to attend, and to abstract are merely different but correlative names for the same process; and the first two are more nearly convertible. When we are said to “present” the idea exclusively, we are supposed to attend to that quality exclusively; and when we abstract, we are properly said to abstract from that, is, to withdraw or abstract ideas from the idea. We shall hereafter notice, a term is properly applied to the qualities which we abstract from; and by abstracting from some are enabled to consider others more attentively. Attention and Abstraction are only the same process viewed in different relations. They are, as it were, the positive and the negative of the same.’

In spite of Hamilton’s protest against using the term ‘abstraction’ as applying to the elements to which we attend,—a protest previously made by Kant (Logik, § 8),—the usage has persisted. As we shall presently notice, abstraction often plays a part in the formation of concepts or general ideas, as it is usually said that by abstraction the identical or similar elements or attributes in a number of different objects are singled out and combined into a general concept. Thus by abstracting from the objects denoted by man, horse, bird, fish, etc., the common property or identity of structure, we form the concept of ‘vertebrate.’ Without now raising the question whether concepts are formed solely by abstraction, we may notice that the essential element in abstraction is the exclusion of the particular characteristics which are unlike, but the focusing of consciousness on what is similar in the different cases. This Kant himself admits, and in applying the term ‘abstraction’ to the process of separating the common elements, the usage of logic agrees with that of grammar and of ordinary life.

It is essential in considering the nature of abstraction, to distinguish carefully the psychological from the logical discussion of the subject. We may describe abstraction psychologically as a process of isolation, closely correlated with active attention, and go on to exhibit its various forms and characteristics in terms of the structural mechanism of the conscious elements. From the logical point of view, however, abstraction has to be considered as playing a part in knowledge. Here we have to deal, not with its psychological form or
structure, but with its function or purpose in the development of the intellectual life. This distinction of standpoint does much to clear away the difficulties and confusions which attended the older discussions of the subject. For example, it puts in a new light the point as issue between Locke and Berkeley regarding the evidences of abstract general ideas. It is possible to grant Berkeley's contention that abstract ideas must exist psychologically as particulars in individual form, and at the same time to maintain that as functions of the knowledge-process, i.e., as logical ideas, they necessarily transcend their individual mode of existence and are real universals.

The question then arises as to the relation of the knowledge-process to the ideas viewed as psychical content. Can the psychological states of consciousness be regarded as the original form from which the logical idea is derived by abstraction? This has been very commonly maintained. Mr. F. H. Bradley tells us that a logical meaning "consists of a part of the content (original or acquired) cut off, fixed by the mind, and considered apart from the existence of the sign." The whole trend of modern logic (including Mr. Bradley's own work) shows conclusively, however, that it is impossible to go from psychological states to a mental abstraction to logical ideas. The view of the cognitive side of consciousness, as at first made up of particular images or ideas, is now acknowledged to be a fiction. And similarly we must reject the quaternity of ideas, or the formation of general ideas which is based on this fiction, according to which we are said first to abstract the common element from the particular images and then proceed further to generalize it, thus in some mysterious way transforming it into a logical idea. But we cannot derive knowledge from an anthetic process, and therefore must postulate that consciousness is from its first beginnings a process of interpretation and generalization. It starts from a content that is a vague presentation continuum, lacking both differentiation and integration, and, as such, not yet either particular or universal. It is the work of intelligence to transform this into a coherent system of parts. Not that it must contain in the mind the whole knowledge-process, and as contributory to it, that abstraction finds its function and justification.

It is not the end or essence of thinking, but a process or method which thought uses in the accomplishment of its ends. The activity of reason is closely related to that of Analysis, though the specific method of abstraction has its own difference. 'The reflective idea which guides it,' says Bosanquet, 'is the equivalent in general knowledge of the mathematical axiom that if equals be taken from equals the remainders are equal.' But, as within any real whole the withdrawal of one part never leaves the other parts unaffected, the guiding idea of abstraction is only provisional. 'It amounts to this, that what in the whole known changes may appear to leave remainders known as unchanged' (Logic, ii. 22 f.).

Abstraction as a specific process is thus only a provisional expedient; and, unless corrected by a more adequate conception of the nature of the whole, it is likely in most fields to lead to error. But thinking proceeds both by confrontation and abstraction, and these two moments are never entirely distinct and separate. Aristotle, and the formal logicians following him, hold a view of abstraction (epiaston) and Determination (epiaston). When, however, we emphasize the unity of the intellectual process within which both these functions operate, we see that the opposition can never be more than relative. Abstraction and Determination, like Analysis and Synthesis (within which they may be said to be included), imply each other as complementary moments of real thinking. The goal which thought seeks is not to be gained by passing to the highest abstraction; for this is the emptiest of all thoughts. Nor can it be reached by the determination of a 'pure abstract idea'; but the abstraction and determination must unite in defining experience in terms of a concrete universal. It is against the abstraction of abstraction, against making isolation and mutilation the final goal of thinking, and this, we see, is the necessity and unity of things, that Hegel's criticism is chiefly directed. The process of abstraction is for him never an end in itself, but only a means in the progress towards greater unity and concreteness.

J. E. CLIGGHTON.

ABU (Mount).—A famous mountain and place of Hindu and Jain pilgrimage, rising like an island out of the great plain of Rājputāna, in the native State of Sirohi. The name is derived from its Skr. title Arbuda, a serpent: 'a long round mass;' and it is perhaps from gpraduteshvara, 'a place of reception,' probably with reference to its form. Its summit, Guru Ṣikhara, 'Peak of the Teacher,' rises to a height of 5,633 feet above the level of the sea.

It is hardly to be wondered at, writes Ferguson (History of India and Eastern Architecture, p. 234), that Mount Abu was early fixed upon by the Hindus and Jains as one of their sacred spots. Rising like an island from the sea, presenting on every side inaccessible scarps 5000 ft. or 6000 ft. high, and the summit can be approached only by ravines cut into its sides. When the summit is reached, it opens out into one of the loveliest valleys of India. A 6 or 7 miles long plain, covered everywhere by granite rocks of the most fantastic shapes, and the spaces between covered with trees and luxuriant vegetation. The little Nākki Talsū (properly Nakki Talao, as it was supposed to be have been excavated by the nails (Skr. nakha) of the gods) is one of the loveliest gems of its class in India, and it is near to it, at Dilwara, that the Jains selected a place for their Dīrgh (Skr. śrītā) or sacred place of rendezvous. It cannot, however, be said that it has been a favourite place of worship in modern times. Its distance and inaccessibility are probably the causes of this, and it consequently cannot rival Pātīlāna or Gimbār in the extent of its holiness.

To the styles Mount Abu 'the Olympus of India,' because in olden times it was reputed to be the favourite residence of the gods, and was believed to be the scene of two famous events in Hindu mythology. Here the scholar-kings or nāsīḷa, a worshipper of Siva, was the leader, practised austerities, living on milk and the fruits of the earth. There was then no mountain, but only a cleft in the plain, into which the cow that supplanted the want of the sage fell, and miraculously floated out by a rise of water from beneath. To prevent the recurrence of such an accident, the sage prayed to Siva, then enthroned on the Kalīṣā peak of the Himalaya. He called on the sons of Himāchāl, the defied mountain range, to relieve the saint. They agreed to come, but on the condition it would be necessary to exile himself, and, mounted on the serpent Takshaka, he journeyed to the holy land. At the behest of the sage he leaped into the cleft, embraced, as he fell, by the serpent god. Within the mountains the violence of the god was appeased again to Siva, who from the depths of Pātīlāna, the nether-world, raised his toe until it appeared at the top of the mountain, which was thus formed by the god. Hence, under the title of Nīkāla Iśvara, 'the head of the mountain' (ṇīkāla) the deity became the patron deity of the hill. But in accordance with the eclectic spirit of Hinduism, this does not prevent the place from becoming a site sacred both to Vaiśeṣikas and Jains. The second legend tells of the creation of the Aṅguṣṭha, or 'fire-born' seats of the Rājputas. The Dīpatīs, or demons, it is
said, disturbed the performance of the rites of Siva on the hill. Vivasvān, another sage, appealed to the gods, who proceeded to the spot, and out of the Agnikūnda, or fire-pit, in which the fire-sacrifice was performed, created the four Agnikula, or ‘fire-born’ septs—Chauhān, Parāhāra, Solanki, and Pramāra, who destroyed the Dalityas, and restored the cult of Siva. Both these legends seem to indicate some early conflict of rival cults, the nature of which is unknown.

The chief Hindu religious sites are, first, the crowning peak of Guru Sīkāra, where in a cavern and between the footsteps of the arch-raider Dātuvėśa, presided over by some dissolute-looking Gaṇapati priests, and those of Rāmānanda, the great apostle of the Vaishnava cultus. At the temple of Achalā Īśvara, which is now, according to Cousens, in a state of desolate decay and neglect, is shown the toenail of Siva in a cleft of the rock. His female counterpart is worshipped as Aḍhārā Devī and Arbuda Mātā, the Mother-goddess of the hill. The sage Vaśiṣṭha is honoured at a shrine called Vaśiṣṭhyā, or Gaumukha, ‘Cow-mouth,’ where a footprint of a spout shone out amid the ivy. To the W. of this is the shrine of the saint Gogamjī, or Gautama Rishi, containing two images, one of Viṣṇu and the other of a female beside a male bearded figure. The temples at Devāṅgaṇ, ‘Courtyard of the coffin,’ are not best preserved, if the steps have ever been visited, by an European, the approach being over rugged, dangerous rocks. The largest is dedicated to Viṣṇu, and close to it is Narasihna, the fourth Avatāra, or incarnation of the god, said to have changed his shape on the hill.

Of the Jain temples at Devalaśa and Devaḷaṇḍa, ‘place of temples,’ two are described by Ferguson as ‘unrivalled for certain qualities by any temples in India.’ The first was built by Vimala, a merchant Jain prince, about A.D. 1032, two years after the death of that arch-raider Fidhud of Ghazni, who desecrated the older temples. It is dedicated to Rishabhadeva, the first Jaina arhat, or saint. The original image was destroyed by the Musalmāns, and that now in the temple is the second or perhaps the third in succession. The second temple was built by the brothers Tejaśpāla and Vastupāla between A.D. 1197 and 1247. It is in honour of the 23rd arhat, Pārśvanātha, the only one in the series readily identifiable by the many-headed serpent hood which adorns his head. Both these temples are built of white marble, though the quarry of this material is known to exist within 300 miles of the spot, and the stone could have been conveyed up the rugged slopes of the hill only by incredible exertions and at enormous cost. Both these remarkable buildings have been fully described by Ferguson, whose account is supplemented and in part corrected by that of Cousens.

Ābu was once the haunt of a colony of those lòngthesome scoundrels, the Aghoris, but they have long since disappeared.

LITERATURE.—Tod, Annals of Rajasthan, Calcutta reprint, i. 96 ff.; Travels in W. India, 101 ff.; Ferguson, Picturesque Illustrations of Architecture in Hindostan, 391, Hist. of Indian and Eastern Architecture, ed. 1890, 234 ff.; Cousens, Progress, Report, Arch. Survey of W. India, for 1901, p. 2 ff.; Rowland, Ind. Arch. Journal, ii. 249 ff. In the editor’s note to the last article, some of the āba inscriptions are given as a supplement to those recorded by H. H. Wilson, Asiatic Researches, xvi. 77, which well depicts it by Major G. C. Bayley in Rajputana Gazetteer (1880), iii. 129 ff., to which this article is largely indebted.

ABUSE, ABUSIVE LANGUAGE (Gr. λα- 

sopie; Lat. contumeliam officere, conciviciari; Ger. schimpfen, lästern; Fr. mauvaise).—Abuse in general denotes an evil use of a thing caused by excess or injustice; in law it denotes ‘to injure, diminish in value or wear away by using improperly.’ Examples of such abuse are signified in the phrases ‘abuse of authority,’ ‘abuse of confidence,’ ‘abuse of privilege,’ ‘abuse of legal process,’ in all of which the use is assumed as determined by corrective justice, and its opposite, the abuse, is a departure, either in the way of defect or excess, from the mean laid down by corrective justice. In this article we are concerned, however, only of injuries which are inflicted on others by the means of language, under the sway of passion or any other motive opposed to the principle of justice, or of love, or of both. It ranges from blasphemy at the one end to the ‘jesting which is not convenient’ at the other, and varies according to the spirit which produces it or the means adopted for its manifestation. It is usefully classed by Aquinas under the heads of contumely (contumacia), detraction (detraction), backbiting (sceletrum), ridicule (derision), injustice, injury, trickery, insult, slander, injury, mischief, insult).

1. Contumely is an injury inflicted in words, whereby there is denied to a man some good quality on account of which he is held in honour, or whereby some concealed fact to his discredit is made public. It is of two sorts: one, conversiaria, for example, it is said of a man that he is blind, this is abuse indeed, but of less gravity than if he were charged with being a thief. Another and more venial form of abuse is to reflect needlessly on a man’s defect, as, e.g., that he is of low birth, or that he has been badly educated, or that he spent a wild and profane youth, such things being said in order to deprive the person of whom they are said of some honour he has won for himself by virtuous conduct or public service. Such language is to be placed under the general head of contumely, as a form of abusive language which has its root in anger and has pride for its foster-mother. It is a kind of revenge, and is the readiest and easiest form in which revengeful feelings find expression when they are there.

2. Detraction differs from contumely both in its object and in its source. It does not seek so much to rob a man of his honour as to blacken his reputation, and it springs from envy rather than from anger. It effects its purpose (1) directly by bringing a false charge, by detraction, by revealing a hidden defect, or by imputing an evil motive; and (2) indirectly by denying, concealing, or minimizing what is meritorious. ‘He that fitches from me my good name robs me of that which not enriches him, and makes me poor indeed.’ The words used may not be contemptuous—in the case of Iago they included both contumely and detraction—but they are abuse, and abuse of the worst kind.

3. Backbiting, whispering, or innuendo is another form of abusive language which has for its object the separating of friends. The detractor abuses language by saying what is evil about his neighbour simpliciter; the whisperer injures him secundum quid, viz. by saying of a man what will alienate his friend. ‘Sin against our neighbour is so much the greater as the greater loss is inflicted, and the loss is the greater as the good taken away is greater. But the loss of a friend is a great loss, and therefore the whisperer is a greater sinner.’

4. Ridicule, when apart from se, is a further abuse of language. The three forms of abuse mentioned above tend to deprive a man of some external good, such as honour, reputation, or friends. Derision, however, goes to deprive a man of his inward peace, the testimony of a good conscience. It is to be classed with contumely, de-
traction, and whispering as abusive language, but it differs from them in its end. It holds a man up to scorn and ridicule. It is this special form of abusive language which is condemned by Jesus Christ in the sayings (Mt 5\textsuperscript{th}) in which He forbids contempt for a man’s intellectual qualities (expressed by *racau*), or for his moral qualities (expressed by *morah*).

5. Cursing is abusive language whereby evil is pronounced against a man in the imperative or the optative mood. Words which inflict deserved punishment (as in the case of Gehazi, 2 K 5\textsuperscript{th}), or which express contempt for the person or race of Adam and his son (Gn 3\textsuperscript{rd}), or express abhorrence of evil in itself (as David and the mountains of Gilboa, 2 S 1\textsuperscript{st}), or are used symbolically (‘Dominus maledictus faculnem in significationem Iudaeæ’), do not come under this definition, and are not, therefore, of the nature of abusive language. To curse is to pronounce against anyone, in the name of religion, or under the impulse of some violent movement of the soul, words of reprostation or of contempt that one’s name is either explicitly used, or lies implicit in the current forms, especially those in use among the more uncultured classes. To this it seems necessary to add that in these classes sexual processes or aberrations are laid down for the purpose of supplying the vocabulary of abuse, a fact which serves the purpose of demonstrating incidentally the close connexion between sensual indulgence and contempt or hatred or scorn of our fellows. The peevishness which in such an expression in abusive language directed against others is at bottom a deep-seated discontent with self.

The subject of blasphemy (q.v.) is beyond the scope of this article, and the only remark to be made here about it is that cursing any creature as a creature comes under that head.

Abusive language, when it is used in the hearing of several persons in a public place (even when the name of God is not uttered, but words importing an imputation of future Divine vengeance on any may constitute profane swearing, and is a nuisance at common law. Blasphemy and profane swearing differ at law only in that, this blasphemy is a word of larger meaning.

**W. P. COBB.**

**ABYSS (Abyss).**—The Greek word, of which our ‘abyss’ is a transliteration, occurs in the classics as an adjective signifying ‘bottomless,’ ‘boundless.’ It is composed of the intensive

view of As. *tiāmu, tām'tu.* In any case, *Tāthom,* like *Tiāmat,* was a proper noun, ‘Deep,’ not ‘the deep.’ Frequent as are its appearances in the OT, it is almost invariably without the article. Turning now to that Babylonian conception, of which *Tāthom* in the Heb. is a derivative, it is a greatly modified one. We find that *Tiāmat* was the dark and primeval chaos, the primevil undifferentiated matter, out of which gods and men, heaven and earth sprang. *Berosus* (c. 275 B.C.) conveys the idea (ῥά όον στιγματα και ὄςς), *Theog.* and *Wis. 117* in his *Isis*. Such a chaos is postulated in the myths of Egyptians, Phoenicians, Indians, and Greeks. *Heiod., e.g., Theog. 115,* asserts: *έπ' θθν ην οφρονα χολος κατ' οκρ. θη.* The well-known Bah. legend opens thus: *'When on high the heavens were unnamed, Beneath, the earth bore not a name. The primeval ocean (aپυιν ρκτι) was their producer; Mummu Tāmto was she who begat the whole of them. Their waters in one united themselves, and The plains were not outlined, marshes were not to be seen. *' (Pinches, Old Test. etc., p. 109).

There is a substantially correct reproduction of this legend in the Syrian writer Damesius (6th. cent. A.D.), who states that the Babylonians believed in two principles of the universe, Tauthé and Apasion, the latter being Tauthé’s husband. Apasion, here, is evidently the same as *Apas (Δοσος)* = the waters under, around, and below all things, especially the sweet waters in contrast to *Tiāmat,* the salt, whilst Tauthé (*Berosus, Θαυματ*) is *Tiāmat.* The latter also sometimes bears the name *Baku* (*Αβά,* ‘emptiness,’ of Gn 1, LXX *αἐκατερος,* the Phoenician Beza, mother of the first men. Here we have the origin of the Heb. idea of the abyss. Gunkel (*Schöpf. u. Chaos, 15*) has pointed out that such a picture of the primal state of the universe would easily project itself in a land like Babylonia, where the winter rains pour down from heaven and, uniting with the streams and rivers, turn all things into chaos: only when spring returns do land and water take their separate places. This idea reached the Hebrews through the medium of Phoenicians and Canaanites, and was reinforced by a similar Egyptian idea of a boundless primeval water (*Nun*), which filled the universe and contained the germ of all existence. We may refer here, with *Trevias* (1398): ‘*The primordial and furentative body in the begynnynge of the worlde wol not dystanguyd by certayn fourme is calleth Abyssus.*’ In it were the potencies of the life that would hereafter appear. The process, according to the Barb. theory, was one of evaporation; according to the Egyptians, it was determined wholly by the creative fiat of God.

The memory of the original abyss was kept up by the ‘seas’ and ‘abysses’ which were common in the temples of Babylonia. *Urinâ of Lagas* (c. 4000 B.C.) set up a greater and a smaller *apāt* (Gunkel, pp. 28, 153). *Argum* (c. 17th. cent. B.C.) placed a *tamtu,* or sea, in Marduk’s shrine. ‘This was, no doubt, a large basin or “laver,” similar to the brazen sea of Solomon’s temple which stood upon twelve oxen’ (King, *Bab. Rel. 1890* p. 109).

*The recalcitrancy of matter and the struggle of darkness against light are portrayed in the myth of *Tāthom,* as a dragon-like monster, fighting with Marduk, but slain by him. Out of one half of her body he constructed a vault (the earth), the two ends of which rest on the ocean (*apēl*). A similar picture of the position of the earth is present to the Heb. poet’s mind when he declares that

*A. Jeremias declares (Das ATR im Lichte des Alt Orienta.)* that borrowing on either side, or direct dependence, is not to be thought of.

1 Didron (*Christian Iconog. i. 127*) copies a miniature from a 10th. MS.—a small, conical mound, divided into stages by spiral bands. The lowest zone contains birds, the next vegetation, finally a human head issues from the summit. By the side is written ‘Abasus.’
Jahweh has 'founded it upon seas and established it upon floods' (Ps 24:2). The disc of the earth rests on the all-surrounding ocean, and the 'waters under the earth' are called ἰθῶν or ἰθῶν ῥαββά, 'abyss,' 'great abyss' (Gen 7:11, Dt 8:33, Am 7:1, Pr 30:8, 9), whose fountains are broken up at the Flood, from which well up the sources that fertilize the land (Ecc 8:12). It is in this sense that Clem. Rom. (I. xx.) speaks of the inscrutable depths of the abysses (ἀδύσων τε ἀνεκχύλαστα). Trevisa also says: 'Abyssus is dephes of water vesse[n], and therof come and spring thereto.'

Τιθήμ or 'Abyss' is a frequent designation of the oceans and seas, without any reference to their being 'under the earth.' And although there is no trace of the refractoriness of matter in the narrative of Gn 1, this comes out strongly in many references to the sea (Is 50:11, Jer 5:20, Ps 77:14, 164, 166, 168; Ps 80:9, Job 7:20, 35, Sir 43:1, Pr 5:25, 6:14, 21:21).

The question has been raised whether the πονηρία of Ps 50:11 should not be corrected to πονηρία (cf. Ps 39:8). The abyss is a Rabbis make it may be, cf. LXX has 'abysses' (ἀδύσων), word, which, either in the sing. or the plur., became one of the names for Hades. In the verse in question it points to the profound depths of the invisible world, from which the soul has to be brought back again. The Rabbis, too, represent Sammael and his angels as emerging thence (Eisenmenger, Entdeckt. Jud. ii. 336 f.). The abyss of Rev 11:17 is put in the same light: a beast which occasions calamities to the saints arises out of it. The dragon, 'that old serpent, which is the devil, and Satan,' is shut up therein, and its mouth is sealed for a thousand years (20). The language in which this set forth should be compared with Prayer of Manasses 3:

ο θεος της θαλασσας της θηρας της
πρωτογονιων αι των
ελεειας της θαλασσας και σφοδρομενοις
αυτην τη φωτη και εκθετας θαλασσας·

In the Ritual Romanum, part of the formula of Exorcism runs: 'Cede Ergo Deo qui te, et saeculitiam tuam in pharaonis miseriorem sapientia, super Moyseen servum sumin abyssum demiserit.' with this: Jubilees 484.

The Gnostics, as might have been expected, made an altogether different use of the idea of the abyss. Their special name for it was the Abyssus (Abyssus). By this they meant the Divine first principle, the fountain of all existence, the infinite, unfathomable, inscrutable abyss of Deity:

A vast, unfathomable sea, Where all our thoughts are drowned.

Αγώνοι γαρ τινα ειναι εν άρατι και δακτυλοματοις
υψομενοι τελειοι άλων προστατον' τουτοι δι και [προφανης και]
προστατευτικα και βροντον καλλων (Iren. adv. Haer.
1: 1): 'For they say that in the invisible and nameless heights there is a certain place called Ἄεων. And they call him [first principle and] proponent and Bythus.' Hippolytus (vi. 37) bears the same testimony: speaking of Valentinus, he says: οι προφανης των πλανων βεβαλει την Πλανων, οντος γαρ και βωτικα και [προφανης των] Πλανων αιωνος ('He whom Plato spoke of as King of all, this man postulated as father and Bythus and first principle [?] of all the aeons'). The Valentinites held that by a process of self-limitation the Bythus evolved a series, now disappeared, being remanded to their own place, because their power of doing mischief is thus terminated (Lk 8:33); it is Hades, where the spirits of the departed dwell, where Christ spent the interval between death and resurrection (Rev 10), 'Ipsa anima futur in abysso' (Ambrose). The impression conveyed by St. Paul's language is of the vastness of that realm, as of one that we should vainly attempt to explore. The abyss communicates with our earth by a pit or shaft (φυραμ), Rev 9:11, with which the διαστος of En 21 should be compared. According to the Tractate Sukkah of the Talmud, the mouth of this pit is under the temple, and can be called forth by magical formula: 'Qua hora David fodiashat fundamenta templi, exundavit abyssus mundum submeraurus. Dixit David: Estane hic, qui sciat, an locat testes inscribere nomen ineffabili, et proieciemus illum in abyssum, ut quiescat.' (Budz., Sitzungsber. der baruyn Johannis, p. 251). When the φυραμ of Rev 9 is opened, there issue from it poisonous, stinging locusts, which cause exquisite anguish to men. Over them is a king, 'the angel of the abyss,' whose Greek name, Ἰδωρογις, represents pretty accurately his Heb. Abel Adon. This is a different point of view from that of En 20, where Uriel is designated the holy angel who presides over both the angelic host and Tartarus. At Pr 15:27 etc., Abaddon is parallel to Sheol, and the source of the abyss. The abyss, then, in the present passage, as in Lk 8, is the abode of the ministers of torment, from which they go forth to do hurt. In the Bab. documents, demons and spirits of disease proceed from it: 'They, the productions of the internal regions, on high they bring trouble, and below they bring confusion.'

The Rabbis, too, represent Sammael and his angels as emerging thence (Eisenmenger, Entdeckt. Jud. ii. 336 f.). The abyss of Rev 11:17 is put in the same light: a beast which occasions calamities to the saints arises out of it. The dragon, 'that old serpent, which is the devil, and Satan,' is shut up therein, and its mouth is sealed for a thousand years (20). The language in which this set forth should be compared with Prayer of Manasses 3:

ο θεος της θαλασσας της θηρας της
πρωτογονιων αι των
ελεειας της θαλασσας και σφοδρομενοις
αυτην τη φωτη και εκθετας θαλασσας·

In the Ritual Romanum, part of the formula of Exorcism runs: 'Cede Ergo Deo qui te, et saeculitiam tuam in pharaonis miseriorem sapientia, super Moyseen servum sumin abyssum demiserit:' with this: Jubilees 484.

The Gnostics, as might have been expected, made an altogether different use of the idea of the abyss. Their special name for it was the Abyssus (Abyssus). By this they meant the Divine first principle, the fountain of all existence, the infinite, unfathomable, inscrutable abyss of Deity:

A vast, unfathomable sea, Where all our thoughts are drowned.

Αγώνοι γαρ τινα ειναι εν άρατι και δακτυλοματοις
υψομενοι τελειοι άλων προστατον' τουτοι δι και [προφανης και]
προστατευτικα και βροντον καλλων (Iren. adv. Haer.
1: 1): 'For they say that in the invisible and nameless heights there is a certain place called Ἄεων. And they call him [first principle and] proponent and Bythus.' Hippolytus (vi. 37) bears the same testimony: speaking of Valentinus, he says: οι προφανης των πλανων βεβαλει την Πλανων, οντος γαρ και βωτικα και [προφανης των] Πλανων αιωνος ('He whom Plato spoke of as King of all, this man postulated as father and Bythus and first principle [?] of all the aeons'). The Valentinites held that by a process of self-limitation the Bythus evolved a series, now disappeared, being remanded to their own place, because their power of doing mischief is thus terminated (Lk 8:33); it is Hades, where the spirits of the departed dwell, where Christ spent the interval between death and resurrection (Rev 10), 'Ipsa anima futur in abysso' (Ambrose). The impression con-
many varying opinions concerning the Bythus itself. According to some thinkers, he was outside the pleroma: others held him to be within it, but separated from the rest by Horus (Opo), a personified boundary (Lightfoot, Coloss. p. 332). Thrice actually deposed him from his place at the head of the seven heavens and made him follow the first ogdoad. Some thought of him as unwedded, and neither male nor female; whilst others again gave him Sýgē as his consort, or the two powers Thought and Will (Hippol. loc. cit.). The relation of Gnostic speculation on the Bythus to later philosophical thought is perhaps sufficiently indicated in one sentence of Irenæus, ap. Epiph. xxxii. 7: ὁ μὲν γὰρ αὐτὸν δύο γέρων λέγων, μητέρα δὲ μητέρα Φθειὰν, μητὲ δόμον του ἔκα. (For some may say that he is unwedded and is neither male nor female, nor, in fact, anything at all). He was exalted above all contradictions—the Absolute, identical with Nothing, the Being of whom even existence might not be predicated. No wonder that the Mystics took up both the thought and the term: 'I saw and knew the being of all things, the Byes and the Abyss, and the eternal generation of the Holy Trinity, the descent and original of the world and of all creatures through the Divine words, (James Behmen, German, of the words of the olympians, jurisprudence of experience p. 411.)

LITERATURE.—In addition to the works mentioned above, see Jensen, Kosmogonye der Bodenfolger: Sayce, Hibbert Lectures, 1893; Smythe, Tiber and Tigris, 1897, and in Guardian, Feb. 6, 1907; Driver on Genesis, 1901; Neander, Hist. of the Christian Church, vol. ii. for the Gnostics; and Liddell, English Dic 'Abhíma, 'Abysme, 'Abyss' in English literature.

ABYSSINIA.—The peoples of Abyssinia belong to three distinct races, viz. the African aborigines, the Hamitic (Cushitic) tribes, and the Semitic immigrants.

(a) The African aborigines are now found only in the western and north-western part of Abyssinia; they are called by the other Abyssinians Shangâldâ or Shangâlê. Originally the name of a certain tribe, this has come to be a generic term for all non-Semitic or non-Hamitic people of probably negro origin. The largest aggregation of these Abyssinian negroes is found to the north of the river Bâríâ, whose languages also are entirely different from those of the Cushites and the Semites. They inhabit the country around the Takkâzê and the Gash Rivers, mostly in the present Italian Colonies Eritrea and Somaliland. Sometimes by the derogatory term 'mouse-eaters'; bârîâ in Amharic means also 'slave,' because these aborigines are taken as slaves all over Abyssinia. This part of the population is, to a large extent, pagan; others, like the Bârîâ, have become Muhammadans; some of them, especially the slaves among the Christians, have adopted the Christian faith.

(b) The Hamitic or Cushitic tribes form the stock of the population of Abyssinia. They immigrated into that country at some remote period of which we have no record. There is scarcely a part of Abyssinia where the Semites, who imposed their language almost everywhere, did not intermingle with them. In the south the Semitic blood was almost absorbed by the Hamitic; in the north the Hamitic tribes seem to have been kept a little more separate. The main tribes of the Cushites or Abyssinian Hamites are the Somali and the Gallas in Southern Abyssinia; the Afar (called by the Abyssinian Christians, or Bârîâ, have become Cushites or Cushitic language) in the east; the Aago (with several subdivisions) all over the centre; the Sáoos in the north-east, the Bogos (also called Bilin after the name of their language, of Aago origin), finally, the Bedawin in the north, who extend into the Egyptian Sudan. The Gallas, or Oromos, are very numerous, and are divided into many tribes, some of which extend as far as the equatorial lakes. Their language is a Hamitic one, and the Abyssinians make a distinction between them and the Shangalâs. Since, however, many Gallas whom the writer has seen (in Northern Abyssinia) have pronounced negroid features, it may be that a part of this nation is of negro origin and has adopted a Hamitic language. Similar cases occur very frequently, as, for instance, with the Celts in Bavaria, who speak German, and the negroes in the United States of America, who have adopted the English language. The Gallas are partly pagan, partly Muhammadan. Some of them became Christians, but the wholesale baptism of Galo people by King Theodore I. (1855–1888) met with little success. The Somalis and the 'Afar are practically Muhammadan; the Sáoos and the Bedawin are Muhammadan; the Bogos partly Christian, partly Muhammadan.

(c) The Semitic population of Abyssinia is strongest in the north, i.e. in the region of the ancient kingdom of Aksum. There is no doubt that these Semites came to Abyssinia from Arabia. The bulk of them may have come within the last cent. B.C., but the Semitic immigration was, however, a gradual infiltration, and even in our days an Arab tribe, the Rashâhid, has crossed to the other side of the Red Sea and is beginning to be nationalized in Africa; they still speak Arabic, but they sometimes use the Tigré language as well. The Semites have been, beyond doubt, the civilizers of, or at least the bearers of some civilization to, Abyssinia. They founded an empire, they built temples, palaces, and entire cities, as well as dams and reservoirs; they originated and carried on the only literature that Abyssinia ever had. When they came they were, of course, pagan, but after some centuries they became Christian; and, whatever their Christianity is, or may have been, it has always tended to a higher state of morals and religion than that which native Africa, south of Egypt; and the other countries along the north shore, has ever been capable of producing. The Semitic language which was first written in the Ethiopic or Ge'ez. A few pagan and Christian inscriptions and almost the entire Christian literature are committed to writing in this language, which must have died out before the 10th cent. A.D. The Semitic tribes are divided into two main groups: the Christians. The Tigré tribes are now mostly Muhammadans, but about half of the Mânsa tribe have retained Christianity.

We have therefore, in speaking of the religions of Abyssinia, to deal with Paganism, Islam, and Christianity. Paganism is at the bottom of all of them, and even the religious ideas of the common people in Christian and Muhammadan districts are more like pagan superstitions than like the ideas of the founder of Christianity or of the prophet of Islam. We may here dispense entirely with the discussion of the Christians. It will suffice to record the following facts: Islam in Abyssinia is Sunnite, the Muhammadans living in Christian surroundings are called Djäbarti, the people who do missionary work there at present are mostly of the Senûa order. The Confession
of the Christian Church of Abyssinia, that of Jacobus Baradaeus,—in other words, the Abyssinians are Monophysites. A few remarks on the history of Christianity in this country will be found below.

Still another religion exists in Abyssinian,—the country of many races, languages, and religions,—viz. Judaism. There are a number of Jewish communities in the region between Asmara and Gondar. They are called Falashas, and they speak an Aqag dialect; their books are in Géez. Their origin is altogether unknown to us. According to Abyssinian tradition, the Queen of Sheba, who visited Jerusalem and was instructed in the Jewish religion by Solomon and then introduced it into her own country. This is, of course, legendary, for the oldest inscriptions prove—if we need any proof—that the official religion of the Aksumite kingdom, before it became Christian, was pagan. But this curious legend seems to reflect some historical events of which no other records have come down to our time. For a number of OT practices and ideas are integral parts of Abyssinian Christianity, and are significantly given in the languages, mostly denoting religious ideas and objects, are of Jewish-Aramaean, not of Christian-Aramaen, origin.

1. pagan abyssinia.—1. pagan religion of the hamites. The religious customs of the pagan religion of the Kunamas, as we know it, may be characterized as animistic or ancestor-worship. For the spirits or the souls of their forefathers play the most important role in their religious life. Above all, there is the unknown Great Spirit, with whom man comes little into contact. This idea is one mysterious, almighty, supernatural being seems to pervade almost all pagan religions. The Great Spirit is far away, the other spirits are near, and are in a way mediators between mankind and the Great Spirit. He is that which gives rain, the most important and vital thing for the agricultural Kunamas, and he is probably the god of heaven, just as Wáq is among the Gallas (see below). To him only the chief of the tribe may sacrifice. At the beginning of the ploughing season the chief has a revelation bidding him immolate a red goat and a white sheep, and in return promising abundance of rain. The animals are killed, the blood is sprinkled on the ground, and the chief says: "the blood of the chief bids that we have offered; now give us rain." After that, the chief and priest eat the meat in communion with the spirits, whereupon mankind and spirit world are reconciled and friendly.

It is only upon important occasions that the priest or chief enters into action: the religious affairs of everyday life are in the hands of sorcerers and witches, i.e., men and women who are believed to have communication with the spirits, or even to be possessed by them. Sorcerers and witches are in contact with, or in the service of, the chief and the spirits. The latter form no separate caste; certain persons are believed to be possessed in order to have the evil eye. Against their power the people take refuge, or protect themselves by using a branch of sacred wood; not the sorcerers' caste sometimes make use of their power,—and then the same remedies are used against them; but generally their work is that of prophesying, healing, and doing other miracles; in general, mediating between the people and the spirits.

The sorcerers wear women's clothes, decorate themselves with necklaces, bracelets, anklets, rings, beads, and pearls of many colours. They receive revelations from the spirits about diseases, ordinary perils, and the like, and they remedy them—or not—in return for high payment. The witches do their duty only at a certain period, viz., harvest time. Then the people wish to 'greet' their ancestors and to give them meat. These demoniac women all of a sudden are possessed by the spirits, fall to the ground in a state of ecstasy, and begin to speak and sing in foreign tongues. After that, they put on the people 'greet' their ancestors and pour meat for them. When all have done so, a special sacrifice is offered to free the women from their possessors, and every one returns to his usual life.

Remedies against the influence of malevolent spirits are incantations and the twigs of the ghost-tree. The spirits and the tree have the same name, and in this identity of name lies the power of the latter. For instance, at the time of childbirth twigs of this tree are placed crosswise over the door of the house to protect the child. The first sight after someone has died, all the spirits visit the house of the dead and drink meat: the living sit outside, with the magic twigs around the neck or the arms. Again, the next day, when a libation is offered at the grave, they protect themselves in the same way. Aramaic words in Géez, which become the basis of their practices, are used to protect the cattle or the crops. The spirits of the ancestors rule and regulate the entire life of these people. They have established the laws of social and political life; in other words, these laws are the basis of their custom. The king, the priests, and the spirits watch over the laws and punish transgressions,—above all, the omission of taking blood vengeance.

2. pagan religion of the hamites. The pagan religion of the Hamite tribes of Abyssinia does not seem to differ essentially from that of the aborigines. According to our sources, however, it appears that the Gallas, who nowadays are practically the only pagan Hamites in Abyssinia, have outgrown the stage of crude animism, and have developed a sort of polytheism with one highest god, and that with them, partly at least, true religiosity has taken the place of torpid fear and awe. That highest god is called Wáq (or Waqay), and many say he is their only god. This being seems to be 'deity' or 'soul' in general, in a way to be compared, therefore, with the Semitic 'kab. The noun wáq originally means 'heaven,' and thus the god Wáq is also named Gurada—a word which, as an adjective, denotes 'dark-blue,' and as a substantive, the black god which they have offered; now give us rain.' After that, the chief and priest eat the meat in communion with the spirits, whereupon mankind and spirit world are reconciled and friendly.

It is only upon important occasions that the priest or chief enters into action: the religious affairs of everyday life are in the hands of sorcerers and witches, i.e., men and women who are believed to have communication with the spirits, or even to be possessed by them. Sorcerers and witches are in contact with, or in the service of, the chief and the spirits. The latter form no separate caste; certain persons are believed to be possessed in order to have the evil eye. Against their power the people take refuge, or protect themselves by using a branch of sacred wood; not the sorcerers' caste sometimes make use of their power,—and then the same remedies are used against them; but generally their work is that of prophesying, healing, and doing other miracles; in general, mediating between the people and the spirits.

The sorcerers wear women's clothes, decorate themselves with necklaces, bracelets, anklets, rings, beads, and pearls of many colours. They receive revelations from the spirits about diseases, ordinary perils, and the like, and they remedy them—or not—in return for high payment. The
spices and augures at the same time. Of course, they consider themselves much better than the ordinary sorcerers. There seem to be certain sects among them, e.g. the sect of Abba Muda, who lives in a mysterious cave with a serpent to which offerings are made; among the members of this sect make pilgrimages to the famous cave, they shave their heads, let their hair grow, and perform some well-known religious duties. An example of a Galia prayer is the following: 'Thou hast made the corn to grow, and shown it to our eyes; the hungry man believeth it and is consoled. When the corn is ripening, thou sendest caterpillars and locusts into it, locusts and pigeons. Everything cometh from thee, thou allowest it to happen: why doest thou this, thou knowest.'

Besides Waq, there is a host of lesser deities, who fall into two groups, viz. the 'good spirits,' named ayana, and the 'evil spirits,' named jinni. The ayana live in all places where Waq lives, especially in rivers; but they also comprise the house-gods (penates) and the souls of the ancestors (manes). Even in a newly built house there is an ayana, and crumps are thrown on the floor for him when the people first enter the house. Individual members of this class of gods are Kaba, the god of the sun and of the dead; and Atila, the goddess who protects women, like the Greek Eileithyia. It seems that even the personified Sabbath, called Sambata, is known as a goddess to the pagan Gallias, who must have grown to worship from the Gallas. Among the 'evil spirits' the buda, or the devil of the evil eye, is the most feared. It is well known that this superstition, so common over all Southern and Eastern countries, is particularly deep-rooted in Abyssinia. Other evil demons seem to be the monsters banta and bulgu. The former is the wolf, a demonic animal among various peoples; the latter is explained as 'man-eater.' A special caste of sorcerers has to do with these evil spirits. Among them there are different degrees and specialists, some of whom predict the future, others cure diseases by driving out the devils, and others know the art of making good weather and of producing rain.

Sacred animals are, among others, the hyena, the snake, the crocodile, and the owl. The hyenas eat the dead, and thus the souls enter their bodies; hence the spirits who are in the hyenas enter living men, and men—especially blacksmiths—who know how to change them. Among the hyenas the wolf is worshipped by almost all primitive peoples. The crocodile is sacred because it lives in the sacred rivers. Again, a certain owl is believed to be the bird of the dead; these owls are the souls of people who died unavenged. Life after death is, according to the belief of the pagan Gallias, a shadow-like existence in a sort of Hades or Sheol, called skerd (taken from the Arabic al-dhira, the 'other,' not world, but adapted to Gallia ideas).

3. ABYSSINIA:—What we know about the religion of the Semitic conquerors of Abyssinia is very little indeed—scarcely anything more than a few names. Our sources are the ancient inscriptions and native tradition. According to the famous Greek inscription copied at Adulis by Kosmas Indikopleustes, the king of Aksum, who had this inscription written (1st cent. A.D.), sacrificed ῥυ ῥυ καὶ ῥυ ῥυ Πορεύσαναι and erected a throne in honour of his god 'Aρης. The next earliest document is that of King Abba Meder, who is mentioned about A.D. 380. This inscription is carved in Greek, Sabean, and Old Ethiopic. The Greek part speaks only of the god 'Aρης, the Sabean of Mahrem, 'Astar and Beber, the Old Ethiopic of Mahrem, 'Astar and Medir. A Greek fragment from Abbā Pantaleon, a Christian shrine near Aksum, built over an ancient Sabean sanctuary, mentions the 'Αρης Διός of Aksum. But in only one case are all these gods found together, viz. in the first inscription of (Tāzānā, written perhaps about A.D. 450. There the throne is dedicated to 'Αρης; and they are rendered to Mahrem, the god 'who begat the king.' From this it appears that the Semites who came from South Arabia to found the Aksumitic empire worshipped the ancient triad of Heaven, Sea, and Evils. For Tigre means 'heaven,' and Atar-Samain (Atar, i.e. 'Astar in Aramaic, of the heavens) as well aslict bēlī šāmā (Ishtar Lady of the Heavens) are known in Semitic mythology. Thus 'Astar is the Semitic god of heaven and the Greek Zeus. Meēr is the Ethiopic word for 'earth,' and here it must necessarily mean the god (or goddess) of the earth. Now, if the Adulitan inscription mentions Poseidon together with Zeus, the conclusion is unavoidable that Beber is the god of the seas, in spite of the fact that the Ethiopic word beḥer means 'land,' and is even used in this sense in our inscriptions. We must connect it with the word beḥer ('sea'), and assume that, being a proper name, it retained its old meaning as the common noun corresponding to it had received a different meaning of its own. Besides this triad, Ares-Mahrem, the tribal or ancestral god of the kings of Aksum, was worshipped. Since they fought so many wars to extend his worship from the Gallas, it is very likely that they entered into their dominions, it was most natural that they should identify Mahrem with Ares, the war-god. From the inscription of (Tāzānā it seems that bulls and sacrifices were sacrificed to this god. From other sources we know that.safe worship was erected to him and the other gods. [Drawings and photographs of the altars will be found in the publications of the German Expedition to Aksum].

In a way Mahrem-Ares may be considered the national tradition. For the Abyssinian tell that before their ancestors adopted King Solomon's religion they worshipped a dragon, and that this dragon was their god. According to Greek mythology, Ares begat, in a cave near Thebes, a dragon, his own image. It is therefore not impossible that a similar association existed between Mahrem-Ares and the dragon; but of this no record has come down to us thus far. (A study of the Abyssinian dragon legends was published in the writer's Bibliotheca Aethiopica, i. pp. 17-33.)

Another hint with regard to the cult of the ancient Aksumites may be taken from the great monuments of Aksum, which, though they have been called 'obelisks,' but they should rather be termed 'stelae,'—stelae, it is true, of huge dimensions, as may be inferred even from the illustrations in the publications of the Sacred City of the Ethiopians, and in the publications of the German Expedition to Aksum. The stela is the chief element of a Semitic tomb, and there is a certain mysterious connexion between the stone and the personality of the dead, for the stela is called neshāk ('soul'). It, then, at Aksum we find a large number of such stelae, and among them huge highly decorated monoliths, varying in height from 16 to 30 metres, and in front of them, or rather around them, large slabs representing, in all likelihood, altars, we may conclude, with a certain degree of probability, that these monuments served for 'ancestor-worship,' that form of religion which, as we have seen, is at the bottom of the pagan religions of Abyssinia.

II. CHRISTIAN ABYSSINIA.—Christianity became the religion of the Aksumitic empire about A.D. 450. The king (Tāzānā was the Constantine of Abyssinia; for in his first inscription he is pagan, in the second he is Christian. In the latter he speaks of only one god, the 'Lord of Heaven,' or the 'Lord of the Land' (repidā beḥer,—in Ethiopic the word for the Christian God), whoenthroned him and gave him victory over his enemies. But in the king's own mind this 'Lord of Heaven' was probably not very different from 'Astar. We have to contend, however, with the virtual disappearance of Christianity in Abyssinia, nor do we know whether the Jewish communities were older, or whether they had anything to do with preparing Abyssinia for the Christian faith. However this may be, the Christian kings soon regarded themselves as the protectors of the new faith, and when
the Christians in South Arabia were persecuted by a king who had adopted Judaism, a king of Aksum fought against the latter, although his main object was probably to aggrandize his empire. South Arabia had been partly Christianized by Syrian missionaries, and it is most likely that Abyssinia, too, received its Christianity from Syria. The two missionary narratives are said to have had Aedesius and Frumentius from Antioch, and the 'nine saints,' who about A.D. 500 strengthened Christianity, probably came from Syria. They may even have influenced the style of church architecture, since both are to be regarded as organized in some of the most ancient churches of Abyssinia. The ancient shrines were now changed into Christian sanctuaries, the high places were dedicated to saints, and the sacred sycamore trees to the Virgin Mary. Within the first centuries of its history in Abyssinia, Christianity probably did not spread beyond the borders of the kingdom of Aksum, and it scarcely reached as far south as the Tana Lake. In the 7th or 8th cent. great political changes must have taken place; but the history of Abyssinia, from that time until 1600, is at the same time a history of its connection with the Ethiopian Church. During this time many wars must have been fought between Christians and pagans, and also between Christians and Muhammadans. The outcome was that political conquest and missionary success did not always go together. The most extraordinary fact is that the centre of the empire was transferred to the southern provinces. Abyssinian historical legend tells of many miracles performed by the saints who converted the pagan Hamites and negroes. Among them Tāskī Hākimānt (Plant of Faith), and Gabra Manfas Qeddīs (Servant of the Holy Ghost), were the most famous and popular. Meanwhile Abyssinia had been cut off from South Arabia, which had become Muhammadan, and had sought and found close contact with the Coptic Church of Egypt. In the Abyssinian empire itself Christianity has been the official religion ever since, and many conquered tribes have been forced to be baptized. But outside of these limits Islam made rapid progress, and at present the Christians are surrounded by Muhammadans on all sides. Many Muhammadans even live among the Christians, although the building of mosques is not allowed. The country has seen many internal quarrels concerning dogmas or ecclesiastical and secular power, and has suffered persecution and mob violence against Roman Catholicism (about 1560-1635). The greatest dangers that the Church experienced were the wars waged by Muḥammad Grāī, the Muhammadan conqueror who overran Abyssinia from 1525 to 1540.

From these perils Abyssinian Christianity was finally saved by the Portuguese. The Christian religion of Abyssinia became more and more degenerate, the more it was shut off from the rest of the civilized world, and the more the Semitic element was absorbed by other races. From 1540 to 1635 a large number of people who were more enlightened and energetic than his fellow-countrymen tried to introduce reforms; but although they did their best, it was not very much. An altogether exceptional case is that of the monk Zā'īr-Yāqūb (1560-1602), who evolved a rationalistic system of religious philosophy (pub. and tr. by the present writer under the title Philosophi Abyssini, Paris and Leipzig, 1904).

In conclusion, it may be stated that at present there are three main divisions in the Ethiopian Church. These are: (a) those who profess the ethiopian form of Christianity; (b) the followers of the ges'at ('union'), who profess that Christ, when He was anointed with the Holy Ghost in the Jordan after His baptism, became a participant of Divinity, even as man; (c) the true Monophysites or followers of the twaḥάḏdā (unity) doctrine.

Possible Jewish traces in Abyssinian Christianity.

—As has been said above, there seems to be some connexion between the Semitic and the Christian religion in Abyssinia. The Aramaic words in Ethiopic denoting religious ideas were apparently taken from the Jewish Aramaic rather than from the Christian Syriac. Besides this, there are traces that may indicate a Jewish influence, unless they be explained away by the purely Christian origin of the Ashénas, and the Sabean. These are chiefly (a) the observance of the Sabbath ('Sanbat') which has even been personified, and is considered a female saint. In a church at Adun, the picture of a woman with a halo, soaring in the sky over a crescent, with an angel on either side, was by some declared to be 'Sanbat,' whereas others asserted that this was the picture of the assumption of Mary; (b) the distinction between clean and unclean animals, in the main following the OT; (c) the idea of ritual uncleanness of persons who have sinned in dirtiness during menstruation; (d) the duty of a man to marry his deceased brother's wife, if this brother dies without a son. Among the Christians a man who has his deceased wife's widow and his heir and that the centre of the empire was transferred to the southern provinces. Abyssinian historical legend tells of many miracles performed by the saints who converted the pagan Hamites and negroes. Among them Tāskī Hākimānt (Plant of Faith), and Gabra Manfas Qeddīs (Servant of the Holy Ghost), were the most famous and popular. Meanwhile Abyssinia had been cut off from South Arabia, which had become Muhammadan, and had sought and found close contact with the Coptic Church of Egypt. In the Abyssinian empire itself Christianity has been the official religion ever since, and many conquered tribes have been forced to be baptized. But outside of these limits Islam made rapid progress, and at present the Christians are surrounded by Muhammadans on all sides. Many Muhammadans even live among the Christians, although the building of mosques is not allowed. The country has seen many internal quarrels concerning dogmas or ecclesiastical and secular power, and has suffered persecution and mob violence against Roman Catholicism (about 1560-1635). The greatest dangers that the Church experienced were the wars waged by Muḥammad Grāī, the Muhammadan conqueror who overran Abyssinia from 1525 to 1540. From these perils Abyssinian Christianity was finally saved by the Portuguese. The Christian religion of Abyssinia became more and more degenerate, the more it was shut off from the rest of the civilized world, and the more the Semitic element was absorbed by other races. From 1540 to 1635 a large number of people who were more enlightened and energetic than his fellow-countrymen tried to introduce reforms; but although they did their best, it was not very much. An altogether exceptional case is that of the monk Zā'īr-Yāqūb (1560-1602), who evolved a rationalistic system of religious philosophy (pub. and tr. by the present writer under the title Philosophi Abyssini, Paris and Leipzig, 1904).

Pagan traces in Abyssinian Christianity and Islam.—The excessive and unbounded cult of the Virgin Mary, which even the Muhammadans share to some extent, must in a way reflect the cult of a deposed pagan goddess. Mary lives on high mountains, at springs, and in the sycamore trees, which in ancient Egypt were sacred to Hathor. Who the pagan prototype of Mary was we cannot determine; she may have been Allat of the Arabs, or 'Earth Mother,' or 'Lady of Heaven,' since 'Astar was a male deity in ancient Abyssinia. Furthermore, there is a large number of saints who have performed, and still perform, many miracles of all sorts; one of them, the famous Gabra Manfas Qeddīs (see above), commonly called Gaber, even opposed successfully the will of God. Again, the Christians and Muhammadans believe in a host of evil spirits in the same way as the pagans do. These spirits live in dark places or near the cemeteries; they gather around tan dogs or haunt spots where no grass grows (like the elves in Northern Germany). Or, finally, they possess animals, like the hyena, the wolf, and the snake, and especially human beings. The devil that usually makes them mad or sick is called Waddegenn (demon's son) among the Tigrites, and Tegerti (probably of African origin) in Tigritia. Then there is the famous Abyssinian Lilith, called Werzelya, the demoness that makes a business of killing little children, etc. These spirits are driven out by burning the root (or a branch) of the ghost-tree. They are 'smoked out,' or they are exorcised by incantations. Magic prayers, written on scrolls or small booklets, and carried in little leather cases around the neck or the arms, are exceedingly common in Abyssinia; they are used against all possible dangers, and are good not only against many different diseases caused by the demons, but also against snakes, leopards, hyenas, drought, hail, locusts, and the like. Even the animal world has to suffer from devils in its midst, for the dobbo or dubbū, described as somewhat smaller than a
dog, drives every other animal away wherever it goes. It deserves to be mentioned also that among the Tigrè tribes, tales about the doings of certain stars—star-myths, so to speak—are to be found which may reflect ancient star-worship. The remnants of moon-worship among the same people are more pronounced.

A very conspicuous remnant of paganism is the idea of a nether world, where the shades live until the Day of Judgment. The shades of 'people of below' (sab tosbat) in Tigrè appear to live in dreams, or they punish a man by beating him, if he does not fulfill his duty of blood-vengeance, or isiggarded enough not to offer the proper sacrifices to the dead. The souls of those who die unavenged or before they have attained their desires, are changed into a kind of owl (gən in Tigrè), and howl and screech until they are avenged, or until some descendant or relative carries out their designs.

LITERATURE.—Nißsen in Verdis Laos (Nordisk Missions Kalender) for 1906, pp. 159-164; Paullischke, Ethnographie Nordost-Afrikas, also Hauser, Ca Deja alle frontiere della storia, p. 218; and the Anfänge der Anfänge des Alexandria (A.B.A.W., 1875), also Zur Gesch. des Askünum. Reichs im Altertum seit 1100 v. Chr. ACADEMY, ACADEMICS.—The Academy ('Acaemyia, older form 'Ekaemyia, later 'Academia), so called from the local hero Academos or Hekadeus, was one of the three great gymnasia outside the walls of Athens, the others being the Lyceum and the Cynosarges. It was situated less than a mile from the Dipylon Gate, off the road which ran N.W. through the outer Cunicularia, among the olive groves below Colossus Hippicus. As a gymnasium it already existed in the time of the Paistiatrates, but it was Cimon that laid it out as a public park with shady avenues of plane trees (Pint. Cim. 13). Here was the precinct of Athena with the twelve sacred olives (μοῖραι), and the ancestors. (i.e. the ancestors of Heraclides of Herakles and Prometheus, which formed the starting-point of the torch-race at the Lambdaee-dromia (Apollodorus ap. schol. Soph. Ed. Col. 57). This last worship gave rise to several features of the myth.

It was in the Academy that Plato founded the first Athenian philosophical school, the idea being doubtless suggested to him by the Pythagorean societies, such as those of Thales and Phileus (cf. the Phaedo), and possibly by that of his friend Euclides at Magara. The school possessed a shrine of the Muse (Μουσών), at which votive statues (αἰνόθεμα) were dedicated (Diog. Laert. ili. 25, iv. 1, 19), and Antigonus of Carystus (ap. Athen. xii. 547 f., 56a) spoke of a 'sacred priest (σερπιστής) and an 'attendant of the Muse' (Μουσών ἐνικυλος) as officials of the school. He also spoke of the monthly common meals (μουσοτά) as religious acts (ἐνα φαύλωσα το θεόν τιμιωτέρες). From all this it has been inferred by Wilamowitz-Moellendorf (Philol. Unterr. iv. 253 ff.) that the legal status of the Academy was that of a religious association (βίας). That, indeed, was the only form which a corporation could take at Athens, and it was of great importance that membership of such association was made open to others than Athenian citizens.

The original property of the society was a house and garden, in which Plato and most of his successors lived. It is not quite certain whether the place of teaching was here or in the actual gymnasium; for the name 'Academy' is given to both. A semicircular marble bench (ζωόδορα, σασσίον) still existed in Cicero's days, which was at least as old as the scholarchate of Polemo (Cic. de Fin. v. 2, 4). It is not certain whether the scholarchs (σχολαρχεῖς) were elected or selected by their predecessors. The official title seems to have been-acadouchos (ακαδουχος), 'successor,' in honor of Athenes by Sulla (88 B.C.), the suburbs became unhealthy, and the school was moved into the town; but the house and garden remained in its possession to the end.

From an early date it was customary to distinguish the Old and the New Academy, though Plato (see below) objected to this (Cic. Acad. i. 13). The Old Academy includes the immediate followers of Plato, the New begins with Arcesilaus, who introduced the sceptical doctrine for which the school was best known from the 3rd to the 1st cent. B.C. Later writers speak of three Academies, beginning the Middle with the Ancients and the New with Carneades. Others added a fourth consisting of Philo and his followers, and a fifth consisting of Antiochus and his (Sext. Phyrrh. i. 220). All these divisions only mark stages in a continuous history.

The 'Old Academy' carried on the discussion of the problems which Plato had raised in his oral teaching. These problems concerned what is possible and what is not, and concerned with the distinction between continuous and discrete quantity. The former Plato calls in the Philebus the 'unlimited' (αψυφος), but we know from Aristotle that in his oral teaching it was called 'the great-and-small' (ρ θύμιο και μικροσ). The problem was to show how discrete or 'ideal' numbers (εἰδικοί αριθμοί) could arise from this, and similarly how 'magnitudes' (μέγεθος) could arise from continuous and infinitely divisible space by the introduction of limit (ρ θύμιο). If once we get to magnitudes, it may be possible to give at least a tentative mathematical construction of the 'elements,' or even of the things of sense.

The true glory of the Old Academy is its impetus which it gave to mathematical science by the study of these problems. Solid geometry, trigonometry, and conic sections all took their rise from this source, and the new conception of continuous quantity led to the solution of many old difficulties. According to Diogenes Laertius, with whom members of the Academy in Plato's time, attacked the problem of the solar system with extraordinary boldness, and prepared the way for the great discovery of the sun's central position by Aristarchus of Samos (c. 260 B.C.). It is from the light of our knowledge of the Old Academy comes from Aristotle, who was not in sympathy with the mathematical movement of his time.

Plato was succeeded by his pupil Speusippus (scholarch 347-339 B.C.). Xenocrates and Aristotle at once left Athens, the former returning later to succeed Speusippus, the latter to found a rival society.

Speusippus regarded number as arising from the union of unity (το τῷ ἕν) and plurality (το ἕνα), but he made no attempt to derive magnitudes and other forms of reality (σώσα) from numbers. He explained them instead as parallel series formed on the analogy of number. Magnitudes, for instance, arose from the union of something like unity (the point) with something like plurality, and so on with souls and sensible things (Arist. Met. 1029a, 9 f., 1075b, 37 f., 1085a, 31 f., 1090b, 18 f.). His most characteristic doctrine, however, was his denial of the identity of the Good and the One. The Good was the highest and most divine, and revealed itself (διαφερέθαι) in the process of development. As in the case of plants and animals, it is only in the 'full-grown' (το θελειον) that we see the Good (Arist. Met. 1072b, 30 ff., 1091b, 14 ff.). Speusippus is thus the originator of the 'teleologi-
so ACADEMY, ACADEMICS

(derived from ἡρακλείδας, ‘full-grown’) or evolutionary view of the world, and this explains the facts that he wrote chiefly on biological subjects. We know from the quotations of Athenaeus that in his ten books of ‘Similaris’ (Ὁμοιόμοιοι) he discussed shellfish and mushrooms. It is in accordance, too, with this evolutionary standpoint that he regarded sense-data ( בלבדיה מציאות), and that he defined happiness (סantidad) as the ‘full-grown state’ (.Fill: טלה). It was not pleasure; for pleasure and pain were two evils, opposed to another, and the middle state of ‘imperturbability’ (אכש), which is the happiness aimed at by good men (Clem. Strom. ii. 21).

Xenocrates of Chalcodon (scholarch 333–314 B.C.) spoke of the limit and the unlimited as the ‘unit’ (אומד) and the ‘indeterminate dyad’ (אךريعט אד’) and he reverted to the strictly Platonic view of the ‘ideal numbers’ (אכשומטי אונומס). It is characteristic of him that he was fond of religious language, calling the unity the Father, and the dyad the Mother, of the gods. The House of the Virgin, was also a god, and so were the planets. When we come to the ‘sublunary’ (טאנוטלגי) sphere, however, we find ‘demons’ (באלים)—beings who, like Eros in the Symposium, are intermediate between gods and men. The souls of men were also ‘demons’ (Toπ. 112x, 27), though the scientific definition of a soul was a ‘self-moving number.’ This theory of ‘demons’ had, of course, an enormous influence upon later theology, both Platonic and Christian, and marks Xenocrates as the originator of the ‘emanationist’ view of the world, opposed to the ‘evolutionary’ view of Sporusippus. It is important to notice, however, that he was quite conscious of the allegorical character of this doctrine. He asserted that his account of the creation was only a device intended to make his theory clear for purposes of instruction. Really, the creation of the world was eternal and timeless, a view which, he maintained, had also been that of Plato (Plut. An. Proc. 3).

Liscus, Xenocrates’ successor, was inclined to attach much value to rudimentary forms of knowledge. He distinguished φαινομεν as the wisdom possible to man from φανα or complete knowledge, and he thought that even irrational animals might have the idea of God and immortality. In his own view he was less ascetic than Sporusippus, and attached importance to the possession of the power which ministers to goodness (에너יקס דומהא), that is, to ‘external goods’ (Clem. Strom. ii. 22, v. 13).

The next two scholarchs, Polemo and Crates, seem to have busied themselves almost entirely with popular ethics. The most distinguished member of the Academy in their time was Crantor, who wrote a much admired treatise on mourning (Πελ πלεῶν). He was a disciple of Xenocrates, but died before Crates, and was not scholarch.

2. The ‘New Academy’ (‘Middle Academy’ according to those who reckon from the New from Carnedas) begins with Arcesilas (scholarch 270–
241 B.C.), who made use of the weapons provided by his father to combat the Stoic theory of ‘comprehension’ (אכשמחה) as a criterion of truth intermediate between knowledge (אכשמחה) and belief (אכש). As he appears to have left no writings, we cannot tell how far his scepticism really went, though Cicero certainly states that he denied the possibility of knowledge (441). On the other hand, Sextus Empiricus says that his Pyrrhonism was merely apparent, and that he taught Platonic dogmatism to the inner circle of his disciples, quoting in support of this a verse of his contemporary Ariston of Chios, describing him as a sort of Chumera, ‘Plato in front, Pyrrho behind, and Diodorus in the middle.’ In any case, we must remember that Plato himself had denied the possibility of knowledge as regards the world of sense, and it was quite natural that this side of his teaching should become the most prominent in an age of dogmatic materialism. The next scholarch, Lacydes (241–215 B.C.), continued the tradition of Arcesilas. Of his successors, Telecles, Euander, and Hagesinus, we know nothing.

The most distinguished head of the New Academy was Carnedas of Cyrene (214–129 B.C.), who threw himself whole-heartedly into the attack on Platonism. When Justinian closed it, it had lasted over nine hundred years.

Burnet.

ACCEPTANCE.—"Acceptance," as a Scriptural and theological term, may be said to denote a state of favour in the sight of God which men may enjoy when they fulfill the conditions upon which such favour depends. The gracious purpose of God which the mission of His Son fully reveals, has in view the establishing of a state of reconciliation in which men may find abiding acceptance for themselves and their service, and share in all the benefits of redemption. But the idea of acceptance, as presented in Scripture, does not depend either upon redemption actually accomplished, or upon any prescribed measure of knowledge or of conduct. It is everything which tends to show that the way to the Divine favour has always been open, and that it may be secured everywhere by a true heart and an obedient spirit, in which there is always the pledge that all available means will be utilized to attain to a life of favour. There can be no barrier to forgiveness and acceptance but in the sin and unbelief of men.

Yet the actual conditions in which this state is reached in Scripture cover a wide field of experience, and it is not easy to distinguish between the actual conditions of the people of God, which are described in various terms which give prominence to different aspects of the conception. A cursory glance at the numerous instances in which the persons or the conduct of men are spoken of as fitting in with the terms which are used, it is seen that the Divine favour has been open to men in all ages and in all conditions of human life. Yet there are special means calculated to secure it which reveal the great truth that acceptance seeks to make known, along with the objective grounds upon which, in the economy of redemption, it is established and guaranteed to men. The full knowledge of these was not possible before Christian times, yet it is clear that God has always and everywhere been gracious and friendly in His regard. Nothing is said in any of the books of the Old Testament as if it were by nature hostile, as heathen gods were often supposed to be, or that His favour can be procured by costly gifts or sacrifices. On the contrary, the gift and sacrifice of His Son are the highest proof that to whom could be revealed the will of God?

(1) There is the wide sphere of religious experience which the worship of God by sacrifice may be said to cover; of which Gn 6:5 may be taken as a type. Of Noah's sacrifice it is said: "The Lord smelled a sweet savour." God is by nature hostile, as heathen gods were often supposed to be, or that His favour can be procured by costly gifts or sacrifices. On the contrary, the gift and sacrifice of His Son are the highest proof that to whom could be revealed the will of God?

The Lord smelled a sweet savour, and said, 'This is an acceptable sacrifice to Me.', which shows the favour with which this sacrifice was regarded, and the effect it had upon the future course of the world.

The word sacrifice also appears in a new form. Similar phraseology is frequently used, both of the purpose which sacrifice had in view, and of the result which it effected in fostering favour for the worshipper. Whether all worship in the earlier ages was expressed by sacrifice or not, it is obvious that sacrifice constituted the central and essential feature of it, and genuine piety would naturally seek satisfaction in the faithful observance of all prescribed forms. This tendency exposed the worshipper to the danger of externalism, of treating sacrifice as a mere act of obsequiousness. The reformation consciousness in its OT form was based on the thought that sacrifice was the appropriate form for acknowledging God and mediating His favour. In the different kinds of offerings and in a ritual appropriate to each, the Law provided for a wide variety of religious need; and in the faithful observance of what the Law had prescribed, the true Israelite could assure himself of acceptance in the presence of Jahweh.

(2) To what extent the character of the worshipper was an essential element in acts of sacrifice? At early times, it is not easy to determine. It is not likely that the religious acts even of primitive men would stand out of all relation to their habitual life. With the advance of culture, however, increased importance would come to be attached to the spirit of worship as contrasted with the form. And once it became clear that the two might be not only different but even opposed, as was manifest in the time of the Prophets, then the call would begin to be made for mercy and not sacrifice, for righteousness in life and conduct rather than the multitudes of sacrifices. Yet the maxim that obedience is better than sacrifice (1 S 15: 23) is only new in the time of Isaiah. It was an element in the regulation of worship from the first, and its importance increased with a deepening sense of the inner character of religion; especially when it began to be felt that the outward forms of worship were subject to change. The movement to restrict worship by sacrifice to one central sanctuaries of God, if accepted, is a sure sign of the decay of the old belief, and shows that sacrifice was unsuitable as a general and universal medium of worship. That the Prophets were against all sacrifices, wherever they might be offered, is clear, although the revelation, and the old corruptions of the high places, which had invaded the Temple in their day, gave point to their loud rebukes and increased the longing for a new and better time. It cannot be said, however, that the Prophets were antagonistic to the idea of sacrifice itself. In any case, the worth of the latter as a religious act was always dependent upon the moral state of the worshipper, and this circumstance explains their insistence upon moral conditions, upon 'clean hands and a pure heart,' as necessary to acceptance with God.

(3) The broad principle of acceptance in its widest universality may be inferred from the spiritual nature of God, as in Christ's words to the woman of Samaria (Jn 4: 24). In that, God is by nature hostile, as heathen gods were often supposed to be, or that His favour can be procured by costly gifts or sacrifices. On the contrary, the gift and sacrifice of His Son are the highest proof that to whom it could be revealed that He had passed to the Father. It is well expressed by St. Peter in the case of Cornelius (Ac 10: 9-16): "Of a truth I perceive that God is no respecter of persons: but in every nation he that feareth him and worketh righteousness, is accepted with him.'

(4) But, while the broad principle of acceptance is contained implicitly in the revealed character of God, and was boldly proclaimed by the Prophets, it is never realized as a living experience except in the life of faith and obedience, in the life which, based on the redeeming work of Christ, seeks for and accepts all available helps both to know and to do the will of God.

A. F. SIMPSON.

ACCEPTATION is a term which, like many others, has passed from Roman law to Christian theology. According to its derivation, acceptationis, acceptationem means 'a reckoning as received,' acceptatione being the proper name for the credit side of the ledger. In Roman law, however, the term had a special technical use in reference to the discharge of an obligation by the use of a solemn and prescribed form of words, in which the debtor asked the creditor if he had received payment, and the creditor replied that he had—no real payment, however, having been taken place. Gaius consequently says that acceptation
resembles an imaginary payment. This method of discharge was properly applicable only to obligations contracted verbally by stipulation, i.e. by the use of a similar solemn form of words, in which the creditor asked the debtor to own his debt, and the debtor so did. Obligations contracted in other ways could, however, be transformed into verbal obligations by the use of a special stipulation intended for the purpose, named the Aquilian, and could thus be made terminable by acceptation. See Gaius, Inst. iii. 169; Justinian, Inst. iii. 29. 1 and 2, Digest, 'De Acceptatione,' xlvii. 4.

In Christian theology, the term 'acceptation' is commonly used in a loose sense to denote the principle of that theory of the Atonement, in which the merit of Christ's work is regarded as depending simply on the Divine acceptance, and not on its own intrinsic worth. This theory was taught by Duns Scotus, who says that every created offering is worth what God accepts it at, and no more, and further, that Christ's human merit was in itself strictly limited, but God in His good pleasure accepted it as sufficient for our salvation (Com. in Sum. vol. iii. p. 191). But the term occurring in saying, 'He holds to what is termed the theory of `acceptation,'" The Saviour's work becomes an equivalent (for the debt of sin) simply because God graciously wills to accept it as such," (Hist. of the Ch., Ch. iv, 1894, p. 187.) has not the same meaning as the doctrine of the doctrine of Duns as one of acceptation. He says: 'It is incredible, but it is a fact that the expression `acceptatio' is used almost universally as equivalent to `acceptatio,' as though it presupposed a verb `acceptare.' For instance, Schneckenburger (Lehrbegriffe der kl. prot. Kirchenparteien, p. 18) speaks of the acceptation of the merit of Christ in Duns Scotus' (Recht fertigung und Ver-schöning, i. p. 328, note). The theory of Duns Scotus is certainly not very suitably spoken of as one of acceptation. In the solution of an obligation by acceptation there is no payment at all; whereas, in the theory of Duns there is a payment, though it is accepted beyond its intrinsic value. The usage of the saying the name `acceptatio' to Duns's theory is probably too confirmed to be done away with. It is to be understood, then, that it is used only loosely. The danger of such usage is, however, shown by the fact that Sheriff, (Hist. of the Ch., Ch. iv., p. 187) has recently stated that Duns Scotus taught the doctrine of acceptation, but actually speaks of him as having transferred the term `acceptatio' to the doctrine of Christ's satisfaction—a statement which is historically quite inaccurate.

The confusion which has gathered round the term does not, however, end here. It has been used even more indefensibly than in the case of Duns Scotus to describe the doctrine of the Atonement taught by Socinus. The only excuse for this is that Socinus states his preference for the view of Duns Scotus just described, in contrast to the orthodox Protestant view according to which the death of Christ was a strict satisfaction for sin (Pars Tertia, cap. vi, in Bibliotheca Frustrum Polonorum, 1656). His positive teaching is, however, quite different. Jesus Christ is our Saviour because He announced to us the way of life eternal, confirmed it (by His miracles and His death), and showed clearly in His own Person, both by the example of His life and by His resurrection from the dead, that He would give us life eternal, if we put faith in Him (Pars Prima, cap. i.; cf. cap. iii.). Grothus, however, accuses Socinus of applying the legal word `acceptation' to the remission of sins, which God grants us, and then waxes eloquent upon the fallacies involved in such usage (Defense Fidei Catholicae de Satisfactionibus Christi, cap. iii. Oxon. 1637). The only explanation of the language of Grothus seems to be that he had misread or misunderstood a passage in Socinus, where he criticises Beza for using the term `acceptation' in explaining St. Paul's doctrine of imputation (De Jesu Christo Servatore, Pars Tertia, cap. ii.). The ancient theologian Crell points out the mistake in his 'Responsio ad Grothium' (ad cap. iii. in Bibliotheca Frustrum Polonorum, 1656); it is he who tells us that it was Beza whom Socinus had in view. Crell, however, did not succeed in preventing the general impression that Socinus took the doctrine of acceptation. We still find Turretin saying (De Satisfactionis Christi Necessitate, Disp. xx, cap. x).: 'We admit no Socinian acceptation'; though his Disputations on the Satisfaction of Christ did not appear till 1666 (enlarged, Edin., 1687; see Turretin's Works, Edin. 1648, vol. i. p. xlii.).

Robert S. Franks.
Our access to this state has been established through the incarnation and death of the Son of God, who bears away the sins of men and gives them power to become sons of God. It is not merely an open way; it is an actual leading of the Saviour and the Spirit which makes them in hand and conducts them into the blessedness and peace of the Divine kingdom.

(2) In Eph 2:4 it is clear that much more is meant than the open way to God. It is an actual and effectual introduction of a personal kind which begins a state of friendship and fellowship by means of the indwelling spirit common to all believers. In the former text the Christian state as a whole is in view, as that to which Christ is introduced: 'hence we are shown into the higher sphere of Divine fellowship, of filial privilege and power which Christ opens up to us, and into which He conducts us. Jew and Gentile have their access to the Father through the Son by one Spirit. All outward differences which separate and divide men fall away in presence of the high unity which is produced by the life of God mediated by Christ and the Spirit of Christ.

(3) In Eph 3:12 access is viewed as a standing condition related to Christ in the Church. The confidence, boldness, and freedom which faith in Christ ever sustains and renews. It secures all the possibilities of a free and joyous fellowship, and provides the power by which the energies and motives of any higher life are sustained and filled. The filial spirit is nourished and enlarged from the fulness of the Divine life and love.

The idea of access to God through Christ differs in many respects from that access which must be one to a spiritual being. This latter is never denied but rather taken for granted in Scripture. Compared with the former, however, it can never come into competition with it, or supply its place. In the light about God which Christianity reveals, it soon becomes clear that none but Christ can lead us to Him. The Father whom the Son reveals can never be known or approached through any save the Son. The incarnation and mission of the Son, accepted and believed, must henceforth determine the character of our access to God. This St. Paul has very clearly perceived, and he has brought the thought to clear formal expression. It appears in various parts of the NT: in the Fourth Gospel as a general principle of Christianity (Jn 14); in Eph 1:17 and 2:16 a closer relation to St. Paul. As a broad principle, we readily see that we cannot have real access to God except amid the conditions which Christianity has established, both as to the character of God and the way of acceptable service and worship. Yet it is important to keep in mind that the NT ascribes our access specifically to the great sacrifice which removes the barrier of sin and establishes peace and friendship between God and man (He 10:19, 20).

A use of the word 'access,' different from, but related to that given above, is found in some liturgical writers, by whom the term is employed to characterize and describe certain prayers in the old Liturgies and in the Roman service of the Mass. It is applied to one of the prayers offered by the officiating priest in approaching the altar at the commencement of the service, and is called Prayer of Access or Prayer of Humble Access.

The prayers in question express generally deep humility in presence of the Divine greatness, and ask for the grace preparatory to the actual presentation. Language of the terms, either in the prayers or in the rubrics which direct the order of the service. It is a word of the editors and commentators, and one has difficulty in discovering the special aptness of the term with reference to instructions which are so described, there being many others of the same character throughout the service.

The explanation probably is that the approach of the priest to the altar at the commencement, and the nearing of the worshippers to the Divine presence in the consecrated and now transformed elements, are the two points in which access to Deity now present in the great Sacrament begins and culminates. In this sense the term is apt enough of the Supper which is already latent in the old Liturgies and is seen fully developed in the Roman Missal. (See Hammond's Liturgies, Eastern and Western, III, p. 132.)

ACCIDENT (accidents, ἀττιπῶθης).—I. One of the five Predicables (accidents predicables).—According to Mill, under accidents are included all attributes of a thing which are neither in the ordinary signification of the name, nor have, so far as we know, any necessary connexion with attributes which are so involved (Logic, vol. i. p. 149). This, allowing for the Nominalist standpoint of Mill, is the same view as that contained in Aldrich's definition, 'that which is predicated as contingently joined to the essence,' as contrasted with proprium which is predicated as necessarily joined. Some such definition or its equivalent is given by most writers on Logic. According to Mansel, (Aldrich, 4th ed. p. 25), found in Albertus Magnus (de Princ. Tract. ii. cap. 1).

The view taken by Aristotle is different. The attribute of a triangle, that its three angles are equal to two right angles, is a transmissible to other triangles; the view would be a proprium, is by him regarded as an accident (Metaphys. iv. 30). The distinction between property and accident in Aristotle turns on the convertibility or non-convertibility of the attribute. It is essential to an accident (that it should be present in certain objects and in them alone. If present in other objects, it is either identical with the genus, or it is not. If not, it is an accident. The test of an accident is that it is common to heterogeneous things. Aristotle at the same time recognizes that that which, simply considered, is an accident may become in a certain relation and at a certain time a property. He gives two definitions of accident: (1) what is not necessarily, nor property nor genus, but is in the thing'; (2) 'that which is able to be in and not to be in one and the same individual' (Top. i. 5). Porphyry gives a third definition: 'that which is present and absent without destruction of the subject' (Topogr. v. r. 2).

Aristotle recognizes two classes of 'accidents': those which are necessarily connected with the essence and ducible from it (αὐτοτέρως καὶ αὐτό); and those which are not (cf. Ueberweg, Hist. of Philos., Eng. tr. vol. i. p. 155, and Grote's Aristotle, vol. i. p. 142 note). Sanderson in his Logic (Works, vol. vi. p 10) distinguishes separable and inseparable accident thus: Separable—that which can be actually separated from its subject, as cold from water; Inseparable—that which cannot be separated except in the intellect, as wetness from water. Aldrich gives a similar distinction. Mansel and most logicians define the inseparable accidents of a class as those accidents which, though not connected with the essence either by way of cause or consequence, are as a matter of fact found in all the members of the class; the separable accidents as those found in some members of the class and not in others. The inseparable accidents of a natural class are those which can be predicated of their subject at all times; the separable only at certain times.

2. Accident, Fallacy of.—This fallacy is generally considered as arising when we infer that whatever agrees with a thing considered simply in itself agrees with the same thing when qualified
by some accident. Aristotle's view of the fallacy was different. He defines it as arising 'when it happens to belong in a similar way to a subject and to the accident of that subject.' This definition does not mean merely that the attribute is assumed to exist along with both subject and accident, but that the mode of attachment is the same (Soph. Elench. v.). The condition of valid reasoning which Aristotle here lays down, is precisely the same as Herbert Spencer (Psychology, vol. ii. ch. v.) has in view when he speaks of 'connature.' Aristotle regards the nine categories which follow substance as accidents, and the classification itself may be regarded as a classification of 'connaturs.'

3. Accident in relation to substance.—Sir W. Hamilton (Lectures, vol. i. p. 150) says 'accident' is employed in reference to a substance as existing; the terms 'phenomenon,' 'appearance' in reference to it as known. The Scholastics distinguished 'accident' in this sense as accidenta praedicamentale or categorical accident from accidents predicabile or logical accident (Aquinas, Summa Theol. i. q. 77, a. 1-5). The former is the wider term. 'Accident' in the sense defined above, and in the sense as a thing being ens per se. Thomas Aquinas (ib. iii. q. 77, a. 1) says the proper definition is not actual inherence in a subject, but aptitude to inherence. The chief reason of this definition is that in the doctrine of Transubstantiation the accidents of bread and wine remain when the substance is changed. The substance of the body and blood cannot be affected by the accidents, therefore these must be capable of existing apart from their substance, being supported by Divine power. This has led to a distinction of three kinds of accidents: (1) metaphysical, accident which, although we may conceive the substance without it, is nevertheless identified with it. There is a distincto rationis rationes between them. Opposed to this is the physical accident, which, if different from the substance itself as thing or entity, is (2) absolute or real, as quantity, motion. If it signifies merely a state of being, as to sit or stand, it is (3) a modal accident. It is for the absolute accidents that the capacity of being miraculously sustained is recognized. Eucharist is claimed (Zigliara, Summa Philos. i. 441; Pesch, Institutionum Logicae, Pars II. vol. ii. p. 281). Aquinas maintained the real distinction of absolute accidents from the substance of a subject, and matter. He was at one time opposed to mental faculties, see Sir W. Hamilton, Lectures, ii. pp. 5-8. The question is still disputed by Roman Catholic theologians. Leibnitz supported the view of Aquinas (System of Theology, ed. by Russell, pp. 112-114; Opera Philosophica, ed. Erdmann, pp. 869, 868, etc.). He distinguishes mass as an absolute accident from substance (System of Theology, p. 115).

Accidents, according to Locke, are qualities which are capable of producing simple ideas in us (An. exc. xxi.). According to Kant, accidents are the determinations of a substance which are nothing else than its particular modes to exist; or the mode in which the existence of a substance is positively determined (Werke, ed. Rosenkranz, vol. ii. p. 160).

In Hegel, accidents are the determinations which are unconditioned being. Being in so far as it has immediate existence (Philosoph. Propadectik, p. 105).

4. 'Accident' in the sense of that which happens by chance, is defined by Aristotle as that which occurs neither always nor from necessity, nor from the most part (Metaph. x. (xi.) 8). Elsewhere (Metaph. iv. (v.) 90) he gives, as illustration, finding a treasure when digging a hole for a plant.

G. J. STOKES.

ACCIDENTALISM.—The theory that events may happen without a cause. This is a view of the world which characterizes a pre-scientific or pre-theological view of nature. With the rise of the scientific method and spirit all events come to be regarded as connected in a causal manner, and no single event whatsoever is conceived as possibly falling without the closed circle of cause and effect relations. Chance or error, therefore, is considered as opposed to the idea of causation, so that it could be possible to say, 'This event happened by chance, but that event was evidently the effect of some cause.' There is no such antithesis, for every event is caused. The accidental event is merely one whose cause is so complex that it cannot be determined, and, therefore, it affords no basis for any exact prediction of the re-occurrence of the event in question. It becomes a matter of treatment according to the theory of probability. Chance in the theory of democracy, as in the complex combination of possible causal relations, whose interaction sometimes produces a certain event, and sometimes fails to produce it. The interacting causes may co-operate and reinforce, and, again, may oppose and neutralize one another, and therefore the resulting combinations are not predictable. This is the scientific view of chance, which is not free in any sense of the law of causation.

In the early Greek philosophy the idea of a certain kind of accidentalism in the world of events was a very persistent one. It appears in Plato, and even in Aristotle; and it was not until the Stoics emphasized the scientific view of the universe that the unscientific nature of accidentalism became fully recognized. Aristotle held that single events may be referred to universal laws of cause and effect, but he did not commit himself to this conception wholly without reservation. He ascribes events to a causal order 'for the most part' ('ευρέως τα ραγάδοι), and insists upon the contingent and random character of what happens (Met. 1065a, 4). Plato finds a place for chance in the economy of the universe. 'God governs all things, and chance and opportunity co-operate with Him in the government of human affairs' (Laws, vii. 709). The act of opportunity is not the same as the act of chance; it is an instinctive shrinking from the idea of chance as the antithesis of cause and law. The Fates were, after all, the daughters of Necessity. Of them Plato remarks: 'Lachesis or the giver of lots is the first of them, and Clotho or the spinner is the second of them, and Atropos or the unchangeable one is the third of them; and she is the preserver of the things of which we have spoken, and which have been compared in a figure to things woven by fire, they both (i.e. Atropos and the fire) producing the quality of the web; and when the web is being woven, it is not possible for any to change it' (Laws, xii. 960). This quality of unchangeableness is opposed alike to the caprice or whim of a goddess, and to the chance control of the destinies of man.

Moreover, accidentalism in the field of ethics appears in the theory of indeterminism. Epicurus, for instance, regards the unchangeable and immutable of man as analogous to the accidental deviation of atoms from the direct line of their fall. The uncaused event and the uncaused will both present the same general characteristics and the same difficulties also.

ACCIDENTS (from the theological point of view).—Accidents, to a teleological theology, must be not merely what they are to logic, viz. occurrences which do not fall under a general law of nature. The laws of nature are, from the teleo-
logical point of view, rules expressing the purposes of a conscious Being, and accidents will be occurrences not conforming to such purposes.

The theologian who adopts the theory that contingency in the natural world is an illusion due to our ignorance of general causes, must hold that there is no event not in conformity with Divine design; the very illusion of contingency must itself be the result of purpose. The difficulties that attend this subject are the same as around the problem of Evil (wh. see). Practically, the belief that there are real instants in the world thwarting the Divine design is an incitement towards activity; the opposite doctrine—that accidents are, after all, part of the Divine purpose, gives consolation in failure. On the whole, Christian theology tends to maintain that the solution of such difficulties falls outside the province of reason, and does not attempt such a synthesis of contradictory opinions as constitutes the Hegelian treatment of the contingent.

G. R. T. Ross.

ACCIDENTS (Injurious).—Accidents, in the general sense of the term as popularly employed, may be defined as unforeseen occurrences in human experience. Obviously the accidental character of events may be relative, with a reasoning power of different individuals. In order to mitigate the consequences of injurious accidents, the method of insurance (wh. see) is the most effective. By this means the consequences of an injury or accident can be happily expressed in terms of money, may be entirely deprived of their momentary and future effect by a previous economy, much less in most cases than would be necessary to equalize, as a sum of payments, the damages sustained.

Not only so, but the diffusion of the evil results of contingency over a lengthened period, and their transference to a corporation, prevent them from having that cumulative effect which may lead to further disaster of new and increasing nature.

Injurious accidents may lead to legal action, wherever the occurrences so styled are the result of the agency of at least one individual other than the sufferer, and that other agency can be distinctly ascertained in general.

(a) In the first class of such suits—actions for damages at common law—the first plea to be established by the prosecutor is substantially the proposition that the occurrence, which relatively to him was an individual, was due entirely within the scope of the latter's knowledge and foresight. But there are numerous circumstances which might neutralize the effect even of the establishment of such a contention.

(b) Claims for compensation may be brought in cases where the injurious accident occurs in an enterprise concerning which there was a previous contract or agreement between the litigating parties. In numerous classes of such joint enterprise the extent to which the risk of accident is borne by the party is laid down by law. In each species of relation a different rule may obtain. Thus in British law the liability for damage to goods entrusted to their care differs in the cases of warehousemen and of common carriers. The relation involving joint enterprise to which Parliamentary enactment has most recently extended delimitation of the risk of the contracting parties, is that of employer and employed. In consequence of the Workmen's Compensation Acts of 1897, 1900, and 1908, in a great number of industries, and not merely in those involving an unusual amount of danger to workers, the employer now bears the risk of injury to his workers. Every workman may claim compensation from his employer for injury through accident, unless the accident be caused by his own serious and wilful misconduct.

The result of these enactments is practically to make the employer bear the cost of the insurance of his employees against accident. It is not only to be expected, however, that, though the immediate consequence will be a diminution of the revenue of employers, in due time the expense of this system will fall partly upon the workmen, in the shape of a diminution or absence of increase in wages.

G. R. T. ROSS.

ACCIDIE.—The obsolete 'accidie, from ἁμαρτία, incursā, torpor,(Hippocr.), through med. Lat. accidie (as if from accidere), was once current as the name of a quality related on one side to sloth, which has superseded it in some lists of the principal vices. Chaucer in the 'Parson's Tale', dilating upon the 'Seven Mortal Sins,' 'Superbia, Invidia, Ira, Accidie, Avaritia, Gula, Lazuria,' writes of the fourth: 'Agayns this rote-herte sinne of accidie and Sioute the sholde men exercise herm-self to doon gode werkes, and manly and vertuously cacchen corage well to doon' (Skst, Student's Chaucer, p. 700). In Dante accidie and adj. accidioso (Purg. xvii. 47) are used for the evil uses of ἁμαρτία rest upon the Old Testament. The earliest of them is not noticed by the authorities mentioned below. The correct Latin form is accidie. Bp. Hall is quoted for 'acedy' (1622).

'Hamartia, ἁμαρτία, which may be translated sloth, may be apprehended in two senses: (a) as a general term for all, or (b) as a term for a specific species. (1) In the first class of such suits—actions for damages at common law—the first plea to be established by the prosecutor is substantially the proposition that the occurrence, which relatively to him was an individual, was due entirely within the scope of the latter's knowledge and foresight. But there are numerous circumstances which might neutralize the effect even of the establishment of such a contention.

ACCIDIE.—The obsolete 'accidie, from ἁμαρτία, incursā, torpor,(Hippocr.), through med. Lat. accidie (as if from accidere), was once current as the name of a quality related on one side to sloth, which has superseded it in some lists of the principal vices. Chaucer in the 'Parson's Tale', dilating upon the 'Seven Mortal Sins,' 'Superbia, Invidia, Ira, Accidie, Avaritia, Gula, Lazuria,' writes of the fourth: 'Agayns this rote-herte sinne of accidie and Sioute the sholde men exercise herm-self to doon gode werkes, and manly and vertuously cacchen corage well to doon' (Skst, Student's Chaucer, p. 700). In Dante accidie and adj. accidioso (Purg. xvii. 47) are used for the evil uses of ἁμαρτία rest upon the Old Testament. The earliest of them is not noticed by the authorities mentioned below. The correct Latin form is accidie. Bp. Hall is quoted for 'acedy' (1622).

The phrase 'spirit of accidie' is from (2) above; Antioch, Hom. 28 alludes also to (1), (4), (6), (8), and (9), (10) in the Latin are cited by Alarous Gazan in Cassian.

In Vis. iii. of Horae Pastor it is explained that the Church appeared first as old, 'because your spirit was aged and already falling from your stainings and doubts. For as the aged, having no hope any more to renew their youth, expect nothing but their last sleep; so ye, being weakened by worldly affairs, yielded yourselves up to accedies as defender, but not to the Lord, but your spirit was broken, and ye were worn out with your griefs (LXX).' Thus accedie is associated with sadness (LXX), one of the four plus eight principal vices in Sim, ix. 15; which is more wicked than all the spirits, and destroys the power of prayer (Mand. v. x.). The parable of the Unclean Spirit which takes it seven other spirits more wicked than itself (Mt 12:43), Lk 11:29 serves as a proof-text for the number eight (afterwards seven) of the principal vices. Titus of Sinai calls them the 'Eight Spirits of Wickedness' (Zöckler, op. cit. inf. p. 65).

In Cassian's Colit. v. 'De octo principalibus Vitiis,' which embodies the teaching of Serapion, the eight vices are said to be casar Gastrinarpia, Formicio, Philargyria, Ira, Trautico, Adeicta, Carnes cordis, Cenodoxia, Superbia. They are referred to in Lk 11:17, and they correspond to the like number of nations hostile to Israel. Why eight vices, when Moses enumerates only seven such nations? (Irie. 7.) For according to the first vice (Nu 11), makes up the number the land of Egypt was to be forsaken, and the lands of the seven taken. Acedy, the besetting sin of the monk, was of two kinds: it sent him to sleep in his cell, or drove him out of it. The same vices
accommodation attack all men, but not all in the same manner and order. This remark foreshadows the disagreement of later moralists in their accounts of the vices, which are all more or less subjective.

Cassian, in *Cenob. Inst. x. 'De Spiritu Acieide' (cf. Evagri. ap. Zöckler; Antloch. *Hom. 26,* details the effects of ascetic beginning. 'Sex tum nobis cedat' (Gratian. *Moral. 5. 24).* It is akin to *Tristitia*; is most felt by recluses; and attacks chiefly about the sixth hour, so that it has been called the 'midday demon' (Ps 90:2). Thus, he has lived and fasted, the monk is as if wearied by long travel or toil, or as if he had fasted two or three days. Impatient for the repaint, he leaves his cell again and again to look at the sun, which seems to 'hasten too slowly to its setting.' Through 'not-caring' he is remiss at his tasks, and finds it a weariness even to listen to the voice of the reader. Solitude impels him to gad about visiting the brethren or the sick. Discontented with his surroundings, he vainly imagines that he would do better in some distant monastery. The complex of adaptations may or may not be a local or a global one, and is to evince a difficulty. In SERAPION'S octode it is distinct from *Tristitia* and different from mere *pigritia.* Briefly, it was the state of a monk who had mistaken his vocation; the natural effect of being 'religious with the fasting from food and from the world.'

C. TAYLOR:

ACCOMMODATION (in Biology and Psychology).—The process of organic or psychological adjustment understood in an individual and functional sense. The concept of accommodation has arisen in the group of genetic sciences by a process of growing specialization of problems. The old problem of 'adaptation' (q.v.) was 'accommodation.' The description of the 'organ' involved and the 'ends' they serve—such as the case of the eye—has given place to the functional problem of the reactions and evolving functions through which the organ is to be part of the endowment of the organism. This has given rise to a distinction between 'adaptation' and 'accommodation.' Adaptation is, by the terms of this distinction, restricted to the congenital adjustments for which the organism inherits structures adequate and fit; accommodation is applied to the adjustments which in the organism, in the lifetime of the individual, achieves and perfects. Instinct in the animals is, in many cases, an adaptation; the adjustments of the senses to their appropriate stimulations are likewise adaptations: such processes, on the contrary, as modifications of instinct to meet special conditions, the special modifications learned in the individual, such as handwriting, together with the functional effects of conditions in the environment upon the organism, are accommodations.

The importance of the problem of accommodation is seen in biology in all cases in which the endeavour is made to interpret the influence of individual behaviour and individual modification upon the organism and upon the next and following generations. As early as the work of LAMARCK, this factor was made very prominent in evolution theory, in the Lamarckian hypothesis that the results of accommodation—of 'use and disuse'—were inherited. This was also maintained by DARWIN, as shown in his greater principle of Natural Selection. WESSELMANN and the neo-DARWINIANS reject this direct influence of the accommodation factor; they deny its hereditary transmission, but still admit its importance as a constant and fitted process in succeeding generations of essential learning, whereby the individuals of each generation grow up to be competent and fertile: this position being that known as 'Intra-Selection' (Wesemann). A more recent theory, called by the present writer 'Organic Selection,' discovers the importance of accommodations in directing the line of evolution. It is pointed out that, even though the modifications due to accommodation are not inherited, they still so effectively aid and protect individuals against the action of natural selection, that certain lines of adapted organisms will be served and accumulated rather than others. The trend of evolution is thus in the lines marked out in advance by accommodations, natural selection following up and clinching the results first secured by accommodation.

The effects of accommodation on the structure of the organism are technically known as 'modifications'; they are contrasted with 'variations,' which are differences of structure of the 'adaptive' and congenital sort. Individuals are born different by variation; they become different during their lives by modification.

In Psychology the theory of accommodation is of even greater importance. The remarkable range and importance of the learning processes are never more made matter of question. The problem of accommodation becomes therefore in Psychology—as also in Biology—that of the possibility of learning anything new. Thus stated, the fact of accommodation is set over against that of 'habit.' If we call all those functions one conception, the individual is already able to perform, his 'habits,' it then becomes necessary to explain the process by which habit is modified, cancelled, and added to: this is accommodation.

The present solutions of this problem are in line with the requirements of genetic science as science of function. It is no longer considered possible that an individual may simply, by an act of will, do a thing that he has not learned to do; only certain fixed instincts work in that way, and that because they are fixed as habits by the gift of heredity. No muscular combination is possible, even when it involves the voluntary muscles—as, for example, those for moving the ear in man—that has not been learned, and the process of learning is a most current, and hard, and effortful one. The theory is that of current, and hard, and effortful one. The theory of current, and hard, and effortful one. The theory that learning is a process of accommodation becomes therefore in Psychology—as also in Biology—that of the possibility of learning anything new. Thus stated, the fact of accommodation is set over against that of 'habit.' If we call all those functions one conception, the individual is already able to perform, his 'habits,' it then becomes necessary to explain the process by which habit is modified, cancelled, and added to: this is accommodation.

If we call all those functions one conception, the individual is already able to perform, his 'habits,' it then becomes necessary to explain the process by which habit is modified, cancelled, and added to: this is accommodation.

The present solutions of this problem are in line with the requirements of genetic science as science of function. It is no longer considered possible that an individual may simply, by an act of will, do a thing that he has not learned to do; only certain fixed instincts work in that way, and that because they are fixed as habits by the gift of heredity. No muscular combination is possible, even when it involves the voluntary muscles—as, for example, those for moving the ear in man—that has not been learned, and the process of learning is a process of accommodation becomes therefore in Psychology—as also in Biology—that of the possibility of learning anything new. Thus stated, the fact of accommodation is set over against that of 'habit.' If we call all those functions one conception, the individual is already able to perform, his 'habits,' it then becomes necessary to explain the process by which habit is modified, cancelled, and added to: this is accommodation.

in higher animals, are being fruitfully interpreted in accordance with this view (see L. Morgan, Animal Behaviour; Jennings, Behaviour of the Lower Organisms).

In the higher reaches of psychic function, the all-embracing term 'thought' is that of 'Selective Thinking,' together with the theory of adjustment to various non-physical environments. There is the social life, to which each individual must be accommodated; there is the environment of truth, to which all our processes of thinking selectively must conform. As this carries the problem of accommodation up into the realms of Social Psychology, Ethics, and Theory of Knowledge.

On Organic Selection see Lloyd Morgan, Habit and Instinct (1890); and Baldwin, Development and Evolution (1903), and Dictionary of Philosophy and Psychology, where lists of selected works are given under art. 'Accommodation,' 'Adaptation,' 'Evolution,' etc.

J. MARK BALDWIN.

ACCUMULATION.—'Accumulation' (Lat. accumulare 'a heap') signifies (1) a heap, mass, or pile; (2) the process of growing into a heap, e.g. the growth of a debt, or of a deposit at the bank, through the continuous addition of interest to principal; (3) the action of heaping, piling or storing up, amassing, as in the case—important from the standpoint of the present article—of the growth of capital.

The accumulation of capital is the result of saving. This, however, does not necessarily imply abstinence, privation, or sacrifice, in the ordinary sense. Saving on the part of the great capitalist involves no personal abstinence from immediate consumption, no sacrifice of such personal gratifications. His immediate expenditure is limited only by his tastes. Often the pleasure of accumulation is greater than that of careless extravagance, and at times the dominant idea is the increase of wealth for the sake of power. 'Abstinence here means abstinence from senseless waste; it is a negative not a positive merit' (E. R. A. Seligman, Principles of Economics, p. 320). This must be conceded to Karl Marx and his followers. Hence the notion of saving has been suggested as a substitute for 'abstinence.'

In the case of smaller incomes the subordination of present to future utility often involves real sacrifices, forbearance, prudence, forethought. But even in such cases it may be born in mind that increases the productive power of labour so far increases the amount which can be saved. 'To increase capital there is another way besides consuming less, namely, to produce more' (J. S. Mill, Principles of Political Economy, Bk. I. ch. v. § 4). Thus, in general, all that we can say is that saving implies an excess of production over consumption—a favourable state of that balance 'which, according as it happens to be either favourable or unfavourable to the general interests of the community, determines the prosperity or decay of every nation' (Adam Smith, Wealth of Nations, Bk. IV. ch. iii.).

To say that capital is the result of saving does not mean that it is not consumed. Saving is not hoarding. All capital is consumed. It fulfils its primary function—the satisfaction of the needs of mankind—only in being consumed, that is, used; but it is not immediately consumed by the person who saves it. Saving thus simply implies that productive power is directed to the satisfaction of present needs, whereas the saving of it is done through saving 'money,' not, however, as a hoard, but as giving, through the banking system, the power of directing national industry into particular channels. In this way, saving gives an increase in the productive power, and consequently in the consuming power of the society (see Nicholson, Principles of Political Economy, Bk. I. ch. xii. § 4).

In this connexion, Mill points out the erroneous nature of the popular idea that the greater part of a nation's capital has been inherited from the distant past in which it was accumulated, and that no part was produced in any given year save that year's addition to the total amount. The fact, he says, is far otherwise. 'The greater part in value of the wealth now existing in England has been produced by human hands within the last twelve months.' The growth of capital is similar in many respects to the growth of population. Each is kept in existence, and increases from age to age, not by preservation but by perpetual consumption and reproduction. It is only the value of the capital that remains and grows; the things themselves are ever changing (see Mill, Principles, Bk. I. ch. v. § 6).

This consideration helps us to understand, at first sight, amazing rapidity with which countries often recover from the effects of a devastating war. The material capital destroyed or removed would, for the most part, have required reproduction in any case; while the land and its quasi-permanent improvements subsist. So long, therefore, as the country has not been made sterile, the motives of a working life remain, the character and skill of the people being unchanged, there are all the essential conditions of a speedy recovery (ib. Bk. I. ch. v. § 7).

Here the relatively greater importance of what is known as personal or immaterial—i.e. mental and moral—capital, as compared with material capital, is apparent. It is indeed this immaterial capital that constitutes our great inheritance from the past. 'The privileges of the degree in the List, the German protectionism, 'is the result of the accumulation of all discoveries, inventions, improvements, perfections, and exertions of all generations that have lived before us; they form the mental capital of the present human race' (National System of Political Economy, Eng. tr. p. 140). The economic condition of a country depends far more on the mental and moral qualities of its inhabitants than on their accumulation of dead material capital.

It is thus with reason that Adam Smith includes the acquired skill of the people in the fixed capital of the nation. 'The improved dexterity of a workman may be considered in the same light as a machine or ingenuity of that sort; it adds to the capital and abridges labour, and which, though it costs a certain expense, repays that expense with a profit' (W. of N., Bk. II. ch. i.). The successors of Adam Smith, however, lacked his comprehensive grasp of the realities of industrial life; and much of the popular antipathy to the teaching of the English economists of the early part of the 19th cent.—the followers of Ricardo—may be traced to their use of narrow and faulty abstractions, and in particular to their intemperate diatribes against that which ignored altogether the skill of the worker. The force of attention was thus misdirected. Regard was had to the quantity rather than to the quality of labour, and consequently the influence of efficiency on wages was overlooked. Every proposed reform, e.g. the Factory Acts, was judged by reference to its probable immediate effect on the accumulation of dead material wealth. It was not seen that the capital of a country may be as profitably invested in the physical, mental, and moral acquirements of the national character, as in the nature of dead material wealth in the shape of machinery, factory buildings, and the like.

To take but one other example of immaterial capital, and that a characteristic product of the mental and moral qualities of the people of these
islands, the British money market—that marvelous banking and credit organization through which the capital of the country finds its way into the hands of those who can turn it to the most productive purposes—has been described by Bagehot as 'the greatest combination of economical and economical delicacy that the world has ever seen' (in 'Edward Street', ch. i.).

Some idea of the relative importance of immaterial capital is given by Professor Nicholson, who estimates the 'living capital' of the United Kingdom as worth about five times the value of its dead material (see Social and Economic Problems, pp. 97-118). Enough has been said to show that, for an explanation of the rise and fall of nations, we should look to the growth and decay of their immaterial rather than their material capital.

To return to material capital, the state of the balance of production and consumption, or, in other words, the accumulation of capital—which in a modern industrial society, with its vast and increasing variety of forms and substitutes, is necessarily transferred to and depopulated on causes which naturally fall into two groups, those, namely, which determine the amount of the fund from which saving can be made, or, in other words, the power to save, and those which determine the strength of the dispositions which prompt to saving; or, in brief, the will to save.

1. The power to save is necessarily limited to the amount of the national dividend or real net produce of the society, i.e. the surplus of the annual produce over what is required to supply the efficiency—necessities of the producers, including those engaged in replacing raw material, repairing the auxiliary capital (e.g. machinery, buildings, etc.), and keeping up the consumption capital (e.g. dwelling houses, museums, etc.). The amount of this national dividend depends on (a) the natural resources of the country, (b) the state of the arts of production in the widest sense, including not only the means of communication and transport, but also the machinery of exchange; for under the modern system of division of labour production involves exchange, and thus the state of the credit institutions must also be considered.

The causes embraced under these two heads together determine the amount produced within the nation. But the amount of the national dividend is further affected by (c) the state of foreign trade, which determines the amount of imports obtained in return for exports. (d) The amount taken by Government for public purposes, whether in the form of taxes or burdens like conscription, must also be considered (see Nicholson, Elements of Political Economy, p. 86).

These causes determine the annual national dividend or maximum which can be saved. But the popularly added to capital always falls short, and generally far short, of this, depending as it does on the will to save.

2. The will to save is the resultant of a complexity of causes, amongst the most important of which are: (a) Security. To induce saving there must be some reasonable expectation that the owner will be allowed to enjoy the fruits of his saving. This involves protection by the Government against force and fraud, which includes the enforcement of freely made contracts; and protection against the Government; against oppression and, above all, arbitrary taxation (see Mill, Principles, Bk. 1. ch. vii. § 6; Nicholson, Principles, Bk. 1. ch. xii. § 3). The importance of security in both these forms finds abundant illustration in the history of all nations and ages. Compare, for example, Egypt or India under British rule with Armenia or Macedonia under the dominion of the Turk, or the present state of Russia under the government of the Czar. The British credit system, already referred to, is the outcome of security and good government, just as the hoarding so prevalent in the East is the natural fruit of the uncertainty so often associated with Oriental forms of taxation and government. Even in India the influence of the pax Britannica has not yet sufficed to eradicate from the native mind the traditional tendency to hoard, engendered by centuries of turbulence and insecurity.

There must also be a sense of security against the violence of the powers of nature. In balancing the advantages of present and future utilities the uncertainty of the future is an important factor. Where a country has an unhealthy climate, and is liable to plagues, or is subject to earthquakes, volcanic eruptions, tornadoes, or other physical disasters, the consequent uncertainty of life does, so far, tend to check accumulation by lessening the will to save, apart altogether from the influence of such disasters on the power to save. On the occasion of a regular plague—set out in the maxim of pagan philosophy: 'Let us eat, drink, and be merry, for to-morrow we die.'

(b) The effect of the rate of interest on saving is somewhat complex. A high rate, security being unchanged, affords a greater reward for saving, and, thus far, a greater inducement to save. But the higher the rate of interest the lower, ceteris paribus, the rate of wages; and thus a high rate may react on the efficiency of labour and may check enterprise, and thus lessen the power to save. At the same time, those who merely wish to obtain a certain annuity need save less if the rate of interest is high. In general, however, a fall in the rate of interest will tend to check accumulation. But some accumulation would go on even if the rate of interest became negative (see Nicholson, Principles, Bk. i. ch. xii. §§ 3; Marshall, Principles of Economics, Bk. iv. ch. viii. §§ 8, 9). (c) The accumulation of capital is affected also by the existing facilities for investment. The multiplication of exchange in Scotland has undoubtedly contributed to increase both the power and the will to save. The more recent extension of savings banks and the growth of joint stock companies with limited liability have also greatly stimulated saving throughout the community.

(d) The distribution of national wealth amongst the different economic classes has likewise a certain influence on accumulation. When the bulk of the wealth of England was in the hands of the feudal landowners, extravagance prevailed, as explained by Adam Smith (W. of N. Bk. III. ch. iv.), and it is only after the revolution of 1688 that, with the rise of the mercantile class, we find a rapid accumulation of wealth. Similarly in France the contrast is striking between the extravagance of the ancien régime and the frugality of modern times. Amongst the latter the effective desire of accumulation appears to be excessive. The living or immaterial capital is sacrificed to the dead. 'In England,' says Lady Verney, 'thrift appears to be a great virtue. Here one hates the very mention of it . . . The sordid, unclean, hideous existence which is the result of all this saving and self-denial, the repulsive absence of any ideal but that of cacher de petits sous dans de grands bas as an object for life, is incredible if it is not seen and studied' (Panani Properti, p. 151).

(e) The effective desire of accumulation is compounded of many elements, intellectual and moral, including the development of the 'telescopic faculty' (Marshall), the growth of the family affections, the hope of rising in the world, and the
social and other advantages attendant on the possession of wealth. The strength of this desire may be weak from intellectual deficiency. The wants of the present are vividly realized, those of the future are but dimly imagined. There is thus a power of imagination necessary to the proper appreciation of the true importance of future benefits, as in the case, mentioned by Dr. Rae, of the Indians on the banks of the St. Lawrence, who, when a speedy result was to be obtained, would stoil even more assiduously than the white man, but would undertake no work for which the return was at all remote (see Rae, The Sociological Theory of Capital [ed. Mixter, pp. 71-72]; also Mill, Principles, Bk. 1. ch. xi. § 3). As we go further, the scale, this weakness becomes more pronounced. The Australian native, in respect of foresight in providing for the future, is inferior to many of the lower animals (see Letourneau, Property, Eng. tr. p. 30).

Often, however, the effective desire of accumulation is weak, not so much from intellectual as from moral deficiency. Even in the most highly civilized nations, there are too many instances of men of the most vivid imagination—men who in no way defective in the telescopic faculty—who yet, through lack of will-power or fear of family affection or sense of independence, are unable to resist the temptations of the present sufficiently to provide for the clearly foreseen needs of the future. Men of this type are pronounced. The strength of this desire is generally recognized. It is a weak point in other respects, that rash in other respects. That is in all respects. It is also readily seen that, had the money not been thus squandered, the capital which it represents would not have lain idle, but would have found its way, through the medium of our banking organization, into the hands of some manufacturer or shipbuilder, say, to be employed by him in productive industry. The spendthrift, then, does not benefit trade, or give employment to labour; he simply alters the direction of the employment of capital, and he renders the nation poorer by the division of the wealth he thus wastefully consumes. The saving person, on the other hand, creates a fund which, in its consumption, affords an equal employment for labour, and yet is continually renewed (see Mill, Principles, Bk. 1. ch. v. §§ 3, 5). Economy, in short, enriches, while extravagance impoverishes, the individual and the nation.

And in this, as in most other cases, good economy and good morality are connected. The accumulation of wealth implies, in the normal case, forethought, self-restraint, energy, and enterprise on the part of the individual, and it is an essential condition of his economic freedom. For the nation, it is also an essential prerequisite of the highest civilization. It means increased security of Labour. 'As the accumulation of stock must, in the nature of things, be previous to the division of labour, so labour can be more and more subdivided in proportion only as stock is previously more and more accumulated' (Adam Smith, W. of N., Bk. II. Introct.). It thus means increase in man's power over nature, with consequent economy of human effort in the satisfaction of the primary needs, and increased leisure for the culture of Art and Science and the intellectual culture which may grow rich without culture, but the highest civilization is impossible in the absence of a sound economic basis of accumulated capital.

ACHÆMENIANS.—A dynasty which ruled in Persia from B.C. 558 to 330, and whose religion is important for the study of the development of Zoroastrism. The monarchs of the line were as follows: Cyrus the Great (558-530), Cambyses I. (530-522), Darius I. (522-486), Xerxes I. (486-465), Artaxerxes I. (465-424), Xerxes II. (424-404), Artaxerxes II. (404-358), Artaxerxes III. (358-337), and Darius III. (337-330). The scanty data concerning their religion are contained in clay tablets and inscriptions in Babylonian, Egyptian, and Greek, and above all

ACHÆMENIANS

of Dr. Rae, of the Indians on the banks of the St. Lawrence, who, when a speedy result was to be obtained, would stoil even more assiduously than the white man, but would undertake no work for which the return was at all remote (see Rae, The Sociological Theory of Capital [ed. Mixter, pp. 71-72]; also Mill, Principles, Bk. 1. ch. xi. § 3). As we go further, the scale, this weakness becomes more pronounced. The Australian native, in respect of foresight in providing for the future, is inferior to many of the lower animals (see Letourneau, Property, Eng. tr. p. 30).

Often, however, the effective desire of accumulation is weak, not so much from intellectual as from moral deficiency. Even in the most highly civilized nations, there are too many instances of men of the most vivid imagination—men who in no way defective in the telescopic faculty—who yet, through lack of will-power or fear of family affection or sense of independence, are unable to resist the temptations of the present sufficiently to provide for the clearly foreseen needs of the future. Men of this type are pronounced. The strength of this desire is generally recognized. It is a weak point in other respects, that rash in other respects. That is in all respects. It is also readily seen that, had the money not been thus squandered, the capital which it represents would not have lain idle, but would have found its way, through the medium of our banking organization, into the hands of some manufacturer or shipbuilder, say, to be employed by him in productive industry. The spendthrift, then, does not benefit trade, or give employment to labour; he simply alters the direction of the employment of capital, and he renders the nation poorer by the division of the wealth he thus wastefully consumes. The saving person, on the other hand, creates a fund which, in its consumption, affords an equal employment for labour, and yet is continually renewed (see Mill, Principles, Bk. 1. ch. v. §§ 3, 5). Economy, in short, enriches, while extravagance impoverishes, the individual and the nation.

And in this, as in most other cases, good economy and good morality are connected. The accumulation of wealth implies, in the normal case, forethought, self-restraint, energy, and enterprise on the part of the individual, and it is an essential condition of his economic freedom. For the nation, it is also an essential prerequisite of the highest civilization. It means increased security of Labour. 'As the accumulation of stock must, in the nature of things, be previous to the division of labour, so labour can be more and more subdivided in proportion only as stock is previously more and more accumulated' (Adam Smith, W. of N., Bk. It thus means increase in man's power over nature, with consequent economy of human effort in the satisfaction of the primary needs, and increased leisure for the culture of Art and Science and the intellectual culture which may grow rich without culture, but the highest civilization is impossible in the absence of a sound economic basis of accumulated capital.

ACHÆMENIANS.—A dynasty which ruled in Persia from B.C. 558 to 330, and whose religion is important for the study of the development of Zoroastrism. The monarchs of the line were as follows: Cyrus the Great (558-530), Cambyses I. (530-522), Darius I. (522-486), Xerxes I. (486-424), Xerxes II. (424-404), Artaxerxes I. (465-424), Artaxerxes II. (424-358), Artaxerxes III. (358-337), and Darius III. (337-330). The scanty data concerning their religion are contained in clay tablets and inscriptions in Babylonian, Egyptian, and Greek, and above all
in their own inscriptions, which were written in Old Persian, with Babylonian and New Elamitic translations. The only kings of this dynasty who come into consideration here are Cyrus, Cambyses, Darius I., Xerxes I., and Artaxerxes II. and III.

1. Cyrus the Great.—The material for a knowledge of the religion of this monarch is restricted to the Cyropedia, by the couplets which it presents in its Old Persian, and the Babylonian inscriptions. The Cyropedia, as is well known, is a historical romance, and its statements, therefore, can be accepted only with caution, unless they can be controlled by the Assyrian sources. Nor must it be borne in mind that Xenophon had exceptional opportunities for observing the Achaemenian religion, through his long association with Cyrus the Younger, so that under his apparent Hellenic viceroy there may lurk some true elements of Achaemenian belief. In this romance Cyrus is repeatedly represented as offering sacrifices, and it is noteworthy that he invokes the assistance of the magi (iv. 5. 14, vi. 5. 67, viii. 1. 23). The deities to whom he rendered sacrifice appear under the names of Berenice (the sacred fire), Erato, Ophrodite, Hestia (i. 6. 1, iii. 3. 22, viii. 7. 3), and in addition to them he worshipped 'the other gods' or 'all the gods' (the latter phrase is interesting as being a striking, though doubtless accidental, parallel of a similar meaning in the Old Persian inscriptions of Darius and the treaty divinities (şpêrest) of Assyria, Syria, Media, and Persia. With this list must be compared the statement of Herodotus (i. 131) and of Strabo (v. 3. 13) that the Persians worshipped the sun, the moon, earth, fire, water, the winds, Aphrodite, and above all, the sky, which they called Zeus. It thus becomes evident that the worship ascribed to Cyrus by Xenophon was a nature-worship closely akin to the Iranian cult which finds its revival in the so-called Younger Avesta. The deities honoured by him were doubtless identical with Ahura Mazda, Mithra, Aitarâ (the sacred fire), and Anahita (apparently identified with the earth as a goddess of fertility). The identification of Hestia with Ge and the sacred fire requires its confirmation in the rôle ascribed to fire in the sacrifice recounted in Cyrop. viii. 3. 12, but the equation of Ge with Anahita is more doubtful. This goddess is represented by the Aphirotide of Strabo, and the divinity personified in Iranian mythology was Spenta Armaiti (Gray, A.R.W. vii. 364–370). If, however, the identification here proposed be accepted, it finds a striking parallel in the collocation of Ahura Mazda, Mithra, and Anahita in the Old Persian inscription of Artaxerxes II. The tutelary divinities whom Cyrus is represented as worshipping are none other than the fravashis, who were originally the ghosts of the dead, yet who later came to be protecting godlings, and are thus invoked in Yasna, xxiii. iv. 'I invoke to worship those fravashis who aforesaid receives to the house and of the villages, and of the districts, and of the lands, who sustain the water, who sustain the earth, who sustain the kine, who sustain children in the wombs to be conceived that they die not.' In the dying Cyrus concerning the disposal of his body, on the other hand (Cyrop. viii. 7. 25), he departed widely from Zoroastrian usage when he requested that he be buried in earth, a request whose accuracy is confirmed by the elaborate description of his tomb as given by Strabo (iv. 3. 7), which agrees strikingly with the so-called Tomb of Cyrus at Pasargade. It may be noted in this connexion that the Achaemenian kings were entombed in rock, as is evidenced by their tombs at Persepolis and elsewhere; while Herodotus (i. 140) states that the Persians, after exposing the corpse to birds or dogs, coated it with wax and placed it in the ground. It would seem, therefore, that the data of Xenophon concerning the founder of the Achaemenian dynasty are not so valueless as is sometimes supposed. They agree remarkably with the statements of the Younger Avesta, which, despite its comparatively late date, doubtless reflects the religion of the Iranians before the reform associated with the name of Zoroaster.

Turning to the Babylonian inscriptions of Cyrus, we find that the religion of Cyrus is mentioned in the Cylinder Inscription, and the Cylinder Inscription. In both Cyrus declares that Nabuna'id, the last native sovereign of Babylon, had brought the gods of Sunner and Akkad from their own temples to his capital, while he, on the other hand, as the chosen of Marduk, restored them to their homes. The view has been advanced that Marduk and his son Nabu, who are mentioned in close association in both these inscriptions, were regarded by Cyrus merely as other names for Ahura Mazda and his son Aššur (the god of the sacred fire), but it is certain that the cylinder inscription is only a late, scarcely tenable; and a general consideration of the character of the Achaemenian, so far as it can be traced, leads to the interpretation that he acted as a clever politician, and not as a religious leader. Nor can the famous passage in Herodotus (xxvi. 1) cast any real light on the religion of Cyrus. Though the Persian king is addressed as 'the shepherd of Jahweh,' as his 'anointed,' before whom all nations should be subdued, and as the one whom Jahweh had called and in whom he took delight, this implies nothing more than a recognition of the close sympathy existing between Israel and Persia, and the conviction that the conqueror of Babylon would free the Jews from their exile. It is, in other words, the eulogy of the enthusiastic and hopeful prophet in honour of the political victor.

Of these three sources, the Greek, even making all allowances for possible inaccuracies, seems to be the most reliable. The most that can be said, in the light of the data now available, is that the religion of Cyrus approximated closely to that contained in the Younger Avesta. There is no evidence whatever to show that he was a Zoroastrian.

2. Cambyses.—The religious records concerning this monarch are extremely scanty. Herodotus (ii. 16) mentions his impious theurgy at the request of Amasis, 'since the Persians regard fire as a god... , saying that it is not right to give the corpse of a man to a god.' Both in Persia and in the home of the Avesta the delimitation of the fire by contact with dead matter was regarded as a most grievous sin (cf. Vendidad, vi. 73–81). The only other document which throws light on the religion of Cambyses is an Egyptian text on a naophoric statue in the Vatican. According to this inscription, the straw that had intruded within the precincts of the goddess Neit at Sais had various obstructions there. In answer to a petition received by him, Cambyses commanded that the straw be purified and that its worship be restored. He himself then went to Sais, restored all offerings to the goddess and also to Osiris, while he likewise 'worshipped before the holiness of Neit with much devotion, as all the kings had done; he made great offering of all good things to Neit, the great, the divine mother, and to all the gods who dwell in the house of the pious kings had done' (Pretie, History of Egypt, 103, 361, 362). Though Cambyses was, as is universally acknowledged, a madman, his policy with regard to this temple was thoroughly in accord with that pursued by Cyrus before him and Darius after him. His stabbing of the Apis bull, on the
other hand, was the act of a maniac's cruelty, and was not inspired by any devotion to religious tenets of his own.

3. Darius I.—The chief source for a study of the religion of this monarch is furnished by his inscriptions in Old Persian, with their Babylonian and Elamite versions, found on Behistun, Persepolis, Naqš-i-Rustam, Elamard, Susa, Kirman, and Suez. In his inscriptions the king constantly ascribes the source of his authority to the 'grace of Ahura Mazda,' declaring: 'Auramazda brought me the kingdom; Ahuramazda helped me under this kingdom was held by the grace of Auramazda I hold this kingdom' (Bh. i. 24-26).

All evil in the realm is regarded as due to the malignant influence of the 'lie' (druuga), which is to be compared with the drúj of the Avesta. The 'lie' was the cause of rebellion, while the power of Darius was due, in his opinion, largely to the fact that he had not been a 'liar.' The 'lie' is thus closely parallel with the Ahura Mainyu of the Avesta, and it is not impossible that he may have been in part of this hypothesis. Ahura Mazda is frequently described in the texts of the Achemenian kings as a 'great god who created this earth, who created all the creatures,' who created peace in heaven, who created the earth, who was the father of the world. In Darius he is identified as the one king, of the one ruler of many.

This passage is very similar to the Gáthá Avesta Yasna, xxxiv. 1: 'Here praise we Ahura Mazda, who created both kind and holiness, and created both good light, both earth and all good things.' This is but one of a number of parallels between the Old Persian texts and the Avesta which might be cited (cf. Windischmann, Zoroas. Studien, 121-125); yet, on the other hand, an equal mass of coincidences exists between the Achemenian inscriptions and the Assyr.-Bab. records (cf. Gray, AJSL viii. 151-159).

It has been suggested that Ahura Mazda was regarded, in a sense, as a god of health, as well as of good, since Darius xv. (vii. 57-59) says: 'If thou hast this tablet, (and) lest thou not to the people, may Ahuramazda be thy slayer, (and) may thy family be extirpated, (and) may woman be without her husband (uparti̇ṛstam uparti̇rayam, Bh. iv. 64; for the establishment of this text see Jackson, JAOS xxiv. 90-92), the Arštā here mentioned being doubtless identical with the Arštā of the Younger Avesta, 'who furthereth creatures, prospers the creatures, giveth health unto creatures' (Yast, xi. 16). If these two beneficent powers are represented both in Old Persian and in the Avesta, the two sources agree in their view of the demon of drought, for the Dsšyārās and the Mazdās are identified in both inscriptions with the Dāryāyāryās, for whose destruction, according to the Younger Avesta (Yast, viii. 50-56), Tīstrāy, the Dog-Star, was especially created by Ormazd (note also the mention of the 'hordes,' Old Persian haññā, Avesta haññā, in both texts in close association with 'drought').

It is thus evident that the Old Persian inscriptions of Darius represent him as a worshipper of Ahura Mazda and as filled with abhorrence of the 'lie.' One beneficent godling (Arštā and one malicious demon (Mazdās) are exalted in the same names in the Younger Avesta. The stylistic parallels which may undoubtedly be traced between the Achemenian texts and the Avesta, on the other hand, are counterbalanced by the Assyr.-Bab. inscriptions. The successors manifestly drew. His policy towards other faiths than his own was that of Cyrus.

In his reconstruction of the kingdom on his accession, he states that he 'restored the places of worship which Gaumata had disturbed' (Bh. i. 64). He thus appears as an opponent of rigid Magian orthodoxy, for the 'places of worship' (ayadānā) are shown by the Bab. version to have been 'houses of the gods' (sámatha sa sûna). That these were fire temples, like the Magian structures described by Strabo (733) as existing in Cappadocia, seems less probable than that they were temples of the gods of non-Persian peoples.

This view receives confirmation from a Greek and an Egyptian inscription of Darius. In the former text, found in 1886 at Deirmeenjik (ed. Cousin and Deschamps, BCH viii.), the king refers his subject Ormazd to the fire which efface all traces of the royal attitude towards the gods, which, Darius expressly states, had been that of his predecessors, and who had exacted a tax from the priests of 'Apollo. Who 'Apollo' was is doubtful. Cousin and Deschamps, somewhat strangely, identify, Artaxerxes, the king, the one king, of the one ruler of many, in Greek, as stated above, under the name of Histia. He is probably, however, the Greek divinity Apollo, who in times past had given a favourable oracle to Cyrus, perhaps during his Lycean campaign, and who was consequently honoured by the Achemenian dynasty. At all events, the inscription is non-Persian in tone.

Still more polytheist is the stele of Darius at Tell el-Maakshabutah (ed. Golenischeff, BCH iii.), which contains the following words: '(Darius) born of Neit, the lady of the gods, the lady of Sais, image of the god Ra who hath put him in his throne to accomplish what he hath desired (master of all the sphere of the solar disc). When he (Darius) was in the womb of his mother and had not yet appeared upon earth, she (the goddess Neit) recognized him as her son ... she hath (extended) her arm to him with the bow before her to overthrow for ever his enemies, as she had done for her own son, the god Ra. He is strong ... (he hath destroyed) his enemies in all lands, king of Upper and Lower Egypt, Darius who liveth for ever, the great, the mighty (son) of Hystaspes, the Achemenian, the mighty. He is her son (of the goddess Neit), powerful and wise to enlarge his boundaries.'

Devout and noble though his inscriptions show him to be, Darius seems to have been by no means a strict monotheist. Xerxes prays in the Avesta both by the old Persian texts themselves, which show that he felt merely that Ahura Mazda was, as he himself says, 'the greatest of gods.' A Persian-political inscription thrice contains the words hadā hāsihtā bôgâshtâ, which were formerly rendered with the clan-gods, but which are now regarded as meaning 'with all the gods.' This interpretation is confirmed by the Bab. itti sûna gâbâri, and the New Elamite ammây marpepta-lâka ('with all the gods') in texts of closely similar content and parallel. This is also likely to have been the case in the Avesta only in Yast, x. 141, which states that Mithra 'is the wisest of gods,' but its Pahlavi form occurs at least thrice, an undoubtedly Zoroastrian passage (Dünker, viii. 15. 1) being especially interesting in this connexion. That Darius prays in the 'worship of Ahuramazdā, the highest of divinities.' This phrase is strikingly similar to passages in the inscriptions of Darius and Xerxes which describe Ahura Mazda as 'the greatest of gods.' That such a phrase is not wholly Darius' work is manifest from such passages of the Old Persian language as Ps 82:9 85' and 97'. In the New Elamite version, however, occurs the statement, which may be significant, that Ahura Mazda was 'the god of the Aryans. If stress may be laid on this (a fact which is by no means certain),
it may serve as a partial explanation of the policy pursued by the Achaemenians with regard to the gods of the Babylonians, Egyptians, and Greeks. This view of Ahura Mazda as a national deity in the eyes of the Persian kings may readily be paralleled from other Oriental nations of antiquity. It may also explain the collocation of Ahura Mazda with the Adarshir, which is due to the accidental coincidence that the grand-father of each was named Darius. Again, according to the Denkart (iv. 23), "Darai, son of Darai, ordered the preservation of two written copies of the whole Avesta and Zend." This Darius, who was the son of Vivasvan, is identified with the Achaemenian Darius III, Codomans, who was the son of Arsanes. Al-Biruni once more carefully distinguishes between the two, and it is not unlikely that he is right in so doing (cf. Noldeke in Geiger-Kuhn's Grundriss der tiefen, Philologie, ii. 141), even though other Oriental sources identify the two. At all events, the equation is too doubtful, with the data now available, to serve as a basis for any hypothesis, either for or against the Zoroastrianism of the Achaemenians.

In this connexion it may be made of the very plausible hypothesis of the Paris scholar Dehmi, who supposes (Canoma Memorial Volume, Bombay, 1900, 57) that this Darius and his immediate predecessors were the last of the one dynasty to the other by the Pahlavi writers 'in their attempt to pave off some of the last kings of the Achaemenian line thus mentioned above, as the last link of the successors of king Gustam.' If this may be accepted (and it is by no means improbable), it would really seem of course that the undoubted Zoroastrianism of the dynasty of Vistaspa should be attributed to the added kings, whatever their own faith may have been. The list of kings whose names the monarchs recorded in the Pahlavi texts and the dynasty of the Achaemenians must, however, be taken into account in any attempt to solve this problem.

In the light of what has been said, it would appear that the Achaemenians were pre-eminently worshippers of Ahura Mazda, though they did not refuse to recognize other Iranian deities, such as the sun, the fire, and the waters, or even hesitate to honour the divinities of other countries, rebuild their temples, and restore their cult. Ahura Mazda was to them a purely national god, surrounded by subordinate deities who were clearly of a nature-divinities. From a careful study of all these documents, it becomes clear that the only conclusion which can safely be reached concerning the religion of the kings of this dynasty is that they were Zoroastrians, not Zoroastrians. These scholars may be quoted: 'The Mazdeans have no religion, they believe in the One God, Ahura Mazda, the One God of the Persians. They believe in the custom of the Persians to offer victims by burying them alive. In view of the fact that this custom is mentioned nowhere else, and of the defilement of the sacred earth which it would cause, the statement of the Greek historian seems too improbable to be accepted as authentic. A passage of much interest, however, is that in which Herodotus says (vii. 40) that Xerxes was accompanied in his march by the 'sacred chariot of Zeus,' which was drawn by eight white horses, whereon he sat on the throne of this chariot,' (cf. Quinzius Curtius, iii. 8-12). This chariot of Zeus,' was, it may be conjectured, none other than the shrine which dwelt Ahura Mazda, the national deity, who thus escorted the king to victory quite as Jahweh did in his ark carried by the Israelites.'

5. Artaxerxes II. and III.—The brief texts of Artaxerxes II. and III. are interesting solely as adding the names of Mithra and Anahita to that of Ahura Mazda. That this was a real innovation seems from Ptolemy's collocation of the religious divinities by the allusions in the classics to Cyrus and Xerxes. It is noteworthy, in this connexion, that Plutarch, who was by no means unacquainted with true Zoroastrianism, confirms the testimony of the classical authors. In his life of Artaxerxes II. he mentions the king's worship of Anahita, his paths in the name of Mithra, as well as his coronation in a temple of 'Minerva' (a deity of uncertain identification). The Achaemenians are curiously, and perhaps significantly, ignored in the Middle Persian writings. The theory has been advanced that Artaxerxes I. Longimanus is mentioned in the Pahlavi texts under the name of 'Arashdir the Kayan, whom they call Vohuman, son of Vohuman, second dad,' who, according to Balsam Yast, ii. 17, separates the demons from men, scatters them about, and makes the religion current in the whole world." This hypothesis lacks all foundation. The Zoroastrian Artaxerxes was the son of Send-dad; the Achaemenian was the son of Xerxes; al-Biruni rightly distinguishes between them, and the identification of the two in the Shah-Nama and other sources is properly regarded as contrary to the current collocation. In the light of this, the epithet parom of the Persians, applied by Cyrus, according to Xenophon, to Zeus (Ahura Mazda) and Hestia (Atar, the sacred fire), possibly likewise becomes explicable (cf., however, the same epic of the Greeks), more so perhaps for the case of Artaxerxes with the case of the Achaemenian Darius. Again, according to the Denkart (iv. 23), "Darai, son of Darai, ordered the preservation of two written copies of the whole Avesta and Zend." This Darius, who was the son of Vivasvan, is identified with the Achaemenian Darius III, Codomans, who was the son of Arsanes. Al-Biruni once more carefully distinguishes between the two, and it is not unlikely that he is right in so doing (cf. Noldeke in Geiger-Kuhn's Grundriss der tiefen, Philologie, ii. 141), even though other Oriental sources identify the two. At all events, the equation is too doubtful, with the data now available, to serve as a basis for any hypothesis, either for or against the Zoroastrianism of the Achaemenians.
ACHELOUS—The name of the greatest river in Greece. Flowing from the watershed of Pindus in a southerly direction, it forms in its lower waters the boundary-line between Aetolia and Acarnania before falling into the Ionian Sea. The river-god who presided over it was reputed the son of Oceanus and Tethys (Hes. Theog. 340); he was the eldest of 3000 brothers and supreme amongst them, in power second only to Oceanus himself (Aesopus fr. 11a, Fragm. Hist. Gr. i. 101). Other legends, after the manner of Euhemerus, report that he was born of a consequence of whose sorrows the river first gushed forth as a divine solace (see, e.g., Prop. ii. 25, 33). Tradition regarded him as the king of streams, from whom are derived the waters of all other rivers, those on Hellenic coasts, and (183), and it was such he was worshipped throughout the Greek world, from Athens and Oropus as far as Rhodes and Metapontum. Thus it is not surprising that smaller streams besides the Ætolian river bore his name—e.g., Asopus, Achelous, Acheron, and Alpheus. Further, we find the word Acheleus generalized in the sense of water (Eur. Bacch. 625, etc.); this occurs especially in the ceremonial phraseology of sacrifices and oaths—proving that the identification is not a poetical refinement, but the survival of an old religious formula (Ephorus fr. 27; Fragm. Hist. Gr. i. 230). Again, Acheleus is the father of a numerous progeny of water-nymphs, such as Peirene, Castalia, and Dirce, the guardian spirits of local Hellenic streams. The appropriateness is less obvious when the Sirens appear as his daughters (Pausan. ix. 34, 2): perhaps they are so viewed in their aspect as the windless calm of the southern sea in summer (cf. Od. xii. 168). For it has been held that Acheleus acted only as a significant symbol of water in general, also the lord of the sea (Wilamowitz-Moellendorf, Eur. Herakles, i. p. 23). His most famous appearance in mythical story is as the suitor of Deianeira, who was vanquished by Herakles in a fierce struggle. Like Proteus, he perished in the power of the vanquisher; in the battle he assumed the form of a wild bull (Soph. Trach. 9ff., 507ff.). In the course of the fight, one of his horns was broken off by Herakles, and, according to one account, he ransomed it from his conqueror by giving in exchange for it the horn of Amaltheia or cornucopia (Apollod. Bibl. ii. 7, 5). The ancients gave a rationalistic explanation of the story: Herakles represents the growing power of civilization, which reclaimed the marsh-land for agriculture, and the sound exuberance of the river (Strabo, x. p. 458). It seems rather as if Acheleus was a name consecrated in primitive rite to express the principle of moisture as the source of life and growth. Further, since to a nation of cowherds the bull is typical of generative power, the wrestling river-god was worshipped in bull form. Whatever be the explanation, it should not be forgotten that the bull shape is common to all river-gods and is not limited to Acheleus (cf. Eur. Ion 1261). A symbolic connection between the two aspects of divinity was found in the horn of plenty, which, as we have seen, was mythically associated with Acheleus.

In art, Acheleus is represented either as an old man with horns, as a sea-serpent with human head and arms and bull’s horns, or as a bull with human face and long dripping beard.

The etymology of the word is unknown, and inferences based merely upon conjectural explanations of it are almost inestimably rejected.

A. C. PEARSON.

ACHEILLES was extensively worshipped throughout the Hellenic world. Numerous cults have been made at the derivation of his name both in ancient and in modern times, but the etymology remains quite uncertain. Nor does it appear possible to attribute to him with confidence any exclusively naturalistic significance, though he has been claimed as a river-god, as a god of light, and even as a moon-god; for us, he is merely the chief of the heroic figures of Greek mythology who were deified by later generations as transcending the normal powers of humanity. Nevertheless, there are certain prominent features in his worship which claim recognition.

He appears most conspicuously as a sea-god, whose temple was placed on promontories or navi-gable coasts as a place of anchorage, or as a safe anchorage, or, in time of stress, would assure the victory of the storm. The contrary winds, with which his spirit visited the Greeks after the capture of Troy, ceased when Polyxena and Hecuba had been sacrificed, and elsewhere. Further, we find the name Achilles generalized in the sense of water (Eur. Bacch. 625, etc.); this occurs especially in the ceremonial phraseology of sacrifices and oaths—proving that the identification is not a poetical refinement, but the survival of an old religious formula (Ephorus fr. 27; Fragm. Hist. Gr. i. 230). Again, Achilles is the father of a numerous progeny of river-nymphs, such as Peirene, Castalia, and Dirce, the guardian spirits of local Hellenic streams. The appropriateness is less obvious when the Sirens appear as his daughters (Pausan. ix. 34, 2): perhaps they are so viewed in their aspect as the windless calm of the southern sea in summer (cf. Od. xii. 168). For it has been held that Acheleus acted only as a significant symbol of water in general, also the lord of the sea (Wilamowitz-Moellendorf, Eur. Herakles, i. p. 23). His most famous appearance in mythical story is as the suitor of Deianeira, who was vanquished by Herakles in a fierce struggle. Like Proteus, he perished in the power of the vanquisher; in the battle he assumed the form of a wild bull (Soph. Trach. 9ff., 507ff.). In the course of the fight, one of his horns was broken off by Herakles, and, according to one account, he ransomed it from his conqueror by giving in exchange for it the horn of Amaltheia or cornucopia (Apollod. Bibl. ii. 7, 5). The ancients gave a rationalistic explanation of the story: Herakles represents the growing power of civilization, which reclaimed the marsh-land for agriculture, and the sound exuberance of the river (Strabo, x. p. 458). It seems rather as if Acheleus was a name consecrated in primitive rite to express the principle of moisture as the source of life and growth. Further, since to a nation of cowherds the bull is typical of generative power, the wrestling river-god was worshipped in bull form. Whatever be the explanation, it should not be forgotten that the bull shape is common to all river-gods and is not limited to Acheleus (cf. Eur. Ion 1261). A symbolic connection between the two aspects of divinity was found in the horn of plenty, which, as we have seen, was mythically associated with Acheleus.

In art, Acheleus is represented either as an old man with horns, as a sea-serpent with human head and arms and bull’s horns, or as a bull with human face and long dripping beard.

The etymology of the word is unknown, and inferences based merely upon conjectural explanations of it are almost inestimably rejected.

A. C. PEARSON.
ACOSMISM—ACOSTA

when suffering from the pollution of accidental
homicide (Plut. Quist. Gr. 37, p. 299 c-e).

ACOSMISM (Gr. a privative, and σῶμα, 'the universe,' in the sense of an op. or eranged whole).—This term belongs primarily to the field of Ontology, i.e. the theory of the ultimate nature of Being and Reality; but it has ethical bearings also. Allowing for several possible differences of theoretical interpretation, the doctrine of Acosmism in its essential universe must be viewed as a

in the world, the universe must be

as a semblance. In the history of modern thought the classical example of the doctrine may be described as the metaphysical parallel to Hume's psychological scepticism. For Hume, Cogito, ergo sum esse. And just as he thus fixes illusion upon the experience of the individual man, so the acosmist holds the universe as a whole to be but a delusion. This conclusion, as in Spinoza's case, from the standpoint of the historical and speculative conditions of the time, may be controverted on the strictly theoretical side. For it is obvious that the reality constituting the substratum of any universal must be regarded as real; it is no less obvious, however, that the only reality attributable to it must be derived, as concerned human experience, from the universe already declared to be illusory. For example, Spinoza's Absolute Substance—the reality underlying the universe—is known to man in the two 'attributes' of Thought and Extension. These in turn differentiate themselves into two modes, each mode of Thought being the correspondent of a mode of Extension. (God, therefore, at once the 'Thing' which thinks and the 'Thing' which is extended. Hence (as the conditions of his age prevented him from seeing fully) any attribute of God, whether known to man or not, is a method of perceiving substance. By attribute I understand what intellect perceives as a substance as opposed to its essence (cis Ethics, ii. 21, Schol.). Between this conclusion and Hegelian idealism there may be, doubtless, a distinction, but without fundamental difference. And the reason lies open. Only from human experience can any reality be derived reality and meaning to be come into the so-called substratum or 'Unknown.' In other words, either the reality underlying the cosmos is nothing, or it achieves reality just to the extent to which it may be viewed as an effective component of human experience.

One need not do more than indicate the importance of this as bearing upon theological problems, especially those raised by the religions of India; or upon ethical questions, particularly those connected with Quesitian (wh. see below).

The feeling of the overwhelming nature of the Ultimate Being tends naturally to Acosmism; so, too, does undue emphasis upon the transcendence of Divinity. In both cases, however, the conclusion follows usually from a more or less vague ethical attitude, rather than from metaphysical analysis and logical argument.

R. M. WENLEY.

ACOSTA.—Uriel (or, as he was originally named, Gabriel) da Costa is an interesting but overrated personality. Interest in his career is due mainly to the similarity between his life and that of another Amsterdam Jew of the same period—Spinoza. It may even be said that the harsh treatment which the latter received from the Jewish community was the result of the vagaries of Acosta; but there was no principle of human experience, possesses no reality in itself, but is dependent on, or is a manifestation of, an underlying real being. In a word, the universe must be viewed as a semblance. In the history of modern thought the classical example of the doctrine may be described as the metaphysical parallel to Hume's psychological scepticism. For Hume, Cogito, ergo sum esse. And just as he thus fixes illusion upon the experience of the individual man, so the acosmist holds the universe as a whole to be but a delusion. This conclusion, as in Spinoza's case, from the standpoint of the historical and speculative conditions of the time, may be controverted on the strictly theoretical side. For it is obvious that the reality constituting the substratum of any universal must be regarded as real; it is no less obvious, however, that the only reality attributable to it must be derived, as concerned human experience, from the universe already declared to be illusory. For example, Spinoza's Absolute Substance—the reality underlying the universe—is known to man in the two 'attributes' of Thought and Extension. These in turn differentiate themselves into two modes, each mode of Thought being the correspondent of a mode of Extension. (God, therefore, at once the 'Thing' which thinks and the 'Thing' which is extended. Hence (as the conditions of his age prevented him from seeing fully) any attribute of God, whether known to man or not, is a method of perceiving substance. By attribute I understand what intellect perceives as a substance as opposed to its essence (cf. Ethics, ii. 21, Schol.). Between this conclusion and Hegelian idealism there may be, doubtless, a distinction, but without fundamental difference. And the reason lies open. Only from human experience can any reality be derived reality and meaning to be come into the so-called substratum or 'Unknown.' In other words, either the reality underlying the cosmos is nothing, or it achieves reality just to the extent to which it may be viewed as an effective component of human experience.

One need not do more than indicate the importance of this as bearing upon theological problems, especially those raised by the religions of India; or upon ethical questions, particularly those connected with Quesitian (wh. see below).

The feeling of the overwhelming nature of the Ultimate Being tends naturally to Acosmism; so, too, does undue emphasis upon the transcendence of Divinity. In both cases, however, the conclusion follows usually from a more or less vague ethical attitude, rather than from metaphysical analysis and logical argument.

R. M. WENLEY.
Acosta must be honoured, but his championship
was fantastic rather than robust.

ACROSTIC.—An acrostic is etymologically
an extremity of a line or verse, lit. 'row' (στίχος).

Apoet. Const. ii. 87 prescribes an antithetical chant-
ing, in which each line begins and ends with the
verse numbers, and the congregation sing the
acrostics (δασσορχνοις). Epiphanius (Migne, xlii. 365) calls
the numerical iota the 'acrostic' (δασσορχνον) of
the name Jesus. But an acrostic is usually a poem in
which the initials of lines or sections spell a word
or words or an alphabet. An abecedary acrostic
is sometimes called simply an alphabet.

1. Bickell and others find fifteen complete alph-atis or remains of them in the Heb. OT and Sirach,
the following Psalms or chapters: (1-5) Ps 9-10, 25, 34, 37, 111, 112, 119, 145; (9) Pr 31; (10-13) La 1. 2. 3. 4; (14) Nah 1-2; (15) Sir 51.

(1) Ps 9-10 (LXX 9).—Remains of an alphabet spell
the first letters of alternate verses (Ps 6. 6 . . . 11. 11. 14. 17).
With Heb yinay and yinay from 107 and as initial words we should have
παρηγορωs, as in other cases noted below. The order yinay
begets somewhat similar letters together.

(2) Ps 20.—An alphabet minus π, with a letter from each
verse, except that the π is included in the π. To restore
the π, begin v. 18 with 'Arisse' (Ps 109). An appended 'διεισ
makes up the number of the verses to the alphabet twenty-
two. 'Carmina alphabeticata,' like Ps 35, 5, etc., are
such have that number of verses or sections, but are
not alphabets (Bickell).

(3) Ps 34.—An alphabet like (5), the added verse beginning
νικα. EV and LXX have in v. 18 'The righteous cry (or, cried),' for Heb. νυμια. But with π in v. 19, there would be no need of the 'righteous.'

(4) Ps 37.—An alphabet minus π, formed like (1). To complete
it, read in v. 28 κατακρησις (κατακρεσις) with datē for reiskh,
the word in brackets for LXX Χρωμα. In επονομαίοις 1
of the π.

(5) Ps 111. 112.—Alphabets with their letters from the
halfs of the verses, of which three at the end are numbered as
108-110.

(7) Ps 119.—Known as κατα ηδόνης 'the great alphabet' (Buxtorf, Lex. s. v. '790'). Eight verses begin with aleph, eight with
beth, and so on. The names of the letters are given in the
alphabet in the LXX. Note, however, that the alphabet is
missing in B; and see the variants from the Psalters R
and Τ (S note).

(14) —An alphabet minus π, with a letter from each
verse, one beginning νικα (LXX ομορφή) having fallen out before τοις νομοις (v. 14).

(9) Ps 23:1.—An alphabet with a letter from each verse;
both π and π are borrowed before the π verse.

(10) La 1.—An alphabet like (9), with the letters in the usual
order. The LXX gives them, some of them in B in

(11. 12. 13) La 23:21-36 41-52.—Three alphabets, of which
every verse gives a letter, that in (12) being of the form ΛΑ,
BB, etc. Heb. b below π; but in the LXX, which here also
names the letters, B gives 'Aραβ and ψι ρώμων wrongly as titles of the
pe and πι verses.

11. In the supposed traces here of an alphabet arranged 'exquisito artificio,' see Bickell's Carm. V.T., and art.
Nahom in Hastings' DB and in EB.

12. Sir 61:39—.From the version, before the discovery of the Cairoine Hebrew, Bickell saw that Ben Sira's poem on
Worship was an alphabet, but he did not satisfactorily
determine all the letters. In the LXX B (ed. Swete)
supplies materials for the beginnings of all but the πd verse in their
right order. In (4) begin in the (περιστέρα); in v. 19 (γεγραμμένος); and supply the πd line from the Hebrew.
The other letters may then be found without difficulty. Comparing (9) with (5), Rashi mistranslated the whole line, but in
the Heb. it begins rightly or wrongly with μεμ.

2. Evidently the alphabeticism of a composition
is not without critical importance: it enables
us to perform through the names of its authorship, which is a
place to detect and emend errors, or to supply deficiencies.
Sometimes at least it connotes completeness, as in Pr 31:10-
31, where the praises of the virtuous woman exhaust the alphabet. In the NT
compare 'I am the Alpha and the Omega.'

3. Alphabets and other acrostics are found
in Jewish Prayer Books and secular writings. Famous
names were shortened acrostically, as in RaMBaM
for Rabbi Moses Maimonides (ben Maimon.). A name
given by acrostic verses may settle a question of
authorship, as in the case of R. Jacob Ben Shim-
hon's commentary on Abott, often found attributed
to a better known writer. The mistake may have
arisen partly from his name having been written
αλ'αβαμα for Rabbi Jacob Shimshon, and then read αλ'αβαμα
Rashi.

4. Syriac acrostics abound in Service Books and
other early writings. Aphantes prefixed the
letters of the alphabet to his twenty-two Homilies.
Ephraim wrote alphabetic hymns, two of which
may be seen translated at the end of Bickell's Carm. V.T.

5. That acrostics were used in oracles is
true to be indicated by their occurrence in the
pretended oracles of the Sybil. These make the name
αλ'αβαμα an acrostic of east, west, north, south in the line
'αλ'αβαμα φερει τε και την Ρεμουλικην' (Westminster Reg.
viii. 321; cf. ii. 195, xi. 3). Romanus and Remus are
alluded to by the word κεκρός (xi. 114), the Greek R standing for a hundred. The initials of the
lines v. 217-250 give the Greek for 'Jesus Christ God's Son Saviour Cross,' whence, without
Cross, as an acrostic of an acrostic, comes IX0XΣ, 'fish,' a mystic name of Christ (Aug. Cív. Dei,
viii. 23).

6. Otfried's metrical rendering of a form of the
Diasystema into Old High German (9th cent.)
is preceded by the acrostics, 'Ludovicum (Luthovicum)
Orientalium Regnorum Regi salus aeternam,' 'Salononi Episcopo Offriciau,' and followed by
a longer one to the effect, 'Offfr. W. monachus R. et
W. Sancti Galli monast. monachus.' Thus again
acrostics testify to authorship.

7. Professor H. A. Giles, of Cambridge, informs
the writer that the 'Chinese have several forms of the
acrostic. The simplest is that in which the hidden sentence is revealed by the
word in each line of a short poem. This form is
often still further elaborated by using, not
the actual words required to make sense, but homophone of a more or less misleading character;
Anglicé, 'Boughs are made bare,' etc.
we must have recourse to the words 'act' and 'action.' Hence, when we wish to designate the agency of man in its peculiar character, we must prefix the epithet. The peculiar character of human action, as the phrase is ordinarily used to mark the distinction from any sort of physical action, is that the former is an expression of consciousness. But in making this broad distinction we must notice, first, that it applies equally to all animal action as distinguished from physical and merely physiological action; and, second, in the discussion of human action the phrase is often used more widely to include unconscious actions as well as conscious actions of the human organism. The fact is, of course, that the human organism exhibits all grades of action, physical, animal, and human in the strictest sense. The only physical actions of the organism, however, which concern us in relation to our study of conscious actions, are those which are like the latter in depending directly upon the nervous system, but unlike them in not expressing consciousness, whether in the form of feeling or purpose. Of such actions of the nervous system, not expressive of consciousness, two grades may be distinguished: the simple Reflex action, and the more complex Instinctive action in which a number of movements are co-ordinated in the production of a single result—though it should be observed that the range of true instincts is very limited. It is the case of many of our actions that these actions are not expressive of consciousness, we do not necessarily imply that they have no conscious accompaniments, but only that the nature of the action is not determined by these conscious accompaniments even when present. The reflex action of sneezing is not determined by the sensations which accompany it. And similarly, though an instinctive action may be accompanied by sensation and feeling, the purposive character which it displays is not due to conscious forethought.

Of human actions, in the stricter sense, which are expressive of consciousness—or which, to use the technical term of psychology, are 'conations'—the most obvious type is the purposive action, in which the performance of the action is preceded by an idea of the thing to be done. But it is evident that such purposive action cannot be psychologically primitive, since those ideas or images of movements to be executed, which are the end of the purposive action, are formed only after previous experience of the same movements brought about in some other way. Consequently, either we must fall back upon reflex actions for a beginning, or we must hold that, in the most primitive phase of conception, a change of sense-perception, or the feeling which accompanies it, finds immediate expression in movement. To the former course, which is apt to be favoured by physiologists, there is the objection that reflexes, even though they may be primitive for the individual in the sense of being inherited nervous arrangements, must have been developed at some time in the experience of the race. In our present experience of the formation of new ideas, the transition of consciousness into action that resembles the reflex type. And unless we are prepared to assume that our inherited reflexes were originally formed by some similar process of degradation, the beginnings of action are left psychologically inexplicable. From the psychological point of view, then, we must prefer the other course, and regard as the original type of action that in which a change of sense-perception or feeling finds immediate expression in movement (cf. W. J. Ward's Art. 'Psychology' in *Edin. Encyc.* vol. xx. pp. 42-43). And this view will appear all the more plausible if we remember two points.

First, such 'impulsive' action, as we call it—the terminology of the subject is very confused—although as a rule definite enough in the adult (e.g. in warding off a blow), is to be conceived as having been originally vague, diffuse, and uncertain, as the movements of an infant are in comparison with those of an adult. Second, it is a fact recognized, and has been shown experimentally, that all mental states have this impulsive quality, this tendency to affect movement, although in our present experience these motor effects are to a great extent either quite inappreciable or only indubitably (cf. James, 'Conscience' [1890], ii. ch. xxiii.). And the difficulty of a psychological theory of action is thus greatly diminished when we see that action does not begin with particular and isolated definite movements, but that these, whether they be inherited reflexes or acquired impulses, must have been developed by the progressive restriction or specialization of movement that was originally more diffuse.

Although it is with purpose rather than impulsive action that the moralist is mainly concerned, it seems a mistake to distinguish the term 'voluntary' to the former, and the practice of those psychologists is rather to be followed who tend to apply the epithet widely to all action that is expressive of consciousness. There are, of course, objections to such a use of the word 'will' in a more narrow sense. And the term 'voluntary' no doubt seems paradoxical as applied to the simpler expressive movements which are hardly to be distinguished from mechanical reactions. But we have to remember that the impulsive actions of the adult are usually of a higher type. The hasty words of an angry man may burst from him without any previous distinct idea of what he is going to say, and yet there accompanies his utterance a consciousness of its meaning, in virtue of which we hold him responsible for what he has said. The more definite and significant an impulse is, the more it must be regarded as an expression of character. One man will say things in anger which would be impossible to another however enraged for the very fact that he permits himself to go on, that he is not brought to a halt by the consciousness of what he is saying, shows a basis for the impulse in the man's general character which forbids us to regard the outburst, however devoid of previous purpose, as simply involuntary. Will is favourite ground of all investigators. That all impulsive action is also in a broad sense voluntary action, but that voluntariness has many degrees, and that the lower down we go in the scale, the less possible it becomes to distinguish voluntary from involuntary action in character.

Before proceeding to the consideration of purposed action, we may refer very briefly to a general conception of human action, which, if true, would profoundly modify the significance to be attached to the element they may be primitive for the individual in the sense of being inherited nervous arrangements, must have been developed at some time in the experience of the race. In our present experience of the formation of new ideas, the transition of consciousness into action that resembles the reflex type. And unless we are prepared to assume that our inherited reflexes were originally formed by some similar process of degradation, the beginnings of action are left psychologically inexplicable. From the psychological point of view, then, we must prefer the other course, and regard as the original type of action that in which a change of sense-perception or feeling finds immediate expression in movement (cf. W. J. Ward's Art. 'Psychology' in *Edin. Encyc.* vol. xx. pp. 42-43). And this view will appear all the more plausible if we remember two points.
ACT, ACTION

Desire and feeling and calculating intellect, to
which the reflexion of the individual naturally but
mistakenly attributes the direction of his life.
Now, such a conception of human life may have an
appearance of profundity, but it conveys no real
import, it does not aid, on the contrary it obstructs,
the work of scientific analysis and explanation.
To appeal to instinctive tendencies is only to
involve ourselves in empty mystery; unless we can
definitely characterize these tendencies, and
show how they operate, and why they manifest
themselves in such ways so inexplicable. Yet for
this concrete analysis we must, of course, return
to the very surface processes of consciousness which
we had affected to despise, and must seek in their
definite modes of interconnexion, and not in the
vague and mysterious depths of instinctive ten-
dencies, the definite explanation of the course of
human life.

When these two conditions are fulfilled, first, that
definite movements have begun to emerge from the
earlier stage of diffused movement—an emergent
which may be greatly facilitated by the existence
of inherited nervous co-ordinations; and, second,
that images have begun to be formed, then the
higher stage of purposed action becomes possible,
indeed, it is made of all or impossible to be
executed precedes and directs its actual execution.
The idea of movement may be prompted by a
present object (with whose attainment or avoid-
ance the movement must, of course, have been
already associated), and, as promoting, the object
is an object of desire or aversion. But the range
and significance of desire are vastly widened when
not merely present objects, but objects that are
themselves represented only in idea or imagination,
are sufficed. It is in every case with the
agent is thereby delivered from his former
bondage to the immediate present, and is enabled
both to modify his present situation by the aid
of ideas derived from his past experience, and to
anticipate the future by present preparation. With
the development of such desire-promoted action
there is bound to emerge the situation described
as a conflict of desires, with its need for a volun-
tary decision between them. This decision has
often been represented by protagonists of the
Associationist school as brought about in a
quasi-mechanical way: it is the strongest
desire that prevails, and the conflict is simply a
conflict of opposed intensities. Now it is true that,
as in the case of every simple kind, the epithet ‘voluntary’
seems hardly to mark any essential peculiarity of
the process so described. The voluntary decision
between two desires of a very simple kind, depend-
ing as it does merely on their relative strength,
some hardly to be distinguished in character (save
for the fact that the process goes on in conscious-
ness) from the mechanical result of a conflict be-
tween two forces. But here, too, we must remem-
ber that the simplest type of choice, say the choice
of a ball between two, is not really representative of the
more important choices which the adult has constantly to make.
And it is just in proportion as the ‘conflicting’
desires are not simple or low-grade, but complex and
significant, that the choice becomes an expression of
character, and becomes therefore in a fuller
degree voluntary. Now, the more complex and
significant the desires are, the less it is possible to
picture their ‘conflict’ as a mere collision between
two forces of different intensities. The man who
has to decide whether he will continue in his
present accustomed vocation or accept a new career
that has opened out for him, is not simply dis-
tracted between a love of ease and a love of gain.
He is deciding ultimately between two complex
schemes of life, and to represent such a decision in
terms of a simple quantitative difference would be
a caricature. The factors which do admit of
quantitative measurement in money value may even be the least influential of all.

It is evident, of course, that in an example like
this we have gone far beyond the range of the
desires that merely reproduce past experience in
imagery. We are at a level at which conceptual
thinking has long been at work upon the materials
which memory supplies, a level at which the agent
has become something more than a vessel of generalized purposes,
to which he refers, and by which he guides, his
particular actions. The desires of the adult are
nearly always more or less significant. That is to
say, the desired object is desired not merely for its
own sake, but because it fits in with some wider
purpose. And the more intelligent and thoughtful
the agent is, the more his desires and purposes will
be organized in this way, and rendered subservient
to the scheme or type of life in which he sees the
complete realization of his powers.

We must indicate the psychological processes
involved in this higher development of conception
and action. One practical relation that must soon be
forced upon the attention of an agent trying to
render the intelligible to himself the nature of
attaining it is that of means and end. With the fuller recog-
nition of this relationship among objects comes the
process of deliberation, in which the agent seeks to
discover the means of attaining an end, or to de-
termine which of a number of possible paths is the
best. In Aristotle’s classical analysis of the
deliberative process (Nic. Ethics, III. iii.), choice is expressly characterized as choice of the means.
Such a view of choice will not, however, apply to
deliberation in every case, although in every
case between two objects or courses of
action some end or criterion is implicitly assumed,
there is an obvious difference between the case
in which the end or criterion is explicit from the start
of the deliberative process, and the case in which it
emerges only as a balance of advantage at the end.
And we must further recognize the possibility,
of which Aristotle takes no account, that even where
we start with a certain end explicitly before us,
the deliberative process may, by bringing in the
elements of significance in our end which we had not
before fully appreciated, cause us to modify or
abandon it altogether. In short, the more impor-
tant the matter for decision is, the more does the
choice tend to express, not an isolated desire for
a particular end, but the whole of the
agent, or, what is the same thing, his ultimate and
all-inclusive desire for the kind of life which is to
him best. And the more strenuously a man lives,
the more will the unity of his character tend to
work itself out in even the simpler actions of his
daily life.

It is for choices of a more or less deliberate kind
that the term ‘will’ is often reserved in psycholo-
gical and ethical discussions. But we must not
suppose that this term connotes a power or
energy of mind. The expression ‘fist of will’
often used in this connexion is very misleading.
The man who seriously sets himself to deliberate
must mean to come to a decision. He starts, that
is to say, with some sort of decision already vaguely
outlined in the shape of possible alternatives, and
the only function of deliberation is to eliminate
what is doubtful and make the proper course of
action clear. This being done, nothing more is
needed: if the man was impatient to act, the
obstacles in his way have now been removed, and
he will act at once. The general purpose of acting
was present all through, and by means of the de-
liberative process this general purpose takes shape
in a definite volition. A fist of will, additional
and subsequent to the phase of conation in which
the deliberative process was complete, would be
to seize if it merely gave its consent, and wholly
arbitrary if it withheld it. For, if any reason
remained for withholding consent, the deliberation
could not have been complete, and it is only a sense
of such incompleteness that could make the agent
hesitate in this action. Thus it is that if we are to give
this notion of a fact of will any
meaning at all, we must regard it as merely empha-
sizing the last or finally decisive element in the de-
liberative process itself, the thought that clinches
the agent's determination to act or not to act.
In our consideration of the development of cona-
ation in the individual, we have so far been abstract-
ating from those aspects of the individual's action
which depend upon the essentially social character
of human life. In point of fact, however, the
actions of the individual for the most part do
either explicitly contain or not remotely imply a
reference to other persons, and to their agency in
relation to himself as well as to his own agency in
relation to them. And this social factor in individ-
ual action pervades itself through in the sense of the
content of the action, but in the definite control
which social influences exert over the will of the
agent. The child is no sooner able to understand
a particular prohibition or command, than he begins
to experience this social control, which in varying
forms and degrees implies the duty of life. At first
it comes to him from without as a constraint upon
his desires, but more and more it tends to become
an internal factor in his own will and character,
and so not more society's law than that of his own
nature. At first it comes to him in the form of
particular injunctions to refrain from particular
objects or to do particular acts, and his obedience
is an obedience given merely to particular persons,
but more and more it tends to take the generalized
and impersonal form of rules of action to be obeyed
merely as such. These rules become concrete, of

course, only in the personal claims and expecta-
tions which they warrant, but their control reaches
out beyond every particular case, and pervades the
whole field of thinking of the individual. Hence
the important consideration that the rules of
action express, not a consideration of means and ends
at all, but a simple obedience to rule, and that,
even where it does express a consideration of
means and ends, this consideration itself is con-
trolled through and through by the habitual regard
which we pay to social rules in all our practical
thinking.
To complete our sketch, we may ask as a final
question, how far we can bring the whole develop-
ment of conation and action under a single for-

tula. Various attempts have been made to find
an explanatory formula applicable to action at all
stages. Many psychologists and moralists have
sought such a formula in the connexion of action
with feeling and pain. This connexion has been asserted in two forms which it
is important to distinguish clearly from each other.
On the one hand, it may be held that feeling is the efficient cause of action. This doctrine is applied
over the whole range of human action, and means
that between various impulses, desires, or aims,
that one will always tend to be realized which
gives the greatest present pleasure or relieves the

greatest present uneasiness. And we must, of

course, observe that present pleasure or uneasiness
may be caused not merely by present events and
objects, but also by the mere images or thoughts
of distant events and possibilities. On the other
hand, it may be held that feeling is the end or final
cause of action. This doctrine (technically known
as Psychological Hedonism) is obviously narrower
in range, since it applies only to purposive and not

to impulsive action. It means that of various
possible courses of action represented before the
mind, that one will always be chosen which promises
most future pleasure or least future pain, pleasure
being thus regarded as the only real object of
desire. This doctrine is now almost universally
abandoned in psychology and ethics. For it
is hardly evident that there is a great deal of pur-
oposered action, at all levels of conduct, which is not
determined by calculations of future pleasure and
pain at all. The hungry man seeks food not for
the pleasure of eating, but for the mere satisfac-
tion of his hunger; the honest man may elect to
give his just debts not for the pleasure of having
been honest, but merely because he is honest and wants
to remain so. The other form of doctrine, according
to which we do what we continue present pleasure or
relieves present uneasiness, is more plausible
(cf. the change of view in the chapter on 'The Idea
Nevertheless it is open to objection on grounds
both of fact and of principle. The objections of
fact are: (1) that action often goes on for a con-

siderable stretch in the absence of any
feeling, (2) that we may persist in painful actions
in spite of their painfulness. Now we may, of
course, to save our theory, attribute this persist-
ence to the greater uneasiness experienced on
stopping. But such uneasiness would seem itself
to imply a direct interest of corresponding strength
in the object of our action, and it is surely simpler,
therefore, to refer the persistence to this interest
directly. Moreover, as a matter of principle, it
seems impossible to explain in terms of merely
quantitative variations of feeling the definite forms
which action takes. We have what to explain is not simply varying degrees of one funda-

tmental type of action, but many actions of widely
different types, and the particularity of the action
can be explained only by the particularity of the
interest which it expresses. There is thus a good
deal to be said for a view which seems to be find-
ing increasing favour with recent psychologists
(e.g. Stout, Analytic Psychology (1896), i. 224 ff.;
Titchener, Outline of Psychology (1898), § 38), viz.,
that pleasure and pain, agreeableness and uneas-
iness, are not so many factors in the causation of
activity as the feeling-tone which accompanies and
reflects its varying fortunes.
Another well-known formula for purposive action
affirms that in all cases where a particular course of
action chosen is conceived as realizing what is
there and then the agent's good (so, e.g., Green in
his Prolegomena to Ethics). The same meaning
is negatively expressed in the Socratic maxim, that
no one willingly chooses what is evil; and this
famous paradox, when rightly interpreted, only
says what cannot well be denied, that a man's
actions, not his professions, are the test and index
of his real convictions. The formula, as it stands,
however, is not sufficiently comprehensive, for
many actions are done without reference to the
agent's personal good at all, e.g. assist-
ance given to a person in distress from the mere
pity felt on seeing it.
The defect of such formulæ is apt to be that
they are framed with a too exclusive regard for special

types of action. If we want a formulæ which applies to all human action, we must fall
back on the more generalized conception used above,
and say that all human action is as such expressive
of consciousness, and that in proportion as the im-
mediate consciousness experienced, be it impulse,
desire, or general aim, is intelligent and significant,
in the same proportion is the action voluntary and
expressive of character.

LITERATURE.—In the text-books of psychology the various
phases of conation or action are apt to be treated in

detached
ACTION SERMON—ACTIVITY

sections. For a comprehensive and continuous account, see Sully, Human Mind (1892), vol. ii.

H. BARKER.

ACTIVITY. The designation given by Presbyterians in Scotland, and where Scottish communities exist, to the sermon which immediately precedes the celebration of the Lord’s Supper. The name is derived directly from John Knox’s Book of Common Order and from the Westminster Directory for the Public Worship of God. In both these works the celebration of the Holy Communion is described as ‘the Action.’ The use of the phrase in the earlier document may have been partly (1) to the Liturgy of Calvin, which was largely the basis of the Book of Common Order, and in which the section entitled ‘Mode of Celebrating the Lord’s Supper’ contains this rubric: ‘The ministers distribute the bread and the cup to the people . . . finally, on use of action de grâce’; (2) to the pre-Reformation use of the word actio to denote what was regarded as the essential part of the Eucharist, the Sacrifice of the Mass, wherein ‘Sacramenta conficiunt Domini.’ Knox, of course, and those who followed him, while retaining the word ‘Action,’ used it with a different signification, applying it to the celebration as a whole, or to the sanctification and distribution of the sacred symbols, without reference to any ‘sacrifice.’ While Calvin’s ‘action de grâce’ was probably the origin (though indirectly) of the term ‘Action Sermon’ being introduced in Scotland, the long and popular retention of this term is due, doubtless, to the broader application of the word ‘action’ to the entire sacramental celebration; for the designation ‘Eucharist’ (Thanksgiving) has never been widespread among Scottish Presbyterians.

The employment of the phrase ‘Action Sermon’ while still frequent, has within living memory declined, owing (1) to the somewhat diminished relative importance of the Covenanter church and the general nature of its expression or consequences; (3) distinguish one form of activity from another, as bodily from mental; and (4) describe the conditions of our knowledge of that form with which

1. (a) Activity belongs, within the world of existence, to the class not of things and qualities, or substances and attributes, but of events, processes, or changes; an activity has a beginning and an end; this is an essential characteristic of activity. (b) The definition of the designation ‘activity’ is as follows: ‘To say of any existing being used may be quoted: (1) In 1674, during the persecution of the Covenanters, John Welsh, great-grandson of John Knox, is stated to have “preached the Action Sermon” at a conventicle held near the bank of the Whittle, in Tievotllo (see Blackadder’s contemporary Memoirs, p. 305). (2) In the diary of Edward Irving for 1835, the entry occurs: ‘April 1: prestar “my Action Sermon” (see Mrs. Oliphant’s Life of Edward Irving, vol. i. p. 395).’ (3) Chapter on the ‘Manner of the Administration of the Lord’s Supper.’

1. Chapter entitled ‘Of the Celebration of the Communion.’

The term ‘actio’ is used even in classical Latin to denote a sacrificial act (Ovid, Fasti, 1, 1, 282). Honorius of Autun (Opera, 1, 103) and others describe the sacramental use of actio (with less probability) and its employment in legal processes: ‘Actio disticto quod causam populi cum Dee agon.’
ACTIVITY

activity or the expression of activity, and the amount to be put forth at any moment (Pechner, Psychophysik, 1860; Höfler, Psychische Arbeit, 1895). The activity is continuous because of the constant shocks which the equilibrium of the organism receives from the play of the enervating forces. It may be doubted, however, whether the term should be translated in this manner. Dr. Stout suggests (a body tending to continue its motion with the same velocity in the same direction) (Analytic Psychology, i. 146; but cf. 148). Such a body would be described as one which has another body and transmits its own motion, wholly or partially, to the latter. The ‘activity’ in the continuous movement of the first body would be referred rather to the initial impulse of that force which sent it on its way.

(ii.) The second criterion is that as to the conditions of activity being within the active body. From this point of view, a body is active so far forth as its changes are determined from within itself. Thus Condillac wrote of his state: ‘It is activity, then it recalls a sensation, because it has itself the reflection of the reason in the memory. It is passive at the moment when it experiences a sensation; for the cause which produces the latter is outside of it (the statue), i.e. in the odoriferous bodies which act upon its organ.’ (At this stage the statue was supposed to have only one sensorium, that of smell.) Substantially, Condillac’s statement, that ‘a being is active or passive according as the cause of the effect produced is in it or without it,’ would be accepted to-day. The difficulty would be (1) to determine what is the cause of a given change, and (2) to determine whether the discovered cause is within or without the active being. If, for example, we refer all actions of the body to purely physical causes,—brain and nerve processes and the rest,—and regard the soul or consciousness as a mere spectator or accompanist of these central processes, without causal efficacy, then there is no such thing as mental activity, but only mental passivity.†

The mind would not determine even its own changes, and act be active with respect to them, for an infinitesimal change is always a by-product of certain physical changes. Of theories with regard to the relation of mind and body, neither automatism nor psychophysical parallelism is consistent with the existence of mental activity; the latter is compatible only with a mind of its own, on one hand, the interaction theory on the other. The second difficulty—that of determining what is and what is not in the active being—may be illustrated from the controversy as to the existence of mental or psychical dispositions, or tendencies towards action, as opposed to merely physical dispositions, i.e., special arrangements or structures of the brain. Probably nine-tenths of the conditions of any mental act—an act of seeing, for example, or of hearing, an act of imagination or memory, or volition—lie beyond consciousness, or below the threshold of distinct consciousness. Our visual perception at any moment is determined largely by our own experience in the past and the general dispositions of our interests: the purely sense element,—what is given,—the affection of the retina, and the feeling of the ocular movements, is infinitesimal as a contribution to the resultant perception. Yet the term

Condillac, Traité des Sensations, ch. ii. § 11. The note may be added here: ‘There is in us a principle of our actions which we put, but which we cannot define; it is called force. We act alike in respect of all that this force produces in us and outside us. We are active, for example, when we reflect, or when we cause a body to move. By analogy we suppose, in the bodies which cause change, a force of which we know still less, and which, regard to the impressions they make upon us. Thus a being is active or passive according as the cause of the effect produced is in it or without it.’ (Ob. note a).

† See Huxley’s essay on Animal Automatism (Cott. Essays, 1894).

latter appears instantaneously and as a single act. Are the submerging factors wholly physical—the excitation of special cortical arrangements which in their turn are the direct product of past experience, or are there also mental tendencies actually present, although out of distinct consciousness, and which are re-excited by the given sensations? (1) (Manual of Psychology, bk. i. ch. 2, and Analytic Psychology, ch. 1.) The analysis of a complex tone into its partials is given as an instance:

Dr. Lipps holds that the unanalyzed note is a simple experience. The new tones which analysis discovers are, according to him, not in any sense secondary. According to him, what is analyzed is not an actual experience, but an unconsciously complex mental disposition corresponding to a complex physiological modification of the brain substance (Analytic Psychology, vol. i. p. 61).

The value of the argument here is to show that our idea of mental activity will differ according as we interpret the dispositions or tendencies from which acts of perception, of memory, of association flow as psychical or physiological, or both; if they are physiological merely, as many have supposed, they may not be regarded as internal causes of mental changes or effects, and therefore the mind is not active so far as their effects are concerned.

(iii.) The third characteristic is much more controversial than either of the others. A being is active, in popular speech, only so far as the effects or consequences of changes in it are transmitted to other beings; in other words, activity is transient causality, not immanent. In a body moving under the law of inertia, it may be said that the cause of its motion, in a given direction, with a given velocity, at any one moment, is its motion in the same direction and with the same velocity at the previous moment (Stout, Analytic Psychology, i. p. 146). Hence its motion at any moment is self-determined, i.e., both cause and effect are within the same being. And, according to many, mental activity exists only when there is self-determination in this full sense. It may be questioned, however, whether immanent activity in this sense ever fails within the scope of human experience; the continuance of a body under the law of inertia is not activity; it is absolute passivity, the movement as a whole being the effect of the original impulse. In mental activity, again, we never find that all the conditions of any mental action, are within the mind. The volition to recall a name, for example, works itself out only when the necessary physiological substratum is present and uninjured. Even the moral resolution must make use of similar physical aids. It does not appear, then, that immanent activity, so far as our experience goes, is ever anything but indirect: the mind does not act upon itself, except by exciting physiological processes, to which presentations correspond. This conclusion may seem to render introspection, internal perception, an impossibility, since knowledge is a form of action. Comte’s arguments against introspection are indeed irrefutable, so far as pure introspection is concerned (cf. Miss Martineau’s edition of the Positive Philosophy, vol. i. pp. 8, 91); but introspection on the basis of external presentations, objections, and is, in fact, the first method of psychology alone, but of all science (Wundt, Philos. Stud. iv. 1886). This introspection is merely the analysis of presentations, whether primary (sensations) or secondary (memories, etc.), through repeating the conditions of the experience itself which has given the presentation; introspection is thus in no sense a turning of the mind upon itself, it is not a different process from external perception, it is only a more accurate and detailed perception, so as
to bring out elements not previously or directly experienced. Introspection is thus, as a form of mental activity, indirectly immanent; directly, it is an interaction between the mental and the physical. The first effect of the action is a change in the physiological process (see below); this in turn reacts upon the mind, and shows a modified presentation result. All activity is of this type,—a moving body would be described as active only when it effects a change in another body; no doubt, in such a case, the original body suffers a change, but this change is not in that in which the activity is thought to result, or which is referred to the activity. In itself activity is essentially transitive. This does not exclude, of course, the possibility that the highest forms of activity are those which are indirectly immanent, i.e., in which the outcome of the activity is a change in the subject itself or self-determination.

2. The general conditions of mental activity are partly physical and partly psychical. Among the former must obviously be included the nature of the cortical systems present, their degree of nutrition, and the like. Among the latter fall all presentations and feelings. The mind is wholly passive, so far as its direct presentations are concerned; it may select among them, give prominence to some and down-play others, but their simple conditions are always a cortical process. What is true of presentations is true also of feelings and emotions: a feeling represents on the subjective side the attitude of the individual as a whole in a given situa-
tion; it is a presentation which represents changes in his environment, directly or indirectly affecting him. In both, the mind itself is passively affected, but each may be stimulative or directive of its activity. Feeling especially has been through-out human history the basis of the whole activity, becoming deeper or more intense or more persistent as the presentational side of mental life received greater expansion and greater differentiation. The activity itself has no presentational or feeling-side. Although an element, it is not one of which the subject himself can be directly aware. The immediate effects of mental activity, on the other hand, are cortical changes and bodily movements, in primitive life diffuse, indefinite, uncoordinated; later, as mental activity becomes more and more definite, coordinated, and centralized. It is only through these bodily changes that mental activity produces changes in the mind itself, effecting there the recall of past impressions, or the building up of new and creative mental syntheses. The formation of a moral character, for example, is impossible without the constant practice of moral actions. These outward actions are reflected in the physical organization, and thereby the mental organization as a whole is modified in accordance with them. Without action, a character cannot be formed; nor, being formed, can it be maintained.

3. The contrast between bodily and mental activity has been already discussed in what has been said above. We have assumed that body acts upon mind, the latter reacting to present the whole body, producing bodily movements, which in their turn may lead to changes in the cortical system, and thus indirectly to changes in the presentational field. Whether there is any real causation in the one case or the other is a metaphysical question on which we do not touch.

4. It will follow that mental activity cannot be directly apprehended either through feeling or in any other way. All that is apprehended is the sequence of conditions and of effects, so far as the latter are represented in consciousness. There is no more ground for assuming a primitive consciousness of activity as the basis of the conception of activity than there is for assuming such in any other case of symbolic knowledge,—for example, that of chemical affinity. There are, of course, primitive experiences on which these conceptions are based, but the conceptions are built upon them, not drawn out of them. The most complete description of the phenomena on which our knowledge of mental activity is founded is that of Wundt:

'If we try to find for the "striving" in the will process itself a substrate corresponding in some degree to this expression, we always come to certain feelings, belonging principally to the class of strain and excitement feelings, and which may most aptly be called feelings of the activity' (Wundt, Psychologie, iii. 249). These 'mediate the consciousness of activity, which is known to all from self-observation, and which, under whatsoever circumstances we find it, whether accompanying an external action, or an act of attention directed upon the contents of consciousness themselves, appears of a uniform nature' (ib. 232). It may be defined as a total-feeling, composed of partial feelings of tension and excitement, following a regular course from beginning to end, the completion being the sudden conversion of one of the partial feelings (that of strain or tension) into its contrast-feeling (ib. 263). They accompany every form of mental activity from the simplest upwards. Thus experiments show that mental activity is not in the first instance always a cortical process, but an activity of the brain and mind, under certain conditions. It is only at a certain time in order to penetrate to the locus of consciousness,—its 'appereception,' in Wundt's terminology. During this time we always find, according to him, the above-mentioned feeling of activity, which he regards as the veritable core of the whole mental vision is concentrated, and continues until the idea has reached perfect clearness of consciousness. It is more distinct, however, in the state of active thought or tension towards some expected impression, or in the case of thought of activity, which is the most definite. Thus the mental activity, which we thus know, is but a modality of consciousness, and the peculiar complex of feelings and sensations referred to. The feeling as a whole is a direct contrast to that which we have when an external impression, or a memory-image, arises, which does not harmonize with or correspond to the dispositions of the attention, but suddenly compels it into a direction opposed to that of its activity up to that moment; this feeling is the feeling of passivity. Each as a whole is simple and indefinable, but each belongs, at the same time, to several of the general classes of feeling, of which Wundt recognizes six (ib. 332). It is clear that for Wundt, as for others, the activity itself, the inward act, is not directly cognized at all; the complex of feelings is merely an index or sign by which we know such activities are taking place. With Dr. Ward this is still more definitely stated.

'There is, as Berkeley long ago urged, no resemblance between activity and an idea; nor is it easy to determine a pure feeling and an idea, unless it is that both possess intensity... Instead, then, of the one minimum genus state of mind or consciousness, with its three coordinate subdivisions,—cognition, emotion, conception,—our analysis seems to lead us to recognize three distinct and irreducible facts,—attention, feelings, and objects or presentations,—as together constituting one concrete state of mind or psychesis' (Berkeley, Brit. Antiq. Psych. '1890', p. 192). Neither activity (attention) nor feeling can accordingly be presented to the mind; we know them only by their presentational conditions, accompaniments, or effects.

'Our activity as such is not presented at all; we are being active; and further than this psychological analysis will not go. There are two ways in which this activity is manifested,
Activity and feeling are present in all states of consciousness, they show no differentiation of parts, possess therefore no marks of individuality by which they may enter into association with other activities, feelings, or presentations; and as they cannot enter into associations, so they cannot be reproduced or recalled in any sense analogous to that in which presentations are recalled (ib. 444). It might perhaps be said that Dr. Ward's view of the causal analysis of the unanalyzable phase of experience can never be an object or content of experience. Professor James has argued with great force against the conception that there is any peculiar consciousness of activity, more especially in the form of a feeling of innervation as it has been called—the feeling of the current of outgoing energy, in volition or attention or other active states—which is defended by writers otherwise so diverse as Bain, Helmholtz, and Wundt (Principles of Psychology, ii. 492 ff.; cf. i. 509ff.).

While in ordinary volition before the act takes place is simply a kinesthetic idea of what the act is to be—an idea which would make up of memory images of the muscular sensations defining which special act it is. All our ideas of movement are to be found in other parts of the effort which it requires, as well as those of its direction, its extent, its strength, and its velocity, are images of peripheral sensations, either "remote," or resident in the moving parts, or in other parts which sympathetically act with them in consequence of the diffuse "wave" (ib. 494). Wundt himself, as James points out, has come to admit that there are no differences of quality in these feelings of innervation, but only of degree of intensity. They are used by the mind as guides, not of which movement, but of how strong a movement it is making, or shall make. But does not this virtually surrender their existence altogether? (ib. 500). The fundamental form of mental activity, according to James, is attention, and the fact of attention is known partly through changes undergone by the idea to which we attend, and partly by muscular sensations, in the head and elsewhere, which accompany the strain of accommodation, sensory and mental. Dr. Stout has rightly pointed out that separation here separates activity from the process which is active, and makes it consist in another collateral process. It "is like identifying the velocity of a moving body with the motion of some other body" (Anal. Psychol. i. 163). James does not, however, identify the activity with the sensations by which we become aware of it; they are indexes of something which directly we cannot know. By Dr. Stout himself this is precisely what is denied: an idea must be based upon some direct experience or sensation. This idea, according to Dr. Stout, must be based on the direct experience of time-transience, as the thought of red colour is based on the corresponding sensation. The cardinal antithesis between mental activity and passivity is not merely a group of relations ideally cognized by the reflective intelligence. Mental activity exists in being felt. It may readily be admitted that change or transition is given as a direct experience; but an activity is much more than a transition. It involves (1) direction or tendency toward an end, and (2) some feeling or knowledge of effectuation in the successive phases of the realization of the end. It is impossible to see how either a tendency towards an end, or the effectiveness of a process in furthering the tendency, can be a direct experience or feeling of the mind. Causality cannot exist in being felt; and causality is an essential feature of activity. We conclude, then, (1) that there is no direct consciousness of activity; (2) that the conception of activity is an idea; founded on certain complex groups of feelings and presentations, in which similar elements and arrangements of elements constantly recur.

5. What is the simplest or primary form of mental activity? At least three possible answers may be given: (1) Effectuation of physical change, (2) Attention, (3) Apperception.

The first identifies activity with conation simply, of which the lowest form is impulse; the second, the mental element in conation to the movement of the attention; the third, to the play of apperception. In the first, which is that adopted above, mental activity is self-determination only in an indirect way; the mind cannot act immediately upon itself; it can produce a desired change and by subjecting itself to certain physical conditions or circumstances through which the change may be effected. The question of Liberty and Determinism does not turn in the least upon this of the conception of mental activity, as Dr. Stout has so aptly said, "Whatever be our opinion about our liberty or our determinism, we accord to the different moments of our mental life a decisive influence upon the nature of the following moments. We consider our actual modifications as acting upon our future modifications." Even those who feel themselves subject to an inflexible necessity do not so because their will is without efficacy, but, on the contrary, because the efficacy of every idea, every feeling, every volition is such that it does not leave the smallest place to contingency (van Biema, Revue de Metaphys. et Morale, 1900, p. 298).

But an idea has efficacy not in itself, but only in so far as it excites feeling, and thereby stimulates activity or striving. Both Dr. Ward and Professor James, from different points of view, regard attention as the primary and fundamental phase of mental activity. The effort of attention is thus the essential phenomenon of will (James, ii. p. 592); but this volitional effort pure and simple must be carefully distinguished from the muscular effort with which it is usually confounded. The latter consists of all those peripheral feelings to which a muscular " exertion" may give rise. The attention is kept strained upon an object of thought which is out of harmony with the prevailing drift of the thoughts that are growing and playing upon itself before the mind with ease. This strain of the attention is the fundamental act of will. And the will's work is in most cases practically ended when the bare presence to our thought of the naturally unwelcome object has been secured. For the mysterious tie between the thought and the motor centres next comes into play, and, in a way which we cannot even guess at, the obedience of the bodily organs follows as a matter of course (ib. p. 584). Consciousness (or the neural states and the motor states which are the concomitants of) is an impulsive (ib. p. 535). Now, it is in precisely this impulsiveness, this transition from thought to bodily action, that we have sought the primitive or essential form of the activity of mind. The retaining or strengthening of an idea in attention is only an instance of it. Attention is not a pure activity which can be called now to one idea, now to another: it is the interaction between the mind and its presentations, the degree and form of attention being proportional to the mental organization; and the effect of attention is either the idea, the content of consciousness itself, but upon the motor centres by which the physiological process underlying the idea is strengthened or heightened, and thus the idea itself brought indirectly into clearer consciousness. As Volkmann has
said, 'The willing to hold a presentation fast is not the willing of the presentation itself—and cannot therefore be directed immediately upon the presentation, but must take the roundabout way through renewing the stimulus or keeping up the activity of auxiliary (i.e. associated) ideas' (Volkmann, Lesung über Psychologie, [1864], li. p. 360). With Wundt, the elementary process is 'the apperception of a psychic content' (l.c. iii. 307), or the bringing of a presentation into the focus of consciousness. Consciousness and will belong together; that from the beginning ourselves act as a volition-process differs from the internal action of apperception only in its consequences, not in its immediate psychological nature. Considered as a phenomenon of consciousness, the former consists in nothing but 'the apperception of an idea of movement' (ib.; on Wundt's 'Theory of Apperception' see Villa, Contemporary Psychology, p. 211 ft.). If we analyze this process of apperception, we find there are three steps: (i.) the idea is perceived or enters consciousness; (ii.) it acts as a motive or stimulus, through the feelings connected with it, upon the internal will; (iii.) the will reacts upon it, and it is 'apperceived.' The sole effect of the will upon the ideas is to raise their level of reason or Intensus. All which follows springs from the mechanism of the ideas themselves. Volkman objects to the theory that it implies a will hanging above the ideas, and striking in among them, but which in itself is wholly inanimate'—a will which we must wait for stimulation from without (I.c. p. 194). The latter objection holds only if we suppose that perception precedes apperception in time, as Wundt indeed assumes: it fails if we regard the analysis as the result of a process in which the ideas can be held apart only by abstraction, but which have no separate conscious existence. The former objection is, however, conclusive: a will which acts upon our ideas and affects them directly is non-existent. We conclude that attention and apperception are alike modes of the more fundamental form of mental activity which consists in the response of the mind to a presentation, through feeling, by effecting some bodily change. The dualism of soul and body is already partly overcome in Aristotle; it is not the soul in man that thinks or learns of itself, but man thinks through the soul; i.e. the man is an organic whole. On the other hand, the dualism returns within the limits which impede the passive and active. All human knowledge depends upon experience, and rational truths are merely the highest inductive generalizations from experience; the mind is passive in the double sense: (1) that it is not efficient, but it is limited in material, and even the forms into which the material is moulded, through successive impressions; (2) that the separate phases of consciousness are transitory and fleeting. On the other hand, the possibility of these empirical generalizations implies the co-operation of an Active or Creative Intelligence which gives the ideas their reality, as eternal, imperishable existences. This Active Reason is separate from the body, as from all matter, whereas the Passive Reason is merely the essence or form of the body itself: the Passive Reason perishes with the body, the Active Reason is the eternal element in man (de Anima, iii. Cf. Siebeck, Gesch. der Psychologie, i. 2, pp. 64 f., 72). The difficulties of the theory are that the understanding of the soul must be simply identical with the Divine Consciousness itself, by which the finite mind is passively affected, so that there is no real activity of the finite consciousness; (2) that from another point of view the passive passage of the Soul into the forms is simply Truth, as an ideal system of knowledge, of which our every thought is a partial realization. It has validity, not real existence. Aristotle's theory suggested, however, that the mind is active, the human understanding at work, in all knowledge, from sense-experience onwards. This conclusion was brought out first by Alexander of Aphrodisias—2nd cent. A.D.—(ib. p. 202). In Plotinus also (3rd cent.) consciousness is not merely the passive spectator of its own experiences, but a synthetic activity, grasping together, holding together and moulding the impressions it receives (ib. pp. 333, 337). Throughout the Medieval Period controversy as to mental activity resolved itself mainly into the relation of soul to body, or the problem of the relation of the finite to the Divine mind. In Avicenna (A.D. 980–1038) the intelligence is wholly unattached to any bodily organ, and its objects are wholly distinct from those of sense; on the other hand, he distinguishes, with Aristotle, between an Active and a Passive, each of which within the intelligence itself. The latter is only in the individual soul and perishes with it; the former is distinct and separate from the individual soul, is universal, one and the same in all, and it alone is immortal (Stöckl, Gesch. d. Philosophie des Mittelalters, ii. 1 § 12).
The question of ethical activity in its modern form first emerges in Averroës (A.D. 1126–1198). He distinguishes between beings which are active, i.e. act upon other beings, by nature, and those of which the activity is conditional upon desire. The powers of the former are determined to one thing, and must, when the corresponding conditions are satisfied, necessarily, be directed into the path of this end. The latter—beings which act from desire or choice—do not enter into activity necessarily, when a fitting object is presented, but are in themselves indifferent to the object, and may desire or choose the one thing, i.e. their choice is an activity according to the object and independent of it (ib. § 21). Some of the Muslim dogmatists denied that any source of activity exists in man or in any other finite being; all movement and activity in the created world depends directly and solely upon an external cause—viz. God. That definite events appear to follow upon definite causes is due to the fact that God observes the habit of allowing it so. Each process is an accident, momentarily created by God, according to the course prescribed to Himself. Man is not really will or act, God creates in him the volition and the act; man is thus wholly passive, the blind instrument of God's will. His activity is an illusion. These ideas return in Guilinco and the rationalists. The doctrine of the soul as a substance, and therefore a source of activity, was upheld by Albertus Magnus (13th cent.) and Thomas Aquinas (ib.), and prevailed, along with a side current of scepticism, until Descartes (1596–1650). In his metaphysical theory Descartes makes mind the diametrical opposite of body; the former being active, free, the body a pure automaton: the soul is nothing that is not spiritual, unextended, immaterial; no intercourse, therefore, is possible between soul and body, except by the Divine intervention. The soul produces its sensations from itself, on occasion of, but not through, the bodily excitations. In his Psychology, however, as Weber has pointed out (Weber, Hist. of Philosophy, tr. Thilly, p. 310; cf. Descartes, Traité des Passions de l'Homme), Descartes entirely contravenes these principles and speaks of the soul as united to the body, and as acting upon it and acted upon by it in its turn. In both Spinoza and Leibniz the special activity of the soul is knowledge; it is particularly its idea; its functions or perceptions are inadequate or confused. With Malebranche, a little later with Schopenhauer, but from a totally different standpoint, the centre of activity is transferred to the will—the mind in relation to the outward world. In the English Psychologists it is jointly placed in the will and in the inward power of combining, synthesizing, and transforming the ideas. In modern psychology, as we have tried to show above, the tendency has been to reduce one of these different forms of mental activity to the other.

ADAM.—x. The name. The Heb. ְ帐号(ʿādāh) is properly a common noun denoting 'mankind,' or 'human beings,' and is hence distinguished from ʿārāh. In Gn 1:26–28 (P), ʿādāh = 'mankind'; in 2:4–25 we have הָאֲדָם = 'the man,' i.e. the first man; in 5:2 it is used as a proper name. The etymology of 'Adam' is uncertain; Gn 2:21 Jehovah Elohim forms man (ʿādāh) of the dust of the ground (ʿādāmah) is not to be taken as a scientific derivation. The usual words for 'man' in the Semitic languages generally are not cognate with ʿādām. 'Adam' has been connected with an Assyr. adum, 'child,' 'one made,' 'created'; with the Heb. root ʿād 'red,' the name having orig. pointed race; Dillmann on Gn 1:2 suggests a connexion with an Eth. root = 'pleasant,' 'well-formed,' or an Arab. root = 'to attach oneself,' and so = 'gregarious,' 'sociable.' Any connexion with ἄνθρωπος, the hero of a Babylonian myth, is most improbable.

2. Adam in the OT.—The only references to Adam are in Gn 1–5, and in the dependent passage 1 Ch 1. The common noun ʿādām is misread as the name in AV of Dt 32:8 and Job 31:24; RV corrects Dt. but retains Adam in the text of Job, putting the correction 'of' after 'Adam' for 'like Adam' in the margin. In view of the OT habit of playing upon words, there may be a secondary reference to Adam in Job and possibly elsewhere; but as 'man' or 'mankind' gives a satisfactory sense, there is not sufficient ground for recognizing a secondary meaning.

In the Priestly narrative (P) of Creation (Gn 1:26–28) Jehovah Elohim creates 'mankind' (ʿādāh) in His own image, in two sexes, makes man supreme over all living creatures, bids him multiply, and gives him the fruits and grains of the earth to eat. But whereas it is said separately of each of the other groups of creatures, 'God saw that it was good,' there is no such separate utterance concerning man; he is simply included in the general statement, 'God saw every thing that He had made, and, behold, it was very good.' In 5:1–5 Adam is the ancestor of the human race; when he is 130 years old he begets Seth in his own likeness, after his image. Afterwards Adam begat other children, and died at the age of 930. 

In the Prophetic (J) narrative (Gn 4:24–46) Jehovah Elohim mounds 'the man' out of dust, gives him life by breathing into his nostrils the breath of life, and places him in Eden to dress and keep it. Jehovah Elohim also makes the animals out of the soil (ʿādāmah) in order that 'the man' may find a helpmeet; 'the man' names them but finds no suitable helpmeet. Jehovah Elohim builds up a woman out of a rib taken from 'the man' while he slept; the woman proves a suitable helpmeet. Jehovah Elohim makes 'the man' to eat of the fruit of a certain tree of the knowledge of good and evil' planted in the midst of Eden; but, tempted by the serpent, the woman ate of the forbidden fruit, and also persuaded the man.'
man to eat. Thereupon Jahweh Elohim drove them out of Eden, and men became subject to death. After the expulsion the man and the woman became parents of three sons; one of these, Abel, was murdered by his brother Cain; while formed for the Cain and Seth, became the progenitors of the human race.

These two narratives differ markedly in form; the Prophetic narrative is frankly anthropomorphic, while the Priestly narrative minimizes the supernatural element. Both are adapted from ancient Semitic traditions, but here again in Gn 1 the mythological element is reduced to language and framework, and is altogether subordinated to the teaching of revelation; whereas in Gn 2-4 the author is evidently glad to retain a picturesque story for its own sake as well as for the sake of its moral. In other words, he uses an ancient tradition as a parable, and we have no right to extract theology from all the details.

The two narratives agree in their pure monotheism, in representing man as the immediate creation of God, without intervention of angels, sons, or other intermediate supernatural beings; in representing him as a creation of God, and not as born of God by any quasi-material process; and in representing the human race as descended from a single pair. They are also substantially at one in other points: man is God-like; in the Priestly narrative he is made 'in the image and likeness of God, and passes that image and likeness' on to his children (as in the Parable of the Mustard Seed); in the Prophetic narrative man's life is the breath of God (Gn 2); in the Priestly narrative man is given the dominion over all other creatures; in the Prophetic narrative the animals are specially formed for man's service, and to receive their names from him.

It is characteristic of the Priestly narrative that its expressive moral is found in two points of ritual: man is to be a vegetarian, and to observe the Sabbath. The Prophetic narrative, on the other hand, is concerned with the moral life: the marriage tie is to be permanently binding, and marriage is spoken of in terms which imply a preference for monogamy. Man is under a divine law; God has provided for his welfare, and not ordained his abode, his work, his food. There is moral retribution; the disobedience of the man and the woman, wrong-doing, murder on the part of Cain, are punished; but even while Jahweh Elohim punishes, He still clothes the nakedness of the woman, and protects Cain from being put to death.

Passing to other features of the Prophetic narrative, we note the inferior position of woman, corresponding to her status in the East, suggested by her formation after man, from his body, and for his service; she is also the instrument of his ruin. Again, man enjoys immediate fellowship with God; and this is not terminated by the expulsion from Eden, for Jahweh converses in the same fashion with Cain as He does with Adam; and the dwelling-place of Cain as descendant of Eden is still thought of as being in the special presence of God. When Cain leaves this dwelling-place, he goes 'out from the presence of Jahweh' and feels that he will 'be hidden from his face' (Gn 4:14).

The original sin of man, the fatal source of all his misery, was inordinate desire, indulged in contrary to the Divine prohibition. This desire is comprehensive. It is sensuous: the woman sees that the tree is 'good for food'; it is aesthetic: 'it was a delight to the eyes.' Desire is also intellectual: the tree is 'the tree of the knowledge of good and evil'; the serpent promises that by eating it 'their eyes shall be opened . . . to know good and evil,' and the woman sees that the tree is 'to be desired to make one wise.' But the desire for the 'knowledge of good and evil' is not merely intellectual, it is also a desire for a deeper, more varied, more exciting experience of life, a desire to 'see life,' to use popular language. And as the serpent promises that by eating they shall become 'like gods,' this desire included ambition. In other words, the first sin consisted in defying God by giving the reins to the various impulses which make for culture and civilization. Similarly, in Gn 4:18-24 progress in civilization is due to the evil race of Cain.

The author of the source which the Prophetic narrator follows regards the life of man as accursed, a life of sordid toil, poorly rewarded, embarrassed by shame arising out of the sexual conditions of human existence, burdened by the pain of child bringing, and by her subjection to her husband. These evils are the punishment of the first sin, the consequences of the unwholesome appetite for luxury and culture, knowledge and power. Smend (Alttest. Rel. Gesch. 121 f.) has pointed out that this conception of desire does as descending from the Cainites, or the other portions of the Prophetic narrative; hence the author must have taken it over from older tradition, and it does not represent his formal and complete judgment on life, though he retains it as expressing one side of the truth.

Similarly, there are other theological implications which might be discerned by pressing details; but such implications are no part of the teaching which the Prophetic narrator intended to enforce; such details also are merely retained from ancient tradition: e.g. the feud between man and the serpent is retained as corresponding to the facts of life, but in the original story it was probably a reminiscence of the contest between Maruduk and the primeval Dragon.

Again, the story serves to explain the miserable estate of man and the sense of alienation from God; but it does not profess to explain the origin of evil or of sin. It is indeed implied that sin did not descend from man, but was due to suggestion from outside. Obviously we are not intended to deduce doctrines by combining features of the two narratives, otherwise we should be confronted by the difficulty that the serpent should be the instrument of the creatures whom God pronounced 'very good.' In the Priestly narrative the fact of sin is not mentioned till the time just before the Flood, when we are told that the earth was corrupt and full of violence (Gn 6:1); no account is given of the origin of this corruption. It is noteworthy that we are told that Adam transmitted the Divine likeness to Seth (cf. 5:2 and vv. 25); but no such statement is made as to Adam's other children. Possibly the divine likeness was a birthright of eldest son to eldest son, till it reached Noah, but not possessed by other men, hence their corruption; or again this likeness may have been shared by the descendants of Seth, but not possessed by other races. The Book of Chronicles simply traces the genealogy of Israel from Adam.

3. Adam in the Apocrypha and later Jewish literature.—As the first man, Adam occupies a prominent place in theology and tradition. An immense body of tradition gathered round the brief narratives in Genesis, and these were traced to Adam in the Apocrypha, however, are for the most part mere references to the accounts in Genesis. Thus 2 Es 3:10-19 is a summary of these accounts, followed in v. 21 by the comment, 'For the first Adam, bear

* As far as the Fall and Cain and Abel are concerned, only unimportant features of each story have yet been discovered in the Inscriptions of Western Asia; but the character of Gn 5-4 shows that the author is adapting ancient tradition.

* Not as in RVm 'desirable to look upon,' cf. Dillmann.
4. Adam in the NT.—Adam is mentioned in Lk 3:38 as the ancestor of Jesus, thus emphasizing the Incarnation, the reality of our Lord's humanity. In 1 Ti 2:14, the authority of the husband over the wife is deduced from the fact that Adam was 'first formed'; and that it was Eve, not Adam, who was deceived by the serpent. The idea that Adam was not deceived probably rests on some Rabbinical exegesis, e.g. the suggestion that Adam did not know that the apple Eve gave him came from the tree of life. Jude 14 has the casual reference, 'Enoch also, the seventh from Adam.' Also, 1 Co 11:8 supposes current, popular, and ready-made way in which women wore their hair, and as to their wearing veils, by the fact that the first woman was created from the man, and for the sake of the man, and not vice versa.

But the most important NT passages are Ro 5:12-21 and 1 Co 15:21-22, which state a parallel and a contrast between Adam and Christ. To a certain extent, Adam and Christ stand in the same relation to the human race; in each case the nature and work of the individual affects the whole race: Adam 'is a snare of death' (Ro 5:12). But while the one man Adam's one sin introduces sin and guilt and death, the one Christ's one act of righteousness justifies the guilty, restores them to righteousness, and enables them to reign in life. This 'one act of righteousness' is also spoken of as 'the obedience of one'; the general tenor of St. Paul's teaching identifies this 'act' with the death of Christ (Ro 5:18-21, 1 Co 15:21). St. Paul does not make it clear how, or in what sense, Adam's sin became the cause of sin, guilt, and death to his posterity. The statement of Ro 5:14, that 'death reigned from Adam until Moses, even over them that had not sinned after the likeness of Adam's transgression,' suggests that men were involved in the guilt and punishment of Adam apart from their own sins.

1 Co 15:21-22 is not prima facie quite consistent with Romans; and there is nothing to show that St. Paul had correlated the two sets of ideas. In Corinthians, mankind inherits from Adam limitations; and Christ enables mankind to transcend those limitations. The first man is of the earth, earthly, merely a living 'soul' (ψωφίς); and such were his descendants until Christ came. 'The last man,' 'the second man from heaven,' was 'a life-giving spirit' (σῖνα), and apparently communicates this pneuma to Christians, who resemble their Master, and bear His image. In other words, by the Incarnation human nature was raised to a higher plane. But again it is doubtful how far St. Paul would have been prepared to affirm all that his words imply. The idea of a higher and a lower Adam, of a heavenly and an earthly or earthly man, is found in Philo, in some of the Gnostic systems, and in the Qabbālā.

5. Adam in Christian literature.—The Patristic commentaries on the stories of the Creation and the Fall largely follow Jewish models, and often allegorize and ornament the narrative by legendary additions; while the Gnostic cosmologies anticipate and pave the way for the mysticism of the Qabbālā. Adam becomes a Gnostic Θεός. The Ophites speak of 'the spiritual seed or ἐξ άνθρωπος as an efflux ανά τοῦ θανάτου άνθρωπος ἀνάφλος Ἀδάματος,' Greek equivalents of the Adam Qadmon or Adam Elyon which figure in the Qabbālā.

1 See Budge’s “DB,” I.22, art. “Adam, Books of.”
2 Heschel, Rabbinical Commentary on Genesis.
ADAM'S BRIDGE—ADAM'S PEAK

To derive these Gnostic ideas from the Qabbala is an anachronism; both are developments of Rabbinical mysticism. Medieval and Protestant divines, especially Calvin following Augustine, develop the doctrine of Original Sin from St. Paul's teaching: "Thus Calvin: * 'He (Adam) not only was his own self, but he involved his posterity also. ... The orthodox, therefore, and more especially Augustine, laboured to show that we are not corrupted by acquired wickedness, but bring an innate corruption from the very womb. It was the greatest impudence to deny this." *

6. Adam in Islam.—The Muhammadans accept the Christian Scripture subject to the necessary correction and interpretation; they have also borrowed many of the Jewish legends. Adam, therefore, is an important person in their religious system; and they have adorned his story with legends of their own. For instance, on the site of the Ka'ba at Mecca, Adam, after his expulsion from Eden, first worshipped God in a tent sent down from heaven for the purpose; and Eve's tomb may be seen near Mecca; it shows the outlines of a body 173 ft. by 12 ft.; the head is buried elsewhere.

ADAM'S PEAK.—This is the English name, adopted from the Portuguese, of a lofty mountain in Ceylon, called, in Sinhalese Samanala, and in Fr. Samanta-kīta or Sinamata, and it is directly from the plains, at the extreme south-west corner of the central mountainous district, to a height of 7420 feet. The panorama from the summit is one of the grandest in the world, as few other mountains, though surpassing it in altitude, present the same grandeur and extent. The sea, and the sea and sea, with sandbanks and sandbanks, around are but small things when viewed from this peak.

The peak is best known as a place of pilgrimage to the depressed rock at its summit, which is supposed to resemble a man's footprint, and is explained by pilgrims of all religions in different ways. It is a most remarkable, and probably unique, sight to see a group of pilgrims gazing solemnly at the depression, each one quite undisturbed in his faith by the knowledge that the Peak is not a footprint of the Buddha, the Saiwadee regarding it as the footprint of Siva, the Christian holding it to be the footprint of St. Thomas, or perhaps admitting the conflicting claims of the eunuch of Queen Candina, and the Muhammadans who hold the footprint of Adam. The origin of these curious beliefs is at present obscure. None of them can be traced back to its real source, and even in the case of the Buddhist belief, about which we know most, we are left to conjecture in the last, or first."

The earliest mention of the Buddhist belief is in the Samanta Pādikā, a commentary on the Buddhist Canon Law written by Buddhaghosa in the first quarter of the 5th cent. A.D. This work has not yet been published, but the passage is quoted in full, in the original Pali, by Ekeke (pp. 50, 51). It runs as follows: *'The Exalted One, in the eighth year after (his attainment of) Wisdom, came attended by five hundred Bhikshus on the invitation of Maniakkha, king of the Nagas, to Ceylon; took the meal (to which he had been invited), seated the while in the Rata Mandapa (Main Pavillon) put up on the spot where the royal throne (afterwards) stood, and making the footprint visible on Samanta Kīta, went back to India.'* Seizing that Adam's Peak is a hundred miles away from the Kalyāni Dagaha, the classic at the back of Adam's Peak, Bock, and others, also accepts the view—not the Buddhist thinking it to be the footprint of the Buddha, but the Sinhalese, and the Buddhists who think it to be the footprint of Adam. The origin of these curious beliefs is at present obscure. None of them can be traced back to its real source, and even in the case of the Buddhist belief, about which we know most, we are left to conjecture in the last, or first."

"We, my lord, how our island is called Rama, the second of the Hindu Trinity—the god who preserves and supports the universe. The island of Ramesvaram, from which Rāma is supposed to have crossed to Ceylon over the causeway built by him, is therefore a sacred spot of pilgrimage, visited by thousands of Hindus every year from all parts of India. The famous temple of Ramesvaram, with its pilared corridors, 700 feet long, is perhaps the finest specimen of Dravidian architecture in India.

LITERATURE.—Rāmāyanā (Grihūṭā’s tr. and Romesh Dutt’s condensed tr.); for an account of the temple of Ramesvaram, see Ferguson, Indian and Eastern Archaeology.

ROMESH DUTT.

ADAM'S BRIDGE.—Rāma-sattva —Rāma's causeway.—A chain of sandbanks over 30 miles in length, extending from the island of Ramesvaram off the Indian coast, to the island of Manar off the coast of Ceylon. These sandbanks—some dry and others a few feet under the surface of the water—seem to connect India with Ceylon; and this fact has given rise to the tradition that they are portions of a causeway which was constructed by Rāma, the hero of the ancient Indian Epic called the Rāmāyana.

The story of the Epic is well known. Rāma, the prince of Ayodhya or Oudh, was banished by his king, his father, for fourteen years, and came and lived in a forest near the sources of the Gōdāvari, accompanied by his wife Sitā and his younger brother Lakṣmanā. During the absence of the two brothers from their cottage, Sitā was taken away by Rāvana, king of Ceylon. After long search Rāma got news of Sitā, and determined to cross over from India to Ceylon with a vast army of monkeys and bears to recover her. It was for this purpose that the causeway across the ocean is said to have been constructed. Rāma crossed over with the army, defeated and killed Rāvana, recovered his wife, and returned to Oudh. The period of exile had expired; Rāma's father would have ascended to his throne.

The building of the causeway across the ocean is described at great length in the epic poem. And after Rāma had killed his foe and recovered his wife, he is described as sailing through the sky in an aerial car—all the way from Ceylon to Oudh. The whole of India was spread below; and few passages in the epic are more striking than the bold attempt to describe the vast continent as seen from the car. It was then that Rāma pointed out to his wife, who was seated by his side in the car, the great causeway he had constructed across the ocean.

ADAPTATION

Adaptation and also on the basis of the lost Sinhalese history, the Adam's Peak legend is referred to in almost identical words and in the same abrupt manner. If, then, the few words about Adam Ansak and Pamaka have been inverted in a previous story, they must have been so inserted already in the lost Sinhalese Mahavamsa. It seems curious that we hear no more of these legends in the Sinhalese literature of the intervening period till almost all Sinhalese literature has been destroyed, and as what survives of it is still buried in Sis, this should not be deemed so surprising as it looks at first sight. It should perhaps be noted that in the local Sinhalese tradition, which the present writer heard when a magistrate in the adjoining district of Sitawaka, was that the footprint was discovered by King Walagamba Bahu, the successor of Asokamuni in the sixth century of the Christian era. But we have found no literary record of it. This remains to say with regard to the Pali evidence, that there is a poem called the "Samanta-Kité-sa" written at an uncertain date, and possibly by an author witha (who also wrote a popular collection of palm and elephant grammar in Sinhalese), who seems more careful of little correctnesses and little elegance than of more important matters. This work contributes nothing of value to the present question.

Fa Hian, who visited Ceylon about A.D. 412, mentions the footprint; and Sir Emerson Tennent (Ceylon, i. pp. 384-386), gives on the very excellent authority of the late Mr. Wyile, quotations from the Chinese records of Chinese geographers who speak reverentially of the sacred footprint impressed on Adam's Peak by the first man, who bears, in their mythology, the name of Pau-ku. It would seem probable that these geographers may have derived the idea from the Adamans. For there are large settlements of Arabs, or at least Mahommedans, in China, before they wrote; the Arab traders were rightly regarded as good authorities in matters relating to foreign countries, and they had already the idea of connecting the footsteps with Adam. The idea has been traced back in Arab writers to the middle of the 9th cent., and occurs frequently afterwards. Ibn Batuta, for instance, who saw the footprint of Moses at Damascus, gives a long account of his visit to the footprint of Adam on Adam's Peak. Whence did they derive the belief? Sir Emerson Tennent (vol. i. p. 135) is confident that it must have been from Gnostic Christians.

The evidence of the Saivite belief is much later. Ibn Batuta (circa 1340) mentions that four Jogis who went with him to the Peak had been wont yearly to make pilgrimage to it; and the Parakram Bâ Sirita (Parakkama Bâhu Charita), which is about a century later, mentions a Brahman returning from a pilgrimage to Anuradhapura, the Sinhalese name of the Peak. But neither does he say that the footprint was there; and indeed the latter says that the deity of the spot was Sumanâ. But in the Mahâvamsha (ch. 269?) it is stated that King Râja Sinha of Sítâwâka (A.D. 1581-1592) granted the revenues of the Peak to his courtiers. King Râja Sinha had slain his father with his own hand at the Bhikshadvara war. *

* James D'Alwis, Sinhalese Manuscripts in the British Museum, p. xlvii., put him in the 14th cent.; Wijsenbeek, Sinhalese Manuscripts in the British Museum, p. xlvii., in the 13th century. This may be the text of the Saivite source, as it is mentioned in the great Sinhalese Manuscript assigned to p. 72, Ganda Vanahan (JPTS, 1886) to Vadissara, who belongs to the 12th cent. a.n.

‡ Schwartz's translation, p. 251.

had declared they would not absolve him of the crime; the ascetics said they could; so he smeared his body with ashes and adopted their faith, that of Siva. The Sanna or grant, issued by King Kirti Sri of Kandy in 1751, making a renewed grant to the Buddhist Bhikshu at the Peak, calls it the Saivite fagioi Aniydiasa. Possibly the Saivite tradition may date from this event. But it may also be somewhat older. In the Thatchana Kallâsa Mâmmiyam, a Tamil legendary work on Trincomali, it is said that rivers flow from the Peak out of Siva's foot there. The date of this is altogether unknown, and the present writer has seen only the extract given by Skeen (p. 295).

Whatever opinion they hold about the footprint, both Tamils and Sinhalese consider the deity of the place to be Samaan Dewiyo, as he is called in Sinhalese, or Sumanâ (also Samanta) as he is called in Pali. His shrine still stands on the topmost peak just beneath the pavilion over the footprint, and his image has been reproduced by Skeen (p. 258). Skeen also gives (p. 256) a ground plan and woodcut of the buildings on the Peak. Sir C. Tennent (ii. 140) gives a ground woodcut of them as they appeared in 1858; and Dr. Rost, in the Journal of the Royal Asiatic Society, 1903, p. 656, gives two woodcuts, one of the upper pavilion and one of the footmark. On the little rock plateau at the top of the mountain is only about 50 by 30 ft. — there is the boulder on the top of which is the footprint covered by a pavilion, the shrine of Samaan Dewiyo, a shrine containing a small image of the Buddha recently erected, and a hut of wood and plaster work occupied by the Buddhist Bhikshus. The four who were there when Rost visited the Peak told him that they had not been down from the mountain for four years. They complained of the cold, but said that otherwise they were quite contented, and had much time for study, and showed him their palm-leaf books. Rost says that the depression in the rock is now 5½ ft. long by 23 ft. broad, and that the heel of the footprint is well preserved, but the toes are not visible, being covered by the wall of the pavilion.

LITERATURE.—Tennent and Rost as cited above, and William Skeen, Adam's Peak, Colombo, 1850.

ADAPTATION.—Almost every detail of inherited structure and congenital behaviour shows fit adjustment to the needs and conditions of life, and may be spoken of as an adaptation. Wherever we look throughout the wide world of animal nature, we find illustrations of particular fitness to particular conditions. The size, the shape, the colour of an organism, the structure of parts in relation to their use and in their relations to other parts, the everyday behaviour and the only occasional activities, e.g. those concerned with reproduction, — almost every detail of structure and function is adaptive. The term may be used simply as a descriptive adjective, implying that the structure or function in question is fit, effective, well-adjusted, making for the preservation or well-being of the species. * This purely biological usage it has also a theoretical implication, that the detail in question —if it be more than an individual accommodation, more than an individually acquired modification—is the result of a process of evolution. It was not always as it is now, it has a history behind it, it is the result of evolution, whatever these may be (see EVOLUTION).

The structure of a long bone in a mammal is adapted to give the utmost firmness with the minimum expenditure of material. The sole pollen-basket on the hind legs of worker-bees is adapted to stow away the pollen; the colours and patterns on the wings of leaf-insects are adapted to harmonise with the

* A full translation of the Sinhâsa is given by Skeen. See p. 295.
foliage on which they settle; the parts of flowers are often adapted to ensure that the insect-visiters are dusted with pollen, and thus to secure cross-fertilization; the leaf of the Venus Fly-trap is adapted to attract, capture, and digest flies; the peacock is adapted to captivate the peahen; the mother monkey for the prolonged prenatal life of the young; the so-called ‘egg-tooth’ at the end of a young bird’s bill is adapted to the single operation of breaking the egg-shell;—and so on, till the whole of the animate world is indeed a mistake to dwell upon signal instances of adaptations, since (apart from degenerative changes in old age, morbid processes, inherited vices, or vestigal structures, and certain ‘indifferent’ characters which are not known to have any significance) almost every detail of structure and function may be regarded as adaptive.

To gain a clearer idea of what is one of the most difficult and fundamental problems of biology, it may be useful to consider briefly—(1) effectiveness of response; (2) plasticity; (3) modifiability, which lead on to the conception of adaptiveness.

1. Effectiveness of response.—One of the characteristics of organisms, as contrasted with inanimate systems, is their power of effective response to environmental stimuli. The barrel of gunpowder can respond to the external stimulus of a spark, but it responds self-destructively; the living creature’s responses tend to self-preservation or to species-preservation. A piece of iron reacts to the atmosphere in rusting; it becomes an oxide of iron and magnesia; but what it is to do, or how it is to respond, is a problem of primary and fundamental power of effective response; it is part of our conception of life. In some degree it must have been possessed by the first and simplest organisms, though it has doubtless been improved upon in the course of evolution. Without wrestling words, it cannot be said that inanimate systems ever exhibit effectiveness of response. A river carves through a soft rock and circles round a hard one, a glacier carves mountains in a single age, a snail grows in the course of many years. But it cannot be said that there is any advantage to river, glacier, or crystal in the way it behaves. The biological concept is plainly irrelevant. The nearest analogues, perhaps, to organic effectiveness of response may be found in the movements of inanimate machines, but the analogy is little more than a pleasing conceit, since the machine is a materialization of human ingenuity and without any intrinsic autonomy.

2. Plasticity.—But in addition to the primary inherent power of effective response, we must also recognize that living creatures are in different degrees plastic. That is to say, they can adjust their reactions to novel conditions, or they can, as we seem bound to say, try first one mode of reaction, and when another, and another, and another, and another, and another, and another, until that which is most effective. Thus, Dallinger was able to accustom certain Monads to thrive at an extraordinarily high temperature; thus Jennings reports that the behaviour of certain Infusorians may be compared to a pursuance of ‘the method of trial and error’; thus some marine fishes are plastic enough to live for days in fresh water. How much of this plasticity is primary or inherent in the very nature of living matter, how much of it is secondary and is acquired by the individual during the course of ages, must remain in great measure a matter of opinion. Each case must be judged on its own merits. It is certain that many unicellular organisms are very plastic, and it seems reasonable to suppose that, as differentiation increased, restrictions were placed on the primary plasticity, while a more specialized secondary plasticity was gained in many cases, where organisms lived in environments liable to frequent vicissitudes. It is convenient to use the term accommodation for the frequently occurring functional adjustments which many organisms are able to make to new conditions. When a muscle becomes stronger if exercised beyond its wont, we may speak of this temporary individual acquisition as a functional accommodation. See ACCOMMODATION.

3. Modifiability.—Advancing a third step, we recognize as a fact of life that organisms often exhibit great modifiability. That is to say, in the course of their individual life they are liable to be impressed by changes in surrounding influences and by changes in function, that, as a direct consequence, modifications of bodily structure or habit are acquired. ‘Modifications’ may be defined as structural changes in the body of an individual organism, directly induced by changes in function or in environment, which transcend the limit of organic plasticity and persist after the inducing conditions have ceased to operate. They are often inconveniently called ‘acquired characters.’ Thus the man’s skin living organisms persist, to a certain degree, through half a lifetime in the tropics, that it never becomes pale again, even after migration to a far from sunny clime. It is a permanent modification, as distinguished (a) from a temporary adjustment, and (b) from congenital swarthiness.

It is admitted by all that both temporary adjustments and more permanent modifications may make for survival or for an increase of well-being. Some favour survival in the long run, and others may also be indifferent (as far as we can see), or they may even be injurious to the organism as a whole, e.g. when an important organ, in response to inadequate nutrition or stimulus, is arrested at a certain stage in its development. In themselves, however, they seem always in the direction of at least local effectiveness. It is difficult to bring forward any instance where the reaction is in itself in the wrong direction. It may spell degeneration, but it cannot be assumed that this degeneration is always attained in other members of the species or in antecedent species, but the degeneration is in itself an effective response to the conditions thereof. A growing organ which does not receive adequate nutrients may stop growing; but while this may be injurious to the organism as a whole, it may be actually beneficial, and in any case it is the most effective response the organ as such could give.

The change-provoking stimulus may imply conditions with which the organism cannot possibly cope, but the parts primarily affected may be said to do their best within the limits of their modifiability. Even a pathological process like inflammation, set up in response to intrusive microbes, is an effective reaction, and may be useful, if not useful. When a mammal taken to a colder climate acquires a thicker coat of hair, when a plant similarly treated acquires a thicker epidermis, when an area of skin much pressed upon becomes hard and callous, when a shoemaker in the course of his trade develops certain skeletal peculiarities,—and hundreds of examples might be given,—we call the results adaptive modifications. The changes are effective, useful, fit,—they may even make for the organism’s so-called ‘natural selection’ to some extent. But the need for existence is keen. And yet these adaptations are not what are usually meant by ‘adaptations.’ For this term (used to denote a result, not a process) is most conveniently restricted to racial adjustments, that is, to characters which are inborn, not
ADAPTATION

acquired; which are expressions of the natural inheritance, not individual gains. It goes without saying that though these adaptations are potentially implicit in the germinal material—in the fertilized ovum—they cannot be expressed without appropriate ‘nurture’; that is a condition of all development. But the truly adaptive—what is theoretically the most difficult distinction to make in practice—quite different from acquired adaptive modifications, which are not innate though the potentiality of their occurrence necessarily is. According to the Lamarckian hypothesis, adaptations are due to the cumulative inheritance of individual modifications; but as satisfactory evidence of the hereditary transmission of any modification as such or in any representative degree is, to say the least, far to seek, and as it is difficult to conceive of any mechanism whereby such transmission could come about (see HARDWY), some other origin of adaptations must be sought for.

4. Origin of adaptations.—Within the limits of a short article it is impossible to discuss adequately a problem so difficult as that of the origin of adaptive modifications. So the origin of species is one of the fundamental—still imperfectly answered—questions which the interpreter of animate nature has to face. We cannot do more than indicate the general tenor of the suggestions which evolutionists have offered.

(a) According to the Lamarckian theory, racial adaptations are due to the cumulative inheritance of individual modifications. But there is a lack of evidence in support of this interpretation, plausible as it seems; it is difficult to conceive of any internal mechanism whereby a change acquired by a part of the body can affect the germinal material in a manner so precise and representative that the offspring shows a corresponding change in the same direction. Moreover, there are many known cases where any such transmission of modifications certainly does not occur.

(b) The general Darwinian theory is that adaptations are due to the selection of those inborn and heritable variations which, by making the possessors better adapted to the conditions of their life, have some survival value. It is a fact of observation that in many groups of organisms the individuals fluctuate continually in various directions. These fluctuating variations appear as if they followed the law of chance; it is also a fact of observation that some of these variations increase the survival value of their possessors. It is inferred that the cumulative inheritance of these favourable variations, fostered by selection in any of its numerous forms, and helped by the elimination—gradual or sudden—of forms lacking the variations in the fit direction, or having others relatively unfit, may lead to the establishment of new adaptations. The greatest difficulty in this argument is to account of the origin of the variations, and this has to be met by the accumulation of observational and experimental data bearing on the origin and nature of variations. It is also necessary to accumulate more facts showing that the selective pressures—acting directly on fluctuating variations—do really bring about the results ascribed to them. To many, furthermore, it appears that more emphasis should be laid upon the power that many animals have of actively selecting environments for which the variations they possess are adapted. Hence it is necessary to refer to the probable importance of some of the many forms of Isolation.

(c) The work of recent years—notably that of Bateson and De Vries—has made it plain that, besides the continually occurring ‘fluctuating variations,’ there are ‘discontinuous variations’ or ‘mutations,’ where a new character or group of characters not only appears suddenly, but may come to stay from generation to generation. It cannot be said that we understand the origin of these mutations, in which the organism in many of its parts seems suddenly to pass from one position of organic equilibrium to another; but the result of these mutations occurring is indubitable, and their marked heritability is also certain. Mendel has given at once a demonstration and a rationale of the fact that certain mutations, when once they have arisen, are not likely to be swamped, but are likely to persist, unless, of course, acquired modifications; hence horticulture, in particular, artificial selection has operated in great part on mutations. If this interpretation be confirmed and extended, it will not be necessary to lay such a heavy burden on the shoulders of selection. But more facts are urgently needed, and how and under what conditions mutations—whether adaptive or non-adaptive—occur, remains an unsolved problem.

(d) In his theory of Germinal Selection, Weismann has elaborated an attractive subsidiary hypothesis that the present germinal mechanism consists of a complex—a multiplicity—of organ-determining particles (the determinants), he postulates a struggle going on within the arca of the germ-plasm. Supposing limitations of nutrition within the germ, he pictures an intra-germinal struggle in which the weaker determinants corresponding to any given part will get less food and will become weaker, while the stronger determinants corresponding to the same part will feed better and become stronger. Thus the theory suggests a possible mechanism by which the survival of any form with a favourable variation may influence the subsequent variational direction of that form. The determinants are supposed to be variable—everything living is; for each character separately heritable there are in the germ multiple determinants (paternal, maternal, grand-parental, ancestral); these are not all of equal strength; there is a germinal struggle and selection, the strongest asserts itself in development, and the resulting determinate corresponds in character to the victorious germ. If we assume that the resulting determinant is of survival value, those organisms which have that character tend to survive, and their progeny will tend to keep up the same strain. But while the external selection is proceeding, it is being continually backed up by the germinal selection. Thus nothing succeeds like success.

(e) Various evolutionists—Professors Mark Baldwin, H. F. Osborn, and C. Lloyd Morgan—have suggested that although individual adaptive modifications may not be transmissible, they have indirect importance in evolution, by serving as life-preserving screens until coincident inborn or germinal variations in the same direction have time to develop. As Lloyd Morgan puts it—(1) ‘Where adaptive variation $s$ is similar in direction to individual modification $m$, the organism has an added chance of survival from the coincidence $m+s$; (2) where the variation is antagonistic in direction to the modification, there is a diminished chance of survival from the opposition $m-s$; hence (3) coincident variations will be fostered while opposing variations will be eliminated.’ As Groos expresses it, in reference to some instinctive activities—Imitation may keep ‘a species afloat until Natural Selection can substitute the lifeboat heredity for the life-preserver tradition.’ As Mark
Baldwin states it, the theory is 'that individual modifications or accommodations may supplement, protect, or screen organic characters and keep them alive until useful congenital variations arise and survive by natural selection.'

Working on the difficult problem of adaptations, we must remember the importance of the active organism itself. As Professor James Ward has well pointed out, it may seek out and even in part make its environment; it is not only selected—it acts as well as reacts. And although the details and fitness of this may have been elaborated in the course of selection, the primary potentiality of it is an essential part of the secret of that kind of activity which we call life.

J. ARTHUR THOMSON.

ADELARD.—Adelard of Bath (Philosophus Anglicus) occupies a distinctive position among the schoolmen of the 12th cent., as a chief representative of the philosophic doctrine of 'Indifference.' He was one of the mediating theories in the great medieval conflict as to the nature of universal conceptions (genera and species) and their relation to the individuals comprehended under them. It lies between the extreme Realism on the one hand, which attached substantially only to the universals, and the extreme Nominalism on the other, according to which generic conceptions were mere names, while reality belonged only to the individuals. It tends, however, to the side of Nominalism, inasmuch as it gives up the substantiality of universals, and makes the universal to consist of the non-different elements (indifferentia) in the separate individuals, which alone subsist substantially.

Everything depends on the point of view from which the individuals are regarded: accounted for as attention is fixed on their differences or their non-differences, they remain individuals or become for us the species and the genus. Thus Plato as Plato is an individual, as a man the species, as an animal the subordinate genus, as a substance the most universal genus.

This doctrine of Indifference was probably first stated in Adelard's treatise de Ecodum et Diverso, composed between 1105 and 1116. [It has recently been edited by H. Willner in I. Gesch. d. Philos. des Mittelalters, ed. by C. Bäumker and G. v. Hertling, Münster, 1903.] Adelard seeks to reconcile Plato and Aristotle, and says:

"Since that which we see is at once genus and species and individual, Aristotle rightly insisted that the universals do not exist except in the things of sense. But since those universals, so far as they are called generic and species, cannot be perceived, the doctrine of the imagination, the doctrine of the individual. Plato maintained that they existed and could be known by a superior sense, to wit, in the Divine mind. Thus these men, though in words they seem opposed, yet held in reality the same opinion."

The doctrine of Indifference was also represented by Boethius (died as bp. of Lon, 1174), whom some indeed have regarded as its originator, while others again have traced it to a supposed late view of William of Champeaux.

Besides the above-mentioned treatise, Adelard wrote in a wide range and a wide range and acquired great physical learning, especially from the Arabs, out of whose language he translated Euclid. He teaches that the knowledge of the laws of nature should be united with the recognition of their dependence on God's will. He says: 'It is the will of the Creator that herbs should grow from the earth, but this will is not without reason.' Mere authority he compares to a hatter, and desiderates that reason should decide between the true and the false.

ADIAPHORISM.—Three meanings of this word are given in the dictionaries: (1) the theory that some actions are indifferent, i.e. neither bad nor good, not being either commanded or forbidden by God, either directly or indirectly; so that they may be done or omitted without fault; (2) the theory that certain rites or ceremonies, not having been either commanded or forbidden by God, may freely be used or omitted without fault; (3) the theory that certain doctrines of the Church, though taught in the word of God, are of such minor importance, that they may be despised with impunity by the foundation of faith. [Although use of the word can be found in good authors, it is a question whether it is accurate.]

J. Actions.—Very early in the history of the Christian Church the gospel began to be conceived as a new law. Perhaps the wider meaning of the word 'law' had something to do with this. But it was to be expected that those who had grown up under a system of rigid prescription, not only in the rites and ceremonies, but in the observances and the details of personal conduct,—a prescription, moreover, that had Divine authority,—should be unable to conceive any other method of moral life. It is not strange, therefore, that L. James (12) speaks of the gospel as 'the perfect law of liberty.' The early converts to the gospel had been heathen; the customs in which they had been bred were abhorrent to a Jew; they were corrupting; and therefore those new-made Christians had to be taught and drilled in the first principles of morality. In the Early Church, before the books of the NT had been written and for many years afterwards, the OT was the word of God read in their assemblies for worship; and its prescriptions for conduct, its rules of ceremony, and its religious institutions became authoritative. It seems likely that a legalistic conception of Christianity must always preponderate in a community recently won from heathenism. Such converts remain under tutelage, and discipline, if it is to be rigidly exercised, until the fundamental principles of right living are wrought into their conscience.

Mareon urged the rejection of the OT Law. As the Church began to spread through all classes of men, and to have part in the whole of their daily life, it began insensibly to accommodate its ascetic rules to the necessities of the case. Gradually there grew up a distinction between a law of morals incumbent upon all men and a higher rule of life voluntarily assumed, but when once assumed, of the lasting obligation. The authority of the Church thus made a man might earn a higher reward than was due to the simple observance of the commandments of God (consilia evangelica). And might even deserve enough of God to be able to transfer some of his merit to others (opera supererogationis). An ascetic life was looked upon as holier than the observance of the duties of one's calling in the world. To the commandments of God were added the commandments of the Church.

The Reformers had assimilated this notion of an esoteric and artificial righteousness. The moral injunctions of Jesus and His holy example are for all alike. The works of our calling are the sphere in which to serve God. No one can fulfil the law of God, much less can any one exceed it. All are
dependent upon God's mercy; and, forgiven for Christ's sake, depending upon that grace and thankful for it, are to go forth to the performance of daily duty, pleasing Him by childlike, not by the excellence of what they do.

It has been charged that the immediate result of the Reformation was a deterioration of morals, especially in the lowest corner of morals and morals was taught, no efficient external discipline being at hand to take the place of the ecclesiastical rules and jurisdiction of the older time (see Döllinger, *Reformation*). A more successful effort was made under Calvin to hinder and to refrain from the cultivation of rigid unreasoning habits or by the adoption of a formal law (Frank, *Theologie der Concordienformel*, iv. 18 ff.).

But Christian freedom has its limits. These limits are external and internal. Our liberty must not become a stumbling-block to the weak, sinning against the brethren, wounding their conscience when it is weak' (1 Co 8:8-13). Some things that are lawful edify not (1Co 8:9); they contribute nothing (6). We are not to live in the moment, wasting the material of everlastism, who regard the OT Law as still in force in all its regulations, even concerning meat and drink.

To appreciate the answer which Christ gave to this question, we must bear in mind that the Pharisaism which He refuted endeavoured to secure by 'putting a fence around the Law,' consisting of conventional and artificial rules of life. Those who vigorously observed these the Pharisees accounted meritorious; and they put such stress on these comments and additions that by them they made the law of God of no effect. Our Lord rebuked the substitution of a human law for the simple law of God, and also the exaltation of human rules of life to the same sanctity as belonged to the revealed law. He required the inward service of the heart. Jesus was not as ascetic in the usual meaning of that word. He accepted invitations to the table (Lk 7:36), He honoured a wedding-feast (Jn 2:1), He spoke sympathetically of the children playing in the streets (Lk 18:16), He commanded Mary's sacrifice of percy creature of God to be all she could do. He submitted to be called a wine-bibber and a glutton (Mt 11:19). Neither was St. Paul an ascetic. It is evident that he did not consider it essential to his personal salvation to make distinctions of meats (Ro 14:3-5, 14-15) in order to raise questions about the life of the entertainment (1 Co 10:27), or to avoid social pleasures (*ibid.*); and he could look upon and talk about the games of Greece with no word of abhorrence or disapproval (1 Co 9:9-12). In writing to Timothy (1 Ti 4:2-3) he foretold those errorists who would 'forbid to marry, and command to abstain from meats, which God created to be received with thanksgiving by those which believe and know the truth.' For every creature of God is good, and nothing is to be refused, if it be received with thanksgiving and with prayer. 'Meat will not commend us to God,' he says (1 Co 8:8); 'neither, if we eat not, are we the worse; nor, if we eat, do we the better' (see also 1 Co 7:8-9, and cf. He 5:14). It is evident that a sphere is left for Christian freedom, in which a man may, may not, use his own judgment, and in reference to which good men may differ, and no man may condemn his brother. Here we have the justification of what are described as merely aesthetic activities of human life, in which the natural delight of man in simple enjoyment has place, and where the law of beauty is supreme rather than the law of duty. No doubt St. Paul would have barred these out, because of 'the present distress' (1 Co 7:9); but his 'opinion' in contradistinction from 'the com-

mandment of the Lord' allows them, though with the important condition which has yet to adduce. They derive a sanction from the constitution of man. Under this category we put the drama, music, art, all recreation. We therefore assert that there is a sphere for the freedom of a Christian. He is not under a positive law which extends to every corner of his life. He does not move in the sphere of a moral necessity. He must exercise judgment and choice. He must abound more and more in knowledge and all discernment, and prove the things that are different (1 Th 5:21). It is wrong for us to hinder and to refrain from the cultivation of rigid unreasoning habits or by the adoption of a formal law (Frank, *Theologie der Concordienformel*, iv. 18 ff.).

But Christian freedom has its limits. These limits are external and internal. Our liberty must not become a stumbling-block to the weak, sinning against the brethren, wounding their conscience when it is weak' (1 Co 8:8-13). Some things that are lawful edify not (1Co 8:9); they contribute nothing (6). We are not to live in the moment, wasting the material of everlastism, who regard the OT Law as still in force in all its regulations, even concerning meat and drink.

To appreciate the answer which Christ gave to this question, we must bear in mind that the Pharisaism which He refuted endeavoured to secure by 'putting a fence around the Law,' consisting of conventional and artificial rules of life. Those who vigorously observed these the Pharisees accounted meritorious; and they put such stress on these comments and additions that by them they made the law of God of no effect. Our Lord rebuked the substitution of a human law for the simple law of God, and also the exaltation of human rules of life to the same sanctity as belonged to the revealed law. He required the inward service of the heart. Jesus was not as ascetic in the usual meaning of that word. He accepted invitations to the table (Lk 7:36), He honoured a wedding-feast (Jn 2:1), He spoke sympathetically of the children playing in the streets (Lk 18:16), He commanded Mary's sacrifice of percy creature of God to be all she could do. He submitted to be called a wine-bibber and a glutton (Mt 11:19). Neither was St. Paul an ascetic. It is evident that he did not consider it essential to his personal salvation to make distinctions of meats (Ro 14:3-5, 14-15) in order to raise questions about the life of the entertainment (1 Co 10:27), or to avoid social pleasures (*ibid.*); and he could look upon and talk about the games of Greece with no word of abhorrence or disapproval (1 Co 9:9-12). In writing to Timothy (1 Ti 4:2-3) he foretold those errorists who would 'forbid to marry, and command to abstain from meats, which God created to be received with thanksgiving by those which believe and know the truth.' For every creature of God is good, and nothing is to be refused, if it be received with thanksgiving and with prayer. 'Meat will not commend us to God,' he says (1 Co 8:8); 'neither, if we eat not, are we the worse; nor, if we eat, do we the better' (see also 1 Co 7:8-9, and cf. He 5:14). It is evident that a sphere is left for Christian freedom, in which a man may, may not, use his own judgment, and in reference to which good men may differ, and no man may condemn his brother. Here we have the justification of what are described as merely aesthetic activities of human life, in which the natural delight of man in simple enjoyment has place, and where the law of beauty is supreme rather than the law of duty. No doubt St. Paul would have barred these out, because of 'the present distress' (1 Co 7:9); but his 'opinion' in contradistinction from 'the com-
lapse of time and under changing circumstances. All rites and ceremonies instituted by men are subject to the judgment of Christian conscience enlightened by the word of God.

In the Silver Age of the Reformation a warm controversy among Lutheran theologians was precipitated by the attempt of Comenius to compile a code of ceremonies which he thought the church should follow. The controversy raged about the possibility of a vague formula which might be interpreted in two ways, one of which the one side had rejected because they served error, and the other regarded as sacred and necessary. Placius was the protagonist on the one side; Melanchthon was the target. The matter and the controversy are more clearly than is done in the Formula of Concord, 1580.

* * *

1 For the settlement of this controversy, we believe, teach, and confess with one consent, that ceremonies or ecclesiastical rites (which had been neither commanded nor forbidden by the Word of God, but instituted only for the sake of decency and utility), if they are Divine Worship or any part thereof, are to be allowed. For it is written (Heb 10:19): "In desire do they worship me, teaching for doctrines the commandments of men." The Churches of God everywhere throughout the world, and at any time, have the right to change such ceremonies according to necessity, in whatever way it may seem to the Church most serviceable for its edification.

2 But in so doing all levity should be avoided and all offense, and especially care be taken to spare those weak in the faith (1 Cor 8; Ro 14).

3 Times of persecution, when a clear and steadfast confession is required of us, we ought not to yield to the enemies of the Gospel in things indifferent. For the Apostle says (Gal 6:1): "Stand therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage;" and Co 2:14: "Harmoniously vailed with the beloved sister." For what fellowship is there between light and darkness?" etc.; also (Gal 2:12): "To whom we gave place by subjection, that the outward man might be perfected by sufferings, unto the praise of his name." For in such a state of things the dispute no longer concerns things indifferent, but concerning the truth of the Gospel and the preservation and protection of Christian liberty, and how to prevent open idolatry and the protection of those who would weak in the faith against offense. In matters of this sort we ought not to yield anything to our adversaries, but it is our duty to give a faithful and sincere confession, and patiently to bear whatever the Lord may lay upon us and may permit the enemies of His Word to do to us.

4 No Church ought to condemn another because Church observed more or fewer of outward ceremonies which the Lord did not institute, if only there be between them consent in all essential and in the right use of the Sacraments. We believe and truly said it was said of old: "Disagreement as to fasting does not dissolve agreement in faith." Psalms and condemnation of these false teachings, as contrary to the Word of God, viz: that human traditions and constitutions in matters ecclesiastical are to be considered by themselves as the religion of God or a part of the worship; that such ceremonies and constitutions should be forced upon the Church of Christ, as against the Christian liberty which the Church of Christ has with reference to outward things of this sort; that in time of persecution, when a clear confession is required, the members of the camp may be placated by the observance of things of this sort that are in themselves indifferent, and that it is permitted to agree and consent with them—a thing detrimental to heavenly truth; that outward ceremonies, because they are indifferent, should not be observed, as if the Church of God were not free in Christian liberty to use this or that ceremony which it may deem useful for edification.

5 (See Planck, Gesch. des Prot. Lehrrichts, iv.; Jacobs, Geschichte der protest. Erziehung, 2. t., Bickel, Das Dogmat. Interim.)

There remains the question whether each person has a right to change the ordinances of the Church according to his own judgment and taste, observing such as lie pleased, and omitting those of which he disapproves. Inasmuch as these rites and ceremonies are things indifferent, and as the custom of the Church, lest he be disorderly (2 Th 3:6, 1 Cor 11:22), Again, it may be asked by what test a rite or ceremony handed down in the Church is to be estimated. The Augsburg Confession (Art. vi.) that rites should be observed that contribute to unity and good order, and the Apology for the Confession (iv. 33), that the Church of God of every place and every time has power, according to circumstances, to change such ceremonies in such manner as may be most useful and edifying to the Church of God. A further question may be raised, as to the authority of good taste, of artistic canons, in regard to the forms and accessories of Christian worship. In this matter, without doubt, edification is of more value than artistic merit, and all must yield to the instinct of Christian love.

3. Dogmas. In order to answer the question suggested by the third definition, the distinction between a 'dogma,' a 'dogrine,' and the 'faith' must be clearly established. Dogma is the result of an analysis of the faith, and the word is properly restricted to those statements of Christian truth which have been finally declared by the authorities of the Church and accepted by the Church in its Confessions. A dogma is always subject to examination and challenge. Not even a Council of the Universal Church is infallible. Even the Ecumenical Creeds must justify themselves to the Christian consciousness by their evident agreement with the word of God. Dogrine is an explanation and elaboration of the faith which has not yet crystallized into dogma. The Faith is the gospel— the 'faith once delivered to the saints' (Jude).

Dogmas can be understood either in the original sense in which they were written, or, as they were, and are, approved by the Church, or in the sense in which they are apprehended by any age. It is conceivable that a student may discover a deflection of popular and universal faith from the idea which the original authors of a. Confessional dogma may have set forth in it. Every dogma must be understood in relation to the entirety of the faith. Each age gives especial attention to different aspects of the faith. The 'spirit of the age,' its conception of human duties and rights, its philosophical notions, colour its explanations of Divine truth and cause the emphasis laid upon different aspects of it to vary. From its own standpoint every age and clime develops first doctrine, then dogma. That, finally, is recognized as Christian dogma quod semper, quod ubique, quod ad omnium creditur. Securus judicat oribus terrarum.

Edward T. Horn.

Adibuddha (the theistic system of Nepal, including its Buddhist antecedents, Dharmasas, etc.).—Introduction.—Abel Remusat stated in 1831 that the 'learned of Europe were indebted to Mr. Hodgson for the name of Adibuddha.' And it might almost be said with truth still that nowhere else do we find a more complete account of the theory of the theistic Buddhists of Nepal (Astravis) than Hodgson has given in his Essays. Unitarian and theistic Buddhism, after having aroused keen interest, fell later into neglect, when attention was drawn to primitive or ancient Buddhism, especially by the works of Spence Hardy and Burnouf. The result of the iconographic discoveries and the Tibetan studies of the last few years seems to have been to bring it again into greater prominence. It is, however, because, although more 'Alexandrian' than Buddhist, Buddhist in fact only in name and in so far as it employs Buddhist terminology, it nevertheless is, as it were, the consummation of the philosophical, mystical, and mythological speculations of the Great Vehicle, and differs from several other systems, widespread in the Buddhist world, only by its markedly 'theistic' colouring. The system of the Astravis is, in effect, merely the half-naive (i.e. theistic), half-savite (i.e. pantheistic) interpretation of the ontological and religious speculation of the Great Vehicle in the last

stage of its development. It differs from it sufficiently clearly, however, to justify Burnouf in recognizing in the system of the Adibuddha a new kind of Buddhism—a third (or a fourth) Buddhism*; and, in order to give the reader a just appreciation of the significance of this new interpretation of Buddhism, before unheard of, it will suffice for the purpose to mention Adibuddha: 'Of all that proceeds from causes the Tathāgata has explained the cause,' was transformed into, 'Of all that proceeds from causes the Tathāgata is the cause.'

A further characteristic of the Adivārikas of Hindu and Nepalese thought, the absence from their theology of every feminine, tantric, and magical element. It is well known that Hodgson had recourse for his information to native scholars, whom he ceremoniously styles 'living oracles,' and who, in support of their statements, supplied him with fragments of texts, which were not all authentic. These mutilated testimonies, this tradition arranged with a view to meet questions conceived in an altogether European spirit, are, as far as the absence of the element is concerned, confirmed by the Svayambhūpurāṇa, which is not very tantric. We do not, however, believe that, even apart from the wide and comprehensive nature of its mythology, Nepalese theism has in reality ever been quite free from intermixture of Saivite thought.

Plan and division.—As the problem has not been examined in its entirety for a long time, and as much light has been thrown upon it by recent research, we propose to state it here, as completely as possible, from the doctrinal point of view, of course; for we shall willingly dispense with legendary, iconographic, and ritual details.

The interest of Adibuddha systems (for there are at least two of them) lies chiefly in their relation to genuine Buddhism and to Hinduism. It will be most convenient (I.) to give a brief account of those Adibuddha systems which are more or less well known, and (II.) to inquire into their antecedents, often obscure and problematic, beginning with the sources, so that we may be able in this way (II.) to 'locate,' the systems in question, doctrinally and historically, and to present a more accurate appreciation of them.

As most of these antecedents will demand separate treatment (see Avalokiteśvara, Lotus of the True Law, Mahāyāna, Mañjuśrī), a brief reference will here suffice. We shall consider ourselves to Buddhist ground, for, although this long elaboration of the elements of the Buddhist systems of Adibuddha may be inexplicable without Hinduism, it will be sufficient to note, in passing, the points of contact.

I. ADIBUDDHA SYSTEMS.—1. Adivārika system (Hodgson's sources).—There is an Adibuddha or Pravramadibuddha (Tib. dba-po san-srags, megh- gi dba-po ... skyob-mi ...), i.e. first Buddha, the system is in question, doctrinally and historically, and to present a more accurate appreciation of them. As most of these antecedents will demand separate treatment (see Avalokiteśvara, Lotus of the True Law, Mahāyāna, Mañjuśrī), a brief reference will here suffice. We shall consider ourselves to Buddhist ground, for, although this long elaboration of the elements of the Buddhist systems of Adibuddha may be inexplicable without Hinduism, it will be sufficient to note, in passing, the points of contact.

I. ADIBUDDHA SYSTEMS.—1. Adivārika system (Hodgson's sources).—There is an Adibuddha or Pravramadibuddha (Tib. dba-po san-srags, megh-gi dba-po ... skyog-mi ...), i.e. first Buddha, the system is in question, doctrinally and historically, and to present a more accurate appreciation of them. As most of these antecedents will demand separate treatment (see Avalokiteśvara, Lotus of the True Law, Mahāyāna, Mañjuśrī), a brief reference will here suffice. five Buddhas of contemplation. They are not, however, incarnations of them, but rather ‘reflexes,’ pratibimba, ‘magical projections,’ nirmanakaya.

2. It is difficult to date Hodgson’s sources. The same difficulty applies to the poetical version of the Tantric Buddha, which is not a translation of the prose version of the same text. In this prose edition, the only one which the Tibetans have preserved, there is, indeed, a passage which, according to the edition of the Adiprajna, not to mention the verse edition with the title Siddhakshara, which is the unique Tantras of Jina and seems to be the basis for the five Buddhas of the Adibuddha, Adivinayaka (first protector) appears at the beginning (hada-vardhana) in the form of light (yodrinyu). He is the meditative Buddha of the five Buddhas and beats Aksobhya-kara as demigurge. It is not said that he creates the five Buddhas, but rather that he is made up of the parts of the five Buddhas.

3. The name ‘Adibuddha’ or ‘Paramadibuddha’ appears in many ancient documents. According to Cosma, who was the first and only one to determine this chronology, this name and the system to which it is attached are closely connected with the Rikalakacharya, a tantra openly Saiavite in its inspiration, which was probably introduced (?) into India in the 10th cent. and into Tibet in the 11th century.

Now, however, it is a recognized fact that the Tantras are much older than is used to be thought. If it should at least be noticed that Mahāyāna (q.v.) is called Adibuddha in the Nāmasamāgiti (500 A.D.) undoubtedly earlier than the 10th cent., if it is the case, as Taranātha believes, that Chandragomin, a contemporary of Chandrakirti (7th cent.) wrote a commentary upon it. It is not necessary to discuss the question whether the interpretation, given in the commentaries of the Nāmasamāgiti and numerous tantric works, was accepted at the time when, according to this tradition, the work itself was composed.

There were good reasons for ascribing to Mahāyāna, the Adibuddha, an Adibuddha, inasmuch as he is the personification of the knowledge whence Budhisattva, viz., ‘a Jñānasattva,’ in other words the Dharmakāya (see below) or the Dharmadhavagātā. His attributes, in iconography, are the sword which destroys ignorance and the book of the Prajñāpāramitā, the supreme book. King of sages (Vidūṣa), Lord of the Holy Word (Vagīṣṭha), he is in his eternity (trīkāta) a symbol of the Dharmadhavagātā, with a symbolism transparent enough, in the same way as the Prajñāpāramitā (later known as the Adiṣṭhamajñā in very orthodox texts is called the mother of the Buddhas. Even if, as the texts inform us, he is ‘made up of a part of the Tathāgatas,’ and, consequently, the five Buddhas emanate from his person; or if the icons please the five Buddhas on his head, or in the halo of radiance with which he is crowned; if his four faces, together with the fact that he is the spouse of Sarasvati, bring him singularly close to Brahmā, these are conceptions which do not alter his original character any more than does his accidental identification with Ananga, the god of Love, or with Siva, etc. Mahāyāna is Adibuddha, because he is the king of the Prajñā.

4. Although in certain documents Mahāyāna is a tantric Adibuddha, his origin is on the side of purely philosophical speculation. The Tantras have an Adibuddha of a different nature, nearer to Siva-Brahma than to Buddha. The Vajrasattva-Vajradhara, whom later on we shall have occasion briefly to discuss.

II. ANTEDENTS OF THE ADIBUDDHA SYSTEM.

—By more or less well-defined steps we can follow the evolution of Buddhism from its origin (Little Vehicle) to the doctrines of the three bodies and the Dhyanibuddhas.

1. Buddha in quas-nirvāna.—(1) We shall see (Agnosticism in Buddhism) that, according to the doctrine of the Vaibhāṣyavādins, and perhaps the Sthaviras, nirvāna can scarcely be anything else than annihilation. The canonical texts, however, are much less definite. It is said that the Buddha in nirvāna ‘made the grasp of the intelligence impossible, as it is impossible to measure the waters of the ocean, they have no measure.’ The whole of the Prajñāpāramitā (later known as the Adiprajna) is made up of the passage which, according to the view of Ananda, who has an idea of nirvāna as an undefinable state, very different from nothingness. This is, however, the old meaning of the word nirvāna.

(2) It is not a matter of orthodoxy, as a matter of fact, to sift the question of nirvāna, and to solve it in an unorthodox and Brāhmaṇical way, in order to people the heavens with divine Buddhas. For a ‘sutta’ of the first order represents Sakyamuni as possessed of the power of prolonging his earthly existence to the end of the kalpa (see AGES OF THE WORLD [Buddhist]). There is no doubt that it was early believed that he continued to live ‘invisible to gods and men,’ and the new theology proved less absurd. According to the Buddhavat (§ 2), a Buddha lives for a hundred thousand millions of kalpas, or more, without the beauty of his complexion being marred. Sakyamuni did not live eighty years! Only the Tathāgatas understand the vast duration of his life.

(3) The Mahāvastu relates that Sakyamuni, and as a rule any Buddha, or even a future Buddha

See Foucher, Iconographie bouddhique, Part II, and Jñānaśravamahājudrī-adibuddhaskandha, Jāpya 61. Mahāyāna is also the patron of art, architecture, and image-makers; see Haraprasad Śrāti, Cat. Durbar Library, levii.

He is nisakāja. As regards the office and work of a Buddha before nirvāna, according to the Little Vehicle, Dīya 1, 160, 17; Mahāvastu, I, 61; compare and contrast the vows of Amitābha in the Bhūkātantrāṣṭra.
ADIBUDDHA

(Bodhisattva) during his last existence, has the appearance of hesitating, thinking, speaking, acting, suffering as we do. This, however, is wholly due to his condensation. In reality this marvellous being is superior to all such emotions, and remains a stranger to them. To maintain the contrary is hereby. The body of the future Buddhas is entirely spiritual. There is nothing 'mundane' in them. A Bodhisattva has really no father, no mother, no son, etc.

This 'hyperphysical' system (lokottaravāda) is more precisely set forth in the Vetalayāka school. According to that sect the teaching, Sakyamuni did not appear in person in the world, but deputed an image of himself to represent him (cf. DOCTISIM).  

(4) The Mahāvastu says that many ages ago Sakyamuni took the vow of Bodhi in the presence of another ancient Sakyamuni. The same book speaks of eight thousand Buddhas of the name of Dipankara, . . . of three hundred millions of Sakyamunis.* If we identify this ancient Buddha with ours, make all the Dipankaras, all the Sakyamunis, all the Dhanavijayas, etc., into one single Dipankar, one single Sakyamuni, and adopt the docetic theory of the Vetalayakas, we obtain the system of the 'Lotus of the True Law.' Countless ages ago, may rather in the beginning, Sakyamuni became Buddha; his appearances on earth, in which he seems to become Buddha, to enter into nirvāṇa, are purely magical. Although it was quite late when the Mahāvastu received its final shape, the characteristics to which we have drawn attention seem to be ancient. For the Lotus the termānus ad quem is A.D. 265. As for the docetic theory, it is held to have been condemned at the Council of Pataliputra (circa B.C. 246). Although the historical existence of the Council may be doubtful, the impression remains that the Buddhas had early reached the following conceptions:—

(a) Sakyamuni survives his earthly parinirvāṇa, and prolongs the 'trance' (dhāyana), from which he has never in reality issued since the moment that he became Buddha. There is no occasion, therefore, for the Bodhisattvas, in the meantime, when he will enter really into nirvāṇa. 'The Blesses Buddhas, well equipped with knowledge and merit, fields of benevolence and compassion, shelters of the multitudes of beings, holding a perpetual concentration of mind, are neither in the samādhi (worldly) nor in nirvāṇa' (exaptāta nirvāṇāvivākṣā). So it is said in the Dharmaśīlātātra.†

(b) In the orthodox theory (Vaibhāṣyāvādin), Sakyamuni on becoming Buddha entered 'nirvāṇa with residue,' the residue being the body without an active 'soul' or thinking organism, which nevertheless continues to live and speak. But no speaking is possible in dhāyana, therefore this body is only magical. Very probably the Buddhas sometimes, in addition, Sakyamuni during the whole of his earthly existence had only been the magical substitute of the real Sakyamuni, who had long since entered into eternal Buddhism.

The steps are as follows:—The Bodhisattva comes from the budhā, or budhavatva, to enter a human womb. The Budhā remains in the Tūṣā heaven [is it there that he became Buddha?] We do not know, and produces a double of himself. The Budhā, while he has been Budhā, becomes Buddha, or for such a long time that it comes to the same thing, reigns high up beyond the Tūṣā; he acts and saves creatures, it is because

* Cf. Kern, Jhansāil, 66, n. 2. The budhāontology and mythology of the Mahāvastu are contrasted, see, for instance, in p. 308, where the five (human) Buddhas are confronted with the three (Dipankaras). Cf. Harth, Journal des Savants, 1899.

† The same doctrine is found in the Sūtratattvagrabhāṣā. Sūtrabodhisattvas are represented in Avalokiteśvara (t.e.), and Mahāsūtrāntaka (t.e.), the Sūtrabhūdika or the Sūtra who is in personified by the Buddha, and who is in the body of the Buddha who beheld him. Thus it can be said with Waddell (Buddhism of Tibet, p. 319) that the Buddhas have two 'real bodies,' a buddhā-body and a non-buddhā-body. See art. Mahāvīra.

2 Celestial Buddhas are, in fact, no more real than their magical reflexes. From the very moment that a Bodhisattva becomes Buddha he is merged in 'nirvāṇa' or 'voidness '; but, owing to his merit as a time, or for so long a time that it comes to the same thing, reigns high up beyond the Tūṣā; he acts and saves creatures, it is because

+ Sūtra, n. 302. Cf. na buddhā parinirvāṇo na dharmaḥ parinirvāṇo (Sūtra-bhāṣya). The identification of 'nirvāṇa,' with some state of beatific meditation is clearly indicated by the Lotus of the True Law, ch. xi; cf. Kern, Geschichtsa.in, li. 166. Elsewhere dharmākaya = sudbhākaya.
ADIBUDDHA

buddhas’ was fixed, the number was not very uniformly ob-
serve. At one time eight or nine Bodhisattvas of the first
rank are shared very unequally among the buddhas; another,
each Buddhas, a single Bodhisattva, whose name is usually
colourless and seems to be derived from the sculptures.

3. Confusion of the Buddha and the Bodhi-
sattvas. In the preceding discussion it follows
that the relations between Buddhas and Bodhi-
sattvas are complex and do not lend themselves
to precise definition; there is often a confusion be-
tween the two concepts, and traces of this con-
fusion are easily found. In the Mahāvastu the
Bodhisattvas, from the very first stages of their
spiritual development, receive the title of ‘perfect Buddhas.’
In the Bodhicharyavatāra, the work of a very careful theologian, the
Jinas, or the Buddhas who have attained Buddhahood and are
in enjoyment of a quasi-nirvāṇa, are evanished in the
world; they are entreated to delay their parinirvāṇa.
Avalokita, a Bodhisattva by nature, is
at least once termed Bhagavat, and there
are numerous texts in which the Buddhas are active.
In the Mahāvastu, however, it is necessary to come down
as far as the Kārāṇḍavyūha (p. 91, 8) to read in so many
words that nirvāṇa is accompanied by thought.

We have seen that, spiritually regarded, the
Buddhas are by the three fathers and
to the Bodhisattvas, who
are not, from the mystic of the point, of
may be, and has been, interpreted upon a twofold
principle. The first, which is at one and the same
time Buddhist and Brahmanical (see p. 89), is
that of the Nirvāṇa the Upanisad; the
second, genuinely Hindu, is that of process or emanation (see p. 100).
These two principles are
in other respects very closely connected.

Concerning this mysterious relationship between
the Bodhisattvas and the Bodhisattvas
is valuable information to be got, on the one hand, from the
sculptures of Gandhāra, Magadha, etc.; and, on the
other, from texts clearly related to iconography,
whether they inspired the latter or were themselves inspired by it.
We shall begin with the evidence of the
texts.

In the Amītyāurdhvānāsūtra, Avalokita, who
is only a Bodhisattva, besides the hundreds of ‘magical’ Buddhas (see p. 89) radiating from his
body, has his heads, and magical, that is to say, emanating from Avalokita.
Mañjuśrī, a Bodhisattva raised to the dignity of
Adibuddha, sometimes bears on his head small
figures of the five Dharmānubhuddhas, to signify that he has
emanated them. Conversely, the five Buddhas separate themselves from him (ephuratsparivatChatadhatagata); and the
carving that illustrates this expression actually rep-
resents them ranged above his head, following the
profile of the statue; which is merely another way
of setting them in order in the generating hale.

On the other hand, the ancient sculpture places
five Buddhas in the attitude of meditation in the
frieze above five Bodhisattvas.† It is, we think,
reasonable to recognize in these five Buddhas Śa-
kyamuni’s predecessors, and Mañjuśrī, i.e., the ‘historical’ Buddhas of our age.‡
They are not saints who have attained nirvāṇa, for the Lotus
distinguishes clearly between the Buddhas who
have passed away and of whom only stūpas remain,§ and
the Buddhas ‘provisionally eternal,’ whose
contemplative existence is indefinitely prolonged,
such as Amītyā and Śākyamuni. Some
would recognize in them the so-called Dharmānubuddhas,
and assign to one of them the name of Amītyā.

This seems to be a hazardous inference, even when

† See Burgess, ‘Elura Cave Temples’ in ASW, vol. 5, pl. 29;
§ See JRAS, 1906, p. 390. When the Buddha is going to
preach the Law, five fences miraculously appear.

‡ The Thātoṣ, however, assigns to five (see Tantra).
This doctrine of the three bodies was stated to
by Schmidt, Grundriss des buddhismus. See also
Jahn, Inschriften von Pattadambā (Ztschr. f. Ind. Altert., 1906, 1),
Trīkāya (=triṃśā) is a name of the Buddha (Trīkāya).

The Buddha, as identified with the Bodhisattva Śākyamuni, is
called Tripurūra (Kern, Vermerning, 32). But in the present
writer’s opinion, this conception of the Triad (Dharma, Buddhas,
the idea of ‘procession,’ which is wrongly attached to
the word Dharmānubuddha, is rejected, and it is
in harmony with the doctrines of the Lotus to
suppose that the Buddhas are here represented in
the quasi-nirvāṇa which is their rational state.
If, further, they assume the attitude of teaching,
this is referable to their hands double the p. 98),
and if they act and save creatures, it is because a
Buddha always preserves some of the character-
istics of a Bodhisattva.

This activity, however, is not their proper func-
tion; and the Bodhisattvas, placed below them in
the relief, are their servants for the present and
their successors in the future, having entered later
and independently of them on the road that leads to
Buddhahood. Nevertheless, in these motionless
saints, placed above the Bodhisattvas and provided
with lotus and thunderbolt, we have the prototypes
of the Jinas and Dharmānubuddhisattvas of Hodgson.

Somewhat later, apparently, we find in sculpture
a symbol which draws closer the bonds between
the Buddha and the Bodhisattvas. We refer to the
practice (perhaps of Greek origin, for it is met
with at Palmyra) of placing a miniature image of a
Buddha in the tiara of the future Buddha.
It was, we believe, first employed in the case of
Avalokita, whose relation with the head of 
Buddha which emanates from the head of Avalo-
kit in the Amītyāurdhvānāsūtra, is that of a
Buddha-father, but rather that of a Buddha-patron.
And this interpretation, which we believe is founded
on the literature, justifies the three heads which we have
found above regarding the Buddhas in the Gān-
dhāra frieze.

If we come down to the time attested by the
śāhas, or tantric incantations, and perhaps it
will not be necessary to come down very far,
the practice of thus placing a small figure in the
tiara has become classical, and the position of the
five Dharmānubuddhas is fully established.*
They are seen on the heads of numerous divinities, especial-
lly when they are in the company of the Buddhas, and in the
images of Buddha-fathers. They bear
as husband’s rather than fathers.
A sixth Buddha, Vairasattva, also appears (see p. 99).
In the case of Mañjuśrī, as we have seen, the
five Buddhas are all united in a single head-dress.

4. Doctrine of the Parida. This
one contradictory data which have just been set forth are
fused into a theology, or rather a Buddology,
which, taking them all into account, justifies especially the
antithesis of the Dharmānubuddha,
the so-called human Buddha, and the Bodhisattva.
But this theology goes beyond the mythological
and polytheistic conceptions of the Buddhism of the
Great Vehicle, and tends towards the unitarian
systems which form the subject of this article.

The Buddhism of the Great Vehicle is summarized in
the texts which enumerate the triads or
(kāya). This doctrine has been alluded to above,
and we shall now state it in its least unorthodox
form, which is undoubtedly the most ancient.

Buddha has three bodies: dharmakāya, sambhā-
ra-kāya, nirvāṇa-kāya.†

* For the five Dharmānubuddhas in Japan, see K.dasānaya,
Muse Guimet, 1890; at Java, in 779, Minutes of the Buddhists
Society, April 1886, and Dakakusa, J.Taking, p. xvii.
† The Thātoṣ, however, assigns to five (see Tantra).
This doctrine of the three bodies was stated for the
first time by Schmidt, Grundriss des buddhismus. See also
Jahn, Inschriften von Pattadambā (Ztschr. f. Ind. Altert., 1906, 1),
Trikāya (=triṃśā) is a name of the Buddha (Trīkāya).

The Buddha, as identified with the Bodhisattva Śākyamuni, is
called Tripurūra (Kern, Vermerning, 32). But in the present
writer’s opinion, this conception of the Triad (Dharma, Buddhas,
The dharmakāya, or 'body of the law,' is the real identical nature of every Buddha, and of every being. The ancients, without using the word, gave to the thing the name of dharmamāṇḍam dharmatā, 'the manner of being of that which is,' that is to say, of being produced by a cause and of being transpersonal. The Mādhyamikas, on the other branches of the scholastic Great Vehicle, and evidently the older, made it clear that by this term must be understood the 'void,' śūnyatā. There is no difference between nirvāṇa and sammāthā, the latter expressing the successive existence of phenomenon which has the true character of the void, or of the external disguise of this character, every individuality, is mere appearance. On entering nirvāṇa the individual takes possession of his dharmakāya, which, as we have seen, is the 'void.' But under the name of 'void,' which was identical with the 'element of things' (dharmadhatu), it was easy to understand a real substratum, free from any form which could be understood or expressed in words. The Mādhyamikas themselves are not always on their guard; and the Yogāchāras, who form the other great school of the Mahāyāna, have taken the 'void' to mean unreality of the phenomena, reality of the absolute, or the 'mere thing' (vastumātra). Admitting the existence of thought alone, they saw in the dharmakāya, which is the 'outside the speculation, hostagāthaka' (i.e. the identical nature of all beings (bhūtatattvād, dharmaṅdhatu), thought in its quiescent state (ālayavijñāna), whence issue, by a series of illusions, all individualities and all characters.

The nirvṛttadhatu, or magical body, like the different illusions which every magician can produce, is the body which Sākyamuni displays to men from the moment when he became Buddha.†

The 'real' body of the Buddha (the body of the law not being a body at all) is the body of the sambhogakāya, a supermundane body, marked with the thirty-two signs, etc., in which the Buddhas enjoy their full majesty, virtue, knowledge, and blessedness. It is the privilege of saints to perceive this body, which belongs to the world of Buddhas, not to the human world. When Kṛṣṇa (who is only a nirvṛttadhatu) showed his 'true' form to Arjuna, it was a marvellous sight, a symphony of light and jewels, a symphony of knowledge and love, for it ceases lessly proclaims the voice of the True Law (rta-rātri). It is the source of the joy of the Bodhisattvas. Its home is in the Land of Amitābha (Akanisthābhavana, elsewhere Sukhāvati, Vulture Peak, etc.). Yet the first person, from a chronological point of view, to whom a sambhogakāya, a body of bliss, is ascribed, is not, as the present writer understands it, a Buddha, but a Bodhisattva, viz. Avalokiteśvara. It is remarkable that the classical doctrine of the three bodies is silent upon the glorious form of the Bodhisattva in general. These distinctions, however, on the one hand, form so strange a way as the human world, that they are, in reality, of no importance. All these conceptions merge into one another, and in exact theology the sambhogakāya is just as illusory, on its side, as the nirvṛttadhatu. The latter is a Salāgī (nothing) to do with the Three Bodies. An icon is raised to the dignity of representing the dharmakāya by a special consecration, and particularly by the introduction of relics, of bands covered with dhāraṇīs, etc. (Grīnvedel, Myths, 111).

* This śūnyatā is termed acarya in the mystic and tantric schools.

† The 'real extremity' or 'end of the being,' bhūtakāla, the place where the being ceases, that is, the śūnyatā, nirvāṇa. But at the same time it is the crowning thing and their first principle (primary cause). Compare what the Chinese philosophers made of the śūnātākāra, 'aspects of nothingness,' a creator who receptive and uncreated. See above, 1, 170.

‡ It is clear that this body, since it has neither blood nor bones, cannot leave any remains; its nirvāṇa is only illusion, na buddhaḥ pratirūpaṁ (Sūryagārabhadra).

1. Dhyānabuddhas.—At first, however, the progress made in mythological and religious speculation is neither so great nor so rapid as in ontological. The Mādhyamikas regard the dharmakāya as the essence from whom every germ of rebirth had been by himself destroyed; who survived the destruction of the germ of rebirth as the 'living emancipated one,' and at death entered into nirvāṇa, nothingness or mystery. He was afterwards assigned a place among the 'never-reborn saints,'† termed in Pali Akanisthāgāmino, who attain nirvāṇa after having ascended from one heaven to another to the summit of the world of forms. He therefore possessed an acquired and perishable sambhogakāya. When it was understood that he lived in taking the 'void' to mean unreality of the phenomena, reality of the absolute, or the 'mere thing' (vastumātra), it was evident that Vairochanas, the most glorious Buddha, and all the Madhyamikas, were equally, and exhaustively, said the same things. The Azayavijñana, quoted in the previous note, is a self-contradictory being. In principle there has never been but one dharmakāya, while the worlds are inhabited by millions of Buddhas, who have a right to this dharmakāya, and succeed more or less in appropriating it, and who in their sambhogakāyas are so many celestial Jinás or Dhyānabuddhas. Each of them, as such, has control of a 'Buddha field' (Buddhaksetra), of a world more or less blessed according as he has conceived his mission as Bodhisattva. Moreover, every Buddha has his own domain, and when he pleases, in his magical body (nirvṛttadhatu), or is replaced for this purpose by a worthy Bodhisattva.†

The imagination which runs riot through the universe is subordinated to religious instinct. There must be gods, but there need not be too many. Among the innumerable Buddhas there is one, Amitābha, the Buddha of the setting sun, the god of Infinite Light, who, thanks to his ancient vow, has won for himself the happy office of presiding over a universe in which there is no death, no evil destiny, 'the Land of Infinite Light,' a paradise, open to the gods of ours. There are none but Bodhisattvas, and only a few Arhatas. That world is a

* For further details see J.R.A.S., 1906, p. 943 ff. The one branch of the Great Vehicle is at once Siva, the various forms of Siva, and the multitude of created beings. It is worthy of note that according to Wessely, the Saktisthas (of the Little Vehicle) acknowledge the sambhogakāya.

† Köpen (ii. 93) is of opinion that there is some relation between the five so-called Dhyānabuddhas on the one hand and the four trances and the Anāgāmin (never-reborn saints) on the other. There is no evidence in support of this view. But the Anāgāmins seem to furnish a good illustration of what a Buddha may be after his apparent destruction.†

‡ The doctrinal theories, therefore, undergo several modifications. Atimitābha, a visible form, is named sambhogakāya. He is, however, described as dharmakāya, a qualification which he alone is permitted to him only so far as he is Vajradhāra, according to the passage cited by Foucher, Isomorphie, ii. 24; and, regarded as sambhogika, he receives the name of Amitābha. In the same way Akṣobhya is the name of the dharmakāya, whose sentient appellation is called Vajraśānti, as found in the Lankasāndhī (for the two Vairocana and two Ratnasambhavas). A very unorthodox relationship is thus established between the three bodies and the three worlds of formlessness, of form, and of desire (ākāśikā, ākāśikā, kama). But the dharmakāya is in principle quite a different thing from the arūpa.†

Among the most curious enumerations, that of the thousand Buddhas of our age, published by Schmidt (Mém. de la Soc. de St. Pé, 6th ser., I), in which Vairocana and Amitābha are made of the śūnyatākāra, 'aspects of nothingness,' a creator who receives the name of Akṣobhya (S. 100, 167, 351, 999), gives a fairly clear idea of the system of the present Madhyamika. See also J.R.A.S., i. 1709. See further, Mahāvaipulya, iii. 999, where Vairocanaabhadra is the most glorious Buddha.
'Happy Land,' a Sukhdvati, or, as the Visnupurana says, a Sukhd. Although Maitreya has a paradise, a Buddha, who at different times attracted the attention, now of religion, of mythology, or again of mysticism. From among the myriads of Buddhas they are chosen to represent at one and the same time the dharmakaya and the sambhogakaya. As they are connected with the five human Buddhas, the five magical appearances of our age, it may easily be inferred that the number five originates in this ancient enumeration; and that just as the human Buddhas may have one or more Buddhas of the same name, so too religious or ontological, so our names seemed ill fitted to designate their sublime 'substrata.' In the same way as Sakyamuni, as eternal, bears the name of Amitsyas, and as uncreated light, of Amitabha, so Maitreya, also known as Akshobhya, and Maitreya Amoghasiddhi. But Kern has warned us repeatedly that it is dangerous to be too enthusiastic; and as the Dhyanibuddhas, these have taken the place of the Dhyanibuddhas, much better attested in literature and more historical, so the Dhyanibuddhas, who are called the Brilliant (Vairochana), the Imperishable (Akshobhya), the Jewel-born (Ratnasambhava), the Sure-Success (Amoghasidh), are in the fifth, sixth, seventh, etc., colours, whereas it is certain that there are five Indras, five Rudras, five Kusikas, Kern suggests that for the same reasons there are five Dhyanibuddhas. And we are quite willing to believe that it is in mysticism, in idolatry, in the solar cosmogony, etc., that we must look for the predominating factors in this divine nrsi.

Such is the polytheistic system of the Dhyanibuddhas. Even when Vajradhara is given only a secondary place, as the second body of Akshobhya, the whole of this system is always an integral part of it. Every Buddha, at least in his 'blissful' form (sambhoga), has a wife, and begots a Bodhisattva; he is brought into relation with a mandala, with a dharana, an element, etc. It is attained in various ways, either by raising to the presidency one of the five Buddhas, usually Vairochana, or by the sixth, a Buddha, at times a combination of the five elements, the five skhandhas, or the five Buddhas. His wife is Vajradhavarti. But it is possible to attain this system by the psychology which is essentially practical, with its physiological presuppositions quite clearly defined, and aiming at the reinstate- ment of the faithful in its true nature, and the attainment into Vajradhara. He has but to take possession, by means of the combined rites, of the bodhisattva essence, of the 'thunderbolt-body' (vajrakaya) in its most perfect form.

2. The Adibuddha system consists, properly speaking, in superimposing on the five or six Buddhas (Vajradhara included) a Being who, however invisible and inactive he may be in principle, is recognized as Buddha, i.e., Vairochana, is identical with Siva. On Vairochana as an Auro, see Vuyut, 171, 5; as a Maitri- pika god in Lalitavistara, see Monier-Williams Dict., p. 1025. On the pre-emminence of Vairochana consult also Sieni, Mand- oed, book, p. 178, and Swed, Myth, p. 120, et seq., etc. In Japan, the identity of the Siva of the Auro and the Siva of the Shingon sect, Nippon Jidosha, p. 172, n. 24, Mv. Guimet, Bib. d'Études, t. viii., especially the Society who Vajradhara or Vajradhara is a respect from Sakyamuni, as a god analogous to the Adibuddha of the old (7) school of the Tibet. The Tibet regards Vajradhara as an emanation of some kind, or, as it is called 'buddhis-reflexes' from Akshobhya (Lamkim, p. 362).

1 Buddhaist Art in India, pp. 39, 40. It is the same system for Vajradhara in the sculptures of the Adibuddha of the old (7) school of the Tibet, of the Adibuddha of the old (7) school of the Tibet. The Tibet regards Vajradhara as an emanation of some kind, or, as it is called 'buddhis-reflexes' from Akshobhya (Lamkim, p. 362).

1 Buddhaist Art in India, pp. 39, 40. It is the same system for Vajradhara in the sculptures of the Adibuddha of the old (7) school of the Tibet. The Tibet regards Vajradhara as an emanation of some kind, or, as it is called 'buddhis-reflexes' from Akshobhya (Lamkim, p. 362).
nevertheless a god. His body, which is a 'body of law,' is called samantabhāda, 'universally propitious,' a title borrowed from the Bodhisattva of that name. There are attributed to him the thirty-two marks, etc., of the Buddhahas and of Great Men, which are, as we saw, the character-istics of the befitting body. More fortunate than Brahma, he is worshipped. The ordinary Buddhhas, etc., are not his 'reflections' in an inferior world; he is different from them, for they proceed from him at a fixed moment of his existence. In place, therefore, of the underlying and scarcely visible identity of the ten formally ontological system of the five Buddhhas, there is substituted emanation or creation by means of dhāyāna.

It is evident that such a doctrine of the Adibuddhas is as much theistic as Buddhist. We must not, however, be led astray by words. If there is a shade of difference here, it is only a shade. Truth, as far as Buddhism knew it, is to be found not in Adibuddhas of the Advaita, but in the worship of the celestial Bodhisattvas.

The doctrine of emanation, although it has its connecting links and its ultimate origin on the side of Hinduism, has, nevertheless, a raison d'être in Buddhism. Here we see the final step of the speculations which converted Sākyamuni into a master magician, into the Vajrayāna, a system of the magicians, Yogis, to use the usual term. This character becomes evident when it is noticed that cosmic emanation is fashioned on the pattern of the creations by means of dhāyāna.

What, then, is the ultimate difference between the system of emanation and the orthodox doctrine of the Great Vehicle? The Great Vehicle taught identity and the essential nothingness of things; but, while thus far very orthodox, it considered individual beings to be distinct from their very beginning. The saṅghā, has no beginning; it is the result of ignorance (avidyā), which is primeval. The saṅghā is the same thing as nirvāṇa, but nirvāṇa will not be realized until the end.

On the other hand, the Great Vehicle does not confuse magical creations (nirmitakas) with real beings. The latter do not actually exist under the form which they adopt and by which they are known. But at least they are known, and they are truly existent illusions; while there is no real thought of magical creations. As regards the first point, however, nothing was more logical than to suppose the 'womb of the Tathāgata' originally virgin, to make the cosmos issue therefrom, and to represent it as returning again in nirvāṇa. The Brahmanas had paved the way, and this system fitted in admirably with the doctrine of cosmic revolutions in the course of the ages. And, as far as the second point is concerned, although ancient speculation, comparatively sober and self-confident as it was, refused to ascribe thought to the magical creations of magicians, it is doubtful whether we are justified in drawing the same conclusion when the magician is the dharmakāya personified under the form of a meditative Buddha. What he sees in his meditation is real and, as it were, autonomous, since it does not exist except this meditation and we ourselves are thought. The absolute idealism of the Yogāchāras and the nihilistic monism of the Madhyamikas entail all these consequences whenever they are brought into cosmogonic mythology.

ADOLESCENCE 101

philosophy of the Hebrews: 'A rebuke entereth deeper into one that hath understanding than an hundred stripes into a fool' (Pr 17:10).

1. Admonition, as a means of maintaining social discipline, whether in the family or in larger social group, has been and is a part of the laws and customs of peoples in almost all stages of civilization. It exists among the primitive races of the Indian peninsula; it is a recognized part of Muhammadan penal law, and it held a place in the penal code of ancient Rome. [Ulpian, ‘De jure civili’ (ad. 1894), ii, 28]. When the Christians of Apostolic times began to form themselves into organized communities, admonition was one of the principal methods of upholding and enforcing ecclesiastical discipline. Admonition was a duty that was to be performed by all the Christian workers and all the Christian communities (Gal 6:2, 1 Th 2:1, Ti 4:2, 2 Ti 4:2; Herma, Vis, ii, 43), and it was incumbent on every believer to admonish a brother overtaken in a fault (1 Th 5:14).

Admonition in the primitive Church was of two kinds: (a) private, pastoral admonition, and (b) public admonition before the assembled congregation. Public admonition consisted either in a solemn exhortation to the offender to amend (2 Co 7:9-10), or in an exhortation to the Church (1 Clem. ad Cor. 54:2; Sohn, Kirchenrecht, 33 f.). The object of admonition in the primitive Church was to perfect all the members in the Christian character (Col 1:9), and it was to be administered not in anger, but in a spirit of anxious, paternal, affectionate solicitude (1 Co 4:20).

2. When we consider the extent and importance of admonition in the primitive Church, as well as the existence of this principle in the ancient Roman penal code, it is natural to expect that admonition would find a place when the Church of later ages ultimately elaborated a complicated and comprehensive legal code of its own. Admonition formed part of Canon Law; it was not regarded as a part of the Roman law. The punishment, however, was administered, as a warning. This warning preceded the actual punishment, which consisted in the excommunication of the offender, and it was usual in ordinary cases to repeat the warning three days before reporting to the final act of excommunication (Corpus iuris canoniz, Edito Romana, 1582 [editions of Richter, 1839, and Friedberg, 1881]; Kahl, Lehrsystem des Kirchenrechts und der Kirchenpolitik, Freiburg, 1894, p. 142; Actes du Congres pénitentiaire international, Rome, tome i, 1892-93). Admonition may hold a more or less definite place in the ecclesiastical constitution of most Protestant Churches.

3. Admonition as a means of dealing with offences against the secular law exists in several modern penal codes. The old Italian and French systems of criminal law admitted the principle of admonition, and at the present time it exists in a more or less restricted form in the penal codes of a considerable number of European communities. It may be extended ad infinitum when the offense has been committed by a juvenile, in others it is applicable in the case of adults as well. As used in the English law it is not the advice, warning, reprimand or exhortation which a judge is always at liberty to give when a prisoner is before him, whether he has been acquitted or convicted. It is to be regarded as a real punishment, solemnly pronounced by a judicial tribunal, and requiring a proper observation of all the rules of legal procedure. Admonition in the old penal codes did not exist (Priest, Science pénale (1890), p. 468; Alimenas, Revista pénale, xxvii, 557).

Admonition is a form of punishment which must always be of very limited application in cases which come before the criminal courts. Most cases which are of so trivial a character that they can be satisfactorily disposed of by a resort to admonition, are cases which are seldom brought before a judge at all. Owing to this fact, admonition is very little used in some of the countries where it exists as a penalty on the statute book. The prominence which the practice of admonition has acquired in recent years has been attributed to a great and growing reaction against the abuse of short terms of imprisonment for petty and insignificant offenses. Many of these offenses are not, strictly speaking, criminal in character; they are for the most part offenses against highway acts, police regulations, education acts, municipal regulations. The growth of large cities has increased offenses of this kind enormously, insomuch as crowded populations require a much more complicated network of regulations than thinly populated communities; and the growth of regulations is always accompanied by an increase in the number of petty offenses. Petty offenses of this kind are usually dealt with by the infliction of a fine; and when the offender is able to pay the fine and when the fine falls upon himself, this penalty is perhaps the best and most effective method of dealing with them. But many cases occur in which the offender is not able to pay the fine, in the case of juveniles, in which the fine falls upon the parents; in most of these cases the only alternative to a fine is imprisonment, and imprisonment, inflicting as it does a stigma which can never be removed, is felt to be too severe a penalty for the trivial nature of the offense. Hence the demand for some form of punishment which will avoid the odium of imprisonment for offenders unable to pay a fine. To some extent English law does deal with such cases. For example, where a charge is proved against an accused person, but the offense is so trivial that it is inexpedient to inflict punishment, the court may dismiss the information altogether, or it may convict the offender and discharge him conditionally on his giving security, with or without sureties, to be of good behavior, or to appear for sentence when called upon (Summary Jurisdiction Act, 1879, sec. 16; Probation of First Offenders Act, 1887, sec. 1). These humane and praiseworthy provisions of the English law to some extent supply the place of judicial admonition as used in some Continental States, but they do not succeed in abolishing short sentences of imprisonment, which are the bane of all existing penal arrangements, and which perhaps produce more evils than they cure.

W. D. MORRISON

ADOLESCENCE (adolescere = 'to grow up').

The period of growth that intervenes between mere childhood and complete adulthood or maturity. The term was formerly restricted to the latter part of this period (from 18 to 25), but later writers have followed a suggestion of Clouston (Clinical Lectures on Mental Diseases, Philadelphia, 1884, p. 375 [3rd ed., Lond. 1892]) that the term should be extended so that adolescence should begin at the age of 12. Accordingly, adolescence extends from about the age of 12, when premonitory mental symptoms of puberty appear, to about 25 for males and 21 for females, when the reproductive powers are ripe. The phenomena of these years display a sufficiently definite progression to justify a subdivision of the period into early, middle, and later adolescence, the middle sub-period covering the two or three years from about the age of 15 during which the transition is most rapid and the mental life most turbulent. All these age-boundaries are necessarily only average and approximate.

I. The most obvious mark of adolescence is the attainment of reproductive power. But this is only a centre for a remarkable group of phenomena. The curve of growth, both for weight and for
ADOLESCENCE

height, takes a new direction; the proportions of bodily parts and organs change; hereditary tendencies crop out; new instincts appear; there are characteristic disorders, particularly of the mind and nervous system; new intellectual interests and powers spring up spontaneously; the moral sense is more or less transformed; emotion greatly increases in quantity, character, and appreciation (literary, artistic, ethical, religious) multiply in number and depth.

These phenomena have the deepest significance for both the organic and the personal life. In respect to the personal life, which is here our chief concern, adolescence presents a peculiar state of flux or plasticity of all the faculties, followed by the assumption of a new type of organization. As a general rule the 'set' that character now takes remains through life. Even the vocational and other special interests that distinguish one's mature years commonly take their rise here. It is a time of peculiar responsiveness to religious impressions, and conversely it is the period when nearly all careers of criminality, viciousness, or incompetency and all the practical exercises of adolescence for moral and religious growth are great so that a special article will be devoted to this topic. (See GROWTH [MORAL AND RELIGIOUS, PERIODS OF]). Certain abnormal tendencies of adolescence will be treated in the article on MORBIDNESS. The remainder of the present article offers only such general description as may assist towards a correct perspective for the manifold problems of morals and religion that have their centre here.

2. For physiology the importance of adolescence lies in the ripening of a new organic function, that of sex. If we carry forward this physiological notion in the direction of biology, we perceive that adolescence marks a change in the relation of an individual to the species. The significant fact now becomes the attainment of racial, as distinguished from merely individual, functions. Extending our horizon, in the next place, from biology to sociology, we note that adolescence is the period in which individual life becomes socialized. Here begins the possibility of the family and all the derivatives from family life that are summed up in the terms 'society' and 'the State.' But the genesis of complete social existence is likewise the genesis of complete individuality. In infancy and childhood, though individual impulses have, as their mental side, a decided access of intellectual and ethical independence, and of self-conscious purposes of relatively wide sweep.

Advancing, now, to the ethical aspect of these relations, we may say that adolescence tends toward the attainment of complete ethical personality, through release from a predominantly egoistic motivation of life. Self-realization now advances beyond a series of particular egoistic satisfactions (a characteristic of childhood), and requires the organization of the self into a larger whole as a member of it. This involves at once increased self-guidance, yet a deeper sense of obligation; a heightened individuality, yet an individualism that is transfigured into social self-realization. This movement outward from the merely particular self is of the highest importance for religion. For the movement may, and, wherever adolescence has been carefully studied, does go on to include the individual's relations not only to human society, but also to nature, and to God or the gods. It is characteristic of adolescence to become interested in the whole 'other-than-myself,' to feel its mystery, and to endeavour to construe it in terms of selfhood and sympathy.

Viewed from the standpoint of the Christian consciousness, adolescence is the normal period for attaining communal devotion, as it has been through the organization of the self into larger social wholes such as the family, society, the State, humanity, and the all-inclusive social relationships that Jesus called the Kingdom of God. But this is only the culmination of a view of adolescence that is present, more or less clearly, in all religions. The custom of signaling the arrival of puberty by initiation into the tribe and its religion by means of symbolic ceremonies, bodily markings and mutilations, or by other civil and religious exercises of world-wide and it reaches through all strata of cultural development (see Hall, Adolescence, ch. xiii., and an art. by A. H. Daniels, 'The New Life,' in Amer. Jour. Psy. vol. vi. p. 61 ff.).

4. The close time-relation here existing between sexual development and the growth of the highest sentiments and impulses cannot be a mere coincidence. It is too constant, and the parallel between the biological and the psychological transformation is too close to permit a serious doubt that these two lines of growth need to be included under a single concept. Living organisms display two fundamental functions, nutrition and reproduction, the former of which attains its immediate end in the individual, the latter in the species. They are the physiological bases of egoism and Altruism respectively. The physiological and the ethical here present a single law manifesting itself on two planes. In infancy and childhood we have a type of life that, in the main, presents on the physiological side a predominance of the nutritive functions, and on the ethical side a predominance of self-regard, while in adolescence nutritive and reproductive functions are blended and unified, just as are also egoistic and social impulses. Of course, childhood is not exclusively egoistic, for fatal impulses and social environment guide conduct and even habits of feeling into social channels; but the inner, emotional, self-conscious realization of one's social nature waits for adolescence. Now, the mental states that characterize this change directly reflect the new physiological condition, though they pass beyond it, as though it were only a door of entrance. The new interest in the opposite sex tends to humanize the adolescent's whole world. All heroism becomes lovely, not merely the heroic devotion of a lover; Nature reveals her beauty; in fact, all the ideal qualities that a lover aspires to possess in himself or to find in the object of his love,—all the sympathy, purity, truth, fidelity,—these are found and looked for in the whole sphere of being. Thus the ripening of sexual capacity and the coming of the larger ethical and spiritual capacities constitute a single process going on at two distinct levels.

The evidence of this connexion thus derived from normal growth is strengthened by abnormal and pathological phenomena. Personality eunuchs in childhood commonly display a peculiar insensitivity to social and religious motives. Further, nothing tends more positively towards the production of morbid moral and religious states during adolescence than defective physiological
ADOPTIANISM has familiarized us with the idea of tracing an Adoptianist Christology to an earlier period. We propose, therefore, to treat of Adoptianism in the broadest sense, bringing under this head all writings which speak of Christ as the adopted Son of God.

1. The keynote of the Christology of the 2nd cent. is struck in the opening words of the ancient homily known as 2 Clement: 'Brethren, we ought so to think of Jesus Christ, as of God, as of the Judge of quick and dead.' Ignatius emphasizes the divinity of the Word and ascribes to Him a more than human freedom: 'Thus He has been from ages eternal and invisible, immutable, and unchangeable. He is the Son of God.' (Ad Philad. 2.)

Harnack, however, contrasts with such teaching, to which he gives the name 'Pneumatic Christology,' the teaching of such a writer as Hermas, whom he claims as a teacher of Adoptianist Christology. Whereas Ignatius and Clement and their followers carry on the tradition of pre-existent Christ on the lines of NT writings (Ep. Hebrews, Ephesians, Johannine writings), Harnack regards Hermas as a witness to a truer doctrine. According to the Shepherd of Hermas (see Sim. v. and ch. xi. 12), in Hermas's words (Hist. of Dogma [Eng. tr.]. i. 191 n.):

'... The Holy Spirit—it is not certain whether He is identified with the chief Archangel—is regarded as the pre-existent Son of God, who is elder than creation, nay, was God's counsellor at creation. The Redeemer is the virtuous man chosen by God, who being begotten from eternity, exists in time. As He did not define the Spirit, but kept Him constantly as His companion, and carried out the work to which the Deity had called Him, nay, did more than He was commanded, He was, in virtue of a divine decree, adopted as a son and exalted to μεγάλα ευνωσία και κυριαρχία.'

We may agree with Lightfoot and others that Hermas sometimes confuses the Persons of the Son and of the Spirit, but this is as far as the evidence leads us. It is surprising that an obscure shopkeeper without philosophical training should make slips in the work of analysis of Christian experience, which is the great task of Christian theology!

In Sim. v. Hermas distinguishes accurately enough between the Lord of the vineyard, the Servant, under which figure Hermas speaks of the Son; and the Son, referring to the Holy Ghost, he writes (vi. 5) that God sent the Holy Ghost to dwell in the flesh of Christ, he does not mean that the Holy Ghost is the power of the Godhead in Christ, but that the pre-existent Christ was a spirit being. Such teaching is found in Ignatius and the Apostolic Constitutions, Jerome, Tertullian, etc. (Harnack, Adv. Haer. v. 1, 2; Tertullian, Apol. 21, adv. Prax. 8. 36.)

As Dorner (Doct. of Person of Christ [Eng. tr.], i. 131) writes:

'So far is Hermas from Ebionism... that he rather seeks in part to retract the representation of the Son as a servant in the Similitude, and even to represent His earthly work as power and majesty; whilst what remains of the humiliation, such as His sufferings, He treats as the work of His free love, as the means of the taking away of our sins, and as the point of passage to a higher position.'

What Harnack reads into the Christology of Hermas is really the teaching of a much later writer, Paul of Samosata. No doubt it is true that the pre-existence of Christ was ignored or denied in some quarters. One class of Ebionites held a low view of the divinity of the pre-existent Christ, regarding Him as an ordinary man though superior to other men (Euseb. HE iii. 27). Some writers held that the Baptism was the beginning of His Divine Sonship.

2. This tendency to minimize the Divine glory of Christ reached a climax in the writings of Paul of Samosata, a rationalist Monarchian, who laid stress on the unity of God as a single Person, denying any distinction of the Wisdom or Word.
ADOPTIANISM

of God. 'A real incarnation of the Logos was thus impossible; He existed in Jesus not essentially or personally, but only as a quality. The personality of Jesus was entirely human; it was not that the Son of God came down from heaven, but that the Son of man ascended up on high' (Bethune-Baker, History of Doctrine 168b, p. 60; cf. Whewell). He was deified after His Baptism or His Resurrection was not clearly taught, but the union between God and Christ was, according to this view, one of disposition and will only.

3. The truth is that this tendency to minimize, was probably the Latin translation of his works were read in Spain from the 6th century. Theodore discusses the indwelling of God in Christ, in his work 'On the Incarnation.' What is in holy men an indwelling of the God in their hearts is really a disguise, but brought him into a close relation to God on a higher plane. From His Birth the co-operation of the Divine Word with the man raised Him to the level of perfect virtue. 'The Man Christ... is thus the visible image of the invisible Godhead; and at His union with the true Son of God, He possesses the privileges of a unique adoption, so that He also the title of Son of God belongs' (Swete, Thes. of Mopsuestia on John, etc., p. 187). Theodore seems to prefer the term 'conjunction' of natures rather than 'union,' and uses the metaphor of the union of husband and wife in marriage to express the union of two Natures in one Person. But in his desire to avoid Apollinarian error he opened the way for Nestorianism, who taught that there was a 'conjunction of the two Natures, an indwelling of the Godhead in the manhood united morally or by sympathy.' Such a union is mechanical, not vital. 'I separate the natures,' said Nestorius, 'but the reverence I pay them is just.' The strong point in his theory was the recognition of the Lord's true manhood. As Bright puts it, 'Nestorianism was really Trinitarian in one aspect, but in another it was inevitably, under whatever disguise, Humanitarian, or, in modern phrase, 'Adoptianism.'

5. We pass on to consider the links which bound the later Spanish Adoptionism to earlier heresies. There seems no doubt that Muhammad rulers who claimed to patronize Nestorian Christians as more enlightened than their brethren. When the Arabs overthrew the Persian kingdom, they found Nestorian Christians strong. Muhammad himself is said to have cultivated the literary friendship of a Nestorian monk Sergius, and he gave privileges to Nestorians. They followed the Arabs everywhere, where, the Khalifs appreciating their learning, and probably followed the Moors into Spain. Gams (Kirchengesch. Spaniens, ii. 264) suggests that the mysterious 'Brothers of Cordova,' whom Eipandus, the first teacher of the heresy, quoted as witness speaking much to him (he wrote to Felix in 790), were Nestorians. Alcuin traces the origin of the new error to Cordova (writing to Leifrad, he says: 'Maxime origo hujus perfidiae de Corduba civitate patet; ne si non furemur Nestoriani, they may very well have been students of Theodore of Mopsuestia, whose works were read in the West. Gams also points out (op. cit.) that in his controversy with Migetius, Eipandus quoted Elytus (the Syriac), suggesting that knowledge of his works seems to imply the presence of Nestorians in Spain.

6. Eipandus, Metropolitan of Toledo, was an old man when the trouble began (c. A.D. 780). It appears that he had successfully opposed the objections of Migetius of Mopsuestia, who railed at his showing a lurking remnant of Priscillianism. Migetius taught that God was revealed in David (as Father),

in Jesus (as Son), in St. Paul (as Holy Ghost), on the basis of an absurdly literal exegesis. (Thus he quotes David in Ps. 44 (45), 'Eructavit cor meum uterum bonum'). From this extreme Eipandus turned to its opposite, and taught what with vehemence he declared to be the teaching of all the Fathers, and of Whence, and his abler ally, Felix, bp. of Urgel, intended to teach the unity of Christ's Person while distinctly distinguishing the Natures. They found the term 'adoption' in common use in their Spanish Liturgy, and they argued that it was a fitting term to express the raising of man to the dignity of Divinity. They taught that the Son is 'adoptive in His humanity, but not in His Divinity.'

It does not appear that the term 'adoption' in the Liturgy means more than 'assumption.' Eipandus was rightly concerned to guard the reality of the human nature assumed, but overstated the case in his antithesis, teaching a double Sonship: the 'Son of God, Christ, is Son genus et natura; as man, He is Son adoptio et gratia.' He roundly accuses his opponents of teaching Eutychianism, that the manhood was derived from the being of the Father.

7. Felix followed on the same path. He transferred to the Person what was true of the nature. He taught that Christ as a servant needed grace, was not omniscient or omnipotent. As the Only-Begotten Son, Christ, 'I and the Father are one' (Jn 10). As the 'First-born among many brethren' (Ro 8) He is adopted with the adopted sons. Only thus can we be certain of our adoption. Felix applied the phrase 'true and peculiar Son' (sacer et proprietas juris) to the God-Logos as man, and did not shrink from the proposition 'the Son is believed one in two forms'; he distinguished between 'the one' and 'the other,' 'this one' and 'that,' may, he called the Son of Man God by adoption ('omniosus deus'); meaning that He became God). He taught a dwelling of God in man, of the man who is united with Deity (Harnack, op. cit. v. 235). The Son of Man has two births, a natural birth of the Virgin, a spiritual birth by adoption and grace, begun in Baptism, completed at the Resurrection. Felix, indeed, taught that Christ was sinless, but that 'the old man,' i.e. our sinful nature, is regenerated in Him. Alcuin (li. 18) found it difficult to believe that Felix was sincere when he seemed to regard Christ as needing regeneration.

8. When Eipandus published his theory in letters, the Abbot Beatus and the Bishop Etherius (Eterius, Heterius) entered the lists against him. He was amazed at their rashness. Toledo was not accustomed to take lessons from Arians! He called his opponents names, of which 'servants of Antichrist' is a mild specimen. The controversy extended from Spain to France; and the Pope, Hadrian I., was drawn into it, not unwilling to deal with an independent Metropolitan. When Felix joined in the fray, the Synod of Regensburg was summoned, in A.D. 792. Felix defended himself in the presence of Charles the Great, but was vanquished in debate, and was sent in the company of Abbot Angilbert to the Pope. In Rome he signed a recantation; but when he returned to Urgel he repented of it, and fled into Saracen territory.

9. On his return from England, Alcuin wrote his first treatise against Felix. About the same time Eipandus and the Spanish bishops sent a treatise to the bishops of Gaul. Aquitania seems to appeal to Charles to restate Felix. The Council of Frankfort met in the summer of A.D. 794, and was attended by representatives of the Pope as
ADOPTION

ADOPTION (among lower races).—1. Artificial kinship is a well-recognized and widely practised mode of strengthening societies founded, as savage and barbarous societies are, on real or pretended community of blood. By means of artificial kinship, strangers are adopted into a clan or kindred. Various methods have been employed for this purpose, the most celebrated of which is the Blood Covenant (wh. see). In all societies based on blood-kinship, children are a common asset of great value, for the continuance of the society depends on them. Wealth of children is the supreme desire of families, and it matters comparatively little whether they are legitimate, or even whether they really have the family blood in their veins or not. Where natural means of obtaining children fail, therefore, artificial means are often freely resorted to. Moreover, the importance of children to the society leads to their being regarded with special tenderness and consideration; and even where there is no want of issue, children are adopted from motives of compassion. This is the case, to mention only two examples, among the Japanese, among the Pueblos of New Mexico. Of the natives of Loges, an island off the coast of British New Guinea, we are told that on the occasion of a blood-feud after a successful raid, when it is customary to torture to death and eat the prisoners, the leader of the raid, being the owner of the prisoners, will sometimes save their lives and adopt them, according to sex and age, as father, mother, brother, sister, or child (Colonial Rep. No. 185, Brit. New Guinea, Coron. Rep. 1894-1895, p. 51). Elsewhere in New Guinea and the adjacent islands the purchase of children for adoption by women, either childless or with only small families or widows, or by families with children of one sex only, is a common practice (Kohler, in STBV, xiv. 365).

Adoption is also practised by the Papuans (c. A.D. 798), Alcuin (c. Felic. ii. 12) taught that 'in adsumptione carnis a deo, persona perit hominis, non natura.' The idea was inherited from the Gallican Faustus of Riez, who had taught: 'Persone per heresiam consumuntur, sicut personae in persona Christi ad hijum adhuc potest, quia persona in persona Christi ad hijum adhuc potest, quia persona in Persona Christi.' This was probably dictated by circumstances (Hewitt in I Handbk. Amer. Ind., ii. 291).

In every Christological controversy sacramental teaching has been involved. In Arian times, Hilary of Poitiers (de Trin. viii. 13) pleaded standard Eucharistic doctrine as a witness against error. Eusebius and Beatus were right to show that the assumptions of their opponents brought about some misunderstandings in Eucharistic teaching. But Harnack overstates his position when he argues that 'even in the instance of Beatus, the realistic conception of the Lord's Supper turns out to be a decisive motive against Adoptionism' (op. cit. 291). It is not pleasant to note that Alcuin (Ep. ad Elip.) wrote warmly in praise of the character of Felix, whose charm was also admitted after his death by Agobard (op. cit. 2).

LITTERATURE.—Letters of Elipandus. (Recueil Chret., v. 594; Reredit. et Beati ad. Elip. Lib. 3 [Migne, Patr. Lat. 96]; Alcuinus, ad. Elip., ad. Felic. Lib. 110, 101; Polianus, Lib. 3 [Migne, 96]; Agobardus [Migne, 104]; Guas, Kirchengeschichte Spaniens, ii. 2, 361 ff.; Bandesien, Basilisc. u. Alarz; Möller, art. 'Adoptionismus' in FICH.

A. E. BURN

So among the Osages and Kansas of North America children and women taken prisoners are preserved and adopted, especially into such families among their captors as have lost any of their members, either by sickness or war (Hunterson, Memoirs of a Captivity, 249). The Omaha practice adoption of child, or child, or child, or child, or child, and, some living person bears a real or fancied resemblance to the deceased (Dorsey, in 3rd Report of BE, 265).

2. The effect of adoption is to transfer the child from the old kinship to the new. He ceases to be a member of the family to which he belongs by birth. He loses all rights, and is divested of all duties with regard to his real parents and kinsmen, and instead enters upon new duties and acquires new rights as the child of the family to which he is transferred, and of which he is now regarded in all respects as a native-born member. Very early in the development of the family as a social unit, in addition to the care of a parent during sickness and old age, the duty of performance of his funeral ceremonies and the cult of the ancestral manes were reckoned among the most important duties of a child. These are not always mentioned by ethnographical writers among the reasons for adoption; yet, where the religion of the people described lays stress upon them, they must always be taken into account. Thus the old Moravian writer Cranitz, in describing the customs of the Eskimos...

Some of the North American tribes occasionally extended the practice of adoption so as to make it by analogy a trans- mission between entire persons. Thus the Five Nations adopted the Tuscarora on their expulsion from North Carolina, about the year 1720, and admitted them first as a boy, then

through successive stages, as if they had been a single person, up to full equality. The Iroquois seem to have adopted the Iroquois in a similar manner. In both cases the object was purely political, and the form of alliance (for such in effect it was) was probably dictated by circumstances (Hewitt in Handbook Amer. Ind., art. 'Adoption').
of Greenland, assigns as the only reason for adopting children that the family has no children or only little ones, and that the husband in such a case adopts one or two orphan boys to assist him in providing food and to take care of his family in future times, adding that ‘the wife does the same with a girl or a widow’ (Crantz, History of Greenland, i. 165); whereas we know from his own statements elsewhere in the book (pp. 205, 237), as well as from others, that an elaborate burial was given to a deceased Eskimo, that ghosts manifested themselves in various ways, asking for food by name, and that the dead were ‘a kind of guardian spirits to their children and grandchildren’ (Kink, Tales and Traditions of the Eskimo, 44, 63). Hence we may be led to infer that the reasons enumerated by Crantz were by no means the only reasons for adoption in Greenland. The inference is greatly strengthened by the express testimony of a careful observer about the Eskimos of Behring Strait, that ‘a childless pair frequently adopt a child, either a girl or a boy, preferably the latter. This is done so that when they die, their son or daughter may be the one who will have to make the customary feast and offerings to their shades at the festival of the dead. All of the Eskimos appear to have great dread of dying without being assured that their shades will be remembered during the festivals, fearing that, if not, those shades will depart, and that the people will never see them again in the future life’ (Nelson, in 18th Report of BE, 290).

3. Whatever may be the case among the Eskimos of Greenland, therefore, it is quite certain that those of Behring Strait practise adoption for reasons which include the perpetuation of the cult of the ancestral manes. At the other end of the habitable world the Bantu are distinguished by their devotion to the worship of ancestors. The race is so prolific that it rarely happens that a man dies without issue. When among the Baronga of Delagoa Bay the head of a kraal passes away without leaving a son, it is said that his village has departed, his name is broken. This is regarded as a supreme misfortune; and to avoid it the childless man marries his nephew and the adoption of his sister’s son. He gets a sister who is expecting to become a mother to come to his village, and there to give birth to her child. If a boy be born, he is made the heir, and is said to have been restored to his great-grandfather. If a girl be born, this purpose a chief may, it seems (though one below the rank of chief cannot), even adopt a stranger (Junod, Les Baronga, 121). The misfortune involved in the breaking of the name by the failure of children appears more clearly from a Zulu prayer to the family manes.

The worshipper says: ‘Ye of such a place, which did such and such great actions, I ask of you that I may get cattle and children and wives, and have children by them, that your names may perish, but it may still be said, “That is the village of so-and-so yonder.” If I am alone, it may be I shall live long on the face of the earth without any children, and shall come to an end; and you will be in trouble when you have to say good-by; for at the time of my death my village will come to an end, and you will have no place into which you enter; you will die of cold on the mountains’ (Callaway, Religious Customs of the Amazulu, 224).

The Zulus are a people closely related, as well as geographically contiguous, to the Baronga. From what is here explicitly set forth concerning Zulu ideas, it may be legitimately concluded that the underlying motive for adopting a son in the manner practised by the Baronga, is that of providing for the worship of the dead by means of the sacrifices to be offered from time to time by the adopted son and his descendants.

4. It is, however, among races of higher civilization than the Eskimos or the Baronga that the connexion of adoption with the family cult is most clearly visible. Without anticipating what will be said below in special articles, it may be noted that the adoption ceremony often bears witness to this connexion. In Cambodi a solemn ceremony, though not absolutely essential to the validity of adoption, is often performed, and plays a great part in Cambodian custom. It is needless to state the ceremony in detail. Suffice it to say that the following invocation is therein repeated: ‘To-day, at a propitious hour, this man who, in consequence no doubt of a mistake on the part of other entrais, asks to be the son of so-and-so. Let so-and-so be his father, so-and-so his mother! It becomes us now to inform you of the matter, the deed was born, a formal adoption! Grant us favours and prosperity!’ The formal adoption then takes place by the adoptive father or some other person on his behalf asperging the adopted son with water, counting nine, and crying: ‘Come hither, run, O nineteen vital spirits!’ Finally, the cotton threads with which the water has been sprinkled are bound to the wrists of the son thus admitted into the family (Aymonier, in Excursions et Reconnaissances, xxv. 189).

5. The ceremony of adoption has varied greatly. There is reason to believe that it originally consisted of a formal simulation of the natural act of birth, or of suckling. The former, as appears from the legend of the adoption of Heracles by Hera, recounted by Diodorus, was known in ancient Greece, and the same writer expressly tells us that it was still the practice of the barbarians. The Roman form seems to have been similar. It is still observed by the Turks in Bosnia; and a Slavonic folk-song exhibits an example of adopting the son to be adopted into the palace and passing him through her silken vest that he might be called her heart’s child (Krauss, Sitten und Brauche der Süd-slaven, 599 f.). The symbolism is, if crude, so natural that we need not be surprised at finding it very widespread. A story of the Taimehians, a British Columbian tribe, represents a woman who purposed to adopt a child as sitting down and having the child placed between her legs, as if she had just given birth to it (Boas, Indianaische Sagen, 226). Some of the Indian castes place the child in the lap of the person adopting it (Crooke, Tribes and Customs of the N. W. Provinces and Oudh, i. 59, 89). Saint Dominic was the adopted son of the Blessed Virgin. Accordingly, Roman Catholic painters have not hesitated to represent ‘the whole count- less host of Dominicans crowded under her dress’ (Milman, History of Lat. Christianity, vi. 22 note). Although in England adoption has not been recognized within the historical period, a vulgar superstition lingered into recent times, that a mother might legitimize her child born before marriage by taking them under her clothes during the marriage ceremony, seems to point to the existence at an earlier period of a rite of adoption simulating the act of birth.

6. Among the races of the North of Africa the ancient rite was by suckling. It is constantly alluded to in Berber and Kabyle stories. It is mentioned in stories told to-day in Egypt, and was probably the usual form among the ancient Egyptians (Bastu my name is namer, 138, 358, 359; Wiedemann in Am Urquell, iii. 239). The development of the paternal at the expense of the maternal line of descent has in Africa and elsewhere transferred the rite to the man who adopts a son. Among the Gallai at Kambat, in the Eastern Horn of Africa, the son to be adopted sucked blood from the breast of his adoptive father (Paulitschke, Ethnographie Nordost-Afrikas, i. 193). In Abyssinia the son to be adopted takes the hand of the adoptive father and sucks one of his fingers, declaring himself to be his child by adoption. Sir George Robertson was thus constituted his adopted father by an old Kafir in the Hindu-Kush. On another occasion a man desirous of being his adopted son smeared butter on his left breast and sucked it (Robertson, Kafirs of the
ADOPTION (Chinese)  

Hindu-Kush, 203, 30). The Circassians practise adoption by the suckling rite. The woman offers her breast to the son to be adopted. So far is this carried, that if a murderer can by any means, even by force, succeed in sucking the breast of the murdered man, whom he has in succession, he becomes the son; and it ends a vendetta if the offender can simply manage to plant three kisses on the breast of the mother of the injured man (Dairinsky, in ZYlV, xiv. 168 ; LAnthropologie, vii. 229).

These rude ceremonies, of course, disappeared from the higher culture long before the custom of adoption itself passed away.

E. SIDNEY HARTLAND.

ADOPTION (Chinese).—Adoption is in China principally a religious institution, based upon ancestor-worship, which demands perpetuation of the family and the tribe. The most sacred duty of a child, inculcated by the ancient classics, consists in absolute obedience and submission to the will of its parents, combined with the highest degree of affection and devotion. This duty, called hiao, naturally does not terminate with death. Father and mother, having entered the spiritual state, then become the patron divinities of their offspring. They reside in their temples at home, and are adored, in wooden tablets inscribed with their names. The sons and their wives have to feed and clothe them by means of sacrifices prescribed with great precision by formal customary law, in order to protect them from hunger and cold, privation and misery, and themselves from punishment and misfortune. The hiao extends also to grand-parents, and still more remote ancestors of the family, who likewise are tutelary divinities. Last of all the sacrifices should be made to both a nearest male and a duty for everybody to have sons, in order that they may continue the ancestor-worship. The saying of Mencius, "Three things are unprofitable, and the worst is to have no sons," is a dogma of social and religious life to this day. Daughters are of no use in this respect; for, in accordance with the peremptory law of exogamy dominating China's social life probably from the earliest times, a daughter leaves her paternal tribe to enter that of her husband, and is thus considered the adoption of her husband's ancestors.

A married man who has no son, either by his principal wife or by a concubine, is therefore bound to obtain one by adoption. According to anciently existing and the laws of the State, he may adopt only a son of his brother, or a grandson of his father's brother, or a great-grandson of his paternal grand-uncle, and so on; in other words, an adopted successor must be a member of the same tribe, and thus a bearer of the adopter's tribe-name; and moreover, he must be a member of the generation following that of the adopter.

An adopted successor holds the position of a genuine son; he possesses the same rights, and has the same personal performances to perform. Adoption is unusual, and at any rate not necessary, for those who have sons of their own; and it is unlawful for any man who has only one son to give him away for adoption.

The adoption of a son may, of course, be sealed by a written contract, but in most cases no such contract is made. It is an important event for the family, and, like all such events, is superintended by the elders of the family, whose tacit sanction is necessary. The intervention of the clergy is not required nor given, and as long as no glaring transgression of the laws of adoption is committed, and no complaints are lodged by the elders, they will not interfere. The consummation of the event is in the main religious, being solemnly announced to the soul-tablets in both homes by the respective fathers; and the son has, with prostrations and incense-offering, to take leave of those in his father's house, and in the same way to introduce himself to those in the house of his adoptive father. Should his natural father and his adoptive father have the same family-altar, it is, of course, only one announcement before it.

J. J. M. DE GROOT.

ADOPTION (Greek).—1. Origin and meaning of the institution.—In the midst of the Greeks and Romans there were three things closely connected, and at first inseparably, connected,—the family organization, the family worship (that is, the worship of the dead ancestors of the family back to the common ancestor of the group of families constituting the clan or gens, gens), and the family estate. It was the rule in both Greek and Roman law that the property could not be acquired without the obligations of the cultus, nor the cultus without the property or some share in it (Vato, Laws, v. 740), and the laws of the Ionians, actioning the facts, for the Ionians, actioning the facts, are given in full, with tr. and comments, in Roberts, Introd. to Greek Epigraphy, Part i. p. 826 f. The regulations concerning adoption are given in full, with tr. and comments, in Roberts, Introd. to Greek Epigraphy, Part i. p. 826 f.
ADOPTION (Greek)

that which Nature had denied' (Cic. pro Dom. xiii. 14) is frequently expressed by the orators (cf. Is. ii. 10; δε τι ζωντα γεγορωφουσα και τελευτα- 

σαντα θανον αυτω και εις τον οπου χρονον τα ουτω- μενα αυτον ποιησας. Id. ii. 46: οπαπα δε των τελευτα- 

σαντα και άνωνων βολησαν καταστημα, ινα μετα το 

λα τα παιδια γι' ουκ εκεινοι μενα τωμ μη έγγυης κατα- 

αναθημα τα τα δι' αυτου του αδελφου." Αντιπαθεια τα 

τας εκεινους. Nevertheless, this idea became over- 

laid with others as rationalism prevailed. The Athenian of the days of Isaeus adopted a son, in very many cases at least, primarily in order to legate, or to make him a citizen. In other words, adoption, gradually losing to a large extent its early significance as a means of supplementing 

nature (Demos. xlv. 43: δος ου ο λογος μη έξηωρησθει,) was used as a means of testamentary bequest, thereby over- 

coming a legal disability. For it must be remembered that 'Intestate Inheritance is a more ancient institution than Testamentary Succession' (Maine, op. cit. p. 207), and that normally (i.e. if he had a legitimate son) an Athenian could not make a will — so the law is uncertain. If method of testing whether 

was strictly enforced, at least in the 4th cent. B.C. (cf. Meier u. Schömann, Der attische Proceß, p. 591 f.; Wyse on Is. lii. 42 and vi. 28). If he died without legitimate male issue, and without a will, the inheritance was ascertained, in an order fixed by law, were his heirs. The Athenian will, therefore, 

though only an 'inchoate testament' (Maine, op. cit. p. 208), together with adoption, which was the form in which a testamentary disposition of property was as a rule made, interrupted the ordinary course of descent of family and property. In 

other words, an Athenian, availing himself of the right of adoption inter vivos or by testament, very often was actuated by the desire of disinheriting some one of his possible heirs at-law (Demos. xlv. 63: δε εκει γα δει των κοιλακεων εις ελοντων 

φυγωναγωγουν και ταυ προς τους οικελων διαφοροι 

πωλακες φιλονεκατες τουτοι μεν ποιησαιται). This 

fact explains not only the frequency of disputes over wills and inheritances at Athens, but also the method of disposal of property followed by the plebeians, e.g. Isaeus. The impression gathered from the speeches is that it was perhaps impossible for an 

Athenian to safeguard the heir of his choice against 

the assaults of disappointed relatives. And, herein 

a great contrast to the Roman courts, the tend- 

encies of Athenian jurisprudence were often 

petitives rather than for the will' (Arist. Prob. 

xxix. 3).

3. Methods of adoption.—In Athens there were three methods of adoption: (1) adoption inter vivos, i.e. during lifetime (cf. Is. ii. 14; δειδων 

ον των γυμνων αυτω παρεδωκε δια το επιμελεια, με 

ποιηται, σκην εν διαθεσις γραματις, μελλων αποδηλωτης, 

δειδων ελον τως); (2) adoption by will, taking effect only on death of the testator (see quotation above); (3) adoption by the next-of-kin succeeding to the estate, or his issue, was adopted into the family of the deceased as his son. (The rules of 

this method of adoption are not known, and our evidence is meagre. Instances are the following—Is. x. 40, 

vii. 31; Demos. xliii. 11, this last an example of 

such adoption deferred for many years, and per- 

formed in the end simply as a manoeuvre in view 

of law and Custom. See Wyse, note on Is. x. 8). In 

Gortyna the procedure of adoption is of archaic 

simplicity, the act being public and oral, as its 

* For these annual offerings to the dead, see Wyse, The 

Speeches of Isaeus, note in loco.

tary form introduced at Athens by Solon. The code seems, 

in fact, concerned to combat the tendencies which produced 

the testament.

name there (δημοσια, 'announcement') denotes 

'Announcement of adoption shall be made in the 

Agora, when the citizens are assembled, from the 

stone from which speeches are made. And the 

adopter shall give to his ιμαια α victim and a 

pitcher of wine. The Spartan mode (Herod. vi. 

57) must have been similar to this.

4. Conditions regulating adoption.—The con- 

ditions under which adoption in Athens was 

possible were as follows. Since adoption was 

in reality a sort of willing, it could be performed 

only by him who was competent to make a will, 

that is by a citizen of maturity. In other words, 

adoptions, gradually losing to a. large extent its early significance as a means of supplementing 
nature (Demos. xlv. 43: δος ου ο λογος μη έξηωρησθει,) was used as a means of testamentary bequest, thereby over- 
coming a legal disability. the testament.
adopted son usually retained his old name, altering only the name of his father in writing his full signature, and if necessary that of his demi (see Kell in Rhein. Mus. xx. (1865) p. 539 f.).

6. Rights and duties of an adopted son.—The son of an adopted father was, as one from the family of his natural father into that of his adoptive father: he lost his relationship to his natural father, and all rights inherent therein (Is. ix. 33: oidei γὰρ πόσοτο ἐκφώντοι γενομένων καλέθροφος του οὗ δέθεν ἐξ- πορθή, ἵνα μὴ ἐπληροῦ τα κατὰ τὸν όνομαν; but he did not lose his relationship to his mother (if we may trust the statement of Is. vii. 25: μορφὸς δ’ οίδεις ἵναι ἐκφώντοι, ἀλλ’ ὀμοῖοι ἐνήργει τὴν αὐτήν εἰναι μεταφράτα, καὶ ἐν τῷ πατρίῳ μνή μη τοις καὶ ἐκταφοῦ— which would seem to mean that an adopted son still retained his rights of next-of-kin so far as they belonged to him through his mother). He became the legal and necessary heir of his adoptive father, taking up and continuing the estate of his new family, and possessing the right of burial in its sepulchral vault (if legitimate son of the legitimate father he was entitled to enter without legal formalities into possession of his estate upon his adoptive father’s death (Demost. xlv. 19: εἰσέσταται ὁποῖος εἰς τὴν οἰκίαν ὅπου ἔκειν τὸν θάνατον ὧν εἰσαχθήθη). Of course (εἰς τὸν θάνατον) may be, on the other hand, were forbidden to enter on occupation before their claim had been established in a court of law (ἐπιταξια). Cf. Is. δρ. iii. 6: οὐκ ἐπὶ τοῦ εὐλαβοῦσαν κρατᾶν πρὸς ὑπήκοον. Id. vi. 8: λαγωνίας δὲ ἔχον, τὸ πατρίδι του ἐν ἑαυτοῦ ἐν λόγῳ ἐξαποθεμένοις. Cf. To. ii. iia. 60). Like a son of the body, an adopted son had no option of refusal of the inheritance, as had heirs at law (Demost. xxxiv. 4. Αἰτ. Πλω. 676, p. 169; 92, p. 246). He was a legitimate son born to his adoptive father subsequently to the adoption, the adopted son ranked with them for equal share of the property according to the law of inheritance (Is. vi. 63: καὶ δοξαίρησιν ἐν τῷ νόμῳ γέγραφα, ἐν πανομοσγείῳ παῖς ἐγγεγράφατο, τῷ μόρῳ ἐκατέρω ἐξήν τῇ οἰκίᾳ καὶ κληρονομιῶν ὄμοιο ἀμφότεροι. Id. vi. 25: τῷ νόμῳ κελεύοντος ἄπαντος τοῦ γραφόντος ἀμορφός εἰναι τῶν πατριών).†

The inheritance of a son adopted inter vivos came to be diminished, for the adopter the father’s limited power of testamentary disposition was, theoretically at least, irredeem abrogated; only in case of a testamentary adoption could any control over the disposition of the adopted son’s property be exercised at all by the general way (Is. x. 6: καὶ ἐπὶ μὲν τῷ τρίτῳ μέρει τοῦ κλήρου Δικαίωμα δῆ τῷ Μεκεσίου Δικαίωμαν ἡδὲ ἐγγενέσθαι τοιαύτῃ). If the adopted son left behind him a legitimized son of his body (γέγραφος οὗ) in the position of his adoptive father, thereby fulfilling the object of his adoption, he might return to his natural father’s house, and there resume all the rights and duties of a son, relinquishing all such claims in respect of his adoptive father’s estate (Is. vii. 25: δὲ τὴν πατρίδα τοῦ πατρὸν οὗ ὑπέκου ἱκώριο, εἰ μὴ παῖς γενομένων καταληφθῶν ἐν τῷ οἴκῳ τοῦ πατριουμα). He could not, however, so leave behind him an adopted son; he had, in fact, no power himself of adoption, either in his lifetime or by will, so long as his own status was that of an adopted son; he transmitted the estate only to an heir of his body (Demost. xlv. 63: οὐ δικαίως δῆτον τῶν παιδιόν ὑπὸ τοιαύτῃ ἐγένετο ἐναγέρῳ ἐκκαθαρίζοντος ἀλλ’ ἐγκαθελέτον μὲν γεγονομένου, The Gortynian Code allows the adopted son to repudiate his inheritance.†

The Gortynian Code treats the adopted son less generously, giving him only the rights of a daughter when the adoptive father leaves legitimate children; that is to say, if there are other sons, he is to receive half a son’s portion; if there are daughters only, he is to share equally with his adoptive sisters. The Code is concerned to depose the artificial son from a position of equality with natural heirs.

†The Gortynian Code treats the adopted son less generously, giving him only the rights of a daughter when the adoptive father leaves legitimate children; that is to say, if there are other sons, he is to receive half a son’s portion; if there are daughters only, he is to share equally with his adoptive sisters. The Code is concerned to depose the artificial son from a position of equality with natural heirs.
It is obvious that by adopting a daughter's son a man could guard against contentions for the hand of his daughter, and defeat the designs of rapacious relatives; nevertheless, instances of adoption of a grandson (son of a daughter) on the part of a grandfather are rare (Wysse on Is. viii. 36).

7. Decray a the interment—Was it possible under Athenian law to adopt a daughter? A woman could not perpetuate in her own person the house and its cult, which was one of the main objects of adoption. Nevertheless, examples of the adoption of a daughter are found. Isæus furnishes two examples of a woman giving her son by will (xi. 8 and 41); but in the first case the will was perhaps also heiress ab intestato, apart from the adoption, and it is also doubtful whether the adoption was not inter vivos. A third example puzzles the lawyers (Is. vii. 3: διέθετο την αδελφή και θέκων την κόρην ανείπωτη, εκεί δι' αυτής, προκειται δι' αδελφή, διδότω αυτήν Λακατείδι). It is generally taken to mean that in his will Apollodorus adopted his half-sister, who was also his heir ab intestato, thus acquiring the right of a father to dispose of his property in a marriage (Is. vi. 36). But Apollodorus had not become the adoptive father of the girl when he made his will and settled the marriage, since the adoption was only to take effect in the event of his death on foreign service.

The adoption of a daughter (πυτραγωγεῖ), certainly not contemplated in earlier times, but never expressly forbidden, probably grew to be practised (though to what extent we know not) largely as a family manoeuvre, as public sentiment became less strict, and the definitely religious aspect of the institution tended to fade from view. There are other traces of this change. Thus in the fragmentary speech of Isæus in defence of Euphiletos there is a reference to the adoption of non-Athenians irregularly for personal reasons (Is. xii. 2: έπειτα ἕκαστον πατροκόλημα έθρονι, ἀνέρᾱς ευπροσότερα, δως τιμήσω πατρός δια αυτῶν ἀθηναίων γεγονότων). Similarly, the necessity of providing a male descendant came to be felt less strongly. It is clear that many Athenians in the 4th cent. B.C. died unmarried and without troubling to adopt a son (Is. xi. 49; Demos. xlv. 18). The Code of Gortyna exhibits the same change. It is by no means certain that by its adoption it was not permissible even when the woman already had both sons and daughters. Its less stringent regulations, however, furnishing heiress to the deceased's estate, is a fact that the next-of-kin might, as at Athens, shirk his spiritual duties to the deceased if he cared to waive his claim to the estate; and the case with which the bond created by adoption could be broken (by simple announcement from the stone in the Agora before the assembled citizens); and, above all, the fact that the adopted son might eventually decline his inheritance (which was his only on the express condition that he should take all the temporal obligations of the deceased)—all testify to the gradual transformation and decay of the old institution.

W. J. WOODHOUSE.

ADOPTION (Hindu).—The adoption of a son (putracarya) amongst the Aryan Hindus, as observed by Sir R. West, is essentially a religious act. The ceremonies in an adoption, as described in the Sanskrit lawbooks, resemble the formalities at a Christian marriage, like marrying, in the transfer of paternal dominion over a child, which passes to the adopter in the one case and to the husband in the other. One desirous of adopting a son has to procure two garments, two earrings and a finger-ring, for a learned priest, sacred grass, and fuel of sacred wood. He has next to give notice to the king (or to the king's representative in the village), and convene the kindred, no doubt for the purpose of giving publicity to the transaction, and of having the son acknowledged as their relative by the kindred. The adopter has to say to the natural father, 'Give me thy son.' The father replies, 'I give him'; whereupon the adopter declares, 'I accept them for the fulfilment of religious duties, I take thee for the continuation of lineage. After that, the adopter adorns the boy with the two garments, the two earrings, and the finger-ring, and performs the Purarhita-Homa or Datta-Homa, i.e. a burnt-sacrifice coupled with certain invocations of the Brahmans, and the adoptions by will (xi. 8 and 41); but in the first case the will was perhaps also heiress ab intestato, apart from the adoption, and it is also doubtful whether the adoption was not inter vivos. A third example puzzles the lawyers (Is. vii. 3: διέθετο την αδελφή και θέκων την κόρην ανείπωτη, εκεί δι' αυτής, προκειται δι' αδελφή, διδότω αυτήν Λακατείδι). It is generally taken to mean that in his will Apollodorus adopted his half-sister, who was also his heir ab intestato, thus acquiring the right of a father to dispose of his property in a marriage (Is. vi. 36). But Apollodorus had not become the adoptive father of the girl when he made his will and settled the marriage, since the adoption was only to take effect in the event of his death on foreign service.

The adoption of a daughter (πυτραγωγεῖ), certainly not contemplated in earlier times, but never expressly forbidden, probably grew to be practised (though to what extent we know not) largely as a family manoeuvre, as public sentiment became less strict, and the definitely religious aspect of the institution tended to fade from view. W. J. WOODHOUSE.

ADOPTION (Japanese).—Adoption, now widely prevalent in Japan, is not a native institution. If
ADOPTION (Muhammadan).—In Arabia, in the days of Muhammad, a man could adopt another person as his son (Arab. tabanā). The Prophet himself adopted Zaid ibn Hāriṣa. The latter was carried away in his youth as a slave and came into Muhammad’s possession in Mecca. Some of his own tribesmen recognized Zaid and told his father Hāriṣa, who went to Mecca to offer a reward for his son. Zaid, however, chose to remain with the Prophet, upon which the latter gave him his freedom and adopted him as his son, saying, ‘He shall be my heir and I his.’ Since that time he was called Zaid ibn Muhammad.

Many other instances of adoption are known in Arabic literature. But as a rule it does not appear that in Arabia adoption was practised exclusively for the purpose of saving the family from extinction. Often the idea apparently was merely to incorporate a certain person into a family, for one reason or another; as, e.g., when a man, on marrying a woman who already had children from a former marriage, adopted her children as his own. Children of slave girls, begotten by the owner, were regarded as slaves, but some sort of son was adopted as his own children (as was the case with the famous poet Antara when he had given proof of ability). He who, having shed blood, fled from his tribe and found a protector in another tribe, was sometimes adopted by the protector, and his name was Miqdād ibn Aswād, for example, who belonged to those who had accepted Islam in the very beginning of Muhammad’s preaching, had fled originally from his tribe Dahā, and later on was adopted in Mecca by al-Aswād, his protector. His real name was Miqdād ibn ‘Amr. (Cf. Robertson Smith, Kinship and Marriage in Early Arabia, 1903, pp. 52-55, 135 ff.).

It is to be understood that at that time an adopted son was regarded as in all respects the equal of a real son. The following event, however, caused Muhammad to abolish the old rule, and to declare that adoption was only a fiction and did not entail any consequences as regards rights. Zinah, the wife of the above-named Zaid, Muhammad’s adopted son, had aroused the Prophet’s passion to such a degree, that he persuaded Zaid to repudiate her, upon which he married her himself. This caused great scandal. It was objected that by his act he had done away with the essential principle that an adopted son (Arab. daʿī) was not a real son, so that to call an adopted son a real son was wrong, inasmuch as the process of adoption could never create any bonds of blood-relationship. Marriage with the repudiated wife of an adopted son was therefore not contrary to the will of Allah.

This passage is therefore of more importance as a canonical cause of adoption not being regarded in the canonical orthodoxy of Islam as a valid institution with binding legal consequences.

ADOPTION (Roman).—The domestic religious observances, whether Shinto, Buddhist, or ancestral, just as if he were the real son. Their neglect, for want of a heir, would be considered a great calamity. There is no ceremony of adoption, but registration at the public office of the district is essential.

W. G. ASTON.

But as a rule it does not appear that in Arabia adoption was practised exclusively for the purpose of saving the family from extinction. Often the idea apparently was merely to incorporate a certain person into a family, for one reason or another; as, e.g., when a man, on marrying a woman who already had children from a former marriage, adopted her children as his own. Children of slave girls, begotten by the owner, were regarded as slaves, but some sort of son was adopted as his own children (as was the case with the famous poet Antara when he had given proof of ability). He who, having shed blood, fled from his tribe and found a protector in another tribe, was sometimes adopted by the protector, and his name was Miqdād ibn Aswād, for example, who belonged to those who had accepted Islam in the very beginning of Muhammad’s preaching, had fled originally from his tribe Dahā, and later on was adopted in Mecca by al-Aswād, his protector. His real name was Miqdād ibn ‘Amr. (Cf. Robertson Smith, Kinship and Marriage in Early Arabia, 1903, pp. 52-55, 135 ff.).

It is to be understood that at that time an adopted son was regarded as in all respects the equal of a real son. The following event, however, caused Muhammad to abolish the old rule, and to declare that adoption was only a fiction and did not entail any consequences as regards rights. Zinah, the wife of the above-named Zaid, Muhammad’s adopted son, had aroused the Prophet’s passion to such a degree, that he persuaded Zaid to repudiate her, upon which he married her himself. This caused great scandal. It was objected that by his act he had done away with the essential principle that an adopted son (Arab. daʿī) was not a real son, so that to call an adopted son a real son was wrong, inasmuch as the process of adoption could never create any bonds of blood-relationship. Marriage with the repudiated wife of an adopted son was therefore not contrary to the will of Allah.

This passage is therefore of more importance as a canonical cause of adoption not being regarded in the canonical orthodoxy of Islam as a valid institution with binding legal consequences.

ADOPTION (Roman).—The domestic religious observances, whether Shinto, Buddhist, or ancestral, just as if he were the real son. Their neglect, for want of a heir, would be considered a great calamity. There is no ceremony of adoption, but registration at the public office of the district is essential.

W. G. ASTON.
ADOPTION (Roman)

only by thirty kists (Cic. Leg. Agr. ii. 31). For the words of Tacitus (Tac. Hist. i. 16: si te ... sufficed to break the bond of patriapotea in the case of a daughter or grandson. See Mommsen, Staattrecht, iii. 31*.

in the applicable mode peculio ius, subjection principis) (Suet. Aug. contione), adrogatio of the Emperor 17 Galb. died, the Emperor Antoninus Pius to the pontifices, for the Emperor continued the moria aut quidem Nee quicquam by adoptio his rights was conferred by Diocletian for the Emperor's life, as described. Originally, adrogation was transferred by the procedure called cesso in iure of the adoptive father.

According to the law of the Twelve Tables, a son thrice transferred by his father to another, under the solemn forms of the mancipatio, or sale por es et libram, 'by the copper and the scales,' was freed from paternal control ('pater si filium iuris senum duit, filch the adoptio was to be transferred with it to his adoptive father. Personal dignities of the adopted (e.g. magisterial powers) remained entirely unaffected in all their claims. It is obvious that adoption would annul any will previously made by the adopted. If the person adopted had himself children under his potestas, these also fell to adoption to the adopter, and became legally his grandchildren. Hence Tiberius was compelled to adopt his own son, for the person adopted by adrogatio by Augustus (Suet. Tib. 15: 'cocetus prius ipse Germani) faciat sui filium adoptare. Nesciquam postea pro patre familias egit aut ius, quod amiserat, ex illa parte retinuit. Nam neque dominus, ne heredatem quidem aut legata percepit ubi alter quam au peculio referre accepta').

(b) Adrogatio originally and always confined to patricians.—It must be remarked that the above mode of adoption was essentially a religious mode, and applicable only to patricians, who alone were organized in true gentes (cf. Greenidge, op. cit.

* Justinian allowed the adoptive father only the usufruct, unless the adopted son did not having been emancipated from his adoptive father's possession.

† Gaius, i. 102: 'minima capitis deminutio est, cum et civitas et liberae libertut, sed status hominis communis; quod accidit in his qui adoptantur."

p. 9), as is evident from the fact that the assembled Curia and the priestly college were the chief actors in the ceremony. On the other hand, the restriction of this mode of adoption to those who were sui iuris cannot be regarded as a primitive characteristic, for the reason that the prime end of adoption, the continuance of the name, which was in danger of extinction through failure of natural heirs, could just as well be effected through the adoption of a filius familiae, i.e. one who was still under patria potestas, provided that he had reached the age of puberty, for on the death of his adoptive father he would himself become the pater familias. And again, it is impossible to believe that the Rome of the regal period actually possessed no means of adoption save of those who were sui iuris—rather would it probably of somewhat rare occurrence that one already sui iuris should put himself by adrogatio in the potestas of another. If, then, the ceremonies of adrogatio were originally also not applicable to sons still subject to their father's potestas, we shall be driven to confess that the mode of adoption of a natural son of a roman freedman, so far as we now know to us; for the earliest method that we hear of as applicable to persons alieni iuris, is the purely civil and probably originally plebanian form by threefold sale hereafter described. Originally, therefore, adrogatio was confined to those who were sui iuris and to those who were under patria potestas. In historical times, however, it had come to be restricted to the former and relatively much less frequent case, while for the other the fictitious sale offered a more ready means of adoption.

2. Adoptio properly so called.—Adoptio in its more proper sense, that is to say, the transference of a filius familiae from the potestas of his natural father to that of an adoptive father, was accomplished by the aid of legal fictions in two distinct acts—(1) the dissolution of the link with the natural father, by means of fictitious sale, mancipatio; (2) the transference of the son to the potestas of the adoptive father by the procedure called cesso in iure of the adoptive father.

The custom was for the purchaser then to remaniplicate (remanipulatio) to his natural father, who thus for a moment held him in his turn as mancipio, no longer as filius familiae, subject to his potestas). Then followed the second act, completing the adoption. This took the form of a fictitious process of law (legatio actio) before a magistrate—the Praetor at Rome, the Governor in the Provinces. The adoptive father instituted a vindicatio filii in potestatem, claiming him as his son. He who was holding him for the moment in mancipio (the natural father, therefore, if remanipulatio had taken place) making no demur to the claim, if this were done, the father would, of course, take no further part in the ceremony. His place being taken by the second act of the proceedings by the third person, to whom the mancipatio had been made. It was written down from the words of the Twelve Tables, that a single sale sufficed to break the bond of patria potestas in the case of a daughter or grandson. See Mommsen, Staatsrecht, iii. 379.
ADOPTION (Roman) 113

the magistrate adjudged (addixit) the adopted to the claimant as his filius, subject to his patria potestas. Hence this form of adoption is spoken as of adoptio apud praeorem, as contrasted with adoptatio, which is per (or apud) populum. It is the form on the earliest record to be found by Cicero (de Fin. 24: 'in eo filio... quem in adoptionem D. Silano emancipaverat'), and by which Augustus adopted Gaius and Lucius, his grandsons, in B.C. 17 (Suet. Aug. 64: 'Gaum et Lucium adoptavit, domi per assentum libram emptos a patre Agrippae'). These complicated forms were gradually simplified, and finally Justinian made simple declaration on the part of the two principals before a magistrate sufficient, the son to be adopted also being present and consenting.

Some effects of adoptio.—Like adoptatio, true adoption involved a capitis determinatio, destroying the agnatic rights of the adopted in his natural family; but he still retained his rights as a cognate therein, and as such was entitled to succeed in the third degree to the estate of an intestate natural father. In his adoptive family he gained the rights both of an agnate and of a cognate; but if he were emancipated by his adoptive father, he re- \...

2. Adoption of females.—Women properly could not adopt, either by adoptatio or by mancipatio, as they could not possess patria potestas. But in A.D. 291 Diocletian allowed a woman to adopt her stepson (principinus) to replace deceased children. This adoption in this case acquired rights of inheritance. Further, it could be adopted, originally not properly by adoptatio, though not for the reason assigned by Aulus Gellius ('cum feminis nulla comitiorum communio'), but because the marriage ceremony of confarreatio provided for a new mode of entrance into another family. Finally, however, adoptatio by Imperial rescript became applicable to women also.

The permission to adopt a female marked, it is clear, a decaying sense of the real significance of the institution. For if, as was, perhaps, most often the case, the adopted daughter was of no consequence, and the marriage displacement from the family, by certain forms, at any rate, fell into the potestas of her husband, and became a member of his family and gens (see Greenidge, op. cit. p. 17). The same evidence of decay is seen in the abuse of the institution for political purposes by Clodius, which presumably could not have happened had the feeling of the community been seriously concerned. Under the early Empire, adoption was practised to enable persons to escape the penalties of the childlessness and to qualify under the provisions of the Lex Julia and Papia. Poppaea, which prescribed that a candidate for office who had children, or who had been preferred to one who had none or few (see Tac. Ann. vi. 17). It became necessary for the Senate to decree that pretended adoption (manumission having at one followed the adoption) should be null and void (Tac. Ann. xx. 17: 'persecutorum caelestis praetissimus mox, cum propinquis comitibus et sordide spectabili orbis educandus filios, praetereaque in provincias later patres scribit statim emissum manu, quo adoptantur').

The general impression given is that, at Rome, as compared with Greece, the institution of adoption more rapidly and completely lost its connexion with religious and social conditions.

3. Name.—Among the Romans, adoption introduced a peculiar modification of the name. The person adopted laid aside his original names and assumed those of his adoptive father, adding, however, an epithet to mark the genus out of which he had passed; that is to say, he retained his gentile name in an adjectival form. Thus C. Octavius, when adopted by the will of his maternal grandfather, became C. Julius Cæsar Octavianus.' The system was, however, far from uniform; and in a few cases the epithet is derived from the name of the familia, not from that of the gens. The case of M. Junius Brutus is an example of another anomaly.

4. Imperial adoption.—The power of continuing the family by adoption gained a peculiar significance in connexion with the early Empire. For theoretically the princeps could not name his successor, though he might do much to guide the choice of the Senate and army. Neither designation nor heredity was recognized. Constitutionally, however, it was open to the princeps to appoint a consort in the Imperial power, who, on the death of the reigning emperor, would have a practical, though not a legal, claim to the chancery. The natural course was to appoint a son to that position; but if the emperor had no son, he could adopt whomsoever he chose as his virtual successor, the danger of such a course being minimized by the paternal control he possessed over his adopted son. The act of adoption by the princeps was in fact commonly called, therefore, by Tacitus, comitia imperii (Hist. i. 14); but the custom hardly attains its full significance until the adoption of Trajan. The accident of the childlessness of Augustus gave the institution its prominence in early years (cf. Suet. Aug. 64, 65; Tac. Ann. xii. 26; Suet. Tib. 17; Dio Cass. lviii. 3).

5. Adoptatio testamentaria.—There remains to be noticed a species of adoption spoken of by Pliny as adoptatio testamentaria. The most conspicuous
ADOPTION (Semitic)

example is the will of Julius Caesar adopting Octavius (Suet. Cos. 83: 'in ima cera C. Octavianum etiam in familia nomenque adoptavit'). The adopted in such a case could not fall under the patria potestas of the adoptor, who was dead; hence the adopted could not become heir or successor, and with no child, in fact, no claim to the deceased's estate, except in so far as the will specifically granted such. The only legal effect, then, was to permit the adopted to bear the name and call himself son of the testator (adsumere in nomen). Octavius, it is true, availed himself of his testamentary adoption by Caesar's will which provided privilege from the Curia adorning him to the testator (Appian, Bell. Civ. iii. 94: 'et suum filium, 

, cohabebat adhaec cata mosum Corintios. ...

... Γάρ δέν τε άλλα λαμπρά, καὶ ἐξελεύθερον παλαιτί τε καὶ πλουτών, καὶ διὰ τάδε λεγεί μάλιστα δ Καίρα, εἰς τήν πτοιέα θάνατ, κατά διαδόχους οί γενε-

μεν, καὶ τντην εἰδέθη. Cf. Dio Cass. xlv. 35, xlv. 5, xlv. 47); but his is an exceptional case. By his will Augustus adopted Livia (Tac. Ann. i. 8: 'Livia in familia Julian nomenque Augusteae adoptata'). Augustus, and at the same time his son, adopted her and Tiberius his heirs. In later times this species of adoption took the form of devising an inheritance under condition of bearing the testator's name. This mode was, in fact, in use as early as the Roman Republic (Brutus, 212: 'Crassum istius Libinum filium, Crassi testamentum qui futur adoptatur'). Atticus, the friend of Cicero, was adopted by the will of his uncle, and so became Q. Cecilius Pomponianus Atticus, his uncle's name having been Q. Cecilius; he also obtained 10,000,000 sesterces (Cic. ad Att. iii. 29). Dolabella was so adopted by a woman, but Cicero had doubts as to the propriety of this—though, as he humorously remarks, he will be better able to decide when he knows the amount of the bequest (Cic. ad Att. vii. 8: 'Dolabella vide Livia testamentum cum duobus hereditatibus esse in triente, sed inueniiter mutare nomen. Est poenitens eam, rectamne sit nobili adolescenti mutare nomen mulieris testamento; sed id philosophorum devarum-

seuos, quam est vivens, quantum quasi sit in triente triente'). Whether Dolabella accepted the bequest we do not know; at any rate he did not change his name. Later, Tiberius found no difficulty in accepting an inheritance without observing the conditions (Tit. 6: 'Post remissionem in urbe factam a M. Gallio senatore testamento adoptatus, heredita adiit max nomine abstinuit, quod Gallius adversarum Augusto partium fuerat'). For other examples of this method of adoption, see Suet. Galb. 4: Dio Cass. xi. 51; Pliny, Hist. Nat. xxxvi. ii.

W. J. WOODHOUSE.

ADOPTION (Semitic).—1. Adoption in Babylonia.—In the great Babylonian Law Code (Code of Hammurabi), adoption of various kinds is referred to and regulated.

(1) Reasons for the custom.—An obvious reason for the adoption of children in its existence was the need of childless persons, who desired to provide themselves with an heir, that the family patrimony might not be alienated. But in Babylonia, as in old Israel, a man whose wife was childless could, if he had a son or maid-servant, enter into relations with a maid-servant for this purpose. And these alternatives suffered in Israel to meet such cases so well that adoption was entirely unknown.

Besides, adopted children in Babylonia were sometimes taken into a family where sons and daughters were living. Johns* suggests that the real cause most often was that the adopting parents had lost by marriage all their own children and were left with no child to look after. Adopting another's child was to adopt a child whose parents would be glad to see him provided for, to look after them until they died, leaving the property they had left after portioning their own children. But this was by no means the only operative cause. Sometimes the children were adopted to safeguard rights to property, sometimes as a matter of convenience; † in some cases a child was apparently adopted as an apprentice; slaves could be taken for the purposes of adoption, and in the process gained their freedom; and not only sons, but daughters, could be thus secured.

(2) Method.—Adoption was effected and legally safeguarded by a deed in the usual form of a 'tablet of adoption' or 'sonship' (dappa apsstitas, marutum). This was sealed by the adopting parents, and the copy of the deed was delivered to the adopted child. The wills and obligations of the contracting parties were fully set forth, and so long as the tablet remained unbroken, and the seal intact, the position of the adopted child was secure. In cases of informal adoption, and when no formal papers were drawn up, the relationship was not legally binding, and the child could return to its own father's house.

An exception was, however, made in the case of an artisan who took a child to bring up, and who, when he taught him a handcraft. Under these circumstances the child could not be claimed.

The term apsstitas is interesting. It is the abstract of apäté, 'son,' and therefore (m. 'sonship.' It was, however, used to denote the filial relation generally speaking (a daughter to a parent), and thus came to have the general meaning 'share' (that which belonged to a son or daughter by inheritance). Apsstit might be granted by a father to a son during the lifetime of the former, the father handing over his property to the son, only stipulating for maintenance during the lifetime.

(3) Conditions and kinds of adoption.—The conditions were fully set forth in the 'tablet of adoption' or defined by the Code. The obligation resting on the child might be to support the adopting parent (details of the 'tablet of adoption' were supplied in such cases are given in many tablets); or one of service (as when a lady adopts a maid to serve her for life and inherit a certain house). The adoption of a child (e.g. a daughter) by a lady of fortune was evidently regarded as a good settlement for the child. Certain classes of people appear to have had no legal claim to their own children. These were the palace-favourite (or warder?) and the courtezan.§ If the children of such, after being adopted, attempted to repudiate their adopting parents, the action was punished with the greatest severity (C.H. §§ 192, 193).

In other cases, however, the possibility of repudiation of the relationship on one side or the other was contemplated. It appears that a clause implying repudiation (on the part of parents of a son, vice versâ) was regularly inserted in the contract, though it could be enforced only by direct appeal to a law-court. Thus parents, according to the contracts, could repudiate adopted sons if they so

* Babylonian and Stephan Lawns, p. 154.
† The complicated and many-sided nature of adoption may be well illustrated by a case cited by Mr. S. A. Cook (Laws of Moses and the earliest code of Hammurabi, p. 191): 'El-hulis, who had been adopted by his uncle, married a widow with one son; he has no children, and proposes to adopt the stepson. The uncle, however, objects, since under this arrangement his property would pass through Bel-kész into the hand of strangers, and it is accordingly agreed that if the marriage continues to be without children, Bel-kész shall adopt his own brother as heir.
§ Cited by Johns, op. cit. p. 159.
* Cf. Johns, op. cit. p. 159.
ADORATION

wished, the son taking a son's share and departing. This looks like an attempt to contract outside the law. Failure on the part of the adopted child to carry out his obligations was good ground for disinheritance; but the penalty could be inflicted only on a subsequent adoption. If he were found bound, in the first place, to do all in their power to reconcile the parties. With this object in view, judgment was sometimes reserved.

The votary and the koutarion formed a class by themselves, and were the subject of special legislation. They were not supposed to have children of their own, but possessed the right to receive adoptive children. They returned for exercising this right in favour of a certain person, they usually stipulated that such person shall maintain them as long as they live and otherwise care for them (Johns, op. cit. pp. 158-159).

2. Adoption not practised by the Hebrews.—As has already been pointed out, no mention of the practice of adoption occurs in any of the Hebrew Law Codes. No term corresponding to *adolescence* exists in Hebrew,* nor does the Greek term (*adolescence*) occur in the LXX, while in the Greek Testament it occurs only in the Pauline Epistles. In fact, the practice of adoption would have endangered the principle of the maintenance property of the possession of the original tribe, which was the object of such painful solicitude, in the Mosaic Code (cf. Nu 27:1-11). It is obvious that the reasons which operated in Babylonia were not inoperative in Israel, and that in the same way, and with greater force and complexity, and more deeply involved the subject. The selfishness of childlessness was met in the earlier period by polygamy, in the later by facility of divorce. [See, further, MARRIAGE.]

In fact, the Biblical history of the patriarchs shows that practice of polygamy is explicitly attested. Sarah, being barren, requests Abraham to contract a second (*secondary*) marriage with Hagar (Gen 16:1), and Isaac's wife Rebekah bears a child by her maid Ephratah. (Gen 21:4). Isolated cases of possible adoption, or something analogous to it, however, met, with in the OT literature. Thus, (1) three cases of informal adoption can plausibly be said to occur in the OT—those of Moses, adopted (Vulg. *adoptavit*) by the Egyptian princess (Ex 2:22); of Genubath, at least, one case of adoption possible (1 K 11:18); and of Esther, who was adopted (Vulg. *adoptavit*) by her father's nephew Mordecai (Est 2:11). It is noticeable that in all three cases the locale is outside Palestine, and the influence of foreign ideas is apparent. Further, (2) something analogous to adoption is implied in the case of Ephraim and Manasseh, sons of Joseph, to whom Jacob is represented as giving the status of his own sons (Gen 48:8) "And now thy two sons... are mine; Ephraim and Manasseh, even mine sons. Theirs shall be mine". As a full son, Jacob each receives a share in the division of the land under Joshua, Joseph thus (in the person of his two sons) receiving a double portion. This, however, is not really a case of adoption, but one where the rights of the firstborn were transferred (for sufficiently grave reasons) to a younger son (cf. Gen 40:4 for the sin of Reuben, vv. 25-29 for Joseph's elevation). To Joseph in effect are transferred the privileges of the eldest son; cf. further 1 Ch 6:5-6. (3) The levirate law has also some points of contact with adoption. The brother of a man dying without children entered into a union with the widow, in order to provide the dead man with an heir. The firstborn in this case received the name and the heritage of the deceased. Some fathers (e.g. Church Augustine) have actually given the name of 'adoption' to this Mosaic ordinance. But the two things are obviously distinguished by fundamental differences. In real adoption the adopting parent exercises an act of deliberate choice. Thus the levirate law is not a case of adoption in any real sense, but 'the legal substitution, made for sufficient reasons, of a fictitious for a natural father' (Many).

3. Legal adoption unknown among the Arabs.—Of ancient peoples, who among the Arabs no clear and certain traces exist. The practice of polygamy was sufficient to meet cases where the need of adoption might have been felt. See, further, art. ADOPITION (Muhammadan), above.

4. Theological explanation of the idea of adoption.—Adoption is an initiated institution, was evidently unfamiliar in Palestine during the NT period. None of the NT writers uses the technical Greek term *adolescence* except St. Paul. He doubtless employed the term because, having been born in Cilicia, he had received a partially Greek education, and was acquainted with the institutions and terminology of the Greeks, among whom adoption was commonly practised.

Among Christian authors, from Pindar and Herodotus downwards, *adolescence* is regularly found.

Theologically the conception of adoption is applied by St. Paul to the special relation existing between God and His people, or between God and redeemed individuals. For the former sense, cf. Ro 8* (Israelites... whose is the adoption, and the sonship, and the glory, and the promises). Here the people of Israel as a whole is thought of. The redemption from Egyptian bondage was specially associated with the thought of Israel's becoming a nation and God's adopting the Israelites. According to Law and primitive thought the sense of the Christian use of the term adoption is to be found in the writer of the Shema' (cf. Singer, *Heb.-Eng. Prayer-Book*, pp. 42-44, 98-99). In the four other passages in St. Paul's Ep. where the word *adolescence* occurs, it has an individual application, and an ethical sense, denoting 'the nature and condition of the true disciples of Christ, who by receiving the spirit of God into their souls become the sons of God' (Thayer), cf. Ro 8*; Gal 4, Eph 1; in Ro 8* the phrase to *adolescence* is used for the child of promise, according to the law, and the service of God, and the promises'). The same thought is also prominently expressed in the Synagogue Liturgy (esp. in the Thanksgiving for redemption and adoption, ch. 19, in which immediately follows the recitation of the Shema'), e.g. Singer, *Heb.-Eng. Prayer-Book*, pp. 42-44, 98-99). In the four other passages in St. Paul's Ep. where the word *adolescence* occurs, it has an individual application, and an ethical sense, denoting 'the nature and condition of the true disciples of Christ, who by receiving the spirit of God into their souls become the sons of God' (Thayer), cf. Ro 8*, Gal 4, Eph 1; in Ro 8* the phrase to *adolescence* is used for the child of promise, according to the law, and the service of God, and the promises'). The same thought is also prominently expressed in the Synagogue Liturgy (esp. in the Thanksgiving for redemption and adoption, ch. 19, in which immediately follows the recitation of the Shema'), e.g. Singer, *Heb.-Eng. Prayer-Book*, pp. 42-44, 98-99). In the four other passages in St. Paul's Ep. where the word *adolescence* occurs, it has an individual application, and an ethical sense, denoting 'the nature and condition of the true disciples of Christ, who by receiving the spirit of God into their souls become the sons of God' (Thayer), cf. Ro 8*, Gal 4, Eph 1; in Ro 8* the phrase to *adolescence* is used for the child of promise, according to the law, and the service of God, and the promises'). The same thought is also prominently expressed in the Synagogue Liturgy (esp. in the Thanksgiving for redemption and adoption, ch. 19, in which immediately follows the recitation of the Shema'), e.g. Singer, *Heb.-Eng. Prayer-Book*, pp. 42-44, 98-99).

Adoption in this sense implies the distinction that exists between the redeemed and Christ. 'Adoption is by grace; Jesus is by nature.' Adoptionem propterea dicit, says Augustine, ut distincte intelligatur unicum Dei filium. (The thought of spiritual adoption is freely expressed in Ps 141, 15.)

In later ecclesiastical language *adolescence* became a synonym for baptism (cf. Sueter, *s.m.). According to Sueter, *theophrastus* thus defines the term: "*adolescence* is the new man, ap. to *theophrastus*.

G. H. BOX.

ADORATION.—As this word is used, both in literature and in common practice, it seems to imply, on the one hand, admiration of qualities that are good and beautiful, and, on the other, a recognition of power in what possesses them. Further, it usually carries with it the idea that the object of adoration is immensely greater than the being who adores.

* In Galatians, adoption of the Greek type may be in the Apostle's mind; in Romans, of the Roman type.

* Lightfoot on Gal 4:5.
It is natural to speak of adoring God or a god, and of adoring Nature: somewhat less natural to speak of adoring another human being: hardly natural at all to speak of adoring a mere idol under which the idea is conceived as in some way possessing an intrinsic force of its own. Kant, for instance, might possibly have adored his Geometrical Imperative, 'The Moral Law within,' which he compares in majesty to 'the starry heavens without,' for he seems to conceive it as something more than that which apprehends it.

The word—adoration—is, in short, still felt in the word. Prayer, however, commonly implies the belief in some gain to him who prays, and this need not be felt in adoration. Indeed, it may be said that the pre-eminent characteristic of the adoring mood is the merging of self in the want of other, or love. In fact, it is a self-imposed ignorance of the other, of the fear to be so near divinity as to be able to be so near God. The whole temper of the individual is admirably illustrated in Browning's lines about the love that 'spends itself in silent and invisible expense' (Paradoxes, part iii, ad fin.).

It is well to note expressly that adoration must reach a certain pitch before the term 'adoration' is felt to be appropriate. The bare recognition of power is, of course, never enough. Adoration of some kind must always be an ingredient, even if it is only the adoration of such power, as in devotional worship. It is, indeed, this element of adoration that appears to give the principle of division between magic and religion. 'But in the lower forms of worship, as in the one just mentioned, the adoration is incomplete, the adoration is felt to be incomplete also. For its completion we seem to require, on the one hand, an embodiment of all that would satisfy our own ideal, and, on the other, the presence of a force that is more than our own. The types of adoration, therefore, complete and incomplete, are as diverse as the diverse types of those religions that definitely worship a power beyond the worshipper. Strictly speaking, it would appear that religions such as Buddhism, which do not recognize such a power, should be excluded from this class, and that adoration, as we have defined it, has no place in them. But for the Semites and the Europeans at least, history plainly shows how vital an element it has been in their religious development. The whole growth of Hebrew monotheism out of the surrounding idolatry, until its final sharp separation, is one of the best examples of the way in which the holy objects into the presence of which was truly to be adored. Lack of power on the one hand, lack of righteousness on the other, are sure signs that the true God has not been found. Anything that suggests either delusion or weakness must be excised, and the heaven then is but the work of men's hands (Is 37:19); and Israel must not turn His glory into 'the similitude of an ox that eateth grass' (Ps 106:13). The god that makes a man's son pass through the fire is Molech, not Jehovah (Jer 7:25). No such god may stand beside Him.

It is this belief in a completely satisfactory object of worship, and this passion to show it to others, that have been among the great moving forces in Mahomedanism, as in every missionary enterprise since missions began. But the Hebrews among all nations, have felt the rapture of this mood, and have given it the most complete expression in poetry.

The break-up of Greek religion was directly due to the fact that the old mythology provided images too imperfect to satisfy the heart's longing to adore. Plato and Euripides show the bitter dissatisfaction with their forefathers' imaginings, and the search, never fully satisfied, for something better (see, e.g., Plato, Euthyphro; Euripides, Bacchae, Troades).

The same dissatisfaction and the same search are manifest during the early days of the Roman Empire, only in a far more prosaic form, insomuch as there was far less imaginative. The eager acceptance of strange worship at Rome, and the attempt of Augustus to set up the worship of the Emperor above them all, are proofs of this, as pitiful as they are ludicrous.

Christianity, it might be thought, would have solved all these difficulties for those who accepted it. And it is noteworthy that perhaps the only expression of pure adoration in literature worthy to be set beside the Hebrews' was the divination of the Christian Paradise at the end of Dante's poem. It may be added that the liturgies of the Church have always been particularly successful in the place they have given to praise as distinguished from prayer. But not to speak of the profound and complicated conceptions of Trinitarian and Unitarian conceptions, it is clear that the fierce quarrels over the use of images and the honour due to the Saints exhibit the essential features of former struggles. The Iconoclasts and Reformers can always find some who, like Wordsworth, definitely make the leap and unite Nature with God.

LITERATURE.—F. B. Jevons, An Introduction to the History of Religion, London, 1889; C. F. Keil, The holy objects with the presence of which was truly to be adored. Lack of power on the one hand, lack of righteousness on the other, are sure signs that the true God has not been found. Anything that suggests either delusion or weakness must be excised, and the heaven then is but the work of men's hands (Is 37:19); and Israel must not turn His glory into 'the similitude of an ox that eateth grass' (Ps 106:13). The god that makes a man's son pass through the fire is Molech, not Jehovah (Jer 7:25). No such god may stand beside Him.

It is this belief in a completely satisfactory object of worship, and this passion to show it to others, that have been among the great moving forces in Mahomedanism, as in every missionary enterprise since missions began. But the Hebrews among all nations, have felt the rapture of this mood, and have given it the most complete expression in poetry.

The break-up of Greek religion was directly due to the fact that the old mythology provided images too imperfect to satisfy the heart's longing to adore. Plato and Euripides show the bitter dissatisfaction with their forefathers' imaginings, and the search, never fully satisfied, for something better (see, e.g., Plato, Euthyphro; Euripides, Bacchae, Troades).

The same dissatisfaction and the same search are manifest during the early days of the Roman Empire, only in a far more prosaic form, insomuch as there was far less imaginative. The eager acceptance of strange worship at Rome, and the attempt of Augustus to set up the worship of the Emperor above them all, are proofs of this, as pitiful as they are ludicrous.

Christianity, it might be thought, would have solved all these difficulties for those who accepted it. And it is noteworthy that perhaps the only expression of pure adoration in literature worthy to be set beside the Hebrews' was the divination of the Christian Paradise at the end of Dante's poem. It may be added that the liturgies of the Church have always been particularly successful in the place they have given to praise as distinguished from prayer. But not to speak of the profound and complicated conceptions of Trinitarian and Unitarian conceptions, it is clear that the fierce quarrels over the use of images and the honour due to the Saints exhibit the essential features of former struggles. The Iconoclasts and Reformers can always find some who, like Wordsworth, definitely make the leap and unite Nature with God.

ADORATION (Biblical).—The god of the simpler and lower forms of a sentiment approaching to adoration is that which is felt in presence of a fellow-man mightier and more majestic than oneself. Kings and conquerors, in the days when might was right, were always anxious to inspire their subjects with a profound dread of their person, and instead of a cringing, self-debasing attitude in their presence. Agas of tyranny and submission made servile fear and abjectness almost universal in Oriental lands. Dread in the presence of a god is an expression of profound respect, and is indicative of lowly self-abasement. We see this in the case of Ruth before Boaz (Ru 29); the Shunamite before Eliaha (2 K 4); Abigail (1 S 25); Mephibosheth (2 S 9), and Joab (2 S 14) before David; and in the 'reverence' paid to Haman by all the king's servants save Mordecai (Es 3). 2. These instances do not seem to furnish us with any sentiment higher and worthier than mere dread of power; and in presence of the indications of power in nature men have ever been wont to pay homage akin to that paid to rulers and lords. The sun is certainly the most wonderful object in nature, and has called forth adoration in every age. Though this was discouraged and forbidden by the monotheistic leaders of Israel (Dt 4:20), it could not be entirely suppressed. Even in the times of the Exile, in the
Temple at Jerusalem, there were those who turned their faces to the east and worshipped the sun (Ezk 8:18); and in the Oath of Clearing Job protests that when he beheld the sun and moon, his heart had not been secretly enticed, and he had not kissed his lips to them (31:12). The stars also, which move through the heavens in silent majesty, and evoke incessant wonder and awe, have for millenniums received devout adoration, and have been believed to rule the destinies of men. Even in Israel, the host of heaven, received worship in the time of the kings (2 K 17:22). Similarly, when anything mysterious suddenly occurred, it was regarded with dread and reverence, especially when it was conceived of as a manifestation of a terrible Power behind all things. At the dedication of the Tabernacle, when fire came forth and consumed the burnt-offerings upon the altar, all the people fell on their faces (Lv 9:24). And in Elijah's time, when fire fell and consumed the prophet's burnt-offering and the wood and the stones, the people fell on their faces and cried, 'Jahweh, he is God' (1 K 18:38). Similarly, Ezekiel fell on his face when he beheld the cherubim (10:3); and when he saw the glory of the Lord, returning from the east to inhabit again the visionary Temple (Ezk 43:1), when the glory of the Lord filled the house of the Lord (43:5).

3. The appearance of angels is stated on several occasions cause great dread and the outward manifestations of adoration as when Abrahan (Gn 18:2), and also Lot (19:1), bowed themselves with their faces to the earth. So when Manoah and his wife saw the angel 'ascend in the flame of the altar', they fell on their faces to the ground (Jg 13:22). The same is narrated when his eyes were opened and he saw the angel of the Lord standing in the way (Nu 22:31), and of the women at the tomb of our Lord when they saw the two men in dazzling apparel' (Lk 24). It was a sentiment more of abject terror, with less of reverence, that caused Saul to 'fall straightway his full length upon the earth' when he saw what he considered to be the ghost of Samuel (1 S 28:29).

4. Idolatry evoked in Israel the same outward signs of reverence, and the adoration of nature and the image was believed to be indwelt by the genius or divinity, and was usually treated with deep reverence; as when the vast multitudes on the plains of Dura prostrated themselves before the image which Nebuchadnezzar set up (Dn 3), and when Naaman spoke of bowing himself in the house of Rimmon (2 K 5:14). If not a deterioration from reverence, it must be a survival of a very early stage of idolatry, when we read of men kissing the image (Hos 13:1; 1 K 10:19); cf. the stroking (f) the face referred to in 1 S 13(1).

5. The loftier our conception of God becomes, the more profound is our sentiment of adoration. So long as men conceive of God as such an one as themselves, they are aptly able to that of a ruler or monarch; but as God recedes beyond our comprehension, the more sincere and profoundly reverent does our homage become. And when at length the term 'boundless,' or 'infinite,' employed either in a spatial, temporal, or intellectual sense, is applied to God, then adoration reaches its ideal. There is an excellent drastic influence in the conception of Infinitude. 'Mystery,' as Dr. Martineau says, 'is the grand redeeming power that purifies the intellect of its egotism and is its prig of pride.' (1861, liii. ch. xiv.). But the contemplation of the abstraction, 'the Infinite' or 'the Absolute,' can scarcely evoke adoration. It is when we realize that Infinitude is not a void, but is permeated with the energy of an Eternal Mind, that we prostrate our souls in holy adoration. When the OT saints could rise to the attitude of conceiving of God as 'the high and lofty One that inhabits eternity, whose name is Holy' (Is 57:15); and when in the prayer of Solomon we read 'heaven and the heaven of heavens cannot contain thee; how much less this house that I have builded' (1 K 8:27), we have as sublime instances of adoration as the OT furnishes.

6. Mystery is the mother of adoration. It is true that in a sense adoration is based on knowledge: 'we worship with wisdom and understanding' (Ps 148:7); but it is an essential of sincere adoration that we should not fully know. Even on the lower human plane, what we revere is higher than we. If there is any one before whom we are inclined to bow the knee, and yield the veneration of hero-worship, it is the man of overpowering intellect, transcendent wisdom, or superlative goodness. Similarly, the very mysteries of the Divine foster adoration and evoke worship. The writer of Ps 8 was in a genuine state of adoration when he considered, 'How great art thou, O Lord, and dreadful thy works! Never mind that God has the power of God's fingers, the moon and the stars which He had ordained, and then exclaimed, 'What is man!' Self-abasement in the presence of majesty is an essential element in adoration, and the work suggested to the Psalmist the incomparable magnificence of the Workman. This finds sublime expression in that most beautiful of the Nature-Psalms, Ps 104. The subject is a thunder-storm which gathers over Lebanon, and passes southward until it dies away in the wilderness of Paran. The storm-cloud is Jahweh's chariot, and as the advancing cloud tips one after another the mountain-tops of Palestine, the Psalmist sees within Jahweh the image of His Father, filling the earth, and causing the mountains to quake before Him. As the storm dies away, the setting sun gilds the gathering clouds with tints of preternatural splendour, and to the Psalmist it seems the very entrance to the temple and palace of God. The beauty of the scene entrances him. He sees a door opened in heaven. In imagination he is with the angels, who, like himself, have been enraptured with the marvelous spectacle, and he exclaims, 'How glorious are His works!' In his temple adoration he contemplates these celestial beings, who, like himself, are filled with adoration at the majesty of God, that the Psalmist addresses the words, 'Give unto Jahweh, O ye sons of the mighty, give unto Jahweh glory and strength.'

Equally sublime is the adoration of the Divine omniscience in Ps 139. The consideration of the intimacy of God's knowledge of him, wherever he is and whatever he does, produces in the mind of the Psalmist the self-abasement which prompts him to hide himself from God's presence (v.7); the fascinating sense of mystery: 'Such knowledge is too wonderful for me' (v.4); and also of adoring love: 'How precious also are thy thoughts unto me, O God' (v.7) is closely akin to that of a ruler or monarch; but as God recedes beyond our comprehension, the more sincere and profoundly reverent does our homage become. And when at length the term 'boundless,' or 'infinite,' employed either in a spatial, temporal, or intellectual sense, is applied to God, then adoration reaches its ideal. There is an excellent drastic influence in the conception of Infinitude. 'Mystery,' as Dr. Martineau says, 'is the grand redeeming power that purifies the intellect of its egotism and is its prig of pride.' (1861, liii. ch. xiv.). But the contemplation of the abstraction, 'the Infinite' or 'the Absolute,' can scarcely evoke adoration. It is when we realize that Infinitude is not a void, but is permeated with the energy of an Eternal Mind, that we prostrate our souls in holy adoration. When the OT saints could rise to the attitude of conceiving of God as 'the high and lofty One that inhabits eternity, whose name is Holy' (Is 57:15); and when in the prayer of Solomon we read 'heaven and the heaven of heavens cannot contain thee; how much less this house that I have builded' (1 K 8:27), we have as sublime instances of adoration as the OT furnishes.

The most worship-filled of the Psalms is a group of seven, containing 93 and 95–100. They have a common theme: the recent enthronization of the Divine King on Zion; and one might say that the keynote of the entire group is to be found in the words: 'O come, let us worship and bow down; let us kneel before the Lord our Maker' (95). This group contains the passage which most readily comes to our lips when we desire to express the mystery of God's dealings and yet wish to 'come into His presence and into His sanctuary'; and the mysteries of God's goodness are round about him: righteousness and judgment are the foundation of his throne (97), and it gives to us the ideal of adoration: 'O worship the Lord in the beauty of holiness' (96). The attributes of God which evoke the adoration
of the author, or authors, of these Psalms are these: (1) The majesty of God: 931 951 961 994; (2) His providential care: 951 991 1001; (3) His creative power: 951 991 1001; (4) His righteousness and holiness: 971 981 991. 4. The effect of the contemplation of the Divine holiness is best seen in the vision of the youthful prophets. The sight of the hoary aging being in heaven, veiling their faces with their wings in view of the eternal Light of the excellent Glory, filled Isaiah with profound awe; and the sound of the antiphonal song of these holy ones, caused by the indescribable glory which filled him with such abasement that the only words he could utter were, 'Woe is me, for I am undone.' It was at his lips that the consciousness of his own impurity caught him. 'I am a man of unclean lips, he cried; and it was there that the canterbury stone from off the altar was applied—after which he felt able to join in the worship of the holy ones, and to become a messenger of the Lord of Hosts. 5. In the NT there is no very marked advance in this position rendered to God, because the attributes of God which usually evoke our adoration were almost as fully revealed in the OT as in the NT. We note, however, that the disparity between God and man is more completely realized, so that the prostration of adoration is considered to be a fundamental expression of the feeling of the mind, as it were by others on that ground. When Cornelius was so much overawed by the mysterious circumstances in which Peter was sent for and came to Cesarea, that he fell down at Peter's feet in lowest reverence, Peter refused such obeisance as being ex- cessive to a fellow-man. 'Peter raised him, saying, Stand up; I myself also am a man' (Ac 10:38); and in the Apocalypse of John, an angel rejects the same obeisance, on the ground that he is a fellow- servant with John and with all who obey God's words, significantly adding, 'Worship God' (Rev 22:8). And yet we find that the Lord Jesus never refused lowly homage, which implies the consciousness that adoration was fittingly paid to Him. The recorded instances of reverence paid to Christ and His acting, especially in the parables, elicit the consideration of the motives which prompted it. There was probably a conflict of feelings in Peter's mind when he fell down at Jesus' knees, saying, 'Depart from me; for I am a sinful man, O Lord' (Lk 5:8), but the incident was by far the most sublime of the Lord's superlative holiness. When Mary 'fell down at his feet, saying, Lord, if thou hadst been here, my brother had not died' (Jn 11:32), the sentiment was one of adoring love, which invests its beloved one with undefined power. The sense of need clinging vehemently to One who, they believe, has love and power enough to reach to the depth of their misery and need, was the sentiment most apparent in those who came to Jesus for His miraculous help, e.g. the leper (Mt 8:3), S. Peter (9:20), the Syro-Phœnician woman (15:25), and the Gadarene demoniac (Mt 8:27), respecting all of whom we read that they 'came and worshipped him': while of the father of the demoniac boy we read that he 'came kneeling down to him' (Mt 17:15). Adoration of superhuman power was the feeling uppermost in the minds of the disciples, when, after Christ had come to the ship, walking on the sea, they 'worshipped him, saying, Of a truth thou art the Son of God' (14:33). Not only power but love was present to the thoughts of the blind beggar who had been excommunicated from the synagogue when he paid adoration to the Lord Jesus (Jn 9:8). Jesus that they had cast him out, and sought the poor outcast; and when Jesus restored His sight to him as the Son of God, he said, 'Lord, I believe,' and worshipped Him (18). And there was a deep adoring love in the minds of the disciples when they were met by the risen Lord, and they 'held him by the feet and worshipped him' (Mt 28:17). 9. Adoration of the Lord Jesus became more profound in the Christian community as their knowledge and faith increased. It was not a devout adoration that the dying Stephen beheld Jesus standing at the right hand of God, and said, 'Lord Jesus, receive my spirit' (Ac 7:56). There was incipient adoration in the words of St. Paul, who, when he saw the ascended Christ, 'fell to the ground and worshipped Jesus, and said, Lord, what wilt thou have me to do?' (9:4-6). There was a deeper adoration when in the Temple he prayed so long and so fervently that in ecstasy he saw his Lord again, and received from Him the definite commission to devote his life to the Gentiles (22:1-23). But how much richer was the knowledge, and more intense the love, and more profound the adoration, when he could say to the Ephesians: 'For this cause I bow my knees unto the Father of our Lord Jesus Christ, that ye, being rooted and grounded in love, may have the love of Christ which passeth knowledge' (Eph 3:14). The Revelation of St. John is filled with adoration to 'him who sitteth on the throne, and to the Lamb.' The vision of the writer among the candlestick led to a new song, 'in which the sentiments of adoration, which are equally impressed by the wonders of Christ's death, and in join in the song, 'Worthy is the Lamb that was slain,' etc. (5:11). In ch. 7 we have the writer's songs of adoration: first, that of the redeemed, the multitude which no man could number (7:10), and then that of the angels, who fall before the throne on their faces and worship God (7:11-12). In 11:1 we again see the lofty adoration of the 24 elders, and in 14:1 we read of the 144,000 who had been redeemed from the earth. All through this book partial knowledge, eagerness for more knowledge, and withal a profound mystery, combine to produce the loftiest type of adoration which the creatures of God, terrestrial or celestial, can experience and render. 10. It remains now that we should tabulate the various attitudes of adoration which are mentioned in the OT and NT. They are the same as are found in other Oriental countries (Heb. naga, Gr. παρευρέσθαι), in which the one who was paying homage lay down abjectly with his face on the ground, as if to permit his lord to place his foot on his neck (Jos 10:28, Ps 110:1). This attitude is mentioned in 1 S 25:4, 2 K 4:4, Est 5:2, Lk 8:2; (2) Standing, as slaves stand in presence of their master. The Pharisee stood and prayed (Lk 18:10), and many of the Pharisees prayed standing in the corners of the streets (Mt 9:18). (3) Kneeling, i.e. kneeling with the body resting on the heels or the sides of the feet. It was thus that 'David sat before the Lord' when he was filled with amazement at the message of Nathan, announcing the eternal establishment of his kingdom (2 S 7:4). (4) Kneeling (Heb. מַעֲנֵה [2 Ch 6:4, Ps 93:), מְעָן [1 K 7, 10, Ezr 9], Gr. γονατίζω),
ADORATION (Jewish and Christian) 119

with the body erect, or bent forward so that the head touched the ground. Solomon, at the dedication of the Temple, 'knelt on his knees, with his hands spread forth towards heaven.' The prediction of Messianic days is that 'every knee shall bow' (Le 49:26; Ro 14:11, Ph 2:9).

Lord Jesus in Gethsemane 'kneaded down' (Lk 22:44), and also 'fell on the ground' (Mk 14:35). St. Paul knelt in the building used as a church at Miletaus (Ac 20:37), and also on the beach at Tyre (21:16). (5) Bowing the head to rest the chin on the chest (Heb. 7:2, Gr. ἀληθευ;) used of Eliazer when he found that God had directed his way (Gn 24:27-48); of the elders of Israel when Moses told the story of the burning bush (Ex 4:17), and when they received injunction as to the celebration of the Passover (12:7); of Moses when Jehovah proclaimed His Name before him (34:3); of Balaam (Nu 22:20) and of Jehoshaphat (2 Ch 20:18). (6) Uplifting the hands: used of Solomon at the dedication of the Temple (1 K 8:42; cf. also 1 K 2:1, 3:4, 1 Ti 2:8). Then, as we have said, there is one reference to 'kissing the hand' to the sun or moon as a sign of adoration (Job 31:17).

ADORATION (Jewish and Christian, post-biblical) I. Jewish.-(1) The outward posture of adoration did not differ from what had gone before (see above), only in post-Biblical literature its various forms were more strictly prescribed. This was a natural consequence of the predominance of the Pharisaic party, with its love for abstract ritualistic observances. It was ordered that on entering the Sanctuary the worshipper should make thirteen prostrations (מעננת), a form of adoration which consisted in the spreading out of hands and feet while the face had to touch the ground. Another outward act of adoration was kneeling with the head bent forward so that the forehead touched the ground; a like posture, accompanied by kissing the ground, was an intensifying of the act. The most exaggerated form of adoration, however, was that of the high priest uttered the Holy Name of God (Jahweh); at the mention of this name every one present threw himself prostrate upon the ground, face downwards (Jer. Yoma iii. 40 d).* The importance attached to the outward expressions is also exemplified by the dispute that took place at the beginning of the Christian era between the Hillelites and the Shammaites, who regarded standing as the most fitting attitude, won the day, and at the present time the Jews recite it standing. The same position is assumed during the saying of the Shemone' E'or (the 'Eighteen Benedictions'), which is one of the central parts of the morning service; indeed, its technical name is 'Amidah ('Standing'); because, as it is one of the chief acts of adoration, the most appropriate attitude is that of standing while it is being recited (cf. for the position assumed during prayer, Mt 6:8, Lk 11:16). Throughout the Middle Ages, down to the present day, the Talmudic prescriptions regarding attitudes of adoration have been observed. Thus, the throwing of oneself at full length upon the ground took place only on the Day of Atonement, but while at other times prostration was restricted to bowing the head or standing, or, less frequently, kneeling.* A notable exception to this is, however, afforded by the Karaites; these professed in all things to reject Rabbinical traditions and to revert to Biblical usage only; they regarded eight external attitudes in adoration as indispensable, viz. kneeling, bowing the head, bending the upper part of the body until the forehead gently touched the ground, violent bowing of the head, complete prostration, raising the hands, standing, and raising the eyes to heaven. t It will be noticed that kissing the ground or any object is not included among these, because in the OT this act of adoration was usually connected with non-Jahwistic worship (see preced. art. § 4).

(2) God alone is adored by the Jews, though the veneration paid to the Torah ("Law") both as an abstract thing of perfection, and also in its material form ("the scroll of the Law"); reaches sometimes an extravagant pitch. One can see not infrequently in the Synagogue, worshipers stretching out their hands to touch the roll of the Law when carrying it from the Ark; the hand that has touched the sacred roll is then kissed; moreover, during the ceremony of the B'g'boa, i.e. the 'elevation' of the scroll of the Law, the whole congregation stands up in its honour; this act is regarded as a special privilege or mispahat.§ There are certain intermediate beings between God and men to whom great veneration, bordering on adoration, is paid; indeed, in some passages these intermediate beings are identified with God, and in so far can truly be said to be worshipped; but the later Jewish teaching on these beings is so contradictory—sometimes they are spoken of as personalities, at other times as abstract forces, at other times as Divine attributes—that it would be precarious to regard them definitely as objects of adoration.

They are: Metatron, the Memra ("Word") of Jahweh, the Shekhinah, and the Raish hakodesh ("Holy Spirit") of the Messiah, in so far as He is represented as the incarnation of the Divine Wisdom, which existed before the world was created.¶

2. Christian. — (1) The attitudes of adoration among the early Christians were borrowed, as one would expect, from the Jews and the Gentiles. Throughout the first few minutes the Jewish custom was followed is seen in Tertullian's description of Christian worship, given in de Corona Militis iii. He says that on Sunday and the whole week of the festival of Pentecost, prayer adoration is to be said in kneeling. This is thoroughly in accordance with Jewish precedent, for 'the synagogue custom (minhag), as old as the first Christian century, omits the prostration on all festivals and semi-festivals.'

(2) Adoration among Christians, almost from the commencement, has not been confined to the adoration of the Deity. It is true that in the Roman Catholic Church degrees of adoration are officially recognized (see above, p. 118†), but in actual practice this differentiation of adoration has always been observed. Apart from worship offered to God, adoration is offered in the following instances:—

(a) Adoration of the Eucharistic elements.—The doctrine of Transubstantiation was held centuries before it was officially declared to be a dogma of

* The references to European Jews; those who live in the East follow, like the Muhammadans, the practice of prostration in earlier ages.

† JB l. 111.

¶ A very small acquaintance with the Jewish religion will show that this is no exaggeration.

§ In the Synagogue this word is used in the technical sense of 'privilege,' not in the Biblical sense of 'command' (cf. bar Mispah). See further, Oesterley, Church and Synagogue, viii. (1890) p. 19.

ADORATION (Jewish and Christian)

the Roman Catholic Church; from it followed of necessity the adoration of the 'Eucharistic Christ.' Roman Catholics, of course, maintain that inasmuch as the elements of bread and wine in the Mass become the actual body and blood of Christ, they worship Christ, and Him alone, in the Mass. The adoration of the elements takes place at their elevation after the consecration; and the adoration is of the highest kind, viz., cul tus la trium. Communities, many in number, exist for the purpose of offering perpetual adoration to the consecrated elements; day and night, at least one person has always been before these images and adores in silence. In these communities each member has a particular hour assigned to him or her at which regular attendance is required for this purpose in the church or private chapel. The raison d'être of this perpetual adoration is that it should be in imitation of the holy angels and glorified saints who serve the Lamb 'day and night in his temple' (Rev. 7:12).

(b) Adoration of the Cross.—As early as the time of Tertullian the Christians were accustomed of worshipping the Cross. St. Cæcilia (d. 455) points to a tendency which, as the witness of later writers shows, soon became a settled practice. He says: 'Quod quidam distictissimis monachorum, habentes zeum Dei sed non secundum scientiam, simpliciter in teis, fereantur illae lignes, resque juxta humerus circumferentes, sed seditionem, sed visum cunctis videntibus intulenter.' St. Aldehaim (7th cent.) speaks of certain Christians as 'Crucicolo,' and, indeed, not without reason, if it be true that Alcin, who lived at the same period, was in the habit of saying before the Cross: 'Tuam crucem adoramus, Domine, tuam gloriosam re- colimus passionem; misere nostri.' Moreover, stone crosses have been found at Mainz, belonging to the second half of the 9th cent., bearing the inscription: 'Sca. Crux nos salva.' It was, therefore, not without reason that 'Latria to the Cross' was forbidden by the second Council of Nicaea (787). Two festivals in honour of the Cross were observed in very early days, and known up to the beginning of the 16th. One is the 'Invention of the Cross,' which is observed on May 3 in memory of the alleged finding of the true cross by Queen Helena; the fact of the 'Invention' is testified to by Rufinus, Socrates, Sozomen, and Theodoret. According to the story, Helena, the mother of the Emperor, procured the inscription, and part of the Cross to Constantine; the rest was kept at Jerusalem in a silver case, which was carried in procession and worshipped by the faithful on certain days in the year. This custom had died out by the time of the patriarch Sophronius (d. 560); it was, however, continued in St. Sophia's at Constantinople till the 8th century. The other festival is that of the 'Exaltation of the Cross,' held on Sept. 14, in memory of the Emperor Constantine's victory over the Persians. At the present day supposed pieces of the true Cross are possessed by some churches; the piece of wood (sometimes very minute) is placed in a glass case, resembling a 'monstrance,' which is sealed up by the Pope or the Bishop; the glass case is kissed and adored by the faithful, and is also used for blessing the congregation. What must have materially contributed to the adoration of crosses and crucifixes was the custom of putting relics inside them, for veneration.

In spite of Conciliar prohibition, St. Thomas Aquinas taught that the Cross was to be adored with latria, i.e. supreme worship, and argued that one might regard it as an image of Christ. In this way: (1) in itself, as a piece of wood or the like, and so no reverence is given to a cross or to an image of Christ; (2) as representing something else, and in this way we may give to the Cross relatively—i.e. to the Cross as carrying on our mind to Christ—the same honour as we give to Christ absolutely, i.e. in Himself.

(c) Adoration of the Sacred Heart.—This cult originated with the mystic, Margaret Mary Alacoque (d. 1690). In the year 1675 she announced that Christ had appeared to her, and said that He appeared to her, and showed her 'His most holy heart upon a throne of flames, encircled with thorns, and over it a Cross'; that it had been revealed to her that Christ desired that His heart should be specially honoured, as satisfaction for the many offences that had been committed against Him in the Holy Sacrament; and that special adoration should be offered to it on the Friday after the octave of the festival of Corpus Christi.

The idea of the adoration of the heart of Christ had, however, already been expressed, for in the 16th cent. the Carthusian monks Lansenpr had recommended pious Christians to assist their devotion by using a figure of the Sacred Heart. The cult was at first vehemently attacked,—the term cardiolatry was applied to those who practised it; but in spite of this it grew in popularity, and in 1759 a special office and Mass were accorded it, with the condition that the 'Heart of Jesus' was to be regarded only as the symbol of His goodness and love, . . . intelligens hujus missae et offici, qua celebritas non agatur, sed institutum et symbolice renovari memoriam illius divini amoris, qua Unigenitus Dei Filii humanam suscepit naturam, et factus oedebis usque ad mortem, prebere se dixit exemplum omnibus' (i.e., dominibus, quod esset usque ad mortem). A little later, an explanation of the principle underlying the cult was put forth in the bull 'Auctorem fidelis' (1754), in which it is said that the faithful worship with supreme adoration the physical heart of Christ, considered not as mere flesh, but as united to the Divinity; they adore it as the 'heart of the Person of the Word, to which it is inseparably united.' Stress is laid on the distinction between 'objectum formale et materiale.' The cult became more and more popular under the influence of the activity of the Jesuits; through their instrumentality the whole month of June was dedicated to the Sacred Heart. In 1850, at the desire of the French bishops, Pius IX. raised the festival of the 'Heart of Jesus' to a festival duplum major, and ordered it to be observed by the whole Church. In August 1864, Margaret Mary Alacoque was canonized, an act which still further popularized the cult.

*Quoted from his Works (iii, xxxv, s. 3 et 4) by Addis-Arnold, op. cit. art. 'Adoration of the Cross.'

§ Called 'Holy Cross Day' in the Calendar of the English Prayer-Book.

‖ Lefsehe, de Vita Const. i. 97-92.
In spite of the fact that officially a distinction is made between the material and the symbolic, and that the whole cult is declared to be only an expression of the dogma of the adoration of Christ's humanity united with His Divinity in the heart, it is certain among very many devout, though uncultured, believers the adoration is characterized by gross materialism; for the heart which is adored is spoken of as that which was pierced by the spear upon the Cross; and, in urging the excellence of the object of adoration, the late Bp. Martin of Paderborn (d. 1138) wrote thus: 'The real object of meditation concerning the most holy heart of Jesus, the same name itself implies, is the actual heart of Jesus, the actual heart of Jesus, and not merely His love symbolized by this heart. . . . It is the real, bodily heart of Jesus which does not yield what he is paying for and intention buy. We must, however, carefully distinguish between what by improved processes of production is really cheaper and what merely seems so; for it is the craze for cheapness that is largely responsible for the extent to which adulteration is practised. Owing to imperfect education and an often consequent misguided social ambition which lead people to ape the habits of those better off than themselves, without either the taste or the means to indulge in those habits, there is a very great demand for substitutes or imitations of articles of luxury, which gives the opportunity to the dishonest dealer, already disposed by self-interest and by pressure of competition and by the difficulty of detection, to adulterate.

The evil is not entirely modern. Even in the Middle Ages, under the guild system, regulations were required to secure that for a fair price an honest article was given. Night work, for instance, was forbidden, and a workman was required to show evidence of skill before he was permitted to practise his trade. Publicity was in the main the remedy against dishonest dealing, and owing to the simplicity of wants and to the simple character of the processes of manufacture, and to the close relations of producer and consumer, the remedy was tolerably effectual. In modern times these conditions are absent, and the practice is so prevalent, that, in defiance of the doctrine caveat emptor, legislation has been required to protect the ignorance of the consumer, the impossibility of educating a taste that is continually being debased by the consumption of adulterated articles, and the frequent danger to life and health, have necessitated this departure from the doctrine of free choice, particularly with regard to articles of food.

The consumer is still at the mercy of the vendor of shoddy clothes, etc., but in food and drugs at least he is protected, although it must be admitted that the penalties inflicted are often inadequate and the laws ineffectives; pre-Reformation days, and that in many cases an adaptation of heathen cults. English documents of the Reformation period prove conclusively that among the things protested against were the rendering to the Virgin Mary and the Saints the honour that was due to God alone; the belief that these were able to give gifts which are in reality Divine; the belief that the ears of the Saints were more readily opened to the requests of men; and, finally, the practice of regarding Saints as tutelary deities.

One other point must be briefly referred to: the word 'adoration' is used in reference to a newly elected Pope. Immediately after election the Pope is placed upon the altar; the Cardinals, who then crown him and render him homage, are said to go 'to the Adoration.' Again, when a Pope is elected spontaneously and unanimously, without the 'scrutiny' having been made beforehand, he is said to be elected 'by adoration.'

ADULTERATION—Adulteration may be defined as the use of cheaper materials in the production of an article so as to transform it into an inferior article which is not by the purchaser or consumer readily distinguishable as inferior. There is not necessarily in the production the intention to deceive; and the substitute is not necessarily deleterious. Indeed, in some cases an inferior article may be more wholesome than the poorer qualities of the counterfeited article, as in the case of margarine and other substitutes for butter. The essential point is that the consumer does not get what he is paying for and intention buy. We must, however, carefully distinguish between what by improved processes of production is really cheaper and what merely seems so; for it is the craze for cheapness that is largely responsible for the extent to which adulteration is practised. Owing to imperfect education and an often consequent misguided social ambition which lead people to ape the habits of those better off than themselves, without either the taste or the means to indulge in those habits, there is a very great demand for substitutes or imitations of articles of luxury, which gives the opportunity to the dishonest dealer, already disposed by self-interest and by pressure of competition and by the difficulty of detection, to adulterate.

In modern times these conditions are absent, and the practice is so prevalent, that, in defiance of the doctrine caveat emptor, legislation has been required to protect the ignorance of the consumer, the impossibility of educating a taste that is continually being debased by the consumption of adulterated articles, and the frequent danger to life and health, have necessitated this departure from the doctrine of free choice, particularly with regard to articles of food.

The consumer is still at the mercy of the vendor of shoddy clothes, etc., but in food and drugs at least he is protected, although it must be admitted that the penalties inflicted are often inadequate and the laws ineffectives; pre-Reformation days, and that in many cases an adaptation of heathen cults. English documents of the Reformation period prove conclusively that among the things protested against were the rendering to the Virgin Mary and the Saints the honour that was due to God alone; the belief that these were able to give gifts which are in reality Divine; the belief that the ears of the Saints were more readily opened to the requests of men; and, finally, the practice of regarding Saints as tutelary deities.

One other point must be briefly referred to: the word 'adoration' is used in reference to a newly elected Pope. Immediately after election the Pope is placed upon the altar; the Cardinals, who then crown him and render him homage, are said to go 'to the Adoration.' Again, when a Pope is elected spontaneously and unanimously, without the 'scrutiny' having been made beforehand, he is said to be elected 'by adoration.'

W. O. E. OSTERLEY.
ADULTERY

ADULTERY (Primitive and Savage Peoples).—1. Woman in primitive society.—A survey of the notions entertained by savage peoples regarding adultery tends to show that, in the earliest times, it could not have been regarded in any other light than as the interference of another with the woman over whom a man had, or conceived himself to have, certain rights. It was not considered as an act of impurity, for the idea of prostitution had not been conceived. Nor was it a breach of contract, for it is improbable that anything corresponding to marriage rites was yet in use. Nor was it a breach of social law, for men were not yet organized in social groups. Woman belonging as below to man, any interference with her would immediately outrage man's instinctive sense of property, and would at once arouse his jealousy. He would, therefore, try to recover his property from the thief; and this could be done only by assaulting or killing him, in her words, by punishing him for his theft. Recognizing, too, that the woman, differing from other possessions of his, was a sentient being, and therefore to some extent a consenting party to the theft, he would also vent his anger upon her, even putting her to death in cases of extreme rage. Among animals precisely similar ideas with respect to the females may be found. Where an animal collects a number of females round him, as in the case of certain apes, he acts as a despot over them; young males born to him are, after a time, expelled, and the approach of a possible rival is at once resented (Darwin, Descent of Man, 591). Thus it must be admitted that, at the earliest stage of human history, adultery could have been nothing but a breach of property rights, to be followed, when discovered, by a more or less savage act of private revenge upon both the culprits. Among most existing savages hardly any other idea of it exists, as we shall presently see. Woman before and after marriage is the property, first of her father or guardian, next of her husband. Among peoples who allow licence before marriage, none is permitted after it, when the husband assumes proprietary rights over the woman. And where such licence is not allowed, any unchastity is punished by a fine or death on the man who has depreciated the value of the woman in her guardian's or prospective husband's eyes. This idea of a husband's proprietary rights in the woman would be increased where she was the entire chief of his band and spear, or where he had to undergo a period of servitude for her, or, much more usually, had to acquire her by purchase. Here it may be remarked that adultery is not confined to cases where a ceremony of marriage exists: when a man enters into a union more or less lasting, and the man treats her as his property, it may occur. But it need not be inferred that it is a common occurrence among all savage races. It is abhorrent to some peoples, e.g., the Andamanese, with whom conjugal fidelity is the rule (Man, JAI xii. 153), the people of Utea in the Loyalty Islands (Erskine, Western Pacific, 341), the Abipones (Dobrizhoffer, Account of the Abipones, ii. 153), and others.

Certain facts are often alleged against the idea that woman is not a free agent in primitive or savage society. Thus, a woman's consent is often required before marriage; yet even the consent of her guardian is also necessary, and this right of choice on her part need not argue anything as to her future freedom of action, while it is counterbalanced by the overwhelming weight of evidence regarding the woman's position as a being owned first by her guardian, then by her husband. Again, in cases where, after marriage, there is a possible influence over her by her husband or in the tribe, this hardly affects the fact that her legal status is not that of the man, nor does it give her equal rights with him. Nor does it, as is frequently alleged, involve her in danger in her most personal relations. The fact that she has been the earliest civilized, that she has much of the tribal lore, and that she is the one the men look to for advice in dangerous (magically) at certain crises of their lives. All this limits the husband's power in many ways; but so far as concerns interference with her sexual relations, she is still able to act for herself. Here, any attempt at independence on her part arouses at once her jealousy, that underlying fact of man's propensity for jealousy in the woman, which innate superiority or her occasional influence does not obviate. Even where the patriarchate exists, and where the man goes to war for his wife, this seldom takes away his power of life and death over her, especially where adultery is concerned (Haddon, Head-Hunters, 190), says that though in the Torres Straits islands a woman asks the man to marry her, and he goes to live with her afterwards, he can kill her if he should desire it (Haddon, Tribes of California, 388). In effect all such exceptional cases are overruled by the fact that universally the woman's power of licence cases at marriage, that universally unchastity on her part is regarded by the husband as a breach of his proprietary rights, that frequently the husband has the power to kill his wife for any such breach, that well-nigh universally he can kill his wife to another man, and that generally adultery on the husband's part cannot be punished in any way by the wife.

2. Adultery under different conditions of marriage.—It is now generally admitted that promiscuity was not the earliest form of human sexual relations. But even had it been so, the idea of adultery based upon jealousy and the sense of property would still have been conceivable. Men and women being collected into groups for the sake of defence or of facilitating the supply of food, the men would resent the approach of members of other similar groups, while any interference with the women of the group would be jealously guarded against by all the males of the group, to whom ex hypothesi all the females of the group belonged in common. Promiscuity, however, as a theory of marriage, is baseless, and has frequently been confused with what is known as group marriage, an institution that entirely differs from what is generally termed group marriage. In actual practice among certain Australian tribes, the men of one definite group are potential husbands of the women of another definite group; the husband of any one woman has only a preferential right in her, and the group may have access to her on certain occasions. But here the husband's consent must first be given; and though it is practically never withheld, and a man is looked upon as churlish who does withhold it, this points to the existence of individual marriage underlying this mixed polyandry and polygynous system, rather than to its being a systematized form of earlier promiscuity. The consent of the husband being necessary implies a certain proprietary right in the woman on his part; he sanctions her union with other men only on certain ceremonial occasions. If the woman dared to consort with a man...
ADULTERY 123

out of the group, this would be resented by her actual and potential husbands; it would be incest rather than adultery (see § 5; Spencer-Gillen, *62, 63, 110, do. *73, 140; Howitt, *JAL xx. 53*). Again, where polyandry exists, adultery is still possible, since acts of this kind are usually not defined, and their rights over her are arranged according to strict rule. Where, as in the Tibetan type of polyandry, a woman is the wife of several brothers, it is obvious that they will resent the advances of one fellow-man to their wife, who, in contradiction to the woman is extremely jealous of her own conjugal rights (*Hist. Univ. des Voyages*, xxxi. 434). The story told by Strabo (*xvi. 4. 25*) of the custom of fraternal polyandry among the ancient Arabs, shows that adultery with another man was punishable, and similar cases might be cited (see § 4, Tibet). Among the Nairs, with whom polyandry assumes another form, the woman is not allowed to have any later sexual relations with the man who first consummates the marriage, while any relations with a man not of her caste is factio adultery, and was formerly punished by death (*Reclus, Primitive Folk*, 162, 164).

A modified form of polyandry exists where the custom of polygyny (the second wife) exists. In this case, the secondary husband must contribute to the support of the household, and takes the place of the husband with the wife of the first husband, as found among some Eskimos (McLeam, *Studies in Ancient History*, 2nd ser. 876; Reclus, 60), where the secondary husband is a younger brother. With them, therefore, the system is akin to that of the Todas, where the eldest of a group of brothers is the husband, but the youngest takes on the widowed wife also (*Toi*, vi. 275); for it occurs among some Polynesian peoples (*Evk*, 1900, 354) and others, as it did in ancient Sparta (*Menon*, Rep. Lac. i. 9).

Sometimes, where adultery takes place, a man is forced to become a secondary husband, to do the work of the house and obey the husband, while he may now associate freely with the wife, as among the Konyagas (*Iceland*, 67).

3. Adultery under polygamy and monogamy.—But it is especially among peoples with whom polygamy or monogamy is the rule that we see the working of the idea of adultery; the woman existing most emphatically. Jealousy of their wives exists among the lowest savages, and with them and higher savage and barbaric tribes the utmost precautions are taken to prevent the approach of another man. Sour punishments are inflicted on the wife even on the slightest suspicion, or, as among the Negroes of Calabar, the wives are at intervals put through a trying ordeal to test their faithfulness (*Miss Kingsley, Travels in W. Africa*, 497). The universalizing and avenging nature of the races, the rigour of its action, and its extreme vigilance, go far to show, as Westernmark (*Human Marriage*, 117 ff.) points out, that there never was a time when man was devoid of it, and that it is a strong argument against the existence of a primitive promiscuity. When adultery has actually taken place and has been discovered, the husband, with few exceptions, can himself punish the offending woman and her paramour, without necessarily incurring tribal death; that is, that tribal or the tribal custom expects him to do so, and fully approves his act, though in some instances he may be retaliated upon by the relatives of the woman or man, where he has killed either or both. Punishment varies, but very frequently death is meted out in cases of detected adultery; in other places the woman is disfigured or mutilated by shaving off her hair, cutting off her nose, ears, etc., or she is chastised more or less severely, or she is repudiated or divorced, or treated as a prostitute. In some cases the husband’s jealousy or anger turns against his offending property, even though his act of revenge deprives him of his wife, or of her attractive qualities. Towards the offending man who has invaded his rights of property his attitude varies: he may kill him, enslave, mutilate, wound, or flog him, or make him his slave, or force him to pay a fine, or to have his wife outraged in turn. Especially noticeable is the idea of theft in adultery, where, as in Africa, the man’s hands are cut off, as if he were a thief (*Waitz, Anthropologie*, ii. 472); in the fact that in the Torres Straits there is no word for adultery apart from theft (*puru*), and all irregular connexion was called “stealing a woman” (*Camb. Expid. to Torres Straits*, 275); and that among the Arunta a man who commits adultery with a woman of the class from which he might choose another is atna mylikura, “vulva-theft,” because he has stolen property (Spencer-Gillen, *99*). The same idea also emerges where, as among some Negro tribes, it is held to be adultery for a man to lay his hand on or brush against a girl against a chief’s wife (*Miss Kingsley, Travels*, 497). The conception of the wife as property is also seen, not only in the common custom of slaying her at her husband’s death, but, where she is allowed to survive him, in the belief entertained by savage and barbaric peoples that second marriage is wrong, or, if permitted, that any unchastity during a certain period after the husband’s death is equivalent to adultery, or should be punished as such (*Amer. Indians, Matsu, Patagonians, Aimus, etc.*). Among the tribes, the widow cannot even appear in public without being regarded as an adulteress (*Adair, Amer. Indians*, 180). For a certain time at least, sometimes for the rest of her life, the woman is still treated as a slave; where several husbands and wives are living over the living, it may be presumed that the dead husband might still retaliate in case of any transgression.

4. Punishments for adultery.—The following examples will show the nature of the punishments for adultery meted out among different races by the outraged husband, or permitted to him by common consent or actual law:

Among the Zulus of South Africa both the woman and her lover are killed; among the Yerka-mining of S. Australia the woman was branded with a firebrand for the first offence, spared in the leg for the second, and killed for the third; among some tribes the punishment consisted in hanging her over all to come (*Howe*, Nat. Tribes of *S. Aust.* 245, 257). A childless wife who murders her husband is repudiated in W. Victoria (*Dawson, Nat. Tribes of Aust.*, 33). In the Vanuatu the most common punishment for adultery was to kill both wife and man (*Bosweil, Daily Life of the Tasmanians*, 73). In the Andaman Islands adultery is rare, but when it occurs it is punished by the husband, who kills the man and the woman (Dawson, *V. & W. Tribes of S. Aust.*, 21). In the Fiji archipelago it is a cause, and frequently the only cause, of repudiation (*Cambridge Expid. to Torres Straits*, *iii.* 563). With the Melanesian tribes the woman was brutally treated, and the paramour was killed by the husband or executed, though he was sometimes, if at all, or what was regarded as a robbery, or had his wife violated by all the men of the village (*De Roche*, *Nova. Galap.,* 350; *Bd. d. Natur*, 186. 86). Death was the usual punishment in New Zealand (*Voyage of the Astrolabe*, 350); in other Polynesian islands the woman was variously punished. With the Hottentots the woman was killed or flogged (*Alexander, Expid. into Interior of Africa*, 133; *Evk*, 1902, 354); and killing the adulterous wife and paramour was common both among the Basuto and Negro tribes (*Reclus*, *Three Years in Savage Africa*, 475). Among the Western Australians *Marron* (*Wilson and Fokin, *Opuscula, *i. 806), on the other hand, adulterous relations were here also administered—chastisement, disfigurement, or repudiation of the woman, marrying her to a slave, and flogging the guilty man (*Post, Afr. J. 40, 37*; *Bowlich, Miss. to Ashanti*, 170; *Du Chailu, Afrique Equat.*, 67, 435; *Johnston, Uganda Protoc.*, 620, 629, 740, 659; *Waitz, Arunta*, ii. 110, 115). Death, mutilation and disfigurement, abandonment, and delivery of the woman to the man of the tribe, were common among the N. Amer. tribes, with whom the woman was killed, mutilated, or fined (*Bancroft, Native Races*, i. 350, 1855, 814; *Amer. Rev.*, 112, 364; *Smith, Kfka*, ii. 132, v. 635); in Tahiti, torture and death were meted out to both parties in Yucatan (*Bancroft*, ii. 874); in Mexico the woman had her nose and ears cut off, and was stoned to death (*Perry Prescott, *Pern*, 21); in Guatemala the woman was repudiated and her paramour fined (*Bancroft*, ii. 673); in Nicaragua she could be divorced for nothing but adultery (*Espineda*, 37); among the Fuegians the husband could kill his wife, but was liable to be killed in turn by her family (*Hyades and Deniker*, 184).
ADULTERY

apud Hobhouse, i. 49). Woman and paramour might be killed by the husband among many of the native tribes of India (Dalton, *Bk. of Bengal*, 40; M’Pherson, *Manor. of Service* in *India*, 1781). Among the Bantus of Tatra, the woman is frequently killed and the man forced to pay the husband a number of cattle; elsewhere in Tibet the woman is punished and the man set free. Among the Dyaks (cited, *Lettre adressée*, xxxi. 437, xxxii. 341). In Japan, woman and paramour are killed by the husband, the law supposing their act so against nature that China, as the law permits this punishment if it is meted out on the spot, otherwise the husband has to be sentence: but where adultery is proved he can repudiate or otherwise punish his wife (Alabama, *Chinese Criminal Law*, 187, 252; Pauthier, *China Moderne*, 229).

Frequently, too, the gravity of the offence is proportionate to the rank of the husband with whose wife it is committed; in others, the woman belonging to a higher rank being punished more severely. In New Caledonia, death was meted out to a man who merely looked at the wife of a chief. Among the Bantu, with whom the male delinquency was usually fined, in the case of adultery with a chief’s or king’s wife, he was put to death (Johnston, *op. cit*., 690); in Uganda, where whipping was the usual punishment, the king’s wife and her paramour were charged to pieces (ib. 669); in Assanti, intrigue with the king’s slaves is punished by emasculation (Ellis, *Tehi-speaking Peoples*, 287). So in Peru, where death was the ordinary punishment, adultery with the inca’s wife resulted in the burning of the whole tribe of his parents, and the destruction of a third of his property (Lettourneux, *Evolut. of Marriage*, 216). Similarly, among the Tatars the punishment of the man’s relatives as well as himself: generally speaking, this distinction holds good among most savage peoples, while a further distinction may be made between adultery with the principal wife and with a subordinate wife—the value of the former being, of course, greater.

The birth of twins is with many savage peoples regarded as uncanny, and one or both are put to death. The reason for this belief is not always certain, but in some cases it is thought to be caused by a dishonor to the man, or to the father of no more than one child, that a god has had intercourse with the woman. Such a belief is found among the Negroes (some of whom, however, regard the birth as lucky for this reason), South American tribes, and Melanesians (Ellis, *Tehi-speaking Peoples*, 87; Codrington, *Melanesians*, 293). In such cases we have the idea that the wife has committed adultery with a divinity or spirit, as in the Greek myths of Demeter and Leda. But it is sometimes held that a proof of adultery with another man (S. American tribes [Waltz, iii. 394, 482]; Teuton [Westermarck, *World Idea*, i. 406]). See Kendall Harris, *Out of My Way* (Pp. 118).

5. Adultery within the prohibited degrees.—Among all races, marriage or sexual union is absolutely forbidden between certain persons, whether blood-relations or members of the same tribe, clan, or band of savage tribes. Such tribes and barbaric peoples is largely thus in the hands of the agrieved husband, and evidently originated out of the desire for personal revenge. But what was at first a mere arbitrary personal vengeance has now generally become an act which is supported by tribal custom. The husband slays the aggressor, but he knows that in so doing he will be backed by public opinion, and may even call in others to assist him. He is allowed or expected to administer punishment. Frequently, too, adultery is taken cognizance of as an offence by the law of a tribe or people, whether administered by the old men, a council, a chief, or by the State. In such cases the husband might appeal to any of these to decide what the punishment should be or to what extent the law is to be applied. In Kamilaroi, the husband’s complaint is carried before the headman, who gives sentence; and among the tribes of N. S. Wales a similar process is found (Howitt, *op. cit.* 207; Fraser, *Abor. of N. S. Wales*, 290). Otherwise, it is being punishable judicially rather than by private vengeance among peoples who also punish it in the latter way, are found among the Xakas of New Caledonia, where the aggressor is led before the chief and his council, and executed by their sentence (De Rochas, *Nouv. Calédo.*, 262); among the Caribs, Samoons, Mishmis, in New Guinea, and in parts of Negro Africa (Steinmetz, *Rechtsverhältnisse*, 727 ff.; Turner, *Samoa*, 178; Chalmers, *Pioneering in N. G.* 171; Letourneux, 211). In such cases, however, the law simply orders the husband to execute the punishment, as in parts of ancient Mexico and in Central America (Bancroft, ii. 465; Biart, *Les Astéques*, 168). And even when the offence is strictly a legal one, should the husband take the matter into his own hands, and, e.g. slay both offenders at once, he would still be considered to be acting within his own rights, or would be subject only to a slight penalty, as in China, Japan, ancient Peru (where it was held that Manco Capac had derived death to adultery [Garcilasso, *Royal Comm*. i. 81]). Or if the husband does not act according to the judicial sentence, he himself may suffer. Thus among the Tatars, if he does not punish his wife, the chief takes the case, and which his accomplices have paid the husband (Letourneux, 216); and in China, if he does not repudiate his wife he is whipped (Pauthier, *op. cit.*, 239). But we also find that, where the offence is a legal one, there is a tendency to stay the husband’s desire for the worst acts of vengeance. This has probably originated the frequent system of compensation by fine; it also accounts for cases, as among the Kafirs or the Bakwiri, where the husband must not kill the other, if he does so is punished as a murderer (M’Lean, *op. cit.* 117; Post, *Afrik. Jurispr.* i. 401); and, as among the Wakambas and other peoples, where the husband is allowed to slay the parties only when taken flagrante delicto.

6. Adultery by husband.—That, at the lower stages of civilization, adultery is regarded as an offence against the proprietary rights of the husband, is borne witness to by the fact that it is an offence only from the husband’s point of view. With the rarest exceptions has the wife any redress which has been obtained in the case of the great idea of the equal rights of wife and husband, and of the ethical belief that adultery is wrong.
Among the people of W. Victoria the wife can get an adulterous husband punished by complaining to the elders of the tribe, who send him away for a short period (Howard, *Matrim. Inst.* i. 229; Nietschman, *Slavery*, 18). In Africa, the husband in question is liable to fines to the wife for unfaithfulness (Post, *Afrik. Juris.*, ii. 79), and among the Mariana he is severely punished (Waltz, i. 106). With the Khonds of Orissa, where polyandry exists, and the woman can set a higher price upon herself, the husband cannot strike her for infidelity, whereas he is punished or is held to have dishonoured himself (Westernmarck in *Soc. Papers* (1904), 152). The Omaha wife could revenge herself on the husband and his paramount; and among the Sioux and Dakota she could leave her husband for unfaithfulness (Dorsey, *Bibliotheca*, 1855, 266; Howard, i. 239). Divorce for unfaithfulness on the husband's part might be obtained by the wife occasionally, as among some of the peoples of the Indian archipelago, the Shans, and others (Westernmarck, *Marriage*, 197). But with these few exceptions savage mankind has scarcely recognized the fact that the adultery of the husband is a wrong done to his wife. Though it might be thought that the marriage-pact with the woman was the property of the husband, his infidelities, this is not supported by evidence, save in a few particular cases. These are where the royal succession was through a woman, who usually married a man of lower rank than herself, and reigned in her superiority. His adultery was punishable, but she claimed greater licence. Thus among the Tassens of North America, where the chief was looked on as a demi-god, his sister's son succeeded him. She, being thus also divinely treated, had killed him if he were unfaithful, but allowed herself great licence (M'Lenann, 420). Similarly in Loango a princess might be licentious, but would have her husband's head chopped off if he even looked at another woman (Pinkerst, p. 598). This did not apply to any other classes, and is on a level with the severity of the punishment meted out to a man committing adultery with the wife of a chief. It should be noted, however, that with a few primitives the woman has probably the right to divorce her husband if he takes a second wife or a concubine (Hobhouse, *Morals in Evolution*, i. 136); while, even where polygamy is practised, the feeling of jealousy on a wife's part, though it may not override the husband's rank, will stay his desire of introducing another wife to his household, is frequently directed against the new-comer to her hurt, and in some cases the wife will commit suicide (Westernmarck, *Marriage*, 497 f.).

7. Permissible adultery.—Adultery among the lower races is considered wrong, viz. an offence against the rights of the husband, when it is committed apart from his will. There are occasions on which he commands or sanctions it, or when it is to inure to general public advantage by others (Westernmarck, *Marriage*, 74, 190). But various reasons exist for this, notably the legal or religious custom. The custom of lending wives either to friends or strangers emphasizes once more the view that the wife is the husband's property. Here she acts at his will, as in the other case she infringes his right. Here for the time the feeling of jealousy is in abeyance, even when it exists most strongly, and the husband decides that the wife may commit adultery. We thus see that adultery has not the precise meaning to the savage which it has to the civilized man.

The sexual crisis is shared by the entire group of savages (Westernmarck, *Marriage*, 74, 190), but various reasons exist for it, notably the legal or religious custom. (a) In cases where a wife is lent to a friend, it may be done out of sheer friendliness or as an act of gratitude, but generally the leader will have no further claim shown to him. In other words, there will be reciprocity, as among the Cibolians Indians, who barter wives as a sign of friendship (H. M. *des Voyages*, xxiv. 376), the Eskimos, Polynesians, and others (M'Lenann, *Studien*, 2nd Ser., 376; Letourneau, 212). The practice of lending wives is sometimes introduced to a system, as in those Australian tribes where group marriage prevails, and generally there are limits to the system of lending among most of the savages. Where an individual marriage prevails, the man can lend his wife only to men belonging to his own group, i.e. to those alone to whom his wife would have been married. This applies also to the tribes actually practising group marriage, the Tabunsan and Uleri, since here the right of access to the woman to whom one has a 'promised' right is limited to the men of his own group (ib. 73, 140). Some cases of polyandry, as among the wife to another brother, as well as the system of secondary husbands, might rather be classed as instances of lending.

(b) Sometimes it is done by way of remuneration of friendship between two men, who then exchange their wives, as in the Timor (Denthef, *Geog. Blatt*, xx. 6) and New Zealand tribes, as in N. S. Wales (J. *J. J.* xxv. 353). In all such cases the friends would belong to the same tribe or clan, and the act would have a more or less sacred significance.

(c) Where the custom of lending a wife to a stranger is concerned, it is usually assumed that sexuality alone is the cause (Westernmarck, *Bibliotheca*, 1855, 266; Howard, i. 239). But with these few exceptions savage mankind has scarcely recognized the fact that the stranger is, qua facto, a dangerous person. Magical and religious ceremonies are often used to avert the danger (GIL. 296 f.), and respectful treatment throughout his stay is necessary for the same end. Thus the extremely common custom of lending a wife or other female to a stranger may justly be assumed to be but one of many acts which are intended to ward off his evil powers. Further, while, by bringing him into direct relation with the man who offers his wife, it makes him one with this. This view seems to be confirmed by the fact that among the Eskimos, tribe, the stranger who would not accept the woman offered him was driven away by his own tribe, and that among the Batawung (ib. *Univ. des Voyages*, xxiii. 380). It was desirable to get rid of a guest who was not only dangerous, but evidently disposed to do actively. This custom of lending wives to strangers is found practically among all savage tribes (Letourneau, *Op. cit.*).

8. Occasionally the idea that the woman was ennobled by the embraces of a stranger may have prevailed, especially among the Kaffirs, who thought a white man was a white woman (WAKE, *Evolution of Morality*, i. 77), and probably underlies the fact that many peoples—Australians, Negroes, Sandwich Islanders, and some Eskimos—who are jealous of their own tribe, show no jealousy of white men, and freely allow them to have intercourse with their wives (Westernmarck, *Marriage*, 131). On the whole, this idea corresponds to the custom of allowing the medicine man or priest to cohabit with the wife to ensure off-spring, or to confer magical or religious virtues. This custom is found among the Eskimos, who believe that it is an honour for wife and husband that the erpove should have intercourse with the chief when he is marriageable (Bancroft, *Des. of Civilization*, 297; Westernmarck, *Marriage*, 197), or that he should have sexual relations with the husband of the new-comer, which is a dangerous custom (ib. *Univ. des Voyages*, xxii. 357); Spencer-Gillies, *Op. cit.*).

9. Another cause which will override the feeling of jealousy is the love of gain—the husband trading with his wife to stranger or others. The Yumas of New Mexico and other Amer. Indians, the tribes of tropical S. America, the Eskimos, the Tahitians, and other Polynesian tribes, Negroes, Australians, and others (Bancroft, i. 218; 144; Powers, *Tribes of Oceania*, 413; *Zern*, 1895, 297; Lisiansky, *Voyage Round World*, 52, 128; Bonnais in Pinkert's, xvi. 525) freely offer their wives for hire or for money or its equivalent. But it is to be observed that, in the revolting practice, though not unknown as between savages between themselves, has treated or religious custom. The custom of lending wives either to friends or strangers emphasizes once more the view that the wife is the husband's property. Here she acts at his will, as in the other case she infringes his right. Here for the time the feeling of jealousy is in abeyance, even when it exists most strongly, and the husband decides that the wife may commit adultery. We thus see that adultery has not the precise meaning to the savage which it has to the civilized man.

The sexual crisis is shared by the entire group of savages (Westernmarck, *Marriage*, 74, 190), but various reasons exist for it, notably the legal or religious custom. We thus see that adultery has not the precise meaning to the savage which it has to the civilized man.
magically the fertility of the land (Eusebius, Fils. Const. iii. 68; Marco Polo, Yule’s ed. i. 471-472).

8. Adultery as an offence against purity and religion. — It has been seen that, to the savage, adultery is a breach of the husband’s proprietary rights. Whether any further ethical idea was appended to this notion is a question which it is difficult to answer. But it is not improbable that savages, who are quite aware that it is wrong, may attach some idea of impurity to its committal. If, so, this conception may go to the root of the moral idea of lust. In the Savage, there is a danger existing in intimate relations between man and woman—a danger existing even in marriage. This danger, implying a material contagion, would naturally be increased where a man had no right of access to a woman; it is most dangerous of all when it is possible to become the father of children. For this reason, we find as a rule that it has been more rigorously repressed in Africa than in the Orient.

(§ 5). Out of this danger and material contagion the idea of sin and of impurity might easily arise; and we can hardly doubt that, in the evolution of moral ideas, it has so arisen (Crawley, Mystic Rose, 214). Adultery being grounded, therefore, it might be claimed that adultery was known by the savage through the idea of impurity. They certainly believe that there are occasions when it is magically dangerous; that certain penalties will befall the transgressor, either automatically or, possibly, by the act of higher powers.

Ethical teaching among savages has hardly been made the subject of inquiry by actual observers, yet it is curious to note that among some of the lowest races—Australians and Andamans—there is a nearly universal moral offence, and, with the former, is taught to be so to the youths at initiation, while with the latter it is obvious to their high god, and will be punished by him. Of the Cannibals are recorded by Eusebius (De Praepar., iii. 68), and in the Polynesian islands, by the Portuguese of the 16th century (Fontes, i. 145-170, and Belon, Hist. Nat., i. 386). Elsewhere, as among the Indians of Guiana, the fear of spirits prevents them from “offending against the rights of others,” and this probably includes adultery (Jay x. 382). With the Fugians, also, “adultery and lewdness are condemned as evil” (Westermarck, 41). We cannot say, however, that this is with these peoples an offence against purity. Perhaps only at a higher stage is this conception really reached: thus it is said of women living in Texas that they look too curiously on a woman commits adultery with his eye (Sahagun, Hist. gen. de las cosas de Nueva Espana, ii. 147).

In those cases where the sin of the living is annually transferred to the soul of a human victim, or where this is done on behalf of a dead person as part of the funeral rites, adultery is frequent among the Neger tribes, the Tuareg, and other tribes of Western Africa (Herschel, Banks of Niger, i. 364; Belo, Reclus, 206). At the Bush festival of the Ota (West Africa), those who had committed this crime had the marriage law not allowed to take part in the fast, and the new fire was believed to be taken for all crimes except murder (Frazier, Q.B. ii. 390). In such cases, however, sin is rather a material than a spiritual contagion, though the particular sin may involve the idea of incipient ethical impurity, and, as such, be ominous to higher powers. Again, the magical view of the danger of adultery at certain times is generally mixed up with the danger of lawful connection at such times, but occasionally a distinction is made. During hunting, fishing, and especially in time of war, men are in a state of taboo, and must have no intercourse with women—a taboo found among savages, and which one must not broken, lest ill-luck follow. The danger is here magical; but it is also likely that it is found becoming more or less religious, as with the Aztecs, who believed that their women’s unlawful attainment during whale-fishing would be punished by the whale, which is an object of reverence to them (Reclus, i. 51); and with some Amer. Indian tribes, e.g., the Dakotas, who think that the violation of covenants would be renounced by the spirits of the dead; and the Winnebagoes, who observe continence because it was commanded by the ‘Great Spirit’ (Schoolcraft, Ind. Tribes, i. 82), (Ind. Tribes, i. 188). A saying of the Eskimos at Angmagssalik, in North-West Greenland, stated that, “the whale, the musk-ox, and the reindeer left the country because men had too much to do with other men’s wives” (Nansen, Eskimo Life, 170). Occasionally, too, the vengeance of a mysterious god worshipped by males in their private mysteries is invoked, to deter women from committing adultery, as with whom some represent the god entering the assembled crowd by night, seizes a suspected woman, and scourges her (Letourneau, 159).

It should be noted that the frequent appreciation of the chastity of unmarried women entertained by many savages, while connected with the idea that they are the property of their guardians or prospective husbands, may also be due to respect for sexual tabu. With some peoples, unchastity is considered absolutely disgraceful, and both parties are punished; while in Loango it is held to bring ruin on the country, and even on the souls of the lord and those his attendants (de Bossange, 471-472).

ADULTERY (Buddhist)—The last of the five Precepts binding on an individual is that of not committing adultery, particularly that of adultery in respect of the wife of a living husband (Anguttara, 3, 212). In a very ancient paraphrase of these Precepts in verse (Sutta Nipata, 393-398), this one is expressed as follows: ‘Let the wise man avoid unchastity as if it were a pit of live coals. Should he be unable to becelate, let him not offend with regard to the wife of another.’ This is evidence not so much of Buddhist ethics as of the general standard of ethics in the 6th cent. B.C., in Kosala and Magadha. In the Buddhist Canon Law we find a regulation to be followed by members of the Order, when on the roads for a long time, to prevent the possibility of suspicion or slander in this respect (Pācittiya, 43, translated in Vinaya Texts, i. 41). An adulterer taken in the act might be wounded or slain on the spot. This explains the implication of the words used in Sutta Nipata, 2, 188. But adultery was also an offence against the State, and an offender could be arrested by the police, and brought up for trial and judgment (Commentary on Dhammapada, 300). In such texts as those of the law administered in Buddhist countries as we have so far been made access to Sibi, to us, the view taken of adultery is based on these ancient customs. So, for instance, of the Sinhalese, Pana-

J. A. MACCULLOCH.

ADULTERY (Egyptian).—That adultery with a married woman was looked upon as a sin in Egypt is shown by the Negative Confession (part of ch. 125 of the Book of the Dead, a chapter that has not yet been found earlier than the 18th Dyn.). Here, in the 19th clause, we read, ‘I have not defiled the wife of another,’ (m. ‘the wife of another’s husband’). That it was also against the law is implied by a text of the reign of Ramesses v. (c. 1150 B.C.) containing a long list of crimes charged against a shipmaster at Elephantine, amongst them being that of adultery with two women, each of whom is described as ‘mother of M. and wife of N.’ (Pleyte, Pap. de Turin, pl. ii.); Spiegelberg, ZA, 1891, 82). The didactic papyri warn against adultery as well as fornication. Pashketop says, ‘If thou desirest to prolong friendship in a house which thou enterest as a ship-master, as with whom soever thou enterest, avoid approaching the women; no place prospereth where that is done. . . . A thousand men have been destroyed to enjoy a short moment like a dream: one attaineth death in knowing it’ (Pries Pap. ix. 7-12; Gunn, Instruc-
tion of Ptahhotep, p. 49). This text is not later than the Middle Kingdom. Another, of the period of the Deltaic dynasties, charges the youth to remember that 'the woman whose husband is afar off (or possibly 'the woman whose husband has freed himself from her'), i.e. 'divorced her'), behold she adorns herself for them daily. If there is no witness with her, she standeth and spreadeth her net. O crime worthy of death if one listens!' (Pap. de Boulag. i. 16; Erman, Life in Ancient Egypt, 165). The story of Ubaaer turns on the infidelity of his wife with a peasant who is eventually handed over to a magic crocodile to devour, the woman being taken to the north side of the palace (evidently a place of public assembly) and burned, and her ashes cast into the river (Erman, Pap. Western, p. 1 ff.; Petrie, Tales, i. p. 97; Maspero, Contes Pop., p. 24). One of Herodotus' Egyptian tales is of King Pheron, who gathered his unfaithful wives into one town and destroyed all together by fire (Hdt. ii. 111). But it would not be safe to conclude that burning was ever the established penalty for adultery. In the New-Kingdom Story of the Two Brothers (Petrie, Tales, ii. p. 38; Maspero, p. 1), Bito, the younger brother, is solicited by the wife of the elder brother Amenophis by the Potiphar, with whom she now reproves her words, 'thou art as a mother unto me, and thy husband as a father.' Antp, when convinced of her guilt— which was doubled, since in her fear she had accused Bito to her husband, and was even induced to persuade him to kill Bito—slew her and cast her to the dogs. What the legal penalty for adultery was in real life, or by whom it was exacted, is not known. In two contracts of the time of the 25th Dyn., the earliest marriage contracts yet preserved, in Egypt, the husband declares, 'If I leave the woman N., whether desiring to leave her from dislike (?) or desiring another woman than her, apart from the great crime that is found in woman, I will restore to her the dowry, etc.' The implication is that the husband had at least no obligation to the wife if he had divorced her for adultery. These contracts were written at Thebes in 589 and 549 B.C., respectively. Later marriage contracts, those of the rarer Ptolemaic era, and the inferior contracts of Ptolemaic date, contain no definite reference to adultery (for all these see Griffith, Catalogue of the John Rylands Papyri, pp. 114 ff., 131 ff.); on the other hand, in the rarer Ptolemaic cases for marriage or adultery (see and Bito, Tebtunis Papyri, i. 449) adultery and all forms of conjugal infidelity are forbidden to both husband and wife. The penalty for the husband is the forfeiture of the dowry, but that for the wife is not specified; perhaps one may gather that she was left absolutely at her husband's mercy. The contracts of Roman date, all of which are written in Greek, prescribe a blameless life on both sides, but in less detail.

The subject of the very ancient Pyramid texts, as found in the pyramid of Unas (Onnos), after describing the divinity of the dead king and the continued activity of his bodily functions, ends strangely: 'Unas is a generator who carrieth off women from their husbands to any place that he willeth, when his heart moveth him.' This idea is hardly to be reconciled with a highly developed kingship invested in them. Even privileges such as the right to enjoy women were no more a matter of crime.

F. LL. GRIFFITH.

ADULTERY (Greek).—In Athens, adultery (μορφία) on the part of the wife implied criminal intercourse with any man other than her husband. On the part of the husband it was, strictly speaking, criminal intercourse with the wife, sister, or mother of a fellow-citizen, or with his concubine, if she were a native Athenian (Dem. Aristoc. p. 537, § 53).

This strict interpretation was in the classical period widened so as to include offences committed against maidens and widows. One and all of these was treated as a violation of the sanctity of a binding obligation, but as an offence against the family. Hence the special severity with which the wife was treated as compared with the husband. Any act of misconduct on her side might introduce alien blood into the family and pollute the ancestry. Marital infidelity involved no such dangers to a man's own family, and was condoned by law, except in so far as it infringed the rights of other families. There are traces, however, which show that the best opinion condemned it (Isocrates, Nicocles, § 42; Aristot. Pol. 1336a 1; Plaut. Merc. 817 f., where the reference is to Greek and not Roman life).

1. Punishment of the man.—If the husband caught the offender f&pi;ρεταργων γονίδια (άδεν το δορυφόρον) (schol. in Aristoc. 10), he might kill him at once (Dem. Aristoc. § 53). That this law was no mere antiquated survival can be seen from Lysias, de coni. Eratosth. § 23 f., where an account is given of the case of a certain Eratosthenes by the injured husband Euphileutes, who, it should be noticed, is careful to secure the presence of witnesses to his act. The husband, however, might content himself with punishment short of death, e.g. &pi;δηλωσαν καὶ &ραφαΘωνους (Suid. s. v. &rho;αψαρίς καὶ &λακάδας; Schol. Aristoc. 1083, Plut. 168, Eccl. 729); or he might agree to accept a sum of money in compensation for the wrong done to him. He was allowed to keep the offender until satisfactory guarantees were given that the sum promised would be paid (Dem. 1 in N.; Lys. de coni. Eratost. § 25: ιεκρεν μι δεσμοτικας αλλα &ραφαρίνας &ραφαϊνας). If the alleged adulterer denied the offence, he might be put to death, or subjected to unjust detention (διεκομ&epsilon;ινα ή ομοια) before the Thesmophoros. Should he fail to prove his case, the Court directed his sureties to hand him over to the offended husband, who might inflict whatever chastisement he chose within the prescribed limits. The fact that a purse or dagger was not used (νυσ ουρανοθύρων, in N.; §§ 66). If the offender escaped, or had not been taken in the act, the husband or, in the case of maidens and widows, the guardian (τιπος) could bring an action for damages (αι&omicron;νυσας) before the Thesmophoros. It is doubtful if any one unconnected with the family could bring such an action. It is not known exactly what penalty was inflicted, but in all probability it was disfranchisement (άρωμα), either total or partial.

2. Punishment of the woman.—If misconduct was proved, the husband was required to repudiate his wife, under the penalty of himself suffering &rho;ωμα. She was excluded from public temples, and, if she refused compliance, could be expelled with impunity by any citizen. Such assailant might tear off her clothes and ornaments, but might not maim or kill her (in N. § 87; &epsilon;schin in Timarch. § 153). Heilodorus (Aithiop. i. 11) is mistaken in stating that an adulteress was punished by death.

Little is known of the practice of other Greek communities in dealing with adultery. That it was everywhere regarded as a grave crime is clear from Xen. Hiero. ii. 3, where it is stated that many cities allowed the adulterer to be killed with impunity. Zaleucus, the Locrian legislator, ordained the punishment of blinding (Ad. Var. Hist. xiii. 24. 5); at Cyme and in Pisidia the adulteress was paraded on an ass (Plut. Quaest. Gr. 2; Stob. Anth. xiv. 41); and at various other cities, e.g.
ADULTERY (Hindu) — The view which Hindus take of adultery is founded upon their conception of the nature of woman and marriage. The whole of Hindu literature is pervaded by the passion of the inconstancy of the female character, by complaints of woman's unbridled indulgence of passion, and by demands for the maintenance of a strict oversight upon her. The practice of polygamy, which has existed from ancient times in India by the side of monogamy, and the consequently slight esteem in which the Hindu woman has been held up to the present day, must necessarily have led to the occurrence of adultery, and to a lenient judgment being passed upon the fault. On the other hand, it should be noticed also, that even if not so frequently, an especially high value seems to be placed upon the wife who proves true to her husband (pativrata), and that the law threatens adultery with severe punishment.

As early as the oldest historical period, the Indian people, on the testimony of the Rigveda, are by custom shown, that this virtue sometimes represented, in a condition of patriarchal simplicity and of austere moral habit. The word ‘adultery’ is unknown to the Veda. But numerous indications point to the fact that the highly developed culture did not fail to produce its ordinary consequences in corruption of character and moral laxity. Women who betray their husbands (patirival) are mentioned by way of comparison in Rigv. iv. 5. 5: ‘Evil-doers ... who walk in evil ways, like women who betray their husbands, shall be consumed by Agni.’ In verse 4 of the didactic poem Rigv. x. 34, it is said that ‘others lay hands on the wife of the man who abandons himself to the disciple. If from these passages we may infer on the one hand a censure upon the transgression of the marriage vow, on the other hand a matrimonial infidelity is spoken of as something in itself intolerable and of daily occurrence. To this effect are the numerous stories which relate the intrigues of the gods with married women, e.g. of Indra with the wife of Vivasvat. Rigv. i. 62. or the story combined with Satyāyana-Brahma by Sāyana in I.c.; Sādhanā-Br. i. 1. 16; Mātrayānīsūhāti i. 5. 5, with Apāla Atreyī (Rigv. viii. 91, and Sāty. Br. in i.c.), and with Athāya, the wife of Gautama (Satap. Br. i. 19-20); of the Asvin with Sukanyā, the wife of Chyavana (Satap. Br. iv. 1. 5), etc. The conduct of the gods is not here made a matter of reproach; and as little in other passages is adultery regarded from the ethical standpoint. It is because the Brahman is in possession of the secret whereby he can by his curse inflict harm, that therefor men must refrain from illicit intercourse with the wife of a Brahman (Satap. Br. xiv. 9. 4; Byhadār. vi. 4. 12; Parat. Gṛh. Sūt. i. 11. 6). Adultery is mentioned in a similar connexion in the Athāvavyākṣa, viz. in the magical spells and imprecations by which, for example, wives soothe the jealousy of their husbands, or keep their rivals at a distance, or by which the husband seeks to win back his unfaithful wife (I. i. 18; vii. 77).

The following passages throw a light that is altogether unfavourable on the ethical conditions of the Vedic period: —

In the Varṇāpaṇḍita the wife of the sacrificer is required by the law to renounce her paramour. * Who cares whether the wife is unchaste (paripūrṇa) or not? * In Tā. v. 8. 8. a special penance is appointed for the man who for the first time has performed the sacred gṛhyagnihotra, not again to intercourse with a rāmd (the wife of a Śūdrā) for he who has performed it for the second time must abstain henceforth from intercourse with the wife of another man. Such conditions, comparable with betrothal, must have had an influence on the purity of the race, and have rendered illusory all the detailed pedigrees which were essential for ascertainment of other and ritual purposes. That men were not ignorant of the actual unirreligiosity of the lists of ancestors is shown by Nidāna-sūtra, iii. 8: ‘Inconstant are the women who have a husband ever (as father) I shall call myself the son both gods and women as witnesses, his son I shall be; and those whom I shall call myself the son as (my) sons, they will be called the son of me and woman ever was of course made in ancient times to provide against this ignorance by strict oversight of the woman; for the begetting of a son of the body (ejaculation), even in the Rigveda as necessary for the preservation of the race. A proof of this is afforded by an ancient ritual quoted in Vānaprastha, xiii. 7, and Baudhāyana, i. 3. 34, which is taken from a dialogue between Aupajāpati, a teacher of the white Yajurveda, and the mythical king Janaka. ‘Now I am jealous for my wife, O Janaka, though I was not before; for in Yama's house the son is awarded to him who begat him. The beggar leads the son after his death into the dwelling-place of Yama. Therefore they protect their wives carefully, who dread the seed of strangers. Watch jealously this propagation of (your) race, for if no strange seed fall on your field, and in other world, the son belongs to him who begat him; it is in vain that the husband, or the (nominal) father accomplishes this perpetuation of his race.’

A contrast between an earlier period of laxity and a latter of austeres morals can hardly be derived from these passages quoted. Even when in later times a strict enunciation of the law, the Smṛitis legal regulations were formulated with regard to adultery (striśāgārākṣa), polygamy and prostitution continued to exist, and the frequent mention of the son ‘born secretly,’ who may be heir to his mother's husband, though he is her illegitimate son by some other man, does not testify to a high regard for the marriage vow. A change of view was effected in course of time only so far as under the increasing influence of priesthood the enumerations adultery was seen to involve danger to the caste system established by the Brāhmaṇas, and an attempt was made to obviate this by the threat of severe punishments. It is essentially from the standpoint of caste distinctions that adultery is condemned in the Smṛitis. Whatever woman betrays her husband is expelled from her household, and her descent, the king shall cause to be born in pieces by dogs in an open place. The paramour shall be roasted on an iron bed; brushwood shall be thrown upon the fire; there shall the evil-doer be consumed. In the Yajurveda: ‘Whoever being his own (in castle) has sexual intercourse with a woman higher (in caste) deserves death. But the woman, who has an unlawful husband, shall be (the king) cause to be born in pieces by dogs.'

By the side of these savage penalties the punishments assigned in the following verses of the Agni-P, in explanation of adultery seem altogether ludicrous: 'The woman misled by a man besides shall be allowed to eat only sufficient to sustain life; the woman misled by a man of a higher caste shall have his head shaved. A Brahman for intercourse with a Vyādi woman, a Kāstrasī for intercourse with a woman of a lower caste, a Kāstrasī or a Vyādi for the first offence of intercourse in the Bādhyasutrā, the king begs his wife, whom he loves, and the minister with whom she has had guilty intercourse, not to sin again, and forgives them. Another king, who has been betrayed by his wife and who, with all the sin which the messages from whom she has sent to her during the campaign gives orders for the guilty parties to be beheaded. The future Buddha, however, obtains their pardon by pointing out to the king that the men were led astray by the queen, and that she has only followed her nature, since women are instable in the indulgence of their passions."

According to the traditional accounts of the indigenous customary law of Ceylon, open punishment for adultery was usual only when the wives of the king were involved. In other cases the husband was at liberty, if he had caught the seducer in the act, to beat, wound, or even kill him. If the husband laid the charge of adultery on the ground of adultery, the accused, in the absence of proof, was to be dismissed with reproach and warnings; but if convicted, to be condemned to light bodily punishment, with imprisonment and fine."

The legal principles, which are in force in Burma, and which are traceable to Hindu law but little modified by Buddhism, do not in general recognize the severe penalties threatened in the Brahmans law-books. Members of the lower castes guilty of adultery with a Brahman woman are to be punished with 100 blows of a stick, but with 1000 blows in case of intercourse with a Kāstrasī. More stern punishments, however, such as burning alive, may be inflicted. In other cases fines suffice for expiation, the amount depending on the caste of the parties concerned. Should the offender, however, be unable to pay, he is reduced to slavery. The seducer must further apologize, and give his promise not to repeat the offence. Should he break his promise, he is executed, if a Kāstrasī, from whom he has sent; if a Brahman, he is executed from his caste, and reduced to the condition of a Ādānā."

According to another passage of the

ADULTERY (Jewish) — The substitution of monogamy for polygamy made no change in the Jewish law on adultery. From the time of the Babylonian Exile, monogamy became the prevalent custom in Jewish life. But the law continued to regard as adultery only the intercourse of a married woman with any man other than her husband. Thus a married man was not regarded as guilty of adultery unless he had intercourse with a married woman other than his wife. For in theory he married his wife, and an unmarried woman with whom he had intercourse might become his wife. In fact, according to the Rabbinic law, such intercourse might be construed into a legal marriage. But concubinage was severely condemned (Leviticus Rabba, ch. xxv.). Yet the difference between the legal position of the male and the female adulterer (using the term in its now current sense) was considerably affected by the abolition of the death penalty or concurrence or inflict capital punishment. This occurred, according to the Jewish sources (Jerus. Sanh. 18a, 24b; Bab. Sanh. 41a), forty years before the destruction of the Temple (i.e. in the year A.D. 30); but whether, or when, it was finally valid, and the social position of women has undergone little change. It is true that even by the Hindu of to-day the chaste wife who remains loyal to her husband is looked upon as the incarnation of Laksmi, the goddess of wealth and good fortune; but how little confidence the Hindus place in the faithfulness of their wives is shown by the close watch to which now, as formerly, they are subjected. The fear of punishment is regarded at the present time also as the best security for the observance of the law. Punishment is thought too brutal for unfaithfulness, and of this fact the women are well aware. I have myself seen instances, especially in the North-West Provinces, where a husband has cut off the nose of his wife, not even upon actual proof, but upon mere suspicion. This mutilation of the face is often repaid by other horrible forms of mutilation are resorted to, ... The woman, robbed of her fair looks, is ruthlessly cast out.” If even this picture is overdrawn, yet other travellers confirm the fact that sternest jurisdiction is sometimes exercised by the husband. In Nepal the aggrieved husband has the right openly to cut down the sederer when found guilty; and here, as well as among certain Chittagong Hill Tribes, a wife whom infidelity has betrayed into guilt is deprived of nose and ears.

Divorce on the ground of adultery is allowed, according to the Madras Census Report for 1891. The Census Report, also, of the North-West Provinces and Oudh for 1901 mentions that the lower as well as the higher castes permit the divorce of the wife for unfaithfulness. If, however, the suspicion of divorce are rare, the cause is to be found less in a lofty morality than in the endeavour of the Hindus to withdraw their family life as much as possible from publicity.

ADULTERY (Jewish) — The substitution of monogamy for polygamy made no change in the Jewish law on adultery. From the time of the Babylonian Exile, monogamy became the prevalent custom in Jewish life. But the law continued to regard as adultery only the intercourse of a married woman with any man other than her husband. Thus a married man was not regarded as guilty of adultery unless he had intercourse with a married woman other than his wife. For in theory he married his wife, and an unmarried woman with whom he had intercourse...
ADULTERY (Muslim). Not all a man’s other virtues would save him from Gehenna if he committed adultery (Sofa, 4b). Even lustful desire was condemned as a moral offence (Eben ha-Ezer, § 21; cf. Mt 5:27-28). Perhaps the most remarkable testimony to the Jewish detestation of the crime is to be found in the Talmud (Sabb, 14b). In the year A.D. 135, at the crisis of the disastrous revolt against Hadrian, a meeting was held at Lydda. The assembly was attended by several famous Rabbits (including Akiya), and the question was discussed as to the extent of conformity with Roman demands which might justifiably be made rather than face the alternative of death. It was decided that every Jew must surrender his life rather than commit any of the three offences, idolatry, murder, or gilul yaredot (sinning against humanity). This latter phrase includes both adultery and incest (Graetz, *Hist. of the Jews*, English tr., ii. ch. xvi.).

**LITERATURE.** — Z. Frankel, *Grundriss des Mosaisch-Talmudischen Eherechts* (Breisgau, 1890); D. W. Amram, *Jewish Law and Jewish Ethics* (1909), and the same author’s art. ‘Adultery’ in *Jewish Encyclopedia*, vol. I.

I. ABBREAMS.

ADULTERY (Muslim).—In the year 4 of the Hijra, the Prophet was accompanied on one of his missions by his son-in-law, al-Husayn. One day, at the removal from the camp towards night, she remained behind and reached Muhammad’s caravan only on the following morning, in the company of a man. This circumstance caused great scandal. Every one of the Prophet at first thought her an adulteress. Afterwards, however, it was revealed to him that she had been falsely accused, and he was again reconciled to her. The verses of the Qur’an that have reference to this occurrence, namely, Surah al-Hijr, 19, except by the te tesimonium of the following words: ‘As for the whore and the whoremonger, scourge each of them with a hundred stripes, and do not let pity for them take hold of you in Allah’s religion. . . . But as for those who cast (imputations) on chaste women and who do not bring four witnesses, scourge them with eighty stripes, and do not receive any testimony of theirs for ever’ (cf. Th. Nödeke, *Gesch. des Korans*, p. 156; A. Sprenger, *Das Leben und die Lehre des Mohammed*, iii. 65 E.; D. S. Margoliouth, *Mohammed and the Rise of Islam*, p. 341; *The Koran*, Sale’s Eng. tr., ed. 1829, ii. 180).

In Islam, therefore, according to these verses of the Qur’an, incontinence should be punished with one hundred stripes. Originally, the Prophet had commanded that those who had been found guilty of this misdemeanour should be put to death by stoning—a punishment which he had probably derived from Judaism. In the Muslim tradition, various instances are mentioned on which this punishment is said to have been inflicted at Muhammad’s command (cf. A. N. Matthews, * Mishkát-ul-Madídik*, ii. 182-186, Calcutta, 1810; I. Goldziher, ‘Mohammedanisches Recht in Theorie und Wirklichkeit’ (Zeitschr. f. vergl. Rechtswissenschaft, 1891). Muhammad may thus have thought that the Prophet had designately mitigated the punishment attached to adultery out of affection for ‘Aisha. After Muhammad’s death, a difference of opinion arose amongst the faithful with respect to this point. Many thought that the punishment of stoning to death was abrogated by the verses of Qur’an xxiv. 1-5. But the second Khalif, ‘Umar, set his face very strongly against this view. According to him, adultery in Islam should be punished with stoning. Thus the Prophet ordained it, he said, ‘and thus have we acted on his command. Some people say that they find no injunction to this effect in Allah’s book; but in the days of Muhammad we were accustomed in the recitation of the Qur’an to recite also a verse in which the punishment of stoning was undoubtedly denounced against the violator of the marriage bond.’ Indeed, according to Muslim tradition, such a verse is said to have formed originally a part of the thirty-third Surah (cf. Nödeke, op. cit. p. 183).

In the Muslim law-books, both punishments, stoning as well as scourging, are found threatened against the offence of fornication (Arab. zin'). By this offence, the Muslim jurists understand not only adultery, but any sexual intercourse between two persons who do not stand to one another in the relation of husband and wife or master and slave. For those who are not yet married, if they render themselves guilty of this offence, scourging is thought sufficient; all others must in that case be put to death by stoning. An individual belonging to the latter group of persons is in Arabic called muhàsan. The original signification of this word is ‘well-guarded,’ but in Arabic it came to be employed metaphorically to signify a married woman, and later a married person in general (cf. J. Wellhausen, *Die Ehe bei den Arabern*, *Nachrichten der kgl. Gesellsch. der Wissensch. in Göttingen*, 1893, No. 11, p. 447). According to the jurists, however, a person remains muhàsan, even though his marriage may have been dissolved at a later period. If he thereafter commits zin', he is stoned. In Islam, stoning is not thus a punishment exclusively of adultery, as was often incorrectly supposed (cf. Snouck Hurgronje, *Review of E. Sachau’s Mohammedanisches Recht in ZDMG* lxxi. 161 ff.).

On various matters debated, for example, the question whether those who are to be stoned must also be scourged, etc., many go into different scholastic minutiae. The evidence of zin', however, according to Qur’an xxiv. 1-5, cannot be presented unless by a man and four women, among which are those who are able to confirm the truth of the accusation by details. In fact, a condemnation for zin' is thereby rendered impossible, unless the guilty person makes a confession, and thus becomes willingly subjected to the punishment.

When a man takes his wife in the act of adultery, he may put her to death at once, along with her paramour. If he suspects her of adultery, he is not required to bring forward any witnesses. The law permits him, to take oath, and on his being found guilty or unfaithful to him. When, however, the wife on her part swears under oath that she is innocent, she is not punished. Nevertheless, the marriage is then dissolved; and if the wife brings a child into the world, the husband, Muhammad, is ordered to let her keep it. The swearing of this oath is in Arabic called idan. Cf. Qur’an xxiv. 6-9: ‘They accuse their wives (of adultery) and shall have no witnesses (thereof) besides themselves, the testimony which shall be required of one of them (shall be) that he swear four times by God that he spake the truth and the fifth time (that he) imprecate the curse of God on him if he be a liar. And it shall avert the punishment (from the wife) if she swear four times by God that he is a liar and the fifth time (that he) imprecate the wrath of God on her if he spake the truth.’

Slaves are not stoned for zin', but only punished with fifty stripes.

**ADULTERY (Christian).** — Teaching of Jesus and the Apostles. — It is sometimes said that the Law of Moses deals only with outward actions, while the Sermon on the Mount teaches us to think of the inward disposition, and the motives that prompt to action. The Decalogue, it is said, like other ancient codes of laws, forbids...
the sinful act by which the marriage bond is violated, but takes no account of the character or disposition. Jesus, on the other hand, shows us that the inward disposition which renders the sinful act impossible is the one thing of importance in the sight of God. A moment's consideration will convince us that, whatever element of truth there may be in this statement, it cannot be taken as a complete and satisfactory account of our Lord's comment on the Seventh Commandment (Mt 5:27-28), inasmuch as it is simply untrue to say that the Decalogue takes no account of inward disposition or self-knowledge, as it shall not occur to thy neighbour's wife, goes behind the outward act, and condemns the sinful desire which leads to adultery. It is true, nevertheless, that in this passage in the Sermon on the Mount our Lord goes beyond the teaching of the Decalogue, and gives a new and deeper meaning to the command, 'Thou shalt not commit adultery'; that He does not merely reflect to men's minds the teaching of the Tenth Commandment, which had been overlooked or forgotten in the Jewish schools, but that He lays down a principle of conduct which is to govern the whole of life. In the Kingdom of heaven, from which obedience to the letter of the command will follow as a matter of course. The Tenth Commandment forbids the sinful desire, mainly because it tends to circumstances which will injure one's neighbour; it is a safeguard against injury, and the thought of the injury done to one's neighbour is the prominent thought. In the passage in the Sermon on the Mount, on the other hand, our thoughts are centred on the moral injury to the man himself. 'If thy right eye cause thee to stumble, pluck it out, and cast it from thee: for it is profitable for thee that one of thy members should perish, and not that thy whole body be cast into hell.' The indulgence in sinful thoughts and desires is not a minor offence tending to the injury of others, but is already the soul-destroying sin of adultery committed in the man's own heart.

It is now easy to understand why it is that, while throughout the NT sins of the flesh are unsparingly denounced, and we have no detailed classifications of such sins; and very little account is taken of the various distinctions—as between adultery, fornication, *stuprum*, etc. etc.—which are so often treated of at unending length in writings on these subjects. The word used most frequently in the NT for such sins is *μοιχεία* (or *μοιχεύει*), and to *μοιχαλ φρεναρια* (Mt. 5:32). The word *μοιχεία* is often treated to include all those 'lusts of the flesh which war against the soul' (1 P 4:4); and but little account is taken of the distinction between fornication and what we naturally regard as the graver offence of *μοιχεία*, or adultery proper, which involves the violation of the marriage bond. Some writers in modern times have found a difficulty in our Lord's words which forbid the dissolution of the marriage bond—*μοιχαλ φρεναρια* (Mt. 5:32), *μοιχαλ φρεναρια* (1 P 4:4). They were made a not very successful attempt to show that the word *φρεναρια* in these passages must refer to some offence committed before marriage, rendering the marriage itself null and void ab initio. It is a consequence of this that such an interpretation was not thought of by the writers of the first four centuries, and that no difficulty was found in recognizing *φρεναρια* as a general term, including in itself all sins of the flesh, and in this particular instance applying to adultery.

The passage in 1 Th 4, in which St. Paul deals directly with the sin of adultery, may be placed side by side with these passages from Mt, as affording an interesting illustration of the same principle. The Apostle does not ignore our duty towards our neighbour. Adultery is sinful because it is a kind of theft (τοις *μοιχαλ φρεναρια και πλεκεται ετω το πρόγνωσμα του ἄδελφου αὐτοῦ*). But he seems to dwell on this aspect of the matter only in passing, while his exhortation is occupied with the need for purity and sanctification, and the danger of that fornication (*τοις *μοιχαλ φρεναρια*—note the use of the article) which was so common a feature in the life of the Greco-Roman world. St. Paul, no doubt, would have been quite ready to emphasize the danger of adultery, as it seemed to be a grievous or irreparable wrong, a graver offence than simple fornication, just as he recognized fully the gravity of the case of incest in Corinthians (1 Co 5); but, in general, the object of the gospels was not primarily to develop a system of casuistry, but to call men to newness of life, and to produce a character which should make sin in all shapes and forms impossible. For the Christian, therefore, the Seventh Commandment is, before everything else, a law of chastity, and the sin of adultery includes every kind of unchasteness required by the principle. Marriage is, first of all, a spiritual union between those who are 'heirs together of the grace of life' (1 P 3); and all other objects must be considered as subordinate to the promotion of that social life which is absolutely necessary to man's well-being.

2. Ecclesiastical discipline. — The case of the incestuous Corinthian (1 Co 5) gives us our first example of the exercise of ecclesiastical discipline by a Christian community; and the Epistles to the Corinthians make it plain that, while the Christian Church from the very beginning was accustomed to exercise a stern discipline over the lives and conduct of its members, the idea that the offence of adultery necessarily involved final and irrevocable exclusion from the Church was unknown in the days of the Apostles.

Tertullian's statement, therefore, that from the beginning great sins of the flesh were visited with final exclusion from the Church, must be regarded as an exaggeration, so far as the Apostolic age is concerned. Indeed, all the evidence goes to show that we have here rather the ideal picture of the discipline of the primitive age, as conceived by the enthusiastic Montanists, than a sober statement of fact. *

Towards the close of the 2nd. cent. there seems to be no doubt that the discipline in the Churches of Africa and Italy, with which Tertullian was most familiar, * This sober judgment, if the evidence available appears to show that there was no uniform or clearly defined system of discipline established throughout the whole of Christendom. Irenaeus (c. Hær. l. 13) tells us of certain women in the Church of Lyons who had been found guilty of adultery, and subjected to penance. As he speaks of only one of these as not being finally restored to communion, it may be inferred that the others had been received back; hence we may conclude that the system of discipline in the Gallic Church was somewhat less strict than that which prevailed in Italy or Africa. During the whole of the sub-Apostolic age, and down, at all events, to the end of the 2nd. cent., the high standard of morality which we find in the Apostolic age was well maintained throughout Christian communities. If any Christian fell away to vicious or immoral courses, he would in all cases be excluded from the Church and relapse to heathenism. Hence cases of grave offences calling for ecclesiastical censure would be of rare occurrence, and the conditions required for the establishment of a well-defined system of penitential discipline would not arise.

With the expansion of the Church and also, perhaps, as a consequence of the fading away of the early enthusiasm, it became essential that the Church was to maintain her position and carry on her work in the world, to relax somewhat the extreme severity of discipline, to make provision for the restoration of penitent sinners, and, at the same time, to make the Church's rules on such matters clear and distinct. *

---

* St. Paul uses *πορνεία* and derivatives about eighteen times: *πορνεία* does not occur, while *μοιχεία* (and derivatives) occurs only five times in his Epistles, and two of these instances are quotations from the Decalogue, viz. Ro 2:21, 19.
ADULTERY (Christian) 133

Pope Callixtus I. (c. 220) was probably neither the monster of Iniquity depicted by his biographers, nor a saint as some have supposed, but a man who saw clearly what was required by the circumstances of the time. His famous edict: "Ego st maculosa functa penisitentiis dirigitur, although, however, provoked a stormy controversy, and was assailed with much vigour and bitterness by Tertullian in his treatise de Pudicitia, etc. But, in the event, the dispute was settled for once and for ever, and the penalties of the ancient Church, in the form of social and religious ostracism, were prolonged indefinitely. The death penalty for adultery was, however, abolished, and the Lex Julia restored with certain modifications. By this legislation the guilty wife, if not received back by her husband within two years, was condemned to be shut up for life in a convent.

Whatever we may think of the influence of Christianity upon the civil law of the older Empire, we can have no doubt that its influence upon the laws of the new nations that overran the Provinces of the Empire in the 5th and following centuries was wholly, because made,” barbarous severities of the old national laws against adultery were mitigated. Divorce, pecuniary fines and—for guilty women—confession in convents gradually took the place of the death sentence or the infliction of cruel mutilations.

The Code of Theodoric decreed death for adultery. A married man who seduced a virgin was mulcted in double part of his property as damages. The unmarried seducer was bound to marry his victim and endow her with a fifth of his estate. In the Burgundian code the adulterer was punished with death, and the adulteress, if not put to death, was treated as an infamous person. By the Visigothic code the adulteresses and their paramours were given up to the flames, or were to be punished with death or otherwise—according to his free pleasure. Flogging, mutilation, and other barbarous punishments were in force amongst the Danes and Saxons. In England the death penalty was not formally abolished until the reign of Canute.

There was, indeed, one custom of the Northern nations which yielded very slowly, and only after many conflicts, to the influence of Christian teaching. In general the tone of morality—especially in all that relates to married life—amongst those nations was very high, much higher than in the Roman world which they conquered. Monogamy was the rule, and conjugal fidelity was sternly enforced. An exception, however, was made in the case of princes, who, as a mark of dignity, were allowed to maintain a plurality of wives or concubines. It is perhaps not wonderful that after their conversion these rude chiefs found it hard to accept the Christian view, and to regard this practice as sinful adultery, or that zealous Christian teachers should have often found the task of contending against this practice beset with much difficulty and danger.

4. Divorce. The adultery of the wife has at all times been regarded as a sufficient ground for divorce; but differences of opinion have prevailed as to whether the same rule applies to the case of adultery committed by the husband. By the civil law of England, a wife cannot obtain a decree of divorce on the sole ground that her husband’s adultery: there must be other circumstances, as, e.g., cruelty or neglect. In Scotland, on the other hand, the adultery of either partner is itself a sufficient ground for divorce. The subject of divorce will be more fully treated in a separate article. For the present it may be sufficient to note that in the Roman Catholic Church, and by the canons of the English Church, divorced persons, whether innocent or guilty, are not allowed to marry again during the lifetime of their partner. Remarriage is permitted in the Greek Church and in most Reformed Churches.

ADULTERY (Parsee).—The ancient Iranians attached much importance to marriage, and hence they looked upon adultery with horror. In the Gāthā Šūstavaitā (Yašna, liii. 7) there is a carefully worded warning against what Mills calls...
'sollicitations to vice,' etc. The female Yazata Ashi (Yasth, xvii. 57-60) inveighs bitterly against this vice. She says that it is the worst deed that men and tyrants do,' \textit{et c.} The female Yazata Ashi (Yasht, xvii. 57-60) inveighs bitterly against this vice. She says that it is the worst deed that men and tyrants do,' etc. The female Yazata Ashi (Yasht, xvii. 57-60) inveighs bitterly against this vice. She says that it is the worst deed that men and tyrants do,' etc. And the evil influence of vicious women, whose lustful, wavering mind is like a cloud, which changes the direction of its motion according to the direction of the wind (Yasna, ix. 32). The Asmias Spenta Asha Faishteti ('Best Righteousness') is similarly appealed to (Yasth, iii. 9). An adulterer who was an apostate of Gao, the good spirit of the earth or the animal creation, the idea being that such a person comes in the way of the progress of the world (Vendidad, xxi. 1). The progress of the world in the different spheres of activity, physical and mental, acts against these evil-doers (ib. xxii. 17). Eredaf Fedri is the name of a good, pious maiden who is considered as a prototype of maidenly virtue, and whose guardian spirit is invoked to withstand the temptations of Jahi, the personification of adultery (Yasna, xvi. 139). In the Pahlavi Bundahishh (ch. iii.) this Jahi (Pahlavi Jēhē) is said to be an accomplice of Ahuramazd and the archangels. In the Pahlavi Duistān-i-Dēnig (71st question) adultery is spoken of as one of the most heinous sins. The mother of Zohak is said to be the first woman in the world who committed this offence. It is described as a sin which disturbs all lineage, which puts an end to all self-control and to the legitimate authority of a husband. It is more heinous than theft or spoliation (77th question). It is a crime which leads at times to murder, because the woman sometimes brings about abortion. There is another way in which adultery leads to murder. It is noted in the account of pregnancy** that sexual intercourse during pregnancy is prohibited, because it is understood that it leads to injury to the life of the child in the womb. Now, a woman who yields to lust and gives herself up to an adulterous life is likely to commit adultery even in pregnancy. Such intercourse may cause the loss of the life of the child in the womb.‡ Adultery is a canker in society in another way. When a married woman is seduced by an unmarried man, according to the injunction of the Vendidad he is bound to support the woman whom he has seduced and the children that may be born of the illicit intercourse. It is his duty to bring up his illegitimate children along with his legitimate children. But then the company of the illegitimate children is likely to spoil the good manners and morals of the legitimate children. And, on the other hand, if he does not bring up the illegitimate children properly, if he does not give them proper training, he is responsible for all the wrong acts and sins that the children may commit in their childhood or when they are grown up. The sin of adultery was too heinous to be fully atoned for. But what little atonement could be made for it was directed to be done by the following good acts (Duistān-i-Dēnig, lxxvii. 17-19): (a) The guilty person, especially the adulterer, must help, i.e. by money or otherwise, in bringing about the marriage of four poor couples. (b) He must assist with money poor children who are not cared for by others, and bring them up decently and educate them. (c) If he sees others in society leading a vicious life, he must do his best to retrieve them. (d) He must perform certain religious rites, like those of the Drāzhdah-Hōmāst. In the Virāf-Nāmak the adulterer is represented as punished by being thrown into a steaming brazen caldron (ch. ix.), the adulterers as gashing her own bosom and breasts (ch. xlii.). The adulterer who brings about abortion meets with worse punishment (ch. lixiv.). In all cases of adultery the Vendidad (xv. 18) requires that the person seducing a woman, whether married or unmarried, shall maintain her and the children that may be born of her until they attain the age of eighteen years. If an adulterous woman was considered a great sin (Vend. xv. 11-14). Jivanji Jamshedji Modi. ADULTERY (Roman).—I. Under the Republic.—The word adulterium is a noun-derivative of adulterare, which is probably ad alterum (se convertere). The offence on the part of the wife is sexual intercourse with any man other than her lawful husband. On the part of the husband it has a narrow meaning, and is confined to misconduct with married women, misconduct with concubines, or concubinearies, and adultery with married women being designated by the general term stuprum. The unequal treatment of husband and wife is bluntly expressed by Cato in Aul. Gell. x. 23: 'In adulterio uxorem tuam si prehendisesses, sine iudice impune nocere: ilia te si adulteras . . . digito non audiunt contingere, neque ius est.' From this passage it is clear that the old right of self-help survived into the times of the Republic. There is no evidence, however, that the adulterer could be killed as well as the woman, if taken in the act. Originally the offence was dealt with not by the State (except in cases where it passed all bounds, and became, like open immorality, a matter for the police jurisdiction of the censors and ediles), but by the iudicium domesticum, or family council, in which near relatives took part, with the head of the family as president in virtue of his patria potestas. This council could inflict what punishment it chose (Dionys. li. 25; Suet. Tib. § 35. Cf. Plin. HN xiv. 13 ff. * matronam a suis iudicia mori comatam,* i.e. the man where the charge is brought is in temporary seclusion). If a wife was divorced on the ground of adultery, it was left to a civil court to decide what part of her dowry she should retain. Such a trial was termed a iudicium de moribus. The procedure, however, is known to us, and cannot be recovered with any certainty from the evidence of the later lawyers, who are our only authorities. 2. Under the Empire: The Lex Julia.—By the end of the Republic, owing, among other causes, to the absence of effective legislation, immorality became so rife at Rome that the Government became alarmed at the prospect of a shrinkage in the population of Italy. In consequence of this, Augustus in 736/18 carried through the measure known (though the title is doubtful) as the Lex Julia de adulteris (the new law was enacted as the Lex Julia de adulteriis, veteri sui praebente, Suet. Aug. § 34). This, as its opening clause shows ('ne quis posthac stuprum adulteriumus facito scienis dolo malo'), was directed against immorality in general as well as against adultery. But now for the first time Roman law recognized adultery as an act done in contravention of the law of the State, and allowed others than the father or husband of the adulterer to prosecute. For this purpose a new court (quaeatio perpetua) was established (Dio, liv. 30). The fragments of the law that survive will be found in Digest, Lib. 50, tit. Juris Antiqui, p. 114. Adultery on the part of wife or concubine was declared punishable by the law, while marital misconduct was taken to include offences knowingly (dolo malo) committed against...
ADULTERY (Semitic). The treatment of infidelity among the Semites can be illustrated by groups of Semitic evidence, extending from the codified legislation of Hammurabi, king of Babylonia (c. 2250), to the unwritten, though no less authoritative, tribal laws of the present day. So far as women are concerned—and, as elsewhere, the infidelity of the man was only tardily recognized as blameworthy—it must be understood that the offence implies a particular type of marriage, since it is obvious that where the woman has liberty of choice, does not leave her own kin, and may receive her suitors when or as long as she will, adultery is out of the question. Such a union is entirely one of a personal character, and gives the man no legitimate offspring. But the prevailing type in the Semitic world is that wherein the woman follows the husband, who has paid a 'bride-price' (Arab. "sadr, or akhdar", i.e. her kin, whereby he has compensated them for the loss of her services, and has acquired the right of possessing sons who shall belong to his tribe. By this act the man has practically acquired the exclusive property-rights, and deprives the woman of the right of disposing of her own person. Further, it must be recognized that this does not imply that maternity always meant what it does to us. The evidence goes to show that the man is at first only the father of all the children of the woman he has taken; and he might transfer or dispose of her temporarily in a way that is quite repugnant to all ideas of chastity. At this stage, therefore, a distinction could be, and was, drawn between those cases authorized and those others wherein circumstances the term ‘adultery’ could be applied only to those acts of infidelity which were done without the husband's consent or knowledge. It required a great advance before any breaking of the union between the two could be regarded as a desecration.† See MARRIAGE.

In tracing the growing strictness of ideas of chastity in the Semitic world, it is to be observed that there was a gradual development of institutions Primarily, the case against a man are matters for him and for his kin or tribe to settle; adultery may thus be privately avenged, and it is not until society has taken many steps forward in government that the matter is taken out of private hands and referred to a judicial inquiry. There is a great social gap, therefore, between the parental authority of Judah in Gn 38, and the recognition that immorality is an offence to be punished by judges, in Job 31. It is undeniably to be noted that much in early Semitic life cannot be judged in the light of modern ideas, and that primitive usages which were hardly thought to be dishonourable (Gn 29, cf. Jg 19), for which parallels could easily be found—bespeak a lack of public spirit to the inferences of infidelity, which was recognized at all, could only have been the unauthorized infidelity referred to above. But a general advance in custom can be traced, and is peculiarly illustrated by three stories of the patriarchs: there is a distinct growth in morals in the account of Isaac's adventures at Gerar (Gn 26) as compared with the duplicate narrative of Abraham in Egypt (ch. 12), and these stories from the Jahwist or Juxean source are overshadowed by the Elohist or Ephraimitic story at Gen 26. The second type of the story of Gerar (ch. 20), where the iniquity of adultery is forcibly realized.

Under the ordinary type of marriage, known as the baal or marriage of subjection, the Semitic woman, if unmarried, is entirely under the authority of her father; if betrothed or married, of her husband. It is necessary, therefore, to observe that, if adultery is primarily an infringement of the husband's rights, seduction is no less a matter for the father of the unbetrothed virgin. According to the old Hebraic law (Ex 22), no man who was

* See Robertson Smith, Kinship and Marriage in Early Arabiā', pp. 79-90.
† Robertson Smith's researches are supplemented by Wellhausen (GGW, 1898), who has observed among the Arabs mistrust and jealousy spring less from love or ethical considerations than from ideas of property.
ADULTERY (Semitic)

The Babylonian code of Hammurabi implies a more advanced state of culture than the oldest Hebrew. The position of the married woman was secured by a contract which could specify the penalty for her infidelity and possibly vouched for her independence of thought. If the payment (according to the code) of $500 was made in the event of the husband's refusal, it was an apparent settlement of the dispute.

The following laws require notice:—The husband who is caught ravishing a betrothed virgin who is living in her father's house is put to death, while herself she goes free. If she was betrothed to his own son, a distinction is drawn upon whether the marriage had or had not been consummated. In the latter event, the man must pay half a mina of silver and give her personal property, and she is free to marry whom she will. In the former event, the man is strangled; the treatment of the girl is uncertain in the text. Drowning was the ordinary legal penalty, although, in cases where adultery was proved to be at hand, capital punishment was prescribed. In all ordinary cases the wife could take an oath and disavow her innocence, and was allowed to return (or was sent?) to her (father's) house; but if the evidence had been pointed at her on account of another, she and the offender are put to death. Modern custom permits the guilty pair, if caught, to be killed at once, or, at the sentence of the sheikhs, all the men take an equal share in the execution. The last point is important, since bloodshed according to primitive thought is a responsibility which all members of the community must share. The old form of exacting the death-penalty is parallel, as Robertson Smith has observed, to the ancient ritual of sacrifice. In both, every member of the kin should as far as possible participate in the act. The penalty of death-penalty may vary between strangling, impaling, burning, and—at the present-day—shooting.

Mere suspicion of adultery is not enough, and terrible consequences may result from unsupported denunciation, in which have occurred many cases in which the guilty are found in the act. The law in question belongs to a group which reflects that stage where moral ideas have become so advanced that the husband attaches importance to the chastity of his newly-married wife (the restrictions of Lv 21:14 apply only to the priests). The procedure (Dt 22:21) is detailed, and states that if the accusation of impurity brought against the bride is true, she is stoned to death by the 'men of the city'; if false, the man must pay a hundred shekels to the father, and is not permitted to divorce his wife.§ In Italy, intelligence to the former event the girl is treated as an adulteress, since from the time that she was betrothed she is regarded de facto as a married woman. The same code in its treatment of betrothed women makes a notorious distinction between the two. Should it be committed in the city, both are stoned; whereas, if it be in the open country, the woman goes free, since it is assumed that she cried for help and found no protector (Lv 21:14).§

The payment, 'according to the bride-price of virgins', which the man must make in the event of the father's refusal, is apparently an additional compensation.

The payments, '500 shekels', which the man must make in the event of the father's refusal, is apparently an additional compensation.

Religion of the Semites, pp. 385, 386 ff.

1 See further, Driver, ICC, "Deut." p. 255.

1 See the contract, Fincnas, The Old Testament (1903), p. 172.

It will be noticed that in Dt 22:24 the accusation of impurity is regarded as a distinct reflection upon the parents.
ADVAITA

The great advance upon primitive thought was the insistence upon the fact that adultery is as immoral in the husband as in the wife; previous to this the adulterer suffered only in so far as he had been the object of the injured husband’s revenge. Accordingly the Dvaita and related teaching mark a great step in ethics in denouncing adultery, and in their warning against the covetousness from which lust springs (cf. the development of the truth in Mt 5:28).

The peculiar character of Nature-worship and the native cults of Baal and Ashthoreth were direct incentives to impurity, and whatever may have influenced growth of refinement in this scattered field, it is evident that the purer conception of Jahweh among the Hebrew prophets went hand in hand with the refinement of moral ideas in Israel. The relation between worshipper and God was typified by the marriage-relations, and Jahweh was His people’s Baal even as the husband was the Baal of his wife. It was impossible not to perceive that intercourse with aliens tended inevitably to participation in foreign rites, and the symbolic use of such terms as ‘jealousy,’ ‘fornication,’ or ‘adultery’ becomes characteristic of the religious life of Israel, bound as it was to its own moral duality as that of the double husband. Hosea’s doctrine was thus in accordance with well-established belief, and lays stress upon the fact that, whatever may have been the customary attitude towards adultery in everyday life, Jahweh has always one’s own. He foresaketh His adulterous people, but was willing to receive them again and pay the betrothal price of ‘faithfulness.’

STANLEY A. COOK.

ADVAITA.—Advaita, derived from a privative and dualism, ‘duality’ or ‘dualism’ (from Skr. dvi = ‘two’), its philosophical applications means non-dualism, and is used to designate the fundamental principle of the Vedānta (see art. VEDANTA), which asserts that the only reality is brahma; that the dualism set up between self and the world, between spirit and matter, is in the nature of illusion, or of ignorance (avidya). The manifold world with its changing phenomena is unreal; the only reality is brahma, which is identified with atman or self.

The view which accepts as real both the Ego and the world and their distinction is advaita or dualism; that which denies this dualism is advaita.

It is important to note the negative form of this philosophic term. It would have been easy to find a positive term if the intention had been to assert dogmatically the oneness of all reality as a positive conclusion. The advaita does not positively assert this oneness; it simply denies the dualism which presents itself in our ordinary thinking. This distinction is not only of importance in defining the precise meaning of the advaita, but it also throws light on the process of development by which Indian philosophy arrived at this result.

Just as the ideal philosophy of Greece was preceded by steps to reach the basis of things along quite other lines, so the advaita solution of the Indian problem was the culmination of a long series of philosophic systems. These are generally described as the six darśanas, the six recognized systems.

The predominant interest in all of these was religious, not philosophic. The Nyāya taught its logic in order that man by the light of it might attain the state of kaivalya or liberation, through the favour of lākṣaṇa (God), whose existence can be demonstrated by inference. The Vaiśeṣika school sought to enlarge our means of knowledge by an elaborate classification of existence. The Sāṅkhya called in question these classifications, and reduced all existences to one, which it called prakṛti,
ADVTA

Of it is all real being (sat), all thought (chit), all joy (ananda). Hence the formula which defines brahman—sac-chid-ananda = being, thought, joy.

It is to be noted that the advaita does not deny the existence of matter, it simply regards it as per se unknowable, and therefore indescribable. We can know it only in the forms in which it is presented to our knowledge. The formula contains two elements, one constant and eternal, which is the true, the real; the other changing and transitory, which is the untrue, the unreal.

The precise meaning of mâyâ becomes clearer when regarded from this point of view. Mâyâ is illusion, but not illusion without a basis. This basis is not thought which is changing, but the indescribable, the unknowable substratum of phenomena. That this unknowable must exist is a necessity of thought. Some metaphysicians speak of it as if it were an illusion out and out, sent forth from within the bosom of thought itself; but this view is which is not necessitated by the teaching of the advaita as expounded above. Mâyâ can mean illusion out and out, but only so far as the phenomena which it affects are described by the formula which concerns us here.

The Advaitins are concerned only in maintaining that thought and being are inseparable; it is quite in harmony with this position to maintain that a substratum of phenomena, regarding which nothing is known, exists.

The name given to the complex whole, thought and being as reality, brahman, has been variously explained. (See art. Brahman.) The most satisfactory explanation is that which traces it to the rise of the term in the Rigveda to describe the elevating and inspiring power of prayer, resulting in an elevation of spirit which seems to lift the soul out of the consciousness of its individual separate existence. It is also described as the one indivisible subject, for the consciousness of individuality must vanish in the contemplation of brahman, but because the sphere within which these higher powers may rise above the phenomenal self, have their being is that of the thinking subject. Brahman is the Supreme, the unconditioned self, transcending all individuality. The relation of this brahman to the illusions that present themselves in our consciousness is illustrated by familiar examples— the mirage assumed to be water, the rope assumed to be a snake, etc. As in some of these instances not of proper light is the source of the illusion, so want of right knowledge is the cause of our illusions as regards phenomena that are themselves brahman.

The Advaitins were fully conscious of the gravity of the problem which still remained unsolved, viz. the real origin of these illusions. In many of their attempts at explanation they confine the fundamental principle of their system. Of these, we are told that mâyâ is only a creation of the mind, the mind is led away to these false notions. But this explanation, which seems to give definite objective existence to these false notions, is subsidiary to advaitism. The attempt is made to evade this difficulty by asserting that the mind has within itself from eternity ideas which it only reflects or dreams out. It thus only perceives itself. But eternal ideas seem also to constitute a separate reality. Others find the origin in the illusory appearances imposed - upon the the unlimited. These limits, which give rise to the phenomena of perception, are the creation of the individual as an individual; in brahman, the unlimited, there is no individualization. To be emancipated from sense of self is individuality is real knowledge, real bliss. This is the emancipation which finds expression in the formula tat-tatr-tam-asi, 'thou art it.'

Others, again, have recourse to the theory of reflection, viz. that the varying phenomena of perception emerge through the reflection of brahman in nature. But what is it that reflects? Here again we have duality. The most generally accepted solution is that which departs of the solution, and contents itself with saying that separate existence in every form is false, all as it is, all is brahman. It illustrates its position by the story of Yajâvalkya, the ancient sage, who, when asked by one of his pupils in a question, thrice repeated, to describe the advaita, gave no answer; and, when pressed, replied that the advaita is best described by silence, for all describing means advaita or dualism.*

Religion having furnished the chief stimulus to Indian philosophy in its dual aspect, we naturally expect to find the root and germ of its leading conceptions in the Indian sacred writings. A line of thought leading up to the Vedântic or advaita conception can be distinctly traced in the Brâhma-sûtras based upon the Vedas, and in subsequent writings reckoned as inspired scripture. Starting from a worship of personified nature-powers, the religious mind of the ancient Indians pressed on to seek that on which the gods and the worlds depended for their creation and their support. It found it in that elevation of soul experienced in prayer, which enabled it to transcend its individual existence, to which it gave the name brahman.

In the Tattvîrya-Brâhma-sûtras, 2, 8, 9, 6, the question of the Rigveda, 'Who is the supporter of the bearers of rthi?" is answered. Brahman is declared to be 'that out of which earth and heaven have been formed, and that which upholds the bearers of the world.'

In the Kâthaka-Upanishad, v. 1-3, which represents a later stage in this process of thought, the brahman is described as the most inward and the noblest element in all the manifestations of nature, 'the sun in the firmament, God in the heavens, as dwelling everywhere, as born everywhere, and he only is free from suffering and sure of salvation who is versed in the unchangeably spiritual' that dwells within him.

In the Chândogya-Upanishad is set forth in the clearest terms this extaltation of the âtman, or self, in its identification with brahman. This Universe is brahman. Its material is spirit, life is its body, light its form, . . . all-embracing, silent, undisturbed—this is my soul (âtman) in the inmost heart, smaller than a seed of grain—this is my soul in the inmost heart, greater than the earth, greater than the heavens, greater than all these worlds . . . this is brahman, to it shall I go hence, be united.'† The self in this sense is 'the real,' 'the one without a second (advaita).'

It is that out of which the whole world has been formed, of which the world is a mere transformation. He who knows the one may be said to be the one.

The parallel movements of thought in the ancient and modern philosophies of the West have been frequently pointed out. The early Greek philosophy was inspired by the longing to discover a principle of unity in the manifoldness of the phenomenal world. The earlier attempts resulted in the assumption of some one common physical principle, out of which the variety was developed; the later attempts sought it in a spiritual cause. Xenophanes proclaimed the unity of the Divine, and his disciple Parmenides, denying to this Divine principle personality and change, reduced it to Being. To the unity thus reached by the path of pure abstraction, the principle of phenomena as non-being (vû or 5û). The correspondence between these successive stages in Greek thought and the course of Indian thought outlined above is interesting and suggestive. The other parallel is that presented by the Kantian philosophy. By a different path from that of mere abstraction two separate and the same metaphysical quest. Having subjected to a minute critical analysis the faculties of human knowledge, he arrived at the result that 'the thing in itself' (das Ding an sich) is not accessible to human knowledge, as all knowledge of the external objective world is realized through the application of certain categories of thought, the categories of space, time, and causality, which inhere in the mind of the thinking subject. Reality itself, therefore, so far as these faculties are our means of knowledge, is unknowable.

One cannot fail to recognize here also a remarkable similarity between Kant's critical position and the real advaita doctrine. But there is this important difference to be noted in regard to

* Sâkara on Brâhma-sûtras, ii. 5. 17; Deussen, Upanishads, Eng. tr. (1906) p. 156 f.
† Chand.-Upan. iii. 14, cf. Satap.-Br. x. 6. 3.
method. The advaita presents us with no critical analysis of the process of knowledge, for we can scarcely dignify with such a name the arbitrary and fanciful methods above indicated, by which the Advaita sought to explain the fact of nityā in our perception of phenomena. So far as the advaita is to be regarded as a philosophy, it is a philosophy of a purely abstract and speculative nature. By one supreme effort of mind it advances to a position which other philosophies have sought to establish by a patient and laborious examination of the facts of experience on its religious aspect it exhibits similar characteristics, and its religious aspect is more important than its speculative interest. It is a doctrine of salvation through the attainment of the true knowledge, and this knowledge is to be realized in the advaita conclusion. By a purely intellectual effort the emmanicipation of the soul from evil is to be achieved. In this solution of a deep moral problem we see the same impatience of facts, the same summary method of reaching the desired end, as marks the speculative side of this philosophy. How far this philosophy has sowed the seeds of the problem may be gathered from the illustration which it employs to describe it. One well-known advocate is disturbed when, forgetting that he has it, he seeks here and there to find it. His peace is restored when he discovers that it has never been lost. So, we are told, the distressed soul finds salvation in the knowledge that there is no evil, no fear, no separateness. Pleasure and pain are merely the results of this false sense of individuality and separateness. The mind of the individual may be conscious of evil and of suffering; but the great mind of the world knows none of these. Identification with brahma is the source of all bliss, the sense of separateness is the root of all evil.

LITERATURE.—See art. Vedānta. The view of Advaitism given above will be found fully expounded in M. N. Dwivedi's Bhāmon or Advaita, Bombay, 1899.

D. MACKICHAN.

ADVOCATE.—The etymological meaning of advocate (Lat. advocatus) is one called to, i.e. one called to another's aid. It may be used of one called in to assist another in any business, as, e.g., when an official appointed to defend the rights and revenues of the church was called advocatus ecclesiae. In legal phraseology an advocate is one called in to assist another's cause in a court of justice. The Lat. advocatus had a wider significance than 'advocate' connotes in modern English; in Cicero's time it denoted a backer, hence any legal assistant: not an advocate as in later authors (cf. Plut. i. § 10; Dem. 24, 43). Like ἀνακαταλύω in classical Greek, advocatus might refer to any friend of the accused person, called to speak to his character, or otherwise enlist the sympathy of the judges (or, as we should call them, the jury) in his favour. (Translation of Thuc., i. 199, 199, 199, 199, 199) supports the above statement by the following apposite quotation from Anaximenes, ad Qz. in Qz. Qz.: 'Qui defendat alterum in indico, aut potius in curia, si alter est; aut advocatus, si aut non suggerit, aut presentiat suam commodam amicum.' For a similar use of ἀνακαταλύω he refers to Dem. de P. L. true. 311. the Disc. Laert. P. E. E. 50. In Philo, de Opif. M. § 6 the intention is that of a monitor or advicer ... but still preserving the leading idea of amicus advocatus in consilium.'

'Advocate,' as a judicial term, now generally signifies pleader. This is a natural development of meaning, for assistance in courts of law usually takes the form of speaking on behalf of another. As thus employed the word practically corresponds to the English 'barrister,' whose office it is to plead the cause of his client.

Five uses of advocate fall within the limits of this article, viz.:

1. In the New Testament:
   (a) Jesus Christ 'an Advocate.'
   (b) The Holy Spirit 'another Advocate.'

2. In Church History:
   (a) Advocatus ecclesiae.
   (b) Advocatus dialoqui.
   (c) Advocatus Dei.

3. 'Advocate' in NT.—(a) Jesus Christ 'an Advocate.'—There is general agreement that in 1 Jn 2 (1) 'any man sin, we have an Advocate with the Father, Jesus Christ the righteous,' Christ, 'Advocate' is a better rendering of ἀνακαταλύω than either 'Comforter' or 'Helper,' the alternatives suggested in RVm. Wyclif, following the Vulgate, has 'We have an advocate anentis the Saviour.' In considering the NT use of this word, Jewish as well as classical authors should be consulted. In Rabbinical literature paraklētos—'the Aramaic transliteration of ἀνακαταλύω (cf. parakletē)’—is not infrequently found. Buxtorf quotes 'An advocate is a good intercessor before a magistrate or king' (cf. JE vol. ix. p. 641 f.). Doubtless the word sometimes occurs in Jewish writers with a wider meaning, as, in the Targum on Job 16:2 and 33:19, where it represents the Hebrew word for 'interpreter' (mālēt); but its use to designate 'pleader' is well established. The antithesis between a 'broad advocate' is, for example, clearly marked in Pirg. Aboth, iv. 11: 'He who performs one good deed has gotten to himself one advocate (parakletē), and he who commits one transgression has gotten to himself one accuser.' Field (op. cit.) has good reason for saying that Rabbinical writers use parakletē precisely in the same way as St. John in his Epistle, and as the Latin patronus which they also adopt. This judgment accords with the conclusion already drawn from the history of the word, that the etymology of the word's meaning. Though the evidence that the patronus was ever called advocatus, 'advocate' was, in its later usage, extended in meaning so as to include the function of the Roman patron, who was liable to be called to the aid of his client to represent him before the tribunals when he became involved in litigation' (Muirhead, Roman Law, p. 9). Clement of Rome (1 Ep. ad Cor. i. 36) applies to our Lord the title θεοφόρος = patronus. In 1 Jn 2 the thoughts suggested by the comparison of Christ to the Advocate must be interpreted in harmony with the context. When the believer is charged with having sinned, and Satan presses the charge in the presence of the Father ... who judgeth (1 P 1:3), Christ pleads for the accused; because He is 'righteous' His advocacy is well-pleasing to the Father; and His plea that God would show forth His righteousness in the sinner's forgiveness is based upon the fact that He Himself is more than the sinner's Advocate, even the 'propitiation' for his sins (1 Jn 2:2, cf. Ro 3:28), 'Faith in the forgiveness of sins cannot be religiously and ethically innocuous unless it is associated with faith in the propitiation' (Rothe, Ezech., i. (1890) p. 209).

(b) The Holy Spirit 'another Advocate.'—There has been much controversy in regard to the rendering of ἀνακαταλύω in Jn 14:16, 15:16. In all four places Wyclif and the chief English versions translate 'Comforter'; the Rheims has 'Paraclete.' In RVm 'Advocate' is the first alternative. However, has advocatus both in the Epistle and in the Gospel; he rightly explains its application to the Holy Spirit by a reference to St. Paul's words (Ro 8:30) about the Spirit as making intercession for us. The sin of one who is accused, however, is more than the sinner's Advocate, even the 'propitiation' for his sins (1 Jn 2:2, cf. Ro 3:28), 'Faith in the forgiveness of sins cannot be religiously and ethically innocuous unless it is associated with faith in the propitiation' (Rothe, Ezech., i. (1890) p. 209).
is a growing consensus of opinion in favour of **Advocatus** as the title of the Holy Spirit as well as of Jesus Christ.

"Christ is our Advocate on high, Thou art our Advocate within." (Psalm 143:6, NIV)

The arguments in support of this view are succinctly stated by Field (op. cit. p. 103): (1) "Another Advocate," i.e. besides Myself. (2) The word is only known from St. John's writings, hence it is a foreign term for the general correlative in the right place. (3) Etymologically, advocate and **advocatus** are identical. (4) This is the only rendering which suits the passive form.

The question is, 'Does the work of the Holy Spirit as described in the above four passages correspond to the functions of an advocate?' In three of them (Jn 14:16, 15:26, 16:7) the Holy Spirit is the 'Advocate within' the hearts of Christ's disciples; as an Advocate he 'pleads the truth and makes reply to every argument of sin' (14:16); His pleading is with power because He brings to remembrance the Saviour's words, unfolds their teaching, (14:16), and bears witness to His glory (16:13). No strain is put upon the context of these passages by this interpretation; the disciples themselves will be judges against their own unbelieving hearts, and Christ will be triumphantly acquitted and declared to be the Son of God with power (Rom 8:37, x. [1899] p. 170). The remaining passage (16) describes the Holy Spirit's work in conviction the world. He is Christ's Advocate, and 'for the Apostles themselves the pleading of the Advocate was a sovereign vindication in the great trial they were about to undergo; shown to have the right, whether their testimony was received or rejected.' (Westcott, **Com. in loc.**)

Zahn (Eisenle, vol. i. p. 45) finds a difficulty in accepting the rendering 'another Advocate' in Jn 14:16, "Another, he argues, implies that Christ Himself had already been His disciple, Advocate, whereas He had rather been their Teacher or their Instructor. It is no part of the meaning to 'Advocate' when it is applied to Christ's earthly intercourse with His disciples and to His heavenly intercession on their behalf. The difficulty seems to be sufficiently met by saying that in Christ's conversation with the men who had been given Him out of the world, whilst in heaven He is ever pleading their cause with God (cf. Comenius, Bibl. TheoL. Lec. of NT Gr. p. 357).

All admit that 'Advocate' does not adequately represent the varied work of the Holy Spirit. As a title rather than as a predicate of the Holy Spirit, the word is used in passages above, the felicitous suggestion of Dr. E. A. Abbott may be gladly accepted: 'Perhaps the best periphrasis of Paraclete for modern readers would be "The Friend."' (Paracletus, 141.)

**2. ADVOCATE IN CHURCH HISTORY.**

(a) **Advocatus ecclesiae.**—The 'Church's advocate' was a civilian officially charged with the duty of defending ecclesiastical rights and revenues. At the sixth Council of Carthage (A.D. 401) it was resolved (Canon 10) that 'the Emperors shall be prayed to appoint, in union with the bishops, protectors (defensores) for the Church.' At the eleventh Council of Carthage (A.D. 407) it was decreed (Canon 2) that 'for the necessities of the Church the Emperors shall be demanded of the Emperor to collect the revenues of the Church' (Hefele, Hist. of Church Councils, vol. ii. pp. 425, 442). At different periods the duties of the **advocatus ecclesiae**—sometimes designated as agents, defensores, or excatores—included not only the defence and maintenance of the secular and legal rights of the Church, but also the protection of the poor and of orphans, the exercise of jurisdiction, including police functions and the power to levy suits from among the vassals of ecclesiastics who claimed immunity from the service of the State.

At first the office of **advocatus ecclesiae** was not hereditary, but Hinschius states (Petr. J. 1. 199) that before the end of the 9th cent. founders of monasteries, etc., sometimes stipulated that it should be retained for themselves and for their heirs. In Charlemagne's time the right of nomination belonged to the king; but to some ecclesiastical corporations the power of free choice was given, with the proviso that the secular authority of the district—the duke or count—had the right to reject the nominee of the Church.

When the office of **Advocate** was held by unscrupulous men, it became an instrument of oppression and extortion. Historians record many charges brought against these officials of plundering the property of the Church and misappropriating its revenues. Kurs notes that when he says: 'Many advocates assumed arbitrary powers, and dealt with the property of the Church and its proceeds just as they chose.' (Church History, § 86). Hinschius (op. cit.) says that it was Pope Innocent III. who, in his negotiations with Otto IV. and Frederick II., first secured a promise that the State should protect the Church against the oppression of the **advocati ecclesiae**.

(b) **Advocatus diaboli.**—In the Roman Catholic Church, when it is proposed to honour a deceased saint by Beatification or Canonization, it is the duty of the 'Devil's advocate' to oppose the proposal and to bring forward every possible objection to it. These objections may lie either against the saint's reputation for 'heroic' virtue, the orthodoxy of his writings, or the genuineness of the miracles with which he is credited. Since objections may also have reference to technical errors of procedure, or to flaws in the evidence.

Von Moy, in an article which has the approval of the Roman Catholic authorities, says that perhaps the most certain known to have taken place before the time of Pope John xv. (A.D. 995). At first bishops sanctioned beatifications without consulting the Pope, but in consequence of abuses Pope Alexander iii. decreed (1170) that henceforth papal consent should in all cases be obtained. The **advocatus diaboli** (the word with which it begins), is the basis of the present regulations in regard to Beatification and Canonization. The edict of Pope Urban v. (1644) made it beyond dispute that it is the Pope's exclusive prerogative to beatify as well as to canonize, these acts being forbidden not only to bishops, archbishops, etc., but even to a papal legate. A conclusion is drawn from the Pope's consent, and the college of cardinals assembled when the papal throne is empty (Weinert-Weise, Kirchenlehen, II. b. p. 146 f.).

In the process of Beatification a preliminary inquiry is instituted by the bishop of the diocese concerned. If the result is favourable to the post-investigation, the process is forwarded to the **congregatio ritum** in Rome. At the various meetings of this congregation the **advocatus diaboli** or promoter fidei is required to bring forward all the objections that can be urged against the proposition of beatification, the proposal is then taken after both sides have been fully heard. Between the first and second meetings of the **congregatio ritum** ten years must elapse. The Beatification of a saint cannot take place less than fifty years after his death. Canonization may follow after an interval, if it can be shown that 'since beatification at least two miracles have been wrought by God in answer to the intercessions of the saint.' (Von Moy, op. cit.). In the processes preliminary to Canonization the 'Devil's advocate' discharges the duties of his office in the manner already described.

The official regulations under which the **advocatus diaboli** acts provide for the strict application of the most stringent tests to the claims of the saint, on whom it is proposed to bestow Beatification, and moreover, the final decision, as in all **causa majoris**, rests with the Pope. It is claimed that 'in modern times the court of Rome has shown itself extremely averse to promiscuous canonization; and since the days of Benedict XIV., the promoter of the faith,
AEGEAN RELIGION

popularly known as the devil's advocate, has exercised extreme severity in sifting the claims of aspirants (Foye, Romish Rites, p. 406 f.). This statement, however true of the procedure under some Popes, needs qualification. Alzog, an orthodox writer of correct opinions, testifies that Pope Sixtus IV performed more beatifications and canonizations than any of his predecessors; and Nippold, who quotes this testimony, adds that the Beatifications of this Pope show him to have been 'entirely in the hands of the Jesuits,' and that the biographies of the virgins beatified by him were 'full of unnatural asceticism and unnatural miracles.' The same historian states that the virgin Clara of Montefalco was canonized by Leo XIII. on the ground that 'not only was the body of the saint well preserved since her death in 1908, but that more especially her heart showed traces of the instruments of the passion.' At the public celebration of Dec. 8, 1881 there were exhibited in the gallery connected with the Vatican 'twelve pictures, of which six treated of the miracles performed by Clara' (The Papacy in the Nineteenth Century, Schwab's tr., pp. 128, 147, 198).

[Ad vocatus Dei.—In the Roman Catholic Church this title is given to the procurator whose duty it is to refute the objections raised by the advocatus diaboli against the Beatification or Canonization of a saint. Von Moy (op. cit.) states that 'God's advocate' is always a man of high rank and that he is chosen from the province from which to the order to which the saint belonged. Just before the solemn moment of canonization, the advocatus Dei approaches the papal throne, accompanied by an advocate of the consistory, who, following the steps of the Pope, in the name of 'God's advocate,' an earnest request that it may please His Holiness to canonize the saint.

Liberuma.—For 'Advocate' see bibliography given in art. Holy Spirit. Special value is Westcott's Additional Note on Jo 14:16 in his Com. on this Gospel. For advocatus eclesiast the best sources are mentioned by Hinschius (PIB 1. 186). Amongst them are Böhrer, Observations juris canonici, Oes., 1.; Hopp, De Advocatia Ecclesiastica; Brunner, Deutsche Rechtsgeschichte; Lamprecht, Deutsche Wirtschaftsgeschichte. For advocatus diaboli and advocatus Dei the chief authority is Perrot and Chipiez, Histoire de l'art du Moyen Age, vol. II. (1891). For canonization and beatification see also Du Cange, Glossarium, etc. 'Canonisation'; Millman, Hist. of Christian Art, vol. iv., p. 71.; Albright, Outlines of the Sciences; F. W. Faber, Essay on Beatification, Canonization, etc.

J. G. Tasker.

AEGEAN RELIGION.—By this is meant the religion of the coasts and isles of the Aegaean Sea in the Bronze and earlier Ages. The Aegaean civilization was commonly known till recently as 'Mycenaean.' Now, however, that Mycenae has been shown to have been probably neither the centre of it nor the scene of its earlier developments, the wider and non-committal name 'Aegaean' has come into use, to embrace all the sites and cultures contemporary and posterior to the Mycenaeans' of his earlier critics, the 'Cycladic' of Blinkenberg and others, and the 'Minoan' of Evans. The first revelation of this forgotten civilization occupied the latter quarter of the 19th cent., and it was, as it was inevitable, more wonderful and exciting than science. Scholars were not able at once to comprehend and co-ordinate the mass of novel raw material accumulating on their hands; and it took time to make the necessary comparisons between the Aegaean civilization and other early cultures. Presenting, contemporary and posterior to the Aegaeans, its institutions none remained so long obscure as the religious. Up to almost the end of the century no sacred building had been recognized among Aegaean remains, and no undoubted idol of a divinity. Of the small number of unquestioned cult objects discovered, almost all were still ascribed by many scholars to foreign importation. The few ritual scenes represented on intaglios were, some of them, not observed to be religious at all, while others were ill understood for want of known parallels and of a sound general conception of Aegaean cult. Perrot and Chipiez in their volume on the Art of Primitive Greece, issued in 1895, found hardly anything to say on religious representations; and Evans, when about to show in 1900 how much light could be thrown on this religion by certain classes of small objects, not till then adequately remarked, had to confess that 'among the more important monuments of the Mycenean world' very little was to be found 'having a clear and obvious relation to religious belief.' Since that date, however, the inquiry has been revolutionized by the exploration of Crete; and we now have a mass of monumental evidence upon Aegaean religious belief, cult, and ritual from which knowledge of the broad principles and most of the ritual detail have been obtained. Upon this class of evidence any general account of the religion of a prehistoric civilization must of necessity be based; and only in the second instance should contemporary and posterior cults be introduced into the inquiry. For the present purpose no account will be taken of possible racial changes during the Aegaean period, since the civilization evidently remained of one type throughout, and the popular religion shows development only, not essential change.

I. GENERAL NATURE OF AEGEAN RELIGION.—We have ample evidence that Aegaean religion and ritual had originally both a natural aniconic phase and an artifical phase, and an artificial phase presents to us the most interesting features of the Aegaean religion, for we may regard the religious objects discovered in stones of singular natural appearance, or fashioned by himself into pillars; in trees or bushes of his own planting, weapons, animal forms, and all kinds of object known to us as fetishes. The transition from this to a more humanized, more personal, more intimate with the Spirit, and conceiving it more and more in his own image, he passes to the iconic state, and in that will remain till the advanced point of mental development at which he ceases to demand a visible home for his god.

These states, however, are not to be regarded as always successive. With primitive man they are often contemporaneous, the usages and ritual proper to one coexisting with those proper to another, and man, the Aegaean man, the non-Mycenaean, is by all the authors' of his earlier critics, the 'Cycladic' of Blinkenberg and others, and the 'Minoan' of Evans. But this is a subject too large for this place; and it would be a subject on which so much has been written already, and so much more written in recent years by so many able scholars, that it is not necessary to enlarge on it here. For our purpose a few general facts and a few general conclusions must suffice.
inform us not only how the deity was conceived and how worshipped from the beginning of theanthropism, but how worshipped previously, before being ended with human attributes on the monuments, or perhaps with any very precise attributes whatever in the minds of worshippers. Moreover, more than most religions, the Ἐγεαν remained to the end full of aniconic cult-practices.

Ἐγεαν religion, then, was from the first a Nature cult, in which the heavenly bodies and imposing terrestrial features were objects of worship, while at the same time a Divine Spirit was understood to have its dwelling therein. From this state there survived in the Ἐγεαν religious art of a later stage such cult objects as the solar disc, the lunar crescent, the star symbol passing into various forms of cross, the rocky mountain, and the grove; while from the other state, the artificial aniconic, persisted the single tree or group of trees, generally three in number, the pillar, single, triple, or many, sacred animals, weapons, conspicuously the bipennis, or double war-axe (chosen as a fetish very probably from its obvious likeness to the star dwelling), the large body shield, and other objects, notably a pair of horns, perhaps a trophy, symbolic of a sacrificial bull. All these accidents of the primitive religion will be dealt with more fully below in the section on the Cult of the Goddess; but in order to discern its essential idea, dependent as we are for all first-hand information on artistic monuments, we must pass at once to the iconic stage and inquire how Ἐγεαν man, so soon as he had clearly conceived the Divine Spirit, represented it in terms of his own nature.

ii. The Deity.—It has been said that, previous to the exploration of Crete, no idol or icon of a deity had been certainly recognized among Ἐγεαν remains. It must be borne in mind that in dealing with novel monuments of a prehistoric civilization, it is not legitimate to presume that a representation of the human figure is intended to be Divine until and unless it be found with clear concomitant indications of the supernatural—unless, for example, it be represented as emitting light, or accompanied by wild beasts, such as lions or large serpents, fatal to ordinary humanity, or, again, of superhuman relative stature, or, lastly, receiving adoration. In the cult-scenes found first, e.g., those on the base of a gold ring found in the Acropolis treasure at Mycenae (fig. 1), on impressed glass plaques, on a painted stele from the same site, and on other monuments, a manifest deity was not generally recognized, although there were undoubted religious votaries, even monstrous demonic

* The 'Smatia' (crus gammata), the cross paté, and the plain Greek cross.

** The latter, often observed on gems, were not credited with much significance owing to the double, not only of the indigenous nature of the objects on which they appeared, but also of their being used by human votaries engaged in a theonomorphic ritual. See A. B. Cook in JHS xiv. p. 21.

lions, and sometimes armed (fig. 3).* On a gold signet of Knossos such a figure with hair flying loose behind is seen in the upper field, and is supposed by Evans to be the deity descending on his shrine.† But no actual idol of a god has come to light, unless the male of short stature offering a dove to the goddess in the little chapel at Knossos ‡ is to be interpreted as a Divine figure. This list is not exhaustive. The goddess is probably to be recognized in many other intaglio scenes, e.g. those wherein a female holds up goats by the legs,§ as elsewhere she holds lions; and perhaps in certain other feminine idols. But it includes all undoubted representations of a deity so far found, and is more than enough to prove how the Aegean peoples, when they arrived at the iconic stage of religion, conceived divinity. They personified the Supreme Principle as a woman, to whom was subordinated a lesser divinity, in honour and probably later in time. There are no evidence for more deities than these. The religion was what may be called a Dual Monotheism.

iii. Cult.—There is evidence for several classes of cult-objects, considered to be dwelling-places of the Divine Spirit, and surviving through the theoanthropic age as fetishes; for inanimate accessories of various kinds, of which the origin and later significance are often obscure; and for animate accessories of cult, perhaps also at first dwelling-places of the Spirit, but tending more and more to be regarded as symbolic. These all played a part in a customary ritual, of whose practices, strikingly uniform over the Aegean area, we have many illustrations.

1. Dwelling-places of the Spirit (fetishes).—(a) Betyls (sacred stones or pillars, Gr. βατυλαὶ or βατυλίων = esp. the stone swallowed by Kronos, which was really Zeus in his betylic form, but also others, e.g. the black Cone of the Sun at Baalbek = Sem. Bethel). The character and use of Aegean sacred stones have been very fully treated by Evans in TPC, and subsequent Cretan discoveries have added little but confirmation. There can be small doubt that, as cult-objects, they represented in a convenient fetish form the original Divine mountain, still seen in intaglio cult-scenes of a later period. They themselves became in time the origin both of altars and of iconic statues, passing through gradations of rude shaping. A remarkable example of this transition has come to light latterly at Knossos in the large building to the west of the palace, where lay several natural stone freaks, roughly resembling human forms, and evidently carefully preserved in a shrine. Whether pillars or wooden posts, descended from sacred trees, eventually acquired a symbolic significance as phalli, is less certain. An upright object impaling a triangle occurs in any case in gem-scenes, and is strongly suggestive of a phallus in connexion with a vulea. Further, there is reason to think that betyls originated upright tombstones, which from being Divine or ghostly dwelling-places became merely commemorative in a late age.

Betyls passed in Aegean cult through various modifications, retaining their significance as dwelling-places of the Spirit. At first unshaped single rocks or cairns, we find them developed in the majority of earlier Aegean cult-scenes into pillars, monolithic or built up. The Divine pillar stands alone, sometimes, as over the Mycena Gate, between sacred animals, a position wherein it precedes the iconic figures of a later period; often also in front of a shrine, while a votary adores before it; and it is very often associated with trees. Almost equally often it does not appear singly, but in groups of three, and less commonly of more.* Occasionally the dove is seen either descending towards it or perched upon it; more rarely rays issue from it. Thereafter the pillar, from standing free, becomes a support,—a 'pillar of the house,'—but is still betyltic, and its double function is sometimes shown by the free pillar bearing a fragment of superstructure. It is seen rising from behind 'horns of consecration' in fresco pictures of the façades of shrines, and in one case bearing sacred axe-heads affixed to its caps; and it props up 'tables of offerings,' with accessory supports round it.‡ It is possible that such sacred 'pillars of the house' have actually been found in certain chambers at Knossos and elsewhere, which seem too small to have needed a central prop for structural reasons, and the probability is heightened by the fact that the blocks of which two such pillars in the Knossian palace are made, are marked with the sacred sign of the double axe.§ There is reason to think that the original Aegean sanctity of pillar supports has something to do with the later Greek fashion of using a redundancy of columns in sacred architecture.

(b) Triliths (dolmens).—These are much less frequently represented than betyls, but sufficiently often to leave no doubt that the tripod of stones forming a free standing portal had a sacred character in Aegean as in so many other lands.¶ They are seen framing a betyl or standing before a sacred tree. On a remarkable gem impression from Zakro || in East Crete, such a trilith is well shown with lions couchant on either hand.

(c) Trees (Sem. ashara).—These, being perishable, are now to be looked for only in cult representations, and especially on intaglio impressions. There they are as frequent as betyls, and they

\[3\] See TPC § 26.
occur singly or in triads (very common) or in groves. They are often seen growing out of the shrine itself, or in close proximity to an altar. The goddess sometimes sits under the shade (fig. 1); at other times she plucks the fruit. Many botanical varieties can be distinguished, the palm, the fig, the cypress, the pine, the plane, the vine; but the first three are most frequent. As has been said already, the tree occurs very often in the same scene with the pillar, a coincidence frequently observed in the case of megalithic monuments elsewhere.

The great body-shield, curved inwards at the waist, which is so often used as a decorative motive in Aegean relief work, occurs in cult-representations as an independent object, lying before a shrine, or suspended in mid-air. Compare two gem-impressions from Zakro, which show shields lying, in the one case, before a group of five pillars (probably not towers, as stated in the text); in the other, before the façade of a shrine. The most decisive monument is a small painted stela found at Mycenae, whereon is depicted a green shield between two adoring votaries. Miniature shields in clay and ivory, found at Knossos, were evidently cult-objects or amulets.

Figures of both the goddess and the god bear spears, but we have no evidence yet for the use of either that weapon or the sword as a cult-object.

With the bipennis or double-axe the case is very different. The evidence for its cult-use is overwhelming. It is seen in the field of a gem-impres- sion with a votary adoring it; it forms the central object of a cult-scene painted on a clay coffin found at Palaikastro; and is being adored in both the chief scenes on the great Hagia Triadha sarcophagus, where it is seen in conjunction with sacred palm-trees and doves, and stands upright on a stepped pyramidal base, similar to the basis with socket for a staff, found in the palace at Knossos. In the small chapel on the latter site, it evidently stood between the sacred 'horns of consecration,' a position in which it is often shown on intaglios (cf. fig. 4). Sometimes it appears in a reduplicated form, as in a steatite example from the small shrine at Knossos; on the gold signet from Mycenæ (fig. 1); and on the ephialtis from East Crete, mentioned already: and, a propos, Evans recalls the fact that, since it appears in the hand of the goddess on a Knossian gem, and in company with her idols in the small shrine, it was at least as much her weapon as the god's. The double axe is, he thinks, the fetish of a bi-sexual god. Miniature axes in bronze have often been found on Cretan sites, e.g. in the lower part of the holy cave on Mt. Dicte, and were evidently very common fetishes or cult-offerings. The sign of the axe is found more often than any other on Knossian blocks, whether of consecration or as mason's mark. It is not impossible that its name labrys is to be detected in that of the Cretan labrynth.  

2. Other inanimate accessories of cult.—Certain objects of a more ornamental cut-scene, or have actually been found in connection with shrines, about which it is less safe to say that they were dwelling-places of the Spirit. Even if originally so, and long in use as fetishes, they seem in the iconic stage to have become rather articles of ritualistic furniture.

(a) 'Horns of consecration.'—These long mis- understood objects, of commonest occurrence in gem and fresco cult-scenes, and found modelled in stucco, clay, terra-cotta, and stone, were almost certainly fetishes at the first. They consist simply of a base with two erect horns, which, in the more elaborate examples represented, bend outwards at the tips, like the horns of oxen (fig. 4). They are seen either on the top of a shrine or altar, or beside sacred pillars or trees, which in some cases seem to rise out of them (cf. figs. 5, 6). Also they support in the same way the sacred bipennis, actual examples having been found in the small shrine at Knossos with sockets for axe-shafts.

Upon a vase from Enkomi (Old Salamis) in Cyprus the picture shows not only one bipennis so rising from these horns, but two other axes fixed between the horns of actual bucra, depicted in full (fig. 5). This seems to confirm the inference, which in any case suggests itself, that the conventional sacred horns are a convenient reduction of an original bucranium, itself a reduction of the entire bull, known from abundant evidence to have been a sacred animal, and probably a Divine dwelling. The horns-object serves to stamp any scene as religious, and its very frequent appearance is of great importance as a clue to the sacred character of other objects.

(b) The knotted tie or zone.—A representation of a knotted scarf or tassel seems also to have gained sacred significance. Found modelled in alabaster by Schliemann in the Mycenaean Acropolis graves, and supposed to be merely a fragment of wall decoration, it turned up again in the small shrine at Knossos as an independent object. It is possible that this 'tie' is a votive model of a zone, dedicated with a sexual significance, as in later Hellas. On a ring found at Mycenae these knots are seen suspended from the capital of a lion-guarded pillar; and on a gem from the Argive Heraeum they perhaps appear on either side of a bucranium.

(c) The cross.—A cross in marble was found in a Knossian shrine; and the cross sign is common on gems and seal impressions.

ÆGEAN RELIGION
3. Animate accessories of cult.—What are known in late stages of religion as animals sacred to such and such a divinity, in art appearing as mere attributes, and in real life devoted to the Divine pleasure, whether by being preserved as 'tabu' in the sacred precincts, or by being sacrificed that they may pass to the world invisible, have probably all a common origin as Divine dwelling-places or fetishes. In Ægean cult there were many such sacred animals:

(a) Serpents, seen twined about the person of the goddess (fig. 2), or held in the hands of her votaries. These were probably her original dwelling-place as an earth (chthonian) spirit.

(b) Doves, settled on her person or offered by votaries; also settled on, or seen approaching, bastylis, shrines (fig. 6), trees, and axes. They represent probably her original dwelling-place as a spirit of the sky.

(c) Lions and lionesses, which, in the iconic stage, are represented as the companions, guardians, or supporters of the deity.

(d) Bulls, cows, and calves.—The bull is most frequent. He is seen crowned with the sacred axe (fig. 5). In a magnificent relief, he guarded the main portal of the Knossian palace, and both there and at Tiryns appears again and again in fresco or on intaglios charging and tossing maidens and youths. Evans interprets these as circus scenes (the later ραυκοκαθαρσία); but it is possible that what was represented was not so much a comparatively harmless sport as a scene of the devotion of maidens and youths to the Divine beast. It is inevitable in this connexion to recall the tradition of the Knossian Minotaur, the semi-Divine and monstrous bull to which an annual tribute of maidens was devoted. Monstrous figures of minotaur type actually appear on Ægean intaglios,* proving that the legend is of prehistoric Ægean origin.

The cow and calf, very frequent on intaglios, seem to have typified the goddess's maternity.

(e) Goats, nannies, and kids.—The goat is very frequently held by the leg in the hand of the goddess, or accompanies her. A clay goat was found in the west shrine at Knossos. The nanny and kids seem to have the same significance as the cow and calf.

(f) Deer and eagles are frequent intaglio subjects; but beyond the fact that all Ægean engraved gems were probably in some degree amulets, we cannot adduce evidence of the sacred character of these animals.

(g) Fishes appear in fresco paintings at Knossos and Phylakopi in Melos, in two cases at least in possible connexion with shrines, recalling their well-known connexion with the Semitic goddess.

(h) Monstrous animals.—Not only the Minotaur, but the Griffin, the Sphinx (two sphinxes draw a chariot on the Hagia Triada sarcophagus), and various composite monsters appear in intaglios and on frescoes. Lion-headed demons are seen performing ritual acts, as, e.g., pouring libations. Human figures with heads of asses, lions, goats, birds, and bulls occur, e.g., on a carved shell found at Phestos.* A procession of ass-headed figures bearing a pole on their shoulders, in a Mycenaean fresco painting, has been interpreted as a scene of votaries wearing skins and engaged in theriomorphic rites; but this is an unsupported guess. An extraordinary variety of wildly monstrous combinations was found on intaglio impressions at Zakro; but it is possible that these were the product of heraldic fancy, and owed their variety to the necessity of differentiating signet types.

4. Temples and ritual.—There is no good Ægean evidence as yet for the existence of such large free-standing structures, having no relation to domestic buildings and devoted to Divine worship, as were the temples of the Hellenic period, although intaglio scenes show small shrines, either isodomic or of the dolmen type, standing apparently within enclosures or temenos, and containing beryl, sacred trees, and horns of consecration.* Such constructed shrines as have actually been found are small plain chambers enclosed in palace blocks, as at Knossos, and, possibly, at Palaikastro and Phylakopi in Melos. These, if they do not contain a sacred pillar, show only a ledge or platform at one end, upon which fetishes, idols, and other sacred objects stood. Such domestic 'shrines,' even if beautifully decorated with frescoes like the Melian chamber, can be regarded as little more than mere repositories for saeca. As for the representation of shrines, characterized by betylis and horns, seen through paintings in the facade, and in almost all cases tripartite, it is very doubtful if they are intended to show distinct temples.

FIG. 5.—PAINTED PILLAR FROM PHYLAKOPIS, MELOS.

FIG. 6.—GOLD SHRINE FROM MYCENAE.
and not rather parts, or the whole, of a palace or other domestic structure. We have such representations in the Knossian frescoes, on intaglios, and in beaten metal (the gold miniature dove shrine of Mycenae, fig. 6). It seems clear that certain parts of the Knossian Palace had a peculiarly sacred character;* and if it be admitted that the whole Palace was the sanctuary of the house of the 'Labrys,' and that Minoan rulers were priest-kings (which is very probable), the whole palace is perhaps to be regarded as a temple, and we may assume that palaces and temples had not yet been differentiated. Cave-sanctuaries there certainly were, wherein Nature often provided batraps ready made in the form of stalactites and stalagmites, as in the lower grotto of the Dictaean Cavern. Crete has supplied the most notable instances of caves so far; but parallels to the Idanian and Dictaean grottoes, and those near Sybrita and Kamaraes (southern face of Ida) and the mouth of the Knossos river, will probably be found ere long on the Greek mainland and in other islands. Such discoveries as the Temenos near Haghia Triadha and the deposits of votive objects found by Myres at Petsa in the hills near Palaikastro, seem, however, to show that there were sacred places, distinct from domestic buildings, where cult was practised and votive objects were dedicated; but whether these were marked by constructed shrines or were mere enclosures (temenos), or, again, open spots, possibly sanctified by a sacred tree or natural batry, we do not yet know. The evidence now available is rather in favour of the last alternative. Free-standing altars, probably evolved from the batry, and retaining, perhaps, its self-contained sanctity and its significance, were, however, in ritual use. One, hewn out of rock, stands before the Idanian Cave; the foundations of three were found within the Knossian Palace on three sides of a quarter apparently indicated by its contents as peculiarly sacred; and they are often shown on intaglios and reliefs,† sometimes crowned with 'horns of consecration,' like the actual models found in the Temenos of Haghia Triadha (see above). Altars appear in pictures and rectangular structures of moderate height (fig. 7). The cupped 'table of offerings,' found, as has been already said, in some cases superimposed on a batry, is a convenient reduction of the altar.‡

We have not good evidence yet for a class of priest or priestesses; but it is quite possible that certain figures shown in such cult-scenes as those on the Haghia Triadha sarcophagi are intended to be sacerdotal.

As to ritual, various acts are represented. Votaries pour libations, raise hands in postures of adoration, call down the Divinity to his fatal dwelling by blowing through a triton shell, dance round the goddess (the 'Chorus of Ariadne'), brandish swords (as does the faience votary of the snake-goddess of Knossos), play on stringed and wind instruments (Haghia Triadha sarcophagi), offer flowers and perhaps fruit (fig. 1), doves, etc., and slay animals in sacrifice (an ox on the Haghia Triadha sarcophagus, and perhaps goats, as in many intaglio scenes). There is no good evidence for burnt sacrifice; and the question of human victims cannot be determined at present. It depends on the interpretation of the *taurobolia scenes and of the Minotaur legend.

Dedication both of real articles of personal property and of simulacra was extensively practised. The Dictaean Cavern yielded hundreds of spears, heads, arrow-points, knives, sword-blades, razors, tweezers, hairpins, rings, and other bronze objects, taken off the persons of worshippers and offered to the Deity. It also yielded simulacra of weapons, e.g. especially the double-axe, a miniature chariot, miniature oxen, sheep, and goats, and figures of men and women. The latter figures belong to a large and widespread class of *Aegean remains, found in silver, bronze, lead, terra-cotta, ivory, and faience, and of every grade of art. They are conventional representations of worshippers, dedicated to the Deity and placed in the Divine precinct to ensure Divine protection and a share in the Divine life for the dedicator. Even when placed in tombs, as at Kampos in Laconia, such statuettes were probably not *ushabbi (servants to answer the dead man's call in another world), but simulacra of surviving relatives who wished to be under the protection of the deceased and the Deity to whom he had gone. Less common objects of *ex voto dedication are models of garments, e.g. skirts and girdles (found in the faience deposit at Knossos), and of human limbs, birds, and vermin (found in

The religious character and use of a great body of Aegean cult-objects having now been established, without reference to alien evidence, we may safely inquire whether a comparison of neighbouring and succeeding cults will explain the significance of the religion to which they pertained—a religion, be it remembered, which has no literary history of its own, and no literary records that can yet be deciphered. In this place the comparisons must be very briefly made. First, in regard to the Aegean Divine Spirit itself, personified in the iconic stage as a young woman, a particular religion finds itself on very familiar ground. A goddess with a young subordinate god is known in early times on every coast of the Mediterranean which looked towards Crete. In Punic Africa, the goddess whose birth, death, and resurrection are personified with Horus; in Phoenicia, Astarth with Tammuz (Adonis); in Asia Minor, Cybele with Attis; in Greece (and especially in Greek Crete itself), Rhea with the young Zeus. Everywhere she is *apótheos*, prepared for her son's embrace by immaculate conception, and then of the gods and all life by the embrace of her own son. In memory of these original facts, her cult (especially the more esoteric mysteries of it) is marked by various practices and observances symbolic of the negation of true marriage and obliteration of sex. A part of her male votaries are castrated; and her female votaries must ignore their married state when in her personal service, and often persecute their own husbands. As there is no ordinary human birth, so there is no ordinary human death. The Divine son Tammuz, Attis, Melicertes, or Zeus himself in Crete (where his tomb was shown), dies, but comes again to life, as does the sun to summer and winter. The goddess is therefore the Spirit of Nature, constantly renewing herself in her own offspring. Of this universal Deity of all the Near East the Aegean goddess with her son was, beyond all question, a manifestation. If we are to give a name to her, it must be *Rhea*; and if to her son and companion, it must be Zeus, remembering that, by Hellenic tradition, the coming into being of Zeus was laid peculiarly in Crete. In the primitive story he embraces his own mother— *Krista* was ascribed from dim antiquity with Rhea; and a curious piece of direct evidence connecting the Aegean goddess with the cult of Rhea has lately been adduced. A clay vessel of very peculiar form, the *kernos*, is stated by an ancient commentator to have been for the use of worshippers of Rhea. The only vessels answering his description have come to light on *Aegean* sites, and one in particular was found at Palaikastro, in Crete, among the hoard of sacred objects accompanying a snake goddess described above.

The community between *Aegean* and other Near Eastern religions being so close, it is not surprising that almost every recognizable cult-feature in the former can be paralleled in the latter. The indwelling of the Deity in stones, whether natural *batelis*, cairns, pillars, or shrines, and in trees, is a most familiar Semitic belief, and one which left numerous traces on Hellenic worship. A cult of weapons appears to have existed in early Asia Minor among the Hittites of Pteras and the Carians of Labranda, not to go so far afield as the Alani on the Eastern Euxine, who in a late age adored a standing blade.* The "horns of consecration" are seen in Semitic sacred representations, and appear in Hebrew ritual as "horns of the altar." The "sacred animals" are all widely related. The serpent as an embodiment of chthonian Divinity is not only Greek but Egyptian (snake-form of Nekhebet); the dove as the vehicle of the Divine spirit from on high has survived from Semitic literal belief into the symbolism of Christianity. The great *felide* were guardians and supporters of Anatolian Cybele. The bull, as a dwelling of Divinity in Egypt, has its counterpart in the god Zeus of Crete. Astartes, mother of Apollo and Hith, is known to all. The infant Zeus is wrapped in the goat-skin, and the goat continued to a late time peculiarly sacred in the cult of western Asia Minor. The monsters of *Aegean* cult-scenes have so many affinities with the Egyptian (those on the Phaestan shell actually carry the Nilotic life-sig, the *ankh*) that they have all been referred to an Egyptian original, the maternity personification, Thuenis, the hippo, rear ed on her hindquarters. The nude of her iconography is too extensive and obvious to need detailed mention.

It is not to be understood, however, that such parallelism implies the derivative character of *Aegean* religion, least of all derivation from any single civilization, such as the Semitic or the Egyptian. If there be parentage between Semitic and *Aegean* civilization, it is the former that is the offspring, given the comparative youth of its art and its system of writing; while, as for Egyptian influence, it is a good reason to think that it came to exercise a considerable influence on *Aegean* iconic representation, and even a little on the ideas which that in turn produced, no one, comparing the complexity of early Egyptian cult with the simplicity and winter. The goddess of the one is exoterically, is the embodiment of all life. It is needless, indeed, to look for the derivation of the essential features of *Aegean* cult at any later epoch than that of the primeval expansion of mankind. Its fundamental religious ideas were those of a vast proportion of the common human stock, and they continue to be so to the present day. The *Aegean* race sought Divinity in the life principle of Nature, spontaneously originated and reproducing itself to eternity. It placed that Divinity in great features of Nature, was naturally led to a reason to think that it came to define its idea in terms of man, being yet in that social stage in which man in relation to reproduction held his naturally subordinate place, it represented the principle of life as an unweeded woman, its property of reproduction as a son unbegotten, and its relation to the humanity resultant from this woman and man as an unseen Spirit, descending on wings and indwelling in certain material objects, the choice of which was to some degree determined by their inherent suggestion either of great natural features or human organs of life. From these fundamental
ideas all the features of 

Greek cult representation and ritual practice known to us can very well have proceeded naturally and independently.

D. G. HOAGTH.

AEGIS.-In Greek mythology, the aegis is an attribute of magic power, which seems to belong originally to Zeus, the supreme god, who is therefore often depicted as wearing it. It appears as both the protector and revealer of his attributes, and on his enemies and for this purpose, according to Homer, it is borrowed both by Athene and by Apollo. Its form is not easy to realize in the earlier descriptions, of which we find the fullest in the hymn to Athene in the Iliad (xv. 321).

"About her shoulders cast the tasselled aegis terrible, whereon is a crown all about, and strife is therein, and valour and horrible onslaught within, and therein is the dreadful monster's Gorgon head, dreadful and grim, portent of aegis-bearing Zeus."

Here it appears to be some sort of defensive mantle, like what is worn by Athene in later art; it is provided with 'a hundred tassels of pure gold' (Ht. ii. 448), and is also described as 

δακτυλία 

, fringed all round or hairy on both sides; there is a shield or mantle, which was made by the smith-god Hephaestus (xv. 309); when it is shaken, it scatters terror on all around. It is used by Apollo (xxiv. 20) to wrap round the dead body of Hector, and so protect it from injury.

The views both of the Greeks themselves and of modern philologists as to the origin and meaning of the aegis have been greatly influenced by opinions as to the etymology of the word. The Greeks often associated it with 

αἰγας, 'a goat-skin'; and Herodotus (iv. 188) suggests that the aegis of Athene was derived from the tasseled goat-skins worn by the Libyan women near Lake Tritonos. It was interpreted by later Greek mythologists as either the skin of the goat Amalthea, which had suckled Zeus in his infancy, or that of a monster slain by Athene. Modern mythologists have usually referred the connexion with 

αἰγας, 'to rush,' 

αἰγιν, or 

καραγιν, 'a squall'; but their interpretation of it as symbolical of the thundercloud, though found in many modern books, is not supported by any satisfactory evidence of early date; though Zeus himself is sometimes described as a 

αἰγας, 'to rush,' 

or 

καραγιν, 'a squall'; and their interpretation of it as symbolical of the thundercloud, though found in many modern books, is not supported by any satisfactory evidence of early date; though Zeus himself is sometimes described as a thundercloud, the two actions are not necessarily related as cause and effect; for a clear example of the aegis as causing a thunderstorm no earlier authority can be quoted than Silius Italicus (xii. 720); Virgil (Aen. viii. 95) describes the process of Zeus, and I find no authority for the connexion in the Herodotus. It was at this point in the history of the aegis that it received its final form; it was made of a short breast-plate with similar adjuncts, and this is the usual form in later art; sometimes it is abridged to a mere band across the breast of the goddess.

ERNEST A. GARDNER.

ÆONS (Gr. ἡμέρας = 'ages,' 'periods,' 'dispensations,' probably related to ἄεις = 'always,' 'for ever').—This term was employed by the opponents of Gnosticism, and by some of the Gnostics them- selves, to designate the successive emanations from the Absolute Being. The problem of accounting for the existence of the actual world-order, when it is regarded as unreal and illusory, without ascribing it directly to the Absolute One, is common to all Oriental theosophical systems; and the philosophers of most of them attempted its solution by an evolutionary (devolutionary) series of aeons or emanations. Close parallels to the Gnostic æons may be found in Japanese Shintoism, Mahayanaistic Buddhism, Zoroastrism, the Platonic Ideas, Philo's Powers, the Stoic Logoi, etc. The Shinto system (as set forth in the Kojiki) seems to rest upon pure pantheism; in the Zoroastrian process, the infinite becomes differentiated into the male and female principles Izanagi and Izanami, personified and conceived of as grossly lustful. These procreative æons are thought to be derived from certain abstract deities that are normally infinite. These produce, first, three other deities (æons), representing the great powers of nature; and these still others, some working for the good and some for the evil of man. In the Buddhism of the Northern School the Adibuddha (q.v.) produces the five 'Buddhas of Contemplation;' Vairochana, Akṣobhya, Ratnasambhava, Amitābha, and Amoghasiddhi; from whom, in their turn, emanate five 'Future Buddhas of Contemplation,' who...
by Epiphanius (Herm. xxxviii. 1) in his description of the Cainites. Traces of this original doctrine continue to reappear in the more highly developed Gnostic systems. Valentinus himself (Frag. 5) speaks of the 'living Αἰών' as of a unity, although he discovers a principle of distinction within this primordial unity. It belongs, indeed, to the essence of Gnostic speculation that the Αἰῶνες remain ideally one, while they manifest themselves as a plurality.

In later Gnosticism the Αἰῶνες are represented as a system or confederacy of Divine existences, with a human being. Nevertheless (syzygies) from the supreme Father. Each pair originates another, and each descends in dignity as it stands more remote from the sources of being. The doctrine of syzygies has its analogies in Mithraism as in the other Eastern religious systems mentioned above; but it was no doubt borrowed by the Gnostics from that Babylonian tradition to which they were indebted for so many details in their cosmology. In Gnosticism, however, the Babylonian idea of a physical generation is softened and rationalized. The successive pairs are not gotten, but are projected or emanated. They are the self-unfolding of the Divine nature; and in their totality they form its perfect manifestation. Homer speaks of a purely phlegmatic—the 'fulness' in which the Godhead exhausts its hidden potentialities. The Pleroma, composed of the several Αἰῶνες, is the world of Light or higher reality; and is divided by a great gulf from the 'darkness' or another being.

The different Gnostic systems are widely at variance in their accounts of the number and arrangement of the Αἰῶνες. Basiliades (if we accept Irenaeus and Hippolytus I. as our authorities for his teaching) wove a web of only six (Πατρὶς, Νοῦς, Αἴγων, Φόρμωσις, Δώσιμα, Σοφία). The Pistis Sophia assumes thirteen, and conceives of the Αἰῶνες as the spheres inhabited by the Divine powers, rather than as the powers themselves. Valentinus enumerates thirty Αἰῶνες, which are grouped in three divisions—the Οἴκοδομος, the Decad, the Dodecad. Ideas of a geometrical nature are probably involved in this grouping; while the number 30 is apparently suggested by the thirty zodiacal signs. Among the Gnostics, the various systems which branch off from the main stem of Valentinism, the Pleroma of 30 Αἰῶνες is normative, but this number is subject to continual modifications.

A brief account of the system of Valentinus will suffice to illustrate the general character of the Gnostic Αἰωνολογία. He starts with Βυθός (depth) the Absolute One, and Σύγκρασις (silence) as his female companion. These generate Νοῦς (mind), and Ἀληθεία (truth). These in turn project Λόγος (word) and Ζωή (life), and these Ανθρώπος (man) and Εκκλησία (church). Νοῦς and Ἀληθεία afterwards produce ten ἡμιῶν (a perfect number) as an offering to the Father. Λόγος and Ζωή follow in the production of the Αἰῶνες, but produce twelve (not a perfect number) of Faith, Hope, Love, and Lower Wisdom (Ἀχαμάθ). This last, being unduly ambitious, and aspiring to produce sons without conjunction with a male σεξ, brought forth a 'formless and undigested substance' (the Demiurgos), which evolved in the present order of things, with its mixture of good and evil, and with reason, in whom spirit is enslaved by matter. This disturbance of the Pleroma alarmed the other Αἰῶνες and deeply disturbed Achamoth. In response to the tears of Achamoth and the supplications of the other Αἰῶνες, the Father permitted Νοῦς and Αληθεία to project Christ and the Holy Spirit for the restoration of form, the destruction of the Demiurgos, and the comfort of Achamoth. They have for their task the separation of the life and light that have become imprisoned in humanity, from death, evil matter, through a long series of magical rites (mysteries), and through the promotion of ascetical living.

In Gnosticism generally, as in the teaching of Valentinus, the creation of the lower world is explained by the hypothesis of a disturbance within the Pleroma. The error, or the undue ambition, of one of the Αἰῶνες results in the origin of an inferior power, who in his turn originates others, until a whole world of darkness and illusion comes into being. Nevertheless, since the process has its beginning within the Pleroma itself, some portion of the higher essence becomes intermingled with the baser elements, from which it yearns to be delivered. The Redemption, according to the Gnostic thinkers, consists in the sifting out of this higher essence and its restoration to the Pleroma. In order that this may be accomplished, an Αἰών of supreme dignity descends into the phenomenal world and becomes identified, really or in seeming, with the One.

The Αἰώνic theory, as we have seen, was in the first instance derived from the Zoroastrian idea of Infinite Time as the ultimate fact in nature. Thus it was allied from the beginning with speculations on the ultimate character, and from these it never succeeded in entirely freeing itself. The greater Gnostics, and Valentinus more especially, sought to resolve the Αἰῶνes into spiritual facts or processes. They were construed as modes of the Divine Being, activities within which the One unfolds and manifests His inward life. It proved impossible, however, to effect a complete transformation of a theory which was, in its essence, physical. Valentinus himself wavers in his conception of the Αἰῶνες—regarding them now as ideas, now as heavenly Persons, now as creative forces. His philosophical construction loses itself at every turn in primitive astrology and cosmical speculation. To this may be attributed the eventual failure of Gnosticism, alike as a philosophy and as a religion. While it professed to open a way out of the bondage of the natural world, it was itself grounded in ideas derived from nature-worship. See, further, Gnosticism.

ALBERT H. NEWMAN AND ERNEST F. SCOTT.

ÆSCHYLUS.—Æschylus, son of Euphorion, an ephor of Eleusis, was born B.C. 525, commenced as a dramatist c. 490, gained his first victory in 484 and his last (with the Oresteia) in 458, and died at Gela in 456. He fought at the battles of Marathon, Artemisium, Salamis, and Plateae. From about 476, when he composed for Hiero of Sicyon the Women of Atreus, at the foundation of that town, he was frequently in Athens. There is no satisfactory explanation of the statement of Heracleides Ponticus that he was tried on a charge of revealing the Mysteries in a play, and acquitted on the ground of ignorance (cf. Arist. Eth. Nic. iii. 2); the further details are probably unhistorical. Partizanship in politics can hardly be imputed to him on the strength of the supposed reference to Aristides in the description of Amphiarous (Sept. 552-594), * still less on the theory that Prometheus, son of Themis, is the model for his character; and his eulogy of the Areopagus, however, in the Euemices (esp. 681-708) testifies to conservative sentiments. In the same play (754-777), as well

* All references are to the text of Sidgwick (Socrep. Class. Bibl. Oss.)

(Scott), whose numbering hardly differs from that of Dindorf, Wecklein, and most modern editors. Hermann, Paly, and a few others use their own special notation.
ÆSCHYLUS as in the Supplices, he approves of the democratic friendship between Athens and Argos. He expresses the strongest detestation of tyranny in all forms (Pers., Prom., Ag. 953-955, Eum. 185-190); but has no objection to constitutional monarchy (Supp. 398, 517, 600), or to moderate democracy (Pers. 242, Supp. 483-489). His general ideal is a balance of the different agencies, and the consti-tutional mon-archy of Olympia, because the personages are derived mainly from the Epic cycle; but he drew upon other sagas as well, and upon contemporary history; and he dealt very freely with the plots. He was evidently acquainted with Hesiod and other cosmological writers. In a few cases he cites the gnostic moralists (Prom. 890); more often (Sept. 439, Ag. 1331, Cho. 60, Eum. 529) he expresses similar sentiments about wealth, fortune, pride, moderation, etc. It is, however, so much in common with his other works that it is difficult to judge his genuine attitude towards the popular mythology was almost certainly influenced by the poems of Solon and Theognis. The common statements that he was indebted to Orphic or to Pythagorean doctrines cannot be safely supported from the extant plays or fragments.

Of the 80 or 90 plays attributed to Æschylus, many of which can be grouped in trilogies or tetralogies, the majority are cited only by the lexicographers; little is known of their plots or the views contained in them, except in the case of the Prometheus Sulpit. The Danaids, Myrmidons, and Niobe seem to have dealt with various aspects of the passion of love. Certain gnostic fragments (Nos. 70, 156, 158, 161, 167, 255, 299, 301, 355, 365, 401, 475, Sidgwick), which are of striking aphorisms about the nature of the gods, good and evil, life and death, do not necessarily express the mind of the poet himself. His own moral and religious doc- trines must be sought in (1) the general tendencies, (2) the corresponding didactic speeches, and (3) the extant plays and fragments of the characters, in the seven extant plays. The selection of these, made apparently not later than the 5th cent. A.D., if not entirely accidental, may be due partly to celebrity and partly to the exigencies of dramatic form and popular taste, there emerges a body of gradually developed views attributable to Æschylus himself. His philo- sophy, in which the ethical cannot be sharply demarcated from the theological, may be discussed in the order of its development, as it deals with (1) the Divine nature, (2) the Divine agencies, (3) the moral nature and action of man, (4) the special questions of responsibility and heredity, the family curse, and the blood-feud, which is the problem dramatized in the Prometheus requires separate consideration.

1. In the earlier plays the Olympian gods are invoked jointly as a πάρθενος (Sept. 220), or a κοινόθεος (Supp. 229); they are άργυρος, γινώ-θαι, βαλτησαρχή, ἄστατος, πάνωμε, with temples, altars, and images (Ινως). The Theban maidens are invoked jointly to Pallas, Poseidon, Artemis, Cyprus, Lyceus, Artemis, Hera, Apollo, and the local Pallas Onca (Sept. 128-180), as παράκλητος, τέλεως, λουθρός, but also διοικητής, under Zeus as the πάρθενος παντοτής (118); Eteocles adds Earth and the Άπρος of Greek (70). Popular language is used of augury, slaves, sacrifices, river-gods, and Hades (28, 378, 618, 269, 272, 854-860). But the same play finely describes Justice as the virgin daughter of Zeus (622); both the piety of Amphiarous and the impiety of Polynices have moral elements; no διάλεξη could involve Eteocles in his determination to defend the gate attacked by his brother (677-708, 948-958). Similarly (in the Supplices the fugitives appeal to Artemis, Ares, Poseidon, Apollo, Hermes, and especially (Supp. 1034-1042) to Aphrodite, by whom Hypermenaeus was perhaps deceived (Fr. 44); also to Zeus as ξινός, αἰνός, ἀδέως, λείτους, εἰδέως, κτέιναι, etc.; and to local deities, as the hero Apis (117, 263). With the θανάτοι τοι πολυφωνία is coupled the βαρσισμός χθόνος δέας κατακτώς (24-25); if Artemis is dead, the suppliants will turn to Zeus, the host of all, the host of all those whose work is done, if we fail to reach the Olympian god's (156-161). But the other side of the myth of Io seems to be treated sarcastically (291-315); it is tentatively moralized by the insistence on Zeus as the eventual deliverer and founder of a royal dynasty. The chthonian Zeus, who 'judges the sins of men by final judgments among the dead' (230), is deliber-ately identified with the Zeus who is τέλεως, γαδοσ, and παγωρεια (816), who is also the son of Earth (822) and allied with Themis (360). The slightest association of injustice with the gods is impiety (921; cf. 395); and everywhere the lyrics extol the power and righteousness of Zeus, with the fervour of Hebrew prophecy. He is 'king of kings, most perfect in strength of the powers that make perfect' (294-299); 'hospitalable in the highest, he directs destiny by venerable enactment' (673); 'he beholds violent deeds not gladly, but with eyes of justice' (812); 'the beam of his balance is over all' (822); 'what is fated, that will be; there is no fated, that is non-existent, the limitless will of Zeus' (1047-1049). This is not merely poetical optimism:

'The desire of Zeus is not made to be easily grasped. Everywhere it glows, even in the gloom, with fortune that is sombre, and dusty, and dazed, and dazzled, and perished, and with the mind, unobservable by human gaze. He hurleth men to utter destruction from their towering height; though he array no forces against them; deity does nothing with labour. What his spirit has once designed, he works out withal, from above, from his holy seat' (67-105).

Such melody is in essentials that of the Oratia, though the more ethical conceptions are tentative and far from correlated. The theology of the Persae (472 B.C.) is dra-matically Oriental. Zeus and Phoebus and the Sun are invoked; Pallas has favoured Athens. The ritual of the dead (οἰοίνθις, 822) is supplemented by appeals to Earth, Hermes, and Hades-Aidonous, who λαβὼς ἄμφωνες εἰς ἡμᾶς (890), though Darius as a δαίμων or even ὀνόμα has a δυνάστεια below. The repeated εἰς τοῦτο allegations of a Divine Nemesis or φόβος, arbitrarily afflicting excessive wealth or happiness (163, 354, 373, 884), are akin to the fatalism of Herodotus's famous legends; all the characters appeal a deity who deludes men to their ruin (σκύτη τοῦ, 349, cf. Fr. 301 the nature of the problem dramatized in the Prometheus requires separate consideration.

2. In the earlier plays the Olympian gods are invoked jointly as a πάρθενος (Sept. 220), or a κοινόθεος (Supp. 229); they are άργυρος, γινώ-θαι, βαλτησαρχή, ἄστατος, πάνωμε, with temples,
It is insolence (CjSpis) which 'flowers and is full in the ear with ruin (arv), ... 1898.

167-172, 640) possibly indicate development in the Universe; the chthonian cults of Earth, Night, the Dead and their agents (Cho. 399; Eum. 115, 321) are subordinated to the conception of deity as moral and rational. Sacrifices and ceremonies of purification are little in comparison with the observance of justice and self-restraint. Venerable legends of conflicting divinities are ever re-written (Eum. 1-10). Of the Olympians, Apollo as the giver of oracles and εργατής of rites, and Athena as the inspirer of political wisdom, retain some genuine personality with impaired divinity; perhaps Hermes also and Artemis, for whose interference with the winds at Aulis Æschylus attempts to find mediating deity (Prom. 138-140). Zeus is too great for the stage, even in the Prometheus plays. Theology is to be sought not in mythology, but in history (παρέχει τοῦ γ' ἐγκύκλιον, Ag. 368), and in conscience (μεταφρασμὸν πόνον, Ag. 190; cf. 975-980). Zeus is supreme, but not all-j ust; thus Electra cries for Orestes the support of Strength and Justice with him who is the third (i.e. Zeus σωτήρ), Zeus the greatest of all' (Cho. 294). To Zeus are applied not only the epithets αἰτωρ, ὁ παντός, ἔργων, ὁ παντότοκος, the signs of a superhuman, but also the words 'παντετήρησα, παναγείρα, πάνας κρανίων, πάνατερ, and δυκάρχον. There is surely more than an 'illusion du monothéisme' in the first theological passage of the Agamemnon (160-178):

"Zeus, who'er he be, by this name 'the his pleasure to be called, this name I address to him. Weighing all things well, I can conjecture nought but Zeus. If the burden of this vanity is in truth to be cast off from my mind. ... But whose heartly giveth titles of victory to Zeus shall hit the mark of wisdom for him who hath learned and mortals in the ways, who hath established "learning by suffering" as an ordinance for ever."

To those only who have learnt on these lines to know and do justice, 'Zeus the all-seeing and Fate (Μοῖρα) have descended' (Eum. 1046).

Thus, in harmony with the conception of deity as normally personal, there emerges the conception, increasingly personal, of universal order. The physical law this is Μοῖρα, τὸ μόριον, τὸ πεποίημα, ὣς πεποίημα, αἰσθήσεις, ἀνίχνευς; as moral law it is ὁμοίωσις, ἔνοψις ἁμαρτωλών; but these terms admit of many degrees of personification, and not only over-lap, but not uncommonly involve the circles in defining to which idealistic systems are liable. The statement that Zeus is weaker than the Μοῖρα and Ἑρωτεις (Prom. 515-518) is isolated and controversial; generally the established order is the expression of the will of God and His being. God is subject only to the law of His own nature as consistent and just. He cannot be on the side of evil (κατασκέυην ἐκ τοῦ κατά τὸ δίκαιον τοῦ ἡμῶν ἐργατήριον, Chor. 697); He must be partial (ἐπιτροπή) morally either way (μύσθος εὐσεβῆς, Supp. 403). The working of this supreme authority is described in many combinations of terms, personally and impersonally. When in defence of Right (Θευμ) men trample on the majesty of Zeus (Διός σύνθω, Thes. 138-139), then ‘Let us lift up our hands.” Thus is the sword’ (προκάλεσθε· θ' ἄλων φαναριοῦ, Cho. 641-647).

‘For each fresh deed of injury, justice is whetted by Fate (Μοῖρα) upon a fresh whet-stone’ (Ag. 1535, 1536). The μετάθεσις Μοῖρα is besought (Cho. 306-314) ‘to grant success from Zeus to that cause to which Justice (τὸ δίκαιον) has gone over. For words of hate let words of hate be rendered; so Justice proclaims aloud as she exacts her due. For a bloody stroke let him repay a bloody stroke. That ‘the dogs must suffer,’ ‘the just men suffer’ (Cf. Clytemnestra’s ‘thoughtfulness not overcome by sleep shall ordain justly everything that has been fore-ordained with Divine sanction’ (δεῖ τοι τον ἐκ νομίμως ἔσται ἁμαρτωλόν, Ag. 912). Themis the Titaness and the Great Goddess ( Rider, pp. 130, 131, 167-172) no less than Justice, the daughter of Zeus.

2. The determinations of this supreme authority are intimated to man not only in history and in conscience, but by direct agencies. Positively, Æschylus attaches importance to dreams; the visions of Atossa, Io, and Clytemnestra reflect popular beliefs. 'For the mind in sleep is bright in its vision, though in daytime Fate is indiscernible by mortals' (Eum. 104). His attitude towards these oracles is ambiguous. There seems to be a barrière-penit in his treatment of the relations between Apollo and Orestes: Athens and not Delphi has the final word in the termination of the blood-guilt of the house of Atreus. Negatively, the Erinyes are ai-1250) and the word fluctuates considerably in the extant plays, and evidently has a long history behind it. It is hardly likely that Æschylus himself first identified the Avengers of the underworld with the Benign Venerable earth-goddesses of Athena and Sicyon (Εὐανείδες or Σεμβολοι); but he certainly accentuated both factors of this conception, and, while first investing the Furies with the archaic horrors of Gorgons, etc. (Paus. 1, 29, 6), was also conscious of a development from subjective to subjective associations, from punishment as retributive to punishment as remedial. The Erina is the activity of Divine justice in the presence of lawlessness. Zeus is a constant thevis (Cho. 246), even for those robbed of their young, 'a god on high, some Apollo or Pan or Zeus, hears the shrill complaint of his denizens; and sooner or later sends on the transgressors a Fury of requital' (Ag. 55-59). Much less for Paris's breach of the laws. The avenging will of Zeus shoot an arrow in vain; a short of the mark or too high in heaven (Ag. 365). 'One said that the gods do not deign to trouble about men by whom the honour of sacred things (χάρις θεῖας) is trampled on; but he was not pious' (Ag. 575). Helen herself becomes for the sending of Zeus, the lord of hospitality, a Fury of weeping to other brides' (Ag. 749). The Erinyes apply the laws of retributive and educational suffering: 'We deem ourselves,' sings their chorus (Eum. 312-320), 'to be direct in the course of justice. On the man who holds out pure hands, there comes no wrath from us; unsated he traverses the way of life. But if one in guilt, like this man, hides his gory hands, we appear as honest witnesses for the dead, and most exact from him the price of blood.' Again, 'Great power have the awful Erinyes both with the gods immortal and with those below the earth; and in their dealings with men they fully and visibly bring things to pass, to some giving songs of joy, but to others a life blurred by tears' (Ag. 592-955). As the play draws to a close, they serve to link Μοῖρα and Δίκαιος; and in their final metamorphosis there is as much conscious symbolism as the dramatic form permits.

3. If, then, innocence is pardoned and guilt punished, at any rate, in the long run (Ag. 760-771; Eum. 526-555), human morality must be based on...

See Harrison and Verrall, Mythology and Monuments of Ancient Athens, pp. 658-659, and Haigh, pp. 120, 121.
universal law as applied to the life of the family and the city. By Æschylus, as by Dante, types of good and bad character are exhibited rather than analyzed. The dignity of individuality is drawn on a grand scale even in the case of Clytemnestra, without casuistry or sophistry. There is the same notion of distinction about the characters which are appealed for admiration, the King of Argos, Eteocles as patriot, Orestes, Electra, and, above all, Prometheus. The whole range of Greek piety is displayed in the choruses of the Oedipus, Danaids, captive women, Persian and Argive elders. To the Erechtheus in the Septem shows the poet's concurrence in the normal Greek ideas of ἄθλος, ἀθρόον, ἀσωματικόν, and ἄνωτέστα; also in the connexion of morality with religion. He does not absolutely avoid the popular language which makes ἄσθος a divine intangible of the intellect (νοστρ ἀθέτ, Pers. 751; τοί νοστρ ἀθέτ, Sept. 661; συναφρο ἀθνασία, Eu. 530; ἀποράφει, Prom. 479); but in his own view passion at least is bestial in character and originates where there is no law. The lustful 'have the tempers of raging brute': the Eumenides (Ag. 765-788); and the inordinate love which masters the female mind both in brutes and in men wins a perverse victory over the fellowship of wedlock, and involves calamities (Cal. 698-701). Generally sin is ἁμαρτία, iniquity, a transgression against the law (ἀρετοματία) of the fixed limits of human action. It is ἀνομία and μάταιον, and its fruit is δίκη, the criminal infatuation which is its own punishment. 

Its δίκαιον, ἁμαρτόν, ἰταντοτιανον; the moment of its suspension may be inevitable, but it is neither less nor more voluntary than destruction to happiness, as the reward of virtue (Eu. 532-537). Moral pathology has never been more convincingly explained than in the locus classicus on ἀμαρτία (Ag. 707-711):—

"An ancient saying has been fashioned in the generations of old, that a man's prosperity, when it has waxed great, brings forth and does not lament its loss, but that out of good fortune springs up for the family an insatiate misery. But I hold my own mind apart from the rest on this. The impious deed that gives birth to more after it, more, and like to their own breed; but the fate of righteous houses has ever a fair progeny. But old insolence is wont to begot an insolence with the vigour of the new day. Thus as a time of good fortune has come due, yea, and a fhend, against whom there is no battle, no, and in these days there ruled black ignorants (ἄνωτέστας) unto mansions, and like are they to their progenitors."

Nor has the moral ever been drawn more relentlessly from him:—

"And if the sake of Justice, nor trample it down at the sight of gain with godless foot; for retribution will ensue. The right issue abides in force. Wherefore let a man put in the place that longing for revenge and pay reverence to the claims of strangers to hospitality. He who is just of his own will contrive, will not be unprosperous; utterly ruined he will never be. But I say that the transgressor who dares to offend, and is laden with goods all amassed without justice, shall perform in time boils down his maiden, when trouble seizes him and his yardarm is splintered. And he calls on those who hear him not and struggles in the midst of the mob; but the gods mock at the hot-headed man, seeing him who boasted he should never be powerless now in helpless war with his fortress. And so, for ever wrecking his former prosperity on the edge of life and becoming unhappy, unseen. (Eu. 539-565).

A religious materialist is sure to emphasize the inevitabilities of ἀργυρος (e.g. Ag. 1566; Cho. 1076), but there are careful cavers against fatalism:—

"Instruct my son pleasably," says Darius, "warned from heaven as a reproof: that it may be the case of from offending against God in overweening boldness (Pers. 831)."

The murderers of the house of Atraeus are even more agents than the avengers. But if there has been no repentance and no purification, vengeance pursues the sinner even to the very end that he may perish unrepentant (Eum. 467).

"For this office has perjured Fate allotted to us to hold for ever and for all mortal men whose behalf wanton deeds of blood, we should attend, until the guilty pass through the earth; but even in death he is not ever free." (Eu. 384-385).

Æschylus' allure to life after death are marked by a reserve unusual in poetical descriptions of Hades; as to continued consciousness he is perhaps consistent (Cho. 617); but he recognizes the possibilities of prolonged retribution and of remorseful memory, such as that indicated in Clytemnestra's terrible sarcasm about Iphigenia's reception of her father (Ag. 1555-1559). Apart from the functions of an Alastor (Supp. 418) or an Erinys (Eu. 267), there may be a judgment on Hades by the Eumenides (Supp. 228-231). The fate of Orestes will punish or reward his countrymen according as they deal with Athens (Eu. 767-777). The curses of the slain subsist by the survival of their personalities (ὑπὲρ σωλήνατον ἐκ τάτοιον, Cho. 406); the Eumenides are said to 'are in the underworld (Eu. 417)."* 

4. But the more vividly sin is pictured as prolific and its effects as incalculable, the more difficulty there is in escaping from fatalistic theories, such as those implied in the popular ideas of the ancestral curse and the ἄτρωτον turning into a blood feud. These subjects specially fascinated the mind of Æschylus. In the Supplikos there is a simple warning of the danger of starting a curse: 'For your children and your house, in whichever way you deliberate (Ag. 765): and the corresponding penalty' (433-436); and in the sequel there was some purification from blood-guilt. In the Septem the children of Eteidus are involved in a curse not clearly defined as invoked or inherited by him (833-835), but there is a general way of destruction and injury to its δομα καταρχή: 'the field of criminal folly produces a harvest of death' (Sept. 601). The chorus, indeed, makes Eteocles a responsible agent on account of his savage desire to shed unawful blood (ἀπειροδος ὁ θεματός, 689-694), but to the question τι σὲ καθαρ-

μοις πόροι, the poet has not yet found his solution: ὅτι κτῆσις τοῦτοι τῶν μακαρίων (682), unless one is indicated in the self-sacrifice of Antigone. But ten years later the double problem of hereditary criminality and blood-guiltiness is treated in the Orestes with a breadth of design which is not only poetic but 'prophetic.' There is little reason to suppose that early tragedy was necessarily written in trilogies, but the scheme is admirably suited to Æschylus' exposition of the origin, transmission, and extinction of the ἁμαρτία (Ag. 1192). The principal terms, ἀργυρος, ἁμαρτία, are developing specific meanings; beside them are vaguer phrases (ἀθρόο, Ag. 155; μακαρία, Eu. 378; ἄγα, Cho. 155; ἀρακτοκράτη, Ag. 228; ἰταντικός, Ag. 346; σαρώθι, Cho. 894, etc.). The phenomena are best stated in Cho. 400-405: "I think it is that drops of gore spilt upon the ground demand the shedding of other blood. For ἑαυτοῖς cries on the avenging Fury, who brings up from those slain before calamity (ἀθροί) to attend upon calamity;' and then 'who will expel from the body of the living the καθαρμική γένεσις φόρος ἀγα' (Ag. 1566). The story of the house of Pelops is not laboured; but a sufficient number of points—the adultery of Thyestes, Atreus' horrid revenge, the sacrifice of Iphigenia—lead up to the murder of Agamemnon. At each point the chain might have been broken, but each link is fresh rivet: 'Where will the force of this ἀργυρος make an end? where will it cease and be lulled to rest?' (Cho. 1075). Has the curse acquired a personality as above:—

* If the Areopagus is really the Hill not of Are but of the Are (Harrison and Verrall, p. 668), the Erinys as well as the Sapphoi have their ancient home in its chasms.
along the instrument of justice! (Cho. 641). Yet among the consequences may come a deed which, though terrible, is really innocent, an *ανέμεμφος άτη* (Cho. 830); and the chorus of elders, even while declaring that the house is ‘fast-bound,’ grasps the truth that saves the morality of the situation. All retribution is and must be deserved; ‘The robber is robbed, the murderer makes payment in full. There abides, while Zeus abides on his throne, the rule that the doer must suffer; this is the eternal law’ (Ag. 1502-1504). The curse, then, is not an overwhelming fatality, but a hereditary predisposition which may be worked out in the race and even in the individual. The original transgressor was free to sin, and his descendant is free to adopt the prescribed means of purification. The actual development of this theme in connexion with the traditional obligation of the blood-feud is perhaps confused by a political motive; and the special pleading in the *Eumenides* about the nature of kinship is certainly frigid, as also the insistence on legal forms (ἀδίκως, μαρτυρία, σινεκδομή). The idea of blood for blood was so deeply rooted in popular sentiment and religious institutions, that *Æschylus*, no less than the legislators of his time, may have been puzzled to discriminate degrees of guilt. But the instinct. *Προκροτάτας κριτικούς* (Cho. 144), Clytemnestra may be allowed to swear that she sacrificed her husband to the άτη, άτης, and *Ερως of their daughter* (Ag. 1438). If not, how can Orestes ever say that his mother’s blood is really effacing away from his hand, and the pollution is being washed out! (Eum. 280). No libations are of any use (Cho. 521), especially if the blood is *κόνδυρος* (Cho. 1038); the spirit of the dead is not tamed by the former, butبوت by such a way. The feud would go on for ever, or till the family become extinct. In *Æschylus’s* solution of the problem there are really two stages, of which the latter is the more important. Orestes can plead innocence because he acts under the ‘interpretation’ (ο μνήμης άρετής σοι μαρτυρούση, Eum. 595) and even threats (Cho. 283-298) of Apollo-Loxias, and is ready to perform the ritual purifications (Cho. 1059); and the Delphic oracle had since the *Oresteia* the eternal laws (Στηρυγματικά and educational influence in Greece. On the other hand, *Æschylus* felt that neither the payment of blood-money nor the performance of ritual can quiet the conscience or carry civilization very far. It is perhaps the eternal value of pally to *kurzer Gott* but the ultimate and really moral solution is to be found in the judicial decision of Athena on the divided vote of the Areopagus, which she herself represents as the victory of the *vox populi* regarded as the *Dei*; άνθρωπος Ζεύς (Eum. 978). The *Oresteia*, then, is certainly a ‘temple’ poem to this extent, that it expresses a view in the moral and religious speculations of the age as to heredity and responsibility, though it is not merely didactic on any particular question of justice or equity. 

*5. In the *Oresteia* the final reconciliation is provided by the gods; in the *Prometheus* they sustain the whole drama. Except in a few details attributable to a re-reading of his *Suppliants*, the surviving play of the set (probably two tragedies with a satyr play) is totally opposed to *Æschylus’s* theology in all its stages. Prometheus, son of Themis or Earth (212), secured Zeus’s triumph over the older dynasty (221), but is now tortured for having saved the human race from the chief instrument of civilization, of augury and medicine, and of other means of providing for the future, and of Hope as the mainspring of effort (249-256, 442-508). All who visit the victim, whether as Zeus’s agents—Strength, Hephaestus, and Hermes—or as sympathizers—the Oceanides, Oceanus, and Io—have suffered more or less in person or in character from Zeus, who is a *τίνος τορραντος* gods and men. Blithely (εὐθάλης, 180; δεικτικός, 404), unjustly (ἀδίκως, 150; θρία διήνυστος, 30), and odiously (975). But Prometheus, by virtue of his parentage, knows a secret; if Zeus contracts a certain marriage,* his son will be greater than the sire (708, 907-927); in this respect Zeus is weaker than the Fates and Erinys (510-520). The fragments of the *Solutus* indicate close parallelism in form and episodes to the *Pinfusae*; in the solution Zeus and Prometheus meet one another halfway in a reconciliation, of which the agents are Heracles and Chiron the Centaur (cf. *Prom. Vinct.* 188-194, 1026-1029). Now this conception of a Zeus, inferior both in righteousness and in power, is out of all relation to the *Suppliants* and the *Oresteia* alike, and no theory of the poem’s meaning can be accepted which minimizes this fact. Apart from purely fanciful explanations of the plays as political or scientific allegory, two views have been very commonly held.

(a) The tragedians develop their dramatic situations freely, provided he kept to the main lines of some recognized myth. *Æschylus* found Hesiod’s story of Prometheus suitable for the exhibition of character as affected by injustice, and susceptible of treatment about genealogy, anthropology, etc. This view, as developed by (e.g.) Patin and Paley, may be called the literary explanation. Wecklein’s theory, that Zeus is in the right and Prometheus violent and shortsighted, and certain dignity of character, like Milton’s Satan, comes under the same head. But no such theory really explains the boldness of the idea, the confusion of myths, or the intensity of the passion with which the hero is supported.

Accordingly, (b) most modern scholars, including E. de Faye, regard *Æschylus* as deliberately inculcating the position that even the supreme personal authority in the Universe is itself subject to the higher moral necessity (Άνδρον). Prometheus, the mythical representative of these forces, is, then, really in the right, and Zeus is in the wrong with him and with Io; but Zeus’s submission is effected by the educational and spiritual function of the hero (κατάρας, 981); and Prometheus, too, can yield without loss of dignity to an improved Zeus. This view gives an adequate meaning to the play as a whole, but it seems to lay undue stress on lines occurring in mere dialogue and not specially emphasized, and also to ignore the human personality of the protagonist. Moreover, it is difficult to imagine the author of the *Oresteia* and its epiphons for Zeus acquiescing even temporarily in the idea of such development in the character.

Those, therefore (c), who hold the view first enunciated by a brother poet, Shelley, that Prometheus stands for Man, anxious to be moral and religious as well as rational, but convinced that he is the victim of forces incompletely understood, of the de facto supremacy of ‘Nature,’ prefer to trace in this drama the Greek parallel to the Book of Job. *Æschylus* was too great a poet to be a mere allegorist; but when his mind was occupied with the problem of undeserved evil, he found a gift of iron and his gift of iron, the gift of fire and the creation of woman by Prometheus. He selected with a free hand from this *This view of the *Eumenides* seems less liable to objections than the theory of Pontius the Papist, that law, Apollo and Zeus equity, and Athena mercy, in a special question of moral casuistry. For that view see Haigh, p. 119.*

*This is a marked instance of *Æschylus’s* syncretism; the story is even less connected than Io with the myth of Prometheus, which was apparently an anthropological explanation of certain fire ceremonies.*
this and other myths the more dramatic parts of the symbolism. The mention of Heracles in the Prologs of the symbolism. The mention of Heracles, repeated at every point of the play (see 84, 79, 436, 907, 864, 1012, 1034-1038), and especially the pronoun *he* at 1012, 1034-1038, and especially the pronoun *he* in the last lines of the dialogue. In the two recitative passages assigned to the hero in the Exodos, the boast *παρών εύ αύ θανάτου* (1053) must have special significance as balancing the protest *σοφί* αν *τά κακά* (700).

But it is likely that the solution of the problem, like the conclusion of the Book of Job, was too formal a compromise to be altogether satisfactory; and that may be the reason why it has perished. The whole tendency of *Eschylus's* mind is so strongly optimistic that it would right itself naturally after a reactionary period of what is *pessimism* rather than *scepticism*, however dramatically intensified.

*Eschylus's* originality as a thinker consists, then, in his attempt to moralize the traditional beliefs embodied in myths and institutions, by the light of certain religious presuppositions and certain moral convictions which have been illustrated above. In his main ideas there is little variation, except in their poetical expression; in the detailed application at which his genius most fully flowered there is too much admit of exact and consistent analysis. His doctrine is not entirely any mark, though his dramas continued to be popular for their antique simplicity and dignity; even *Aristophanes*'s vindication of his literary merit against the criticism of the next generation takes lower ground than it might. Neither the piety of Sophocles nor the impiety of Euripides felt the force of his protest against a fatalistic theory of morals. In philosophy, intellect and the place of conscience and the Divine law so completely, that *Plato* could employ the myth of Prometheus without reference to a treatment of the subject which the modern world has long considered one of the most sublime efforts of poetic genius.

LITERATURE.—Besides the introductions to editions of *Eschylus*, sections on him are to be found in all the general works on Greek literature or theology. The most useful summary in English is A. E. H. *Philosophy of the Greeks*, ch. ii. (1896). Of the innumerable essays on *Eschylus* the three by J. A. Symonds (The Greek Poets, 2nd series) and E. Myers (Hellenica) are best known. Of older books the most frequently referred to are K. O. Müller's *Dissertations on the Eumenides* (Gottingen, tr. 1843), F. Weicker's *Eschylus*, Gottinger (1857), and H. H. H. Nigelschäf's *Nachkommenschaft Theaters* (1857). The principal monographs are Klausen's *Theologomena Eschylina* (1859); G. Droege's *Religion und stittische Vorgänge des* (1861); E. Buchholz's *St. Wissenschaug des* (Finnari und). *Eschylus* (1860); and E. Faye's *Essai sur les Études religieuses et morales d'eschyle* (1884).

HERBERT E. D. BLAKISTON.

ÆSTHETISM (ασθητις, 'sense perception').—The theory of *Aristotle* concerning the principles of the aesthetic. Ordinarily the term is not used as a distinctive title for specific theories, but as denoting a tendency of theories otherwise named. Three uses of the term may be conveniently distinguished:

1. *Aestheticism* may denote the identification of moral goodness with beauty, such as is suggested in the common Greek phrase 'beautifull and good.' Morality and art may be looked upon as the realization of an inner principle, that of order or harmony. The good man, like the musician to whom *Aristotle* is fond of comparing him, is the man who can introduce harmony into his subject, who can maintain that balance and symmetry of parts essential to the highest music, whether of conduct or of sound. The musician works with a different material from the good man, but their purpose and principles are the same. The good life is a work of art. And the impulse toward creation may also be the same. The artist works from love of the beautiful, from an instinctive passion for the beautiful itself. He recognizes no compulsion in his work, for he has no other desire than to do thus, set in motion by an impulsion from love of the good, from his instinctive desire to realize a complete and perfect life. Morality does not come to him in the form of a law constraining him to walk contrary to his nature. The good life is the life which realizes all the possibilities of man, the most completely human life. The good man is beauty realized in flesh and blood and action rather than in stone, but he is beautiful none the less.

This aestheticism in this sense characterized the Greek view of life is to a certain extent true, but not unreservedly so. It is true that the Greeks did not work out a clear distinction between the beautiful and the good. *Aristotle* states that the term 'good' is limited to certain actions, whereas beauty pertains also to that which is unmoved, but he gives no more exact difference. Yet it is far from true that the Greeks absolutely ignored the more severe, dualistic aspect of the moral life. *Aristotle* certainly, moral development is not a mere unfolding of the life of instincts, but the acquiring of a rational control over desires. The good is a reality recognized by reason, and independent of the individual's approval. A man may have an independent reality it stands over against the individual as the law of his action, demanding realization in his life. The moral life shows struggle and discord rather than the calmness of a work of art. But this difference fails to find adequate expression in Greek theory, and as a consequence the fields of ethics and aesthetics remain confused. Were we to confess that this condition, it would perhaps be truer to say, not that their moral theory is aesthetic, but that their aesthetic theory is moral.

This confusion of the two fields is continued in the English Moral Sense School, which inherits the Platonic tradition, but in these latter works the Platonic principle is being supplemented the other aesthetic aspect. This is partially true of Shaftesbury, but more completely so of Hutchinson and Hume.

*Aestheticism* may also be used to denote the theory that all ultimate values are aesthetic, moral good a means towards an ultimate aesthetic good. Under this conception the moral life is not itself beautiful, but it exists for the sake of aesthetic enjoyment. Morality, with its aesthetic function, is a result of mal-adjustment, in consequence of which we are compelled to do much which we do not value for its own sake, but as the necessary means towards an enjoyment which itself has no further use.

This conception finds literary expression in the writings of Mr. Walter Pater, in which the end of life is stated as riches of experience. This richness of experience is best realized in the life of aesthetic enjoyment.

3. *Aestheticism* also denotes the divorce of art and morals, usually implied in the popular use of the phrase 'art for art's sake.' Beauty is held to be independent of goodness, the technical aspect of a work of art being emphasized at the expense of its human significance. Art thus becomes a kind of higher morality, free from the objective laws which hold in the lower. The immoral may thus enter into the beautiful on the ground of its immediate value for perception.

NORMAN WILDE.

ÆSTHETICS.—*Aesthetics* is the philosophical study of beauty regarded in itself and in its application to art and nature. (1) Meaning of the word.—Considered solely from the etymological point of view (ασθητις, ασθητικος, to perceive by the senses), the word means the study of sense-per-
ceptons. Kant remains faithful to this etymological acceptation when he applies the name of 'Transcendental Äethere' to the chapter of his Critique in which he discusses the sense-perceptions Time and Space. Baumgarten was the first to use the word 'Äesthetics' for the science of the beautiful; and the change that has taken place in the history of the term may be understood when it is recollected that, according to Baumgarten, the beautiful exists in the obscure regions of the lower consciousness, that it belongs to the rank of sensations, and is opposed to the 'clear thinking' of the intellect. To-day the term 'Äesthetics' has lost this connexion with sensation, and denotes in general the philosophy of the beautiful.

(2) Place of Äesthetics in philosophy.—The philosophy of the beautiful is bound up with and forms an integral part of a general system of philosophy. But Äesthetics is one thing in Plotinus or Thomas Aquinas, and quite another in Kant or Taine, because the philosophical systems of these scholars are so widely divergent. In the opinion of the present writer, Äesthetics is a mixed science, borrowing its principles from both metaphysics and psychology; so that (see art. BEAUTY) it includes two classes of questions, the one class being subjective Äesthetics, which produces in the person affected by its charm, and the other relating to the qualities of the things to which we ascribe beauty.

(3) History.—Ancient writers devoted special attention to the objective side of beauty. Plato and Aristotle consider the beautiful as identical with order and proportion; Plotinus and the Neo-Platonic school make it an attribute of everything that exists as such. The Middle Ages changed the aspect of the doctrine of Äesthetics. While it is largely in the objective theories of the beautiful, they supplemented them by a study of impression or aesthetic pleasure. Modern philosophy, on the contrary, takes its stand almost exclusively on the psychological side of beauty, and regards it as a purely subjective phenomenon. With Kant, for instance, beauty does not belong to the object itself, but only to our perception of it. Contemporary Äesthetics perpetuates and emphasizes these ultra-subjective tendencies.

LITERATURE.—See under BEAUTY.

MAURICE DE WALF. ÄÄETHER.—Derived from a root signifying to burn, ÄÄether is a term appropriated in Greek literature to the vault of the firmament, which is contrasted with aer, which is applied to mist and vapour. In Homer aer is the abode of Zeus (II. ii. 412, etc.). In Hesiod (Theog. 124) ÄÄether and Day are the offspring of Night, and in at least one of the Orphic cosmologies, ÄÄether, as representing the light or fire, is contrasted with Chaos, and proceeds from Kosmos (see Gompers, Greek Thinkers, Eng. tr. 1901, i. 92f.). Pherecydes, who occupies the borderland between the mythical and the scientific, took the origin of all things to be a unifying ÄÄether which identified and synthesised the first of these things (Diels, Vorwurknikte, p. 508, No. 71, A 9).

The current conception of äether passed into the keeping of the philosophers, by whom it was variously defined and modified. In the Fragments of Parmenides äether is found as the region of the fixed stars (Fr. 10. 1, Diels); and as the fiery element of which their substance is composed (Fr. 11. 2, Diels); and although ÄÄether indicates a distinction between äether as the outermost covering of the universe, we cannot attach much weight to his authority (ii. 7. 1; cf. ii. 15. 7, and see Krise, Forschungen, pp. 114, 115).

Empedocles treats äether as a synonym of aer, except in one doubtful passage (Fr. 38. 4, Diels). On the other hand, Anaxagoras regarded aer and äether as the two primary differentiations of being—the cold and dark contrasted with the bright and warm (Fr. 1. 2, Diels). Indeed, we are informed that he employed äether as synonymous with fire (A 73, Diels). In the formation of the world, the dense, wet, cold, and dark sank into the centre, while the rare, hot, and dry went to join the enveloping äether (Fr. 16, Diels). From Anaxagoras it is convenient to pass to Euripides, who is said to have been largely influenced by his teaching (Diod. i. 7. 7.). There are various references to äether in Euripides, which may be the reflexion of either of popular fancies or of current science, or of both. Thus the identification of Zeus with äether carries us back to Pherecydes, and anticipates the pantheism of the Stoics (Fr. 885; cf. Aisch. Fr. 652). The conception of ÄÄether as the husband of Earth, quickening all things into life by his fertilizing showers, is the common property of many poets and philosophers (Eur. Frs. 488, 836; and see Mnuor on Lucr. ii. 250). Similar to this is the notion that the vital breath is derived from äether, and that the soul, retaining its consciousness after death, is absorbed in the source from which it sprang (Hdt. 1014; Tapp. 311; cf. Lucr. v. 318). Though it has often been supposed that the idea of äether was derived from Empedocles himself, it is noteworthy that the same thought is found in the inscription over those who fell at Potidea (Cfr. i. 442), and may well be due, as has been recently suggested (Cfr. xv. 431), to a popular belief which arose in connexion with the practice of cremation. The soul of the dead man was thought to ascend with the smoke which rose from the burning corpse.

By the side of the four elements generally recognised in philosophy, from the time of Empedocles onwards,—fire, air, water, and earth,—äether ultimately came to be admitted as a fifth; but it is still open to question whether this view was derived by the Platonic school from the Pythagoreans (Zeller, Pre-Socratics, vol. i. p. 318, n.). Plato, in the Timaeus, does not adopt this position (58 D); and though there is strong evidence that it formed part of his oral doctrine (Xenocrates, op. Simplic. Physic. 296a), and it is accepted by the author of the Epinomis (90 E), it is clear that its definite establishment is generally connected with the name of Aristotle, from whose statement of the theory through the scholastic quinta essentia is derived our word quintessence. Eternal and immutable substance, aether, which is placed between the spheres and stars, ceaselessly rotating round the world, but transcending the strife of the terrestrial elements (de Caes. 1. 2. 269a 20. 1. 3. 270a 13, b 1), was at one time material and divine. The Stoics took a further step by identifying the substance of äether with God. It is described as fiery breath or creative fire, the rarest and most subtle of all bodies (Chrysipp, op. Ar. Did. Fr. 31, Diels), which produces out of itself the phenomenal world, passing through the medium of the elements. The universe, subject to the law of causa secundum æternitatem, moves either in creative progress or towards periodic conflagration. When everything is consumed by fire, the world-soul and the world are united in the single essence of äether (Chrysipp, op. Plut. Comm. Not. 26). But when, by the equilibration of its constituent forces, the created world is in existence, the ruling power resides in the outermost periphery of äether (Diog. Laer. vii. 139; Ar. Did. Fr. 29, Diels). Then, as the world-soul, it penetrates every universe, as the cause of the immanent cause of all individual existence (Diog. Laer. vii. 138). Thus may be justified the summary assertion of Chrysippus, that äether is everything, being at once father and son (Philodem. de Phil. c. 13, p. 90. 28).
ETIOLOGY (αἰτιολογία).—The doctrine of causes. The latter part of the Categories of Aristotle (chs. 10–15), early suspected, but possibly compiled from Aristotelian fragments (Zeller’s Aristotle, Eng. tr. vol. i. p. 66), contains the Post-predicamenta which give the clue to the subsequent position in which treatment of etiology. In the treatment on Metaphysics 6 introd. and there are the scholastic philosophies, ‘General Metaphysics’ is distinguished from ‘Special Metaphysics,’ notwithstanding the difference of standpoint, precisely as General Philosophy is distinguished from Special Philosophy, e.g. in Martianus’ Principles (1 P. p. 1). General metaphysics treats of—(1) Being and its properties; (2) the highest kinds of beings, i.e. the categories; (3) the relations of beings to each other. The third head embraces the same subject as the Post-predicamenta, the whole division being foreshadowed by the Anti-predicamenta (due to Abelard), Predicamenta and Post-predicamenta of the medieval logic. Of the five relations treated of in the Post-predicamenta—opposition, priority, simultaneity, motion, and aetiology—two divisions are especially concerned with causality. The first two divisions of general metaphysics, dealing with universals, the six transcendentals, the nature of being, the supreme classes of finite beings, are sometimes regarded as constituting the theory of causality. The hypothesis, which deals with the relations of finite beings as a whole and to the Infinite, will thus contain as its most important part the doctrine of causes—Etymology.

If we turn to modern philosophy, the position of etymology is not different. In the contents of Burghardt’s Institutiones Metaphysicae (Mainz, Metaph. p. 283), the doctrine of causes occupies a similar position. It holds a like place in Wolf’s Ontologia. K. Rosenkranz (Wissenschaft d. log. Iden) divides metaphysics into Ontology, Etiology, Teleology (Erdmann’s Hist. of Philosophy, tr. vol. iii. § 346.11). E. von Hartmann (Kategorienlehre), under the categories of speculative thought, puts Causality (Etiology), Finality (Teleology), Substantiality (Ontology).

We propose to enter into an examination of the various forms and shades of meaning which etiology assumes in these several systems. Nor does it belong to this article to view the subject of causation from the point of view of the theory of causality or that of the criticism of the causal concept. We shall confine our enquire simply to the leading forms of the theory of the nature and classification of causes in the successive periods of the history of philosophy. For this purpose the history of philosophy may be considered as divided into three periods—the ancient, the medieval, and the modern. The leading characteristic of each of these periods is as follows: in ancient philosophy (Greek) the antithesis of subject and object, of mind and matter, as two substances over which each, other, is absent. Thought and being, the one and the many, are equally objective. In the second period, owing to the development of Greek philosophy itself, and the spread of the Roman conceptions of authoritative law and duty, but above all, owing to the influence of Christianity, the spiritual and material are conceived as antithetically opposed existences, and the attempt is made under this altered point of view to retain the Greek solution of the problem. The substance of this solution is dogmatically affirmed in Scholasticism. What is not shown is that it is possible under the changed point of view. Modern philosophy consists in the constant effort to prove the possibility of the solution, to explain the manner in which spiritual and material being interpenetrate, affect, and condition each other. In modern philosophy, not the dogmatic result itself, but the way in which it is obtained, is the leading interest. The etiological problem becomes an essentially different one in each of these periods.

In Greek philosophy the antithesis of subject and object is absent. Nature is instinct with motion, life, reason. The motion is developed, but at the same time the tendency to personification is omnipresent (see Jowett’s Plato, vol. i. p. xiv). Thought is not a modification of a conscious mind, but consciousness is the accident, a ripple on the surface of nature (see Brough’s Principles of Speculative Philosophy, p. 450). From this point of view the antitheses with which Greek philosophy dealt—the one and the many, the real and the apparent, thought and being—are all reconcilable by one concept—that of mixture. There is only a mingling, and then a separation of the mingled (Empedocles, v. 38). This mingling, or, as Plato termed it, ‘participation’ (μείζονες), when conceived as the union of the one and the many, of form and matter, either in the well-known fourfold classification of causes of genera of things, or, more especially concerned with causality. The first two divisions are, of general metaphysics, dealing with universals, the six transcendentals, the nature of being, the supreme classes of finite beings, are sometimes regarded as constituting the theory of causality. The hypothesis, which deals with the relations of finite beings as a whole and to the Infinite, will thus contain as its most important part the doctrine of causes—Etiology.

When conceived as the union of the one and the many, of form and matter, either in the well-known fourfold classification of causes of genera of things, or, more especially concerned with causality. The first two divisions are, of general metaphysics, dealing with universals, the six transcendentals, the nature of being, the supreme classes of finite beings, are sometimes regarded as constituting the theory of causality.
When Aristotle brought down form from the far-off νοτος νοσεως, or intelligible world of Plato, and incorporated it in matter, the problem still remained, to which side action, efficiency, was to be attributed, and Aristotle is generally interpreted as assigning it exclusively to form. In favour of this view is his celebrated definition of the Absolute as νοτος νοσεως, the thought of thought; but the interpretation is probably one-sided. There is much in Aristotle to lead us to regard the Absolute as dwelling in a sort of supereminent sensuous world, as he conceived the real world to stand in a composition of various grades is a "eidos," a compositur of matter and form—not merely through the element of form, but also through that of matter. In Metaph. viii, (ix.) 8, end, the argument against the ideal theory contends that the idea, as such, are mere potentialities (δυναμεις). This view would help to solve the ancient controversy as to the pantheism or monoteism of Aristotle, the immanence or transcendence of the soul.

In the Neo-Platonic philosophy the ideal world of Plato and the Divine soul of Aristotle are hypothesized into a series of personal beings. This philosophy represents the innate tendency of Greek philosophy itself to pass over into that antithesis which characterizes Christian metaphysics, the antithesis of subject and object, spirit and nature. St. Augustine views the Platonic ideas no longer as independent substance, but as ideas in the mind of God. The hierarchy of ideas and emanations, as developed by him, are hierarchically arranged by the change of view the combination or composition of form and matter, of idea and reality, becomes a most difficult problem. The community of idea and reality, the intercourse of mind and matter, can no longer be conceived as a mere combination or composition of the two, if the idea as universal dwells in a separate substance—mind. The great controversy of the Middle Ages, of Realism and Nominalism regarding universals, is the struggle with this problem. Yet in regard to etiology, the real interest does not lie in this problem, but in a greater one connected with it. Granting that reality is the union of matter and form, which factor in this union is the active one? Thomas Aquinas, "efficaciam actus est agenti principium" (Stöckl, Gesch. der Philosoph. des Mittelalters, vol. ii. p. 451). It is diverse views of the relation of the causal power in the universe to those principles of matter and form, the union of which constitutes the active one; and this union constitutes the nature of things, that underlie the great rival systems of Thomas Aquinas and Duns Scotus, and from which their other differences proceed. In Scotus the union proceeds from the side of the matter, not the form. The latter is the efficient, the causal factor (de Gérando, Systemes de Philosophie, vol. iv. p. 577; Rousselet, Études sur la Philosophie dans le Moyen Age, iii. p. 56). Duns Scotus's philosophy here encounters the same difficulties as have been urged against Hegel and Hartmann. In both Aquinas and Duns Scotus, however, the source of the efficiency is transcendent, whether it be the Divine intellect or will which determines it.

Modern philosophy, from Descartes and Spinoza to Hegel and Hartmann, Spencer and Leves, is engaged on the problem of explaining how the intercommunication of mind and matter, spirit and nature, takes place. It has been remarked by Bayle and Rousselet that Spinoza's philosophy is contained in that of Duns Scotus, and in the same sense. But the ultimate causal principle is in Scotus transcendent, in Spinoza immanent. This difference is characteristic of modern philosophy. The solution is no longer taken from the transcendent sphere. If the Absolute is called in, it is, as in Spinoza, Leibniz, Schelling, Hegel, an immanent, not transcendent Absolute.

Of the problem thus handed down it cannot be said that the solution has yet been reached. In the Monadology of Leibniz and the Absolute Idea of Hegel it is form, the ideal side, that contains the principle of all, the Absolute right, the universe. These principles differ from the Platonic idea in this, that they are subjects, have the objective world over against them, even if that world have no being apart and be a nullity or absurdity. In Schopenhauer, Hartmann only the Will, the material side, actualizes the representation or idea. The 'will to will' of Hartmann answers to the materia prima primorgina of Duns Scotus. It is the same in our English philosophy. Out of the unknowable Absolute of Spencer, and the known Absolute of Leves, the material, organic, and mental worlds proceed. Yet the relation of these higher forms to the primordial matter and motion is unsolved. Physical parallelism is but the statement of an enigma. The question remains, Which is the efficient—form, matter, or both? In what ways do they co-operate, and how? The aetiological and teleological problems are still unsolved.

AFFECTION.—That aspect of psychic life which comes to consciousness as concrete states of feeling (whether in the way of joy or sorrow, of love or hate) is called affection. In the newer divisions of the fundamental or rudimentary aspects of conscious process it has been found necessary to distinguish the concrete given states of mind, characterized as Knowledge, Feeling or Emotion, and Will, from those abstract and largely hypothetical quales which, although never found alone, nevertheless serve to define the concrete states. For example, a state of feeling is always or usually one both of knowledge and of active tension or will. Since never realized in its purity, it becomes necessary, therefore, to define such a state by what it would be if so realized. The characteristic aspect of consciousness whereby it is not knowledge nor will, but feeling, is called affection. It is the differentiation of a state of feeling or emotion. Similarly, a state of knowledge is never feelingless nor will-less; its differentia as knowledge is its reference to an object; it is called 'cognition.' With active process, or in a large sense Will, the same sort of distinction leads us to the determination of its differentia as a certain active quality called 'conation.' Affection, cognition, and conation are therefore the three fundamental aspects of conscious process, considered as irreducible phases of mere consciousness, each one of them, at least, all three. Cf. Baldwin's Dictionary of Philosophy and Psychology, artt. 'Affection,' 'Cognition,' 'Conation,' and 'Classification of the Mental Functions' (by Stout). J. MARK BALDWIN.

AFFIRMATION.—1. In legal parlance an affirmation is distinguished from an oath in that no penalty is invoked upon himself for false witness by the person affirming. It seems to have arisen in the forms of oaths, who felt the danger of invoking the name of the Deity in case of a mistake of memory or statement led to unforeseen consequences. Courts, seeing that testimony from persons of this character might be quite as reliable as any supported by an oath, finally accepted
affirmation in lieu of more strongly attested allegations. The tendency to substitute affirmation for an oath will be proportioned to the decline of the belief that oaths have any more sacredness than a simple asseveration, and to the decline of the belief that the invocation of the Deity affects the efficacy of an oath. Where an appeal to the Deity and the PBUH is substituted the Senate is supposed to influence human veracity, the oath will prevail; but it is not necessary where veracity is respected for itself. No doubt the efficacy of the oath in one period of human history was much influenced by a belief in the power of the Deity to detect a fraud, but it has ceased to exercise the influence it once possessed, and the community must rely upon one of two motives to assure veracity. The first is natural human penalties, and the second is respect for the truth. In either of these there will be no necessity for the oath where any scruple exists about invoking the Deity.

2. Affirmation, in logical and philosophical diction, is distinguished from negation or denial. It thus means the statement of a fact. It may represent more than that a given thing is a fact, but, so long as it takes the form of a positive statement, it is called an affirmation. To assert, to posit, to asseverate, to declare are the equivalents of affirmation, and, of course, mean at least the formal assurance that the thing affirmed is a fact. In formal, logical, speaking, however, affirmation denotes a degree of tenacity in conviction which looks towards assurance, and it expresses that state of mind. Negation or denial expresses the same kind of mental state, while doubt is the opposite of both affirmation and negation. Hence psychologically there is no difference between affirmation and negation, in so far as assurance is concerned, but only a difference in reference to the relation between the ideas involved in the mental process of comparison and judgment. That is, the difference between affirmation and negation concerns the content of the judgment, and not its mental state of conviction. Affirmation implies a certain kind of connexion between subject and predicate, and negation excludes it.

AFGHANISTAN—Afghanistan (lit. 'land of the Afghans') is a country of south-central Asia, whose location and political importance have led to its playing a part in the religious history of the Orient from the time of Zoroaster to the appearance of Muhammad. The present boundaries of this mountainous land are political rather than geographical, as they are largely defined by the fact that Afghanistan is a buffer-country between the great empires of India on the south and south-east and the Russian provinces of Bokhara and Turkestan on the north, while Persia and Baluchistan limit its western and southern frontiers.

The first chapter of the Avesta (Vd. i. 7) the ancient northern capital Balkh (Bakhsh) is referred to as a beautiful city with banners floating from its high walls, and there is a persistent tradition that the city was a strong religious centre, the seat of Varhsap, the father of Vishtasp, patron of Zoroaster, and that Zoroaster himself was slain there when the Turanians stormed Balkh during the Holy War which Iran had started against Turan. The modern capital Kâbul (Kâvul in the Pathan treatise Shatroshâ-i Ahrân, 34) appears in the Avesta (Vd. i. 9) as Vâkerota, and the region of the Helmand, the chief river of Afghanistan, the Elymian dogs of the Grecians, is called Hâtrumant (Ph. Hâtrâmât) in the same Zoroastrian law-book (Vd. i. 13). The modern lowland district of Seistan in south-western Afghan was the home of the Zoroastrian dynasty of the Kaïanians and the place of the holy lake Kân- sauya (mod. Hamun) of the Avesta, from which period the Seistan (Av. Saôshyant) was to arise at the Millennium. Zoroastrianism appears also to have prevailed in the land during the Parthian and Sasanian eras, from B.C. 250 to A.D. 650, although some Greek religious influences may have followed the Parthian. The wake of Zoroastrianism has no certain suggestion; from the Arab conquests, the Afghans themselves prefer the designation Pushtun or Pukhtun, older form PashtOn, Pakhtan (where their Indian name was in Baluchistan in the 7th cent. destroyed all previous religious foundations, and cleared the ground anew for the building up of Islam. Mullahmadanism became the national faith of the Afghans, and has remained, mainly in its Sunnite form, their creed and chief bond of union, although they acknowledge the political headship of an Amir over their loosely connected tribes.

The Afghan nation consists of a number of tribes considerably divergent in their character, with a population variously estimated at between 3,000,000 and 6,000,000. Most important are the Afghans and Pathâns, who constitute the chief element of the population, together with the clans known as Ghilzais in the east, Yusufzais and Afridis on the Indian border, the Durbans to the west, and the Tajiks, Hazaras, Usbeqs, and Aimaks, mostly showing traces of Mongolian blood, to the north and north-west. The great majority of the Afghans belong ethnologically to the Iranian stock; and although there is an intermixture of Caucasian blood, especially on the borders there is no good reason for accepting the view that they were of Semitic origin, while they may preserve some such tradition from a later date and show certain slight Semitic traces.

The language of the country is generally called Afghan, but often Pukhtun or Pushtun, the former (Pukhtun) being North Afghan, the latter (Pushtun) South Afghan. The literature of the people is but scanty, and no monuments have been traced farther back than the 18th century. Most interesting among the remains are the Afghan folk-songs, a collection of which has been made by the French scholar Darmesteter, and among these ballads is a number that deal with religion.

A. V. WILLIAMS JACKSON.

The name 'Afghan,' first appearing in literature in al-Biruní's Índra (tr. Sachau, i. 208), is of uncertain signification; and the Afghans themselves prefer the designation Pushtun or Pukhtun, older form Paštun, Pukhtun (whence their Indian name
AFGHANISTAN

Pathān—a term which Lassen (Ind. Altertums-
kunde, Leipzig, 1867, i. 513) connected with the
Iātērs of Herodotus (i. 93, 102, iv. 44, vii. 68); while Darmesteter (Chants populaires des Afghans,
Paris, 1888, i. 1, Introd. 182) has suggested that the Afghans too are implied by the Παθητα, 
v. 18, 3, 20, 21. At all events, the native appellation Pūštān signifies "mountaineers," and may be implied by the passage in
Arrian's Anabasis, iii. 8. 4: Βοσπόρος δε Ἀρχαῖ-
ων συντάγμα Ἀρχαῖων τε ἡγεῖ καὶ τοὺς ὑπάρχον 
Ἰερακοστάνους (i.e., as an Afghān, the chief of Northern India (Crooke, op. cit. l. 269-271; Calcutta Review, No. cliii. p. 180 ff.), who, though

be a
Semitic
and, after
is a
concerning the coming of Muhammad,
whereupon of their chiefs, headed by Kās, went to Medina and there accepted the new faith, spreading it in Afghanistan on their return. The
historic worthlessness of this legend is beyond question; and equally absurd is the tradition regarding Khālis ibn Valad, and the descendants of Pharaoh's nobles, who, after his fall, emigrated to India and settled in the Sulaiman Mountains. Many joined Abrāha in his attack on Mecca, but were converted, and later returned to the neighbourhood of their early home.

Turn from legends to facts. Afghanistan was traversed by Alexander the Great in his march to India, and it is alluded to by Strabo (p. 699) as ʿArābāt. This latter term is of particular interest, in that it represents the Sanskrit Gandhāra, which "lay on both sides of the Kabul river, immediately above its junction with the Indus" (McCricnde, Ancient India as described in Classical Literature, Westminster, 1901, p. 31, n. 4). After Alexander, the region came under the Gāndhārīs; so that suction and thus formed part of the dominions of the Greco- Bactrian and Indo- Scythian dynasties. With the latter line of kings a new religious influence was introduced into Afghanistan, particularly by Kanishka (1st cent. A.D.)—the faith of the Buddha. By this time nearly all trace of Zoroastrianism had probably disappeared, though even in the middle of the 19th cent. local tradition at Herat told of the destruction of a fire temple there by Muhammad b. Sulaimān b. Ḥassan b. Abi Ḥassan (Vigne, op. cit. 220-221) (Ferrier, Caravan Journeys and Wanderings, London, 1837, p. 181); while Zoroastrians seem to have flourished in the Pāmirs as late as the 13th cent., ruins of three forts ascribed to them still exist in Wakhān (Gordon, Roof of the World, Edinburgh, 1876, p. 141), where the natives even now treat fire with reverence, being reluctant to blow out a light (Wood, Journey to the Sources of the River Oxus, new ed., London, 1872, p. 333). Buddhism, however, has left not only many small figures at Hidda and Kabul (Vigne, Personal Narrative of a Pilgrimage to Iram, Kabul, and Afghanistan, London, 1840, p. 207), but also some sixty topees, dating mostly from the 4th and 5th cent. A.D., and found chiefly at Darunta, Chālar Bagh, Hidda, Kabul, Koh Daman, and Kohwāt; as well as ruins of elaborate monasteries at Jamajgir, Takhti-i-Bahi, and Sahri Bhalol, which show distinct influence of Greek art. Sculptures of the Buddha have also been found at Damian (Wilson, in Vigne, op. cit. pp. 187-192); and the Chinese travellers Fa Hsien (tr. Legge, Oxford, 1886, pp. 33-40) and Hiuen Tsang (tr. Beal, London, 1884, i. 98-103) both describe Kanishka's magnificent dagoba at Peshawar.

Modern Afghanistan, as noted in the preceding article, is wholly Muhammadan. Besides orthodox Sunnite orthodoxy, however, there exists a mixture of Semitic and Indian folk-belief. To this category belongs the vast number of saint-shrines (ārātā), which consist either of the domed tomb of some local saint enclosed in a shrine, usually surrounded by trees or bushes (Bellev, Journal of a Political Mission to Afghanistan, London, 1892, pp. 70-71, 107-109, 386)—a religious phenomenon common amongst both the modern Semites and Indians. Amongst the latter, the Religion To-day, New York, 1902, passim; Cooke, Popular Religion and Folk-Lore of Northern India, Westminster, 1896, i. 183-185, 189-229. Again, levirate marriage is practised, and it is a grievous sin to drive a man of childless issue from his wife. If the widow be again married, though, if she have children, it is considered more honourable for her to remain unwedded (Elphinstone, Account of the Kingdom of Cashmir, London, 1815, i. 236). Amongst some tribes, moreover, it is customary for the suitor to serve the father of his would-be bride for many years, as Jacob served Laban for Rachel's sake (ib. p. 240; Bellev, Journal, p. 27). The blood-feud, as amongst the Semites, is a sacred duty (Elphinstone, op. cit. George Conolly, Account of the North of India, London, 1838, ii. 163-165); and blasphemers, as amongst the Hebrews, are stoned to death (Bellev, Journal, p. 68). In time of pestilence a buffalo or cow is led through or around the village or camp, and the community are then ceremonially transferred to the victim's head, after which it is either slaughtered and its flesh divided between the priests and the poor, or it is driven into the wilderness (Bellev, loc. cit.). This practice, familiar from the Hebrew secapegoat, is also found extensively in Northern India (Cooke, op. cit. i. 142, 166-167, 169-170).

DREAMS, the evil eye, exorcism, ordeals, and omens are, of course, attentively regarded by the Afghan wise men. A strange sign that a murder has been committed, since, when Cain slew Abel, there was a similar commotion of the elements (Conolly, op. cit. ii. 137-146). The popular demons of Afghan folk-belief are jinn, perās, dīl, and parārīs. The jinn and perās are common to all popular Muhammadan mythology, but the dīls and parārīs (the latter word a semasiologic variation of pārti, "perāt") are plainly Indian in origin. The dīl, described as a woman about 30 years old of average size, having long nails, eyes curving down to the side of the nose, feet turned inward foremost, and feeding on corpses (Vigne, op. cit. pp. 211-212), is manifestly the churul of Northern India (Cooke, op. cit. i. 269-271; Calcutta Review, No. cliv. p. 189 ff.,), who, though
found in possession of all the inhabitable parts, either exclusively or in association with their Semitic kindred who have returned at different times to the common cradle-land.

The Hamites, who are called Libyans (Africans) by Herodotus, and recognized by him as the one antecedent people in the north (ix. 91), have throughout all this huge middle region, withabby breasts thrown back over her shoulders, stretching out her hairy arms to any length, and devouring those who answer her plaintive cry for help (Darmesteter, op. cit. i. 284–285), is clearly the Indian rakshas (Crooke, op. cit. i. 246–253), who play an important part in Hindu folk-tales. Though the Afghans are essentially an Iranian people (Denker, Races of Man, London, 1901, p. 420), they thus exhibit a total loss of Iranian concepts, for which they have substituted an amalgam of Semitic and Indian beliefs.

LITERATURE.—In addition to the works cited in the previous article, mention may be made of Lassen, Ind. Altertumskunde, i. 565–615, ii. 289–390 (Leipzig, 1867–74); Masson, Topen and Sepulchral Monuments of Afghanistan in the Iznik, Arican, and Tituqa, pp. 55–118 (London, 1841); Ferguson, Hist. of Indian and Eastern Architactures, pp. 72–79, 168–184 (London, 1874); Bellere, De Shabak, et les Champs Politiques du Sud; and Modin, Le Monde, 1889–92; Conolly, Journey to the North of India, ii. 135–160 (London, 1808); Nimat Allah, Hidie, etc. (1842); Alt. An-450, when Christianity was introduced by the Mazyes of Herodotus (iv. 191, 193), this term and its later forms as given by Ptolemy, Masics, Masics, being identical with Amevagh (plur. Masiehen), ‘free’ or ‘noble,’ which is still the collective name of all the Mauritanian Hamites. There are three well-defined divisions, which, with their chief sub-groups, may here be tabulated:

I. EASTERN HAMITES:

Ancient Egyptians and Copts; Nile valley from the Delta to the Delta, the land of the Pharaohs, Copts, and Nubians. The Pharaohs, as they are usually called, were a people of ancient Egypt, whose history dates back to the earliest times. They were a powerful nation, and their empire extended from the Mediterranean Sea to the Red Sea. They were a great people, and their civilization is one of the most ancient in the world. They were a people of great learning, and they are known for their great works of architecture. They were a people of great wealth, and they were a people of great power. They were a people of great beauty, and they were a people of great grace. They were a people of great nobility, and they were a people of great refinement.

The Egyptians were a people of great hospitality, and they were a people of great friendliness. They were a people of great love, and they were a people of great kindness. They were a people of great justice, and they were a people of great mercy. They were a people of great courage, and they were a people of great strength. They were a people of great wisdom, and they were a people of great knowledge. They were a people of great piety, and they were a people of great faith. They were a people of great beauty, and they were a people of great grace. They were a people of great nobility, and they were a people of great refinement.
the apostle Frumentius from Alexandria. Then the Bible was translated into Ge'ez (v. supra), which was at that time the current, as it is still the liturgical, language of the country; and this tongue has preserved some early Christian documents, the Greek or Syriac originals of which have been lost.

Having received its teachings from Alexandria, the Abyssinian Church is a branch of the Coptic, and consequently professes the Monophysite doctrine of Eutyches accepted by the Coptical patriarchs in the 8th century. The Abuna, or spiritual head of the Abyssinian Christians, is always consecrated by the patriarch of Alexandria, and for the last 700 years has even been of Coptic nationality. But his possibly dangerous political influence is neutralized by the Etakeje, a kind of national high priest at the head of the regular clergy, and of the debtura, or men of letters. These literati, although laymen, enjoy special ecclesiastical privileges, and thus serve to check the action both of the Abuna and of the religious orders, which are very numerous, and own a large part of the land. Like the mosques in Muhamma- dan lands, the churches and monasteries are the schools of the country, and over these the debtura have had control. In all the lands the Artuiza, a rudimentary state, and the only art still cultivated is painting, which was introduced in Byzantine times, and is employed exclusively for the decoration of the churches. A traditional canon of the art remains on the Etakeje, or the clergy, and sects, the good people to be represented in full face; all others in profile. Among the latter are included all their enemies, the Jews, the devil, and especially the Palashas, who are popularly believed to be the descendants of the crusaders, with their wer-wolves, of assuming the guise of dangerous animals, such as lions, panthers, or hyenas. These and many other pagan notions are still rife beneath the thin lacquer of Abyssinian Chris-
tianity.

After the 6th century the Aksumite empire disappeared from history, and was successively followed by those of Tigré in the north, Amhara in the centre, and Shoa in the south. Menilek, present king of Amhara, derives his sovereignty, and all his Himyaritic subjects are being slowly merged in a single Abyssinian nation-
ality, differing little in their physical and mental characters, and speaking two distinct modern forms of Ge'ez, one for the inhabitants of the north and Amhara in the south, the parting line being the Takkazé river. But all these his-
torical Himyarites of the plateau are to be dis-
tinguished from the Zabalgat Himyarites, who probably preceded them in this region, and have been settled from time immemorial in the district of the Blue Nile and its Dender affluent east of Senaar. These Zabalgats never came under Hellenic or later Muslim influences like their Funji neighbours, and hence are neither Christians nor Muslims, but another, yet still Semitic, people, called by the same Semitic rite as their Maen and Sabaeon forefathers. They are called 'fire-worshippers,' but do not worship the fire itself, which they regard only as a great purifier and as an emblem of a Supreme Being, who reveals himself in this element as well as in the heavenly bodies. Hence they turn in prayer to the stars or towards the rising and the setting sun, and kindle great fires over the graves of the dead. But there is also a second demon, whose worship has to be availed of by offerings and sacrifices. The two principles of good and evil would thus appear to be recognized, as in so many other religions which can have had no direct contact with the old Zoroastrian system. The Zabalgats differ from the Muslim Arabs in many other respects, being strict monogamists, keeping no slaves, and recognizing no hereditary sheikhs.

Even before the great Muslim irruptions of the 7th and later centuries, the northern Arabs, mostly, no doubt, Bedaun from the Nejd plateau, had ranged into North Africa, and混踪 is made of the Rundites, who had already penetrated west-

wards to Mauritania before the rise of Islam. But the great movements which have made the Arab race, language, and religion dominant throughout North Africa, began with the conquest of Egypt in the 7th century. Later came the peaceful but ethnically more important immigration of North Arabian tribes, instigated by Ahmed ibn-Ali, who died in 1045. Then took place that tremendous dislocation of the indigenous populations during which a large section of the Berbers withdrew from the plains to the Mauritanian uplands, while others retired to the Saharan oases. Here they were followed later by the Arabs themselves; so that at present the pure Arab and mixed Arabber tribes form the great majority of the inhabitants of Tripoli, Mauritania, and the Sahara; while the Arab language and the Muslim religion prevail almost exclusively amongst the native populations in the main Along the northern seaboard, from Marakesh and Fez to Cairo and Alexandria. The old Hamitic languages, however, still persist amongst the Muhammads of the Sahara (Tuaraga, Tibus), the tribes of the Siwa and Aujila oases, and many of the Berber groups in the Atlas uplands. Islam, long the exclusive religion of Arabs, Berbers, and Tibus, presents few special features, except where it assumes a political aspect, as among the Senus or the Emperor, who is said to have been an immense influence throughout the Muslim world. It is so named from the Algerian sheikh Senus, who set up as a zanawis governor or re-
former, first in Mecca, then at Bengazi in 1848, and is now a powerful heautocracy in the Sahara, and is said to have been 'in the odour of sanctity.' Since then the brotherhood has continued to flourish under its successors, the Mahdi ('guided'), who are destined to restore the power of Islam to its former splen-
dour. Numerous zanawis (convents), each a little centre of religious fervour, industry, and even culture, have sprung up in Tripoli and the Saharan oases, and the Faredgha 'mother-house'—convent, mosque, school, hospital, and stronghold combined—has thus become the headquarters of a powerful organization, which has for its spiritual adherents, and makes its influence felt from Mauritania to Mesopotamia. The society continues to expand throughout North Africa; and although it looked askance at the late Nubian Mahdi and his Khilafah successor at Omdurman, that was only through jealousy, and because its time had not yet come.

Of the strange interminglings of Muhammadan-
ism with primitive religions, some instances are in the people and the Meteene, who represent the ancient Garamantes, and were nearly all pagans till they became at least nominal Musal-
mans in the 18th century. Some still practise heathen rites openly, and amongst the Bees of the
Exnedi district Allah has not yet been dethroned by Yido, the native name of the Supreme Being. In the same district a kind of mana or supernatural virtue is ascribed to the kintok, a species of motled stone of somewhat rare occurrence in the country. During the prayers addressed to Yido this stone is sprinkled with flour and with the blood of a sacrificial camel, and it then remains for its fortunate owner the success of all his projects and confusion to all his enemies (Nachtigal, Sahâra u. Sudan, ii. p. 176). Polygamy is not controlled by the Qur’ânic law, the number of wives being merely a question of ways and means, while the male is obliged to feed and clothe his wife’s father’s wives except his own mother. Matriarchal custom persists, as is shown by the fact that the wife continues to reside in her parents’ home till the birth of the first child, and permanently if there is no issue; in which case the husband receives back the camels paid to his father-in-law for his bride.

Although passing for good Muhammadans, the Tedaas (Northern Tibus) do not abstain from lakbi (palm wine), and now and then sacrifice a goat for rain or other favourable season. They have numerous parts of the body, and think that ailments may be cured by drinking the water used for washing Qur’ânic texts written on the inside of a cup. Similar texts contained in little leather bags make their spears and other weapons more deadly, and also help them in cases from the devil’s eye. Their half-Arabized Fezzanese cousins put great faith in the marabouts, who are more numerous and influential in Fezzan than elsewhere. They are much employed as sorcerers in thwarting the machinations of the great demon Ish or Shalân and the innumerable other wicked jinns, common enemies of mankind, against whom Allah appears to be powerless. In the Timbuktu district the marabouts are, or were formerly, replaced by the sanûtan, a sort of African shamans, who employed music to work themselves into a state of ecstasy, in which they pretended to hold communion with the souls of departed Muslim saints. From these they received instructions as to the proper animals—a white or red cock, a hen, a gazelle, a goat, or an omelette—then offered to the sanûtan, who ate the last. In such cases incense was burned, and the cooked meat was served to the patient and those present, the blood, the bones, and feathers being buried as a sacrificial offering to the dead saint.

The Muslim Oueddoune belief is universal that below the surface the Sahara is everywhere peopled by a class of supernatural beings called Ahî-at-Trab, who delight in playing mischievous pranks on wayfarers in the desert. They seize and pull down the camels’ feet, causing them to sink in the soft sands; they gnaw off the roots of the desert plants, thus killing the scanty vegetation; on the approach of the thirsty traveller, they drink up the water of springs and wells; they even come to the surface and assume bodily form to deceive and torment the living. All unexplained natural phenomena, such as the pillars of sand raised by the whirlwind, are referred to invisible agencies, and the mysterious droning heard on a still night in many parts of the wilderness is the voice of the jinns conversing among themselves (Harding King, A Search for the Masked Tawarsiks, pp. 39, 42).

Although little influenced by the teachings of Islam, the moral character of the Tuaregs and Mauritanian Berbers is greatly superior to that of their western neighbours. Apart from the blood-feuds, vendettas, and predatory expeditions permitted by tribal usage, the vices so common amongst the Moors are unknown in the homes of the Berbers. They seem to possess none of that uncontrollable passion that is so large a feature in the Arab character, and its place is taken by affection and sincerity. No doubt, to a great extent the moral character of the Berbers is due to the fact that their women are allowed entire liberty, do not veil their faces, and mix on almost all occasions with the men (W. B. Harris, Taqilat, p. 160). The Arab, still a nomad herdsmen, who holds that the plough-share and sheep enter hand in hand for his fortune, remains a fanatic ever to be feared, because he blindly obeys the will of Allah proclaimed by his prophets, marabouts, and mahdis. He is ruled by a despotic and theocratic sheikh, in accordance with the precepts of the Qur’ân; whereas the agricultural Berber, with his shop and stable, and his fanatical learned code, feels himself a freeman, is a born sceptic, cares little for theological dogmas, and is far less a fanatic than his Semitic neighbour. Although many of the Mauritanian tribes have adopted the Arabic language, the process of assimilation appears to be arrested, and the Berber is now everywhere gaining on the Arab. 'He is the race of the future, as of the past' (Dr. Malbot).

In a remarkable ethnological generalization, Herodotus tells us (iv. 197) that the African known to him four hundred years previous to him was divided into two indigenous, the Libyans (our Hamites) and the Ethiopians (our Negros); and two intruders, the Phœnicians and the Hellenes. Since then other intruders (tēphakos), such as the Romans, Vandals, Bulgarians, and Cherkesses, have been added. While other later arrivals—Arabs, Jews, Turks, Italians, Iberians, French, Britons, Dutch, Belgians, Germans—have settled round the seaboard, and, by occupying their respective ‘Hinterlands,’ have made nearly the whole continent a political dependency of Europe. But these movements have scarcely affected the ethnical relations, and the statement of Herodotus regarding two indigenous races (tēphakos)—Libyans in the north and Ethiopians in the south—still holds good. Thus the Libyan (Hamitic) domain, as above described, is everywhere conterminous with the Ethiopic (Negro), which comprises the section of the mainland south of the parting line indicated at the beginning of this article, together with the adjacent island of Madagascar. Amid the great mass of humanity there are exf the blond and long-standing inter- minglings—Arabo-Berbers and Fulahs in the north, Malayans in Madagascar,—and also some aboriginal elements, such as the Negritos in the forest zone of the Congo, the Bushman-Hottentots in the southern steppe lands, and the aboriginal population of the Limpopo basin. But, taken as a whole, these Negro and Negroid populations present sufficient uniformity in their physical, and still more in their mental, characters to be grouped together as one main division of mankind. More, perhaps, on linguistic than on ethnical grounds, they are usually divided into two great sections: Sudanese Negroes, of diverse speech, north of the equator; and Bantu Negroes, of one speech, thence southwards.

Sudan—that is, the region which stretches south of the Sahara between the Atlantic Ocean and Abyssinia—is commonly regarded as the original home of the Negro stock; hence its Arabic name, Bilad-as-Sudân, 'Land of the Blacks,' the Nigríta or Negroland of our early writers. Although it has been largely encroached upon by Hamites and Semites from the north and east, here are still found many of the most typical Negro populations, such as the Serers, Felups, Timni, and Krumen of the West Coast; the Tahi, Eve, and Yorubas of the Gold and Slave Belts; the Banchei, Mosurs, Michi, and Yedinas of Central Sudan; the Igarraas, Iboas, and Benins of Southern Nigeria; the Mbasas, Nubas, Denkas, Golos, Shilluks, Baris, Bongos, and Nuers of East Sudan and the White Nile; and the Zandeas (Niam-niam), Mangbetas, Monfusas, A-Barambos, and A-Babuas of the Walle basin. These are all
uncivilized pagans, who speak a great number of radically distinct Negro languages, and exhibit Negro physical traits, often to an exaggerated degree. These traits, which prevail with marked uniformity over wide areas, were already special in the times, as we see from the portraits depicted on the early Egyptian monuments, and clearly proved for us, if we find them graphically summed up in the description of a negress attributed to Vergil (Moretum, 32-35):

"Atta genus, tota patriam testante figura, 
Toegli linguis, turpis manu praestante flava, 
Vestis alta, facies mammis, compressor auro, 
Cruribus exilis, spatium prodigia planta."

Standing out in marked contrast to all these primitive peoples are the relatively civilized Hamito-Negro or Semito-Negro nations, such as the Mandingos, Songhais, and Fulahs in the west; the Hausas, Kanuri, Baghirmi, and Mabas of Wadai in the centre; and the Furs and Nubians in the east, who are all Muhammadans, and of diversely modified Negroid type, but still speak independent languages of Negro stock. From these striking contrasts between the pure Negro and the mixed Negroid peoples the inference has been drawn that the Negro left to himself remains Negro in every sense of the term, and without miscegenation is incapable of making any advance beyond a low social and intellectual level. For this arrest of progress seen everywhere in Africa and the New World (Ellis, Peoples, States, p. 32-35) an physiological explanation has been sought in the early closing of the cranial sutures, preventing any further expansion of the brain after puberty. 'A cet arrêt intellectuel doit correspondre la soudure de la boîte crâniale; le développement du crâne, s'arrêt et empêche le cerveau de se dilater davantage' (Binger, Du Nager au Goût des Guéins, ii. p. 246). Hence it is that the Negroes often display in early life a degree of intelligence even superior to that of European children. 'They acquire knowledge with facility till they arrive at the age of puberty, when the physical nature masters the intellect, and frequently completely deadens it. This peculiarity has been attributed by some philologists to the structure of the cranium, and it is worthy of note that throughout West Africa it is by no means rare to find skulls without any apparent transverse or longitudinal sutures' (Ellis, The Ewe-Speaking Peoples, p. 13).

The chief subdivisions of both the Sudanese and the Bantu sections will be found in art. ETHNOLOGY (Conспектus). Between the two sections the most conspicuous difference is the linguistic confusion which prevails in Sudan and the linguistic unity which is the dominant feature in Bantland. Except in the south-western Bushman-Hottentot territory, in Madagascar, where a Malayo-Polynesian tongue is exclusively spoken, and perhaps amongst the Negroids of the forest zone, all the current idioms are closely related members of the same language. And as the tribes themselves are not so closely related, but, on the contrary, often present considerable physical differences, it follows that the Bantu is far more intelligible as a linguistic than as an ethnical expression. In fact, a Bantu is, strictly speaking, nothing more than a full-blood or more often a half-blood Negro of Bantu speech. In general, all are mestizos, showing every shade of transition between the Negro and the Caucasian (Hamito-Negro and Semito) elements. The Negro has apparently everywhere formed the substratum, which has, so to say, been leavened in diverse proportions by very old and later Caucasian infiltrations from the north. These interminglings have resulted in endless modifications of the physical characters, but have left the original Bantu form of speech untouched, as is always the case where two or more races are merged in one. The ethnical groups form new combinations by miscegenation, while the languages, being incapable of miscegenation, all perish except one. Hence it is that in the Bantu domain we have many physical races with only one unblended, and in the case of a people who call themselves one nation the kings of the national dynasty were revered as demi-gods. Their souls were supposed to dwell in and inspire the witches, and everywhere there are persons called 'wizards' who are supposed to possess the power of communication with the deities; their names, or the pretended forms of their names, are always supposed to have a magical power, and unless certain observances are performed, they are often regarded as demons. Hence the belief in a supernatural power to do good or evil, and the absence of any system of moral and religious principles, is the dominant feature of all African primitive religious systems. That the spirits of the dead are the gods of the living is a formula that applies equally to the Sudanese natives of Upper Guinea, and to the Bantu populations of Uganda, the eastern coasts, and Daromaland. Amongst the Gold and Slave Coast peoples there are many local and general personifications of the powers of nature; but these were held in slight esteem compared with the ancestral gods. Two divergent orders of spirits were supposed to exist; the one, the former, formed the substratum of the national dynasty, and of the national, who were deified, and in whose honor public sacrifices were offered. The souls of the dead were supposed to dwell in and inspire the witch-
doctors; shrines were raised over their graves, the maintenance of which was a religious duty, and here were offered the human sacrifices, as many as two thousand by the late King Mtesa. The demon Ndaula, whose abode is on the Gambaragara heights, whence he plagues the people with small-pox and other evils, broke his bow and knife and joined with one of the early members of the Uganda dynasty. The trees planted round the ancestral graves were sedulously tended by wise women, whose oracles, like those of the Turkish priestesses, were taken as decisive in certain political crises. The course of events was thus determined by divine intervention associated with human sacrifice. If the deceased owned several slaves, an enormous hole is dug for a grave. The slaves that were caught immediately on hearing of the death were carried forward. They may be either cast into the pit alive [being made fast to slave-sticks], or the undertakers may cut all their throats. The body of their master or their mistress is then laid down to rest above theirs, and the grave is covered in (ib. p. 107). We know from Commander Cameron and most other early travellers that similar and even worse atrocities were of constant occurrence all over the Bantu lands, before and after their suppression by the European powers, up to the year 1884. It is thus again seen that in these respects the Bantus stand on the same low social level as the Sudanese negroes.

On the West Coast nature-worship was, as a rule, perhaps more prevalent than on the east side. Here Munkulunkulu was controlled by the Great Tree and by a supreme deity, who also has many variants, and is similarly described by some observers as a ‘Supreme Being.’ But this is denied by the Rev. W. H. Bentley, our best authority on the subject, who rejects the far-fetched explanations of Kolbe and others, adding that ‘the knowledge of God is most vague, scarcely more than nominal. There is no worship paid to God’ [in Kolangola] (Dict. and Gram. of the Kongo Language, p. 90). Farther south, Mulungu reappears, under the form Mukuru, amongst the Bushmen and the Bantu Hereros of ‘great Mungu’ Lat. alt.us, cognate with Teutonic alt, ‘old’; so that the word really connotes a deification of the great departed, and is thus a direct outcome of the universal ancestor-worship. This is also fully attested by Mukuru, that of Bleek, which holds that the term originally meant ‘great ancestor.’ Thus, as in Celebes, where empong (=‘grandfather’) is the generic name of the gods, Unckulunkulu becomes the Divine progenitor of the Zulu Bantu people, while of Mulungu, the form current in Nyasaland, the Rev. Duff Maclean, writes: ‘In all our translations of Scripture where we found the word “God” we used Mulungu; but this word is chiefly used by the natives as a general name for spirit. The spirit of a deceased man is called Mulungu, and all the prayers and offerings of the living are presented to such spirits of the dead. It is here that we find the great centre of the native religion. The spirits of the dead are the gods of the living’ (Africana, I. p. 59). And again: ‘Their god is not the body in the grave, but the spirit [Mulungu], and they seek the spirit at the place where their departed kinsman last lived among them. It is the great tree at the verandah (kopenu) of the dead man’s house that is their temple; and if they grow near their graves they are offered some sweets, and there perform their simple rites’ (ib. p. 60). Hence we have the very inceptient stage itself of ancestor-worship again closely interwoven with the tree element. Then comes a further development, in which the departed spirit reveals himself first in dreams, and later through the jukwaneesta, the priestesses or prophetesses, as in Uganda and Hellaas. ‘The god comes to her with his commands at night. She delivers the message in a kind of ecstasy. She speaks (as her name implies) with the utterance of a person who is in an excitement. During the singing of the communication her ravings are heard sounding all over the village in a high key’ (ib. p. 61).

We seem to be reading an extract from Pausanias on the Delphic Oracle. And the broad statement is made that the spirit of every deceased man and woman, with the solitary exception of wizards and witches [who become hyenas], becomes an object of religious homage. The gods of the natives, then, are nearly as numerous as their dead’ (p. 68).

In Nyasaland, in Uganda and elsewhere, ancestor-worship eventually became associated with human sacrifice. ‘If the deceased owned several slaves, an enormous hole is dug for a grave. The slaves that were caught immediately on hearing of the death were carried forward. They may be either cast into the pit alive [being made fast to slave-sticks], or the undertakers may cut all their...’

A. H. KEANE.

AGAMA.—In the oldest Buddhist writings this is the standing word for 'tradition' (Vinaya, ii. 249; Aṅguttara, ii. 147). This usage is maintained in the Milinda (215, 414) and in the Mahāvamsa (ii. 51). But from the 5th cent. A.D. onwards the word usually means a division of the Sutta Pītaka—the same portion as was, in the older phraseology (Vinaya, ii. 287), called a nīkāya. The reason for this change was that the latter word (nīkāya) had come to be used also in the sense of a division of discipulæ, a school or sect, and had therefore become ambiguous. In Buddhist Sanskrit books this later use of agama seems to have supplanted entirely the use of nīkāya; but our edited texts are not sufficient in extent to enable us, as yet, to state this with certainty.

T. W. RHYS DAVIDS.

AGAOS.—1. The Agaos or Agows, a name applied to various groups of Hamites who do not properly come under the title of Semitic, are the principal and active Hamitic population of Abyssinia. Formerly they occupied a large extent of the plateau, but were gradually driven, in prehistoric times, towards the south and west by incoming peoples—the Hymar, the Falashas, and in the latter case by the Ge'ez-speaking peoples of the desert tongue. The latter are now divided into the Tigre and Amhara branches, but the Amhara, who crossed the Takkazä, are much mixed with the Hamitic element, while their Ge'ez speech has been greatly modified by the primitive language of the conquerors. At present the Agaos, whose name means 'the free,' are composed of several groups scattered throughout the region between the Takkazä and the Abai, mainly in subjection to the rule of the Negus Negust, but retaining their own customs and speech. They are found chiefly in the province of Lasta, on the upper Takkazä (where they were completely reduced only in the 17th cent. by the Emperor of Abyssinia), and in the districts to the south-west of Lake Tana or Tsaña (where they give their name to one province, Agaomidir or Agao-land), which is almost entirely peopled by them. They are characterized by broad and high cheek-bones, yellow complexion, and strong, coarse, straight hair, and are of the Caucausian type, like their Semitic conquerors, from whom they do not differ much in appearance. The name Agaos is probably to be found in the Aththägu of the inscription at Adulis, dating from the beginning of the 2nd cent. A.D., discovered and preserved by Cosmas. This may be the district of Addago on the Takkazä, with a population of Agaoo blood. Cosmas (A.D. 550) remarks that they cultivate, and says that they acknowledged the authority of the kings of Aksum. About 400 years later, the Agaos of Senem, under their queen, Judith, were strong enough to expel the Menilk dynasty from the throne of Aksum (J.A. 1863). The Agao speech is said by Beke to be the language of the people of Abyssinia, and Amharic is that of the court, the army, and commerce. It is spoken from the Sanhait district in the N.E. to Gojam and Shoa in the south, under different names and in a variety of dialects, and in some parts of the country it is almost lost. The people themselves in Lasta it is known as Ḫam转入ja; this group also call themselves Ḫamra, now found in the name Amhara borne by the district between the Takkazä and the Abai, and suggesting that the present Himyariite Amhara people may have borrowed their name from that of some of the Hamitic aborigines. D'Abbadie calls the Lasta Hamites Ḫamra—a word connected with Ḫam转入ja (Athenaeum, 1845, 359); while Beke (JEGS xiv. 56) calls their language Ḫamra. Ḫamra, still borne by the Khamants of Lake Tana, and Ḫhamra were probably names of earlier dominant Agao tribes.

2. The principal divisions of the peoples who may be classed as Agaos are the Agaoos of Lasta (Bruce's 'Tcherats Agaos'), including the Khamants; those of Agaomidir and the surrounding districts enclosed in the sweep of the Abai as it issues from Lake Tana; and the Falashas. Both the first groups are divided into seven tribes, probably from some sacredness in this number. The second group call themselves Aghagha, according to Beke (JEGS xiv. 10). The Falashas, whose language closely resembles the Agao, are found scattered through the province of Semen and neighbouring districts, as well as in Agaomidir. Beke claims this similarity as evidence that the Falashas originated from Judæa with the Queen of Sheba, and follow the rites of Judaism. Hence they are frequently called the Jews of Abyssinia. But they are certainly not Jews by descent, nor are their features necessarily, in children, much different from those of the Agaos. Possibly their Jewish faith is the survival of some earlier diffusion of Judaism through Abyssinia before the introduction of Christianity, as there is no record of their conversion. They are divided into three sects, each headed by an old priest; they hold themselves aloof from the other peoples of the land, do not practise polygamy, and never marry out of their own tribe. Entering a Christian house is strictly forbidden; when this has been done, if unexcused, it requires the priest to wash his person. Their places of worship or masjide are distinguished by a red earthenware pot placed on a pinnacle. They are divided into three compartments, each of different sanctity, as in the Jewish tabernacle, and admission to each is strictly regulated by the Levitical law. Behind is a small enclosure with a stone on which sacrificial victims are slaughtered. Though they have incorporated with their customs several ceremonies drawn from Christian sources, especially in the ritual of purification and of feasts and keeping the Sabbath. Some of their sacrifices, however, differ from those of the Jewish law. They observe great ritual scrupulosity. The dying are not permitted to die in the village; they are killed in a hut specially built for this purpose. They fast twice a week, as well as for forty days before Easter. Their ideas about the Messiah are vague, but they believe that Jerusalem will again be rebuilt. The priests must observe several tabus from which the people are free; some of them are great ascetics, passing years in dismal swamps, and sometimes in a frenzy throwing themselves into the waters. As a people the Falashas are inoffensive. They are devoted to agriculture, and says Beke, 'they are the artisans in various towns of the province (see D'Abbadie in Nouvelles Annales des Voyages, iii. 84 ff; Stern, Wanderings among the Falashas, 1862; Beke, JEGS xiv. 8).

3. The other branches of the Agaos were pagans, or possibly pagans with a veneer of Judaism, as the name of their queen, Judith, would suggest, until the advent of the Portuguese missionaries in the 16th and 17th centuries. By them they were in part converted to Christianity of a nominal type, and the process was almost entirely destroyed by the final subjugation to the Abyssinian emperors. Like the rest of the Abyssinians, they are of the Monophysite sect, and assert their orthodoxy as strongly as any; but it is probable that, beneath their nominal adhesion to the faith, there are many
survivals of their earlier paganism with its cult of sun and moon, trees, rivers, and animals, of which the cow was the chief. No complete account of that primitive paganism is now available, but it was evidently nature-worship of no high order, and in its observances the fertility of the land was aimed at. Hence the worship of rivers, and especially of the Nile, was promulgated. Survivals of these rites are described by Lobo and Bruce. The springs from which the Nile rises were the scene of an annual gathering of the tribes for this cult. A small mound formed the altar upon which the offerings were made, and which was fumigated before the sacrifices. To this place once a year, on the appearance of the star Sirius, the sham or priest called the heads of the Aga clan. A black heifer which had never borne a calf was slain, its head cut off and plunged into one of the springs, and then wrapped up in the hide, which was sprinkled with the sacred water. The carcass was laid on the mound, washed with water, and divided into as many pieces as there were heads of clans. Each head received a piece, and the flesh was eaten raw, with draughts of the Nile, which the latter says that the Aga drank. Each man killed one or more cows. The bones were collected into a heap, and the priest, having annointed himself with the fat, sat down on the heap, which was then set on fire. As the flames increased, he harangued them, the first doing him no injury. When all was consumed, each male clan head made him an offering. The head of the animal was carried to a cave, where other ceremonies were performed, apparently for the purpose of ensuring rain and good seasons. The spirit of the river was called by the highest Divine names—Eye of the World, the Everlasting God, etc., and the priest told Bruce that it had appeared to him in bodily shape like a venerable man (Lobo, "Voyage to Abyssinia," Eng. tr. 1735, 89; Bruce, "Travels," ii. 730). This cult is obviously based upon the importance of the river to the whole region through which it passes, and is not unlike the rites performed by the ancient Egyptians at the rising of the Nile and the appearance of Sirius, the star of Isis (Frazer, "Adonis, Attis, Osiris," i. 82). Similar rites were practised by other tribes (La grande Encyc. i. 177), and human sacrifices to river-divinities are also spoken of; these also occurred in Egypt (Johnson, "Travels in S. Abyssinia," 119). A modified form of these rites still prevailed in Beke's time (1804), and sick persons are still brought to the springs of the Aga, and left there for seven days in hope of their recovery (Beke, "JRGs" xiv. 13). Serpent-worship was prevalent in Abyssinia in earlier times, and a great serpent called Arwe figures in the early history of the people. Some remains of this cult are found among the Agaos. The preservation of serpents was prayed for; they were believed to give oracles, and in some cases they were kept in the houses of the people and fed. If the animal did not eat, ill-luck was said to attend the people (Bruce, ii. 732). Miraculous stories of serpents are found in the legendary lives of Abyssinian saints (Parkyns, "Life in Abyssinia," 298). Other relics of earlier animal-worship may be seen in the claim of the Agaos of Lake Tant to understand the language of birds, by the interpretation of which they regulate their affairs (Powden, "Travels in Abyssinia," 124). The Falasha, on account of their skill in metal working, and some of the Agaos, are regarded as sorcerers and bandas or werewolves. They are believed to take possession of their victims, who exhibit curious symptoms of hysteria, and try to get into the forest, where their persecutor, in hyena shape, devours them (see LYCANTHROPY).

4. The Khamants, scattered through Amhara and Sho, claim descent from Moses, but are regarded as pagans by both the Falasha and the Abyssinians. They are said to believe in God and in a future state, but are called worshippers of forests from the rites performed by them under trees. Other 'secret acts of devotion' at certain rocks are also spoken of. A scheme of King Theodore's for their compulsory conversion was overruled by his advisers (Stern, 48, "La grande Encyc.", i. 177; Reclus, "Unord.", iii. 147). It is not clear whether the Waato, dwelling on the eastern shore of Lake Tant, belong to the Aga race. They speak the Agao language, but are an extremely primitive people, supporting themselves by hunting and fishing, and regarded by the other tribes as uncivilized. By them, therefore, they are called 'idolaters,' a vague term, but they call themselves Christians (Keane, "Africa," 494; St. Martin, "Géog. Univ." i. 30).

AGAPE

I. Summary of theories.

2. Ecclesiastical writings to the end of the 3rd cent.; Diodorus; Ignatius; Flavius; Justin Martyr; Celsus; Minucius Felix; Lactantius; Epictetus; Donatus; Acts of Paul and Thecla; Acts of Perpetua and Felicitas; Ireneus; Clement of Alexandria; Tertullian; Canons of Hippo; Acts of James and Marcellus; Origen; Cyril; Acts of Polycarp; the older Dresden.

3. Writings of 4th. cent. and later; Church Orders; Councils of Laodicea, Carthage No. 8, Gangra; pseudo-Floridus; Chrys neces; Theodosius; Augustine; Socra tes; Sozomen; Trianon Council.

4. Funeral and commemorative Agape.

5. Archaeological and epigraphic evidence.

i. Review of the evidence.

(a) General deductions.

(b) Relative order of Agape and Eucharist when united.

(c) The name 'Agape.'

(d) Materials for the Agape.

ii. Origins of the Agape.

Literature.

i. Summary of theories. — The Christian Agape or Love-Feast is one of those subjects which are apparently easy, but which are shown by careful study to be exceedingly difficult. At one time there was little doubt about its origin and history; but in the last few years it has attracted much attention, not only in Great Britain and in Germany, but also more especially in France; and views which were formerly held almost as a matter of course have been emphatically called in question, with the result that there is at present nothing like unanimity among scholars as to the origin and history of this curious custom of Christian antiquity. It may be well, by way of preface, to state briefly, and as far as possible in general terms, the views that have been entertained, grouping together those which differ only in minor details.

(a) The view which was almost universal, and which is still by far the most common, is that from the first the Christians celebrated the Eucharist and the common meal to which some liturgical importance was attached, and which was called, from at least the latter part of the 1st cent., the 'Agape'; that the Eucharist and the Agape were at first united, but that, by reason either of abuses or of external persecution, they were disjoined at some time in the latter half of the 1st or the first quarter of the 2nd cent., though the time of the separation was not the same in all countries.

(b) An entirely different view has lately (1902) been published by Mgr. Batifol, who thinks that the Agape itself did not exist till the 3rd cent.,
beginning as a private charity supper, and becoming a more public organization in the 4th cent.; that though in the earliest ages the Christians sometimes had meals in common, these did not, except as an abuse, have any connexion with the Eucharist, and that the name ‘Agape’ in writings of the first two centuries was another designation of the Eucharist itself. (c) A view which has found much favour in Germany is that the Agape was the original institution, and that the Eucharist itself grew out of it, or that there was no real distinction between them (Spitta, Juliuscher). (d) Ladeuze and Ermoni consider that both the Agape and the Eucharist are Apostolic, but that they were in reality perfectly distinct rites, though sometimes joined as in 1 Co. II. (e) Dean Armitage Robinson and a writer in the Church Quarterly Review (July 1902) hold a somewhat undefined but perhaps intermediate position, being dissatisfied with the first of the views enumerated above. Dr. Robinson (Ecclesiastic. Bibl. a. e. ‘Eucharist’) suggests that every meal was probably hallowed by Eucharistic acts, especially the daily meal for the poor (Ac 6), but that these should be distinguished from formal Eucharists like that in Ac 20. The Christians had stated charity suppers, he thinks, parallel to those in Greece; and if in the latter there is any use of these cannot always be distinguished from Eucharists. The Eucharist was gradually separated from a common meal; the original institution developed in two ways, liturgically into the Eucharist, and socially into the supper; and the two, as developed, the more decided became the separation. Such are the various theories that have been maintained; we shall return to them when we have cited the evidence.

I. FOR CHRISTIAN COMMON MEALS AND FOR THEIR CONNEXION WITH OR SEPARATION FROM THE Eucharist.—It is proposed to gather together here all the evidence; for it seems unreasonable to put out of view, as is suggested by the Church Quarterly Reviewer, all evidence of suppers where the word ‘Agape’ is not found. We shall discuss later the name ‘Agape’ itself; here it may be remarked that the most important matter to be considered is the thing implied. The matter does not concern us, whether it was universal or not; if it was universal, there is no special reason why it should have been mentioned in all the authorities, many of whom allude only incidentally to the custom now under discussion.

(a) Estienne. (b) We may first take Acts, as indicating the earliest Christian customs, though the book itself was written later than 1 Corinthians, which we will next consider. In neither of these books is the name ‘Agape’ mentioned, but in Acts probably, and in 1 Corinthians certainly, there are allusions to a common meal having some connexion with the Eucharist. In Ac 2nd we read that the Christians continued steadfastly in the Apostles’ teaching and fellowship (εὐθεῖας τε ἐν τῇ κοινωνίᾳ καὶ ἐν τῷ κόσμῳ), and in v. 46, that they ‘day by day continuing ... in the temple, and breaking bread at home (κατὰ τὸ κόσμῳ ἐν τῇ κοινωνίᾳ καὶ ἐν τῷ κόσμῳ), did take their food (εὐφαγίας) with gladness and singleness of heart, praising God,’ etc. The expression ‘to break bread’ is found also in Ac 20, where St. Paul, at Troas, after preaching till midnight on the ‘first day of the week,’ and after the Eutychian incident, broke bread and ate (κατὰ τὸ κόσμῳ καὶ εὐφαγίας) ... till break of day—apparently an Eucharist with or without a meal, though Alford (Gr. Text. in loc.) and Bp. J. Wordsworth (Ministry of Grace, p. 316) think that γεύσασθαι certainly means a meal (cf. Ac 10),—and in Ac 27th, where an ordinary meal is almost certainly spoken of. The phrase was used by the Jews (Jer 16, Le 4), and we find it, or the corresponding substantive, in NT in connexion with the Feudings (Mt 14th and Mk.), the meal at Emmaus (Lk 24th), and the Eucharist (Mt 26th and Mk. Lk. and 1 Co 10th), in the last of which verses, however, εὐφαγίας agreeing with σῶμα must doubtless be omitted, with ABC. In view of these facts, we must conclude that ‘to break bread’ (κατὰ τὸ κόσμῳ καὶ εὐφαγίας) was used in the Apostolic age sometimes of an ordinary meal and sometimes as a technical name of the Eucharist, or perhaps of the Eucharist and a meal combined. In Ac 2st the article (‘the breaking of bread’) shows that an ordinary meal is not meant, and we have to take the reference to be to the Eucharist, with or without a meal eaten in common, and the word ‘food’ (εὐφαγίας) in v. 46 will probably lead us to think that the Eucharist with a meal is meant. The Peshitta reading in v. 46 (‘the breaking of the Eucharist’) does the other way, but seems to be a mere gloss due to later ideas. The phrase κατὰ τὸ κόσμῳ in v. 46 (i.e. ‘at home’ or ‘in a private house’) has probably no bearing on the matter, as being merely opposed to ‘the Temple;’ it is not likely that the meal was going from house to house to partake of a common meal.

(b) In 1 Co 11th we have an undoubted reference to a meal taken in common (εὐφαγίας, probably, though not necessarily, separate) and combined with the Eucharist, when the Corinthians were in meeting assembled (ἐν τῇ κοινωνίᾳ, v. 18); abuses of greed and drunkenness are censured, and St. Paul promises to set the rest in order whensoever he comes. From the passages here we have concluded that the earliest custom was for the Christians to combine the Eucharist with a meal taken in common. Lightfoot (Apost. Fath. pt. 2, ii. 313) and Duchesne (Origines, p. 48, in Eng. ed. p. 49 n.) further deduce that the meal came first and the Eucharist ‘at a late stage in the entertainment;’ this (apparently) being suggested by the emphasis laid by St. Paul on our Lord’s having taken the Eucharistic cup after (εὐφαγίας) the supper (τὸ κρεβάτιον), and that 1 Cor. 1st ser. p. 281) thinks that the union of meal and Eucharist was an innovation of the Corinthians, and that it is the union itself that St. Paul censures. If so, we cannot argue any common custom from this passage. Against this view, Ermoni (L’Agape, p. 9 ff.) truly remarks that St. Paul does not attack the thing itself, but only the abuse of greed and drunkenness, seeing that each one ate what he had brought, not partaking with others. St. Paul would not, Ermoni says, have hidden them wait for one another if the meal itself, in union with the Eucharist, were the thing condemned. All knew that the Eucharist began when the community were assembled. And, further, the Father’s who comment on the passage in the NIC., say that in the early Church combined,—Chrysostom, Theodoret, Augustine, Jerome,—though Chrysostom, imbued as he is with the discipline of his own time (of fasting communion), puts the Eucharist first: Augustine says that it was St. Paul that gave the rule of fasting communion in consequence of the abuse at Corinth (Ep. cxviii. [iv. Beneed.] ad Januarius, § 8).

(c) In Jude, and probably in 2 Peter, we have the first trace of the name ‘Agape.’ In Jude we read of ‘hidden rocks in your love-feasts when they feast with you, shepherds that without fear feed themselves’ (Gr. τὰς γλυκαίς ἐν τῷ κόσμῳ καὶ εὐφαγίαις, κατὰ τὸ κόσμῳ καὶ εὐφαγίαις, οὐκ ἔχεισιν κατὰ τὸ κόσμῳ καὶ εὐφαγίαις). The reading γλυκαίς (B1 and B2, etc.) is not doubt correct, and is supported by the
Vulg rate (opuslilu) and the Syriac (\(\text{συριακος}\)) but AC have \(\text{διδραις}\), influenced by the v.l. in 2 P 2.\textsuperscript{19} Here, then, we have a common feast called Agape, but nothing is said of the Eucharist. There is no necessary connexion of the feast with the Eucharist in Jude, nor yet does any attempt at separation. Batiffol endeavours to give over this witness to the Agape by translating \(\text{διδραις}\) by 'love,' saying that Jude elsewhere has \(\text{διδας}\) in this sense (v.\textsuperscript{24}; cf. \(\text{διδασκοντο},\ \text{νυ.}\ \text{v.}\textsuperscript{27}) and that he uses plurals for singulart elsewhere,—in v.\textsuperscript{4} \(\text{διδος}\) (Vulg. \(\text{dodra}\) or \(\text{dias}\)), and v.\textsuperscript{12} \(\text{αληθινα}\) (Vulg. \(\text{confusiones}\), but Synt. has singular). There is, however, no reason for taking these plurals as singular in meaning; in the former case 'dignities' makes the only good sense, and in the latter the plural, as meaning 'each his own shame,' is very suitable. Thus Batiffol's translation in v.\textsuperscript{21} can hardly be accepted. But in any case the common feast itself (if not the name 'Agape') is borne witness to by Jude. In the parallel passage 2 P 2\textsuperscript{2} we have at least one variation: 'Spots (\(\text{τυμπανα}\), and blessed their love-feasts (\(\text{διδραις}\) while they feast with you') (\(\text{συνεφασμον ου}\)). Here we note the variation of \(\text{τυμπανα}\) and \(\text{σπλιτα}\); and the reading \(\text{διδραις}\), which is supported by B and by the A corrector, the \(\text{συνεφασμον ου}\), which is not found in Jude or 2 Peter), Sahidic, and Ethiopic, is disputed by A\(\text{C}\), which have \(\text{διδας}\) both here and in Jude. Deissmann (\(\text{Bibl. Stud.}\) p. 365) and Batiffol (op. cit. p. 283) assume the latter to be the true reading without even mentioning the former; and Batiffol builds an argument on \(\text{διδραις}\)—that the writer of 2 Peter did not see any reference to the Agape in the Jude passage that was before him. On the other hand, Lightfoot (op. cit. ii. 313) and Bigg (\(\text{Internat. Crit. Com. in loc.}\)) treat \(\text{διδραις}\) as an obvious error; and this is probably true, \(\text{ΑΓΑΠΗΠ}\) passing very easily into \(\text{ΑΙΩΝΑΠ}\).

2. Ecclesiastical writings up to A.D. 300. (a) We may pass over Clement of Rome (though his mention in § 44 of the presbyters 'offering the gifts of the episcopate' is thought by Lightfoot to include contributions to the Agape) and come to the Didache, which, in common with almost all writers, we may date very early in the 2nd century. In this work (§ 9) we find, after instructions on baptism and fasting, the following directions for the 'Eucharist' (\(\text{της εορτας εορτας εορτας εορτας}\)), with thanksgivings first over the cup and then over the 'broken bread' (\(\text{διδας}\)); to the latter is attached a prayer that the Church may be gathered together. In these formulas we have no reference to our Lord's words at the Last Supper, or to the sacrament of His body and blood; nor is there anything in common between them and the Eucharistic passages of Ignatius and Justin Martyr. After them follows a prohibition against any of the unbaptized eating and drinking of the 'Eucharist,' and we then read (§ 10): 'After ye are satisfied (\(\text{τω ου} \ \text{εναουσιασιν}\), thus give ye thanks,' and the thanksgiving is for God's holy name, for the 'knowledge, faith, and immortality made known,' for God's power, and because the Creator had given food and drink for enjoyment (\(\text{ελ γνωσισι}\), and had bestowed spiritual food and drink and eternal life. A prayer is added for the procession and gathering in of the Church, ending with 'Hence, holy father, the fencing of the tables and 'Maranatha.' But prophets may 'give thanks' as much as they desire (\(\text{ευχαριστησι} \ \text{δω} \ \text{θεοσι}\)). Of all this there are many interpretations. Batiffol (op. cit. p. 354) thinks that the Eucharist is referred to; he takes the words 'after ye are satisfied' metaphorically, as a souvenir of \(\text{Jn} \text{6}^\text{th}\) (though that tells against his view). He considers that as only the cup and the bread are mentioned, we cannot have here an Agape; while in the thanksgiving after 'being satisfied' spiritual nourishment is spoken of, which would be inapplicable to an Agape. Dom Leclercq also (\(\text{Diction. Arch. Chret.} \ \text{etc. 'Agape,'}\) col. 793) thinks that the Eucharist is referred to in Agape, but that it does not contradict the supposition of its existence; he does not, however, consider that the first formulas are the words used to consecrate the bread and wine. Mr. Box likewise (\(\text{JTAS}\), ii. 363 ff.) holds that the Didache formulas were used for the Eucharist, and that the Agape followed the Eucharist and must be inserted before the words 'after ye are satisfied.' Prof. Ermont, on the other hand, holds (\(\text{op. cit. p. 17}^\text{th}\)) that, as the Didache in § 14 speaks of the Sunday Eucharist ('gather yourselves together and break bread and give thanks,' or celebrate the Eucharist, \(\text{ευχαριστησια},\)—first confessing your transgressions, that your sacrifice may be pure'), the earlier sections must speak only of the Agape; and he concludes that the two ordinances were then separate, all those at Agape being (or supposed to be) satisfied and given to attend the Agape, but only the pure and holy (§ 15) the Eucharist. He takes \(\text{εορτας} \ \text{εορτας} \ \text{εορτας} \ \text{εορτας}\) as meaning no more than 'thanksgiving.' None of these theories appears to be so probable as that of P. Lightfoot. Perhaps, he says, the Didache may (\(\text{P. Agape, p. 53}\)) that the Didache writer means that the Agape was joined on to and preceded the Eucharist. The reference in §§ 9, 10 would then be to the two combined; the mention of the Sunday synaxis in § 14 does not really militate against this. The Agape, probably, in the Didache as in 1 Co 11, came first, with the formulas given there as grace before and after meat (so Bp. J. Wordsworth, \(\text{Holy Communion,}\) p. 46); and after the people were satisfied came the blessing of the tables (§ 10 a f.), which, as Zahn (\(\text{Forsch. zur Gesch. des NT Kanons,}\) 3rd pt. p. 293 f.) suggests, would be the connecting link between Agape and Eucharist. The prayer for the Eucharist, on this view, is not given; but prophets might use any words which they thought suitable. It is not improbable that the earliest Eucharistic worship was, in the main, extemporaneous. This theory makes \(\text{εναουσιασια} \ \text{in the Didache include the Agape.}\) As the common meal was holy and so closely joined with the Eucharist, there was not in the thought of the writer such a sharp separation between the two that one name might not be applied to both (cf. Ignatius below), or that the meal itself should not be conceived of as giving a spiritual blessing, as in the thanksgiving 'after being satisfied.' It is remarkable that the writer of the Apostolic Constitutions (vii. 25 f.), owing to the changed conditions of his day, in adapting the Didache turns this thanksgiving into a thanksgiving (after partaking (\(\text{μετανωσις}\)) of the Eucharist (\(\text{εναουσιας}\)).—There is nothing in the prayer which should be noticed. A prophet who 'orders a table (\(\text{δοσις}\) πρεσβυτεριον) in the Spirit' must not eat of it. The Eucharist therefore cannot be referred to. The phrase may be applied to an Agape, but Batiffol is probably right in thinking that merely gifts to the poor are meant, and that there is nothing liturgical about this passage.

(b) Ignatius (c. 110 A.D.) speaks (\(\text{Ephes.} 20\)) of 'breaking one bread,' which is the medicine of immortality and the antidote which we should not die but live for ever in Jesus Christ. 5 says: 'I desire the bread of God, which is the flesh of Christ . . . and for a draught I desire His blood, which is love (\(\text{αγαπη}\)) incorruptible' (see below, p. 114). In \(\text{Smyrn.} 3\) he says: 'Let that be a valid Eucharist which is under the bishop . . . it is not lawful apart from the bishop either to baptize or
to hold a love-feast (σετρείον εὐαγγελίων). In the first two passages Ignatius clearly speaks of the Eucharist, and it is remarkable that he uses ἐαράνων in connexion with it; while the most obvious interpretation of the last passage is that ἐαράνων in the first two passages Ignatius clearly speaks of the Eucharist, and this would therefore be held together in Ignatius’ eleventh book. This is Lightfoot’s conclusion (op. cit. i. 400 f., ii. 312 f.). But Batiffol takes ἐαράνων here of the Eucharist, ‘par une abstraction,’ and thinks that the metaphorical use of the word in Rom. 7 bears out his view. He denies that ‘Agape’ was at this early time used of a feast. He also says that the 4th cent. interpolator of Ignatius took the words in question to mean the Eucharist [the interpolator being probably the writer of the Apostolic Constitutions, see Brightman, Lit. E. and W. p. xxxiv f., 169], though Lightfoot gives an argument to the contrary, op. cit. i. 285 n. The interpolator has, ‘not to baptize, nor to make an oblation (προσφέρειν), nor to offer (προσφέρειν) sacrifice, nor to celebrate a love-feast.’ Here the Eucharist and the love-feast are spoken of as quite separate. This was obviously the case in the 4th cent., and the interpolator is only introducing the customs of his own day; but this has no bearing on the sense of the true meaning of ἐαράνων = the Eucharist, a forti si so would the Eucharist. This does not really explain why Ignatius should join baptism and the Agape without mentioning the Eucharist, as would be the case if his ἐαράνων does not include the Eucharist. Lightfoot, therefore, seems to be by far the most probable. The phrase ‘to baptize and hold the Agape’ would be nearly equivalent to Tertullian’s ‘to dip and offer.’ A woman may not, that Father says, ‘tinguere eum offere, i.e. baptize or celebrate the Eucharist (de Virg. Tr. 9; cf. de Euch. Cast. 7; ‘et offere et tingui et sacerdis es tibi solus’).

(c) Pliny’s letter (Ep. xvi.) to Trajan (A.D. 112) may next be considered, so far as it bears on the Agape. The letter should be examined to see whether or not in connexion with the Agape should be introduced. It was to him that the Christians were wont on a fixed day (stato die) to assemble before dawn and to repeat antiphonally a hymn to Christ as to a god, and to bind themselves by an oath (σαρκαμένη τον αὐτόν αὐτούς, e.g.,) which signified that they had been accustomed to separate and to come together again to take food, but that ordinary and innocent (προμενείαν τομείν κατ’ εἰσορεύοντα) and even this they had ceased to do after Pliny’s edict, in which he had forbidden guilds (ἐκτερναίοι) according to [Trajan’s] command. Thus there was a morning religious service and a meal later in the day (which, however, was innocent, and gave no countenance to the charge of indiscriminate immorality again), the estians, (and the second meeting was given up. Various views of the meaning of this passage have been held. With Lightfoot (op. cit. i. 13 f., 50 f.,—a long and careful account,—ii. 513) and Probst (Lehre und Gebet, p. 330 f.), we may consider the morning service to have been the Eucharist, and that there is some confusion between the double meaning of the word sacramentum (‘oath’ and ‘sacrament’), or that the two sacraments of baptism and the Eucharist are confused; while the later meeting was for the Agape. Lightfoot thinks, with the former interpretation of the word sacramentum, that it was a love-feast which was given up in Bithynia. The separation between Agape and Eucharist would either have taken place some time before Pliny,—perhaps, as Probst thinks (following Augustine), in St. Paul’s time,—or else have been recent, and due to Trajan’s well-known hostility to clubs. It is inconceivable that the Christians should have given up the Eucharist, and this consideration is against Batiffol’s idea (op. cit. p. 288), that the first meeting was only for praise and prayer, and the second only for the Eucharist,—the being the reason, he says, of ‘ordinary and innocent food,’—the Agape became yet existing. He thinks that the Eucharist no less than the Agape would be contrary to Trajan’s edict; and that, had the Eucharist been celebrated at the morning meeting, the apostates would have said, for they had no reason for hiding anything. Dr. Armitage Robinson thinks (op. cit. § 17) that we cannot deduce from Pliny’s letter that the Eucharist and the Agape had once been united, and that they were at that time, or had been at some previous time, separated; he considers that the renegades had given up the common meal, but that the Christians, as far as we know, had given up nothing. The renegades, however, had given up Christianity altogether, and they spoke of what had been given up before the persecution broke out,—they can hardly refer to any but the whole body of Christians in Bithynia. Dom Leclercq (op. cit. col. 796) thinks that the early meeting was the one which was given up; but the Latin will hardly bear either in the text, or in the sense; and the criticisms seem to present writer to have shaken Lightfoot’s position.

(d) Justin Martyr (Apol. 65–67) openly describes the Eucharist; for, as Batiffol shows (Œtudes, 1st ser. p. 18), the disciplina arcana hardly existed in his day; but he does not mention the Agape. Leclercq (op. cit. col. 796) thinks that his silence does not exclude it, for he had only to defend what was attacked. But surely the Agape was a ground of attack? Keating (op. cit. p. 59) thinks that it had been given up generally, because of Trajan’s edict; and with this opinion we may agree. The unessential nature and partial existence of the Agape are the conclusions to which the early evidence points.

(e) The date of Celsus is disputed. Keim, Funk, Aubé, Renan, and Mozley place it c. 177 A.D. For a careful discussion see Lightfoot, Ap. Faith. pt. 2, i. 530 f.; he gives reasons for thinking the date should be later. He also shows (Ep. 81, Cels. i. 1) says that Celsus’ first accusation against the Christians was that they were accustomed to hold secret meetings among themselves, forbidden by the laws (οι σωφρόνες κρατήριον πρὸς ἄλληλους καταστασίας ἐπίθομοι, σ. c.) and he would enumerate the so-called Agape of the Christians among themselves (καὶ διδάσκεται διαβάλει τῷ καλομενῷ ἀγάπα τοῖς ἄλλοις) as taking its rise from the common danger, etc. Batiffol (Letter in the Guardian, Jan. 7, 1863) argues that ἐαράνων must mean ‘love’ here, since πρὸς ἄλληλους follows. No doubt the phrase ‘Agape among themselves’ is not an elegant one, but Batiffol’s interpretation makes καλομενῷ meaningless; ‘so-called love’ has no technical sense. He also shows that the phrase above (σωφρόνες κρατήριον πρὸς ἄλληλους) may there be a double entendre in the second phrase, the word ἀγάπη being used in its technical sense, with an ironical reference to the primary one? Celsus would mean ‘the so-called Agape of the Christians, the feast of mutual love.’ He could not intend to condemn Christian love as ‘arising from the common danger and having a power that transcends oaths.’ Origen clearly understands him to refer to the Agape, and this seems to be the only possible meaning of his text, and his explanation would have some force with regard to Christian assemblies. H
AGAPE

says (Octavius, xxxi. 5): 'The feasts (convivia) which we hold (colimus) are chaste and temperate; we neither indulge ourselves in luxurious repasts (epoulia) nor protract our feast (convivium) with strong drink, but we blend cheerfulness with gravity.' This can only refer to a meal, not to the Eucharist, to which the accusations of drunkenness would not refer, though Batiffol thinks that Minucius is here alluding to it alone.

(g) Lucian in his satire de Morte Peregrini, § 12 (written probably not long after A.D. 165, Lightfoot, op. cit. i. 141, 345), says that when Peregrinus was in prison, 'old women and children are called — and orphaned children might be seen waiting about the doors of the prison. . . . Then various meals were brought in and sacred formularies (λόγος τελοποίης) of theirs were repeated.' Whether Lucian was primarily satirizing the Christians or the Cynics, we have probably here, as elsewhere, allusions to Christian history and customs, and in this case to the Agape (see below, i).

(h) The Epistle to Diognetus (date uncertain; probably c. 170 A.D., though some argue for a later date) says of the Christians, 'They . . . do not hold a table, not of the same bed' (πράσινα κοίνων παραποίητα, αλλ' ου κοινών), evidently alluding to the accusation of Cœidianese inquests made against the Christians. As Leclercq (op. cit. col. 796) observes, this accusation seems to refer to the Agape, the feast of Thyestean banquets referred to the Eucharist, the feeding on the body and blood of Christ being misunderstood; and the πράσινα κοίνων would apply less to an Eucharist than to a feast where the guests lay at meat, there being a paronomasia between κοίνων and κοίνων.

(i) In some texts of the Acts of Paul and Thecla (§ 25), in connexion with a meal of bread with vegetables, salt, and water, we read: 'There was within the tomb a great Agape' (or 'much love,' ἀγάπη τῆς ἀληθινῆς, Lat. gaudium magnum). But in the uncertainty as to the date of the writing, which has probably a very early substratum, though in its present form it is a late work, we can lay no stress on this quotation, especially for the name 'Agape' (cf. Ramsay, Ch. of Acts, ch. xvii.; also Commentaries on the Early Christianity, p. 15, strangely takes this meal for a primitive Eucharist).

—In the Acts of Perpetua and Felicitas (§ 17, Ruina, Act. Mart. Sin. p. 100), which must be dated probably at the very end of the 2nd cent., we come upon the same meal, a banquet, at a free meal those condemned to wild beasts (cf. Tertullian, Apol. 42 [Patr. Lat. i. 556]). Perpetua and her companions turned the entertainment into an Agape ('non cenam liberam sed agapem comemant').

(j) Irenæus does not mention the Agape. Dom Leclercq (op. cit. col. 796) thinks that this does not exclude its existence in Gaul; this Father's treatise being an exposition of Christian doctrine, no mention of the Agape is to be expected.

Dr. Keating comes to the same conclusion, believing that no connexion between Agape and Eucharist had survived in Gaul. But Batiffol takes Irenæus' silence as disproving the existence of the Agape in Gaul.

(k) Clement of Alexandria undoubtedly refers to meals taken in common, and to their being called 'Agape.' He denounces the drunkenness and greed which discredited such meals (Ped. ii. 4). 'They . . . dare to apply the name Agape to feasts which are a prodigal in food habits, discouraging the good and saving work of the Word, the consecrated Agape, with pots and pourings of sauce. . . . Gatherings for the sake of mirth . . . we name rightly suppers . . . but such entertainments (ετέρας) the Lord has not called Agape.' So in Strom. iii. 2 he denounces the licentiousness of the feasts of some heretics (perhaps the cause of the heathen slanders), and says that he will not call them 'Agape.' According to the Church Quarterly Reviewer (July 1902, p. 590), Clement protests against the use of the word 'Agape' at all for common meals, and not only against its application to these feasts of drunkenness and revelry; but this hardly appears from Clement's own words. A more probable interpretation is that meals taken in common were ordinarily called 'Agapes' in his time, and that he would not allow the name where abuses were ripe. In any case, he is writing for the ordinary use of the term, for he does not qualify it or note it. For Clement and the Agape see Bigg's Christian Platonists of Alexandria, p. 102 f.

Dr. Keating inclines to the idea that the Eucharist and the Agape were celebrated together in Clement's time at Alexandria, in the evening. In connexion with the passages from Jude and 2 Peter, Dr. Bigg points out (Internat. Crit. Com. in loc.) that Clement uses εὐχάς of the Agape (Ped. ii. i), which he also calls ἥν ηὔμνον τρῃνθι (ib. 12, aliter), using ἥν in a good sense as opposed to τρῃνθί, the later Dickens. It may be possible, or even that this is also possible, as Dr. Keating suggests (The Agape, p. 86), that Clement is referring by this latter phrase to the Eucharist as preceding the Agape ("public banquets after the rich fare which is in the Word, μετὰ τοῦ εὐχάς τρῃνθί") but see below, iii.ii.

(l) Tertullian refers more than once to the Agape, or as he also, translating, calls it, 'dilectia.' He gives a full account of it in Apol. 39 (Patr. Lat. i. 531 ff.), and says: 'Among the Greeks our supper is called dilectia.' In § 9 he had dealt with Thyestean banquets; in § 39 he returns to the heathen accusations, dealing with the charge of incest, and the words used (e.g. 'triclinium,' "discumere," 'conulla') show that a meal in common is referred to, though Batiffol understands him to be speaking symbolically of the Eucharist throughout.

In the treatise ad Martyres (§ 2, Patr. Lat. i. 696), Tertullian speaks of the consolations of Christians in prison 'through the care of the Church, the brethren's and the Agape' (coni. Petretus, above); but here the meaning probably is 'love' merely, though the Greek word is used. In his Montanist days he brings against the Catholics the very accusations which he had refuted in his Apologeticus, ad jegleri (Patr. Lat. ii. 1053, public Act. Pet. 47, A.D. 1), he accuses them of licentiousness in the Agape: 'Apud te agape in cacaia fervet: fides in culinis caleta, spes in ferculis lacet. Sed maior est haec agape, qui per hanc adolescentes sui cum sororibus dormiunt, etc. This cannot possibly refer to the Eucharist.—Tertullian's style is so difficult that it is not surprising if scholars do not agree in interpreting his words; but it is hard to escape the conclusion, especially from the Apologeticus passage, that the Agape, as we generally understand it, was in common use in his time. We hear here of preliminary prayers, sitting at meat, handwashing, the lighting of the lamps, psalms and hymns, prayer and dismissal; a collection was taken for the poor. This description shows that the Agape was held in the evening. On the other hand, the Eucharist in Tertullian's time was in the morning (de Cor. Mil. 3 [Patr. Lat. i. 99], etiam antelucanis cotibus, where etiam perhaps means that the usual custom was to celebrate the Eucharist after dawn, save in time of pestilence and wars and similar [Patr. Lat. ii. 141], where the same is implied; see J. Wordsworth, Min. of Grace, p. 317). For a full discussion of Tertullian and the Agape, see Keating, pp. 62 ff., Batiffol, p. 291 ff., Leclercq, col. 802 ff.; Ermoni, p. 28 ff.

(m) There is not much that need detain us after
this till the end of the 3rd cent., but the Canons of Hippolytus are important as introducing a whole series of 4th cent. 'Church Orders,' which are, as some think, derived from these Canons, or more probably are their collateral descendants. For the fourth...'. Quo Achelis, Die Canones Hippolyti (TU vi. 4), p. 212 ff., and Funk, Didasc., et Const. Ap., 1906. The latter thinks that the Canons are of the 6th cent. or later, and derived from Apost. Const. bk. viii.; but most writers take them to be a somewhat interpolated work either of the Roman or of the Alexandrian Church early in the 3rd cent. (so Achelis, Duchesne, J. Wordsworth, Brightman, Morin). We know the work only in an Arabic translation. In these Canons (§§ 164–171, ed. Achelis), the Agape, 'if there is one,' is to be on Sunday at Lamplighting, the bishop being present and praying, and psalms being sung; the people are to be dismissed before dark. The feast is described as 'prepared for the poor.' The catechumens receive the 'bread of exorcism' but are forbidden to eat at the 'meal of the Lord.' Christians are to eat and drink to satisfy, not to drunkenness or scandal. The exhortations of the bishop at the meal (he speaks sitting) are referred to. It is not, however, correct to say that the Canons 'Agape' forbid the agape Supper of Cyprian (Achelis, Haneberg); for, as Riedel (Die Kirchen-rechtsquellen des Patr. Alex., 1900, p. 221 ff.) points out, the Arabic Collectihainm does not mean anything more than a meal or feast; it is not equivalent to the Latin 'Agape.'

(a) In the Acts of James and Marianne († 259 A.D.), James, speaking of the heavenly banquet and a martyr Agapius, says: 'Ad Agapium oeceterorunque martyrum beatorum percon conversionis, et ditionis et perpetuae, et ditionis et perpetuae, and the Epistle of James (b) Cyprian (Ep. Ixii. [cxiii.], 16, c. 253 A.D.) explains why the Eucharist (dominium) is celebrated in the morning and not after supper. While it was right, he says, for Christ to 'offer' (the mingled cup) the offering of the hour of sacrifice might symbolize the setting and the evening of the world, yet 'we celebrate the resurrection of the Lord in the morning.' Elsewhere (ad Donatum, 16) Cyprian describes the supper in common, the temperate meal (convivium sobrium) resounding with psalms. Thus the Agape and the Eucharist were quite distinct in his day. For other allusions to the Agape in Cyprian, see Keating, op. cit. p. 102 ff.

(b) In the Life of Fleming († 250 A.D.; see Rutilii, p. 140), we read of what seems to be a Saturday Agape with solemn prayer ('faca ergo oratione solemni cum die sabbato sanctum panem et aquam degustassierent'). The 'bread and water' could not be the Eucharist.

(c) The older form of the Didascalia (as given by Dr. Hauler in the Verona Fragments, xxvi. p. 38), which perhaps belongs to the 3rd cent. or the beginning of the 4th, speaks of the Agape by name. It is a feast given to old women (aniciulis); and the word is to be understood, even if he be not present at the Agape and distributions (in agape et erogationibus), and so also to the other clergy. Similarly the Syriac Didas- calia, edited by Mrs. Gibson (Eng. tr. p. 46), which has 'widows' for 'old women'; and also the parallel passage of the Apostolic Constitutions (ii. 28, c. 375 A.D.), which has 'agape or entertainment' (agape wq f€w 6oxw, &f. the Ignatian interpolation above, 2 (h)), and expands the Didascalias without adding to the sense.

3. Evidence of the 4th cent. and later.—It is not disputed that in the 4th cent., there was custom of having meals in common and of calling them 'Agape'; and also that the Eucharist was absolutely distinct from them.

(o) The 'Church Orders' make this plain. (For a description of them and the their dates, see Cooper-Maclean, The Testament of our Lord, pp. 7 ff., 25 ff.; Funk believes that the dates of most of them are later than these there given). The Egyptian Church Order (c. 310 A.D.), found in the Sahidic Ecclesiastical Canons or Egyptian Heptateuch, the Ethiopic Church Order (c. 355 A.D.), found in the Ethiopic Statutes (late publishly by Mr. Horner), and the Latin Verona Fragments (c. 340 A.D.), edited by Dr. Hauler, and the Testamentum of our Lord (c. 350 A.D.) some think that it was edited in its present form c. 400 A.D., though this seems less likely), all speak of the common meal, which the Egyptian Church Order and the Verona Fragments call 'the Lord's Supper.' They go on to partake of the 'bread of exorcism,' they allow them to receive the 'bread of exorcism' [Ethiopic: 'of blessing'] and a cup (the bread and cup are omitted in the Testament). The bishop presides and exhorts, all eat abundantly, but soberly and in silence; drunkenness is strictly forbidden, and scandal is not to be brought on the host. We must also notice that the Egyptian and Ethiopic books say that the people are each to receive a portion of bread and wine, this is a blessing, and not an Eucharist: the body of the Lord (the Testament has a similar phrase). This partaking of eulogia (‘blessings’), or leaves given by the people at the officery in the Eucharist, but not consecrated, afterwards became and still is very common in the East, and it is just possible that it may be a relic of the Agape. Perhaps the 'bread of exorcism' is something of this sort. In these Church Orders the Agape is a feast provided by the rich for the whole community; but it is not represented as being merely a 'charity supper' or a form of alms to the poor.

(b) The Agape is mentioned in three 4th cent. Councils. That of Laodicea in Phrygia (c. 370?) forbade the so-called Agape to be held in the Lord's houses (equivalents in churches). But the abuses of the Agape made the Council of Nicaea (c. 325) forbid it. The Third Council of Carthage (A.D. 397) made the same rule (canon 30, aliter 29; following one which orders that the 'sacrament of the altar shall always be celebrated fasting' except on Maundy Thursday). The Council of Gangra in Paphlagonia (date uncertain) endeavoured to restore the Agape to its former dignity, and forbade any to despise those who in the faith solemnized it (canon 11). This shows that the abuses of the Agape were leading to its disappearance in Asia and the East.

(c) Pseudo-Pionius' Life of Polycearp can be used as evidence only for the 4th cent. (see Lightfoot, Ap. Fath. pt. 2, li. 429 ff.). The writer relates how Polycearp visited a certain bishop named Daphnus, who made an offering in his presence to a number of brethren, and set a little cask full of wine in the midst of them, which miraculously remained full though they drank from it. Here an Agape seems to be meant.

(d) The comment of Chrysostom on Co 11 (Hom. 27) does not appear to give us any sure indication about the ordinary Agape in his own day. He uses the past tense, and from his language here, if taken alone, we might have supposed that the Agape had ceased in his time. In
Hom. 22 he describes how, after instruction, prayer, and the commemoration of the dead, the rich had been accustomed to bring materials for a feast from their houses to the church, and to entertain the poor there. Pseudo-Jerome and Theodoret in their comments on 1 Co 11 follow Chrysostom. Their evidence is good for the tradition of the common repast at the Eucharist. In the 7th cent. a special reference to the dead, nor can it be argued from it that the Syriac translator of Jude and 2 Peter took the Agape for a memorial meal. If there is a memorial meal, it is at (at meat) let them partake of the mysteries, though not on the first day of the week (see above, § 1). In the same Hom. 27 and in Hom. 31 Chrysostom refers to the funeral-Agape of his own day (see below, § 4.), we cannot say.

(f) The Agape in Egypt in the 5th cent., united with the Eucharist, as the Agape of Faustus, Legat. to Socrates and Sozomen. The former says (HE v. 22): 'The Egyptians near Alexandria and the inhabitants of the Thebaid hold their religious assembly on the sabbath, but do not participate in the mysteries in the manner usual among Christians in general; for, having dined themselves with food of all kinds, making their offering (sopor-phiropes, i.e. celebrating the Eucharist, as often) in the evening they partake of the mysteries.' Sozomen (HE vii. 19) says: 'There are several cities and villages in Egypt where, contrary to the usage established elsewhere, the people meet together on sabbath evenings, and, although they have dined previously, partake of the mysteries.' [For the Saturday Agape cf. the Acts of Pionius, above, 2 (g)]. Dom Leclercq (op. cit. col. 822) thinks that in Socrates and Sozomen there is no trace of an Agape, only of an Eucharist. But the words 'eating and satisfying themselves' certainly point to one, and the whole object of this exceptional custom would appear to be to keep up the example of the Last Supper.

(g) We notice, lastly, that as late as the Trullan Council (A.D. 692) the 'African practice of receiving the Eucharist on Maundy Thursday after a meal' is approved (can. 50), and Agape within the churches are forbidden (can. 60).

4. Funeral and Commemorative Agape.—These should probably be treated separately from the ordinary Agape, as being quite distinct in origin, and as having arisen later (Duchesne, Originis, p. 49 n., Eng. tr.). It will be a question whether some of the references already given should not have been placed under this head. The commemorative Agape was a Christianized form of the heathen parentalia or festival in honour of dead relatives. Augustine, Ep. xxix. 9 ad Aquinatum, and the custom probably was, first to celebrate the Eucharist with prayer for the departed, and later in the day to hold an Agape. In the references to this custom in Tertullian and Cyprian, the Eucharist was explicitly mentioned; but probably an Agape is intended as well, as the Hippolytian Canons show. The custom seems to have spread as the veneration for the martyrs grew.

In the Martyrology of Polycarp (§ 18) the Smyrnians took up: 'celebrating the birthday of his martyrdom, for the commemoration of those who have already fought in the contest.' But we are not told how the commemoration was to be celebrated. The Lecienian Acts of John (Gnostic; c. 170 A.D. or perhaps earlier) speak of going 'to the tomb to break bread' (ed. Zahn, p. 231). This may be an Agape or the Eucharist. Tertullian (de Cor. Misl. 3 [Patr. Lat. ii. 99]), immediately before describing baptism and the Eucharist, says: 'We make oblations for the departed annually for their birthdays'; and in de Monogam. 10 (Patr. Lat. ii. 992) the widow 'prays for his (her husband's) soul. . . . and offers (i.e. the Eucharist) on the anniversary of his falling asleep.' So in de Exspect. Casti. 11 [Patr. Lat. iv. 939] the widower about his departed wife, we read: 'For whose spirit thou prayest, and for whom thou offerest annual oblations.' The Canons of Hippolytus (above, 2 (m)) have this direction (§ 108, 170): 'If there is a memorial meal, let them partake of the mysteries, though not on the first day of the week (neque tamen die prima). After the oblation, let the bread of exorcism be distributed to them before they sit down.' This comes after the directions for the Sunday Agape, and before general rules for meals taken in common. We may notice here that the parallel passage in the Apostolic Constitutions (c. 375 A.D.), which follows an office for the departed, refers to the commemorative feasts only, and not to the Sunday Agape, later than Ambrose (c. 376), and rebukes faults of drunkenness. In Cyprian (Ep. xxxiii. [xxxix]. 3, ad clericum [Patr. Lat. iv. 323]) we read of sacrifices being offered ('sacrina offerimus') for martyrs and their anniversaries kept, and the last words probably refer to an Agape (cf. elsewhere in the Epistles). For many years after Cyprian's death they danced and sang round his grave, till this was stopped by Aurelius, bishop of Carthage (Augustine, Serm. cxxi. 5 [Patr. Lat. iv. 323 f.]); a feast is probably implied. The Commentary on Job, ascribed to Origen (Bk. iii. p. 238, ed. Loimatsch), speaks of these commemorations of the departed as being an opportunity for feeding the poor. In the 4th cent. we have an obscure canon of Elvira in Spain (c. 305 A.D.), forbidding lights in cemeteries 'per diem,' as disturbing the souls of the dead (can. 34). This may refer to a funeral Agape; the lamp-lighting rather points to this. Later, Gregory of Nazianzus (Orat. vi. 4 ff.) and Chrysostom (Hom. 47, On Julian the Martyr) bawl the drunkenness that was rife at these entertainments (cf. also Chrys. Hom. 27 in 1 Cor. i. 11, Hom. 31 in Mt. 9). Augustine tells us of the pious custom of his mother Monica at Milan, of bringing food 'ad memorias sanctorum,' as was usual in Africa; but that Ambrose had forbidden it (Ep. lxxvi. 37), and had given the laity doubt because of the revelries and lavish repasts in cemeteries, which Augustine himself deplores (Ep. xxii. 6, ad Aurelium). He forbade these commemorative feasts himself in A.D. 392, and says that they were not universal in Italy, and that where they were customary they were abolished by the bishops (ib. 4, 5). Theodoret, however, in the 5th cent., tells us of yearly feasts in honour of martyrs; and the sermons ascribed to Eneseibus of Alexandria (6th or 7th cent.) (see Smith.-Wace, Dict. Chr. Biog. iii. 395 f.) describe banquets given to the poor on Saints' days, 'the hosts considering that they are entertaining the martyrs themselves.' These sermons speak of the disorders and drunken revels going on till daybreak; 'while aside the priest prays for them and consecrates the body of Christ, they separate' (Migne, Patr. Gr. lxxxvi. 357 f., 364 f., quoted by Leclercq). At the funeral itself feasts were common. Paulinus (Ep. xiii. 11, A.D. 397) tells us of a funeral banquet at Rome called an Agape, given to the poor in the basilica of St. Peter, by Pammachius.

In Syriac writers Agape are called nyghabhâ, lit. 'rests' or 'refreshments'; so in Jude and 2 Peter. This word, however, has no special reference to the dead, nor can it be argued from it that the Syriac translator of Jude and 2 Peter took the
meaning of ἀγαπή to be 'commendations of the dead.' On the other hand (see Payne-Smith, *Theaurus Syriacus*, s.v.), the word is often in Syriac writings coupled with δυρκάριον, the ordinary word for 'Saints' days,' and then the reference may be doubt to commemorative Agape.

5. Archaeological and epigraphic evidence—This seems to the present writer not to carry us far. It is too vague, and the dates are too uncertain to lead us to any sure conclusion about the Agape. Reference may, however, be made to Dom Leclercq's art in the *Dictionnaire d'Archéologie Chrétienne*, where this side of the subject is treated very fully with excellent illustrations. It will suffice here to mention one or two examples of evidence adduced by the author. There is a fresco in the Capella Greca of the Cemetery of St. Priscilla near Rome, discovered in 1893. The multiplication of the loaves and fishes is represented as a banquet, with seven persons lying at meat. Dom Leclercq thinks that this shows that at the time of the fresco the Agape and the Eucharist were united. But this is very precarious. Of inscriptions alluding to the heavenly Agape may be mentioned παρεκκλησία (Leclercq, *op. cit.* col. 583) and 'Anima dulcis pie zesis in Deo; dulcis anima pie zesis vivas,' where παρεκκλησία is a term, and perhaps vivas = 'bibus' (ib. col. 833).

iii. REVIEW OF THE EVIDENCE.—(a) General deductions.—Looking back at the quotations and references detailed above, we may obtain some idea of the history of the Agape, and the present writer it appears, after a careful consideration of what has been written in the last few years, that Bp. Lightfoot's view of the matter has not, in the main, been shaken. The evidence seems to point to the conclusion that the Agape had the same meaning in the primitive among the baptized churches and the Egyptian Agape was the same. It was a meal of holy communion, and the Agape was not universal. It was dropped, in some places earlier than in others, and then vanished under somewhat different names. At first, as the evidence seems to show, the Agape was a meal for the whole community. To call it always a 'charity supper,' as it undoubtedly became in some or in most places later on, is a little misleading, though it was a supposition alike, though no doubt supposed almost entirely by the rich, a sign of Christian unity and marked by liturgical forms. Later, the thought of the rich providing for the poor and of the Agape being a charity supper, and that this was performed largely due to the fact of religious or commemorative feasts, in which the relatives of the deceased gave in his honour, or rich people generally gave in honour of a martyr, a banquet to the poor. These commemorative feasts and the ordinary Agape seem to have been confused, at least in many places, during the 4th century. It is important to bear in mind that the custom of the Agape, being a non-essential, varied in different countries. Perhaps the Agape is the custom of the church, and it was of only partial adoption for the greater part of the first four centuries.

To summarize the evidence, we may say that in Acts and 1 Corinthians the Eucharist and the Agape seem to have been combined; in Jude and 2 Peter perhaps dissociated. In the *Didache* and Ignatius they were probably combined, and perhaps also in Bithynia quite up to the time of Pliny, when they were separated and the Agape dropped. In Justin the Agape does not seem to have been actually excepted in Philo's *Elohist* or in Celsus, Minucius Felix, and *Epistle to Diognetus* it is found existing. In Gaul, at the end of the 2nd cent. it had probably been dropped, as it is not mentioned by Irenaeus. Lucian's satire and the *Acts of Perpetua* probably testify to the custom of a 'prison Agape.' Clement of Alexandria, Tertullian, Cyprian, the *Canons of Hippolytus*, and some *Acts of Martyrs* in the 3rd cent., attest the Agape as existing and separate from the Eucharist; the old *Didascalia* describes it as a feast to old women. In the 4th cent., 'Church Orders' the Agape is a common meal, not only a charity supper; it is entirely separate from the Eucharist. From the canons of the Councils of Laodicea, Gangra, and Carthage (No. 3), we gather that it was held in churches; perhaps the evidence shows a tendency for it to disappear at this time. Augustine treats it as a charity supper, 'a feeding of the poor.' In the 5th cent. there is the remarkable testimony of Socrates and Sozomen to the exceptional case of Agape and Eucharist combined in Egypt; but there is nothing to show that this custom had always existed there. It may, on the one hand, be a relic of old custom; or, on the other, it may be a revival, a piece of out-of-date antiquarianism. In the 7th cent. the Trullan Council shows that the Agape still existed. Funeral or commemorative Agape are probably referred to by Tertullian, the *Acts of John*, and Cyprian, certainly in the *Canons of Hippolytus*, in the *Commentary* on Job (by Origen?), by Gregory of Nazianzus, Augustine, Cyprian, and others.

(b) Relative order of Agape and Eucharist when united.—Did the Agape or the Eucharist come first? On the one hand, we have the precedence of the Last Supper, where the Eucharist followed Agape, and the Agape was followed by the Eucharist. On the other hand, the Agape came first (see above, ii. 1). In the *Didache*, if the view taken above (ii. 2) be right, the Agape precedes, and the 'fencing of the table' is followed by the Eucharist. In the exceptional case in the Trullan Council (or Agape (if there was one) clearly came first. On the other hand, in Ac 20* we have the order, 'breaking bread' and 'eating.' If the former means the Eucharist and the latter the Agape, the order is reversed. It is quite possible, however, that 'breaking bread' and 'eating' are here one and the same thing, and refer to the Eucharist and the meal combined; in which case we can make no deduction from the words. As has been seen, Chrysostom, in this passage, was a supposition alike, though by no means the case primarily, that the Eucharist precede, i.e. not in his own day merely, but in the primitive ages. We need perhaps lay no great stress on the evidence of the Didascalia on the one hand, or of Chrysostom on the other: there is probably no better knowledge or Christian antiquities in this department than we have. Chrysostom was no doubt influenced in his view of the Apostolic age by the customs of his own day, and the Christians of the Therdah may have been merely trying to follow what appeared to them to have been the custom at the Last Supper. Confining ourselves, then, to the earlier evidence of NT and the *Didache*, it certainly seems more probable that the Agape immediately followed. This is Bp. Lightfoot's view. Dr. Lock (in Hastings' *DB*, s.v. 'Love-feasts') inclines the other way; and so, more decidedly, does Mr. Box (*op. cit.*).

(c) The name 'Agape.'—It is important to consider why this word was applied to a meal. The Greek ἀγάπη is apparently first found in the LXX. Before NT it is exclusively found in Jewish documents. It is not, however, only biblical. Deissmann (*Bibl. Stud.* p. 190, Eng. tr.) quotes a passage in Philo's *Elohist* (92) which probably took the word from the LXX; the meaning is 'love to God.' ἀγάπη is also found in a scholium on Thucydides, but we do not know if the glossator was a Christian or not (see Deissmann, *op. cit.* p. 290). In OT and NT, except in
the two passages Jude 12, 2 P 2:19, the word always means 'love.'

How, then, did it acquire its technical sense? Dr. Keating (paper in the Guardian, Dec. 24, 1902) suggests that it was because of the new commandment given at the Last Supper (Jn 13:1-20 ἀγαπάτω τὸν κόσμον ἕναντι τῶν ἑαυτοῦ); and this may very probably be the case. As bread and wine were always 'love,' because it was the bond which united Christians together; and when (as in Ignatius) the name was applied to the Eucharist and the meal jointly, it would be especially suitable, because Christians and their Saviour. That this was the main idea of the name is confirmed by the phrase 'kiss of love,' φίλαγμα ἀγάπης (1 P 5:2; cf. φίλαγμα ἀγάπης, Ro 16:19, 1 Co 16:16, 2 Co 13:1, 1 Th 5:16), which was no doubt in early times as in later ages, and as it is still in the East, one of the most significant features of Christian assemblies; by it the worshippers reminded themselves of their brotherhood.

As the idea of a charity supper became prominent, after the separation of Eucharist and Agape, the name came to imply 'benestilemen' rather than 'love.' Sometimes in the Last Supper, and perhaps in Greek, agape came to mean no more than 'alms.' Thus Jerome speaks of widows being fond of display at Rome—cum ad agapen vocaverint, praecipuus conducteur' (Ep. xxii. 32, A.D. 384), and in the Acts of Thomas ἀγαπή is used of a charitable gift to a widow, apart from a supper. But this is not certain. The degeneration of the word is exactly parallel to that of our English 'charity.'

It is noteworthy that the name 'Agape' is very seldom given to commemorative feasts. In the passage of Paulus given above (ii. 4), however, the feast is so called.

As will be seen from the evidence produced above, the name 'Agape' is applied to a meal taken in common, if the deductions made in this article are correct, in the following: Jude, 2 Peter (probably), Ignatius, Celsus (probably), Acts of Paul and Thecla (perhaps), Acts of Perpetua and Felicitas, Clement of Alexandria, Tertullian, Origen (quoting Celsus), Acts of James and Matthias, the older Didascalia, and in the 4th cent. writers passim.

As in the case of other technical terms, it is probable that a double reference was not uncommon. Just as 'Agape' was used of a meal with reference to bread and wine, and its corresponding verb were sometimes used of Christian love with an implied reference to the love-feast. Thus in the Celsus passage (above, ii. 2 (e)) the reference is probably double. So in Ignatius, Rom. 7 (above, ii. 2 (b)), an Eucharistic passage ('I desire His blood, which is love incorruptible'), the primary reference is to love, but there is probably a secondary one to the Agape. And similarly in Symm. 7, the passage which immediately precedes that already quoted (ii. 2 (b)), though the words ἀγαπήν to ἀγαπαί must probably be rendered: 'It were expedient for them to have love,' and not, as Zahn and others suggest, 'to celebrate the Agape' (as if ἀγαπή-παί was equivalent to ἀγαπή-παί, yet the passage is required to have to do with the combined Eucharist and love-feast (see Lightfoot's note, op. cit. ii. 307).

(d) Materials for the Agape.—As to these we have very little evidence. In the Didache only a cup of wine and bread are explicitly mentioned. In the Acts of Paul and Thecla, § 25, 'five loaves of bread, with vegetables and salt besides, and water' are spoken of (Conybeare, Monuments of Early Christianity, p. 75); in the Acts of Pionius, one bread and water. Later, Augustine mentions meat, poultry, cheese, milk, honey (c. Fort. xx. 20). Dean Plumptre (Smith-Cheetham, Dict. Chr. Ant. s.v. 'Agape') suggests, from archaeological evidence, that fish was commonly used. He adds that 'bread and wine were of course indispensable'; but this, as far as the wine is concerned, is not obvious, except when the Eucharist was combined with the Agape.

iv. ORIGIN OF THE AGAPE.—Many suggestions have been made for this subject. Most writers have seen in the custom an endeavour to follow the precedent of the Last Supper, when the Eucharist was combined with a meal. It is also thought that the early Christians were copying the customs of the Jews, who, as the Romans, had clubs, of which banquets were a prominent feature. The origin of the Agape has also been looked for in the funeral feasts which were common among both Jews and Gentiles. Or it has been thought to have arisen simply from the early communions of the Apostolic Church (Ac 4:32).

These suggestions are not all mutually exclusive, and probably all of them have a solid foundation. It would be difficult to deny all association with the Last Supper, and it is certain that the Christians would find ample justification for joining their Agape to the Eucharist, or for making the Eucharist a part of the Agape. But then it is necessary to ask, What was the exact significance of the Agape? Was the Eucharist is made difficult by the apparent discrepancy between the Gospel accounts. St. John suggesting that the Supper was celebrated some twenty-four hours before the Paschal lambs were killed, while the Synoptists would lead us to think that the Supper was the Passover itself. This difficulty cannot be fully considered here (see the discussion in Dr. Sanday's article 'Jesus Christ' in Hastings' DB ii. 633 ff.—the article has been republished in book form, 1904—and the literature enumerated there, i.e. p. 638), but whatever view be taken of the Last Supper, that observance cannot fully account for the rise of the Agape. For, first, suppose that our Lord ate the real Paschal Supper on Maundy Thursday; if the Apostles had instituted the Agape in imitation of the Last Supper, it seems almost certain that the love-feast would have been held only once a year, at Easter. [We cannot use this as an argument for the Johannine account of the disputed chronology, for the combination of Agape and the Last Supper is assumed. But it is probable for other reasons.] Then, (Sanday, loc. cit.) that the Last Supper did not synchronize with the regular Paschal meal. Next, suppose that the Last Supper was an anticipated Passover; then, if the Agape depends entirely on it, the difficulty just mentioned as to its being frequent instead of annual would not be taken away. Thirdly, let us take Mr. Box's suggestion (JThSt, iii. 360 ff.), that the Last Supper had its origin in the Jewish Qidissah or weekly sanctification of the Paschal lamb, the observance, and still a feature of the home life of the Jews. The family sat at table after the synagogue service at the beginning of the Sabbath (i.e. our Friday evening), and on the table are placed two loaves and wine. The father blesses the cup, and all the family drink of it; handwashing follows, and the bread is blessed and distributed. Then follows the Sabbath meal. This ceremony is not confined to the Sabbath, but also precedes other festivals, such as the Passover. This is certainly an attractive suggestion, and one which, if the Agape depended solely on the Last Supper, would account for its frequent, instead of annual, occurrence in the Christian Church. But there are several objections to it. Dr. Lambert (JThSt, iv. 184 ff.) has brought forward some of them. Two considerations seem fatal to it. It assumes
that the Eucharist followed by the Agape (for Mr. Box believes the Eucharist to have come first) represented the Jewish Qiddaṭṭah followed by a festive meal. But at the Last Supper the Eucharist certainly followed the meal (1 Co 11:20); and, further, the balance of the argument appears to be against the order required by this theory for the Christian Agape (see above, iii. (b)). And, further, the Paschal character of the Last Supper seems too prominent for us to be convinced that it was not in some sense a Paschal meal. If so, our difficulty as to the origin of the Agape remains, and we must look elsewhere for it, without indeed denying the influence of the Last Supper on the custom under discussion.

The environment of the Apostolic Church must certainly be considered in judging of the origin of the Agape. To the Jewish meals were quite familiar. The Essenes made a practice of them, living a sort of community life (Philo, Quod omnis probis liber; Jos. BJ ii. 8; Hippolytus, Ref. Har. ix. 18 ff.). For other Jewish illustrations see Keating, op. cit. p. 20 ff. We may also cite the allusion to the heavenly banquet in 2 Es 22:8, 'Behold the number of those that be sealed in the feast of the Lord.' The guilds and associations in the heathen world (Tacitus, Ann. iv. 5, Hist. ii. 95; cf. Conon, de Ag. Carn. 1 [Patr. Lat. ii. 848]) were also very common; of these, banquets were usually a prominent feature (Lightfoot, op. cit. i. 18 ff.; Keating, p. 1 ff.). Funerary feasts were common in the heathen world (Tertullian, Apol. 8); of this time they were part of the sequeois, and were offerings to the dead. They were common in Egypt, Asia Minor, and indeed throughout the countries touched by Christianity. The Jews were familiar with them also (cf. Jer 16:10, Eze 24:27, Hos 9:4, To 47:1, Bar 65:2). For a full account of them see Dom Leclercq's article, which, however, appears to make them too exclusively the origin of the Christian Agape. He seems to look on the Last Supper as a funeral banquet, celebrated before our Lord's death, and on the Agape as having that aspect throughout. The evidence does not show this. We do not read of Christian funeral or commemorative feasts till the fourth, at least; and there is nothing to connect them with the Eucharist or with the Last Supper. They would seem rather to have arisen after the almost total separation of Agape and Eucharist.

The most probable account of the origin of the Agape would seem to be that the Christians of the Apostolic age, desirous of showing their unity and brotherly love, imitated the Jewish and heathen custom of having common meals; they could not join the heathen guilds because of the idolatry that would be involved in doing so, and therefore they had what corresponded to these guilds among themselves, namely, the Agape. The connexion with the Eucharist—which in itself was quite a distinct act—would be a further step. They remembered that our Lord had associated the first Eucharist with a meal, and this was their justification in joining the Agape with it, so that the name 'Eucharist' could be said to include the Agape, as in the Didache, or the name 'Agape' the Eucharist, as in Ignatius. Indeed, in this way they seem to be carrying out our Lord's injunction most fully. That the meal partaken of by our Lord was a Paschal meal—probably one specially instituted by Him in anticipation, but this was immaterial—would not affect the matter. There was nothing Paschal about the Agape, but the point of similarity between it and the Last Supper would be the connexion with the Eucharist. These two points, then, seem to stand out—(1) the frequent Agape was at first due to the early common meal of the Church at Jerusalem, and carried on by the Gentile Churches in imitation of those without; (2) its connexion with the Eucharist was based on the fact that our Lord instituted that sacrament after a common meal. That the origin and history of the Agape are plain cannot for a moment be maintained. But that the connexion here given fits the known facts, appears to be at least probable.

LITERATURE—Lightfoot, Apostolic Fathers, pt. 2 (Ignatius and Polycarp), 1889, ii. 467, 404, 1890, ii. 467, 404, pp. 88; The Agape and the Eucharist, 1901, and art. and letter in the Guardian, Dec. 24, 1901, Nov. 3, 1902, 1901 (reply to Dr. Keating), letter in the Guardian, Jan. 7, 1903, and art. Abh. 1903); Gardner, Origin of the Lord's Supper, 1909; Keating, C.J.; ('The Last Supper') in Theological Dictionary of the New Testament, 1902. The connexion with the Welsh college led to the new sect being called the 'Lampeter Brethren.'

This, however, was misleading, for the Lampeter Brethren, eleven alumni of that institution, were a devout and well-informed band of Episcopalian ministers who met for mutual edification, but who afterwards felt 'compelled,' as they say, 'to be liberal, and, final, though most distressing, conclusion was Prince is unjustly in error.

During his college course Prince was an exemplary student. His brother-in-law and fellow-student, Rev. A. A. Rees, wrote that, till 1843, he never saw or heard of an individual more thoroughly devoted to God.

Prince was ordained in 1840 to the curacy of the agricultural parish of Charlynch, near Bridgwater, Somerset. The rector's name was Starky. The careers of these two men now became identified. Starky, like Prince, was a man of extraordinary gifts of speech, but the rector soon acknowledged his curate as the very voice of God. For the benefit of Agapemones led to its adherents in Weymouth and other parts of the south country being called 'Starkyites.' A wonderful revival of religion began in Charlynch and the district in October 1841. Prince published a book of it in 1842. It is a diary of most earnest work on behalf of souls. In six months the whole parish had professed conversion. Yet we find that, as early as May 4, 1841, the Bishop of Bath and Wells had revoked Prince's licence to preach, on the ground of his labouring in neighbouring parishes, adding *His Christian name appears to have been lost. In the B.M. Cat. the name stands 'Starky' (—) and on the title-page of his book in the Museum it is given as Er. Starky.
to the Lord's Table before Confirmation, and refusing the Sacrament to persons of evil lives. The diary is an instructive and edifying book, but it reveals the subtle and almost hypnotic power of Prince over his rector and the parishioners. While so absorbed in seeking the salvation of his people that he can think of nothing else, the emotion he evokes begins to have the reality of the genuine and unnatural. The Charlynch Revival was published because Prince thought it 'calculated, under the Divine blessing, to stir up the hearts of the Lord's people, and especially of His ministers, to expect great things of God. With a few emendations it might be reissued as a model of pastoral labours.

Before its publication in August 1842, Prince had already sent out two small works, Letters to his Christian Brethren in St. David's College, Lamper, and Strength in the Lord, both of which ran to more than one edition.

The date of the beginning of his delusions seems to have been early in 1843. In May of that year he wrote to Mr. Rees a long letter in which he expounded the steps by which the Holy Ghost entered and possessed and controlled H. J. Prince. In the same year he desired his Lamper brethren to believe (1) that he was the Holy Ghost personified; (2) that the Holy Ghost suffered and died in him; (3) that this suffering and death was that of the last judge; he called himself the Holy Ghost spirit,' or, as he also phrased it, 'a modification of the Holy Ghost.' About the same time he also published Testimony Hymns, religious parodies on certain popular ballads, to back up his own pretensions, -wretched doggerel, like almost all his hymns,—in which he seemed to be losing all consciousness of other things and persons than himself. This was the beginning of his own self-proclaimed apotheosis.

Prince had been inhibited by the Bishop of Bath and Wells, and presently the same lot befell him at the hands of the Bishop of Ely. When he attempted to officiate as curate at Stoke-by-Clare, in Suffolk, he suffered once more at the hands of the Bishop of Ely. He appealed to the Archbishop, but could get no redress. Then, to use his own words, 'prevented from preaching within the pale of the Established Church, Bro. Prince, after some months' waiting on God for guidance in faith and prayer, proceeded to preach without it. He became in denominating priestcraft, but apparently without having observed that there were fellow-Christians who felt as strongly as himself upon this subject. Starky and Prince began to preach in barns at Charlynch. What was practically a Free Church was formed at Spaxton, a mile away. Cowards came to hear them. The twain asserted that they were the Two Witnesses of Rev. 11, and Prince published several brochures in regard to the 'Two Anointed Ones.' He declared that community of goods was still binding, and he divided all the lands, and brought the money, 'laying it at Bro. Prince's feet.' About this period also he asserted that he was the prophet Elijah, that this had been made known to him by direct revelation, and that 'people were not to consider what they heard from him as an ordinary sermon, nor to think of him as an ordinary preacher; on the contrary, he was come from the courts of heaven, from the bosom of eternal glory.'

A crop of opposing pamphlets immediately sprang from the press, written for the most part by men who had been his personal friends. It is clear from some of his actions at this time, and particularly from the ballads which he penned and made his own invention sing, that his phenomenal self-love had passed beyond eccentricality into unsoundness of mind.

Prince and Starky now set up the Agapemone, which they opened in 1849 at the entrance to the village of Spaxton. Money was poured into the treasury by their credulous followers. Freehold land was bought, and a beautiful and spacious residence erected upon it (for a description of it see Hope-Dixon, op. cit. infra). The name of the Prince was associated with the Agapemone. A wave of fanaticism seemed to sweep across the district about Bridgwater. Many intelligent persons believed him when Prince announced himself as the Final Revelation of the will of God to mankind. Christ had come again in the person of His messenger, first to judge, and then to convince the world of righteousness. In him the Holy Ghost was to destroy the works of the flesh, and to cast out the devil. Whether he took the title of 'Lord,' or only accepted it, without depreciating its application to himself, seems uncertain. Some who retired from the Agapemone blazed his followers as much as they do Prince. Said one of them, 'They were all very good about him, and were ready to fall down and worship him as if he were God.' Letters passed through the post addressed to our Holy Lord God at Spaxton. The Prince objected to this profane and wicked adulation. He stood the fact that his throne in the auditorium, devoted to visions of the gladness of his abode, is 'the throne of God, and of the Lamb.' He is the Judge, and the Lamb, or One that is slain, death, hell, the devil,—speaking as if he were master of all, until the doubters among the assembly quailed and trembled beneath the awful appeal upon them. Prince had said, 'It is the will of God to give the spirit of prophecy to every man that asketh of Almighty God.' He announced that neither he nor any that attached themselves to him could die, or suffer grief or sickness, because the power had come in his person to redeem and deliver man. He set up royal state. Having purchased the Queen-Dowager's equipage and four cream-coloured horses, he was accustomed to drive rapidly about Bridgwater and the surrounding country. He was accompanied by bloodhounds, whose presence lent the element of fear to the spectacle. In his journey he often stopped to see the Great Exhibition, he drove about the parks and streets in an open carriage, preceded and attended by attendants, most of them bared-headed because they wore no gowns. He declared that he and the Prince 'are the Lord.' After the catastrophe which we have now to relate, he fixed upon the title of 'The Beloved' as his own, because we are 'accepted in the Beloved.' His tombstone as erected in the churchyard was inscribed with a 'B,' as the initial letter of his pontifical title. Presentation copy bore the words 'From Beloved,' and the inscription, 'I have chosen you out of the world.'

It was inevitable that a movement begun in pride and profaneness should develop into uncOUTH, licentiousness. The habits of Prince and his women's domestic affairs were disgraceful, drinking to excess, gaiety, amusements, and the pursuit of wealth had become the order of the day. Disturbances arose out of lawsuits brought by some who ascended from the Agapemone, horridly-striken at what they had witnessed and suffered there. One of these was Prince v. Prince (British Museum, Vol. Law Reports, 29 L.J. Ch. 857) brought about a complete exposure of the methods by which Prince and his henchmen crept into houses, leading captive silly women, and 'turning the grace of our Lord Jesus Christ into licentiousness.' The suit was heard before Vice-Chancellor Stuart in the Court of Chancery, and occupied in hearing June 4–8, and July 25, 1860, when judgment was given. The bill was heard in June 25, 1860, and the suit was decided in favor of Prince and the Agapemone. The property of Louisa Jane Nottridge, and the like amounts on behalf of two of her sisters. The report of the trial is the most trustworthy and complete history of the shameful condition of the Agapemone from 1848 to 1860, when Prince was at the summit of his power and arrogance.

Whether Prince proclaimed or allowed 'freedom' at the Agapemone cannot be proved. But the cross-examination in Court revealed the fact that, up to 1856, at any rate, grave disorders occurred, and the Vice-Chancellor took the strongest terms to the disgraceful revelations.

We have said that there is much in Prince's writings that is commendable and edifying. In the Journal of three years' spiritual experience he bows low before God under the sense of sin, or enjoys ecstatic communion with his Saviour. The
Man Christ Jesus is an enthusiastic review of the life of the Lord, though verbose, dreamy, obscure, and exclamatory,—exhausting all the Orientalism of Holy Scripture that can be used in a luxurious and erotic sense to express devotion to Christ. In *Agnphs* (1867), *The Tale of Life*, and *The Shutters taken down from the Windows of Heaven* contained much that needs to be said in regard to spiritual, as opposed to sacerdotal, religion. But the books, like the man himself, are stealthy and deceptive. While devout Christians can approve large portions of his writings, the latter are sometimes marred by the sudden introduction of his own theories, and by the application to himself personally of the words used by our Lord about His own nature and work. Indeed that the *Journal* the most important book is *The Counsel of God in Judgment, or Prince's Testimony to the Closing of the Gospel Dispensation*, published when he was 77 years old. It declares the doom of Christendom, the fulfilment of all grace in Prince, his rejection by the Church, and the consequent withdrawal of His Holy Ghost from the Church and the world to Prince and the Agápemôn. But he will have to be judged by *The Little Book Open*. The note to the copy in the library, 4th October 1856, is that orders went forth from the Agápemôn that all copies should be destroyed,—so strong was the public sentiment about it. It consists of a collection of the 'Voices.' In one of them Prince proclaims which ascetics Holy Ghost to cover and justify his own adulteries. All this loathsome uncleanness stands dressed in fervid and glowing language which vainly endeavours to conceal its crime.

For the trial in the Chancery Court, comparative silence fell upon the Agápemôn. Prince lived a very retired life. The funds of the brotherhood also seemed to be failing them, until in the late eighties a windfall came in the person of a wealthy London merchant, who presented to Prince all his property, and served the brotherhood in the humble capacity of butler. For the last ten years of his life Prince was very feeble. He outlived all his principal followers. He was buried on the 11th of February 1889, in the grounds behind the Agápemôn.

In 1890 and for a few years later there was a remarkable recrudescence of this fanaticism. Several prominent members of the Salvation Army went off with Prince. A mission to Nottingham was reported to be very successful. Yet, above all, Clapton, in the N.E. of London, became the scene of this renewed activity. The 'Children of the Resurrection,' as they named themselves, built, in 1892, 'The Ark of the Covenant,' an elaborate structure, seating about 400 persons, at a cost of £6,000. The preacher, at its opening in 1899, was the Rev. J. H. Smyth-Pigott, the official successor of Prince. Smyth-Pigott, who is of good family, was formerly a curate of St. Jude's, Mildmay Park. He has also served with the Salvation Army. In his opening sermon he declared he expected Christ to come that very day to judgment, but did not explain why, in that case, this expensive church was being dedicated. In September 1902, Smyth-Pigott proclaimed himself to be Jesus Christ; with the result that most riotous scenes took place for several weeks.

Since the tumultuous scenes which accompanied the making of this announcement, Smyth-Pigott has lived in retirement at Clapton, at the Agápemôn at Spaxton, worshipped as Divine by the little company who accept his pretensions. 'The Ark of the Covenant' remained closed to the public during 1903 and 1904, private services being held at rare intervals. It needs only to be added that the present tenants of the Agápemôn are a quiet, blameless, and elderly company, numbering about 35 persons, whose praise is sung throughout the whole neighbourhood for their unquestioned piety and fervent charity (1907).

LITURGICAL—Prince's own *Journal*: or, An Account of the Destruction of the Works of the Devil, 1846; written by the Lord Jesus Christ, through the Gospel, published in 1839, but relating to the period of his last earthly sojourn; *The Struggle*; or, An Account of the Remarkable Work of Grace at Chalresworth, 1844; J. G. Dick, *A Word of Warning*: The Heresy of Mr. Prince, London, 1847; *The Holy Peace* of the Heresy of Rev. H. J. Prince, Weymouth, 1838; O. Herr, *The Door Not Shut*; or, Three Reasons for not believing Prince, to be a celestial maried in the struggle for life and in the conflict against their own flesh they being 'The closed Divine Door,' 1847; when Prince, *A Book in the Name of Levison* was published, 1868; *The Soul*; or, Prince's Testimony to the Closing of the Gospel Dispensation, and the Revolution of Jesus Christ as the Son of Man, 1837; also a variety of pamphlets of a painful nature, printed for private circulation only.

EDWIN J. DUKES.
sought power in a union of souls, which was supposed to bring them nearer to God.

The old Irish Church had made this kind of asceticism a foundation-pillar of its organization. According to the primitive Christian custom, no difference was then made between man and woman (cf. Gal. 3:28), and both were to take part in Church functions. In the monastic houses, moreover, the priestly monks lived together with the priests, according to an old anonymous reporter, up to the year 343: *Mulierum administrationem et consortiam non responsam, quia super genus hominis et mulieris*. (Haddan-Stabbes, Councils and Ecclesiastical Documents, ii. 2, p. 292). At the time, too, when the Irish, with their mission, undertook a forward movement towards Brittany, the Gallican bishops found it especially blameworthy in the incoherence that they were accompanied by women, who, like the men, assumed to themselves sacramental functions (cf. the letter of the three bishops in the *Revue de Bretagne et de Vendée*, 1885, i. p. 5 ff.; they did not know that the Irish-Breton Church had already adopted and principles of the most ancient Christian Church.

After the well-to-do circles in the large cities had become Christian, there was developed a new form of spiritual marriage. It happened frequently that rich young women who lived in the tendency of the time, refused marriage, and in order to provide a master for their large houses, caused clergymen or monks to bind themselves to them in spiritual marriage. This is a variety of Syneisaktism, but an unfortunate one. The role seems to be reversed. The woman had the upper hand, because she retained the mistress of her large possessions, and in addition she enjoyed the reputed of virginity. On the other hand, the position of the priest was difficult, and often precarious. However seriously asceticism and the union of souls might be taken, still the fact could not be lost sight of that the priest was a subordinate, and his position may have varied between house steward, domestic chaplain, and spiritual lover. This is the role which the priest in Francia had in the 17th and 18th centuries. At the time of Chrysostom this evil custom was widespread in Constantinople (Migne, clxxxv. col. 495 ff.); likewise at the same time in Gaul, as Jerome (Ep. 117) di- cnotes, it is therefore to be regarded as a peculiar product of Christianity.

The spiritual marriage of the clergy is most frequently mentioned, and therefore best known; so much so that it has been widely believed that only the clergy of the ancient Church lived with Syneisaktai. And it cannot be denied that the custom, just as in the case of Monasticism, found its especial home here. It stands parallel with celibacy, which, in like manner, in Christianity was not created for the clergy, but none the less became a dwelling place among the clergy at a later date, and was elevated to a law, because people judged marriage to be inferior, and imposed the highest and most ideal demands on the clergy. Now, as the clergy who withdrew from marriage became more numerous, this choice of a companion for spiritual wedlock, in order professedly to live a life of asceti-

ism, was of much more frequent occurrence. And as time went on, the ideal nature of the relationship seems to have disappeared in face of practical motives. Out of the ascetic and the bride of the soul there arose a companion of friendship, the housekeeper, who was suspected to be also the mistress. No doubt the common judgment on this form of asceticism had changed in course of time. Men's roles had become more alert and same, and the priest who lived together with a woman was looked on with other eyes than at an earlier date. It seems, however, as if Syneisaktism itself had degenerated. The housekeepers of the clergy were called *mulieres extraneae*, and placed on the same footing as servant maids. Spanish synods, about the year 600, even ordered that the extraneae should be sold as slaves, and the proceeds given to the poor (cf. Can. 5, Toledo, 633). In the Decretals of Gregory IX., iii. 2, *de cohabitatione clericorum et mulierum*, the concubinage of the clergy is forbidden. In the East the same development can be proved. Even in the later synods the Syneisaktai are alluded to: *His sanctissimae mulieris*; but it was often the occasion of female servants of the clergy; and to the Greek canonists of the 12th cent. the name Syneisaktos means no more than the housekeeper of a clergyman. Syneisaktism must, therefore, have undergone a transition. Even in the later centuries clergy lived together with women without being married to them, just as in earlier times; but people regarded this living together differently. In the early times man and woman had taken the vow of virginity, and had struggled in a union of souls to attain the common ideals; in the practical requirements of life came to the front. The clergyman needed a woman to look after his household, who was faithful and devoted to him. The natural way of marriage was barred to him by the ordination and celibacy; but if he took a young woman into his house without marrying her, he was exposed to evil report. Without doubt, even in later times the ideal motives of the community of life may in many cases have been alive, as formerly. On the whole, the development which has been sketched is thoroughly natural. An ascetic enthusiasm which proposes to itself such high aims must, in the course of time, evaporate and make room for the sober realities of the day. Such an heroic ideal may perhaps be suitable as a way to heaven for a few specially favoured natures; but it becomes questionable, and even pernicious, as soon as it is made a rule to be fol- lowed by a large class of men.

The different forms of Syneisaktism arose under the influence of social conditions. In the loneliness of the desert, the man became servant of the hermit; in the cities and villages, the soul-friend of the well-to-do priest degenerated into his housekeeper, just as, on the other hand, rich widows assigned to their spiritual friends the role of steward; and if in Ireland nuns lived together in large companies, that was caused by the peculiar conditions of the Irish monastic church, which was a monastic church. The difference of the forms, however, allows us to see clearly the original form. The original motive was in all cases a religious one—more precisely, an ascetic one; brotherly love was supposed to take the place of the love of marriage. Syneisaktism was the natural product of two opposing tendencies in ancient Christianity. On the one hand, brotherly love, in all its forms of expression, was highly prized, so that it was declared to be the proper palladium of religion (cf. 1 Co 13), and the exclusiveness of the small and intimate congregations favoured the rise of a narrow social life and close friendly relationship between Christians who were widely separated in age and social position. We can see, from the example of the Irish religious houses, how great an influence the idea of community must have had. On the other hand, there was a strong aversion, based on religious feelings, to sexual intercourse. Marriage was a not very honourable concession to the sensuous nature of mankind, and people revered the ascetics without inquiring what sacrifices they paid for their ideals. Owing to the conflict of social ideals, which bound men most closely with each
other and yet threatened to estrange man and woman, there arose the unnatural combination of asceticism and brotherly love, which meets us in Syneisaktism. A form of intimate social life of the sexes was created, which was not marriage either in name or in intent, and was blind to its own dangers, because those who adopted it trusted everything, even the quite impossible, to the power of the Spirit animating the Christian.

Thus it is only natural that it was just the spiritually elevated Christians, the leaders of the community, who were the prophets, confessors, and friends—whom lived in spiritual marriage. In the same way the uxor res spiritualis of the earlier times were always such women as enjoyed a special position of honour in the community as ‘brides of Christ’—the virgins, widows, or even prophetesses. What they undertook was not hidden in a corner, but was generally admired as a glorious example of Christian love and continuity. But in course of time the judgment of the ancient Church regarding the Syneisaktoi changed.

Hermas seems to regard spiritual marriage, in all its forms, as a precious characteristic of the life of the Christian community. The Syneisaktism does not disappear of it (v. 1. 6. 3, f.). Tertullian regards it as the most desirable form of cohabitation of man and woman (see above). Paul of Samosata warns his readers against it and his opponents in the Synod of Antioch (Epich. III v. 30. 12 f.), and, shortly before, Irenaeus also (Ep. v. 4. 18.) says that the first to give themselves against it. The Synods of the 4th cent.—Elvira can. 27., Anycra can. 19., and Nicea can. 3.—forbid the clergy to have women in their houses, and after that date prohibitions of Syneisaktism are never absent from the Church ordinances. In cases of disobedience the clergy are punished or even deposed. In the case of laymen or monks, strict admonitions are as a rule, regarded as sufficient.

The different attitudes taken up by the Church on the question are explained by the development which the ascetics underwent. According to Tertullian, the first three centuries had spread very widely, and the communities had in places become very numerous. There were many elements in her that did not take the moral precepts of Christianity seriously. The strict prohibitions regarding sins of the flesh were, owing to the necessity of the case, weakened and modified in the 3rd century. The Roman bishop Callistus likened the Church to Noah’s ark, in which there were clean and unclean beasts (Ap. ix. 12). Points against the purely spiritual marriage had to be abolished,—a custom which, if feasible at all, was so only in small intimate communities, where each knew the other and all were under supervision and discipline. It proved excessive forms of Syneisaktism, as we may learn from the ever repeated prohibitions, which become more and more strict as time goes on. How very deep the opposition to it went can be gathered from the fact that the later bishop of Antioch, Leontius, castrated himself in order to be permitted to retain his house companion. Yet people were in many places convinced of the innocence and the justice of such a relationship, and even produced proofs from writers who justified the Syneisaktoi by quoting Ephesians and other Clementine and New Testament passages (Achelis, Virg. Subintrod. p. 421 f.).

That spiritual marriage was in course of time regarded in a different light, is proved further by the changes of designation.

Tertullian calls the female ascetic, who lives with a man, his uxor spiritualis— which is the appropriate name in the sense of early days. Then there occurs the term comhospita. The syneisaktoi have been called allegores, on the other hand, the inhabitants of Antioch invented for the female friends of Paul of Samosata the nickname oveirases, and this name is highly respectable to female folk who lived together with like-minded male friends. The term was carried over into the Latin Church in the translation subintroducta (Roman Synod a d. 745 in Mansi, vi. 261). More frequently still the general designation, mulieres extraneous, is used.

In regard to the question of the age of spiritual marriage, the Shepherd of Hermas comes especially under consideration. Hermas knows the custom of Christian men and women being united to each other by a bond of special affinity, even when they are separated from each other by all kinds of relationships in life (Vis. i. 1. 1); he presupposes that virgins find such partners in their brothers (Syn. v. 8); and, finally, knows the intimate forms of intercourse which were usual between the spiritually betrothed (Syn. ix. 11, 3, 7). He reports, of course, not facts but visions, but he would not have been able to introduce the situations he describes in such a matter-of-fact way, if he had not regarded them as characteristics of Christian brotherly love, of which he was proud.

The passage 1 Co 7 has also to be considered, since it has been brought by Ed. Grafe into connexion with the question of the Syneisaktoi. According to the interpretation suggested by Grafe, 1 Co 7 is to the awakening love between a Christian householder and a young girl residing in his house, who are bound by a common vow; the Apostle recommends that an end be put to this precarious situation by marriage. But, on the other hand, in v. 35 he praises the Christian who, in the like situation, understands how to control himself; while v. 36 unites both decisions. The matter, however, does not end here. The Christian who has generally been held by exegetes, but is a case of spiritual marriage—the same situation as we found above in the case of the bishop and clergy of Antioch, as we must presuppose in Hermas, and as we saw in the letters of Clement, was certainly an inevitable past place at Corinth (although it was avoided in other places), viz. that the peculiar relation between the guardian and his spiritual bride became too intimate to be endurable for any length of time. According to St. Paul himself, at least, the case of young girls living in the community with the leader of the Christian community, who had had a disappointing experience, a marriage was certainly the best way. It must, however, be granted that this interpretation of the passages in Corinthians is not beyond question, especially as that text is rarely quoted. Lastly, the de Vita Contemplativa must be mentioned. This may be regarded as a genuine work of Philo. The Therapeuæ in Egypt, who are there described, and who tabooed marriage and sexual enjoyment, lived in union with female companions, just as the Christian monks did at a later date. It is the same combination of sexual asceticism and brotherly communion as in Syneisaktism, only that the personal intimacy between the individual pairs is wanting; the brotherly love is just as great as it is in specific fraterly and sisterly Christian marriage. This makes it possible to place the beginnings of Syneisaktism in the Apostolic Age. The ascetic cohabitation of man and woman had already had its prototype in Hellenistic Judaism. It can, however, on more general grounds, hardly be doubted that spiritual marriage with its extravagances belongs to the earliest Christian times, when the ‘Spirit’ ruled the community, and the ‘first love’ still burned. At that time the communities were small and intimate, and had had no disappointing experiences with regard to themselves; asceticism makes its way into the Church; and so all the conditions for the rise of Syneisaktism were present. This must be so if Syneisaktism is conceived of, as it has been by us above, as
an attempt to substitute for marriage Christian brotherly love. If we seek to derive it, in the way formerly adopted, from the celibacy of the clergy or from Monasticism, then we are driven to a much later date for its origin. But in face of the testimony of the most ancient authors, that can hardly be maintained.

LITERATURE.—The question was first raised by Henry Dobbs in his Cypriote, ii. (Oxford, 1889). Thereupon a small literature on the subject grew up. The titles of books which have been given are by D. v. Volckering, India dissertationum (Leipsic, 1849), p. 197. So far as is known to the present writer, all the authors held Syneasitism to be an error of a minor character, of little importance. The above mentioned discussion of 1 Co 7:36-38 by Ed. Grafe, "Geleitliche Verblüftisenn von Paulus," followed a notice of Weiszäcker, and appeared in Thed. Arbeiten aus dem rheinischen wissen. fil. Prediger-Verein, N.S., iii. (Freiburg, 1899). This interpretation has found considerable approval. The conception of Syneasitism given above is proved in detail by H. Achelis, "Vorgeschichte Subintroductc in... " (Leipsic, 1899).

AGARIÁ, AGAR, AGARI.—An Indian tribe which, at the Census of 1901, numbered 270,370, of whom the vast majority are found in Bombay, the Central Provinces, and Bengal, with a few in other parts of N. India. The ethnography of this tribe is very large, for it is well described under one head, and in the Census returns, it includes at least three different communities, who may, however, agree in being of common Dravidian or Mundé origin. In Chota Nagpur and the adjoining district of Mirzapur the Agari practise a bold method of smelting iron. In the Tributary Mahals of Bengal and in the Sambalpur district of the Central Provinces they are a fair, good-looking race, who claim to have once been Rajputs in the neighbourhood of Agra, whence they say they derive their name. The legend runs that they refused to bow the head before the Muhammadan emperor of Delhi, and were compelled to leave their original settlements and migrate southwards. These returns describe under the name of Agharia, in order to distinguish them from the Agaria, who are pure Dravidians. In the Mandla district of the same province they are described as a subdivision of the Gonds (wh. see), and among the laziest and most drunken of that race. In Bombay another branch practises the business of smelting iron, and derive their name from the pit (Hind. Mahr. agar, Skr. akara, 'a mine') in which the fire is evaporated.

It is only the tribe in Chota Nagpur and the immediate neighbourhood that preserves its original beliefs. Generally they have a well-marked potentistic division into sub-castes; a vague form of ancestor-worship, which is confined to propitiating the dead of the preceding generation; and a respect for the Sál tree (Shorea robusta), which is used at their marriages. In Mirzapur they neglect the ordinary Hindu gods, and have a special worship of Lohára Devi, the Mother-goddess who presides over the smelting furnaces. To her the boiság, or village officiant, sacrifices a goat which has never been fed; and in a few days of cake, the meat and the remainder of the bread being consumed by the worshippers. In Palamau, according to Forbes, their worship is of a still lower type. "They appear," he writes, "to have no deities, and to have no knowledge of the Supreme Being, though some of them appear to have heard of the universe Devi; but I do not think they worshipped her in any way. On certain days of the year they offer up sacrifices to propitiate the spirits of the departed members of the family." This ceremony is called Múa, i.e. "the Dead." They generally also worship the Dih or local gods of the village in which they happen to settle. In Bengal their women have the reputation of being notorious witches. Dalton was told that 'in Gangour there are old women, professors of witchcraft, who stealthily instruct the young girls. The latter are all eager to be taught, and are not considered proficient till a fine forest tree, selected to be experimented upon, is destroyed by the potency of their "mantras" or charms, so that the wife a man takes to his bosom has probably done her tree, and is confident in the belief that she can, if she pleases, dispose of her husband in the same manner if he makes himself obnoxious.'

A closely allied tribe of the E. Munda in Lohár-daga— the Æsurs, who speak the same language as the Agaria—worship Andháríya Devátì, the Earth-godd. The sacrificer places a fowl with its head tied to a tree, and as he beat it with the forge pincers, strikes its head with a hammer, praying that the goddess will protect the worshipper from injury by the sparks which fly from red-hot iron. These people also worship Bør Fakhárí Bongá, the great Hill-god, with the sacrifice of a brown goat, and Pándrá Devátì, the Sun, with a mottled fowl.

The Agaria of the Central Provinces and the allied tribe in Bombay are practically Hindus, worshipping in particular Hánamántí, the monkey-godd, and all the village gods and spirits. But, they still preserve traces of the original pre-Aryan beliefs in representing these deities by stones and white ant hills, and by performing their worship through their own headman, and not by a Brahman officiant.

W. Crooke.

AGASTYA (or Agasti).—The reputed author of some Vedic hymns (Rígveda, i. 105-101). In the Rigveda he is sometimes mentioned, and some particulars are alluded to, notably his miraculous origin and his relation to Lópamúrdha, his wife (see E. Sieg, *Sagenstoffe des Rigveda*, i. 105-129). In Hindu mythology he is regarded as the patron saint of Southern India, where places sacred to him abound; still, his hermitage was shown on the Yamuná near Prayágā. He originated from the seed of Mitra and Varuna, which they had dropped into a water-jar on seeing the heavenly mýthum Urvasí. For a time he was taught, in the manner of the Maithrávari, and from his being born from a jar he got the names Kumbhasambhava, Kalyásoní, and similar ones denoting "jar-born." A Vedic name of Agastya is Mánýa.

Agastya, growing old as an ascetic, was admonished by his ancestors to beget a son in order to save himself and them from perdition. He therefore produced, by magic power, a beautiful maiden, Lópamúrdha, from the best part of all creatures, and gave her to the king of Vídarbha to be his daughter. Nobody daring, on account of her supernatural beauty, to pretend to her hand, Agastya at last demanded her in marriage. The king, fearing his wrath, acceded to his wish, and Lópamúrdha became the wife of the ascetic. When, however, after a course of penance, Gánádávára, Agastya desired to embrace his wife, she refused to do his will unless she was decked out in such splendid robes and costly ornaments as she had been accustomed to in her father's house. In order to satisfy her demand, Agastya applied to different kings for treasures; but he had calculated that their budgets were just balanced, so that they might not bestow wealth on him. On their advice and in their company he went to the king of Manimátí, the Dánava Víra, who was famous for his riches.

*See Holtzmann's paper on Agastya in the Mahábhárata in ZDMG xxvi, p. 389.*

† Mahábhárata, iii. 57.

† Dhádávárdásá, v. 30; *Rómáyána*, vi. 57.
Now Ivala, an enemy of the Brāhmanas, had a brother, Vatapi, whom, on the arrival of a Brāhman, he used to kill and then to prepare as a meal. When the unsuspecting guest had finished his dinner, Ivala, by his magical power, called Vatapi to life again, and in this way killed his victim. The latter died from the ordinary eyes, but his incantation failed to revive Vatapi, whom Agastya had already completely digested. So Ivala was slain to give Agastya such treasures as satisfied the desires of Lopamudrā. According to the Rāmāyaṇa (iii. 11, 13) and the Mahābhārata, the latter work, on this occasion, reduced the Dānava to ashes by fire issuing from his eye. The Rīga had by Lopamudrā a son called Drīṣṭaṣvā or Idhmavaha.*

Another famous deed of Agastya was his having caused the fall of Nabhāsa.

When, after vanquishing Vṛtra, Indra, polluted with the sin of brahmacayā, or killing of a Brāhman, fled and hid himself, the gods made Nabhāsa ruler of the ship. But Nabhāsa soon became overbearing and desired to make Sachi, Indra’s wife, his own. She, however, would consent unless he came to her on a car drawn by the seven Rīgas. Nabhāsa therefore took them to his car, and made them drive it. During his ride, he, for certain reasons, was stated in different places, killing Agastya on the head, whereupon the Rīga turned him, by his curse, into a serpent, until Yuddhishthira should release him from that curse.†

Most frequently Agastya is mentioned in Sanskrit works as having stayed the abnormal growth of the Vindhyā range, and as having drunk up the ocean.

The drinking up of the ocean is thus related in the Mahābhārata (iii. 103 ff.):—

The Kālakayas or Kālayas, a class of Asuras, had fought under Vṛtra against the gods. After the death of their leader they hid themselves in the ocean; but the gods could not reach them, and determined to exterminate the Brāhmanas and holy men; for thus, they thought, they would bring about the end of the gods, alarmed by their raids, were advised by Vīruṇ to implore Agastya for help. The Rīga, according to the Vāyu-sūtra, made his way, as usual, in the ocean and thus laid the Kālakayas, who were then slain by the gods. The ocean continued a void till Bhagiratha led the Gangā to it and thus dispelled it again with water.

A curious trait of our saint is that he was a famous hunter and archer. For this reason, probably, Manu (v. 22) adduces Agastya as an authority for killing deer and birds for sacrificial purposes and for servants’ food.

After his death Agastya was placed among the stars as Canopus, the most brilliant star in the southern heavens except Sirius. The heliacal rising of this star, while the sun is in the asterism Hasta, marks the setting in of autumn after the close of the rains.‡

Agastya seems, in popular belief, to represent that force of nature which makes an end of the monsoon,—in mythological language, drinks up the waters of the ocean,—and which brings back the ordinary eyes, temporarily hidden by the clouds of the rainy season, or, turned mythologically, stays the growth of Vindhyā obstructing the path of the sun. As a rain-godling, * who is supposed to have power to stop the rain, he is still invoked in Mazaffarnagar.*

In Southern India, Agastya is venerated as the earliest teacher of science and literature; he is the reputed author of many Tamil works; * he is believed to be still alive, though invisible to the human eye. He is sometimes represented as living somewhere on the fine conical mountain in Travancore commonly called Agastya’s hill, from which the Poruneli, or Tāmraparṇi, the sacred river of Tinnevelly, takes its rise.† See also VEDIC RELIGION (4 B).

AGE.—In most animals there is a normal specific size to which the great majority of the adult members of the species closely approximate. In a large collection representing a species there may be a few giants and a few dwarfs, but most of the members show a close approximation to the same limit of growth, and there are good reasons for believing that the normal specific size is adaptive, i.e. that it has been slowly established in the course of selection as the fittest size for the given organization and the given conditions of life. In some cases, e.g. many fishes, there is no such definite limit of growth; thus haddocks are often found as large as codes.

Similarly, in many animals that have been carefully studied, we find that there is a normal potential duration of life, which is normally exceeded, though it may be seldom attained. This normal ‘lease of life’ is in most cases known only in a general way, though in individuals we are able to say that the living creature in question never lives longer than a few months, or a year, or a few years. Statistics from forms kept in captivity are obviously vitiated by the artificial conditions, and the life of animals in their natural conditions is so often ended by a ‘violent death’—coming sooner or later according to the varying intensity of the struggle for existence—that it is difficult to say what the normal potential duration of life really is. But a critical survey of a large body of facts led Weismann in his essay on ‘The Duration of Life’ (1889) to the conclusion that, this, like size, is an adaptive character, gradually defined by selection in relation to the external conditions of life.

Attempts have often been made to correlate the duration of life with certain structural and functional characteristics of the type discussed, e.g. with size, with the duration of the growing period, with rapidity or slowness of development, or with the number of the tail, or with the sex of the organism, and many of these correlations have been generalized, and there is much to be said for Weismann’s more cautious thesis, that the length of life is determined in relation to the needs of the species. Given a certain rate of reproduction and a certain average mortality, the duration of life that survives is that which is fittest to the conditions. (See ADAPTATION.) In the same essay Weismann pointed out that unteilerell organisms, which have none of the ‘body’ to keep up, which can continually make good their waste by repair, and which have very simple inexpensive modes of reproduction, are practically ‘immortal,’ i.e. they are not subject to natural death as higher organisms are. Epigraphically expressed, natural death is the price paid for a ‘body.’

In the case of man, we must clearly distinguish between the average specific longevity, about 34 years in Europe—but happily raisable with decreasing infantile mortality, improved sanitation, and the decreasing numbers of human, increasing warfare, increasing temerence and carefulness,—and the potential specific longevity, which for the present race is normally between

---
seventy and one hundred years. There is no warrant for fixing any precise limit, either for the past or the future. All that we can scientifically say is that there are few well-established instances of a greater human longevity than 104 years. Sir George Cornewall Lewis did good service (1862) in destructively criticising numerous alleged cases of centenarianism. The occurrence of the two at last regarded as quite unproved, but even he finally admitted that men do sometimes reach a hundred years, and that some have reached one hundred and three or four. The famous cases of Thomas Parke, the Countess of Desmond, said to be 152, 169, and 140 respectively, were ruled out of court by Mr. Thoms, who edited Notes and Queries at the time when Sir G. C. Lewis's wholesome scepticism created much stir. As man is a slowly varying organism, as regards physical characters at least, it is extremely unlikely that his longevity was ever much greater than it is now. Monsters in age and monsters in size are alike incredible.

Prof. E. Metchnikoff is one of the few modern biologists whose name would deal generously with Biblical and other old records of great human longevity. He apparently thinks there has been some misunderstanding in regard to Methuselah's 909 years and Noah's 950, but he accepts the great ages of 175, 180, and 147 years ascribed to Abraham, Isaac, and Jacob. Similarly, he accepts the 186 years with which St. Mungo of Glasgow has been credited. And as he is generous in regard to the past, he is hopeful in regard to the future, believing that a more careful and temperate life, as well as an enlightened recognition of the disharmonies of our bodily frame, may bring about a time when man will no longer, as Buffon says, 'die of disappointment,' but attain everywhere 'a hundred years.'

'Humanity,' Metchnikoff says, 'would make a great stride towards longevity could it put an end to syphilis, which is the cause of one-fifth of the cases of arterial sclerosis. The suppression of alcoholism, the second great factor in the production of senile degeneration of the arteries, will probably still more mark the expiration of the term of life. Scientific study of old age and of the means of modifying its pathological character will make life longer and happier.' He also quotes the theoretically simple conclusion of Pflüger's essay on 'The Art of prolonging Human Life':—'Avoid the things that are harmful, and be moderate in all things.'

A fact of much interest is the statistical evidence that such a subtle character as 'longevity,' that is to say, a tendency to a certain lease of life, be it long or short, is heritable like other inborn characters, though it rests, of course, to some extent with the individual or his environment to determine whether the inherited tendency is realized or not. Just as stature is a heritable quality, so is potential longevity. The expression of this expression is in part determined by 'nurture'—taking the word in the widest sense.

There is, as we have hinted, reason to believe that natural death is not to be regarded simply as an acquiescence in the rate of all life; we can carry the analysis further, and say that it is incident on the complexity of the bodily machinery, which makes complete recuperation well-nigh impossible, and almost forces the organism to accumulate arrears, to go into debt to itself; that it is incident on the limits which are set to the multiplication and renewal of cells within the body, thus nerve-cells in higher animals cannot be added to after an early stage in development; and it is incident on the occurrence of organically expensive modes of reproduction, for natural death is often the beginning of death. At the same time, it seems difficult to rest satisfied with these and other physiological reasons, and we fall back on the selectionist view that the duration of life has been, in part at least, punctuated from without and in reference to large issues; it has been gradually regulated in adaptation to the welfare of the species.

It seems to us suggestive to recognize four categories of phenomena in connexion with age. The first is that of the immortal unicellular animals which never grow old, which seem exempt from natural death. The second is that of many wild animals, which reach the length of their life's tether without any hint of ageing, and pass off the scene—or are shaved off—victims of violent death. In many fishes and reptiles, for instance, which are old in years, there is not in their organs or tissues the least hint of age-degeneration. The third is that of the majority of civilized human beings, some domesticated, and some wild, which reach the maximum of normal senescence. The fourth is that of many human beings, not a few domesticated animals, e.g. horse, dog, cat, and some semi-domesticated animals, notably bees, in which the close of life is marked by distinctively pathological senility. It seems certain that wild animals rarely exhibit anything more than a slight senescence, while man often exhibits a bathos of senility. What is the explanation of this?

The majority of wild animals seem to die a violent death, before there is time for senescence, much less senility. The character of old age depends upon the nature of the physiological bad debts, some of which are more unnatural than others, much more unnatural in tamed than in wild animals, much more unnatural in man than in animals. Furthermore, civilized man, sheltered from the extreme physical forms of the struggle for existence, can live for a long time with a very defective hereditary constitution, which may end in a period of very undesirable senility. Man is also very delicate in old age and seldom takes much thought about resting habits. In many cases, too, there has come about in human societies a system of protective agencies which allow the weak to survive through a period of prolonged senility. We cannot be wise in regard to those we love; but it is plain that our better ambition would be to heighten the standard of vitality rather than merely to prolong existence, so that if we have an old age it may be without senility. Those whom the gods love die young.

AGED.—See ABANDONMENT AND EXPOSURE, OLD AGE.
AGES OF THE WORLD.

AGES OF THE WORLD (Primitive and American).—I. The conception of a series of cosmic eras, mutually related, yet separated from each other by cataclysms destroying the entire known world and forming the basis for an essentially new creation, is peculiar to a high degree of religious development. The idea of creation is common to practically all religious systems (see art. Cosmo-

gony), and at a later, though still relatively primitive, period is evolved the notion of a cosmic
cataclysm which is to annihilate the world. Still
later, it would seem, comes the doctrine that after
this cosmic annihilation there is to be a new world, a
belief which is found, for instance, in systems so
divergent as the Arabian and the Norse. Closely
connected with the belief in the regeneration of
the world is the well-nigh universal doctrine that
the entire earth has already been destroyed by a
flood (see DELUZE). The theory of Ages of
the World has been carried still further by the
phase which holds that the present cosmic era-has
been preceded by others, and the Greek, Hindu,
and Buddhist systems have even evolved a series
of cycles each of which contains four Ages, and
which have been and are to be repeated in infinite
succession.

2. The most familiar example of the belief in
Ages of the World is, of course, the philosophized
Greek view presented by Herodotus (Works and
Days, 109-201), according to whom there have been four
Ages—golden, silver, brass, and iron—each worse
than the one preceding. Equally pessimistic is the
Hindu system of Ages, where the four yugas, or
Ages of a ‘day of Brahmas’ (12,000 years), are
successively shorter in duration and increasingly
degenerate. Among primitive peoples such a series
of Ages of the World seems to be unknown, yet it is
noteworthy that among the South American
Indians it is generally held that the world has
already been destroyed twice, once by fire and
again by flood, as among the eastern Tupis and
the Arawaks of Guiana. In like manner, the ancient
Peruvians fancied not only that two cosmic cataclysms had occurred, but that the
world was again to be destroyed, so that they
stood in terror of every lunar and solar eclipse.

3. Outside the great culture nations of Asia,
Northern Africa, and Europe, however, only the
Aztecs of ancient Mexico, perhaps under the influ-
cence of the still more highly developed Moys of
Yucatan, evolved a doctrine of Ages of the World.
This marvellous people held that the present era,
which bore no special name, was preceded by four
Ages or ‘Suns’: the Sun of Earth, the Sun of
Fire, the Sun of Air, and the Sun of Water. Each
of these cycles had been terminated by a fearful
and universal cataclysm, and the Aztecs looked
forward with dread to the end of the present era.
At the close of each cycle of fifty-two years they
were filled with special fear; every fire was
extinguished, and all the priests, followed by the
people, marched in solemn procession to a moun-
tain two leagues from the capital. There they
watched with bated breath for the rising of the
Pleiades, and when this constellation was seen,
the priests rekindled fires by the friction of two
pieces of wood, one of which was placed on the
breast of a human sacrifice, while the multitude
rejoiced in the assurance that the world would
surely survive for another cycle of fifty-two years.
It is noteworthy that Aztec sources vary widely
with regard to both the length and the sequence
of the cosmic eras, the latter being given not only
as stated above, but also as Water, Air, Fire,
Earth; Earth, Air, Fire, Water; Water, Earth,
Fire, Air, and Water, Air, Earth, Fire. In like
manner, the order of the cataclysms which termin-
ated the several eras varies according to the dif-
f erent sources, but it is certain at least that the
Sun of Earth was terminated by famine, the Sun
of Fire by conflagration, the Sun of Air by a
hurricane, and the Sun of Water by a flood.

4. The basis of this Aztec belief in Ages of the
World is not altogether certain. It has been
suggested that it was due, at least in part, to the
tremendous natural phenomena of a tropical
country, and also to the political and social revolu-
tions which took place in ancient Mexico. The
former explanation is doubtless the one to be pre-
ferred, implying a remembrance of a cataclysmic
catastrophe, mythopoetically magnified by suc-
cessive generations, especially as this hypothesis
also explains the characteristic South American
belief in a twofold destruction of the world by
fire and flood.

AGES OF THE WORLD (Babylonian).—
Even before the discovery of the cuneiform inscrip-
tions, it was known that the Babylonians had
reflected on the course of the world’s history, and
that they regulated the Ages of the World according
to the movements of the planets. Seneca* reports
a statement of Berossus, who under the rule of the
Seleucids was priest in the Marduk temple of
Babylon, and whose lost historical work Chaldaea
was intended to prove the commencement of a
new world period under the Seleucids or under
Alexander.

* Berossus says that everything takes place according to the
course of the planets, and he maintains so confidently that he
determines the times for the configuration of the world and for
the flood. He asserts that the world will burn when all the
planets which now move in different courses come together in
the Crab, so that they all stand in a straight line in the same
sign, and that the future flood will take place when the same con-
junction occurs in Capricorn. For the former he is the constelle-
tion of the summer solstice, the latter of the winter solstice;
they are the decisive signs of the zodiac, because the turning-
points of the year lie in them.†

These accounts of Berossus have here, as well as in the
narratives of the Creation and the Flood, been proved thoroughly reliable. The teaching
which underlies them regarding the course of the world
corresponds to the accounts which we can read from the cuneiform inscriptions.

† The sign of the Crab in the zodiac is the turning-point of the
summer sun, if the vernal equinox lies in the Ram; the corre-
sponding turning-point of the winter sun is in Capricorn, as the
calendar has retained the designations, although the vernal
equinox has long ago moved into the Fish.
The Babylonian doctrine, which we find popularized in myths, dramatic and festive customs, and games, inquires into the origin of things and the development of the world from its beginnings in chaos to its renewal in future eons. The doctrine has spread over the whole world. We find it again in Egypt, in the religion of the Avesta, and in India; it is also found in Mexico and among the savage nations of South America. To refer these phenomena back to 'elementary ideas' (Bastian, Völkeridee), such as may arise independently among different peoples, will not suffice, for the most ancient circumstances that we have to do with ideas connected with definite facts which rest on continued astronomical observations. Babylonia was, moreover, according to a constant tradition, the home of astronomy ('Chaldean wisdom'), and there the science of the stars formed the basis of all intellectual culture.

In the Babylonian conception of the universe, which regards everything earthly as a copy of a heavenly prototype, the zodiac is considered the most important part of the whole universe. The zodiac (as it was understood in antiquity) is a system of 20 divisions in the heavens, c. 20 degrees, upon which the sun, moon, Venus and the four other moving stars (planets) known to antiquity, trace out their course; while the other stars, the fixed stars, seem to stand still on the ball of the revolving heavens. The moving stars were identified with different parts of the Divine will. The heaven of fixed stars was related to them like a commentary written on the margin of a book of revelation.

The rulers of the zodiac are the sun, the moon, and Venus. In a mythological text (WAI iv. pl. 6) we are told that Bel placed them to rule the šipuk šamé. The four remaining planets, Marduk, Jupiter, Nebu-Mercury, Ninib-Mars, and Nergal-Saturn, correspond to the quarter appearances of the three, and have their special place of revelation in the four points of the cycle, or, speaking in terms of space, at the four corners of the world. Every one of the astral divinities represents the whole Divine power. Polytheism rests on myth, which popularizes the teaching, and on worship, which again is a product of the mythology. The temple-teaching at every place of worship serves to prove that the divinity reveals itself at a particular place in a definite form, as result from the relation of that place to the corresponding sacred region of the heavens (róros, templum). The local god is summus deus for the region; the other gods are like wonder-working saints.

Seeing, however, that the Divine power reveals itself in the zodiac, the theory involves a triadic conception of the godhead. The triad—sun, moon, and Venus—in their relation to each other, as well as each of these three bodies individually, comprehends the whole being of the godhead. In the case of this mythological phenomenon, the question must be raised whether the divinity in the particular place or in the expression of its worship stands for the sun, the moon, or the Venus (štár) character. In each case, however, the deity represents the same time of the cycle, which repeats its phenomena in every microcosm of the natural world. The same is true of Marduk, Nebo, Ninib, and Nergal. In the teaching of Babylon, which is best known to us, the chief point in the sun's track belong to them in a special sense as well as the quarter appearances of the sun's course. They can thus be designated sun-gods, but they can equally well be represented as forms of the moon or of Venus as they appear in the sky. In like manner, they are representatives of the course of the cycle of nature (Tammuz in the upper and under world), which runs parallel with the astral phenomena in the changes of the year. Marduk and Nebo as the embodiments of the spring and harvest phenomena, or Ninib and Nergal as the embodiments of the phenomena of summer and winter, could occupy the place of Tammuz in both halves of his cycle.

The Babylonian sages reached the profound conception that time and space are identical; both are revelations of the Divine power, and have therefore the same principles of division.

The course of the world cycle is consummated in the struggle of the two powers of the world system, with light and darkness and evil as result, which are traced in the summer of the world and the winter of the world. In the myths the sun and the moon are the combatants. The moon is, according to the Babylonian teaching, the star of the upper world (the reverse holds in Egypt). She dies and rises again from the dead (šenbi ša šarmanša šubanāti, 'fruit, which produces itself out of itself'); she symbolizes the power of life from the dead. The sun, which, in opposition to the moon, stands at the low point, and in which the stars disappear, is the original power of fire on earth; the sun gives birth to the sun-child or the moon-child, which then overcomes the dragon of darkness and thereby becomes the queen of heaven. In the myth she is the heavenly virgin (in the zodiac she is represented by the figure of the Virgin with the ear of corn or with the child) who gives birth to the sun-child or the moon-child, which then overcomes the dragon of darkness and thereby becomes the queen of heaven in the new era,—then at the highest point of the course dies and sinks down into the under world; or she is the Venus, who descends into the under world and brings up the fallen ones. The four planets of the four points of the world, which indicate in the gyration the turning-points of the sun (Ninib and Nergal) and the equinoctial points (Marduk and Nebo), are made use of in the mythology in the following manner: Marduk is the bringer in of the new time (the spring sun), Nebo (Hermes with the balance of the dead) is the guide to the dark half of the lower world, Ninib (Mars) brings the doom of the change of the summer sun (death of Tammuz by the boar, the sacred animal of Ninib, Nergal is lord of the dark half of the lower world. Thus the dead places under the preceodence of Babylon, whose local god is Marduk. The rôle of bringing in the new time belongs in reality to Nebo. His name indicates that he is the 'prophet' of the new time. He is the Nebo-Mercury, sacred region of Venus, and in the world of the dead, in the underworld, of the sacred region of Venus, and in the world of the dead, in the underworld, of the dead (Tammuz is the day by the boar, the sacred animal of Ninib, Nergal is lord of the dark half of the lower world. Thus the dead places under the preceodence of Babylon, whose local god is Marduk. The rôle of bringing in the new time belongs in reality to Nebo. His name indicates that he is the 'prophet' of the new time. He is the Nebo-Mercury, sacred region of Venus, and in the world of the dead, in the underworld, of the dead (Tammuz is the day by the boar, the sacred animal of Ninib, Nergal is lord of the dark half of the lower world. Thus the dead places under the preceodence of Babylon, whose local god is Marduk. The rôle of bringing in the new time belongs in reality to Nebo. His name indicates that he is the 'prophet' of the new time. He is the Nebo-Mercury, sacred region of Venus, and in the world of the dead, in the underworld, of the dead (Tammuz is the day by the boar, the sacred animal of Ninib, Nergal is lord of the dark half of the lower world. Thus the dead places under the preceodence of Babylon, whose local god is Marduk. The rôle of bringing in the new time belongs in reality to Nebo. His name indicates that he is the 'prophet' of the new time. His name indicates that he is the 'prophet' of the new time. He is the Nebo-Mercy...
AGES OF THE WORLD (Babylonian) 185

1. Lam abubi, 'the time before the Flood.' In the time before the Flood there lived the heroes, who (according to the Gilgamesh Epic, which on the 11th table tells the story of the Flood) dwell in the under world, or, like the Babylonian Noah, are removed into the heavenly world. At that time there appeared, too, Bugba, i.e. Mardu, the son of Ea in the heroic age, who, as the bringer in of the new age (cf. Amun, Horemak), Mardu as fighting with the dragon, will introduce the new age of the world.  

2. Abaduwa = Ammon, 'man.' As Adapa corresponds to the Biblical patriarch Seth, Ammon in like manner corresponds to Enoch (i.e. man).

3. Amnon = ummaddu (workmaster) = Calm (Cainan), smith = (Ex. 32, quinquies = smith).

4. Megalosara = I.

5. Isanu = 1.

6. Oetsa = 1.

7. Oet'sodiac = -sunnebatum, 'favourite of the great gods,' who taught his son the secret of heaven and earth; i.e. Enoch, who walked with God, and after a life of 666 years the chief of the moon-signs of Babylon took away. The Jewish feast of the turning of the winter sun (Hannukah, feast) (applied to the dedication of the Temple) was connected with Enoch. Jubilees (44) says of him: 'Enoch was among the angels of God six jubilees; and they showed him all the history of the sun in heaven and on the earth, and he wrote it all down.'

8. Theophanes = Adam, 'man of god.' Sin = Methuselah. There is a Babylonian text which communicates the secrets of Am'am-Sin.

Berosus relates that Kronos before the Flood had ordered Xiauthros to engrave with letter-signs all the affairs according to their beginning, middle, and end (engraving on tablets with cuneiform letters is meant), and to deposit them in Sippar. After the Flood his children and relatives had gone to Babylon, taken the writings from Sippar, and circulated them among the people.

2. The historic period, which again unfolds itself in Ages. The division of the Ages into periods before and after the Flood is also connected with the course of the stars. The Golden Age of early times corresponds to the time in which the vernal equinox goes through the domain of Anu (four figures). The Flood brought the course of the world through the domain of Ea (four figures, water-region); the historical period corresponds with Bel's realm of the zodiac. The zodiac is portioned out into four parts: Anu, Bel, and Ea, the triad of Divine power in the whole universe of space, corresponding on the zodiac to Sin, Sama, and Istar. The restoration of the world after the Flood corresponds to the fashioning of the world after the original chaos, which also appears as the power of the waters (in the myth the water-dragon had been subdued); the world after the Flood corresponds to the primeval world after the Creation.

The application of Ages of the World to the periods of the evolution of the sons of mankind is connected in a special way with the teaching about the calendar, which is based on observation of the precession of the equinoxes.

By the precession of the equinoxes is meant the gradual displacement of the same point of day in the ecliptic, the middle line of the zodiac, which the sun's track marks out. The inclination of the axis of the plane of the earth to the ecliptic in the following phenomenon: The position of the sun in the same spring signs of the zodiac varies from year to year through 72 years the displacement amounts to a day, in every 2560 years therefore, about a figure in the zodiac. The vernal equinox traverses once in 12,000 years (and 5400 years) into the fire-region. On this fact rests the teaching of Berosus given above (p. 183).

In the region of further Asia, the earliest historical time of which we can trace traces in the original sources had placed the cult of the god of the moon in the forefront. Sargon says, in his State inscription of the king of Meluhha, that his fathers had, from distant times, since the son of the moon-god (Adi Nannan), sent no more messengers to his predecessors. In the scheme of the partition of the world between the moon and the sun (moon = star of the upper world, sun = star of the under world; see above, p. 184), Nebu would, in the Babylonian calendar, correspond to the moon, Mardu to the sun. Nebu, too, in accordance with his character, is the 'prophet'; and, according to the nature of the doctrine regarding him, also the victor over the power of darkness, the herald of God Sin = Methu-selah. Under the influence of the supremacy of Babylon he has exchanged his role with Mardu; and this, by the way, agrees with the principle of the Babylonian doctrine, according to which opposites pass over into one another (east no more messengers to his predecessors).

We could thus speak of an Age of the moon or an Age of Nebu, to which in the epoch of the supremacy of Babylon an Age of the sun or an Age of Mardu would correspond. But if there was a theory which reckoned in this way, still the latter is at least subsequently regarded as the Age of the moon; i.e. the Neo Age, which preceded the rule of Marduk of Babylon, has been transposed in the teaching of the calendar, which was reckoned according to the precession.

(a) Age of the Twins.—In the Age before the rise of Babylon (about B.C. 5000–2800) the sun stood in the zodiacal sign called the Twins. If we were to make additional use of this circumstance in the theory of the Ages of the World, as we are inclined to do, the two phases of the waxing and waning moon would in harmony with it correspond to these twins. The moon also is called repeatedly allmam, i.e. 'twins;' and the hieroglyphics of the zodiac, which even to-day indicate the Twins in the calendar, consist of the picture of the waxing and waning moon, just as the Romans represented Janus, who bears the character of the moon, as the two half-moons with human faces.

This Age of the Twins was for Babylon the age of the settlement of the Semitic Babylonians.

The Twins (Diocuri) thus supply the ruling motive for all the myths which indicate the beginning of a new epoch (Cyrus, Cambyses, Romulus, Remus, etc.). And if, as appears in the Assyrian predominance wished to dispose of the claims of Babylon, he went back to the archaic form of calculation. Either Nebu was deliberately raised to a more prominent place than Mardu, or (e.g., under Sargon) Sivan, the month of the moon-god, was regarded as the first month of the year. In the same way the Roman calendar was made archaic by beginning the year with Janus (January), although the last month was called December (i.e. the tenth month).
One would expect an Age of the sun to follow an Age of the moon (the sun and the moon are also twins). As a matter of fact, the reckoning of the calendar, which was changed about B.C. 2800, on the basis of the procession into the next figure of the zodiac, was so adjusted that in the zodiac the figure of the Bull was followed by that of the Twins.

(6) **Age of the Bull.**—This reform of the calendar was assisted by the actual state of affairs. The time of its introduction corresponds with the period in which Babylon became the metropolis of the world. Marduk, the god of the city of Babylon, the ‘farmer of Babylon’ (Nebuchadrezzar calls himself Iškur in Babili, as representative of the god on earth), is symbolized by the bull, which corresponds to the figure of the Bull in the heavens. In this way the Age of the sun came at the same time to its rights, for Marduk as the representative of the Divine power is in an especial sense the sun-god. Hammurabi took advantage of the reform of the calendar to glorify his rule as a new epoch of the world. He says that he has succeeded in exalting Marduk. The priests of Babylon celebrated the Rē of Marduk with the dragon and as the demiurge, and found the claim of Babylon to world empire on the rôle of Marduk as creator of the world. The honour which belonged to Nebo as the lord of the destinies is transferred to Marduk, and determines on New Year’s Day the fate of the world. Nebo, who in the older teaching carried the tablets of fate, is now recorder of the destinies.

The calendar which corresponded to the Age of the Bull must have reckoned the beginning of the year a month earlier, so that the year began with ḫiyar and closed with Nisan; for the world-eclipse embracing a sign of the zodiac corresponds to the course of the sun through a sign of the zodiac, i.e. one year. That it was so reckoned can, of course, be proved only indirectly. The king of Assyria allowed himself to be invested in office in the month ḫiyar. The investiture is a ceremony which took place also in Babylon, and therefore according to Babylonian law. The king seized the hands of Bel-Marduk, and by this act his rule obtained its ratification and consecration. This inauguration was still observed in ḫiyar after Nisan must have long been regarded as the first month. Under Sargon and Nebuchadrezzar the inaugurational place is transferred to Nisan. The new calendar had thus in the meantime secured recognition for its claims.

The mythological motives of the Age of the Bull had to be taken from the myths of Marduk. Seeing that Marduk is regarded as the child of the sun (the ideogram signifies ‘son of the sun’), the motive of the mysterious birth is connected with his appearance as well as the motive of the persecution by the dragon (exposure and rescue). The myths of Marduk which are as yet known have not supplied evidence for his birth from the virgin queen of heaven (see above, p. 184). But the myths tell of the marriage of Marduk. The child of the sun in the course of the cycle becomes the lord and king of the queen of heaven (Ištar). Every historical celebrity who, in the Bull age, was distinguished as a ruler of the world, a founder of dynasties, etc., was furnished with the Marduk motive, if some antiquated method corresponded with the myth of the Twins did not prefer the motive of the Discovery (see above, p. 185). In this way we can explain the mythical setting of the history of Sargons I., who founded Babylon, and in all probability was the first to introduce the Marduk method of reckoning.

---

1 From the Babylonian ideogram of the planets, Jupiter signifies 'bull of the sun,' and is explained as the 'narrow of the heavens' which the bull of the sun placognos. 
2 'Sargon the mighty king of Agada sm 1. My mother was a vestal,' my father of the lower class. . . . My vestal mother conceived me, in secret did she bear me. She laid me in an arx of my mother’s walls, closed my doors with pitch, laid in the way . . . the river bore me downwards to Akki, the water-carrier, Akki, the water-carrier, received me in the friendliness of his house, brought me up as his child, made me his cradler. From my activity Ištar tell in love with me. . . . For years I enjoyed sovereign power.'

3 It is related of the hero of the Babylonian Gilgamesh Epic how Ištar seeks to win his love. Elius, however (Hist. Anim. xii. 51), says his mother had been a king’s daughter, who conceived the hero by means of an insignificant man.

4 Gudes, the South Babylonian private prince, says to the goddess, who was standing by his side, 'I have no mother, thou art my mother; I have no father, thou art my father; in a secret place hast thou borne me.'

5 Ninib appears in an epic poem as the hero, who will allow his royal power to extend to the bounds of heaven and earth. He is a child of Ištar, he is called 'My father know I not.'

6 Asuransipal allows the following story to be told of himself: 'I was born in the midst of mountains, which no man knew; thou hast, O Ištar, with the glance of thine eyes chosen me, hast longed for my supremacy, hast brought me forth from the mountains, and called me as ruler of nations.'

7 Asurbanipal wishes to be regarded as a child of Ištar, who had once nourished him. The writers of his tablets represent his Age as the Golden Age of the world (cf. p. 187).

8 (c) **Age of the Ram.**—The recognition of the fact that the calendar must now be arranged according to the Ram as the vernal equinox, and the fixing of it so, give to the otherwise unimportant king Nabonassar (Nabû-nasir, 797–734) a special significance. The framers of the calendar in his time have dated a new age from Nabonassar. Syncellus relates (Chronographia, 207) that Nabonassar, according to the testimony of Alexander Polyhistor and Berosus, destroyed all historical documents relating to his predecessors, in order that dates might be reckoned only according to his time (συνογιστὴν τῶν προ̱δικῶν τῶν προ̱σεχθείσων δόξαμα, διόλιος ἐν αὐτῷ ἡ καθάρθησις γένεται τῶν Χαλδαίων βασιλέων).

The breaking of the tablets is not to be taken literally. It is the same as the burning of the books in reforms of other ages, e.g. the Persia under Alexander, in China, and to-day in China and Indochina. In the case of the burning of the libraries of Alexandria, too, this motive must be taken in a symbolical sense. It signifies the beginning of a new era of Islam in Egypt.

This is the reason why the Babylonian chronology contained in the extant inscriptions begins with Nabonassar. The Ptolemaic canon, too, which, as is well known, did not follow historical ends, but represented a calendar with astronomical limits, had begun with Nabonassar. The misunderstanding of Syncellus can also be explained in this way: the Chronographia (267) says the Babylonians had from the time of Nabonassar written down the periods of the courses of the stars (ἀπὸ Ναβονασσάρος τῶν χρόνων τῆς τῶν αστρῶν κυβερνῶν Χαλδαίων ἀκριβείας).

In Babylon itself the reform of the Age of the Ram never obtained full recognition, because the Age of Nabonassar coincided with the fall of Babylon. The old Babylonian reckoning kept its hold here. Still Berosus, under the rule of the Seleucids, reckons, as we saw (p. 189), with the Age of the Ram. The new reckoning seems to have found its chief support in Egypt. Just as the Bull Age received recognition in the form of Marduk of Babylon, in the same way the Age of the Ram served the purpose of glorifying Jupiter Amon, who is represented with the head of a

9 Ετέκις, the 'sister of god,' in the Code of Hammurabi, the priestly representative of the side of the goddess, is by no means the author; he had collected the traditions and preserved them in their true form.
AGES OF THE WORLD (Buddhist)  

ram, although he is in his nature identical with Marduk. Alexander the Great, who allowed himself to be celebrated by contemporary writers as lord of worlds, and to be painted by Apelles as Jupiter, consulted the oracle in the oasis of Jupiter Ammon. Marduk says that under Bocchoris 'a ram (Apelles) spoke.'

The doctrine of the Ages of the World, as may already have been inferred from the preceding explanation, is connected with the expectation of a deliverer. As deliverer there appears the Divinity, which reveals itself in the spring equinox. It is Marduk-Adapa, it is the 'Ram,' which, according to the Age, overcomes the power of darkness. In 4 Ezra (11-46) the see reflects on the ways of the Highest:

'Then the Highest looked at his times; lo, they were at an end, and his sons (successors) were full. . . . Now the earth will be refreshed and return . . . and trust in the judgment and mercy of her creator.

In these words lies the fundamental religious idea of the doctrine of the Ages of the World. 'The sons were full.' 'The time is fulfilled.'

The connexion of the doctrine of the Ages of the World with the distresses viceroy predicts lies in the following characteristic opinions, which meet us at once as axioms:

1. The Age of perfection lies at the beginning. Just as pure knowledge, revealed by the godhead, lies in the dawn, so that it is the task of science to discover the original truth by observation of the book of revelation written down in the stars, and to obtain freedom from the errors which have crept in through human guilt, so also the Age of pure happiness lies at the beginning.

This fundamental idea has produced a special theory regarding the doctrine of the Ages of the World which is based on the connexion of the planets with the metals. Silver is the metal of the moon, gold the metal of the sun, copper the metal of Istar. According to the reckoning which begins with the Age of the moon, the silver must have been the first Age, on which a less valuable then followed. We know from classical antiquity the succession: Golden, Silver, Copper (Iron) Ages (Hesioc, Works and Days, 90 ff., and Ovid, Metam. i. 89 ff.). The succession of the Ages of the World lies also at the basis of the Book of Daniel. The commencement with the Golden Age points to Babylon, where the sun predominates (see above, p. 184). It may, however, point to the Babylonian conception, which gives the first place to Marduk as a sun-phenomenon, just as the planetary series of our days of the week places Sunday before Monday. The Golden Age is also called the Age of Saturn. Owing to the change of the heptagram into a pentagram, Saturn is represented by the sun, as Mars is by the moon; and an astronomical text of the Babylonians, which has been handed down to us from the time of the Assyrians, expressly says that Saturn and the sun are identical. As far as the rest is concerned, the order of succession corresponds to the astral theory. The third, the Copper Age, corresponds to Istar-Venus, the third figure among the rulers of the zodiac.

The succession gold, silver, copper, brings the second characteristic at the same time into view. It is as follows:

2. The times are becoming worse.—This is much

*End insula, the days are full," are the words in an oracle which, according to Graecina in Sues, to which we are said to have been prophesied 1626 years before as the saviour of Nann, the queen of heaven.

The relation of the value of silver and gold in antiquity is 1 : 123, i.e. the relation of the course of the moon to that of the sun. The relation of the moon, which Rawlinson found on the planet steps of the Nebo temple in Borsippa, were for the moon silver, for the sun golden, for Venus lapis lazuli.

* 13. For this, the present writer's Das AT im Lichte des alten Orientes, p. 13.

more strongly expressed when the theory departs from the scheme provided by the planets with regard to the fourth Age, and allows an Iron Age, corresponding to the distress of the present time, to follow after the Golden, the Silver, and the Copper Ages. The end of these evil times, which precedes the destruction of the world, is a time of cursing, a time of tribulation, and the reversal of the natural order. The Babylonian omens often speak of this time of cursing, which stands in opposition to the time the deliverer brings (see above, p. 184). If the sun is dead in heaven, then will the clear become dull, the pure dirty, the lands will fall into confusion, prayers will not be heard, the signs of the prophets will become unfavourable. In a form of curse which speaks of powers of darkness, may not obey the commands of the gods, we have the following:

'Under his rule the one will devour the other, the people will sell their children for gold, the husband will desert his wife, the wife her husband, the mother will bolt the door against her daughter.'

In the Atarhazes myth, the text of which originates in the 3rd mill. (the time of Ammianus), Babylonian, the Elamites, the Carseite the Carseites, the Suseans the Susians, the Cushiens the Cushiens, the Lububans the Lububans, one land another land, one man another man, one brother another brother, but they shall strike each other dead. But after that shall become the Akmish, who shall lay them all low and overwhelm them severally."

Signs in the sun and in the moon proclaim the end. In a hymn we have the following: 'Oh, father Bel . . . oh, lord of the land, the eves reject her lamb, the wise-child her kid. How much has been torn, how much is torn. The whole city shall the mother reject her son, the wise-child her daughter. Heaven and earth are, in low, the sun does not rise to its radiance over the land, the moon does not rise with her light over the land. Sun and moon do not rise with their radiance over the land.'

The time of the curse corresponds to the rule of the powers of the lower world. It is like the time of the descent of Istar to Hades. When Venus is in the lower world, all life is dead. As it is in the small year, so is it in the world year.

But then comes the great revolution:

3. The happy time of the beginning comes back. The Babylonian texts seldom speak of this time of blessing. It is only from the description of the happy rule of kings, who are praised by the writers of the tablets as the bringers in of the New Age, that we can extract the motives of the time of blessing. Especially is this the case with Ashurbanipal.

'Since the time the gods in their friendship did set me on the throne of my fathers, Hammurabi has set forth his rain, as opened the springs; the grain was five eels high in the ear, the ears were five-sixths eels long, the harvest was plentiful, the corn was abundant, the seed shut up, the trees bore rich fruit, the cattle multiplied exceedingly. During my reign there was great abundance, under my rule rich blessing streamed down.'

ALFRED JEREMIAS.

AGES OF THE WORLD (Buddhist).—The views of the Buddhists on periods of cosmical destruction and renovation were matters of vivid interest to the first Orientalists, as will be seen from the bibliography on p. 190. This interest has rather languished since the publication of Religion des Buddhas of Koppenn, the last who has dealt thoroughly with this topic.

* Note bow the whole world is embraced in the range of vision.
The fanciful theories of the Kalpas or Ages of the World do not appear to be essential to Buddhism, whether looked upon as a religion or as a philosophy. Nor are they of mythological moment, being rather matter of ‘secular knowledge,’ or, as a Buddhist would say, lokayatika. Nevertheless, as they can be proved to be very old; as they are mentioned in the myths of Buddhists of the Great Vehicle are honoured, and have been duly recorded by the Buddhists of every country, Sinhalese as well as Mongolian; as, moreover, some bits of philosophic or religious reflection are interwoven with them, we may be allowed to consider the subject in all its aspects.

There is no beginning of transmigration (or samsāra); there will be no end to it: on these two points all Buddhist schools agree. But, without mentioning that speculations on the beginning or the end of the cosmos are forbidden by the Buddha in some texts (see Aphonakacharika), it must be observed that there is an end to transmigration for the Arhats, who right away die at the time of dying. ‘This existence is for me the last one.’ Moreover, in the Buddhist of the Great Vehicle, Avadāna, for instance (see Avakorita), resolved to postpone his entering into Nirvāna till every creature should, by his own really divine exertion, have been delivered. In this problem, where the texts are silent, or rather, contradictory, we may probably have to solve it as has been by the Saivaists: this is, that beyond the cosmical destruction, there will never come a time when all will have attained Nirvāna. Hence there need be no present urgency for us, can be among the elect, if only we care for theories.

Theories on the revolutions of the world are said, in the Brahma-sūtras, to be ‘very absurd’ and ‘even alien to its spirit. But they soon became naturalized; and, while originally very like the brahmanical theories, they were worked after a different plan.

There is mention in the fourth edict of Akoka of the next destruction of the Universe. ‘The king wishes to know if it is true that his sons and grandsons, and so on, will maintain good practices till the age of cossical destruction (saivāntakalpa).’ This text does not show that the belief in the very speedy disappearance of Buddhism was still unknown.

The canonical Pali texts do not furnish us with the complete theory now to be stated. These afford only hints or allusions, from which it is difficult to draw any conclusion as to the conditions of the elaboration of the doctrine of these hints, however, will be carefully pointed out. So far as the Buddhism of the South is concerned, we derive our knowledge from the Commentaries, of which we shall make use here. We know that Buddhism in Ceylon, its official compiler; and for the Buddhists of the North from Mongolian, Tibetan, and Chinese sources, confirmed by the Abhidharma literature.

The general lines are as follows: A ‘Period’ (kappa), or ‘Great Period’ (mahā-kappas, kalpa) of cosmical evolution, is to be divided into four ‘Incalcubles’ (asankheyyas) or ‘Incalculable Periods’ (asankheyyakappas, asankheyyakalpas). These last are always mentioned in the following order: (1) Period of destruction (saivāntakalpa, saivāntakalpa); (2) of duration of the destruction (saivāntatthāyin, saivāntatthāyin, when the world remains destroyed); (3) of regeneration, or rather revolution (svānūcch, svānūcch); (4) of duration of the world renovated (Aghatavana, ii. 142, iv. 100; Majjh. i. 30).

How long is an ‘Incalcuble’ period? The answer given by Buddha himself is a very good one: It is difficult, i.e. impossible, to exhaust an ‘Incalcuble’ by numbering of thousands of years. In Samyutta, ii. 181–2, there is a simile which has found its way into the Chinese and Sinhalese records: ‘Suppose a mountain of iron to be touched every hundred years by a muslin veil; the mountain will be divided in one hundred thousand years. The same is the case with the Incalcubles, nay, with hundreds of thousands of Incalcubles; the saṅkhaṇa being ‘infinite,’ as we should say, and the

The same problem occurs in the Mahāvastu (i. 77). It is said that the future Buddha must, be-
destruction by wind is greater than the destruction by water (samvattasima, limit of destruction by fire) appearing on the thousand, ten thousand, and hundred thousand worlds in the Brahmāvīmañña, with its threefold division of inhabitants, coming from the Abhāṣāvara abode; then in order the three Deva abodes of the Parinirmavāsāvartīna, the Nirmānārati and the Vīra-vīra. The Four中级 Periods (Chiliocosm) are not named; then the Circle of the Wind (vayumandala) on which is established the Circle of Water, etc., with Mount Meru and its heavenly inhabitants, with the sun and the moon, etc. all this is called the bāhūnala or the 'receptacle world.' And that is the end of the first Intermediate Period of the 'Incalculable of Renovation.'

During the nineteen following periods the inferior parts of the bāhūnala are successively peopled by men and women. First, the men are said to be aparimātīya, i.e. of immeasurable life. Such they remain to the end of the Period of Renovation, according to the Abhidhārma.

The sources known to Hardy and Koppen agree in stating a decrease to 84,000.

When the infant beings have appeared, the Incalculable Period of Renovation (vivartamānāvasthā) is finished.

The following Period of Duration (vivartana 1891, p. 321) is divided into twenty well-characterized Intermediate Periods. During the first, the whole of which is of decrease, the average duration of human life falls from 'immeasurable length' (or 80,000,000 years) to 80,000 years. The eighteen following are divided into two parts: the first of increase (ukarbhakalpa, udhvavamukha), during which life increases from ten years to 80,000 years; the second of decrease (apakarbhalpa, adhomukha) inversely to the twelfth and last is only of increase. We do not know if the first and the last are shorter than the remaining ones, but that seems probable.

Here the Brāhmanc theory of the Four phases finds a place: the increase will be by wind, the decrease by fire. The fourIntermediate Periods are united.

Nothing is known of the Second Period. The world remains chaotic, or, if we prefer it, a pure nothing with no regions of space becoming at all like those below, and wholly dark. There are no ashes left by the fire; no dust by the wind. One would assume that the water (which, being very acid, disintegrates the Iron or Crystal Mountains) does not annihilate itself. On the contrary, the water does not settle so long as anything remains.

To understand the following, the reader is referred to the Cosmology. We give below the necessary ideas:

Above the world of desire (i.e., the four continents, Mount Meru with its divine inhabitants) begins the world of form, consisting of three (or two) heavens of the first meditation, then of the second, etc., of the four heavens.

The four heavens of form: the worlds are organized in such a way that the second meditation realms are established above a thousand first meditation realms (Little Chiloicon); the third meditation realms cover a thousand second meditation realms (Great Chiloicon), and the four meditation realms cover a thousand third meditation realms (Great Chiloicon).

For one universe, in the proper sense of the word, there are 1,000,000,000 first meditation abodes (Māyavāsāvartīna), 1,000,000,000 second meditation abodes (Śākta-vīra), 1,000,000,000 third meditation abodes (Śākta-vīra), and 1,000,000,000 fourth meditation abodes (Śākta-vīra). One universe is the realm of a Buddha. The authorities are not very constant. For instance, we learn that the Buddha destroys the same number of worlds (1,000,000,000).

In lateral expansion the Buddha always perishes to the extent of a tenth of a Buddha's domain (Pāramitāśūlī, in Warren, p. 231).

The latter opinion is better supported by the texts at our command (TPS 1591, p. 118).

For particulars see S狍c Hardy, Manual; Koppen and Warren, loc. cit.

According to Ānātha, "Cat. Osoon, 3475, 33, there are seven clouds 'to give the destruction-water'; the first is named 'destruction' (samvattasima)."

case. Sometimes a great Period elapses between two appearances of a Buddha; sometimes an in-
calculable number of great Periods; sometimes, on the
contrary, there are in the same period many
Buddhas. We have 'substantial' -periods (sāra),
with one Buddha; 'cardinal' -periods (mandara),
with two; 'excellent' (tora), with three; 'substantial-
cardinal' (bhajjana-kula), with four; 'excep-
tious' (bhadda) or 'greatly auspicious', with five.
Such is the present Period. There have been
twenty-nine 'void' Periods before it. So far the
old tradition. The redactors, moreover, of the
Mahābhārata, the Buddhist Rājagṛhāspravakas, etc.,
are already aware that in the Bhād-
arakala a thousand Buddhas are wanted.

At the beginning of the Universe, when the
primordial water (see above, 189) is about to give
way for the appearance of the solid world, a
lotus appears at the place where the sacred tree of
Buddha has been and will be.* There is no flower
if the period is to be void; there are as many
flowers as forthcoming Buddhas.† Compare the
Brahmanical flower.

* A point of interest is the description of the
first men, or, as it has been called, the Buddhist
Gnosis. Originaly, as they did from the
Abhāsvara-abode, human beings retained the
attributes of their former existence. Born by
'substantial birth,' self-radiant, with joy as their
own food, with spiritual bodies, such beings
are evidently meant by the 'men of immeasurable life'
referred to above (see p. 189). There is neither sun
nor moon. As time goes on, earth appears for
the surface of the primeval ocean. It is a savoury
earth, and, as it were, a forest. Men eat it, and
their radiance is lost for ever. Sun and stars
furnish some light. Then follows the eating of
some honey-moss, of creepers, of a marvellous
rope. It is a long decadence. When this last has become
a regular food, organs of sex appear; and with the
institute of marriage, of private property, and of
caste, begins the organization of human society.

Interesting for general folklore (especially the
details on marriage), the story is certainly very old,
and was adapted before the actual location of the
celestial abodes. That in falling from the Abhās-
vara-abode the beings do not go through the
heavens of Brahmat and the Devas, and that these
are utterly ignored, are significant facts. But it
is more astonishing that the 'self-appearing' men
do possess the attributes of the other World
beings, i.e., 'replejent,' and the Abhās-
vara gods themselves may be derived from this old
conception.

AGES OF THE WORLD (Christian).*—The poets and the philosophers of pagan antiquity
have, as a rule, represented the evolution of man as a gradual but inexorable decay, putting the
happy era at the beginning of the world, and supposing that the end of the world would end in complete destruction.
The Christian idea is exactly the opposite; and this is quite natural, for Jesus Christ caused a great hope
to shine on humanity, groaning in the darkness of paganism. The prophets of Israel had already
hung out some rays of this hope, in foretelling the
coming of the Messiah, who would establish on
earth an era of true religion, of peace and happi-
ness. In short, while pagans placed the Golden
Age in the past, Christians put it in the future;
they have described the history of the world as
an ascent, if not continuous, at least intermittently progressive, and finally triumphant, towards good
and happiness. The writer of the Apocalypse (ch. 20)
describes in an imaginative style the last phases
of this historical drama.

St. Augustine is the first Father of the Church
who explicitly mentions Seven Ages in the history
of man, and all the theologians who followed him
were more or less inspired by his idea. His plan
is derived from the 'Days of the Creation' in
Genesis, the passage is de Carite Die, xxii. 30
ad fin.

Paulus Orosius, a Spanish priest (d. 418), the
friend and admirer of St. Augustine, to whom he
dedicated his Historia, besides trying to prove
incidentally the Bishop of Hippo's theory of the
government of God in history, divided his work
into seven books, which, however, correspond to
different epochs. He had clearly come under the
influence of Roman history. The founding of
Rome, the taking of Carthage, the death of Alexander, the taking of Carthage,
the Servile War, the reign of Caesar Augustus, with
which he makes coincident the birth of Jesus Christ,—these are the memorable events which form the
boundaries of his periods,†

The Venerable Isidore (c. 570), who in his
Chronicles owes much to Paulus Orosius, also
adopts seven Ages, and surmises that the last one,
ending with the year 1000, will mark the end of
the world.

Adson, abbot of Montier-en-Der, in his treatise,
* [As the Jews were accustomed to distinguish the age before,
from the age after, the advent of the Messiah, so the majority
of NT writers distinguish διακονοκρατία from διακονοκρατία.
In both cases an ethical is always superimposed upon the temporal
meaning. The former age is the period which shall elapse
before the appointed Parousia of Christ, 'the period of in-
stability, weakness, impotency, worldly care,' (Thayer); the latter is the age after Christ has come again in
power to establish his Kingdom, definitively, with all its
blessings. It is inaugurated by the redemption of the dead,
and it answers, in scope and nature, to the completed work
of Christ. The present world, as being subject to a
medallion angels, who mediate the law; the world to
come (διακονοκρατία ἡ δικαιοσύνη, He 8), on the other hand, is
viewed as already existing, in a spiritual world, outside of which it will come down as a new and divine order of
things. The term 'world' (Δαίμονος) expresses the constitu-
tion of that state of things which as an age of 'law' is viewed as
in relation to its development in time. The tone of the NT in
speaking of the present age is almost always negative.
The gulf between the two ages, however, is not conceived as
being quite absolute. 'The powers of the age to come' (He 9)
is not so much an object in itself, as a definition of the
harmony and order throughout what is otherwise a chaos,
and preparing ultimately to supersede the laws of the present
depensation.

† See the Anglo-Saxon version of the Historia of Orosius by
de Antichristo, dedicated to queen Gerberge (954), sketches the preliminaries of the final judgment, which will follow the apsotasy predicted by St. Paul, and the struggle against Antichrist; and he puts off the end of the world until this epoch.

Bernard, a hermit of the Burgundia (d. 1153), announces, on the contrary, that the end of the world is near. He and a great number of preachers in the 10th cent., through their allegorical interpretation of the Apocalypse, spread the belief in the immediate coming of Antichrist and the end of the world.

Nevertheless, this view was combated as an error by Abbo, abbot of Fleury-Loire, the most learned monk of his time.

Scotus Erigena (d. circa 860) groups the first six Ages into three epochs, each marked by a different priesthood. The first epoch, comprising the first five Ages of St. Augustine, was contemporary with the patriarchs and priests of the OT. The second, beginning with Jesus Christ, was marked by the priesthood of the NT. Erigena foretells a third, in the everlasting life, in which the faithful will serve as priests, and will see God face to face.

Joachim of Flora (d. 1292), the famous visionary hermit of Calabria, in his book, de Concordia, and de Divisione Mundi, according to Turenne's interpretation of the Apocalypse, sketches the preliminaries of the beginning of the 3rd Century, and the new age of peace and universal happiness. The socialists of the present day have unwittingly adopted the Christian idea of the 'Millennium.'

It was the privilege of a Frenchman, more famous as an economist than as a theologian, to return to the Christian idea of a progressive development.

In the 18th and 19th centuries, the idea of the development of the Ages of the World, i.e. of mankind, by analogy with the ages of human life, was renewed by some Christian philosophers. J. G. Herder, in Ideen zur Physis. Gesch. der Menschheit (1784), admits that there are in the evolution of races and nations, in the life of plants, periods of growth and blossoming, of fruit-bearing, and, lastly, of withering. Mankind tends, by the reciprocal influence of the nations, to the realization of that blessed Age announced by Christ under the name of the 'Kingdom of Heaven.'

The founder of positivism, Auguste Comte (d. 1857), thinks that religion is contemporary with the infancy of humanity.

'Following the resurrection of the human mind,' he says, 'each branch of knowledge must pass through different stages: the theological stage, which is the age of fiction; the metaphysical or physical stage, which is the negative age; the positive stage, which is the positive age (Courc de philosophie positive, iii., Appendix, p. 77).

Henrik Ibsen maintains that man evolves in turn through three phases:

- ‘the kingdom founded on the tree of knowledge; the kingdom founded on the tree of the Cross; and, lastly, the kingdom founded on two trees at once, for the sources of its life are in the paradise of Adam and at Golgota’ (Emperor and Galilean, 1st Part, Act II).

Drummond, in his Ascent of Man (1894), distinguishes three ages in the evolution of the world: the first, in which the Vegetable Kingdom was led to produce the flowering plants; the second, the evolution of the Animal Kingdom, where the possession of consciousness lead to the separate species and to the organization of the Mammals; the third, the human, which comprises the ascent of man and of society, and is bound up with the struggle for the life of others.

'This is the Further Evolution, the page of history that lies before us, the closing act of the drama of Man' (p. 443).

This is a short sketch of the Christian theories of the Ages of the World. In opposition to the pagan conception of a fateful decay of man, ending in annihilation, the Christian conception, derived from the Messianic idea of the Hebrews, shows the ascent, the progress of man, though not without falls, towards more truth, more justice, and more happiness. The socialists of the present day have unwittingly adopted the Christian idea of the 'Millennium.'
Pascal summed up the Christian conception of the Ages of the World very well when he said: 'The whole race of men, during the course of so many centuries, ought to be considered as being the same man always living and continually learning' (Fragment d'un traité du Vide, Paris, 1897, p. 436).

AGES OF THE WORLD (Egyptian). — In their literature the Egyptians have not left any formal description of the world and its ways as they imagined it to have been in past ages. Manetho (c. B.C. 300), enumerating the rulers of Egypt in the records in the period before Menes two dynasties of gods, followed by four others the character of which is not defined, and finally a dynasty of deities, demi-gods. The fragments of the Turin Papyrus of kings principal view was already established in the 14th cent. B.C. although the details cannot yet be recovered. Hephaestus, the creator-god, heads the list in Manetho, and he is immediately succeeded by the sun-god. These two correspond in Egyptian to Ptah and Re, the latter being the organizer of the world. An inscription of the Tenth Dynasty says of the temple of Siut that it was 'built by the fingers of Ptah and founded by Thoth for Ophiol, the local god; and a Ptolemaic text ascribes to the sun-god, during his reign on earth, the building of most of the Egyptian cities and their shrines. Stories of the time of the rule of the gods on earth are seen in the mythology (e.g. the myth of Osiris, and the legend of Hathor's massacre, and the Heavenly Cow) and in the popular tales (vaguely in the story of the Two Brothers).

'Since the time of the god' and 'since the time of Re' are old formulas for expressing immemorial antiquity; so also is 'since the time of the worshipers of Horus.' These last correspond to Manetho's 'deities,' and are shown by Sethos to be historical personages, representing the kings of Upper and Lower Egypt before Menes united the two lands. Their records, when they had not perished altogether, were written in so primitive a style as to be incomprehensible to the Egyptians of the third millennium B.C., and these 'worshipers of Horus' entered early into the realm of the legendary. The Turin Papyrus appears to give 23,200 + 2 years to the god-kings, and 2101 + 2 years to a dynasty of 19 'worshipers of Horus.' The wise Ptohilo, in his rather cryptic proverbs dating from the Old Kingdom, seems to refer to the 'counsels of them of old, of them who listened to gods;' and the 'worshipers of Horus' are the type of virtue rewarded in the same collection of proverbs: 'An obedient son is like a worshipper of Horus, his happiness in consequence of his obedience; he grew old, and attained to the honour of great age.' Thus there was some idea of a more perfect condition having prevailed in primeval times. None of the above myths show rebellion, deceit, and wickedness of all kinds appearing among both gods (e.g. Seth) and men in the age of Divine rule.

AGES OF THE WORLD (Greek and Roman). — The Greeks, and after them the Romans, were

"There is no extended treatment of this subject as a whole. Among the three or four briefier accounts, the only one of any especially interested in this subject, and it is largely to their speculations that we owe those familiar references to the Ages which we find in the literary tradition of our Western civilization. In the Graeco-Roman world this theme was actively discussed for nearly a millennium. During that long period the theory of the Ages was worked over and again by the various schools of philosophy, by manifold attempts to harmonize conflicting authorities or to incorporate new ideas, by the lore of the people, by the fictions of the poets, even by the embellishments of mere rhetoric. The result is that a complete and detailed exposition of the idea is not to be expected in the space at our command.

Every theory upon this subject belongs to one of two types. The first assumes that man has risen from his former estate; the second, that he has fallen. Both of these occupy an important position in the history of ancient thought, but, so far as the present inquiry is concerned, the theory of descent, that belief in the progressive degeneration of mankind which is cherished by the folk of many races, was at all times the dominating theory in the well-known lines of Horace (Odes, iii. vi. 46-48).

"Eros parentum, poior avis, tult
Noequeiores, moaces daturos
Progrium vitiosum

are the expression of a view which recurs again and again in the Graeco-Roman world, from the Homeric poems (Il. i. 272, v. 304; Od. ii. 276, etc.) to the last words of Classical Literature.

A strictly chronological development of our subject is impracticable. The beliefs in our surviving tradition are so large, especially in the departments most important to us, that no definite date for the inception of any one article of doctrine may be assumed with safety. Indeed, practically every idea by which the later tradition is distinguished will be found upon examination to possess a high antiquity. We may assert, however, that three periods of formative influence are especially prominent. The first is represented by Hesiod, the second by the Stoics and their predecessors, the third by the revival of Mysticism in the 2nd cent. B.C. and the corresponding

1. Hesiod.—The position of Hesiod was always paramount. The influence of Hesiod upon our theme is very much the same as was the influence of Homer upon the form and content of Greek literature. The account of the Ages which we find in his Works and Days (109-201) is our earliest classical authority upon the subject. It is, also, to a remarkable extent, the centre and ultimate source of the later development. There were several other accounts of the early history of man, and some of them were evidently folk-legends of a high antiquity. None of them, however, is of any great importance to us. A few have contributed a detail here and there to the development of the Hesiodic norm, but most of them languish in comparative obscurity. Such being the case, it will be advisable to make Hesiod our basis, and to begin with a summary of his famous account.

First of all, the Olympian gods made the 'Golden Race of men.' These men lived when Kronos was king in heaven. They fared like the gods themselves, always making merry, and untroubled by toil or care, for the teeming earth bore of its own accord an abundance of all good things and there was no old age. Even death itself, when at last it came, stole upon these men like a pleasant slumber. When this race passed away, many gods made them to be changed into stars and earth and are the invisible guardians and helpers of mortal man.

Then the Olympians made a second race, the men of the Silver Age. These were far inferior to the Golden men for they reigned little children a hundred years, and when they finally reached maturity they straitway were swallowed up by their own folly, for they slew each other and refused to worship the immortal gods as men ought to do. Therefore Zeus was wroth, and put them into an ironearth, the real value is by O. Gruppe, in his G. Mythol. und Religion
gesch., Munich, 1912, pp. 447-450 (Müller's Bibl. der Erzä
tschauensche, vol. v).
awed. But even these men were honoured, for they were made the good spirits that live beneath the earth.

Then Zeus made another and a third race, the men of the Bronze Age. They were sprung from the sub-trees, and were strong and terrible, eating no corn, lovers of war and violence, and full of rage. Their weapons and their houses were of bronze, and they wrought in bronze. There was no iron. These men, too, fell by the work of their own hands and fared to Hades. Thus the story of mankind was brought down to the death laid hold of them, and they left the bright light of the sun.

Then Zeus made a fourth race, better and more just. These were the Heroes of the elder days, such as fought at Troy and at Athens. We call them the Demigods. And when they perished and an abiding-place at the border of the earth. There they dwell in careless ease in the Isles of the Blest, hard by the deep-eddying stream of Ocean, and thence a fair world bears them fair fruit.

Would that I had not been allotted to the fifth period, but might have died earlier, or else have been born later! For this is the Age of Iron. There shall be no surfeits of labour and sorrow by day or by night, and the gods will lay bitter burdens upon us. But, even yet, not all will be bad. This race shall Zeus destroy, when men are born with horry hair, when fathers strive with sons and sons with fathers, guest with host and friend with friend; when brothers cease to be dear, when goodness, justice, and piety are no longer regarded.

Then Alcis and Nausixe, whose fair bodies are clothed in princely raiment, shall depart to heaven, and men shall find no succour in their grievous calamity.

The inconsistencies in this account were perceived by the ancients themselves, and in modern times a literary criticism has gathered about its subject. For our present purpose, however, it is enough to say that these inconsistencies are due to the fact that Hesiod’s version is a composite structure, the main support of which is an ancient discussion of the history of mankind into four Ages. No reference to this version is found in the Homeric poems, but, even at that early period, some form of it was probably current amongst the Greeks.

The designation of these four Ages by the four metals—gold, silver, bronze, iron, in the order named—is, in itself, an indication that the theory of descent is the fundamental idea of the legend. True, the causes and symptoms of descent, the coefficients of degradation, so to speak, are by no means clear at first sight. This, however, is, in itself, a striking proof of the high antiquity of the theory. Our long familiarity with the later phases of the legend naturally suggests the ethical motif as the standard of measurement here. But in the pristine stage of a myth like this, neither moral nor our moral responsibility is of much account. The Golden Age is a replica of heaven, a mortal reflection of the glory of the immortals. The men of those days were superior to us simply because they were nearer to the gods than we are.

Their position was a matter of powers and privileges, not of character. The long descent from those happier days has been measured by the gradual loss of those powers and privileges. The causes of it are in the will of the gods themselves. The idea of moral responsibility as a factor in the problem belongs to a period of more mature reflection, and we see the first beginnings of it in Hesiod’s own account. Peace and plenty in the first Age are followed by brutal anarchy and warfare. The second sees organized violence and deliberate cruelties; the fourth, crime of every sort and description. The steps, however, are none too clear, and the old description of the Ages was not yet in harmony with the new standard.

During the subsequent history of our discussion, more and more emphasis was given to the ethical motif. The basis of it continued to be the assumption of a descent from innocence and happiness to guilt and misery, the adumbration of which has already been observed in Hesiod. More specific details of the process frequently reflect the philosophical tenets of the writer, and may, also, be freely manipulated in the interests of rhetoric or for other purposes.

The principal difficulty with Hesiod’s account arises from the fact that there was no place in the old-four-fold scheme for the Heroic Age. As a matter of fact, the Heroic Age belongs to another and a different account of the development of mankind. Neither of these accounts, however, could be neglected, and in Hesiod we see the first known attempt to combine and harmonize the two. The deduction upon which it was based seems tolerably clear. According to the old-four-fold system, the Bronze Age immediately preceded our own. On the other hand, it was also generally accepted that the Heroic Age immediately preceded our own. Consequently, the Heroic Age of the one scheme ought to coincide with the Bronze Age of the other. This, however, is impossible, as any one may see by comparing the two. Hesiod, therefore, inserted the Heroic Age between the Bronze and the Iron Ages of the old scheme, and re-numbered accordingly. The result was a system of five Ages, the inconsistency of which was usually clear enough to the ancient critics themselves. Two famous accounts given by Aratus and Ovid indicate a full realization of the fact that the only way of harmonizing the two systems was either to revise Hesiod’s conception of the Four Ages in such a way that the Heroes could find a place in them, or, better still, to shift all four Ages to the past. In that event, our own race, of which the Heroes are, in any case, the earlier and better exemplars, may be assigned to the period between the close of the Iron Age and the flood.

As we have already seen, the presence of the Heroic Age in Hesiod’s account upset the principle of progressive degeneration, a fundamental idea of the old four-fold scheme. It also runs counter to the belief that each of the Ages is represented by its own separate and distinct race of men. It was not until the rise of the Cyclic Theory that this idea was in any way disturbed, and, even then, the process was one of revision rather than destruction. The doctrine of successive races affected by the later intrusion of the Flood Legend. At first thought, we might esteem ourselves the descendants of Deucalion and Pyrrha, who were themselves survivors from the previous race. But the story itself reminds us that we are really terrigena, a new race sprung from the earth.

We now come to one of the most notable and, doubtless, one of the most ancient features of our legend. This is the significant association of it with the great dynastic change of Olympus. The Golden Age was under the sway of Kronos. Since then, his son Zeus has ruled the world in his stead. On this basis, the Four Ages are sometimes reduced to two, the Age of Kronos and the Age of Zeus, the old régime and the new, the happy past and the present. This may well be an older and a simpler version. But it occurs only in the later writers, and, so far as they are concerned, is probably for brevity, or to score a rhetorical point.

Real variations from this feature of the old account are especially characteristic of the philosophers, and may best be taken up in connexion with...
with the Cyclic Theory. But the Hesiodic version of this motif, above all, the primitive association of Kronos with the Golden Age, persisted until a late date, not only in the genuine folk-tradition to which it really belongs, but also, to a large extent, in the literature. In fact, the Golden Age is often designated simply as 'the Age of Kronos,' 'the Golden Age of Kronos' was to the early Christian writer Philo, an image applied by them to their deceptions of heaven.

The main reason for such a similarity is, of course, not far to seek. In all cases, the theme is ideal happiness, and whether we locate it in the past or somewhere in the present, in this world or the next, the details which make up the vision of unfulfilled desire are, for the average man, very much the same. Nor should we fail to remind ourselves that in the speculations of the folk there is no impassable barrier between our life and the life of the gods, and therefore, that the very thing which was more certain than that the Golden Age and the race who had lived in those happier days had both passed over our ken; but that they still existed somewhere, and that, even now, a mere mortal man might be able to find them again, was not felt to be utterly beyond the bounds of possibility. Odysseus had returned alive from Hades, and it is a well-known historical fact that the gallant Sertorius was, at one time, actually on the eve of setting sail for the Fortunate Isles in the Western Ocean. Thus, as many of the Orphics and their disciples in the Golden Age, the ideal of the Lost Paradise became more and more prominent. Discussion or description of the Golden Age, more especially of its analogue beyond the grave, the Golden Age, so to speak, of the future—continued to grow in importance and interest. We hear many echoes of it in Plato. But, especially to the writers of the Old Comedy and Satire, the Orphic doctrines were a never-failing subject for parody and satiric comment.

One of the plainest signs of Orphic influence upon this discussion was the marked improvement of the traditions. According to the popular belief, old 'King' Kronos had been in the Golden Age a sort of divine Roi d'Yvetot, afterwards consigned to nethermost Tartarus, and, ever since then, a synonym of extreme old age and harmless senility. This view, however, was deliberately opposed by the Orphics. Their teaching was that Kronos had long since been freed from his shameful captivity. Moreover, he is not old and weary. On the contrary, he is ever young and vigorous, and now rules in Elysium, the happy land of those who have passed the grave. There, in a world of eternal youth and joy, he is surrounded not only by the heroes of old, but also by the spirits of just men made perfect—after the Orphic pattern—and, indeed, as some say, by a remnant of men from those golden days whom he was king in heaven.}

Piety and justice as motifs in the ideal of happiness had been ascribed, long before Hesiod's time, to peoples living beyond the limits of the known world. Such were Homer's Abios (H. xiii. 6), 'the most righteous of men,' and to give one more.

*e.g. Homer, Il. xiii. 6, Od. iv. 86, 96, 103, 195, 45, 586, vi. 41, 158. See Graf, Lage p. 4 ff.
*See M. Mayer in Roscher, ii. 1590 ff.
*Pindar, Olymp. i. 124, Pyth. 1. 291; Echyl. frag. 190, ed. Nauck; Teleclides, frag. 1, ed. Kock; Varro, de Re Rust. iii 1, 5; Horace, Epod. xvi. 63; Orphicon, frag. 345, ed. Abel.
example, the Hyperboreans,* so long famous in the literature and legend of the Greek-Roman world. This idea was now emphasized in the analogous legend of the Golden Age—the ideal world of the past—and on the basis of it not only the Orphics but other schools of philosophy exploited their specific view of the nature of righteousness and the indispensable conditions of happiness. In other words, as the Golden Age ceased to be an article of faith, it became, more and more, the field in which those thinkers aired the theories of what the world ought to be. From this sort of thing it was only a step to that long line of Utopian romances which were quite as characteristic of late antiquity as they are of the present day.†

Among the various bits of specific theory imported into the Golden Age by the philosophers, one of the oldest and most important was the doctrine of vegetarism. This doctrine doubtless goes back to the older Orphics, but the most prominent representatives of it in antiquity were the Pythagoreans. The earliest reference to it now surviving is a fragment of Empedocles (127 D), and the most complete discussion of it in connexion with the Golden Age is Ovid, Met. xv. 90 ff. In this fragment the Pythagoreans introduce themselves as the exponents of his own doctrine. The essence of it is that, in the Golden Age, upon the fruit of the earth, and that the degeneration of later ages is marked by the departure from this rule.

It is stated that the Golden Age was distinctively the era of perfect love and peace is easily inferred from Hesiod's account, but the later development is marked by a much stronger emphasis upon this feature. This was partly due to the influence of the Cyclic Theory, in which, as we shall see later, it was the necessary result of the Platonic conception of harmony. The first to lay stress upon it—and probably in this connexion—was Plato's predecessor Empedocles.‡ This, no doubt, is the reason why he made Aphrodite instead of Kronos ruler of the Golden Age.

Among those not interested in any cyclic theory—poets, for the most part—the favourite method of bringing out the peace and harmony of the Golden Age was to emphasize the contrast with later times by diluting upon war, violence, and bloodshed as both causes and symptoms of degeneration in the succeeding ages of mankind. This distrise on war comes first to the front during the Golden Age. It is characteristic of Roman poetry, especially of the Elegy, and, in the end, became a mere rhetorical commonplace.†

Another important line of development in later times was inspired by the varying use and interpretation of one of the principal characteristics: the problematical and characteristic peculiarities of the genuine folk-legend. We refer to the belief that in the Golden Age all the imaginable blessings of life come of their own accord. In this way we have an ideal combination of fabulous plenty with the austere idleness.

* See esp. O. Crussius in Boccher, l. p. 280 ff., and the references.
‡ See Schmeckel, de Ovid. Pythag. Adumbratione, Diss. Gött. 1784, p. 28, etc.
§ See Bol, too, Aratus, 125 ff., and the references in the poem, e.g. Vergil, Ehd. iv. 18, Georg. i. 126 ff. and ii. 539; Tibullus, i. 10 ff.; Ovid, Met. xvi. 97; Seneca, Hel. vii. 1064; Hesiod, Theog. 377; Cicero, De Divin. leg. v. 76; Claudian, de Raptu Proserp. ii. 55, proem., Land. Seren. 70; Sidon. Apoll. Pan. 105, etc.

When treated seriously, either for literary or for didactic purposes, this motif led directly and inevitably to the conclusion that the ideal condition of human society was communism. Several commonplaces which the Alexandrian age might be included here. We know, too, for example, that this theme was one of the preoccupations of the historian Ephorus in his account of the idealized nations of the North.¹

When treated by the satirists and by other people of a less serious turn of mind, the same motif led quite as directly to one of the most important and interesting developments in the literary history of this legend. This new note of the Golden Age or its analogues in this world and the next as a comic theme. It makes its first serious appearance in the Old Comedy, and was primarily intended by them to satirize the peculiar tenets of the Orphics. But the story of Topsy-Turvy Land (des Menchen und der Orphischen Religions, G. Germans call it) was certainly not invented by the Comic Dramatists. It is rather a folk-variation of the old story of the Golden Age, and references to it turn up now and then from the Old Comedy of Greece to the present day. The comedy in this description of the land, the rotaty of ease, and the irresponsible bachelor. The nearest conger of this type is the conception of the Golden Age especially affected by the idyllic-erotic poets of the Alexandrian age and by their Roman imitators. The same can be said of the Orphists and communists.

On the philosophical side, the growing distrust of everything in Hesiod's account that savoured of the supernatural served to bring out still another aspect of the Golden Age more clearly. Before taking up this point, however, we should remind ourselves that the counter-theory of ascent was, meanwhile, being supported by a party of such activity and intelligence that it was absolutely and, by their examples, a new step from this state of mind to that ironical extravagance of humorous absurdity—this, too, has its pathetically—so to say—which we are indebted for the literary world.

It is evident that until the account of Hesiod was revised the two parties were utterly irreconcilable. If one did not believe Hesiod, the most
logical course was to agree with the Epicureans, who denied the account of Hesiod in toto, and replaced it by their own view, which is the nearest approach in antiquity to our modern theory of evolution. This denial, which lies implicit in the famous passage of Lucretius (v. 925 f.), is stated positively, for example, by Diodorus, who (i. 8 f.) describes the theory of Hesiod upon this point, and (v. 66 f.) implies that the Golden Age was a mere invention of the Cretans. But this summary disposition of the difficulty is of no value to us. We are more interested in the process of reconciliation implicit in this process, so far as it was accomplished at all, was a gradual realization among thoughtful men of the fact that the ideal of life traditionally associated with the Golden Age, though it seemed attractive, was, in reality, unfit to pose as the highest development in any theory of descent.

2. Cynics, Stoics, etc.—At this point, certain Stoic modifications of Cynic doctrine are of especial value to us. The great representative passage to be considered in this connexion is Aratus, Ph. 140. * To Eustachius, by this famous Alexandrian poet of the 3rd cent. B.C. was one of the best known in the ancient world, and undoubted traces of its influence are to be found in most of the later accounts. Briefly described, it is a revision of Hesiod under Stoic influence. The main aspect of the author was not only to reconcile the discrepancies of the old version, but also to remove whatever was irrelevant to a theme which he proposed to treat not as an independent account, as Hesiod had done, but as a modern version of his account by his mention of the constellation Virgo, i.e. Astrea, whom Aratus, following an old tradition, identifies with the Nemesis of Hesiod, and calls Dike.

This was comparatively unimportant in Hesiod. Owing to the exigencies of rhetoric, she now becomes the central figure. Moreover, after the true Stoic fashion, she is made to assume the functions of both Zeus and Kronos in the traditional version. The five ages of Hesiod are reduced to three—so Age of Gold, of Silver, and of Bronze.

The men of the Golden Age are described as peaceful tillers of the soil, with no knowledge of civil strife or of the vexations of the law. Moreover, they were removed from the perils of the sea. In those days there were no ships to bring the luxuries of life from abroad. The goddess mingled freely with the simple souls, and taught them how men should live with reference to each other.

The Silver Age was more sophisticated. Nevertheless, the god was present on earth, although he was now retired to the mountains, and was seen but rarely. The poet turns some thoughts, and the first slaughter of the oxen for food. Then Dike, rejecting that race of men, finally departed to heaven and took her place among the stars.

It will be seen that one of the most notable signs of revision here is the disappearance of the old folk-element of marvel. In its place we have a conception in which the Stoics are mainly responsible for the emphasis laid upon the ethical rôle of the *motive*, especially upon the relation of man to his fellows, to the world about him, and to the State.

The underlying principle in such a theory of the Ages is the conclusion that the ascent of man in the arts of civilization is accompanied, at all events beyond a certain point, by a corresponding descent in moral and even in physical fibre. Why is this the case? The reply was that to be healthy in mind and body, and therefore, happy, we must live in harmony with nature. But civilization beyond a certain point, especially in its more refined parts, has an opposite effect on nature. Accordingly, beyond a certain stage of civilization, we can be neither healthy, virtuous, nor happy. Now, as journeying into the future should lead us naturally, finally to a state of ideal misery, so journeying into the past naturally led us back to a state of ideal happiness. That state of ideal happiness was, of course, the Golden Age. The Golden Age of the past was, therefore, the ideal simple life of the past.

Such in substance was the general drift of the Cynic argument as modified by the Stoics, and, as a matter of fact, the Golden Age of Aratus is really an ideal of that pastoral stage of human society—a theme which always comes to the front in any period of over-cultivation, as soon as men begin to stagger under the burden of their own inventions. So conceived, the theory of the Ages was not only consistent with the evolution of civilization from the crudest beginnings, but agreed with the Epicureans in presupposing such a process. But, as regarded the various inventions and discoveries by which that process has been marked, it loved to dwell upon those very devices, and to lay great stress on the view that they had been the most conspicuous cause of the downfall of man himself. The favourite examples are those chosen by Aratus. They are the first sword and the first ship.

The first sword is that made in the course of the war which we have already mentioned. The first ship was also a favourite way of connecting the discussion of the Ages with the various phases of civilization. The two were so closely connected, especially among the Romans. In fact, it is a common-place of modern criticism that the Romans were afraid of the sea. As, however, the opinion is a specialization for the most part, upon these various passages, we need not take it too seriously. There was a certain attraction in the idea that man, and restless deep was a subject inspired not so much by national character as by literary tradition. It is fully developed in the Works and Days of the old Egyptian poet, and adopted by Homer as a theme of the Greek epigram at all periods, a regular *motif* in the poetry of the Augustan age, and by the 1st cent. of our era a mere rhetorical question, the answer to which, according to Stoic reasoning, that theory was founded. We mean the conclusion stated above, that advance in the arts of civilization is at the expense of the character, health, and happiness of the individual. Now, when we consider the Stoic argument by which still another *motif* was made to yield the theory that the Golden Age of

* Horace, Epod. ii.; Propert. iii. 13. 25; Seneca, Medea, 333; Plutarch, de Nabil. 20, etc. etc. This interpretation of the Golden Age was especially welcome to the Romans because of their temperamental Stoicism, but because it agreed more nearly with their own tradition of early times and with their characteristic and attributes of Sakos before he was identified with the Greek Kronos. I. e. Vergil, Georg. ii. 546; Ovid, Met. i. 99; Juvenal, xv. 168; Tibullus, i. 347. The rhetorical question, marriage (l. 10. 1) states a maxim of the philosophers which is often repeated. See, e.g., Seneca, N. Q. v. 18. 15: 'Nihil inuenissim tam manifestissim quod non in contrarium transeuntia culpa. So Ovid, Met. xv. 163, speaking in the person of Pythagoras. Opponents of the theory of descent especially the Epicureans, contended that the sword merely marked one period in the long chronicle of mankind. It was the successor of the club and the large rough stone (Lucretius, v. 969). M. Al. Sat. i. 1. 160; Valer. Flacc. v. 145, and esp. Plato, Rep. 358 E (see the natural condition of mankind), and the commentary of Adam.

1 Among the most important of the numberless references are, Stobaeus, 67 (who gives a number of the opinions): Herod. W. and D. 236; Sophocles, Antig. 332; Seneca, Medea, 301 and 607; Thibullus, i. 37 and bi. 33. 30; Propert. i. 13. 17 and iii. 7. 29; Ovid, Amor. ii. 11. 1; Statius, Theb. i. 29; Ovid, Amor. ii. 11. 1; Statius, Theb. i. 29; Ovid, Amor. ii. 29; Claudian, de Rapta Pras. i. ii.; Proem. The original conclusion, after generations of discussion, was that the one great cause of the downfall of man had been his knowledge of himself. It was clear to the poets and philosophers that man was exclusively a social animal and that the common places of the fall of man were really so many illustrations of this one *motif*. It drove him to war, it urged him on to explore the earth for treasures better hid, it devised the vexations of the law and brought about the injustices of wealth and poverty; through crime and selfishness it has caused the state to be divided and all the lies that flesh is heir to. The result is that he has been only shortened his life by his work, and, what with anxiety, dyspepsia, and a bad conscience, a failure and children a burden, the little life he has left is no pleasure to him.
of the waxing and waning of the moon, and of the eternal round of the seasons, the entire Universe itself is subject to an ever-recurring cycle of change. This ancient Babylonian doctrine⁶ of the world-year, the magnus annus, as it was called by the Romans, makes its earliest known appearance in Greek soil with Hesiod. It was, of course, thoroughly discussed by the later philosophers, and finally became known to the world at large. Indeed, it may be called the prototype of some of our most recent views suggested by the nebular hypothesis.⁷

The associations of the Ages was inevitable, and appears at a very early period in the history of Greek speculative thought. In fact, it has often been stated, though without sufficient warrant, that belief in a cyclical theory of the Ages is the explanation of Hesiod’s wish that he had died earlier or could have been born later. § The fragments, however, of Empedocles show, in spite of their scantiness, that at that time the process had already begun and was the most important and important discussion, so far as we are concerned, the one, too, which had the strongest influence upon later times, is developed or touched upon in various dialogues of Plato,² more especially in the Polit., Timæus, and Republic.

According to Plato’s definition,—and this much, at least, appears to have remained unchanged in later ages—a magnus annus means the period which elapsed before each revolving about the earth in an orbit of its own, with the one preceding. In the opposite direction. A motion forward, as it were, is followed by a motion backward. The history of mankind is directly affected by this motion, and especially by the alteration of it. The motion forwards and of the cosmic upheaval, promotes harmony. During all this period the great Helmsman of the Universe is at his post, and we have the Golden Age of the poets. As the motion is the reverse of that which prevails in our time, it is naively assumed that the conditions of life are to a large extent the opposite of those with which we are familiar. The men of that age are born old, with hoary hair; ² and instead of growing older continue to grow younger, until they finally disappear. Moreover, they are born from the earth, and the earth feeds them. There is no toil, no pain, no war, there are no women ¹ and no children of women. Yet with all their advantages these men do not attain unto immortality.

When the forward motion is completed, the Helmsman retires from his post, and in its stead he places Venus, the god of gravity, as it were, and begins its backward revolution, which is in the direction of discord. The point at which the motion is reversed is always signified by some other cosmic upheaval, involving a terrific destruction of organic life. The few men who survive cease growing young and begin to grow old, those that were once of hoary hair die, and return to the earth from which they came. Men are no longer born from the earth, as before, but even as

¹⁰ The likeness to Hesiod, W. and D. 180 ff., has been pointed out and discussed by Adam in the Ck. v. 445.
¹¹ Polit. 271 f, Leg. v. 378 Cff, as it has been observed by Eichhoff (loc. p. 589) and others that the story of Pandora as told by Hesiod (Theog. 570, and W. and D. 70) implies that there was no woman in the Golden Age, and that this happy period came to an end. See also, Grimm, Deutsche Mythologie, p. 640.
the Universe is now left to itself, so are all and several of its parts; and each race is propagated in the manner familiar to us who belong to that period. The continuance of the motion backward and forward, and of the process of disorganization, until, by the time the Universe again reaches the point of departure, it is ready to fly off at a tangent and disappear for ever. The native of the later Greek and Roman ages could seldom see what is happening on the other side of body or soul. But the Helmsman again proceeds, reversed the direction of the Universe, and with the change again to harmony the god of change again returns. The few who survive from the preceding period suffer change in sympathy with the whole, become young and young, and continue to do so until they finally disappear. Again the new generations are born with hoary hair, and not from each other, but from those who died in the preceding period. They were buried in the earth that now rise again from the dead, and in their turn are born old, grow young, and finally vanish.

It will be seen at once, according to this remarkably suggestive theory, which, of course, owes much to earlier thinkers,1 the sum of human experience is measured by two world-years. During the first the Universe moves forward, during the second, backward, to the place of beginning. Each magnus annus is therefore one of the two Ages into which the history of mankind is divided; and this alternation of Ages will continue as long as the Universe remains whole, with the whole, so with each and all of its parts. The Ages of man, the life of man himself, are closely connected with this eternal oscillation of the Universe. All move in a cycle. The Golden Age of the later Greek and Roman times will surely come again some day. Moreover, each one of us shall rise again to another life in that Golden Age. Thus, as the past was balanced by hope for the future. In the later history of our theme, this association of idea with the utmost of importance, and served to identify the theory of the Four Elements with the old, and closely with its ancient analogue, the doctrine of a future life beyond the grave.

The Stoic theory of cycles occupies an important place in their systems. Here, their acknowledged doctrine is pristinus, it is clearly seen in the prominence they give to his doctrine of *eternitas*, the elemental fire into which the world is periodically resolved, and from which it is periodically born anew.

In the old world has been completely consumed, the four primal elements—fire, air, water, earth—which are indestructible. The Stoics, therefore, assume their world contains only those four, and in this way a new world comes into being exactly like the old. As soon as the proper point is reached in the process of regeneration, the living fire is born from the earth, and from that time proceeds to increase after its kind. Man, too, is here, "knowing nothing of wrong and born under the influence of the "eternitas." His life is to last for long. Villainy steals on space. Virtue is hard to find out, for it needs a leader in every place, and a guide. The vices are learned without a master.1 So the process of degeneration goes on until the time comes for the next *eternitas*. Then the world is destroyed and built anew, as before.

An *eternitas* occurs each time that the eight circles are in conjunction at the place of beginning.1 For the Stoics, therefore, every magnus annus is the measure of one complete life, as it were, of the Universe. It follows that the totality of human experience must, alike between those impassable barriers of flame by which every generation is divided from its fellows, the soul outlives the body, but even the soul of the idea of the *eternitas*. Nothing escapes from this trial by fire except the primal elements from which all things are made. In short, however, we all have a personal interest in every period of the world's existence, for the reason that, according to the Stoic doctrine of *eternitas*, the history of every magnus annus is, necessarily, the exact counterpart of the history of every other magnus annus. The chain of existence is divided by a succession of magnus annus, and its body begins anew, just as it did in the previous epoch; and every thing down to the slightest detail is exactly repeated. To describe a favourite point of this theory, the lowest human race (Socrates) of a previous magnus annus will see Socrates. In every magnus annus we shall see Socrates. In every magnus annus we shall see Socrates. In every magnus annus we shall see Socrates. In every magnus annus we shall see Socrates. In every magnus annus we shall see Socrates.

5 See Appendix, last note.28 (quoted by Ritter and Preller, p. 404).
7 See *Diog. Laert.* vii. 156, which says that "the Stoics claim that the soul is a spirit which is a part of ourselves. It is, therefore, indestructible, and though it survives death, it is not immortal. It is sure to be preserved, if only it know that only souls of the "wise," last until the *eternitas*." Cf. also viii. 151; *Dionysop. Græci*, 398, ed. Diels, etc.
8 *See but Ritter and Preller, l. e. p. 401 ff.*
To mention it is Aristotle. The quotation, which we owe to Censorinus, xviii. 11, was probably from Aristotle's lost Protrept., the model of Cicero's famous dialogue, the Hortensius, which is also lost. * No doubt it was largely inspired by the statement that the Romans became familiar with Aristotle's observation that the two disasters of the magnus anus, or, as he termed them, the great signs, occurred at the summer solstice and the winter—summer in the Greek world, the winter—summer in the Roman world. The fact that the Romans were exposed to both great storms in the summer solstice and winter solstice, because the great summer is hot and dry, and the magnus anus in the great winter, because the great winter is cold and wet. We should not expect this sort of logic from Aristotle, and, as a matter of fact, the idea was not his own. Indeed, as the Protrept. was a discourse, this is quite possible, we do not know that he approved of the view at all. That his information went back to some Eastern source is indicated by a fragment from the voluminous history of his younger contemporary, the Chaldean priest Berosus. The passage is quoted by Seneca, Naturalis Quaestionis, iii. 29. If Berosus, he says, 'qui Belum interpretatus est, insistit nonne sit the time for the confregatio and the diluvium. The earth will burn up, he adds, when all the stars, which now move in different orbs, are in conjunction in the constellation of Cancer. The flood will take place when the same stars reach conjunction in the constellation of Capricornus. 'Ibn Hamdunius and the Sages confutatur.' Conjunction in Cancer produces the confregatio, conjunction in Capricornus a monsoon, and the actual occurrence of the fact seems nothing if not impressive. But, "as Gomperz has already observed, 'the actual occurrence of the confregatio is charitable, and the fact that the summer and winter solstices of the ordinary solar year are presided over by Cancer and Capricornus respectively. When this passes the assumption that the theory of Berosus is probably identical with the one mentioned by Aristotle.

Now that fire and water had acquired a definite and important position in the cyclic scheme, it followed inevitably that the two remaining elements, air and earth, ought to be put on the same plane. The line of development followed was largely suggested by the fact that there were three Elements, four Seasons, four Ages of man. The four seasons of the year are spring, summer, autumn, and winter—a series which has always been associated with man's own descent from youth to hoary old age, from strength and happiness to weakness and sorrow. So the four seasons of the great year are the four Ages of man, another series with which the idea of descent had always been associated. As the springtime of the little life of our life is the golden youth of mankind, so the autumn of that greater year was the golden youth of all mankind. § Finally, the traditional order of the four elements—fire, air, water, earth—is also one of descent from the lighter to the heavier, from pure spirit to the earth, earth to water, water to air, air to fire.

If, now, we associate the four elements in their regular order with the corresponding Ages of man in their regular order, the dominating element during the Golden Age will be fire, during the Silver Age, air, during the Brazen Age, water, and during the Iron Age, earth. The conclusion of this is that the descent of man himself is due to his ever-increasing distance, so to speak, from the Divine fire. We are thus brought back to the Orphic theory reported by Nigidius Figulus, in which, as we have already seen, the magnus anus was equipped with four seasons, each ruled by the appropriate element, is a complete illustration of the tendencies we have just been discussing.

A theory ascribed to the Magi was described by Plutarch and partially reported by him (xxxvi. 45 ff.), should also be mentioned here. The Magi tell us, he says, that the Lord of the world rides in a chariot drawn by four horses sacred to Zeus, Hera, Poseidon, and Hestia respectively. In other words, the four horses are the four elements, fire, air, water, and earth. As a rule they are tractable. Now and then, however, the first steed becomes restive and sets fire to the other three. This is Orphic or Ionic, but not Greek. Again it is the steed of Poseidon that becomes

§ Vergil, Georg. ii. 336 ff.; Ovid, Met. i. 107; Persu. Veneris, 2 ff. etc.

**See Usener, Rhein. Mus. xxviii. 391 ff.**
restive, and the drops of his sweat are sprinkled upon the
other three. This, again, is the source from which the Greeks
derived their story of Deucalion's flood.

If one were to insist upon completing the analogy
between the four Elements, the four Ages of man, and
the four Seasons of a great year, the Ages
presided over by air and by earth, as was already
the case with the Ages of fire and water, should
each be marked by a cosmic disaster appropriate to
its nature. We know that this was actually
done, but as these attempts lie outside the sphere
within which this article is concerned, they do not
require discussion here.*

3. Revival of Mysticism in 2nd cent. B.C.—The
last important stage in the long history of our
subject is the era of the prophets. The rapid
growth of Mysticism which began early in the
Alexandrian age reached its culmination in the
2nd cent. B.C. One of the most striking features of
the movement, and a significant comment upon
the mental and spiritual condition of the entire
Greek-Roman world, was the rapid production of
apocalyptic literature. It is probably fair to assume
that the production of this literature was much
encouraged, if not actually suggested, by the
then widespread belief that the life of mankind
moves in cycles. At all events, one of the most
characteristic features of all these visions and
prophecies was the emphasis given to some cyclic
theory of the Ages. It would be quite unnecessary
here, even if they were still available to us, to
examine these works in detail. Their chief
importance to us would be derived not from their
contents, but from the point of view which, by
virtue of their very nature, they all possess in
common. These visions and prophecies, like all
other works of the same class, appealed more to
faith and the emotions than they did to reason and
the understanding. The author tells his reader that
this last Age has nearly run its course, and
that the great change is near at hand. He does
not state it as an opinion or a theory, capable of
being discussed as such. He states it as oracular
utterance, as inspired prophecy, the truth of which
is already foreshadowed in current events and
cannot be questioned. In this way the Cyclic
Theory of the Ages was transformed from a rhetorical
and philosophical theme into a Divine as
suming upon itself. As a class, these compositions contributed almost nothing to
the development of the Cyclic Theory itself. A
word or two, however, should be given to the Sibyl.
The Oracles of the Sibyl have been ascribed to
about the middle of the 2nd. cent. B.C. They were
well known to the Romans for the next 200 years;
but at the time when the collection now bearing
that name† was composed, the earlier had
apparently ceased to exist. Meanwhile, however, they
had won a sort of secondary immortality through
the influence they had exerted upon the fourth
Eclogue of Vergil,‡ the most famous literary work
ever inspired by any aspect of our theme. From
this poem and the ancient comment upon it, it
appears that the Sibyl adopted the Stoic-Orphic
identification of the Four Ages of man with the
four seasons of the magnus annus. In addition to
this, she—or her authority—was inspired by the
analogy of the ancient solar year to divide the
great cycle into ten great months, each of which
was the length of a socculus and presided over by

* O. Gruppe, Gr. Mythol. p. 450, n. 1, also his Gr. Kulte und
Mythen in ihren Beziehungen zu den orient. Religionen,
Leipzig, 1897, p. 672, n. 2, and 606, n. 2, with references.

† The two modern editions of the Graeca Sibyllina are by
Razch, Vienna, 1891, and by Geffcken, Berlin, 1902. See also

‡ I. O. Gruppe, Gr. Kulte, etc., p. 657, n. 2, and references.
82 f.; W. W. Fowler, Harvard Studies, xiv. 132 f. etc.

As a god. Ever since the time of Sulla there had
been rumours afloat that the Sibyl's last socculus
was drawing to a close, and that the Golden Age
was at hand. One cannot read the fourth Eclogue
without feeling that Vergil was himself impressed
by a prophecy so much in harmony with the
aspirations of his own lofty soul. Nevertheless,
we must not forget that the poem is really a poem
of congratulation upon the birth of a son, into
which, as Marx has clearly demonstrated,† Vergil
introduced the topic of the Ages in accordance with
the specific suggestion of the rhetoricians for poems
of this type, and developed it in strict conformity
with the rules laid down by them. The most famous
line in the poem,

'Ina nova progenies caldo demittitur also,'

is a clear reflection of the cyclic theories which
we have just been discussing. That, in itself, it
should also foreshadow quite as clearly the
important part which the Sibyl plays in the
historical view of the modern age, is seen from
the fact that the poem was never published in its
full form. It has come down to us as an inedita
which passed into the hands of the monks,
and was afterwards inserted in the Grandes
Chroniques of France.

AGES OF THE WORLD (Indian).—The
Hindu doctrine of the Ages of the World (yugas)
are combined with that of two other great periods,
the manvantaras and kalpas, into a fanciful
system of universal chronology, which passes for
orthodox. Its basis is the yugas; they are, therefore,
treated here in connexion with the other elements
of the chronological system. Orthodox
Hindus recognize four Ages of the World (yugas),
roughly corresponding to the Golden, Silver, Brass,
and Iron Ages of the ancients. They are called
kṛta, tretā, dvāpara, and kali after the sides of a
die; kṛta, the lucky one, being the side marked
with four dots; tretā that with three; dvāpara with two;
and kali, the losing one, with one dot. These
names occur in the period of the Brāhmaṇas
as names of throws at dice, and in one verse of
the Aitareya Brāhmaṇa (7, 14) they are already
referred, by the commentator, to the yugas. In
the epics and the Purāṇas the belief with regard
to the four yugas has become a fully established
doctrine. The general idea, the same in all
Brāhmaṇical sources, is that the character, or, if the
expression may be used, the proportion of virtue,
and the length of each yuga conform to the number on
the side of a die, after which it was laid
down. The term kṛtayuga, virtue (dharma) was fully present in
men, with all four feet, as it is expressed, but it
diminished by one quarter or foot in every suc-
ceeding age, till in the kalihya only one foot of
dharma remains. The same proportion holds good
with regard to the duration of the several
yugas. The kṛtayuga lasts 4000 years, to which a dawn
and a twilight of 400 years each are added; the
same items in tretā are 3000 and 300, in dvāpara
3000 and 3000, in kali 1000 and 100 years. Thus
the period of the four yugas together is usually
called a mahāyuga or chaturyuga, though common
ly a yuga lasts 12,000 years (Mam., 1, 69 ff. =
F. Marx, Neue Jahrh. 7, das kshit. Altemum, 1, (1886),
pp. 106-126.

1 Comparetti, Virgilio nel medio eva, 1896, l. 129-138, and
II. 80-99; Mayor, etc., Vergil's Messianic Eclogue, 1897.
Mahābhārata, iii. 12, 826 ff.). The years in this statement are interpreted as Divine years, consisting each of 360 human years, giving thus a total of 4,320,000 years in each mahāyuga, and this interpretation, once adopted in the Purāṇas, became a dogma.
The usual descriptions of the kṛta- (or satya-) yuga reveal to us a happy state of mankind, when life lasted 4000 years, when there were no quarrels nor wars, when the rules of caste and the precepts of the Vedas were strictly obeyed, when, in short, virtuous reigns paramount. In the kṛta period the yugas justly held the first place.
There is a confusion of castes and ādrāmas. The Veda and good conduct gradually fall into neglect; all kinds of vices creep in; diseases afflict mankind; the term of life grows shorter and shorter, and is quite uncertain; barbarians occupy the land, and people kill one another in continual strife, till at the end of the yuga some mighty king extinguishes the infidels. From these extremes the character of the intermediate yugas may be imagined. The dawn of each yuga brings in a new race, originally created for the destruction of the existing world; indications, indeed, of such a belief are not wanting, as will be noticed later. Still, the common doctrine is that one mahāyuga followed on another, and that the thousand twilights of the several Ages are periods of transition from one Age to the next, when the character of the one is not yet entirely lost, and that of the other not yet fully established.

It is usual to presume that originally the mahāyuga comprised the whole existence of the world; indications, indeed, of such a belief are not wanting, as will be noticed later. Still, the common doctrine is that one mahāyuga followed on another, and that the thousand twilights of the several Ages are periods of transition from one Age to the next, when the character of the one is not yet entirely lost, and that of the other not yet fully established.

The Vedic period may be divided, according to the Atharvaveda, into a. eight thousand yugas, b. thirty-two thousand yugas, c. sixty-four thousand yugas, d. one hundred and twenty-eight thousand yugas, e. three hundred and twenty thousand yugas.

The emphasis is on the astronomical use of the yugas, the reader is referred to the translation of the Surya-Siddhanta, JAOS vi p. 16 ff.

A similar belief seems to have been expressed by the term ‘kalpa,’ but perhaps with this difference, that the concept of a yuga was intimately connected with the idea of the four stages through which mankind must pass, analogous to the four ages of the sun, viz., childhood, youth, middle life, and old age, while this idea was not necessarily implied in the concept of the kalpa. The combination of both these popular beliefs, with regard to the kalpa and the yuga, is in the form described above, was pressed upon the systematizing efforts of the Purāṇikas.

There is still a third kind of long period, the manvantara, fourteen of which go to the kalpa.

Each manvantara contains 71 mahāyugas, and 14 manvantaras are therefore equivalent to 934 (14 × 71) mahāyugas. The remainder of 6 mahāyugas required to make up the kalpa (= 1000 mahāyugas, sup. p. 200) is so distributed that the first manvantara is preceded by a dawn of the length of one kṛtyuga (= 34 mahāyugas), and each manvantara is followed by a twilight of equal length (15 × 0.4 = 6 mahāyugas). The twilight of the manvantara is, according to Śrīya Siddhānta, 1, 18, a deluge (jalapalae). This artificial system of the Vedic period, which is repeated in the Śrīya Siddhānta, is intended to account for the different patronymics of Manu, such as Vaivasvata, Svāyambhuva, Svātanrava, which occur already in different Vedic works. These early caused a belief in the existence of several distinct ages. The Purāṇikas systematized these notions as described. Since Manu was thought to have introduced the social and moral order of things, and to have played a part in the creation of gods and men, ‘the seven Rāis, the four seasons, the four yugas, the four thousand years, the twelve months of the year, the sun, the stars, the moon, the planets, the four elements, the five indusities, Indra, Manu, and the kings, their sons, are created and perish’ in each manvantara; and the details of these recurring events in each manvantara are given, e.g., in the same Purāṇa. Artificial as these manvantaras appear to be, still they are given as one of the five characteristic topics of the Purāṇa in a verse found in several Purāṇas. And the whole system of yugas, etc., is regarded as orthodox to such a degree that all the astronomical works, the Siddhāntas, have adopted them, except the Romaka Siddhānta, which for that reason is stigmatized as not orthodox.

The astronomical aspect of the yuga is that, in its commencement, sun, moon, and planets stood in conjunction in the initial point of the ecliptic, and returned to that point at the end of the age. The popular belief on which this notion is based is older than Hindu astronomy. The current yuga is the 457th of the present varaha-kalpa, or kalpa of the Boar, the 26th of the present manvantara (that of Manu Vaivasvata), which itself is the 7th of this kalpa. We are now in the kaliyuga, which began Feb. 17, B.C. 3102, the epoch of the still used era of the kaliyuga. At the end of the last tretāyuga lived Rama, the son of Daśaratha, and at the end of the kaliyuga Pāṇḍava and Kauravas took place the great war of the Pāṇḍavas and Kauravas, described in the Mahābhārata.

A kalpa is called a day of Brahman, and his night is of equal length. At the close of the night he creates the world anew. Of such days and nights a year of Brahman is composed; and a hundred such years constitute his whole life. This longest period is called a para, half of which, a

parārddha, had elapsed at the beginning of the present kalpa.\(^*\)

The notions of the Buddhists about the Ages of the World (yugas) and about the larger periods (kalpas) are similar to those of the orthodox Hindus, but still more fanciful. The names of the four yugas have the same meaning, but their arrangement is different. They begin with kṛta and go on up to kṛtyuga, and then in reverse order, go over to kalyuṣya.\(^\dagger\) Thus, instead of a mahāyuga of four Ages, the Buddhists assume a period of eight Ages, which is called an antarākalpa. An antara-kalpa is the interval of time during which the age of man increases from ten years to an asaṅkhyeya (asaṅkhyeya = 10,000,000,000\(^2\)), and then decreases again to ten years; this period is of immense length.\(^\S\) According to some authorities, it has a length of 1,860,000,000 years. Together with the age, the moral state of mankind increases and decreases.

Twenty antarākalpas form one asaṅkhyeya kalpa (Pali asankheyya kalpa), and four asaṅkhyeya kalpas constitute one mahākalpa.

The first asaṅkhyeya kalpa is called saṁvartaka (Pali samvatta) period. Fire completely destroys the chakravāli (Pāṇini: cakravāla) is completely destroyed by fire, water, or wind. In the second (saṁvartaka), the world is empty and without any inhabitants, and in the fourth (vasantaka), the world continues to exist.

It is during this last period that the world becomes first inhabited, by ābhāsvara gods of the Brahmaloka being born on earth. These self-luminous beings lost their lustre when they first began to feed on a delicious juice produced by the earth. They then created the sun, the moon, and the stars. While these beings gradually degenerated, the earth ceased to yield this first kind of food, and produced a kind of cream-like fungus. This was followed by a climbing plant, and this again by an extraordinary kind of rice. When this rice was used as food, sexual intercourse began.

The rice deteriorated, and at last ceased to grow of itself. At the same time other vices were introduced, and personal property, till at last the present order of mankind was established.\(^\dagger\) Then comes the period of the twenty antarākalpas, described above. A hundred thousand years before the end of a mahākalpa, a god appears and warns mankind of the coming event, exhorting them to change their ways. And after that time the destruction of the earth—i.e., a billion of worlds or chakravālas—sets in by fire, water, or wind.\(^*\) The mahākalpas are either empty (kāya) kalpas—those in which there is no Buddha—or Buddha kalpas. The latter are of five kinds, śrava, manda, vara, sāravanda, and bhadra-kalpas, according as one, two, three, four, or five Buddhas appear. The present kalpa is a bhadra-kalpa for four Buddhas have already appeared—Krakucchanda, Metteyya, Kakusandha, Kassapa, and Gotama; and the fifth, Maitreya (Metteyya), has yet to come (see above, pp. 187-190).

The notions of the Jainas about the Ages of the World are not quite unlike, yet curiously different from those described above. The Jainas liken the time to a wheel with twelve spokes; the descending half of the wheel is called the avasarpini period, the ascending half utṣarpini. Each half is divided into six āras (āras = spokes). The āras are, in avasarpini, the following (1) four birth, and the duration of which is 400,000,000,000,000 years of years (śāgaraṅgama); (2) suṣumā, 300 billions of oceans of years; (3) suṣamadusumā, 200 billions of oceans of years; (4) duṣamadusumā, 100 billions of oceans of years, less 42,000 common years; (5) duṣumā, 21,000 years; (6) duṣamadusumā, likewise 21,000 years. The same Ages recur in the utsarpini period, but in reversed order. In the first āra, men lived three pālys or palyas at a time, but at the end of a long period, not to be expressed in a definite number of years (one billion of palyas go to one ocean of years), and men grew to a height of three gavyūṭis, a gavyūṭi being about two miles. Men were born as a pair of males and females, and all the sub-human life was the same, with the exception of marriage, who married. There were ten kinds of miraculous trees (kalavṛkṣa), which furnished men with all they wanted. The earth was as sweet as sugar, and the water as delicious as wine. This state of things continued through the first three Ages, but gradually age after age the length of life declined, and was only two palyas at the beginning of the second, and one pālya at the beginning of the third Age, while correspondingly the height of the body diminished to two and one gavyūṭi. Furthermore, the planets and the earth were then one cubit in height, and water deteriorated at the same rate. In the third Age the trees more slowly satisfied the wants of men, who therefore claimed them severally as personal property. Vimalavāhana was appointed to keep them among men; and he became the first patriarch (kulakara). The seventh patriarch, Nandi, was the father of Rṣabha, who was anointed the first king, and who introduced the principal institutions of mankind. Rṣabha became the first tirthakara, or prophet of the Jainas. His nirvāṇa occurred 23 years 4 months before the end of the third Age. In the fourth Age the order of things was similar to the present one, except, of course, that everything gradually deteriorated with the lapse of time. The life of man lasted a krota of pārvus (a pārvus = 8,400,000\(^3\) years) at the beginning, and diminished to a hundred years at the end of the Age; and, similarly, the height of men decreased from 2000 cubits to 7 cubits. 23 tirthakaras were born in the fourth Age, the last of whom, Mahāvīra, died 24 years 9 months before the beginning of the fifth Age, which began in B.C. 528.

In the fifth and sixth Ages length of life will diminish down to 16 years, and the height of men to 1 cubit. There will be no tirthakaras in the last two Ages of the avasarpini period. In the succeeding utsarpini period, the same will be the case, but in reversed order. In this way an infinite number of avasarpinis and utsarpinis follow each other.\(^*\) The idea on which the notion of these periods seems to be based is apparently the year. The avasarpini and utsarpini correspond to the two ayanas, the southern and northern course of the sun; and the six āras of each period to the six months of the ayna.\(^\dagger\) On the other hand, the first three āras, with their pairs of twins, with the miraculous trees, and their subsistence, much resemble the first kṛtyuga of the Purāṇas, while the remaining three āras may be compared to the tretā, dvāpara, and kalyuṣya. A peculiar feature of the Jaina system, however, is the great disparity in length between the last two Ages and the first four, while the relative length of the four yugas is reproduced in the āras, if we consider the earth, fifth, and sixth āras as one.

On the whole, there is an unmistakable family likeness between the notions of the orthodox Hindus, the Buddhists, and the Jainas, as described above, though they have developed on different lines.

AGES OF THE WORLD (Jewish).—1. The Heb. word yom (םי), 'day,' is frequently applied in both Biblical and post-Biblical literature in a sense closely allied to that of an Age of the World. Lev. 19:11 and 23:30, referring to Ps 90:4, and to the 'ages of a man' is a thousand years. Philo in de Opificio Mundi, 1:3, etc., treats of the 'Days of Creation' as covering an epoch. He denies that the story of Genesis is to be taken literally as meaning an actual creation in six ordinary days. Creation was not in time; the six days described the arrangements or order of the world which follows. Midrash Ber. Rab. xii. deals with the time occupied in creation. 'The day of the Lord' (Mal 4) 'that day' (Zech 14), 'the great day' (Mal 4), 'the day of judgment,' 'the day of vengeance' (Jer 46:10), 'the day of rebuke' (Hos 5), are all expressions for the Last Judgment, sometimes covering the future world (קָּשָׁם) which will succeed it. קָּשָׁם, 'our day,' is used as a synonym for מַעֲשֵׁים, 'this world' (Targum for 'days' in Ps 34). 'The days of the kings' (Dan 2) means the everlasting kingdom of the future world. 'The days of the Messiah' (Sanh. 95a) is used in the Talmud and Midrash for the Messianic Age; 'the days of the Messianic Age' are the future world to come, which follows. 'The day which is all Sabbath,' 'the day which is altogether good,' 'the day which is altogether long,' 'the day wherein the righteous sit with crowns upon their head and enjoy the splendour of the Divine Presence,' and here are expressions found in the Jewish Liturgy (in the grace after meat for Sabbaths and Festivals, especially Passover) which also denote the future world.

2. Before this world existed there had been succession of days (Gen. xxxvii. 3b, R.A.V., 'Seven' = 'seven') 33, in accordance with the notion held in the Hebrews, and by some also in the Greeks, that there are seven times of seven days in the heavenly spheres, each with its own distinct name. In Zech 12, 14, the seven days are compared with seven days of judgment in the future world.

3. In the Bible narrative there are traces of a Golden Age in the account of the Garden of Eden, where man is clothed and our sons by his own hands. The story, of his sojourn the Rabbis differ. The Bible narrative presents some striking parallels to the Assyrian story, just as post the Biblical does to Zarathushtrian speculation. But, as Goldziher points out in his Mythology among the Hebrews, even if its cosmogony had been derived from Iranian sources, it is an essential part of their system, whereas the Pentateuch makes no further use of it. It is notable that the later Jewish view is that Chasidism will be the future reward for good conduct after death. This is a development from the Golden Age to an Iron Age (for traces of which in Dn 2, see below), and no evolution in an opposite sense, but rather a sort of endless cycle; 'the thing that hath been, is that which shall be' (Hb 13:4).

4. The Pentateuch is almost exclusively concerned with the first age of persecution, after Israel, as מֵבֶט הָאֱלֹהִים, or 'captivity,' is that of Egypt. According to Gen 11:9, Abraham's seed is to be afflicted for 400 years. In Jg 11:16 a period of 300 years is given as the interval between the Exodus and Jephthah, during which the children of Israel were left in undisturbed possession of the other side of the Jordan. In 1 K 6:1 the period between the Exodus and the building of the Temple is fixed at 480 years.

5. The Prophets, before the Assyrian captivity, are concerned only with the immediate future. They deal with practical politics, and warn the people to repent in view of disasters that are imminent. The Day of the Lord, which in the post-captivity literature of the Bible becomes the Day of Judgment, occurs already in Amos (5:18-22), the earliest of the later prophets, as well as in Isaiah (cf. W. R. Smith, Prop. 131 f.).

6. In the poem, much in the literature of the Bible we first meet with a distinct promise of an ultimate, not immediate, Messianic Age, in which all wrongs will be righted. The return under Zerubbabel had proved a disappointment. The autonomy of the Jews had not been satisfactorily re-established. The Jews did not occupy their proper position in the world. The people were dissatisfied with their leaders, and thus the notion of an ideal Messiah rather than a political one seems to have become prominent. The Day of the Lord, which in the post-captivity literature of the Bible becomes the Day of Judgment, occurs already in Amos (5:18-22), the earliest of the later prophets, as well as in Isaiah (cf. W. R. Smith, Prop. 131 f.).
Kingdom is also that of His people (Dn 2:7). And this idea prevails throughout the Jewish apocalyptic writings, e.g., Assumpt. Mos., Enoch (Eth. and Slav.), 4 Ezra: God's enemies, whole peoples, will be previously destroyed. It is perhaps based on Ezekiel's Vision of Gog and Magog (38:20) as the culmination of this stage. After this world-war comes the Judgment (J 3:4). The Messiah of the Kingdom will be hidden away in safety (Is 26:6, Zec 14, Apoc. Bar 59, and Mk 13:22-23). The precurors of the Messiah are Elijah (Mal 4:5, Sir 48:20, Orac. Sib. ii., Ed.oth, vi 25:1, and Enoch [12 Ed.]. 6). The Messianic Kingdom is predominatingly particularistic. The Diaspora will be reunited, Jerusalem rebuilt, the heathen converted.

8. In the Apocalyptic literature, and first in Daniel, we get the universalist idea of the world and the next as parallel to the tribal idea of the Present Age and the Messianic Age. The Aeon of the world (5,6) is 5000 years in Assump. Mos.; 10,000 in Eth. En 16:59; 21:8; Jub 18; 7000 in Sanh. 97a, where R. Katina says the world is 7000 years, to be destroyed; of the 6000, 2000 years are 'Tohu' (chaos), 2000 Torah, and 2000 Messianic. This theory is based on the 6 days of Creation. As the historical remembrance is remitted once in 7 years, so there existed 1 childr., Agada der Tannaiten, i. 130 ff. (2nd ed. 133 ff.).

Daniel's theory of year-weeks (ch. 9) is based on the 70 of Jer 25:12, 29. (The Babylonian year was divided into 72 weeks of 5 days each). Daniel's 4 metals (ch. 2) and his 4 great beasts (7) are based on the classical conception of this world's division into the Gold, Silver, Bronze, and Iron Ages. Eth. Enoch also divides the period of the 70 shepherds into 4 ages ('cursum alter' is divided in a 4-fold, meaning perhaps 4 Roman Emperors).

9. The division into 7 millennial years is the duration of 'this world' is made in Eth. Enoch, Test. Abr., R. Katina (Sanh. 97a). The preceding tribulations of the Messiah are to last 7 years, says R. Simeon ben Jochai (Ber. Erets zut. 10). In 3 periods (Dn 12) 'all these things shall be fulfilled, and 4 Ezra divides the world into 12 portions. All these figures, 4, 7, 70, 72, and 12 have an astronomical basis, and correspond to the seasons, the days of the week, the weeks of the Babylonian years, the zodiacs.

10. The mathematical determination of the end of this world and the beginning of the next was eventually discarded by the Rabbis after all such calculations had proved false. Rab says, All the terms [i.e., calendar] have ceased, and the matter resteth only upon repentance and good works (Sanh. 97a, ed. Am 5:8). Before God renews His world (עמורה), the Messianic Age will come. It is intercalated between this world and the next. The time of Messianic tribulations (עמורה) is the period in which the world is to return to the state before the Flood (Gen 6:7, 4 Ezra 5:24). They will suffer terrible diseases (Orac. Sib. iii. 538), children will be born with white hair (Jub 22:21), women will be barren (Orac. Sib. ii. 164). Fields will not fructify (4 Ezra 8:9), poverty and famine will prevail (Eth. En 99:7, Apoc. Bar 27:1). universal war will rage (4 Ezra 9:1), the wise shall be silent and fools shall speak (Apoc. Bar 79). Then will come the Judgment (נ thru), when God will weigh sins and virtues, but even he who was the Messiah, Prince of Peace, emerges (Apoc. Bar 29 and 73); and after all these events the time of the Messiah shall be revealed, though He is here no longer the national hero but the renewer of Paradise, the restorer of the Golden Age. Next will follow the Resurrection of the Dead (Is 26:19), God will destroy death (Dn 12:2). Many of them that sleep in the dust of the earth shall awake' (En 51:1).
AGES OF THE WORLD (Zoroastrian).

x. By far the most detailed account of Iranian cosmology is afforded by the Pahlavi Būndahishn, a work which, though dating in its present form from the post-Mahomedan period, undoubtedly contains material of far greater antiquity. According to it, Ahūmazd (Ormazd) produced spiritually the creatures which were necessary for those means [his complete victory over evil], and the third thousand years in the spiritual state, so that they were unthinking or [in]vulnerable and unmoving, with intangible bodies (i. 8). "And Ahūmazd spoke to the evil spirit thus: ‘Appoint a period, so that the intermingling of the conflict may be for nine thousand years.’ For he knew that by appointing this period the evil spirit would be undone. Thus the evil spirit, unobservant and through ignorance, was content with that agreement; just like the man when the length of the day is uncertain who, for a time, thus said: ‘Let it be the such-and-such a day for a fight.’ Ahūmazd also knew this, through omniscience, that within these nine thousand years, for three thousand years everything proceeds by the will of Ahūmazd, three thousand years by the will of his plants and three thousand years by the wills of Ahūmazd and Ahurman, and the last three thousand years the evil spirit is disabled, and the adversary is kept away from the creature’s (i. 18–20, West’s tr.). Then Ahur Mazda (Pahlavi Aōhurmarzd) recited the Ahumavār, and exhibited to the evil spirit his own triumph in the end; the evil spirit, perceiving his own impotence and the annihilation of the demons, became confounded and remained three thousand years in confusion, thus the second millennium of time. During the confusion of the evil spirit, Ahur Maza created Good Thought (Pahlavi Vohvāmān), as well as the five other archangels. Ahriman (wh. see) produced in opposition to them six corresponding evil powers. Of the creatures of the heavens there is no mention (and the light of the world); second, water; third, earth; fourth, plants; fifth, animals; and sixth, mankind (i. 21–28). The spirits of men, their jamaahās and their consciousness, had already been created in the beginning. Now Ormazd deliberated with them, asking them if they would assume a bodily form in order to contend with the fiend Ahrimah, and in the end become wholly immortal and perfect for ever, whereupon they consented (ii. 10–11). According to the third chapter, the confounding of the evil spirit and his demons was due to the righteous man,’ a phrase which doubtless designates Gaya-maretn (Pahlavi Gāyomārt), the primeval man, who existed undisturbed, during the same second millennium, with the primeval ox.

The evil spirit now rushed into creation, and the seventh millennium, or the third millennium, began. The elements, the primeval ox, and the primeval man went on to the world; there was none but thee, O our Redeemer, for the days of the Messiah; neither is there any like unto thee, O our Saviour, for the resurrection of the dead.’

E. N. ADLER.

AGES OF THE WORLD (Zoroastrian).—The 34th chapter of the original Būndahishn sums up the first two trimillenniums of the creation as follows: ‘Time was for twelve thousand years; and it says in revelation, that three thousand years was the duration of the spiritual state, where the creatures were unthinking, un-moving, and intangible; and three thousand years was the duration of Gāyomārt, with the ox in the world. Those three millenniums are in thousand years connected with three of the constellations of the zodiac: Cancer, Leo, and Virgo.

The first millennium of the human race is distributed as follows in the same chapter:

Gāyomārt, 30 years.
Māhaya and Māhāpi growing up during 40 years (Būnd. 15. 2).
living without desire for intercourse, 50 years.
living as husband and wife, 93 years, until Hōshang (Av. Hassagangha), great-grandson of Māhaya, came, 40 years (and six months, according to Akbar-ī)
Takḥomārū (Av. Takhma-utupu; Shāh-nāma Takhomārv), great-grandson of Hōshang, 30 years.
Yim (Av. Yima; Shāh-nāma Jamshīd), brother of Takḥomārū, 616 years and six months, until the sun power and glory of the Iranian rulers left him, in the shape of a bird, because he took pleasure in words of falsehood and error (Yasli, xix. 54), and made himself something more than a man.
Then he lived in concealment for 100 years.
Total, 699 years and six months (or 1000 years).

The next millennium, the second of human history, and the eighth of the creation, was under the sway of Dāhāk, whose lineage on his mother’s side is traced, by Būnd. xxxi. 6, nine degrees from the evil spirit himself. Dāhāk is the Azī Dāhāk, the dragon with three heads, of the Avesta, who tried to seize the kingly power-substance of the world, the left Yima, who had become too proud owing to his happy paradise-reign; but Atar, the fire, saved it (Yasli, xix. 47 ff.).

According to another tradition in the same Yasli (xix. 83), the kāvah[mah, in leaving Yima, went in three parts: one to Mithra; the second to Thraṭṭa, who killed the dragon Ashī Dahāka; and the third, the dragon Zeremah, is to be the successful adversary of the dragon at the end of the time. Those three guardians of the ‘kingly glory’ are regarded as succeeding each other, so that Mithra preserves it during part of the end, until Thraṭṭa comes— as, in the other version, just mentioned, Atar is said to save the kingly glory, which takes refuge in the waters of Dāhāk. After the millennium of Dāhāk, who is assigned

*The twenty-seventh chapter of the Būndahishn presupposes the existence of plants before the attack of the fiend: ‘it says in revelation, that, before the coming of the destroyer, vegetation had no thorn and bark about it.’
by Bând. xxxiv. 6 to Scorpio, the sovereignty devolved on Frâtan, the Thraçnêas of the Avesta, the Frâtn of the Shân-nâmah, who killed the terrible usurper and introduced the third millennium of mankind and of the third millennium of creation. This millennium is assigned by the Bândîahshn to Sagittarius, and contains the names of some of the ancient heroes of the Middle East. The Bândîahshn makes the following calculation (xxxiv. 6–7):

Frâtan, contemporary of the 12 years of Ahrîb, 500 years.
Mandaûshn (Mandaucarda), contemporary of the Turanian adversary Frâtshyâb, the Frâshnavay of the Avesta, who made Mandaûshn the Iranian captives in the Trimillennium, from the month of Fâshdich, the 12th of the Caspian, 1660 years.

Zés Shânâb (Av. Uzasa; Shân-nâmâ Shân), grandson of Mandaûshn, expelled Frâtshyâb from Iran, and reigned 5 years; adopted
Kâl-Kâbî (Av. Kâl Kanda), founder of the most renowned royal race of Iran, the Kavîs, who retained the khesran, the spiritual substance of the kingship of Iran, during several generations, 15 years.
Kâl-Kâm (Av. Kâl Usdâhan), grandson of Kâl-Kâbî, 150 years.
His grandson Kâl-Ḫorthâ (Av. Kâl Hurokna), who was received into heaven without death, 60 years.
Kâl-Ḫorshîd (Av. Kâl Usdâhan), reigned 100 years; and his son Kâl-Vîshshap (Av. Kâl Vîshhtâp), the protector of Zaraštushtra, until the coming of the religion, 30 years.

So far the last chapter of the Bândîahshn. It accordingly gives only a short chronology of the millennium of the Zaraštushtrian faith, ruled by Capricorn,—in which period the present generation is the first. After the coming of religion it reckons (xxxv. 7–9):

For the Achemenians: 1280 years.
For the Alexander: 14 years.
For the Ashkînâs (Arsacidâs): 564 years.
For the Sasanians: 460 years.

Total: 1016 years

Then the sovereignty is said to have fallen to the Arâhs (cf. the somewhat older list of the Iranian kings in the Mandevûshn: Louis H. Gray, 'The Kings of Early Iran according to the Sidrá Bâh', in Z. d. ir. 37, 1920). In this chronological table the successors of Alexander and the Parthian kingdom until Arsakhs, the founder of the Sasanian dynasty, occupy only 294 years, instead of at least 647. On the other hand, the Sasanians have too many, 460 years instead of 426 or 437. This double mistake is perhaps unintentional. Although the total of the historical chronology is thus shortened by the writer of Bândîahshn, xxxiv, the millennium of the same name of a year, etc., should have come, as we have seen, sixteen years before the Arab. This millennium, which must contain the whole history since the revelation to Zarathushtra, is the puzzle to the Zaraštushtrians. This Bâhman Yasth (Pahlavi), which, in its present form, a complicated literary history behind it, shows the difficulty caused by the transliteration and translation of the ancient name of the son of the prophet should be born in a supernatural way and saved by the visitation of the Saviour, the son of the thousand, etc. The popular belief awaited rather a valiant warrior, Bahram Varjâvand, the Iranian Messiah. Indeed, we read in the Pahlavi Bâhman Yasth, iii. 44 ('Pahlavi Texts,' tr. by E. W. West, SBE v. p. 231): 'Regarding Hîshûqan it is declared that he will be born in 1650.' This must mean 1650 after Zaraštushtra. That is 600 years too late—but it brings us only to the beginning of the 15th cent. a.d., according to the traditional Zaraštushtrian chronology. (See the introduction of E. W. West to his tr. of Bahman Yasth; and Bousset, 'Beiträge zur Gesch. der Eschatologie' in Zeitschr. f. Kirchengesch., x. 1876, p. 417.)

It is evident, as E. W. West has pointed out in his most important work on the Zoroastrian Texts (SBE zivii), that this system of chronology must have been modified over and over that should finish the millennium of the actual history of mankind after Zaraštushtra. The first revelation to the prophet being dated by the Pahlavi tradition 500 years before Alexander, or about 800 b.c., that means about 370 a.d.

Among other statements and calculations to be found in Pahlavi writings about the first thousand years after the last or fourth millennium, beside the short notice at the end of the Bândîahshn, two have an interest for our present purpose.

(1) The period of mankind being fixed at 6000 years, Zaraštushtra, who was born thirty years before the end of the first millennium, and whose period of intercourse with the celestial beings begins the second millennium, makes his appearance in the middle of human history. According to the San Dor, lxxxi. 4–5, it is declared in revelation that the Creator spoke to Zaraštushtra thus (SBE xxiv. 345):

'T can have created the at the present time, the middle period for it is three thousand years from the day of Day which is till now, and from now till the resurrection are the three thousand years that remain.... For whatever in the middle in the land of the middle, the whole is in the middle of the whole body, and as the land of Iran is more valuable than other lands, for the reason that it is in the middle.'

(2) The Dinkart, i. 8, a compilation of the 9th cent., renders the contents of the seventh yogart of the now lost Sûtêk Nask of the Sasanian Avesta (SBE xxxv. 181): The seventh yogart is about the exhibition to Zarathustra of the nature of the four periods in the millennium of Zarathustra. First, the golden, that in which Ahuramazda dispensed the religion to Zarathustra. Second, the silver, in which Zahrast created the religion of Zarathustra. Third, the steel, the period within which the organizer of righteousness, Ahura, son of Mârampend, was born (or Ardâr, the great champion of orthodoxy in the 4th cent. who offered to undergo the ordeal of pouring molten brass on his chest in order to prove the truth of the Mazdasyan faith). Fourth, the period mingled with iron is this, in which there is much propagation of the religion and many other wars. The period of the destruction of the reign of religion, the decay of every kind of goodness and virtue, and the disappearance of honour and wisdom from the countries of Iran.'

It is not possible to say how much of this account belonged to the text of the Sûtêk Nask and what is taken from its 'Zend' (its translation and Pahlavi paraphrase, used by the compiler). The events described need not concern us later than the time after the death of the great Shâh-pâhîr II. in 379. His grandson Yazdâr 1. (399–420) was called by the priests the 'sinner' because of his tolerance in quarrels about religion. At all events, it is scarcely possible that the long reign of the four [Metal] Ages, known in India, Greece, Rome, etc., should have been wholly introduced by the Pahlavi paraphrase. In the Pahlavi Bahman Yasth, i. 6, it is expressly said that the appearance of the appeared Mazdik (the hero who flourished during the reign of Kâbêd (488–531), and who was put to death by his son Khrashâr Nâshîrşân) during 'this time' (the Iron Age), is mentioned in the lost Zend commentary on three Yasths of the Avesta, although the two of these Yasths still exist (the Avesta Bahman Yasth has long lost) do not contain anything about the matter.

In the same context of the Pahlavi Bahman Yasth the historical standpoint is a later one than in the Dinkart's rendering of the Sûtêk Nask, and in subsequent epochs. That of Gold means the conversation of Ahûra Mazdå in the form of a legible message, perhaps including the reawakening of Xerxes u., Darius i., and Artaxerxes Mâmûn (404–359). That of Steel is the reign of the glorified Kidar, son of Kâbêd (561–670), the greatest of the Sasanians, during whose reign the Pahlavi literature flourished (P. Justi, in Grundriss der iran. Philologie, ii. 383). In ii. 21–22 there is allusion to the great metal of the Steel Age king: 'when he keeps away from this religion the accursed Mazdik that was mixed with iron is the reign of the demons with their revivified hair of the race of the Weth, which it was impossible to contain in a ten-hundredth winter of thy millennium, O Zarathustra, the Spînâm! The speaker is Ormazd.'

In another passage, of the Ahûra Mazdå commentary or paraphrase of the Bahman Yasth (i.16–23) the Metal Ages are increased to seven. Zarathushtra had seen in a dream a tree with seven branches; one golden, one silver, one bronze, one copper, one of tin, one of steel, and one mixed up with iron. The Bahman explains the dream thus: 'The seven branches are the seven periods to come. The Golden one means the reign of King Vîshshap; that of Silver is the reign of Artshīr the Kaykāh (Artaxerxes Longimanus) and the Copper Age represents the seven periods that Christ, the first two Sasanian monarchs, Artshīr (295–341) and his son Šahrûn (341–379), and the restorer of true religion, Artârâb Mârâspand (with the preparation of the pretended Ahriman, Mâshîhshap) (390–397). The Copper Age is evidently out of its order, as it puts it back from the Sasanian dynasty to the days of Ahura, son of the Ashkînân king' (we do not know who) which removes from the world the heterodoxy which existed; while the wicked of this Age (Artshīr and Šahrûn) is the Anachronism that need not surprise us on the part of a Pahlavi writer, who identifies the two great enemies of the Mazda-yasnian faith coming from the West (Alexander the Great and...
the Christian Roman empire) is utterly destroyed by this religion, and passes unknown and unseen from the world. The Tin Age brings us to the powerful Sassanian monarch, Bahram V. (420-438), who, by the spirit of pleasure and joy, at last succeeds in establishing peace and fest, and Ahriman with the wizards (i.e., the heretics) rushes back into the world gloom. The Sixth Age represents the successor of Mazdix, King Khosro, and the one mixed with iron is characterized as in the first chapter.

At the end of Zarathushtra's millennium Uhshyatera (Pahlavi Hoshätar), 'the one who makes pious grow,' shall be born, in a marvellous way, from the prophet's seed. When thirty years old, he enters on his ministry to restore the religion (Bûndahîshn, xxvii. 8; Bahram Yasht, iii. 44; Dinkart, vii. 8, 51-60). The second millennium of the post-Zarathushrian triglomeration begins. In the 5th cent. of that millennium (Dinkart, vii. 9, 3 [SBE xlvii. 108]) the wizard Mahhrklašht, mentioned in an extant fragment (Watkin, p. 2), of the Avesta as Mahrkhsht, will appear for a second time and produce a terrible winter, that will, 'within three winters and in the fourth,' destroy the greater part of mankind and of animals. Böedakhsht, a god of the second fargart of the Vendidad without the name of Mahrkhsht, the demon or the wizard of snow. Yima, the paradise-king, is told by Ormazd to prepare an encloset, a varza, and to live in it himself, with a chosen host of men, animals, plants, and fishes, in order to be preserved during the winters that will invade the earth.

When Hoshätar's millennium the encloset made by Yima is opened, mankind and animals will issue from it and arrange the world again, and the third millennium of the world (Dinkart, vii. 9, 3 f.; Mathny-1 Khurat, xxvii. 27-31). New beings thus come back miraculously for the restoration of the world (Dâštîdâ-1 Dînk, xxvii. 96 [SBE xviii. 109-110]).

A thousand years after Hoshâtar, a second son of Zarathushtra will be born, Uhshyateynemah, 'he who makes the prayer grow' (Pahlavi Hoshätarma). When thirty years old, he will confer with the archangels. That is the beginning of the last millennium of the world (Dinkart, vii. 9, 18-23). After its end the third miraculous son of the prophet shall be born in the same way by a third virgin, pregnant from the water of the lake Kansava, which holds the seed of Zarathushtra (Bûndahîshn, xxvii. 8; Dinkart, vii. 10, 15-18).

The usual translation of his name Astout-reta, 'he who raises the (dead) bodie,' seems very unlikely. The second part of the name, reta, which means in the name of the first son of the prophet 'righteousness,' being the Iranian equivalent of the Sriz rta (which appears otherwise in the Avesta as zaha), would then be a verbal form in the third name. More probable is Bartholomew's rendering (Altiran. Wörterbuch, col. 210), 'he who makes the prayer grow' (Astout Retat-Astout-reta, 'the one who makes righteous'. But the analogy with the former two names: Uhshyateynemah, makes one think that the first half also of the last name is a verbal form of 'praise.' With a preceding d. If, indeed, the initial a were long, the name might be translated, 'he who praises righteousness.' More frequently the third expected restorers of religion is called Svatkhânt 'the saviour,' 'the helper,' originally and generally in the Avesta an appellative applied to the zulœal Mazdyanian and promoters of religion.

Now the last conflict breaks out; resurrection and purification open the way to eternal blissful existence. The time preceding the coming of the three restorers of faith will be marked by misery and suffering. The Pahlavi apocalypic says to Dinkart (vii. 14, 11 ff.). We recall the four Ages that mark a successive deterioration in Zarathushtra's millennium. The Pahlavi apocalypic paints the time before Hoshâtar's coming in dreadful colours borrowed from history. At the end of the last thousand years Ahi Dahâka will break his fetters. But, on the other hand, the end of those three Ages is described as an advance towards the glorious consummation (Dinkart, iv. 41, 4-8). We have seen how the opening of the gate of Yima's encloset will produce a new prosperity before the end of the first half of the Tin Age. Hoshâtar's millennium two-thirds of the population of Iran are righteous and one-third wicked (Dinkart, vii. 9, 13). In the last millennium no one passes away, other than those whom they unite with a scathless weapon away from old age. When fifty-three years of that millennium of his still remain, the sweetness and oiliness of milk and vegetables are so perfect, that, on account of the freedom of mankind from desire for meat, they shall leave off the eating of meat, and their food become milk and vegetables. When three years remain, they shall leave off even the drinking of milk, and their food and drink become water and vegetables (Dinkart, vii. 10, 7 ff.). The milk of one cow shall be sufficient for a seven year span. As hunger and thirst diminish, men shall be satisfied with one meal every third day. Old age shall not be weak; any more and life shall become longer. Humility and patience shall be multiplied.

The Greeks were acquainted with the optimistic Mazdyanian doctrine of the spiritualizing of mankind towards the end. Ptolemy, at the end of the world, will see the Earth on the east no shadow (Thopompous-Plutarch). The eighteenth fargart of the Farshinmaina Nasht of the Sassanian Avesta told, according to Dinkart, ix. 4, 1, 'about the triumph of the sacred beings over the demons at the end of the three last periods of the world.'

These 12,000 years form the long period of creation, divided into four great Ages. It is bounded by eternity on both sides, by 'time without end.' The 'Great,' or 'Iranian,' Bûndahîshn, which appears to be later development of the more commonly known Bûndahîshn, says about Time (Darmesteter, Le Zend Avesta, ii. 310-311): 'It was without limits up to the creation, and it was created limited to the end, that is, to the reducing of the evil spirit to impotence. After this, Time resumes its infiniteness for ever and ever.' This latter theological speculation about the personified Time (Zravna) is found in the Avesta itself, which distinguishes between 'Time without limits' (Zravna-daraghrkhvadhâh), and 'Time, self-determined' (Zravna-daraghr-khvadhâh, [SBE xxix. 1]."

In Vendidad, xix. 9, Zarathushtra answers the Evil One: 'The beneficent spirit created in the time without limits.' 'Time without limits' was made later on, in order to weaken the dualism to an eternal Divine Being, from whom the two opposite spirits emanate.

The distribution of Time into the endless Time before and after the 'long, self-determined Time' has its exact local equivalent in the strictly organised Mazdyanian theology. The region of light where Ormazd dwells is called 'endless light.' The region where the Evil Spirit resides is called the 'endless dark.' 'Between them was empty space, that is, what they call 'air,' in which is now their meeting' (Zûnd, 1, 2-4 Dinkart). F. Hirt's words, as De Is. et Os. 46, about 'the region between the two gods.' The air or atmosphere, Vayô (Pahlavi Vay) is described as intermediate, 'the space between the two,' and is designated exactly as Time: daraghr-khvadhâh (Nystiyh, i, 1). 'Long, self-determined.' The Great Bûndahîshn (Darmesteter, loc. cit.) distinguishes between the physical Vayô and the spiritual space as well as time being divided according to the dualistic principle. Already the Avesta knew such a distinction. Yasht, xv. in linking 'that part of thee, O Vayô, which belongs to the Good Spirit.'

2. Date of the Zoroastrian system of Ages of the World.—(a) As we have already seen, most of the names and legends and ideas that belong to the Pahlavi apocalypic go to Dinkart (vi. 14, 11 ff.). We recall the four Ages that mark a successive deterioration in Zarathushtra's millennium. The Pahlavi apocalypic paints the time before Hoshâtar's coming in dreadful colours borrowed from history. At the end of the last

after the well-known ... millennium, while
the millenniums form together a progress towards
an end, whereas in the Indian conception the four

(5) The heroic lore of Iran knew a list of heroes and old rulers, which is preserved in the extant parts only of the Avesta, especially in the fifth Yasht, consecrated to the goddess Arîv Sûr Anâhita, in the dramatic history of the kshvarenah (the spiritual substance-power of the Iranian kingship), as given in Yasht xiv., and, in the ecclesiastical list of the four ages of the world, in Yasht xii. These legends have been reduced to three thousand years, but in a different way: 3000 for Ahura Mazda's supremacy (= Gâyômârj's trimillennium), and 3000 for the conflict (= until Zarathushtra), the two periods being ended by the final victory and eternal bliss (and the rest of God, which looks like a Jewish-Christian Sabbath of the world; cf. Ep. Barn. 15).

The last trimillennium, from Zarathushtra to the Socehyantr, of the final Zarathushtra, as chronologically still seem to have been understood by Theopompos as the time of fulfillment, rather than as a new period. It is possible that the doctrine had this aspect even in the earlier stages and would better suit the Gâthas, where the final renovation of the world seems, in some texts, at least, to be the time of the end of the world. In any case, Theopompos' record agrees, as far as the central contents, with the last 9000 years of the Bândâshâh. These 9000 years alone are mentioned in the Arôx Vâdâsii, the official text of the Mazdayasnian religion, and in the first of the two great epochs will then have been added in order to get the number four, or the twelve thousand years.

We are not sufficiently acquainted with the old Babylonian divisions of the existence of the world. But probably the 12,000 years—seven ages of the world—are to be predicted by Mani (Kessler, Mass, i. 343; the number 12 is fundamental in Mani's doctrine, see Kessler, art. 'Mani' in P.R.F.) and by the Etrurians (according to Suidas), like the 12 parts of the existence of the world in 2 Es 14:106f. and Apoc. Bar 53, are derived from a Babylonian cycle. This probability comes very near demonstration when we consider that both the Etrurian belief, as reported by Suidas, and the Bândâshâh combine the twelve (or twelve) salutary signs. The Mazdayasnian theologians owed their astronomical science to the Babylonians and to the Egyptians (J. Marquart, Philologus, Sup. x. 1. 102 ff.).

(e) The Gâthás represent an epoch in which this doctrine did not belong to the Zoroasthrian faith. If periods were already known in Iran, this must have been outside the Zarathushtrian reform. The long waiting is incompatible with the preaching of the Gâthás. Time, as in both Jewish and Christian prophecy and apocalypses, is rather sharply divided into two Ages: the present era of struggle and difficulty, and the happy reign of theocracy and justice after the longed-for separation by fire.

4. Meaning of the periods.—The beliefs outlined in the foregoing pages represent the original and characteristic feature of the Mazdayasnian system of Ages of the World, and must be derived from the Zoroastrian idea, expressed in the Gâthás, of Ahura Mazda as the ruler of the future destiny of mankind. The division into Ages does not imply merely a distinction between the past and the old time—as e.g. in the alcheringa (w. h. se. of the Australians. Nor does it signify a deterioration, as, for example, in the Ages of Hesiod and Ovid. Something resembling a pessimistic view of the course of time might be gathered from three passages of the Mazdayasnian religion: (1) the monster of the old myth will be unfeathered; (2) the sharp opposition implied in the Zarathushtrian reform, and the earnest appeal to choose the way of Ahâ, sometimes give a dark colouring to the Gâthic view; (3) several thousand years later, when the glorious line of history was already pointed out by Avéstan and Pahlavi theogy, the tragic events under the last Sassanians and after the Arabian conquest taught a sombre lesson of the impossibility of the Zarathushtra's millennium before the advent of the expected helper, who never came. The four Ages of Gold, Silver, Steel, and Iron were adopted, at first probably by an orthodox compiler, during the early controversies with Manicheism and other heresies, and then history filled out the Iron-mingled Age in different ways. The Great Bândâshâh kept open its chapter 'On the calamities which have invaded Iran in different ages' (Blichet, l.c. 45). But the four metamorphic Ages are only episodes in the general history of the world, and give no idea of the destiny of the world. In both cases the general optimistic character of the Zarathushtrian faith prevails: the victory of Ormazd is the surest thing in the world, known and predicted since the beginning. The worldly corporeal existence and human affairs are no enemies of pietà, but pure elements and duties, the diligent fulfilment of which formally constitutes each Mazdayasnian a fellow-worker with Ormazd, a helper, saving (Ormazd), and fârâshâhâr, 'a renewer' of humanity of the world. These functions he discharges in company with the great heroes, from Kâf-Khûrâv—without whose destruction of the idolatrous temples behind the lake of Caucasia the renovation of the world could never have been completed by the work of the last saoeshyant. The world is a realm of conflict, with impunity constantly threatens and demons are ever on the watch. But it is a noteworthy fact that the period of confusion and strife is not the present Age. That period ended with the appearance of Zarathushtra. We already live in the Age of the victory of Ormazd.

The Persian periods do not imply an eternal repetition, as in the developments of Aryan speculation and the idea of the cyclic change of the ages of the world. They sometimes in modern thought (e.g. Nietzsche, and, in a less pedantic way, Sw. Arrhenius)—the same causes combining to produce in eternal cycles the same effect:

7. When this world shall be no more, underground,
Thro' tenebrosity, teared, twisted, cramped, and cold,
Baked, fried, or burnt, turned inside-out, or drounted,
Like all the world before, with its long shrunken hurid
First out of, and then back again to chaos.
The superstratum which will overlap us.

Nothing can be more characteristic than the placing of the Metal Ages and this Iron Age only in one, the present, Mazdayasnian millennium, while the millenniums form together a progress towards an end, whereas in the Indian conception the four
The Aghoriansyugas and the present evil kali Age form the constant feature of periods which emerge and pass away similarly. The system of periods in India did not unite, as in India, with the popular belief in the transmigration of souls—a belief worked out into a fundamental philosophical doctrine in Indian systems of periods. The Mazdyanian scheme expresses, in a somewhat scholastic way, the idea implied in the word history: that is to say, 'something happens in what happens' (E. G. Geiger), so that the intricate mass of events has a meaning and a goal beyond the actual combinations and situations. The real king of the future, not a 'see-saw,' and not a 'backward,' although it may seem so to human eyes. This profound conception has arisen only twice in the history of human thought—in the only two ancient prophetic religions, one Aryan, one Semitic—in Zarathushtrianism and in Islam. Neither seems to have borrowed it from the other.

Christianity inherited it from Moses, and it has become prevalent in the Western civilization in the form of belief in a Divine purport in history, in progressive evolution, or in a redeeming crisis, and it is one of the most powerful and influential factors in the civilization of Europe and America, as distinguished from the great civilizations of India and of the Far East. It is so deeply rooted in the Western mind, that even should it be an admirable and believable in the Indian conception as Schopenhauer unconsciously yields to it (cf. his Sämmtliche Werke, v. 224).

To have originated faith in the significance and purpose of history may fittingly be called Zarathushtra's greatest gift to mankind. To have received a philosophy of religion from the Aghorians, should be considered a great event in the history of the world. The Aghorians were the first to come into the system of periods, and the advancement of the knowledge of the Aghorians in the future may be expected to be considerable, especially in the direction of the study of the periods of the world. The study of the periods of the world is one of the most interesting branches of the science of periods, and it is hoped that this branch of the science of periods may be developed in the future.

The Aghorians are a sect of ascetics in India who have for a long time attracted attention on account of their habit of cannibalism and other abominable practices.

1. Meaning of name.—Their name indicates connexion with the cult of Siva, being derived from Skr. a-ghora, 'not terrifie,' one of the euphemistic titles of the god. Aghoraparni means 'one who follows the path' (Skr. parpathi) or cult of Siva in this form. The worship of Siva as Aghoravara, 'the non-terrified Lord,' is an established practice at Kukkul, Mysore, and in many other places.

2. Distribution.—The present distribution of the sect is a question of some difficulty. According to the Census of 1901, they number within the Empire 546. They are seated mainly in Bihār or W. Bengal, the remainder in Ajmir-Mahrāvāra and Berār, with 2 convicts in the Andaman Islands. This figures widely from the Census figures of 1891, when 630 Aghori and 4317 Aghors were recorded in the United Provinces, 1067 Aghori in Bengal, and 436 Augars in the Panjāb.

The explanation of this discrepancy lies partly in the fact that, like all ascetics of the kind, they are constantly wandering from one part of the country to another to attend bathing fairs and visit places of pilgrimage. Secondly, the unpopular

* Havell, in 1805, found an Aghar at Benares seated in a stone raised high above the burning ghat, 'Annie had no wish to see this; she would raise the hand that contains here its evil reputation, but this black-robed ascetic, who is shown in the photograph studying a sacred book, proved to be quite ineffective. He bestowed his blessing upon the pious tourist, but contemnously refused to accept a present.' (Benares, The Sacred City, 119.)
marvellous tales are told, and from whom some of the yogi Orders trace their origin.*

4. The sect in modern times.—There are numerous accounts of the disgusting practices of these ascetics in modern times. M. Thévenot, whose Travels were republished in London in 1657, alludes to what he saw on a journey through the province of Agorí cannibals, who during his time were established at a place which he calls 'Debeca,' in the Broach district of the Bombay Presidency; but his statements must be received with caution. Ward (View of the Hindoos (1816) it is related, among other ascetics, the 'Ughorí-pathunee.'

*These mendicants, born in the western parts of Hindoostan, wander about from place to place, and from whom some of the yogi Orders trace their origin. (Travels of the Hindoos 1687.)

'These mendicants, born in the western parts of Hindoostan, wander about from place to place, and from whom some of the yogi Orders trace their origin. (Travels of the Hindoos (1816).) It is related, among other ascetics, the 'Ughorí-pathunee.'

regard of the ordinary needs of life shown by these two sects is very different from the abominable practices ... in a state of drunken excitement, which was supposed to proceed from inspiration (Account of the Kingdom of Nepal, iii. 35).

11. India, of purpose eater, a and in the case, which becomes temporarily ceased for relatives, wife, and children; and on being angered by any of them they would not hesitate to commit murder. In parts of Melanesia, according to Cordrington, Micronesia, and Polynesia, in and this way people obtain the power of becoming vampires, the ghost of the corpse which was eaten entering into friendly relations with the corpse and in many cases besides procuring the power of acquiring power (Fawcett, Bulletin of the Madras Museum, ii. 311). Belief of this kind may have been the real origin of the practice, and the explanation which the Aghori give, that drinking in this way procures power and makes all things equal and all immaterial, may be a recent development.

8. Use of human skulls as cups and vessels.—The same motive possibly accounts for the use of the human calcutaria for purposes of eating and drinking. In many places the skull is believed to possess special magical qualities. Thus, among the Wadou of E. Africa, at the appointment of a chief, a stranger is killed, and the skull of the victim is used as a drinking-cup at the inauguration rite (Mas, iii. 61). The new chief of the Baganda drinks out of the skull of his predecessor, whose ghost thus enters into him (JAI xxxii. 45). In the same way the Zulus make the skull of a noted enemy into a bowl for holding the 'charming-medicine' with which the war-doctor sprinkles the soldiers before a campaign (WA, xix. 256).

Similarly, in the Indian Himalayas, the skulls of some women killed in a snowstorm were made into drums for summoning devils (Waddell, Among the Himalayas, 401). In these and in many other instances of the practice described by Balfour (JAI xxvi. 347 ff.), it is clear that the skull has been carefully selected as that of some eminent or notorious person, or of one whose death has occurred under tragic circumstances. The custom of the Aghori, if it originated in this way, appears, therefore, in a debased form, for they do not seem to exercise any special care in selecting the skulls which they use. Several bowls of this kind, procured in India, Assanti, Australia, China, Tibet, and the lower Himalayas, have been figured and described by Balfour (JAI xxvi. 347 ff.), who gives a picture of one used in Tibetan devil-worship, as well as a drawing of a modern Tibetan hermit, an exact representation of the Aghori, drinking out of such a bowl (Lhasa and its Mysteries, 220, 238, 243, 370). In fact, Tibet, with its remarkable colony of immured hermits described by Waddell (op. cit. 237 ff.), appears to exhibit more closely than even modern India the course of austerity practised by the early Hindu ascetics. The fact, comfortable appearance of the modern yogi or sannyasi proves that austerity is not a part of his way of life.

This habit of using skulls as drinking-cups shows itself even in Europe. It was a custom of the old German nobility (24) tells the same tale of the Celts. Paula Diocles (Hist. Langob. ii. 56 in Gunnemers, Germ. Orig. 129) tells how Alboin's predecessor, at the feast which he held for his eminent person, brought forth a cup made of the skull of his father. It is still a common belief that epilepsy may be cured by drinking out of a cup made from the skull of a suicides (Folk-Lore, vii. 376, xiv. 270; Ritchell, The Past in the Present, 154; Rogers, Social Life in Scotland, iii. 256). The powder made from human skulls, and even the moss growing on them, are valued as a styptic in cases of hemorrhage (Black, Folk Medicine, 99).

9. Punishment of Aghori.—There are numerous cases of members of the sects so convicted in modern times by Indian courts of law, on charges of outraging and eating human corpses. In 1860 the Sessions Judge of Gházipur in the United Provinces convicted and sentenced an Aghori to one year's rigorous imprisonment, under sections 270-287 of the Indian Penal Code, on a charge of dragging a corpse along a road. A similar case, in which cannibalism was proved, occurred at Rohtak in the Panjab in 1882, and in Dehri Dún of the United Provinces in 1884. In 1854 two Europeans de- tected an Aghori man in the Ganges. Several skulls, one of which had been recently severed from the trunk, were found
AGITATION

impealed on bamboo posts round his hermitage (PASB iii. 290 f., 300 ff.).

10. Initiation rite of the Aghori.—Ascentic Orders usually guard as secret the methods of initiation and the formula which is whispered in the ear of the neophyte. Hence the accounts of the initiation rites of the Aghori are, from their general unpopularity, to be received with some degree of caution. According to one, and that perhaps the most authoritative account, the guru, or head of the Order, blows a conch-shell accompanied by rude music, performed by a hired band. He then micturates into a human skull and pours the contents over the head of the candidate, whose hair is then shaved by a barber. The neophyte next drinks some spirits and eats food which has been collected as alms from the lowest castes, and assumes the ochre-coloured, scanty waist-cloth, and the stick of the ascetic. During the rite the guru whispers mystical formulas (mantras) into the ear of his disciple. In some cases it is reported that eating human flesh is part of the rite, and two necklaces, one made of the tusks of the wild boar and the other of the vertebrae of the cobra, are placed round the neck of the disciple (PASB iii. 241 f.). According to another account, five glass beads, suspended in which a bell, necklaces, and flowers are placed upon the altar. A piece of cloth is tied over the eyes of the neophyte; he is then led before two gurus, who light a lamp; the cup of initiation is served to all present. The beads are one of the rite, and a glass of hemp liquor (bhang) and spirits are placed. Those who wish to retain their caste drink only the hemp; those who solicit complete initiation drink both the hemp and spirits. A sacrifice of fruits is then made on the holy fire, which has continued lighted since the days of Kinna Ram, and an animal, usually a goat, is sacrificed. It is believed that the victim often comes to life, and that the cups on the tombstone miraculously raise themselves with the lips of the candidates for admission into the Order. The rite ends with the shaving of the head of the neophyte, the hair being previously moistened with urine, and a feast is given to the assembled brethren. Full admission to the Order is said to be granted only after a probation lasting two years.

11. Dress and appearance.—The Aghori, of whom photographs were collected by Leith for the Anthropological Society of Bombay, is represented as covered with ashes taken from a funeral pyre. He seems to wear frontal marks denoting the unity of the deities Brahma, Vishnu, and Siva. He wears the rosary of Rudraksha beads made of the seeds of the tree Elaeocarpus ganitrus, a necklace made of the bones of a snake, and the tasks of a wild boar and a skull that he has procured for admission into the Order. Some members of the Order are said to wear necklaces made of human teeth (PASB iii. 348 ff.).

LITERATURE.—The chief authorities have been quoted in the course of this article. The most complete accounts of the sect are those of H. Balfour, 'The Life History of an Anglo- Indian Fakir,'_J. of the Royal Asiatic Soc._ 300 ff.; H. W. Balfour, _Aghoris and Aghorapanthis_, from the MS collections of E. T. Leith, _PASB_ iii. (1893) 307 ff.; _Crime, Tragedy and Caution of the W. Province_ (1896), 306 ff.

W. CROOKE.

AGITATION.—1. The methods of the agitator are usually considered to be a modern phenomenon, and although this is not an entirely accurate view of the case, it is at least so far true that the conditions of social life have recently become such as to bring his labours into startling prominence. It is possible to trace the rudiments of this device far back into the past, since the ringer of the tocsin bell, the lighter of the beacon-fire, and the bearer of the flaming torch may fairly be regarded as forerunners of a Mazzini or a Shaftesbury. But there is a pregnant distinction. The message of the tocsin bell in medieval Florence was an urgency one, but it was single, definite, and predetermined, announcing a bare fact, but conveying no new idea. A developed agitation, on the contrary, depends almost entirely on popularizing a new thought; it applies fresh moral judgment to problems which may have been familiar enough. The present writer has elsewhere described this instrument of collective action as an attempt to act meditatively on social abuses by acting directly on a social conscience' (History of Eng. Philanthropy, p. 172). Even in this, its developed form, agitation can be discovered in so-called ancient as well as in modern history. Whether judged by its results or by the splendid vigour of its onset, no greater agitation has been witnessed than the reconstructions of Western society by the enthusiastic promulgation of the Christian faith. Nor is any more instructive description of the effect of the agitator's art to be found than 'These that have turned the world upside down are also he.'

Nevertheless, agitation is characteristically modern. There is not much opportunity for its successful use, unless a public opinion exists to which its appeal can be directed. Public opinion itself has itself been shaped for many centuries, but it continually gains in power and effectiveness. In the more definite form of what Professor Dicey calls 'law-making public opinion' it is not yet evolved except in the more progressive nations. The formation of an opinion, of which public sense has been referred to the era of the first printing-presses, and its mature growth to that of the periodical press (Tarde, _L'Opinion et la Foule_, pp. 7-9). This is also the period of democracy, and it is precisely in democratic societies that agitation is found to be a potent and familiar weapon. We have to appraise its ethical value. If we are to do this with any precision, we shall be compelled to limit the range of the discussion, and to treat not as for the whole group. The present article, then, is immediately germane to agitation as an instrument of the humanitarian spirit, and may require some modification in details before being applied to purely political movements, as for the franchise, or class struggles, as of Trade Unions.

2. The most obstinate labour of public life is to make institutions (e.g. laws or customs) match with the ethical ideal. The agitator's function is to facilitate the task. Accordingly, any good agitation should possess the following characteristics. (1) It is the antithesis of quietism, for it is necessarily based on the conviction that objects of social concern are the proper concern of the individual also; it denies the distinction between public and private lives, and the right or wrong of each to share in the life of all. It is directed to the removal of abuses; but, so far from being caused directly by the existence of a wrong, it springs from the perception of the evil. Successful agitation is, therefore, an index of moral sensitivity.

Men treated animals with cruelty long before the Kindness to Animals campaign began (Society for the Prevention of Cruelty to Animals, A.D. 1824). (2) Agitation is a leading method of popularizing higher moral standards. In the instance just referred to, the matter of judgment was simple enough. Frequently, however, the full significance of the end to be pursued is discovered only in the course of the agitation itself. This was notably the case with Prison Reform and
AGNOSTICISM

Factory Legislation, so that what was at first a good to be reached becomes repeatedly the starting-point for fresh effort. (3) Agitation appeals to the unselfish impulses and strengthens the social imagination. Most of us live largely in a world of personal aims purified and enriched only by community for the aims of a few neighbours. Into this false and narrow (not necessarily poor) sympathies strikes the impetus of a larger claim. It may be a Dreyfus affair, the appeal for justice to one; or Emancipation, the appeal of the enslaved Negro race; or the ideal of Italian unity. In either instance the individuals are drawn into the larger realm of public sympathy. (4) Agitation is a means of social peace. This is in the nature of paradox, because the first result is always controversy and strife. But even in the turmoil something is gained when social imagination is stirred. Through the effort to remove particular wrong there emerges forefeeling of and admiration for the ideal human society in which remediable wrongs will be remedied. Opposition to the bad is one form of loyalty to the good, and therefore the conflict prepares the type of mind fit for the better life of social peace.

3. So far we have rather ignored the foibles, prejudices, and inconsistencies of actual men. No agitation proceeds with much sweet reason, and there is no method in strong zeal which accredits our native quarrelsomeness. In other words, agitation is not a perfect instrument in the hands of imperfect men. Agitators even for worthwhile ends are not immune from bitter envying and strife in their hearts. Of course, there are drawbacks, but the only question which need now detain us is whether they are of such a kind as to discredit the use of a powerful instrument of ethical gain. Two serious criticisms are added, neither of which can be entirely rebutted. (1) Agitation is rooted in exaggeration, and appeals to an unhealthy sensationalism. Thus the higher powers of the intelligence are swamped under orgiastic emotion. This is the danger of all enthusiasm. It would be more serious enough if Le Bon’s indictment of the crowd could be removed by education. Agitation can do no more than cajole, and when it does appeal to half-instructed emotions with indiscernible results. Yet such an appeal may very well lead to right conduct, and even to truer thought. For in respect of the disinterested responsive public it must be noted that (a) it is set to ponder larger issues, and the thinking (or feeling) becomes more inclusive; (c) the thought may not be very clear, but were its sympathies not warmly engaged, it would hardly think at all on great affairs of ethical concern. (2) Popular movements, as it is objected, are liable to be vitiated by the ignorance of those to whom appeal is made. Agitation which is effective as a stimulant is apt for instruction; it is certainly no method for producing philosophers. This fact is serious chiefly as it affects the results of agitation. Something is accomplished, but the whole thought is rarely worked out before the fervour begins to fade. Agitation can achieve more in the field of criticism than in that of construction, or, with a few exceptions, can be the only instrument of reform. But it has its function. A final judgment as to its precise worth will depend on the value attached to ‘correct thinking’ and ‘the good will’ respectively. The difficulty of improving and perfecting this instrument is a part of the general problem of how to maximize the genuine and good will in the same persons at the same time and for a single ideal end.

B. KIRKMAN GRAY.

AGNOSTICISM.—A term coined by Professor J. F. Ferrier in his Institutes of Metaphysic (1854), to denote the Theory of Ignorance in contrast to Epistemology (q.v.), also a term apparently coined by him (p. 49) to denote the Theory of Knowing. The conception of Agnosticism, as well as the word, was originated by Ferrier (pp. 50-51, 406, 435). Agnosticism is intended to meet the plea which Ontology is often balled, that Absolute Being—that which truly is—may be something of which we are ignorant (pp. 50, 406-408). This plea is met by showing that ignorance is an intellectual defect, and must, therefore, admit of a possible remedy. Consequently we cannot be ignorant of anything which cannot possibly be known. We cannot, for example, be ignorant of two straight lines enclosing a right angle, because we may be ignorant of the things which we are supposed to know. For example, it is a true thing that there is, is that, an object which is not related to any conscious intelligence, contradicts the very nature of knowledge. It is something which we cannot possibly know, and therefore cannot be ignorant of. Accordingly the conclusion of Agnosticism is that the only object of which we can be ignorant is, like the real object of all knowledge, not what is commonly spoken of as an object in contradistinction from a subject, but that object in relation to an intelligent subject by whom it is known. Thus matter and mind, some object plus some subject, is the complete object of all ignorance as well as of all knowledge (p. 432). From this the ontological inference is that, as Absolute existence must be either that which we know or that of which we are ignorant, it can never be an object by itself or a subject by itself, but must always be a synthesis of the two (pp. 511-521).

The Agnosticism of Ferrier is thus by anticipation a critique of the system which soon afterwards came to be known as Agnosticism (q.v.). Ferrier’s work appears in the form of a systematic exposition of Agnosticism in his First Principles, and double that period before Huxley gave the system its unclassical name. Yet neither of these writers has attempted to grapple with Ferrier’s critique, and in the vast literature of Agnosticism the critique has failed to receive the recognition which it certainly deserves. There is, therefore, no work to be consulted for Agnosticism besides the Institutes of Metaphysics. The above references are to the pages of the 3rd edition.

J. CLARE MURRAY.

AGNOSTICISM.—1. Meaning.—The origin of the term is described by Huxley as follows:—

* When I reached intellectual maturity, and began to ask myself whether I was an atheist, a theist, or a pantheist; a materialist or an idealist; a Christian or a freethinker, I found that the more I learned and reflected, the less ready was the answer: until at last I came to realize that I was neither art nor part with any of these denominations, except the last. The one thing in which most of these good people were agreed was the one thing in which I differed. They were quite sure they had attained a certain "gnosis"—had arrived at mere or less at a "clear thinking", even while I was quite sure I had not, and had a pretty strong conviction that the problem was insoluble. And, with Hume and Kant always on my side, I could not think of my holding fast by that opinion. This was my situation when I had the good fortune to find a place among the members of that remarkable confraternity of antagonists, long since deceased, of both of which and pious memory, the Metaphysical Society. Every variety of philosophical and theological opinion
AGNOSTICISM 215

was represented there, and expressed itself with entire open-
ness; most of my colleagues were -ists and expressed itself with entire open-
ness; most of my colleagues were -ists and expressed itself with entire open-
ness; most of my colleagues were ... expression of
external existence, if rested on natural instinct, is
contrary to reason, and, if referred to reason, is

These accounts demand a few brief comments.
The inscription on the altar was 'the unknown', not 'the unknowable God'. The term 'agnostic' is said to be

guisically incorrect. The 'Gnostics of Church History' were so called in contempt because they
opposed their extraneous speculations to the his-
torical testimony of the Church; and in opposing Agnostic
knowledge of God claimed by Christian theism, Huxley suggests that it is an

equally baseless fabric. There was no necessity for the introduction of the new term, as the familiar term 'scepticism' is almost synonymous with it,

although Agnosticism restricts its domain to a nar-
rower sphere; not the possibility of all knowledge is denied, but only the possibility of any
knowledge of ultimate reality. This restriction the term does not, however, indicate; nor has Huxley
proved his right to impose on the term this arbi-
tary restriction. The frequency also of the ac-
count must produce a painful impression.

It is as a refuge from the dread of Materialism that Huxley offers us this doubt of Agnosticism.

For what, after all,' he asks, 'do we know of this terrible
"matter," except as a name for the unknown and hypotheti-
cal cause of states of our own consciousness? And what do we know of that "spirit" over whose Thế
extension its doubt is made to narrow? A great lamentation is arising . . . except that it also is a name for unknown and hypothetical cause of states of consciousness? And what is the dire necessity and
"iron" law under which men groan? Truly, most gratuitously induced ... Fact I know, and Law I know
what is this necessity save an empty shadow of my own mind's throwing—something illegitimately thrust into the perfectly legitimate concept of law?

Refusing to attempt any solution of the problem of ultimate reality, he very confidently declares
the terms in which the immediate reality is to be inter-
preted.

'It is in itself of little moment whether we express the phenomena of matter in terms of spirit, or the phenomena of spirit in terms of matter—each statement has a certain relative truth. But with a view to the progress of science, the material-
ist terminology is in every way to be preferred. For it con-

connects with the other phenomena of the universe, whereas the alternative, or spiritualistic, terminology is utterly barren of significance. They are Kantian and confused in
'the idea.' Thus there can be little doubt that the further science advances, the more extensively and consistently will all the phenomena of sense be represented by materialistic formula and symbols' (Collected Essays, i. p. 160 f.).

In the supposed interests of science he is prepared
to sacrifice the real interests of morality and

reflected, although in determining the mode of ex-
plaining the world these supreme interests of the
life of man have surely a prior right to be taken into consideration. Not only so, but he assumes
that from the standpoint of 'spirit', science will not be able to release philosophy from its no
interest in traversing the conclusions of science in

its own sphere—the explanation of phenomena. It is only when science attempts to be a philosophy of ultimate reality as well, that it comes into neces-
sary conflict with a spiritualistic interpretation of

the Universe. If all the phenomena of the Uni-
verse are known only as they exist for thought, it is
not necessary to connect thought with these
phenomena by reducing it to them, for there
must ever be the essential connexion between them
and the subject which knows and the objects which
are known. Thought is not an alien in the Universe to be made at home only by a

proof of its kinship with the material phenomena it
knows. Nay, rather it alone holds the secret of
relationship among all these phenomena; for

Huxley is entirely without waver in his assump-
tion that a complete and adequate and consistent
account of the Universe, even as phenomenal, can
be given in the materialistic terminology. Life and Mind alike cannot be resolved into matter
and force. This line of criticism belongs to the
article on MATERIALISM; but it was necessary to
indicate it so far in order to show on what un-
proved assumptions Huxley's agnosticism rests.
The materialistic explanation, even he recognizes,
cannot be accepted as a solution of the problem of
ultimate reality. It is because he refuses to treat
as seriously as it deserves, on account of its own
sufficiency as well as for the interests it pro-

tects (morality, religion, etc.), the spiritualistic
explanation, which does offer the further claim of
being irrefragable does not.

Whether the demonstration is

irrefragable as Huxley thinks, we may inquire. Hume reduces all the contents of consciousness to

perceptions, and divides perceptions into 'im-
pressions' and 'ideas'. The former include 'all
our sensations, passions, and emotions' which are
given us with a peculiar 'force and liveliness' by

which we distinguish them from the latter, which
are but faint copies. In thinking, we connect our impressions according to the ingenious concep-
tions as causality and substance and sub-
ject. These cannot be derived from our sensa-
tions, the ultimate and exclusive source of know-
ledge. How does Hume account for these con-
ceptions? He derives all such concepts from cus-
tom. 'Because we are accustomed to see that
one thing follows another in time, we conceive the
idea that it must follow, and from it; of a relation
of succession we make a relation of causality' (Schwegler's Hist. of Philos. p. 182). That any

such connexion necessarily exists we have no
right to affirm. 'All events,' Hume says, 'seem
entirely loose and separate. One event follows
another, but we can never observe any tie between
them. They are not connected, but never disconnected.' (Works, etc., i. p. 84). 'Not connected,' he
says elsewhere, 'is something that exists in the
mind, not in objects' (i. p. 212). Without

attempting to offer an ultimate reason for this
custom, he recognizes it as a universal principle of
human nature. Substance is explained in a similar
way. 'The idea of a substance as well as that of

a mode, is nothing but a collection of simple ideas,
that are united by the imagination, and have a

particular name assigned to them, by which we

are able to regard philosophy as distinct from

that collection' (i. 31, 32). A consequence of
this definition of substance is the denial of the

reality of the external world. 'The opinion of

external existence, if rested on natural instinct, is

contrary to reason, and, if referred to reason,
AGNOSTICISM

contrary to natural instinct, and carries no natural evidence with it to convince an impartial inquirer' (iv. 177). The subject fares no better. 'What we call a mind,' he says, 'is nothing but a heap or collection of different perceptions, united together by certain relations, and supposed, though falsely, to be endowed with perfect simplicity and identity (i. 260).

Skepticism could not offer any solid basis for a rational theism. While Hume expressed his satisfaction that 'our most holy religion is founded on Faith, not on Reason,' and personally professed belief in the efficacy of his creation only; 'History and Religion' he sought to trace back the origin of belief in God to ignorance and superstitious fears; and in his Dialogues concerning Natural Religion there can be little doubt he endeavoured to throw discredit on the heathen evidences. This apparent inconsistency may be explained by the fact that his own theistic position, in spite of his philosophical principles and the conclusions which he so frankly and boldly drew from them, was not absolute, but mitigated; for he recognized, in practice, the 'the natural instinct' as lending sanction to common beliefs, for which no rational proof could be given.

Kant.—Although Kant set himself the task of answering Hume, yet his answer was so incompleteness claimed Kant, as well as Hume, on his side. Opposed to Hume's theistic in regard to the forms of sense and the categories of the understanding, Kant himself becomes scepical as regards the ideas of reason.

He conclusively showed that knowledge could not be reduced to sensations, and that reason implied in all its operations necessary conditions as well as contingent impres- sions. He essentially disposes of the scepticism of Hume by proving its dependence on an inadequate and erroneous psychology. But when he proceeded to argue that the categorical principles involved in knowledge have to do only with phenomena or states of conscious experience, but are wholly incapable of placing us face to face with things; that they have a merely subjective and relative value, but give us no information as to external reality; that, while useful in con- structing and unifying our perceptions, they in no degree justify our affirming that there is anything corresponding to these perceptions,—then he virtually vindicated his own work, and become the logical successor of Hume. (Flint, Agnosticism, p. 141).

Into the details of Kant's criticism of Hume's scepticism it is unnecessary to enter (see KANT). Suffice it to say that Kant has shown once and for all that the connective principles, by which the contents of consciousness are united, are necessary and unchangeable, and if not invariable, no movements of thought can be considered as a possible subject of knowledge. The possibility of consciousness depends on them; they are not casual results of, but necessary conditions for, any experience. Nevertheless he distinguishes the 'thing-in-itself' from the thing as it is for our knowledge; and thus the necessary constitution of the mind makes a knowledge of the reality as it is impossible. This appears most prominently in Kant's treatment of the ideas of the reason. 'The mind from the very nature of its intellectual constitution necessarily assumes the unity of the soul, the existence of the universe (the totality of phenomena), and the reality of a First Cause' (ii. p. 163), and nevertheless the ideas are only regulative, and not constitutive. By them we can give the rational unity to our experience which is the aim of all thinking; but we are not at liberty to regard these ideas as clues to reality, or as proofs of the existence of a world outside of, or God. Kant's criticism of the rational theology of the age (the cosmological, teleological, and ontological arguments) will be duly taken account of in the treatment of Theism. Here it need not further concern us. It is true that in his Critique of the Practical Reason he restores the ideas of God, freedom and immortality, as postu- lates of the moral consciousness; yet his conception of reason as theoretical is in its final issue sceptical. German idealism laid hold on the anti- sceptical aspect of the Kantian philosophy; but in more recent Neo-Kantian movements the sceptical aspects have again come to the front. Against Kant's position it may be urged that the reason which, by its very constitution, is debarred from knowing reality as it is, and which in its final unifying exercise is necessarily illusionistic, is so grotesque a conception, that so great a thinker can be excused for not accepting it. Yet Kant, as a pioneer in new ways of thinking, he could not himself realize whether he was allowing himself by his tortuous reasoning to be led. The division of the mind into sense, understanding, reason, is an un- real abstraction; the separation of the pure from the practical reason is opposed to more recent developments of psychology, which recognize the control of the cognitive by the conative aspect of personality. If mind be a unity, the illusioneness of the ideas of the pure reason would attach to the theoretical reason, and the categories of understanding and forms of sense must fall under the same condemnation. What the Hegelian Logico does is to develop the most concrete conceptions out of the simplest, and to identify the mental processes with the connection of the Universe—some interpreters would say 'the expectation of God Himself. If here 'vaulting ambition doth o'erleap itself,' yet, with greater modesty, it may be claimed that experience itself warrants the assumption that in the process of thinking the mind does penetrate more deeply into the reality of things; for the system of nature which science builds is not contradicted, but confirmed, by the course of nature itself. That the world is one and the self one is an assumption that is ever finding verification in experience. Not only is the self one as the subject of consciousness, but it is one as a character which is being formed, as a personality which is being developed. If this be so, then the practical as well as the theoretical need of a final unification of the world and life in the conception of God, fully justifies the assumption of God's existence. What makes reality as we know it most intelligible cannot, without an absolute scep- ticism, such as the positive element of Kant's analysis forbid, be denied reality. Kant should have been more in concord with the Hegelian.
and developed the sceptical elements in his system. While the Divine nature cannot be known, the Divine existence may be believed, as our moral nature and the Scriptures testify. We can believe that God is, without knowing what He is. He goes so far as to affirm that to think that God as we can think Him to be is blasphemy. The last and highest consecration of all true religion must be an altar ἀγαθῶς τεῷ. To the unknown and unknowable God. That there is no warrant for such an application of the inscription on the altar at Athens has already been shown. The endeavours to think what God is is blasphemy, then not only all theology but even all religion must be convicted of it. The recognition in all humility and sincerity that God cannot be perfectly known by the imperfect mind of man is characteristic of all genuine piety; but that does not involve the admission, which is something altogether different, that God cannot be known at all. Hamilton must turn elsewhere than to religion, and theology as its interpreter, for a justification of his sweeping statement. From his own philosophy he draws the following arguments:

(1) As all knowledge is relative in two senses, all objects being related to one another, and also relatively true or false in view of the subject as absolute, out of all relations, cannot be known. But to think God as absolute is not to think of Him as out of all relations, but as Himself constituting all His relations; and His relation as object to the things as subject is necessarily only that in which He, as He really is, is concealed and not revealed; for, as Creator, it is more likely He would make mankind capable of knowing Him. As has already been insisted on in criticising Kant, the reality of a subject true or false is necessarily only a distorting and obscuring element added to it when it is known; but even from the data of sense the thinking mind can construct the object as it is. The phenomenal as perceived is completed in the noumenal as conceived, and in the latter reality is known as it is, which is not the case in the former.

(2) As the only possible object of knowledge and positive thought is the conditioned and the limited, the Infinite as the unconditionally unlimited, and the Absolute as the unrestricted limited cannot by any positive thought. But is there any justification for so defining the Infinite and Absolute, and still more for identifying such verbal abstractions with the conception of God? God has a definite nature, distinct attributes, characteristic of Him, to think of the Infinite and the Absolute at all. His infinitude and absoluteness mean self-limitation and self-conditioning. Since for our knowledge and our thought all existence, save God, is conditioned and limited by other existence, the mind cannot find rest until it conceives such self-limitation and self-determination. It may be said that the mind not only can but must think the Infinite and Absolute, that is, God. (3) As has already been indicated, the Infinite and Absolute next defined as the absolute, or a mere 'negation of thought'; but as the necessity and legitimacy of so defining these terms have been challenged, his conclusion that God as Infinite and Absolute cannot be known or thought fails to the ground. Both are positive conceptions, and both are necessary to complete our positive thinking about the world as conditioned and limited. As correlative conceptions, finite and infinite, relative and absolute, may claim to be equally known and mutually illuminative. (4) He concedes that absurdity by reason we may not know God, yet we believe that God is an authority, which yields us 'the original data of reason.' This faith rests on 'a mental impotency.' To state his amazing argument in his own words: 'The conditioned is the mean between two extremes—two inconditionates exclusive of each other, neither of which can be conceived as possible, but of which, on the principle of contradiction, and excluded middle, one must be admitted as necessary. We are thus warned from recognizing the domain of our knowledge absolutely continuous with the horizon of our faith. And by a wonderful revelation we are thus, in the very consciousness of our inability to conceive anything above the relative and the finite, inspired with a belief in the existence of something above the sphere of all conceivable sensible reality ('Discussions, p. 15). It has already been shown that the Infinite and Absolute are not inconditionates; but if they were, how can positive thought be the mean of notions that are a mere negation of thought? How to these can there be applied any of the laws of thought? If we cannot define these notions, how can we affirm that they contradict or exclude one another? Or, in fact, how can we base any sort of argument on the unknowable and unthinkable? One cannot feel that most of this argument is merely verbal jugglery.

6. Mansel.—Nevertheless, Hamilton found a follower in Mansel, who adopted his philosophy for an avowed Christian purpose. He believed that he could best cut the ground from under the feet of any objectors to the Christian revelation, by showing that in these matters human reason was quite incapable of offering an opinion; and necessarily only negative. He, as He really is, is concealed and not revealed; for, as Creator, it is more likely He would make mankind capable of knowing Him. As has already been insisted on in criticising Kant, the reality of a subject true or false is necessarily only a distorting and obscuring element added to it when it is known; but even from the data of sense the thinking mind can construct the object as it is. The phenomenal as perceived is completed in the noumenal as conceived, and in the latter reality is known as it is, which is not the case in the former.

(1) The first argument Mansel advances is that reason is not entitled to criticise the contents of revealed religion unless it can prove itself capable of conceiving the nature of God, that is, of constructing a philosophy of the Infinite and the Absolute. This is an extravagant demand. The moral insight and spiritual discernment which qualify a man to judge of a doctrine, whether it be of God or not, are very much more general and simple than the speculative capacity, not to say infallibility, which can arise to cut the ground out under the feet of any objectors to the Christian revelation. (2) Having made this demand, he seeks in his second argument to prove that neither psychologically—from a study of the mental faculties of man—or metaphysically—from the knowledge in us of God—all can be met. This second argument loses its validity with the disproof of the first. Both by looking within and by turning without can man get such glimpses of God as make real religion possible; and he need not, therefore, concern himself about the question whether he can or cannot construct a philosophy of the Infinite and Absolute.

(3) Having demanded a philosophy of the Infinite and Absolute, and demonstrated its impossibility, Mansel next defined as to the number and arrangements of the Infinite and Absolute, and seeks to show how contradictory they are. How can human thought distinguish in the Absolute, as one and simple, a plurality of attributes? If the Infinite is free of all possible limitations, how can it coexist with the finite? The conception of God as First Cause, as involving the limitation of its effect, is irreconcilable with the conception of the Infinite. But all this playing with words fails to mislead, if we look steadily at realities and keep our eyes off abstractions. If we define, as we must and should, the Infinite and Absolute as the fullness of being, life, mind, power, which is distinguished from relative and finite existence in that it is self-conditioned and self-limited, not determined either positively
or negatively by that which is not itself, this whole
structure falls to the ground. (4) Having prejudged the
question by this definition of the conceivable, Spencer
proceeds to deal with the capacity of knowing Him is no
limitation of God's Infinitude. As the Absolute, God is
without relations, but only as related to Him do
all things exist, consist, persist. Man's consciousness
of space and time implies the correlative conceptions of
eternity and immensity. This argument, further, is inconsistent with the claim that
man may and should believe that God is, even although he cannot know what God is, as belief
is a state of consciousness, even as knowledge is.
(5) Having denied, to state briefly, the validity of
conclusions, the moral likeness between God and
man, and therefore the possibility of man's judging
by reason or conscience what claimed to be the
revealed mind and will of God; he admitted the
possibility of moral as of physical miracle, that is,
the violation of the laws of nature. (6) In order to
rest the claim of the Scriptures to be accepted entirely
on external evidence; he thus sought to
prove the orthodoxy of his time from attack by
a moral and religious scepticism, which, if taken
seriously, would be fatal alike to goodness and
godliness.

7. Herbert Spencer.—Herbert Spencer attaches
himself in some of his arguments to Hamilton and
Mansel; but his interest is altogether different
from theirs. He is not seeking to protect revealed
religion against attack from philosophy, but to
vindicate the materialistic method of modern science
as the only valid method of interpreting the
Universe. His motive is not, however, irreligious, as
his desire is to reconcile religion and science, and
he is confident that he knows a true to the
age-long conflict. As the most influential of
the exponents of Agnosticism, he claims a fuller treat-
ment and closer criticism than any of the writers
already mentioned. Following step by step his
disciples, we must consider the following questions:

(1) Does he correctly indicate the relation of science
and religion, so as to be warranted in his assump-
tion of the conception which alone can reconcile
them? (2) Does the inconceivability of the ulte-
rate religious and scientific ideas lie in their
very nature, or only in his statement of them? (3)
Is his use of the doctrine of the relativity of
knowledge valid, and does it strengthen his con-
clusion? (4) Does this reconciliation of science and religion do justice to
religion?

(1) In the first chapter Spencer argues that
science and religion are co-ordinate, the sphere of
the former being what is known, and of the latter
that which, though in consciousness, yet transcends
knowledge; that each must 'recognize the claims of
the other as standing for truths that cannot be
ignored'; and that a reconciliation can be effected
only by the discovery that what is the ultimate
factor of the first principle of which, is common to
both. It is in the most abstract truth of religion
and the most abstract truth of science that,
bears, the two coalesce. His claim that science
occupies the whole realm of the knowable, so that
for religion is left only the region of the unknow-
able, must at once be challenged. For the self-
conscious personality the categories of science—
force, matter, law—are not adequate; and within
the realm of the knowable even categories—life,
mind, will—must be employed to which physical
science does not do justice. Religion contrib-
utes a conception, God, to the interpretation of
the knowable, which cannot be got rid of by this
arbitrary division of the province of science and
religion. Not a truth common to science and
religion is what we have to look for, still less the
most abstract truth; but, on the contrary, the
abstract categories of science must be supplemented
by the much more concrete categories of
philosophy, morality, and religion. It is the
same reality which science explains and religion
interprets; but the explanation of science is com-
pleted in the interpretation of religion. Matter,
force, law are less intelligible conceptions than
mind, will, personality, God; for the self-conscious
spirit of man finds itself in the latter as it cannot
in the former. To confine knowledge to objects of
sense and such connexions between them as the
understanding, with its categories of quantity,
quality, relation, and the laws of thought attach
to, and to exclude from knowledge the
larger and loftier conceptions of a teleology of
nature, of a personality in man, and, above all,
of the all-embracing, all-sustaining, all-directing,
and all-illuminating reality, God, is an
arbitrary proceeding. It has already been criticised
in dealing with Kant's scepticism regarding the
ideas of the pure reason. To deny all value to
the knowledge religion claims is necessarily
to challenge the validity of the knowledge allowed
to science.

(2) Spencer's proof in the second chapter, that
science must end in nescience, and religion must be
content with awe of the Unknowable, is as follows:

(a) Conceptions are symbolic, when their whole
content cannot at once be represented to the
mind. These are legitimate, if we can assure
ourselves 'by some cumulative or indirect process
of thought, or by the fulfilment of predictions
based on them,' that there are actualities corre-
sponding to consciousness. Otherwise they have to be
condemned as vicious and illusory, and cannot be
attained from pure fictions. Here, it is
evident, he tries to limit conception to represen-
tation (Forschung), and to exclude the idea or notion
(Deutung). But regarding this restriction, which
is really his first and only principle, all the
great thinkers have not denied because it never
occurred to them that it could be made, there are
some questions which may reasonably be asked.
Is man's thought to be limited to what he can
imagine to himself? Having started from sense-
objects, is that alone knowledge for him which can be
referred to sense-objects? Or, beginning with
these, has he not the right, nay, does it not rest on
him as a necessity of his mind, to bring into
reality all that is implied in this rudimentary knowledge, whether the
attained have corresponding images or not? Does
not his own inner life furnish him with spiritual
conceptions, which, although they have no corre-
sponding sensible actualities, are not only bound
up with his most real and permanent personal
interests, but even make more intelligible to him
the world of sense around him, and help him to
discover its meaning, worth, and aim? As Kant
has surely conclusively shown, the mind has its
own objects, which, unknown from and inexplicable by experience, are yet necessary
to experience. If knowledge were as Spencer re-
stricts it, the conditions of its possibility would
be excluded from it.

(b) Having prejudged the question by this defini-
tion of the conceivable, Spencer proceeds to deal
with the ultimate religions conceptions concerning the origin and the nature of the Universe, and maintains that 'a critical examination will prove not only that no current hypothesis is tenable, but also that no tenable hypothesis can be framed' (p. 30). The Atheistic hypothesis of a self-existent Universe is the only conceivable hypothesis of mystery by another; so is the Pantheistic, for 'really to conceive self-existence is to conceive potential existence passing into actual existence by some inherent necessity, which we cannot do.' And theism, Theistic hypothesis with human art is properly set aside, as this does not produce its own materials. 'The production of matter out of nothing is the mystery.' Granted an 'external agency,' that must be accounted for; and we must assume 'self-existence,' and that is 'rigorously inconceivable.'

This statement calls for several comments. First, it is altogether illegitimate to identify the ultimate religious conceptions with theories of the origin of the Universe; for these theories hold an altogether secondary place in religion, and religion possesses an inward witness of kinship and fellowship with God which is quite independent of them. Secondly, Spencer calls the theistic solution is rather the delict, for without necessity; and the solution of Christ isn't that certain hypothesis combines the thesis of pantheism (immanence) and the antithesis of deism (transcendence) in the synthesis of a conception of unity-in-difference, which certainly does not conform to Spencer's arbitrary rule of conciliation, for which many clear views of the type of theism, is not required to conceive the production of matter out of nothing, as it is not committed to the existence of a personal, absolute dualism of mind and matter, but can conceive the possibility of matter as in God as Spirit. Lastly, that 'self-existence is rigorously inconceivable' is an unwarranted assertion, as dependent existence inevitably leads thought to conceive an existence on which there is dependence, but which is not itself dependent. It is because the existence that is the self, can alone satisfy our thought that we are led, by the application of the category of cause or effect, or existence that does not so explain itself an explanation beyond itself.

(c) After having thus endeavored to show that all theories of the origin of the Universe are untenable, Spencer fixes his attention on the nature of the Universe. We must assume a First Cause, which is Infinite and Absolute; and, nevertheless, these concepts, all equally necessary, are yet mutually contradictory. Here he borrows freely from Mansen, and indulges in the same verbal panegyric, the utility of which is shown. The conclusion, which is supported by such arguments, is put forward as having the support of the religious consciousness itself. 'Not only is the omnipotence of something which passes for omnipotence, but also, the necessity of the power, the common to all religions, which becomes the more distinct in proportion as they develop, and which remains after their discordant elements have been mutually cancelled, but it is that belief which the most unanswerable of each leaves unquestionable, or rather makes it ever clearer' (p. 45). Although it may be admitted that the conception of God has changed, as it necessarily must, since man's thought is dependent on experience, yet it must be maintained that the progress has been not only negative and not necessary, but it does certainly correct the conception of God, bringing it into closer harmony with experience; but this conception of God is not less but more rational, moral, spiritual, because it is not external, the longings of the heart, and the needs of the life more and not less adequately. The religious consciousness will assuredly not sustain the contention that 'this deepest, widest, and most certain of fathomless Power to the Universe manifest is us utterly inscrutable.'

(d) It is not necessary for the present purpose to follow Spencer in his proof, in the third chapter, that the ultimate scientific ideas are also inconceivable; a closer examination would show that all the difficulties are due to an inadequate method of thought, which tries in vain to reduce the concrete complexity of existence to an abstract simplicity of conception. To give but one instance, he tries to prove that the self which knows cannot itself be known, for the relativity of knowledge involves us in the distinction of subject and object. But that subject and object may be discriminated, it is necessary that both be embraced in the unity of consciousness; in self-consciousness that unity is still unity-in-difference, as the self is object to itself, the matter, the object to itself, and it is mere word-play to affirm that the self cannot both be intelligible and intelligent. In fact, self-consciousness is the ideal knowledge, the perfect accord of thinking and being. Assuming for the sake of argument that the ultimate ideas of science are inconceivable, why does Spencer not draw the same conclusion for science and religion? Science with inconceivable ultimate ideas possesses the realm of the knowable; religion with inconceivable ultimate ideas must content itself with the unknowable. How can a system of knowledge be based on inconceivable ideas in one case, and necescebe the necessary result in the other? The proximate ideas of religion—the phenomena of the religious life—have as a conception to be the results of knowledge, as the perceptions of the outer world with which science occupies itself. This scepticism regarding ultimate ideas undermines science as much as religion.

(3) The argument in the fourth chapter, based on the relativity of knowledge, is borrowed from Hamilton and Maunder. 'The inference,' says Spencer, 'which we find forced upon us when we analyse the product of thought as exhibited objectively in scientific generalizations (p. 74).

(a) The analysis of the process of thought leads to this conclusion. 'Of necessity, therefore, our explanation must eventually bring us down to the inexplicable. The deepest truth which we can get at must be unaccountable. Comprehension must become something other than comprehension before the ultimate fact can be comprehended.' This ultimate fact is a highly general fact respecting the constitution of matter of which chemical, electrical, and thermal facts are merely different manifestations. The method of explanation taken for granted is entirely false, and entirely false is to ignore their differences from one another, is not to explain them. The logical universal does not at all account for the particulars it embraces. The abstraction man does not help us to comprehend Caesar, Paul, Luther, Napoleon. It is the most concrete unity—that which combines the most numerous and varied differences in a system within itself—that is the ultimate fact which not only explains all, but is itself explicable. But not in the divorce of existence and intelligence can that be brought to negative; growing knowledge of the self and of the world does necessarily correct the conception of God, bringing it into closer harmony with experience; but this conception of God is not less but more rational, moral, spiritual, because it is not external, the longings of the heart, and the needs of the life more and not less adequately. The religious consciousness will assuredly not sustain the contention that 'this deepest, widest, and most certain of fathomless Power to the Universe manifest is us utterly inscrutable.'

(b) In the analysis of consciousness, the relativity of knowledge is said to imply two kinds of relation—the relation of object to subject and the relation of objects to one another. Because a thing is known only in such relations, Spencer argues that it cannot be known in itself, whatever that may mean. This assumption, that the knowledge of reality adds to reality an element so foreign that
consequently as known it is other than it is as unknown, is an absurdity which has already been sufficiently exposed. Spencer adopts Hamilton's objection, that God as the Absolute must be known either as subject or as object, or as the indifference of both. But what forbids our thinking of God—the object of our knowledge—in so far as God Himself has disinguished Himself as the subject which thinks all things as existent by His will? We as subjects knowing God are, for God, objects which do not limit His infinitude, or determine His absoluteness, because He Himself has disinguished Himself by His own self-determination and self-limitation. Our intelligence which seeks God as its object, and which, on the assumption that the Universe is a manifestation and not a concealment of God, believes that it knows God, must be by God's act delusive, if God does not manifest Himself as He is. It would require much more cogent arguments than these verbal juggleries of Spencer to convince us that God made intelligences in such wise that He Himself could never become intelligible to them. For example, he said also about the second sense in which the relativity of knowledge is used. To conceive God is not to think a Being out of all relations, but a Being whose reality is revealed in His relations, conceived by Himself.

(c) While agreeing with Hamilton in this argument from the relativity of knowledge, Spencer differs from him in asserting that the unrelated, though inconceivable, is yet a constituent element of thought. Our notion of the Limited, he says, 'is composed, firstly, of a consciousness of a kind of being, and, secondly, of the consciousness of the limits under which it is known. In the antithetical notion of the Unlimited, the consciousness of limits is abolished, but not the consciousness of some kind of being. It is quite true that in the absence of conceived limits this consciousness ceases to be a concept properly so called, but it is none the less true that it remains as a mode of consciousness' (p. 90).

He then tells us that this something is constituted by 'combining successive concepts deprived of their limits and conditions' (p. 95). Here a logical abstraction is supposed to be a reality, and even the reality that explains all; but, as has already been shown, God, to explain the Universe, must be conceived as the concrete unity which embraces all differences, and relates them to one another.

(4) Spencer hopes, in the fifth chapter, that 'in the assertion of a Reality utterly inconceivable in nature, science and religion will be reconciled. Science is to admit the existence, religion the inconceivable nature of this reality. He thinks that this will not be a vain appeal, as his understanding of the history of religion is that it is developing in this direction. How mistaken he is needs no proof. The religion does recognize the abyssal depths of the Divine cannot be fathomed by the human mind; but it does not admit that the truth about God it claims to possess is an illusion. Religious knowledge is valid and valuable, though incomplete. Spencer requires religion to give up the conception of God as personal. It is just possible, he says, 'that there is a mode of being as much transcending Intelligence and Will as these transcendent mechanical motions. Nevertheless, he insists on interpreting the Universe which is the manifestation of the ultimate reality as mechanical motion. Rejecting the highest conceivable category as too low for the reality, he insists on applying to its manifestations the lowest conceivable category. He represents the inscrutable mystery as causal energy, while declining to describe it as Intelligent Will. His system is materialistic rather than idealistic. He gets rid of the personality of religion to substitute not a higher but a lower conception in interpreting the Universe. In surrendering the personality of God, religion surrenders everything: in admitting the existence of this reality, science is in no way restrained in its ex- planation of the universe in terms of matter and motion. In this reconciliation religion loses, science gains, everything.'

In the criticism of the authors passed in review the objections to Agnosticism have been stated. We are allowed at the close of the chapter to examine the materialistic explanation for which it seeks to find room is inadequate to account for life, mind, morality, religion. The idealistic explanation which it seeks to shut out not only does justice to the highest interests of life, but makes more intelligible the whole process of the Universe as an evolution of spirit. The theory of knowledge on which it rests is sceptical in its result, and this scepticism must extend to science as well as to philosophy and theology. The trust in the reason and will of man, on which already argued, is as necessary to give validity to the conclusions of science. The arguments from the relativity of knowledge, the conditionateness of thought, the negative character of the conceptions of the Infinite and Absolute, have the futility of scholastic abstractions and verbal subtleties, and are not in direct contact with any intelligible reality. The religious consciousness is altogether misrepresented when it is claimed as confirming the conclusion of the inscrutable nature of the alternate reality. More recent philosophical development does encourage the expectation that Agnosticism will soon be a superseded mode of thought.

LITERATURE.—The works of the authors discussed should be consulted; also Leslie Stephen's An Agnostic's Apology (1890). In all books of Christian Apologetics some attention is given to the subject. Specially to be commended are Flint's Agnosticism (1900), and Ward's Naturalism and Agnosticism? (1905).

ALFRED E. GARYE.

AGNOSTICISM (Buddhist).—One of the most important and, in some ways, most obscure questions in Buddhism is whether the Buddha was an agnostic, in the sense that he refused to express an opinion upon a future life (transmigration) and on the state of the Buddha after death, and preached only the attainment of nirvāṇa upon earth. We propose, in the first instance, to describe the authorities bearing upon this question, then to discuss them, and finally to draw conclusions.

I. Authorities.—1. When Buddha is asked by King Ajātaśatru what are the actual fruits of a religious life (or life of a monk, arthaṁyaga),* he gives an answer in which there is nothing metaphysical. He regards the question, as his interlocutor desires, from the point of view of the present life. In the first place, the monastic state confers a great dignity on the person who assumes it. The slave who has become a bhikṣu is honoured by his former master; in the same way the free man is relieved from private cares. There is, however, something better: good conduct, mastery over oneself, food and clothing in sufficiency but without excess, produce a rich contentment.† And there is something better still: the practice of successive trances (dhāyaṇas), the knowledge which accompanies them, and the annihilation of all passion, the attainment, in a word, of the state of an arhat or of nirvāṇa upon earth—these are the sublime fruits of the monastic life. To say that the Buddha was an agnostic is to say that he refused to assert or deny the existence of the latter.

* See the Suttaṇṇa Mahāpadānasutta, Dīgha, I, p. 47-86, translated by various scholars, and recently by Hysa Davids, Dialogues of the Buddha, pp. 58-59, with an Introduction.
† There are many charming descriptions of the happiness of life in the forest among the trees, which are more kindly and compliant than men (see Sīla-pāramitākhyā, ch. l.)
AGNOSTICISM (Buddhist) 221

2. This sketch of the monastic life will perhaps be more correctly understood if compared with the sentiments expressed by the Buddha when he is questioned on metaphysical subjects. The examples are numerous, and at times widely divergent. We shall confine ourselves to a discussion of the best remarkable. Perhaps the most characteristic is that related in the Mahāvagga. The Buddha is addressed as follows: ‘You are said to teach the doctrine of annihilation (that is to say, that there is no life after death, and no future retribution for the deeds done upon earth). Is that true?’ ‘I teach,’ replies the master, ‘the annihilation of desire. . . .’ There is thus a kind of play upon words; and this passage, in which the problem of the future life is curtly dismissed, confirms the impression left by the dialogue as summarized above.

3. In the ‘Net of Brahma’ the Buddha enumerates a series of propositions, of which some at least are of historical and doctrinal worth. They are presented as strange and all-encompassing, with the addition of the series and, while some are more specifically condemned, the series as a whole is rejected. The following is the order:

(1) (c) The universe and the soul are eternal (etavyāvatāvādha) in the sense that they have had no beginning—a belief founded upon the fact that some sainthood have memory of their previous existences.

(2) The universe and the soul are, at one, and the same time, eternal and non-eternal, either because Brahmā, the creator of the universe, has neither beginning nor end, while other beings are perishable, or because the soul is eternal and the body perishable.

(3) The universe is (a) limited in space, (b) unlimited, (c) unlimited at the sides and limited towards the top and the bottom, (d) neither limited nor unlimited (the contradiction is not explained).

(5) It is possible to refuse to choose between four propositions (affirmation, denial, simultaneous affirmation of the affirmative and negative, simultaneous denial of the affirmative and the negative) with reference to (a) the existence of another world, (b) the reality of apparitional beings; (c) the fact that (d) the remainder (i.e. the arhat. This refusal is said to be a sign of stupidity and sophistry. Teachers of such doctrine are ‘slippery as eels.’

(7) The soul has no cause, that is, it appears in the present world without having passed through a previous existence. In the same way the present evolution of the universe has had no antecedents.

(5) The soul has, after death, (a) conscious existence, conceived under sixteen different aspects; (b) unconscious existence, under eight different aspects; (c) existence neither conscious nor unconscious, under eight different aspects; or (d) it is annihilated at death (seven distinct theories, corresponding to seven classes of souls).

(6) Some maintain that nirvāṇa is attained in this life (diṭṭhadhammanibbāna), conceived as the possession either of the pleasures of the senses, or of the first, etc., up to the fourth ecstasy (ābhāsana).†

These opinions regarding the past and the future are theories (āṣṭiga = theopla).† The Buddha knows the consequences which they entail upon those who adopt them; they form the net in which he is caught with Brahmā, who believes himself to be eternal. The Buddha knows far better things, viz., the origin and the end of sensations, and the means of escaping them. He ends by saying that he has destroyed every germ of re-birth in himself; so long as his body lives, it is seen by gods and men; after his death neither gods nor men will see him.

4. Of all the questions raised in the ‘Net of Brahma’ only ten appear in the Majjhima Nikāya, p. 426. These ten, especially important, for with slight modifications they constitute the list of fourteen questions to which no reply is allowed.

(1) Eternity of the universe: Is it eternal? Is it non-eternal?

(2) Infinity of the universe: Is it infinite? Is it finite?

(3) The vital principle (jīva) and the body: Are they identical? Are they non-identical?

(4) The doctrine of the Tathāgata, i.e. the arhat, the saint, ‘he whose thought is emancipated’: Does he survive death? Does he not survive? Must we assert of such an one at the same time survival and non-survival of death? Must we deny both?

5. Maudgalyāyana is sufficiently curious to insist on obtaining an answer to these questions, which he regards as fundamental. The Buddha refuses to reply. He has withheld information on the questions of the eternity or otherwise of the universe.

As a matter of fact, the pseudo-Buddhism of the Tantas identifies supreme bliss or nirvāṇa with sexual enjoyment.

† Strictly speaking, the possession of the fourth trance is not ‘nirvāṇa upon earth,’ because this possession is a momentary one. But we may assume that this definition of ‘nirvāṇa upon earth’ is very like the orthodox conception.

† That is to say, the absence of all calculation; not that there may not be, in a certain sense, a past and a future, a conscious futurity, a ‘nirvāṇa upon earth,’ but this past and this future are not the past and future of an ego permanent. This comment follows the Mahāyānasūtra, ch. xxvii., and the dogmatistic teaching of the Pali Suttas.

‡ Chăka-mudgalyāyana-śivāda, translated by Warren, Buddhism in Translations, p. 117, and by Oldenberg, Buddh., p. 274f. See also ‘Mahāsiddha,’ in Dialogues, 131.

The fourteen ‘unelucidated topics’ (āsākyatattva) of the Sanskrit Buddhist literature are the same as these, with the addition of four concerning the eternity and the infinity of the universe (viz., Is it at one and the same time eternal and non-eternal? or is it neither eternal nor non-eternal?), and the difference that the questions concerning the Tathāgata precede those on the vital principle (see below, p. 224, note 1).

Oldenberg has proved that, in many cases, ‘word’ must be interpreted as the ‘ego’ (Buddha, p. 271, Fr. trans., p. 265). In any case (taka means satvikas, world of the living, dhaśka means rakṣasadas, the beings of the nether world). On the other hand, we have seen that ‘eternal’ is equivalent to ‘without beginning;’ it is not possible that the mortal authorities define ‘eternal’ as ‘having no end in time,’ contrary to the interpretation of the Sutta quoted above. The question, then, regarding infinity will be understood as follows: Will all beings attain nirvāṇa? Will no being attain nirvāṇa? Will some beings attain nirvāṇa, while others will not? Is it false to say that some beings attain nirvāṇa?

As regards the relations of the jīvas and sārvā, it is difficult to determine the original meaning of the words and the bearing of the question. As was thought at the beginning, with the heroes of numerous legends, or the reference is to the first beings, or perhaps the inhabitants of a paradise, etc., or perhaps the Beheading of the Buddha in his last birth, as he takes up his abode of his own free will in the womb of Māyādevi. In the later dogmatism, to deny the other world, apparitional beings, actions (good or bad), or the arhat, is makkhāyādīrē (hierarchy), which destroys the roots of merit.

It is often of importance to Buddhism that it admits the production of being out of not-being (sacca aj jāyate). But this objection is not supported by any Buddhist authorities.
etc., because knowledge on this point does not help in any way towards the annihilation of the passions.

5. In the 'Dialogue of Vaccha,' we observe a slightly different attitude on the part of Buddha. When questioned as to the ten points above specified, he condemns the ten 'theories'; they produce suffering and do not help towards the annihilation of the passions. He himself has no 'theories' (ditthi); his teaching (dittha, his knowledge) embraces the skandhas only (Pali khandhas), the constituent elements of beings, their beginning and end. In fact, as has been pointed out, all the 'theories' connected with the past or future, and the identity or survival after death of the Ego, presuppose the existence of the Ego. But this Ego does not exist in itself; there is only an aggregation, a complex of skandhas.

Vaccha insists, and returning to the four questions concerning the existence after death of the Tathāgata, who is here denoted by a descriptive term, vinuddhata, 'he whose thought is set free,' he receives a formal answer: 'It is wrong to say that the Tathāgata exists after death; wrong to say that he does not exist, wrong to assert survival and the contrary, wrong to deny both.' Vaccha fails to comprehend this, and the Buddha explains: 'Can it be said of an extinct flame that it has gone to the right or to the left? Similarly in the Tathāgata there exists no matter, no skandhas which one could name when speaking of the Tathāgata; and being alien to every conception of matter and skandhas, the Tathāgata is deep, immeasurable, unapproachable, like the great ocean. It is wrong to say that he exists after death, wrong to say that he does not exist. That is to say, if we understand correctly it is impossible either to assert or deny, or to say anything about what does not exist, insomuch as it is not an object of knowledge. But the skandhas are the only objects of knowledge, and the skandhas, which constituted the man 'whose thought is set free,' have no existence after death, the emancipated Buddha teaches. This is the thought that does not constitute the skandhas in a new grouping.

6. This comparison of the Tathāgata with the great ocean is repeated in a passage in which it appears to be interpreted in a mystical sense: 'If the Buddha says, 'Why has the Buddha not revealed whether life exists or not after death?' To this question, asked by King Pasenadi, a learned nun replies: 'Has thou a mathematician who could measure the water of the ocean? . . . The ocean is deep, immeasurable, unapproachable. In the same way there exists no matter in the Tathāgata . . . ' (as above, § 5).

On examining the comparison more closely, however, we see that it does not hold. The water of the ocean evades measurement because it is too vast, while the Tathāgata after death cannot be calculated, measured, or fathomed because there no longer remains in him anything capable of being calculated or measured, or, more exactly, anything capable of being known and described.

But why is it here to maintain the annihilation of the Tathāgata? Because there is no opportunity of distinguishing between the Tathāgata living and the Tathāgata after death. And just as it is wrong to assert that the Tathāgata, during his lifetime, is either distinct from or identical with the skandhas either united or singly, — the Tathāgata, even during his lifetime, is really apprehended, 'there is nothing real in him, Buddha is only a name,—so what is true of the Tathāgata is true of the Ego, of any Ego whatever; the Ego does not exist in itself.

This way of looking at the problem is precisely that adopted by the Nāgārjuna and the Madhyamika schools. The Tathāgata has no further existence, because there is no Tathāgata. It is the same in reality with all the other so-called Egos. The Buddha has nothing to say about them, because it is impossible to speak about what does not exist.

II. Discussion. — We have thus given an account of the chief authorities on which the study of the problem of agnosticism ought to be based. These documents, the agnostic statements of the Buddha revealing upon various points of view, appear in slightly different forms, admit apparently of three different, and even contradictory, interpretations: (1) They furnish us with the ultimate underlying belief in the mind of the Buddha assumed to be an agnostic, and with the official doctrine of the Order, which is 'positivist' in the modern sense of the word. (2) They conceal, for reasons of a practical kind, an implied affirmation touching the future life of ordinary men quite as much as the existence after death of the 'emanipicated.' (3) They constitute a formal denial of the existence of the 'emanipicated' and of the Ego.

It is obvious that in itself the strange system, which consists in distinguishing four hypotheses,—affirmative, negative, affirmative and negative, and whose earliest application appears in the passages quoted, is capable of this threefold interpretation. It is a method either (1) of evading an answer, the policy of the slipperiest est, as Buddha says, or (2) of asserting the existence of the mystery, but forbidden to discuss its, or (3) of denying both, in order that the practicability of the object in question by closing up all loopholes, or by which the true facts of the case might escape being caught in the logical net.'

Let us examine the three interpretations.

1. Agnosticism. — The first constitutes one of the most remarkable amongst the numerous systems that Western analysis has recently disentangled from those precepts of the Buddha that are more or less faithfully preserved in the Pali writings. It is remarkable quite as much for its own sake as for the contrast which it presents to the pre-Buddhist agnostics.

Dialogue between Yamaka and Skiriputta, Sashyuttakanikaka, i. p. 118; Oldenberg, Buddh., p. 261 f.; Warren, p. 118; cf. Sashyuttakanikaka, iv. 260, Anupatibhądana, according to Oldenberg (Buddha, Fr. tr. p. 272, note), means 'not to be conceived,' and Warren renders 'you fail to make out and establish the existence of the saint in the present life,' i.e. 'the non-perception of what ought to be perceived'; there is no preconceived opinion, all the conditions necessary to the perception of a jar being fulfilled (light, proximity, soundness of sight, etc.), I do not perceive a jar.

According to another school, that of the Sammitiyas, the Ego stands in no definite relation to the skandhas, but none the less exists, though 'unnameable' (avdchya).

1. We have seen that all the Buddhist do not deny the reality of the self, and that the Buddhists who believe in the Ego, even if they are categorically opposed to it, yet make use of a term, the Pali dukha— the commonest word in the sacred literature for 'suffering' and synonymous with 'the individual ego'; 'am individual ego, 'am the individual ego' (avdchya). The term is used in the same sense as 'person,' of which the use of the Brahmanical word atman would necessarily involve.

§ Oldenberg, Buddha, p. 278. It is thus that the 'four-branched syllogism' is dexterously employed by the Madhyamikas; the best example of which has reference to the origin of things. An object is not produced from that which produces it, nor is it produced by what produces it, nor by itself together with something else, nor without that which produces it; therefore nothing produces it. The term here, like so many other, is capable of being applied to the object of the same name. It is used precisely in the same sense as 'person.'

2. We have seen that all the Buddhist do not deny the reality of the self, and that the Buddhists who believe in the Ego, even if they are categorically opposed to it, yet make use of a term, the Pali dukha— the commonest word in the sacred literature for 'suffering' and synonymous with 'the individual ego'; 'am individual ego, 'am the individual ego' (avdchya). The term is used in the same sense as 'person,' of which the use of the Brahmanical word atman would necessarily involve.

§ Oldenberg, Buddha, p. 278. It is thus that the 'four-branched syllogism' is dexterously employed by the Madhyamikas; the best example of which has reference to the origin of things. An object is not produced from that which produces it, nor is it produced by what produces it, nor by itself together with something else, nor without that which produces it; therefore nothing produces it. The term here, like so many other, is capable of being applied to the object of the same name. It is used precisely in the same sense as 'person.'
vailing spirit of Hindu religions. Amid the luxuriant mythological, dogmatic, mystic, penitential, and ritualistic growth which the period of the Brāhmaṇas and the Upaniṣads, and of Jainism exhibited, the Buddha had established his Order with stern simplicity and as a strictly moral religion. The essence of Buddhism, as a matter of fact, lies in the four famous ecstasies (dhyāna), which were regarded by the early Buddhists as older than Buddhism,† is one of the chief features of this regime. Buddhists, however, do not claim that dhyāna by itself affords any valuable superior knowledge or supernatural virtue or insight into the Divine. Without disparaging the ‘divine eye,’ the memory of former births, the passing through walls, etc., are the natural results of ecstasy, their chief aim is to produce by mental rather than physical means a state of mind full of restfulness and moral insight, to the reality of which experience should testify, and which, in the classical language of the category of the yogis, a ‘positivist’ doctrine, whose only concern is moral happiness, need not be asshamed to own.

The point of view ascribed to the Buddha is exactly that of Ajātaṭaraka: ‘Of what use in the present world is the monastic life, and in general, to teach ethics, virtue, and the excellent practice?’ To this question by itself the reply will be that the importance of the monastic life is essentially in ‘this visible world.’ It is indeed possible, Buddha seems to say, that virtue may be beneficial in itself, even by inexistence has clearly proved that, practised as I teach it, and following a middle course between excess and the sorrowful life of penance which Nigantha (founder of the order of the Jainas) preaches, being possessed of all the virtues, for the attainment of the condition of an arhat is difficult and requires bodily vigour;—then virtue produces perfect happiness upon earth. What more do you wish? If you are not satisfied, go elsewhere; sham physicians are legion.

Such, in broad outline and apart from the theory of ecstasy, is the essence of the Buddhism which our neo-Buddhists preach. These conclusions can be reached only by ‘doctoring’ tradition, and by ignoring in particular all that our authorities say concerning the doctrine of merit. That is entirely different. The tradition consistently claims that the Buddha was omniscient (sarvajñata) not only in the narrow sense of the term, possessing the knowledge of what was necessary for salvation, knowledge of the means which lead to the emancipation of thought—a knowledge which he shared with the Pratyekabuddhas, etc.—but also universal omniscience (sarvacarajñatava), the knowledge of all that was and is and is to come.†

† From the very beginning Buddhism claims to be a ‘middle way,’ avoiding, accordingly, constancy in avoiding the two goals (or extremes) of doctrine—affirmation and denial of a self, existence after death, etc. But the word, in its earlier usage, seems to refer to disciplinary or penitential moderation. The Buddhist monk does not indulge in sensual pleasures, but he keeps himself free from the morbid exaggerations of asceticism. See Rhys Davids, Dialogues, p. 260.

‡ Rhys Davids, Dialogues, p. 61, n. 1.

† Ibid., p. 258.

‡ This remark, the interest of which is evident, was pointed out to the present writer by A. Barth.

The passages within the writer’s knowledge in which a contrary opinion is suggested in the discussion in the Tatravacaras, a work by the same author, the Omniscient, on the omniscience of Buddha, shows that all knowledge is derived from the Veda, and not from the teaching of Buddha. And he has done, in the Buddhist, being given to him in words to this effect: ‘Granted that the Buddha does not know the number of the insects, etc., what does that matter?"

2. The agnostic statements may conceal positive affirmations.—(1) The texts themselves invite to study the reasons, opportunely or otherwise, which justified the Buddha in refusing to answer certain questions of a cosmological or metaphysical nature.

On one occasion the Buddha declares that the world is inconsistent with the Buddhist,† that he assents to all to which the world assents, so far as it is based on sound reasons. And, in fact, he sometimes affirms that, since discord and quarrelling are the worst evils, and the annihilation of discord is the essential characteristic of a monk, one ought to refrain from expressing any opinion. Moreover, moral therapies, directed towards the emancipation of thought, demands the regular purification of the mind, progressive suppression of all the ideas to which the mind can cling, extending even to un-consciousness of the end in view, since this can be attained only in the suppression of thought. ‘To long for nirvāṇa is sheer folly and an invincible obstacle to its attainment.’ Thus, on one hand, the Buddhist should try to win the favour of all, and to choose the more advantageous course or that which involves less evil. ‘Just as it is necessary to speak in each of his own language, and to teach the language of the barbarians, so it is necessary to avoid hurting or offending any one, and to guide each on that path of progress which he is capable of following, to the neglect of the real truth, that is to say, even though it is not authoritative. At the same time, the belief, the ‘view’ (dṛṣṭi), which is in itself perfectly justified, that we have passed through innumerable existences before arriving at the present one, must be abandoned, because it is inconsistent with the doctrine of a rest and peace, the idea of the permanence of the individual. It is, moreover, in reality false, the test of the truth of any proposition being its accord with the end in view.

(2) Two points, moreover, of capital importance rest upon the most definite testimony. It is certain, on the ground of tradition, that Buddha adopted a very distinct attitude towards the question of action (karma [which see]), and consequently to the question of existence after death. To quote the texts would be impossible, and perhaps they recall the remark of the Buddha, a sample of the friendly relations existing between the Order and the sects (Agniṣṭak, Jātillas) who accepted the doctrine of the fruit of works.†

The early Buddhists believed in retribution for actions, in the sense that they have always been exercised upon the present, and in a future life conditioned by the accumulated and imputable effects of previous actions.

There is no less evidence that they believed in the possibility of escaping from the circle or whirlpool of existence to the rest of nirvāṇa. In the language of that time, as a very competent judge affirms, ‘the word nirvāṇa always denoted supreme happiness, apart from any idea of annihilation.’

He knows, and he alone was able to impart to us, saving truth’ (see 1 Thess. 2, 9). His knowledge, according to the primary authorities, consisted in avoiding the two goals (or extremes) of doctrine—affirmation and denial of a self, existence after death, etc. But the word, in its earlier usage, seems to refer to disciplinary or penitential moderation. The Buddhist monk does not indulge in sensual pleasures, but he keeps himself free from the morbid exaggerations of asceticism. See Rhys Davids, Dialogues, p. 260.

‡ Rhys Davids, Dialogues, p. 61, n. 1.

† This remark, the interest of which is evident, was pointed out to the present writer by A. Barth.

The passages within the writer’s knowledge in which a contrary opinion is suggested in the discussion in the Tatravacaras, a work by the same author, the Omniscient, on the omniscience of Buddha, shows that all knowledge is derived from the Veda, and not from the teaching of Buddha. And he has done, in the Buddhist, being given to him in words to this effect: ‘Granted that the Buddha does not know the number of the insects, etc., what does that matter?”

† Burnouf, Introduction, p. 468; Kern, Geschichte, i. p. 276.

‡ Hāfner, i. 29, 11; Vinaya, 372; John, i. 29, 21. Others, e.g. the fire-worshippers and Jātillas come to you, O monks, they are to teach them to revere the Buddha, and the observed and unobserved teachings of the Buddha, and the three, etc., hold the doctrine that actions receive their reward, and that our conduct has its result, corresponding to the action (karma). From this it may be inferred that the chief dogmatic tenet of the primitive Church was the doctrine of karma.
AGNOSTICISM (Buddhist)

It seems, indeed, quite probable that, in the dogmatics of Buddhism, the conception of nirvana had been identified, or almost so, with that of annihilation, certain reservations being always made that such an extreme view, however far, from the very first, had been sometimes expressed; for, as the Brahmans say, 'of emancipation during this life' (Sunnakar). It would be an unjustifiable limitation of Buddhism and departure from the non-utilitarian religions to restrict the word nirvana, or, for the most part, to the attainment of that perfect calm denoted by the name arhatship, or 'nirvana upon earth.'

One text declares: 'The disciple who has put off lust and desire, rich in wisdom, has here on earth attained deliverance from the mundane, has become eternal, has transcended immortality. It is undoubtedly right to say that nirvana is not merely the hereafter which aversions and desires cut off, but the perfection which he enjoys in this life. But if the Buddhist aspires to this release from the passions, in which arhatship consists, it is, above all, because, like the Jainists, this is a glimpse of true and final nirvana.

If the monk 'whose thought is emancipated' is said to have attained deliverance from death, it is really by anticipation, for it is a mere name, or nirvana? In the same way, the text, does not prevent former wicked deeds from receiving their due punishment?

(3) If, then, Buddha at times refuses to answer, it is not in the manner of the evasive sophist who is, as it were, an eloquence. Nor is it that he himself is ignorant or wishes his disciples to remain in ignorance.

But the essential point is that his disciples should learn to distinguish profitable knowledge and thoughts. What is the use of indulging in those idle dreams concerning the universe, past or future, according to the ancient texts, does not prevent former wicked deeds from receiving their due punishment?

* The present writer will not conceal his opinion that the expression 'nirvana upon earth' (dīgha-dhadhammanibandhā) possibly conveys a meaning very different from that littlily pointed out by Carpenter, Rhys Davids, and Oldenberg. It signifies, in contradistinction to the nirvana to be attained during a future life, etc. (upapattasaṅga, etadpinanimittā, etc.), the nirvana to be attained at the end of the present existence. With regard to the state of an arhat, it should be observed (1) that there is no actual cessation of dukkha (suffering and pain) (nibbāna, Sumangalavatadīśani v. 121), and (2) that it is called 'nirvana' in contrast to the real nirvana.

* Cf. Oldenberg, Buddha, p. 364 et al. But the world's judgment, according to the present writer, ought to be slightly modified. From the point of view of the ancient Pali text, it is true to think that the Tathāgata and the saints in general were able to prolong their life for an 'age of the world' (see ASSNE or the W khádśa-Buddhist). This is very clear from the very first sentence concerning the immortality of the soul and the gradual formation of the doctrine of anātman (punnaruniva, i.e., transmigration), see A. N. 327, 17 A. N. 328. Another very interesting passage is that in which the author says that ordinary immortality means 'long life after death,' and that everlasting immortality is reserved for the saints (p. 474).

1 At least so far as human powers of understanding are concerned. The intelligent Buddhist sometimes examines certain topics of religion, and sometimes adheres to them without questioning them; 'these matters are understood only by the Tathāgata.'

* As regards the existence of the gods and the universe.

3. The agnostic statements are formal denials.— In the two preceding pages tradition has been treated selectively; the theory of the skandhas has been laid aside. This theory is found in connexion with almost all the ancient and modern texts. It is consistent with the denial of an Ego. It admits the existence of a phenomenon, a fact, which prolongs its existence as long as thought is not 'emancipated.' After emancipation the phenomenal Ego dissolves, the skandhas are no longer associated to form the illusory Ego; there no longer exists anything.

The Tathāgata, therefore, does not exist after death; so that the assertions relating to the Tathāgata after death must be understood in the sense of a radical denial, as has been done by the writers of the various dialogues in the Majjhima and the Samyutta above mentioned.

Moreover, there is no Ego in the emancipated Buddhist. There is none in Tathāgata living, there is no Ego in any being. All speculation concerning the future and the past of the Ego is, therefore, absurd, and what is said about the eternity of the world, etc., must be understood as a formal denial. This is the system of the Mādhyamikas openly preached in the Suttas.

It seems clear, then, that if we admit the primitive character of the theory of the skandhas, and assume the absolute consistency of the early Buddhist speculations, we must ascribe a purely negative value to the Buddha's statements. Thus it is obtained a doctrine entirely coherent, identifying the nirvana with annihilation. All the statements on the one side or the other will find their explanation in practical considerations. On the other hand, the agnostic hypothesis, as far as it concerns the future existence of ordinary men, will be set aside, for the theory of the skandhas implies the teaching with regard to actions and transmigration.

The question is whether, by such an exegesis, we are not building a new Buddhist creed on old principles, as the Mādhyamikas have confessedly done.

III. Conclusion. — Of the three systems explained above, the third is the system of a large number of Suttas, that is to say, the orthodox doctrine of the Pāli canon, and of the Mādhyamikas. The second is very probably that of popular Buddhism and of the 'pudgalavāda'; while the first has nothing to support it save the texts above cited and the sympathy of several European scholars. The writer does not conceal his preference for the second. In order to establish it, or rather to reconcile it with traditional assumptions, a comparative estimate is needed. To this let us finally proceed.

It is generally believed that the earliest Bud- from eternity, all the texts and the best attested dogmas entirely dismiss the idea that the Ego and the universe are uncaused.

(2) As far as the 'infinity of the universe' is concerned, the text quoted (p. 221) understands by infinity (ananta) 'limitless extension in space.' It is very probable that this is the original meaning of the word, and that the writers of the past as well as the present. In fact, Buddhist cosmology was acquainted with a vast number of universes. By the term ananta the Mādhyamikas mean 'endless duration in time' (cf. Saṁhitā N. 1, 22; Oldenberg, p. 285). Ananta is 'end' as contrasted with abide, of which the word signifies, 'beginning.' It implies that the world will continue until the last being has attained emancipation. This moment will probably never come. But in each individual 'the end of the world' is achieved by the emancipation.

(3) As to the relationship between life in the jīva and the sārira, it will be noticed that in the list of the fourteen non-elucidated questions, only the two hypotheses of identity and non-identity are examined. The scholastic doctrine very expressly relates to sattva, pudgala, atman, permanent principle; and denies its existence to the rest. But according to the Madhyamikas, sūjñendriya, vital faculty, which is not destroyed with the body by the sense that existence is 'governed by the vital faculty' of the succeeding life (except where the rebirth has taken place in certain heavens).

* See above, p. 211b, 5, 223b, n. 1.
dhism did not lay any claim to originality of doctrine; it shared with the whole of India the belief in the imputation and the retributive effects of action (karma), the concatenation of causes, and the possibility of attaining nirvāṇa. Nor is there anything to show that by inserting the Buddhists understood something different from what all others understood by it—a state certainly very difficult to define, but quite distinct from nothingness. Moreover, the Buddha was distinguished, as the texts studied lead us to believe, by a certain contempt for speculation; whence we may conclude that the theory of the skandhas, if it existed in germ, had not attained its final form. In the Order there were monks who were opposed, as no doubt the Buddha himself had been, to cosmological or metaphysical speculations; there were also philosophers and 'Abhidharmists,' and it is to these Abhidharmists that we owe the Pali writings as well as the writings of the Sarvāstivādin.

The question of nirvāṇa having been raised, the earliest documents (from Buddha himself?) have given the reply that nothing could be asserted on the subject, either existence or non-existence, etc.—an answer perhaps childish from the Aristotelian point of view, but sufficiently frank to declare at one time the difficulty of that inquiry into its necessarily. Such a rejoinder is, in any case, parallel to that suggested with regard to the eternity of the universe; and the former no more seeks to deny the existence of the Tathāgata than the latter does the non-existence of the universe, or even its eternity. Buddha's only wish, as is said in many words, was to forbid idle or harmful speculations. It was the philosophers who developed the doctrine of the skandhas, the direct result of the denial of the Ego (Suttanta), and the indirect result the denial of all phenomena in themselves, and the 'universal void' (Madhyamikas). It is no wonder that the philosophers put an entirely new meaning into the old answer:—Nothing can be said of the Buddha after his death, because there is no longer any Buddha, because there never has been a Buddha even during his lifetime; the two things go together, as the Suttanta expressly states. It is therefore impossible to construe the sacred writing according to the original Buddhist doctrine. But if it had been, it is most probable that a less ambiguous formula would have been found for its expression.

The Buddhist who accepts the revealed texts as they stand must accept also the answer given to his choice. He must adhere to the third interpretation, the only one which is orthodox and in harmony with accepted teaching. The choice of the historian of religions is more difficult, for it is modified by the manner in which he conceives the orthodox view to have grown up. The present writer confesses to a reluctance to exercise a definite option, but if a choice be required,—which is by no means the case,—he believes that the second interpretation is to be preferred.

AGRA.—AGRAULIDS 225

AGRA, the famous Mughal capital, is situated on the right bank of the R. Jumna, in the United Provinces of Agra and Oudh. Agra does not appear to have been a sacred place to the Hindus, and its religious interest depends on a splendid series of mosques and tombs. On the left bank of the river stood an ancient Hindu town, of which little now remains but traces of the foundations. The Muhammadans first occupied the place in the time of Lodhr, and the founder of the Mughal Empire, died here in 1550, but neither he nor his son Humāyūn left any monument of their reigns. Akbar founded the modern city in 1558, and the splendid buildings which now adorn it are the work of himself, his son Jahāngir, and his grandson Shāhjāhān. Akbar built the Agra Fort about 1566, and four years later commenced the erection of his new capital at Fathpur-Sikri, 23 miles from Agra, which was occupied for only seventeen years and then abandoned. The site was selected because a famous Musulmān ascetic of the place, Shikāl Salim Chishti, resided there, and Akbar believed that it was through his intercession that he obtained an heir in Prince Salim, afterwards known as the Emperor Jahāngir. At Agra no important religious buildings survive which he built. In Akbar; to him we owe the splendid Jāmī Masjid, or 'Cathedral Mosque,' at Fathpur-Sikri, and its magnificent gate, the Buland Darwāza, or 'High Portal,' with a touching inscription, which were completed respectively in 1571 and 1602.

Akbar died at Agra in 1605, and was buried at Sikandra, 5 miles from the capital, in a splendid mausoleum, which he himself had commenced. It differs in plan from every other Moghul monument, and the design, according to Fergusson, being borrowed from a Hindu, or more probably from a Buddhist, model. Akbar's revolt from orthodox Islam is marked by the fact that the head of his tomb is turned towards the rising sun, not towards Mecca. The original design, however, the modified, the building in its present shape gives the impression of incompleteness. It was finished in 1613. The beautiful tomb of Itmād-ud-daula, Mirza Ghiās Beg, on the left bank of the Jumna opposite Agra, was the work of his beloved wife, Arjumand Bānū Begam, better known as Mumtāz-i-Mahal, 'Eminent of the Palace,' who was married to him in 1612, and died in childbirth at Burhānpur in the Deccan in 1631. It was commenced soon after her death, but was not finished till 1648. This splendid structure is too well known to need further description here. Another beautiful religious building erected by Shāhjāhān is the famous Moti Masjid, or 'Pearl Mosque,' which was intended to be the Court Gate of the original Taj Mahal, and daughter, Jahānār Begum, who tended her unhappy father in the troubles of his later years, is due the Jāmī Masjid, or 'Cathedral Mosque' of Agra, built opposite the Delhi Gate of the Fort itself. This was commenced in 1644, and completed in 1648. Aurangzeb, who deposed his father Shāhjāhān in 1658, the architectural history of Agra closed.

AGRAULIDS.—Euripides, in Ion 23 and 496, speaks of the three 'daughters of Agraulids,' who, according to Apollodorus of Corinth and Aglauros, * Herse, and Pandrosus. A rich banquet, the Deipnophoria, was offered to them together (Bekker, Anecdota, i. 239). They danced, Euri- pides tells us (i.e.), on the northern descent of the Athenian Acropolis, on the green meadow before the temple of Athene, beside the Apollo grotto and the seat of Pan, who piped to them. This is the picture which the votive-relics represent, some of which have been found on the spot in question (Athene, Mith., ii. 200). In fact, there lay there many of the votive relics dedicated under the Erechtheum, and the temple of Athene; * Aglauros or Agraulos—both forms have been used throughout the article. It will be observed also that in the spelling of proper names the Greek forms have been employed, except in familiar words like Erechtheum, Cecrops.
and there, too, lay the sanctuary of Agraulos (Pausanias, i. 18. 2; Herodotus, viii. 53; John Michaelis, *Ara Athenarum*, Table vii. and xvi. 3). In it the Attic youth swore allegiance to the standard, calling above all, on Agraulos (Pollux, vii. 106).

Agraulos is thus an ancient and very sacred goddess of Athens as Pandrosus and Herse, the dewy sisters, show that she was a goddess of agriculture. Later she is, in the same way as Pandrosos, so united with Athene that both appear as secondary names of Athene, or that Agraulos is designated the first primitive of those who practised quite an early date their connexion was very close; the diastal feast of atonement and cleansing sacred to Athene, the *Plynteria* in Thargelion (May), stood also in relation to Agraulos (Hesych. *Bekker, Anecdota*, i. 270); the *Aphraxesphia* or *Heresphoria* was associated with Athene and Herse (Latores in scholium to Aristophanes, *Lysistrate*, 642); and the Pandroseion, with the sacred olive tree of Athene, was closely connected with the Erechtheum (Pausanias, i. 27. 2). Athene herself had once been a goddess-agrarian, before she was united with Demeter, and is regarded as a secondary name for her (CIT iii. 379). This proves that Agraulos was originally an independent goddess, who, however, disappeared more and more in consciousness, and was in the connexion of her names with Athene and Diomedes had a common sanctuary, human sacrifice was down to a late date offered to her (*Porphyry, de Abstinenz*, i. 54). In Athens there were secret rites in her worship (Athenergoras, *Leg. pro Christ.* 1), which the family of the *Fraxiergidos* seems to have practised (Töpffer, *Attische Genealogie*, p. 133).

In accordance with the serious nature of the feast of Agraulos, the *Plynteria*, her secret rites, and human sacrifices as well as the worship of her, all developed out of her worship. This we find in a threefold form. (1) Agraulos, along with Herse and Pandrosos, receives from Athene the boy Erichthonios in a chest, with the command not to open it. As Athens opens it, Lysistrata, who practises a primitive agristanding, and in madded frenzy cast themselves down from the Acropolis (Pausanias, i. 18. 2; Apollodoros, iii. 189). This is obviously meant, too, to explain the situation of their sanctuaries below the Acropolis, while that of Pandrosos was on the top. (2) Agraulos casts herself from the Acropolis in order that she may, in accordance with an oracle, secure the victory for her country against Eumolpos; for this reason a sanctuary to her was founded there (*Philochoros*, Fr. 14). (3) Agraulos is changed by her husband into a stone figure before Athene to jealousy, she had refused him access to her sister (Ovid, *Metam.* ii. 708 ff.).

From all this we have as the result that the Agraulids resemble the Horse and the Graves. They nurse the child Erichthonios, the seed-corn, entrusted to them by Athene, just as Demeter does Triptolemos. In the month Thargelion (May), when the dew ceases and the harvest begins, Agraulids die.

Agraulos appears in the tradition twice: (1) as the mother of the Agraulids, daughter of Aeaces; (2) as their oldest sister, and daughter of Cecrops. Connected with Agraulos are Alkippe, her daughter by Ares, who was seduced by Halirrhothis the son of Poseidon, and Keryx, her son by Hermes, the head of the Eleanian family of the Kerykes, who is, however, also called the son of Pandrosos or Herse (Töpffer, *Attische Genealogie*, 81 ff.).

**AGRICULTURE.**—1. Until recently the theory was held that the human race passed from the life of the hunter to that of the agricultural shepherd, and from that again to the life of the tiller of the ground. As a sweeping generalization it is no longer possible to hold this theory; that it is not altogether untrue is shown by what is happening to the Bashkir *Tekel* in Siberia. In their case agriculture has been forced upon them by the danger of starvation. Russian civilization has encroached upon them from the north and west, and the Ural Cossacks from the east, so that the area of their pasture lands, and, as a consequence, the amount of live stock they are able to maintain, have much diminished. Before resorting to agriculture themselves, they employed Russians to farm for them, and farmed part of their land on the *métayage* system. But when the virgin soil is exhausted, the master, who loves to live richly, looks on the shepherd and disdains the hard toil of agriculture, is no longer able to pay for hired labour, and perforce must himself put his hand to the plough (Wallace, *Russia*, new ed. i. p. 265 ff.).

The same observation was made regarding the Tatars of the Crimea in 1734 (Pallas, *Zögeln*, Eng. ed. 1802-3, ii. p. 983). In those parts of the world, however, which are best known to us, there is evidence of a settled agricultural population from the earliest period. Not only in Neolithic times, but even in the earliest Stone Age, there is evidence, supplied largely by the excavations of Ed. Piette in various cave-shelters in France, that agricultural plants, and animals at least partially domesticated, were well known (see *DOMESTICATION*). In Egypt and in Babylon there is evidence of agriculture going back, at a moderate calculation, to the early part of the third millennium B.C., and possibly to a much earlier period. Mesopotamia is the only area for which there is good evidence that some kinds of common cereals grow wild (I re Candolle, *Origin of Cultivated Plants*, 1884, p. 358 (common wheat); p. 364 (spelt)). It is in countries with a rich alluvial soil, like Egypt and Mesopotamia, that we should *a priori* expect agriculture to begin. In Egypt a number of kinds of plants as well as animals are known which would be possible merely by casting seed upon the mud left behind by the river when it subsides after flood. Agriculture in the earliest times was probably thus practised before the invention of the plough, the seed being left to sink into the soft mud, or, as represented on Egyptian monuments, being trodden in by cattle.

It is, however, to be remembered that when we consider primitive agriculture, we must discard all generally accepted notions as to its practice. The cultivation of crops at sites, the introduction of new crops into most countries of Europe, may be defined as (1) the regular cultivation by the plough and other well-implemented, and with the addition of manure, of (2) definite areas of (3) arable land, held as (4) freehold or (5) on a legally defined tenancy, (6) such cultivation being for the most part in the hands of males. But if we may deduce primitive methods from the practice of such tribes in modern times as combine some agriculture with hunting, it would appear to be only in the first stages of agricultural development, primarily preceding all implements except those of stone and wood. Thus the Navajos and many tribes of New Mexico, who grow [Indian] corn, beans, pumpkins, melons, and other vegetables, and also some wheat, and make some attempts at irrigation, dibble the
ground: 'with a short sharp-pointed stick small holes are dug in the ground, into which they drop the seeds, and no further care is given to the crop except to keep it partially free from weeds' (Bancroft, Native Races of Pacific States, p. 489; cf. H. Ling Roth, Sarawak, p. 402). In Northern Hindustan, the pastoral practices of the natives, according to Herrings, cleared the ground with stone axes, and turned the sod by main strength with a forked pole or with sharp wooden spades (Bancroft, i. p. 710). Dibbling alone is found sufficient in the Amazon area, the ground never being turned up or manured (Wallace, Travels on the Amazon, p. 335). In Melanesia, where horticulture rather than agriculture is the form of cultivation, and has reached a high degree of excellence, adzes of stone or shell were used before the introduction of metals. In the New Hebrides and in most of the Solomon Islands the natives use stone; the Santa Cruz people, Torres islanders, and Banks' islanders used shell, for adzes the giant clam shell (Cordrington, The Melanesians, p. 331). Stone adzes, which may have been used by the early inhabitants of France, were found by Pictet (L'Anthropologie, vii. p. 1 ff.), and stone sickles have been discovered in many places. Early Egyptian stone adzes are figured by Dr. Monod (Recherches sur les origines de l'Egypte, ii. p. 96).

Nor are definite areas of arable land held by individuals. The savage is regularly communistic in his ideas; the land tilled belongs in the first instance to the tribe, though, when a man reclaims a virgin forest, what he reclaims is his own hereditary property (Sarawak, i. p. 419 ff.). Areas that are claimed from the primeval forest by the joint efforts of the community are naturally regarded as joint properties. This is described by Wallace (Travels on the Amazon, p. 217): 'Imagine the trees of a virgin forest cut down so as to fall across each other in every conceivable direction. After lying a few months they are burnt; the fire, however, only consumes the leaves and fine twigs and branches; all the rest remains entire, but blackened and charred. The mandioca is then planted without any further preparation. 'If the ground continues to be cultivated and roughly weeded, the trees soon rot, so that they can be(rotation deleted by machine). When the crop is grazed, remains open (Wallace, p. 334). In other countries, however, it is not so; in Sarawak new land of this nature has to be planted every year, as the tough grass which succeeds a crop of paddy is not good for the Dulok, to break up till the land has once more become jungle (Sarawak, i. p. 397 ff.). The landholding systems of the peoples of antiquity and the Teutonic three-field system are descended from a similar system of communal landholdings (Maine, Village Communities, Lec. iii.).

But even wandering tribes may engage to some extent in agriculture. Waits (Anthropologie der Naturvolker, vol. i. p. 498) observes that in North America the practised the tobaco, wait for it to germinate, and then gather it, and go on again. And, even where they are more settled, tribes must from time to time change their habitations, because, as they do not manure their lands, these gradually become exhausted.

From all this it is clear that five of our conditions of modern cultivation are found for primitive times, as illustrated by the last survivors of uncivilized races. Nor is the sixth point more true. Primitive agriculture is not altogether, nor to any large extent, in the hands of males. As von den Steinen records of the Bakairi of Central Brazil, it is woman that has invented agriculture. Its beginnings, no doubt, arose where hunting and fishing were difficult or unproductive. Just as we have been told that it is with the greatest reluctance that a pastoral people becomes agricultural, so it is with the change from hunting to agriculture. Amongst the most primitive of the native tribes of America it is noticeable that where game is scanty, or the men are ineffective hunters, agriculture is most developed. Dibbling with a pointed stick and hoeing with a stone axe were possible for the women and children in the neighbourhood of their huts, while the men wandered farther away, as a field was a bowl as far as the eye could see, and in reaping the harvest; the hard intermediate till of weeding is left to the women, and the men return to the village. As the earliest cultivated cereal was, without any doubt, the South Sea Islanders' local custom settles the respective shares of the men and women in the garden work (Codrington, p. 800). From the time that a man has another occupation, his place in the division of the agricultural work to the women, as may still be seen in the Polynesians and elsewhere. Eastward of the Red Highlands of Sweden and in more advanced parts of the British Isles it is only the rapid development of agricultural machinery in the last forty years that has transferred the women's work from field-work. But the agricultural duties of primitive woman also brought her important rights. Her labour gave her a right to the soil, which, as the importance of agriculture became more marked, brought her many other privileges in its train, and these privileges had the greatest influence upon the history of family relations (Grosse, Die Formen der Familie und die Formen der Wirtschaft, p. 150 ff.). Superannuation also recommended leaving agriculture in the hands of women. 'When the women plant maize,' said an Indian to the Jesuit Guillaum, 'the stalk produces two or three ears. Why? Because women know how to produce children. They only know how to plant corn to ensure its germinating. Then let them plant it; they know more than we know!' (J. H. Hassan, Pesu, p. 727, quoting from Payne, History of the New World, ii. p. 7). This side of agriculture has been worked out more fully in such a treatise as E. Hahn in Der Mensch in Dem Altertum (Strassburg, 1894). (For Africa, see the references in Jovena, Introduction to the History of Religion, p. 226.)

2. The earliest cultivated plants are not easy to define. The carvings on reindeer horns figured by Pictet in his L'Art pendant l'âge du Bronze (plates 17 and 14), and from him by Hoops (Walddauer und Kulturformen, ii. p. 281), as from Mesolithic strata, and undoubtedly represent ears of corn. From a late Paleolithic stratum representations of an ear of winter barley (Securus germ) have been discovered in the Neolithic stratum of the Arise, Pictet in a transitional stratum between Paleolithic and Neolithic a small heap of short oval grains of wheat, the precise character of which could not be determined, as, on being exposed, they turned to dust (Hoops, p. 281). From another transitional stratum at Campigny, in the north of France, the print of a grain of barley has been found on a potsherd. From this period stones for grinding corn have also been discovered. From the Neolithic stratum at the Lake of Constance, 'two varieties of wheat and the two-rowed barley were distinctly recognized both in whole ears and in the separate grain, the latter in quantities that could be measured in grains' (Hesse, Die Versteiner von dem See von Konstanz, p. 497). Before the end of the Stone Age three species of wheat (Triticum vulga, dicoccum, monococcum), probably three species of barley (Hordeum hexastichum, this was the most widely spread—distichum, tetraestichum), and two species of millet (Panicum miliaceum and stalkicum), were grown in Europe—naturally in greater variety in the south than in the north of Central Europe. Not only was this flax cultivated, but weaving was practised (figured by Hoops, p. 283). From the time of Mesopotamia's Prachistorische Vicia (Zürich, 1889), [plates iv. and x.]. Vegetables—lentils, peas, beans, parsnips, and carrots, and poppies were cultivated, as well as vines and fruit trees (Heer, Pfauen der Pfahlbauten; and, more recent and more general, Hoops and Buschan, Der jüngere Vorgeschichtliche Botanik). The precise characters of the grain figured on early Egyptian monuments cannot, it is said, be identified. But both in Egypt and in Chaldea it early became the practice to express the value of land in terms of wheat (Mezopotamia, L' Orient classique, i. p. 761, n. 2), and the already pointed out, botanists regard Mesopotamia and the countries bordering upon it as probably the original home of wheat and barley. As the earliest cultivators...
tion of them in Europe appears in the warmer intervals between successive ages of ice, in the ear-
lier of which ice probably extended as far as the
Alps, in the latter to the latitude of London and
Berlin, they clearly must have been introduced
from the Mediterranean basin. It is hardly to be
expected that evidence of grain cultivation will be
found after the latest of these great ice ages.
Europe in strata corresponding to those in which
Piette has found them in the south of France, for,
as Nehring has shown (Über Tundren und Steppen
der Jetzt- und Vorzeit, 1890), a period when these
cold sheets of ice, moving along the lines as those
of modern Siberia must be postulated as existing
for some considerable time after the end of the Ice
Age. In such an area, where ice still exists below
the surface, agriculture would be impossible.
Impe-
toration, moreover, from Asia through Russia
would have been equally impossible at this period,
the Caspian then extending much farther to the
north and west, while the northern Ægean did not
exist (see Ratzel’s map in SSG W, 1900). From
the earliest literature of the Indo-Germanic peoples—
and there is no task of a very Hellenic kind in
this stock had large flocks and herds, they also
practised agriculture. But the meaning of the word
yava-s which they apply to grain, and which is
stylistically identical with the Greek ἀργία, ‘spelt,’
is hard to define. Its modern representative in
Persian is بیضا, in English wheat.
Agriculture
is, however, is very
likely to vary its meaning according to latitude.
Thus, in English, corn means to an Englishman
wheat, to a Scotman oats, to an American of the
United States maize. The same word applied to
other peoples of the same stock is variously appli-
ied, meaning to a North German rye, and in Scandi-
navia barley. The Greeks knew and cultivated
wheat, barley, and two kinds of millet. In the
classical period the Romans cultivated the same
cereals, though the poets write of far, ‘spelt,’ as
being the grain which formed the food of the early
Romans. The Roman word for wheat, triticum,
is in origin an adjective, and must have originally
meant carded or milled grain, from τριτός, ‘rub,
pound.’ On the other hand, barley was cultivated in
warm countries, and were not cultivated by the
Greeks and Romans. Oats (Σιποκόι) and rye (Σιπίκα)
were both known to the Greeks from Thrace. From
the former, Dionysos, who came into Greece from
Thrace, and hence to Thrace, with the same name
is the northern home a god of beer, not, as in Greece,
of wine (J. E. Harrison, Prolegomena, p. 416).
Schrader (in Hein’s Kulturpflanzen und Haustiere
, p. 550) quotes Diesches, a doctor of the 4th cent. B.C.,
for oat meal, which was regarded as superior to
barley meal. In both Greece and Rome, probably,
barley played a great part in early times. It is to
be noticed that far is etymologically identical with the
English bere and barley. The most plausible
explanation of the name of the Greek goddess
Persephone or Persephatta (the name of a great
variety of forms in the different Greek di-
acta) was ‘the barley-killer,’ the first element in
the name being from the same root as far and bere.
This harmonizes well with the functions of Per-
sephone, who is queen of the underworld during
the four months which elapse between the planting
of the autumn-sown grain and spring.
3. Implements.—The operations of the farmer
very much according to the season of the year, and
the character of the implements used varies according to the
nature of the operations. For Europe the earliest
description is given by Homer. On the shield of
Achilles four rural scenes are depicted, three of
which represent the seasons when the farmer’s life
is busiest (Iliad, xviii. 54 ff.). On the first is
shown a rich fallow in which many ploughmen
are driving their teams this way and that: because, accord-
ing to Professor Ridgeway’s ex-
planation of the scene (JHS vi. p. 336), the land
that is being ploughed is the common land of the
community, and the ploughing must be begun by
all the holders at the same time—an ancient
practice which is still commemorated in England by
Plough Monday, the last Monday after Twelfth
Night. The field is broad, and is for triple plough-
ing (τριπλος πτωος, 542). When the ploughers reach
the headland (τὴν αὐλὴν), a man comes forward
and offers them a drink. ‘They then turn their
ploughs, and the work is left until the reapers
reach the headland of the deep fallow.’ This eagerness is sometimes
explained, rather naively, as arising from
the prospect of a drink at the other end. More pro-
ably the emphasis rests upon the epithet deep.
A fallow speedily becomes covered with grass and
weeds, which, with the very ineffective plough that
is still used in Greece, makes ploughing a hard
work, even for a strong man. In modern times,
even with the best plough, the breaking up of old
pasture (which with improved implements would
be a task of a very Homeric kind) is never
impossible. The threefold ploughing was required
partly, no doubt, because the ancient plough was
so ineffective. In Egypt, where the ploughing was
done in a much more yielding soil, a man is repre-
sented (not in the earliest art) as preceding the
plough with a mattock, for the plough has his
safety. Homer looked upon falling as very hard work is clear from other
passages, in which we are told that he who has
been holding the plough (πτώος ἐργᾶτος) in a fallow
all day is glad when the sun goes down and he
can hie him home to supper, though his knees
trotter beneath him as he goes’ (Od. xiii. 31-34).
The oxen in the yoke also feel the strain (II. xiii.
705). Hence, with the development of the plough
and of a system of tillage, agriculture of necessity
passed more into the hands of men. Moreover,
when a pastoral people turns to agriculture, it
objects to women having to do with the cattle.
‘Among the Bechuanas the men never allow the
women to touch their cattle. The ploughs cannot
be used except by the help of cattle, and therefore
the men have now to do the heavy work’ (E.
Holub, JAF x. p. 11). In countries where cultiva-
tion is carried on in gardens rather than in fields,
the hoe or mattock remains the regular implement
in the hands of women. These are the Islands
and a great part of China. So also in the world of
the gods, Demeter handed over agriculture,
so far as ploughing was concerned, to Triptolemus,
who, as the Homeric hymn to Demeter tells us,
still then was but a prince (Δημητρία τετελείη
, 473) of Eleusis. Henceforth his name, when
its original meaning, is identified with πτώος,
the word for the triple ploughing. It is, however,
probably only Athenian pride that makes plough-
take its rise in the little plain of Eleusis. In
which little plains occur, the little crooked spade,
is hardly yet extinct. The plough, in all probability, took its origin in larger
areas with deeper soil. Such an area was Boeotia,
from which comes the earliest European poem on
agriculture, Hesiod’s Works and Days. A still
better example of an area suited for the plough
is Thessaly, the bed of an earlier inland sea, drained
when the Peneus cut its way through the vale of
Tempe. Eleusis had traditions of a connexion with
the far north of Greece and Thrace, and it is sig-
nificant that the word πτώος is thus, instead of
which preserved a feature which, in historical
names, is specially characteristic of Northern
Greece.

It is unnecessary to suppose that the plough was invented
only in one place. Its simplest form is a forked stick with our
of the limbs cut off short. The stump with its sharp point forms the sole and the cutting edge of the plough, the long branch forms the handle. In this form, pushed along by the handle, the plough is easily to make the ground smooth. The only stage in its development is either to find a tree with two branches or to cut it in Captain Blanford's plan, or other penetrate the ground, while the trunk forms the pole, or to tie the smaller forked stick another branch at right angles to the first, or to cut it in the form of a harrow, so that some power in pulling force may be applied. This force may either be boys, as in an Egyptian representation of ploughing, or some of the old oxen, buffaloes, or oxen. In Egypt, the art at the age is never represented in the plough; but Varro (I. 10. 40) observes that the plough is seen in the woodcut, and says that the Thoroughbred Horse, p. 488) that the war chariot with spoked wheels is earlier than the ox cart, which are probably added to the later and more elaborated form, the mortised plough (xypneiris spargere). Hesiod (W. and D. 422-434) advises the farmer to have one of each kind in case of accident. The more primitive form is to be of holm-oak, which is fitted into a shoe (xopappos), to the front end of which the stem is tied, and in Homer's time the pole was connected to the rest of the plough by wooden pegs in the Egyptian plough it is simply bound fast by a rope (in Alex.). The Egyptian plough by Dr. Schäfer in the Annals of the British School at Athens, x. 152). The English plough (pippus) is though to be cut in the autumn, but this is then less likely to suffer from dry-rut. A piece of the proper shape may not be easy to find. The pole is to be of bay or ash, and strong and easy to handle. Hesiod gives us the remark that everything to be steady. His yoke of oxen are to be nine years old, and if they are not, he says, a ploughman will attend to his work and not gaze after his comrades (144).

To a similar or even less advanced stage of civilization belong the primitive ploughs which are represented in rock drawings on the borders of France and Italy and in Sweden. In these the plough is represented by a sickle (I. 1) a bent fork (II. 2) the point of which (II. 3) the pole is attached. Near the end of the pole a cross-bar is attached which crosses the foreheads of the oxen, and, as in ancient Greece and Egypt, and largely in the East still, is fixed to the horns (see the figures in Sophocles Muller's Dargestellte Europä, p. 147). There are no reins; as is shown in one of the scenes represented, a second man leads the oxen. By the time of the Romans (I. 4) the form of the plough is much developed considerably. Catu and Varro give no details, but the elder Pliny was acquainted with the cultivator and with several varieties of ploughs. The improvements had been made in Roman Rhelia by adding two wheels. A plough of this kind is figured by Dr. E. B. Taylor (J.A.F. x. p. 79). As he says, the modern English plough 'improves upon this rather in details of construction and material than in essential principle.' But the descendant of this is the plough, 'or the plough of the Norfolk, which arises from the first type by the addition of a mould-board.

Needless to say, this and all other operations of husbandry were performed by women. Certain days were fortunate for certain operations, and others not, as is expounded in the latter part of Hesiod's Works and Days, and is observed in all countries. For, as they say, 'it is better to sow than to reap' (A Voyage to St. Elida, 1752, p. 18). Pliny (xviii. 20) recognizes both a hurdle and a mattock (xylas) for this purpose.

The scene upon the shield of Achilles to represent summer is the cutting of the corn on a prince's private estate (xypneirion). In Hesiod's time the sickle was cut in the shape of a sickle (lappodes), though in ancient Greece, as in ancient Egypt, they were engaged in binding into sheaves the handfuls which boys brought from the reapers. Similar scenes are represented in the Persian art, where the sickle was serrated. Such serrated sickles go back to the Stone Age (Filders Patrie, l'Iblato, Akkum, and Gerolit, pl. vii. Fig. 37). The early Greek sickle must also have been serrated, as xypneirion is the verb used of sharpening it in Hesiod (see Work's and Days, 387, with Pala's note). The sickles here are represented as pulling grain up by the roots. This may have been to avoid wasting the straw, which, according to Pliny (xviii. 47), was only about a yard high. A similar body subset in St. Kilian's monastery, according to Martin, the corn was pulled up by the roots in order to have it as long as possible for thatch. As a rule, in ancient

* In Sir G. Fellows' sketch (Journal written during an Ex- cupean, 1851, p. 71), the stump is the part on which the share is fitted. The same kind of plough is still used in some of the Greek islands.

be required. The only stage in its development is either to find a tree with two branches or to cut it in Captain Blanford's plan, or other branches or to cut it in the form of a harrow, so that some power in pulling force may be applied. This force may either be boys, as in an Egyptian representation of ploughing, or some of the old oxen, buffaloes, or oxen. In Egypt, the art of ploughing at the age is never represented in the ploughs. But Varro (I. 10. 40) observes that the plough is seen in the woodcut, and says that the Thoroughbred Horse, p. 488) that the war chariot with spoked wheels is earlier than the ox cart, which were probably added to the later and more elaborated form, the mortised plough (xypneiris spargere). Hesiod (W. and D. 422-434) advises the farmer to have one of each kind in case of accident. The more primitive form is to be of holm-oak, which is fitted into a shoe (xopappos), to the front end of which the stem is tied, and in Homer's time the pole was connected to the rest of the plough by wooden pegs in the Egyptian plough it is simply bound fast by a rope (in Alex.). The Egyptian plough by Schäfer in the Annals of the British School at Athens, x. 152). The early Greek sickle must also have been serrated, as xypneirion is the verb used of sharpening it in Hesiod (see Work's and Days, 387, with Pala's note). The sickles here are represented as pulling grain up by the roots. This may have been to avoid wasting the straw, which, according to Pliny (xviii. 47), was only about a yard high. A similar body subset in St. Kilian's monastery, according to Martin, the corn was pulled up by the roots in order to have it as long as possible for thatch. As a rule, in ancient
was modelled upon it. The body of the cart was a
creel of wicker-work, which could be removed at
will. Of farm carts the Romans had two kinds—
two-wheeled (plaustrum) and four-wheeled (plau-
strum maius). Since they are termed stridentina
plaustra (Virgil, Georgics, ii. 536), it is evident that
they moved with much creaking, like the "gal-
gal (Haddon, Study of Man, p. 186 ff.). The
noise is caused by 'the friction of the axle against
the floor of the waggon which keep it
in its place' (Haddon, p. 189). The
carriage moved by the pole being fastened
by a pin near the end of the pole, and
lashed tightly with a thong or cord.
Some kind of strap
was fastened across under the neck of the animals.
The modern forms are figured by Sir C. Fellows
(Journal, p. 71), the ancient Egyptian by Schäfer
in the article already mentioned.

4. Since in the countries round the Eastern Medi-
terranean the corn harvest comes on in May
and June, the industry of autumn is the ingathering
of tree fruit and the making of wine and olive oil,
judging from the numbering of days. The autumn
occupation of England, and on the Saxon
font at Burnham Deepdale, in Norfolk (which has
twelve scenes representing the months), is taken
as the typical occupation for October. Hence the
villas for the service of the shield of Achilles. The young men and maidens
carry the fruit in wicker baskets, a lad plays on
the lyre and sings to them, and they join in sing-
ing and dancing (II. xviii. 591 ff.). The wine grows
wild in the Mediterranean, and in Asia as far
as the Himalayas. Grape seeds have been found
in pile-dwellings of the later Stone Age in Italy,
and of at least the Bronze Age in Switzerland,
and vine leaves have been discovered in the tufa
round Montpellier and Meyrargues in Provence.

The use of wine was probably introduced to the Greeks
from Asia Minor or Thrace. Hesiod contemplates
that his farmer may make a voyage after harvest,
but adjures him not to wait for the new wine, in
case of bad weather (op. cit. 663 ff.). Such a
voyage from Bootea would probably be to Lebos,
or the adjacent mainland, which was famous for
its wine. According to all tradition, the use of the
corn and the culture of the grape were later in
Hellenic countries. In the countries north of the
Alps (Schrader, Reallexicon, s.v. 'Wein'),
the last of the crops which had more than a local
importance was that of the olive. According to
d'Andoulle (Origin of Cultivated Plants, p. 293),
1its prehistoric area probably extended from Syria
towards Greece.' At Athens, till the development
of the mines at Laurium, the trade in olive oil was
the only important export industry, the soil being
thin and ill adapted for agriculture. The
olive, indeed, was supposed to be the special gift of
the patron goddess, and the sacred olive trees
were protected from harm by heavy penalties.
No doubt in early times such heavy penalties alone
protected all produce, whether of domesticated
plants or animals, against the instinct of primitive
savage man for immediate use without regard
to future loss (see TAU and TOTEMISM).
The olive, as the Latin form of the word shows, spread
from Greece to Italy, and from Italy again to the
north of Europe. It is clear from Cato and Varro
that their olive trees were largely grown and
the growing of cereals. This was the result of the
second Punic war. Hannibal devastated rural
Italy; the agricultural population had to flee to
the towns for protection, and stay there for half
generation while the war lasted; and the farmers
themselves were drafted into the army. When
the war was over, the rustics had no capital where-
with to restore their farms; the State was unable
to help them, and the wealthy quietly annexed
the derelict farms of the poor. With the develop-
ment of an Empire outside Italy, corn came in
payment of taxes from the subject States. With
curious lack of economic insight, Gaius, who was anxious to increase the rural
population, caused this imported corn to be sold at less than
its market value, with the result of making it
impossible to grow corn in Italy.

It is impossible to enter here into the more
advanced processes of agriculture; the use of
irrigation, which developed early in Egypt and
Mesopotamia, and which is also recognized by
Homer; and the cultivation of fruit trees by prun-
ing and grafting. Wallace observed (Travels, p. 335) that the natives on the Amazon never
pruned or did anything else to their fruit trees.
On the other hand, the labourers imported from
Melanesia into Queensland were much surprised
to find black men who had no garden. In the
Melanesian islands, in Sarawak, and elsewhere,
irrigation has characteristically been
the occupation of women; (see nóng高科技, The
Melanesian, p. 303; Sarawak, i. p. 406).

After the corn harvest was finished, the corn had
to be threshed. This was done by oxen treading
it out on the hard threshing-floor (for the making
of which Varro composed a poem}), which
was used in all countries near the Alps (Schrader, Reallexicon, s.v. 'Wein').

The last task in the preparation of corn for food
prior to cooking it was the making of it into meal or
flour. Piette found rubbing stones in a late
stratum of the Paleolithic Age (Hoops, p. 290),
though these were not necessarily used for corn.

In northern countries, for instance Scythia (op. cit. 553) of the methods
of the aborigines of Yucatán shows
approximately very ancient practice. The grain
was soaked, and then bruised on the rubbing
stone and wetted occasionally till it becomes soft
paste. From the rubbing stone develop the pestle
and mortar of later times, which are mentioned in the life of ancient Athens.

But the handmill, with its heavy under stone and its
lighter upper stone, which turns upon the other,
goes back to the Stone Age (Hoops, p. 301 f.;
Schrader, Reallexicon, s.v. 'Mahlen'). They
are often found in the graves of women.

It is evident that this also was one of the duties of early
women, as indeed is clear from the literature of
every country from the earliest times.

Schafer—Agriculture in Mesopotamia and Egypt, the representations
in art: Perrot-Chipiez, both; the texts of the present
work (the text is out of date) and Lepsius, Denkmäler aus Ägypten;
and the books mentioned in the text. Greek Historians: Homer; Hesiod, and incidentally Homer; Theophrastus, Hist. of Plants, etc.,
and De Cassia Plantarum; with many allusions in Aristotle,
Xenophon, and elsewhere (The Genesis of Agriculture, Roman Empire, but contains information from earlier sources).

For Rome: Cato (by present form is not the original form of the text); Varro, who professes to have read and
Latin works on the subject, and was himself competent;
and Cato, who, as a farmer's son, and himself a farmer, writes in the
greek words with knowledge, and in a course, in technical fashion the argument is attributed to him
and gives an excellent abstract and summary. Columnella, elaborate but inexact; Palladius, the greater part
of whose work is arranged as a farmer's year, and had much influence in the Middle Ages. Detailed accounts of Greek
Roman agriculture will be found in Baumeister's Denkmäler der Klassischen Alterthümer, s.v. 'Ackerbau'; Smith's Gr. Rom. Agr.,
and Palay, s.v. 'Ackerbau' (this, though old, still contains much
that is useful). The agriculture of the Semitic nations is
treated in the various Bible Dictionaries; Indian agriculture
AHERIA—AHIQR, THE STORY OF

In the Vedic Age by Zimmer, Altindisches Leben. General accounts, specially for the Indo-germanic peoples, are given, with full references to literature, in Schrader’s Spracherkundigung und Urgeschichte (a new edition is in course of publication) and Reallexicon der indogermaischen Altertumskunde. Der Pfingst und das Pfingstbuch der Römer and in Mittel Europa in vorgeschichtlicher Zeit (Ollenburger, 1894; Meringer, Indogermaische Forschungen, xvi, 1897). The various modes of planting are treated by de Candolle (Origin of Cultivated Plants, 1884), by Hehn (Kulturpflanzen und Hausbaustoffe, ed. by Schrader, 1893), and by Niccolini (Waldframe und Kulturpflanzen der germanischen Altertum, 1905). These works give full references to the origins of agriculture are treated also by Hahn, Die Bauwelt, 1885, Der Baumwolle, 1895, and Das Alter der wirtschaftlichen Kultur der Menschheit, 1893. Miller, Urgeschichte Europas, 1905; and Hirt, Die Indogermaischen, i, 1905. Macke’s book (Urgeschichte des Ahereumus und der Phalku: Eine neue Theorie, 1898) must be used with caution.

P. GILES

AHERIA (Skr. akhetaka, ‘a hunter’).—A Dravidian tribe of hunters, fowlers, and thieves, found in North India to the number of 35,447, of whom the majority inhabit the United Provinces and the Panjab. Their religion is of the animistic type, and they worship a host of minor gods or godlings, and spirits not included in the orthodox Hindu pantheon, who are more influenced by Hinduism, follow Devi, the Mother-goddess; and in the United Provinces their tribal god is Mekhāsura (Skr. māsāsura, ‘the ram spirit’), of which they can give no account, but which probably represents the form of theriologic. Gāgā and Zāhir Pir, the famous saint round whom has been collected a curious cycle of legend, is worshipped by the agency of a Mussalmān officiant (Crooke, Popular Religion, i, 211 f.). Another Muhammadan saint whom they revere is the Miyān or Murād Sābī of Amroha in the Morādābād district, of whom also strange legends are told (Shea-Troyer, Dabistān, ii, 235; Crooke, op. cit. I, 217). In a lower stage of animism is Jakia, who is apparently a defiled sweeper, a member of which caste attends his shrine. To him a pig is sacrificed, and the sweeper officiant rubs a little of the blood upon the foreheads of children to repel evil spirits. Barāi and Chāmar, two of the common village godlings, are also worshipped. To the latter the offering is a cake of wheat, but in serious cases a ram is offered, the flesh of which is then and there consumed in the presence of the god. It is a curious fact that the Aherias have appropriated as their patron saint W. CROOKE. the ethiologic count of the epic of Rāmāyana. The sacrifices to the tribal godlings are generally performed by a member of the family which makes the offering, not by a regular priest. In some cases where the victim is not actually slain, it is released after blood has been drawn from it. The Aherias stand in great fear of the ghosts of the dead; and when they cremate a corpse, they fling pebbles in the direction of the pyre as they return home, in order to prevent the spirit from accompanying them.

LITERATURE.—Crooke, Tribes and Caste of the North-Western Provinces and Oudh, 1896, i, 45 ff.; Popular Religion and Folklore of Northern India, new ed. 1896, ii, 57.

AHIQR, THE STORY OF.—In several versions of the Thousand and One Nights, the story of the sage Ahiqr (Saïkar, Hikâ, etc., cf. n. 1) is the original form of the Arabian Nights. (ib. p. 280, col. 608) is to be found. The tale is derived from a compilation which was circulated especially among the Christians of Syria (cf. Lidzb. in ZDB, i, 1886, p. 192). The contents of the story are as follows:—Ahiqr is minister of Semacherch, king of Assyria. He is already sixty years old, and has sixty wives in sixty palaces, but no son. He has recourse to the gods (in the Armenian version, to Belahim, Shupil and Shamim; cf. on this Lidzbg. in Epherm. i, p. 280) and prays for children, but receives the reply that they have been decreed to him, and is advised to adopt his nephew Nadan, and to bring him up instead of a son. Ahiqr does so, devoting the greatest care to the physical and intellectual culture of his nephew, but the young man

Jain ascetics (ib. p. xxii.) and they carried it to great extremities, not driving away vermin from their clothes or bodies, and carrying a filter and a broom to save minute insects in the water they drank or on the ground where they sat (ib. p. xxvii).

The doctrine has been common ground in all Indian sects from the time to the present. But each school of thought looks at it in a different way, and carries it out in practice in different degrees. The early Buddhists adopted it fully, but drew the line at what we should now call ordinary, reasonable humanity. It occurs twice in the eightfold path,—no doubt the very essence of Buddhism,—first under right aspiration, and again under right conduct (Majjhimī i, 251 = Sānyuttav. v, 9). It is the first in the Ten Precepts for the order (sikkhā-yadānā), and therefore of the five rules of conduct for laymen (pañcika silānā), which correspond to the first five of the Precepts (Vinaya i, 83, Aṅguttarā iii, 203). It is the subject of the first paragraph of the old tract on conduct, the Silas, which is certainly one of the very oldest of extant Buddhist documents, and is incorporated bodily into so many of the Suttantas (Ithys Davids, Dialogues of the Buddhā, i, 3, 4). Aoka made it the subject of the first and second of the Rock Edicts in which the Buddha recommended his religion to the world, and refers again to it in the fourth. But he had long been a Buddhist before, in the first Edict, he proclaimed himself a vegetarian. The rule of the Buddhist Order was to accept any food offered to them on their rounds for alms, when Devadatta demanded a more stringent rule, the Buddha expressly refused to make any change (Vinaya Texts, ii, 117, iii, 283); and a much-quoted hymn, the Amagandha Sutta (translated by Faubâs, SBE, ii, 40), put into the mouth of the Buddha, lays down that it is not the eating of flesh that delites a man, but the doing of evil deeds. The Buddhist application of the principle differs, therefore, from the Jain.

It would be a long, and not very useful task, to trace the different degrees in which the theory has been subsequently held. It is sufficient to note that the less stringent view has prevailed. At the end of the long Buddhist domination the practice of animal sacrifice had ceased, and the revival of Brāhmā influence an attempt was made to restore them, it failed. The use of meat as food had been given up, and has never revived. But the Indians have not become strict vegetarians. Dried fish is still widely eaten, and a taboo on meat is a deep-rooted aversion to taking animal life of any other kind, the treatment of living animals, draught oxen and camels for instance, is not always thoughtful. Nowhere else, however, has the doctrine of ahīśa had so great a and long-continued an influence on national character.

T. W. RHYS DAVIDS.
turns out a failure. He squanders the property of Ahiqar and commits all kinds of crime. When he is at this point called in question by Ahiqar, Nabad seeks to devise means to remove his uncle. He contrives an intrigue to represent him as a traitor to the king. The king is deceived, and condemns Ahiqar to death. However, Ahiqar and his wife Ashleigh succeed in influencing the emperor's counselor to spare his life, and to execute in his stead a slave who had been condemned to death. Ahiqar is kept concealed by his wife, and is generally supposed to be dead. The news, too, reaches the ears of the Sennachersib's rival, Pharaoh of Egypt, and he intends to impose on Sennachersib the task of building him a palace between heaven and earth. If Sennachersib should be able to carry out this demand, he would pay to him the income of his empire for three years; but if not, Sennachersib must do the same to him. Of all the advisers of the king, no one is able to comply with the demand of Pharaoh—least of all, Nabad. The king is in the greatest extremity, and bitterly repents the removal of Ahiqar. Then the executioner discloses the fact that he, at the time of the conviction, did not carry out Ahiqar's execution, and that he is still alive. On hearing this, the king is highly delighted, releases Ahiqar, and sends him to Egypt. He easily solves all problems proposed by Pharaoh, and the latter has to pay him tribute and still other sums to Sennachersib. After his return home, Ahiqar is again installed in his old position, and his nephew is unconditionally handed over to him. Ahiqar reproaches him for his actions, and the effect on Naban is so strong that he 'swelled up like a skin' and burst sunder.

The importance of this narrative, from the side of the history of religion, consists in the fact that, in all likelihood, it belongs to the lost literature of the Arameans of the pre-Christian era (cf. Lidzbarski in ThLaZ and Ephem. i.c.). That the story had arisen in ancient times can be concluded from the consideration that the contents of the tale, with the names of both the principal heroes, are alluded to in the Book of Tobit (14:21). The connexion of the passage in the Book of Tobit with the story of Ahiqar is recognized by G. Hoffmann (Auszüge aus syrischen Akten persischer Martyrer, p. 182), but he adopted the view that the story took its rise first in the Middle Ages under the influence of the passage in Tobit. However, the whole story discovered since 1840 make this supposition untenable, and the priority of the story of Ahiqar is now generally recognized. The heathen character of the tale, too, cannot be mistaken, and this is especially prominent in the Armenian version. Among the gods mentioned in the text, the 'God of heaven' takes the first place. He is Belisamin, whose worship was widely diffused among the Semitic peoples in the last centuries B.C. and the first A.D. Especially instructive is the passage in which Ahiqar emphasizes the association of Belisamin with the 'God of heaven' over Bel, sun and moon (cf. Ephem. i. p. 259).

AHIR.—An important tribe of agriculturists and breeders of cattle, which at the Census of 1901 numbered 9,806,475, of whom the vast majority are found in Bengal (where it is by far the largest caste), the United and Central Provinces, and in smaller numbers throughout N. India. Their name connects them with the Abhirs, a people occupying the Indus valley; and Lassen's view, that the Súdras, or servile caste of the Hindu polity, with the Abhirs and Nishásas, were a black, long-haired Indian race, occupying what is now the valley of Sind, is perhaps correct. In the absence of any intelligible question, which is the Abir and which the Abira, the Abars, who are believed to have entered India in the 1st or 2nd cent. B. C., is less probable. In N. India their traditions connect them with Mathura, the holy land of Krishna; and the Jadháuls, one of their subdivisions, claim descent from the Ydváda tribe to which Krishna is said to have belonged; while another, the Nandabáns of the United Provinces, the Nanda Ghoosh of Bengal, claims as its ancestor Nanda, the foster-father of the divine child.

1. Bengal.—In Bengal the caste is known as Golá (Skr. guḍála, 'a cowherd'), and in accordance with the legend of their descent they are generally worshippers of Krishna, and therefore members of the Vašnuvaka sect. But their belief in the pietistic form of Vašnavism associated in Bengal with the teaching of Chaitanya. Thus, they have a special feast, known as the Govardhán-pūjá, which takes its name from the holy Mathura hill associated with the cult of Krishna, at which they pray to a heap of boiled rice which is supposed to represent the hill, and make an offering of food, red-lead, turmeric, and flowers to every cow which they possess. In other parts the worship is paid to a cow, which makes a sacred cow and is sacramentally slain to promote the fertility of the fields (Frazer, Golden Bough ii. 1067, 1172).

It is a curious proof of the sympathy which even Hindus of high caste and social position exhibit towards the cowherds of N. India, that when, in 1889, the last of the fanatical laws of the Santal country prohibited this brutal rite, a protest was immediately made in the Legislative Council of Bengal by one of its members. It is satisfactory to find that the Lieutenant-Governor supported the action of his subordinate (North Indian Notes and Queries, v. 292).

In W. Bengal they have special reverence for the hero Lorik, round whom a cycle of curious legendary centres, and for Káši Bábá or Kášináth, the ghost of a murdered Bráhmin, which is greatly feared. If he be not propitiated, he brings disease upon the cattle; and Risley describes how, when the plague appears, 'the village cattle are massed together, and cotton seed sprinkled over them. The fattest and sleekest animal being singled out, it is severely beaten with rods. The herd, scared by the noise, scatter off to the nearest shelter, followed by the scape-bull; and by this means it is thought the murrain is stayed.'

2. United Provinces. — In the United Provinces, those members of the caste who are initiated into any of the orthodox sects are called Abar Jat; and in the United Provinces, the former preferring the cult of Krishna, the latter that of Siva or his consort Devi in one of some her many forms, in preference the goddess known as the Vindhyabáns Devi, who has her temple at Vindhyachal in the Mirzapur district, and is supposed to be the guardian goddess
of the Vindhyan Hills. In Saharanpur they have two deities who preside over marriage—Brahm Devata and Bar Devata, the former representing the great Hindu god Brahmā, who has an image of gold in human form; the latter the banyan tree (Hindi, Shri Kesu). On the night of the wedding the image of Brahmm Devata is brought by the goldsmith and placed upon the marriage-platform. When the binding portion of the rite has been performed, the bride and bridgroom offer to the image of gold, rice, flowers, incense, sweetsmeats, and cakes, and light lamps before it. The women of the household then bury the image in the kitchen, and raise an earthen platform over it. The members of the family worship this daily by pouring water over it, and on feast days offerings of milk and rich cakes are made to it. This is done until a second marriage takes place in the family, when it is dug up and removed, and its place is taken by a new image. This is a very curious survival of Brahman worship among a people where we were unlikely to suspect its existence. Except in a few temples specially dedicated to this, the head of the Hindu triad, his cult has now largely fallen into disuse. The worship of the banyan tree is closely connected with the custom of tree-marriage (Crooke, Popular Religion, i., 116). Among the Ahir the bridegroom marks the trunk of the tree with vermilion at the same time as he marks the parting of the bride's hair with the same substance—a rite which is an obvious survival of the belief in a round of spirits, male and female, who live in a newly made marriage. They also worship the Pāmchopīr (see PANCHPRITA) and various minor local gods, the most popular of which is Kāmdev, a deified ghost, whose festival pots of milk are set to boil for the refreshment of the goddess; and one man, becoming possessed by the deity, pours the contents over his shoulder, and is said never to be scolded. Their special cattle-god in the eastern parts of these Provinces is Bīrnath (Sk. vīrānātha, 'hero-lord'), who is represented by a collection of five wooden images rudely carved into human form.

3. Central Provinces.—A similar quintette of gods is worshiped in the Central Provinces. Here their principal deities are Dūlapping, said to be a deified bridgroom who died on his wedding-day (see DAVIDIAN), and Bādh Deo, the chief god of the Gonds. As in Bengal, their chief worship is of the Divālī, which the Gonds count as their New Year. They decked with strings of cowry shells, singing and dancing. They also pay much respect to a deified man, Haridas Bābā. He is said to have been a yogī ascetic, and to have possessed the power of separating his soul from his body at pleasure. One day he went in spirit to Benares, and left his body in the house of one of his disciples, an Ahir. As he did not return, and the people ascertained that a dead body was lying in this house, they insisted that it should be brought. The gonds had it carried away, and when he found that his body had been burned, he entered into another man, and through him informed the people what a terrible mistake had been made. In atonement for their error, they worship him to this day. We have here an excellent example of the world-wide belief in the separable soul. The beliefs of the Ahir in this Province are of a very primitive type, and Russell points to obvious survivals of totemism in the titles of some of the sub-castes.

4. Maharashtra.—In the Deccan the Ahir are known as Gāvīl, which is the equivalent of Gōdāḷa, explained above. Here they are worshippers of the ordinary Hindu gods,—in particular of Śiva—and their priests are jagiṁgas, or officiants of the Lingkāyati (wh. see sect. Those known as Marāṭhā Gōpālīs worship the Mother-goddess, the Devī of Tuljapur in the Nizām's dominions, Kānhūl, Khandola of Jejuri in the Poona district, and Mahāsobha, with offerings of sandal paste, flowers, and food. Each family dedicates a she-buffalo to Kānhūl, or Śrīka, bears her with care, and does not load her or sell her milk and butter, but presents these to a Brāhmaṇ. Further south in Kānara, the GOLLAR, a kindred tribe, worship Śrīka, Siva under the form of the terrible Kālā Bhairava, and his consort Pārvatī. The rites in honour of these deities are performed after the Lingkāyati rule.

5. Gaddi, Choli.—In N. India, when Ahir are converted to Islam, they are known as Ghost ('a shouter'), Skr. gūsh, 'to shout after cattle' or Gaddi, and follow the Muhammadan rule, with some admixture of Dravidian animism. In Bombay they use many Hindu rites at marriage and birth, worship an image of the goddess Devī at the Dasahāra festival, and of Lakshmi, the goddess of good luck, at the Divālī, when they also adores the Tulasi or holy basil plant, as at the Holī they worship the castor-oil plant.

Quite distinct from these are the Gaddi of the Panjab Hills, of whose beliefs Rose has given a full account. They are nominally Hindu by religion, pious worshippers of Śrīka, and deified ascetics, Birs or heroes, and Devis or Mother-goddesses. The Birs, probably as representing the earth in serpent form, receive an offering of fatted beasts, male and female, and small cakes. The Siddhas, as benefactors of mankind, are presented with a sack, stick, crane, and amulets. The Gaddi are divided into two, the Nāgas or serpent gods, Siddhas or deified ascetics, Birs or heroes, and Devis or Mother-goddesses. The Nāgas, probably as representing the earth in serpent form, receive an offering of fatted beasts, male and female, and small cakes. The Siddhas and the Gaddi are divided into two, the Nāgas or serpent gods, Siddhas or deified ascetics, Birs or heroes, and Devis or Mother-goddesses. Like Siva, he is adored under the form of a sickle, which the god always carries when traversing his flock. Besides these, there are the autārās (Skr. avatāras, 'an incarnation of one of the greater gods'), a term here applied to the ghost of a person who has died childless, and who therefore is malignant and causes sickness. To propitiate them the dead man's clothes which are specially made for him, and wears an image of the spirit round his neck. Thus clad, he worships the autārā, an image of which is always kept near a stream. The clothes and image are worn as a memorial of the dead man, to keep him in mind and conciliate him. Besides these, they worship a host of malignant spirits—būtal, the sprites of rivers and streams; yoginis, or rock spirits; rākahās (Skr. rakahās) and bānaças (Skr. bānaça), who are here regarded as akin to the yogīs when not in a demoniacal form; and the female demons (Skr. rakahās); and spirits of the wood (Skr. vānapatī, 'king of the wood'). This would be quite in accordance with the belief of forest tribes, who naturally worship the spirits of trees, rocks, or rivers by which they are surrounded. Chungei is another demon who inhabits trees. He sucks the milk of cattle, and is propitiated with an offering of a coco-nut—a frequent form of commutation of the original human victim, the coco-nut representing the skull—a pungent vegetable, almonds, and grapes. The coco-nut is cut in halves, and the tap is dipped in flour, and to this incense is offered. Gungā, the demon who causes cattle disease, is propitiated by setting aside a griddle cake of bread until the final offerings can be made. Then a piece of iron, something like a hockey stick, is made, and the deity
embodied in this is taken into the cattle shed, where he is worshipped by the sacred fire on a Thursday. A he-goat is killed, and a few drops of the blood sprinkled on the iron. At the same time cakes are offered, and some are eaten by one member of the household, but not by more than one, or the scourge will not abate, and the rest will starve in the early morning. Every fourth year the deity is worshipped in the same fashion. Kailū is a demon worshipped by women after childbirth, by putting up a stone under a tree, which is sanctified by magic formulae (mantra) and then worshipped. A white goat, which may have a black head, is then seized by the demon by making an incision in the right ear and letting the blood fall on a white cloth—a good example of the commutation of the blood sacrifice. The woman eats some coarse sugar and dons the cloth, which she must wear until it is worn out, thus maintaining a sacramental communion between the demon and herself. If any other woman should happen to wear the cloth, it would cause her divers bodily ills. These facts regarding Gaddi religion are specially interesting, as being one of the best exponents of Indian animism as shown in the Panjab Hills.

LITERATURE. — For Bengal: Dalton, Descriptive Ethnology, 314 ff.; Risley, Tribes and Customs, i. 389; Buchanan Hamilton, in Bengal, in 1861, 4, 194 ff. AHMADĀBĀD, AHMEDĀBĀD.—Chief city of the district of that name in the province of Gujarāt; founded in A.D. 1413 by Ahjam Shāh, from whom it takes its name, and during the 16th and 17th centuries, one of the most splendid cities of India. These religious buildings illustrate the conflict of the Muhammadan style with that of the Jains to which it succeeded.

The truth of the matter," writes Ferguson, "is, the Mahomedans had forced themselves upon the most civilized and most essentially building race that is in India, and the Chalukyas conquered their conquerors, and forced them to adopt the Brahministic superstitions. To any invaders known or could have introduced. The result is a style which combines all the elegance and finish of Jaina and Chalukya, and the massiveness of the Hindu, never quite attained, but which is characteristic of the people who at that time were subjecting all India to their sway.

Crooke," writes the J. W. Masjidi, or Cathedral Mosque, though not remarkable for size, is one of the most beautiful mosques in the East. This and other buildings of the same class, following the most elegant and instructive Indo-Saracen styles, were built during the century, and a half of independent rule (A.D. 1412-1573). Their tombs are equally remarkable, that of the King Mahmod Begada being one of the most splendid sepulchres in India.

Introduction to Chushing's Shân Grammar (Bangoon, 1871), and from Bangkok to the interior of Yün-nan." The Ahoms used to call themselves not 'Ahom,' but, like the Northern Shâns, 'Tai.' Regarding the etymology of the word 'Ahom' there has been some discussion, and various views have been expressed. Dr. Grierson seems to incline to the opinion that the word is a corruption of 'Ashom,' a Burmese corruption of Shâm, which is the true spelling and pronunciation of the name of the well-known tribe. We have not, however, been able to ascertain what is the force of the initial A. The Muhammadan historians called the Ahoms 'Assâm.' However, people, who say, wherever they go, to him this and that.' If this suggestion is correct, 'Ahom' must be a, comparatively speaking, modern corruption.† It is very probable that this tribe gave the modern name to our Province of Assam, the old name for the country being Saumarphś.

AHOMS.—The Ahoms are Shâns belonging to the great Tai family of the human race. This family extends from the Gulf of Siam northwards into Yün-nan and thence westward to Assam. It comprises several divisions, viz., the Siamese, Laos, Shâns, Tai Mau or Tai Khî (Chinese Shâns), Kâtn, Mîng-Rî, and Ahom. According to Dr. Grierson, the Tai race, in its different branches, is beyond all question the most widely spread of any in the Indo-Chinese Peninsula, and even in parts beyond the Peninsula, and it is certainly the most numerous. Its members are to be found from Assam to far into the Chinese province of Kwang-kiang.

† For derivation of 'Pong' see Burma Census Report, 1891, p. 203.
‡ For derivation of 'ONG' see Burma Census Report, 1891, p. 203.

" For Introduction to Chushing's Shan Grammar (Bangoon, 1871).
ordinary Kachari * woman of the plains, whose skin is frequently dusky in hue, and whose features are hard and ill favoured. Though more muscular, and certainly more capable of great labor than the Assamese Hindus of Aryan or Aryan extraction, the Ahom, by long residence in the steamy place, is without coordinate use of opium, has physique deteriorated, and has become as inscrupulously lazy as the ordinary Assamese rustick. Ahoms are heavy drinkers, consuming large quantities of rice beer or toddy, and smoking. But they have their own village. The Bihus, or harvest and sowing festivals, are celebrated by more than usually heavy potations. The devotees, dressed in white, distort a spirit from rice in out of the way localities, often in defiance of the Excise laws. The evils of the drinking habit, which affect the other races of Indo-Chinese origin, do not so far, appear to have spread among them. In educational matters the Ahoms are more backward than even the ordinary Assamese Hindus, which is saying a good deal. Therefore, the condition of the old Ahom aristocracy becomes worse and worse every year, owing chiefly to the failure of its members to realise the new conditions of life. Families in Sibisagar which a generation or two back held positions of power and comparative wealth as the Ahom Raja's court are now practically destitute.

Dress.—The dress of the Ahom tribesman at the present time possesses nothing to distinguish it from that worn by the ordinary Ahom cultivator. It was the Ahoms, however, who probably introduced into Assam the large broad-brimmed hat or jajeo (giri) of early description of the Shan head covering. The dress of an Ahom nobleman used to consist of a turban of silk or a cap called jenna, a short coat, mirji, made of Assamese cotton or silk, reaching to the waist, a long coat, and silk, worn over the mirji reaching down to the ankles, and a cloth round the head, which is worn in a similar manner to ordinary Assamese women, wearing either silk or cotton, according to the circumstances of the wearer. Some of the old Ahoms are very fond of flowers. Women as well as men nowadays wear the jhdpi, a specially large and richly decorated hat being reserved for the bridgegroom and bride. The jhdpi was an emblem of authority, and none but the great were allowed to wear it in the past. Jewellery is much the same as in the ordinary world, and is worn in the valley, although the different articles are sometimes called by different names. The girls of the Deodhai, or priestly caste, tattoo star-shaped devices on their hands and arms, the dye used being prepared in the Ahom or Nogor villages. Tattoos were common in all ages. The Norais, another Shia tribe of Assom, who possess a few settlements in the valley, observe a similar custom.

Houses and Villages.—Ahom villages do not differ from those of the ordinary cultivator of the valley, but the houses of the priests (Deodhai), who are in all matters more conservative than the rest of the tribe, are built on piles about 5 to 6 ft. from the ground, the dwelling of the ordinary cultivator being either set up on an earthen plinth or drifted with the ground. The Deodhai houses are divided into three compartments, namely the living-room or sleeping-room, and chamber for dining-room. The spaces immediately below these three chambers are used for the loom, cowshed, and pigsty respectively.

Food and Drink.—Figs and fowls abound in the Deodhai villages. Ahoms have not been Hinduised, sometimes even those who have become the disciples of Vaishnavite gosains, eat pork and fowls, and drink rice beer and rice spirit, much to the disgust of the Achomnicising missionaries who regard them with horror. The Ahoms cultivate rice in the same fashion, using the same primitive plough, as the ordinary cultivator, but, owing to their extremely lethargic habits, fail to reap anything like full benefits from the magnificently rich soil. A large quantity of grain is used up by them in the manufacture of tnu (rice beer), and they spend probably quite as much money in buying opium as in paying the Government land revenue.

Exogamous groups.—The Ahoms are divided into a number of exogamous groups called phoids or khetts, the principal ones being seven in number, hence the term sithgaria (*belonging to seven*) which is nowadays applied to them. This composition of these seven principal divisions has varied from time to time, but they are said to have originally consisted of the following: the Royal Family, the Buragohain, Golahs, Chiring, Deodhai, Mohan, and Ballong phoids. The whole exogamous groups are divided further, into two main divisions, called Golains and Gogois, but there are some decidedly inferior phoids, such as the Chaodangs, who were the public executioners in the old days, as well as Likhans, Gharfiales and others, with whom the Ahoms of the upper classes will not intermarry.

For a description of the Ahom system of government, State and social organization, and particularly the pdik system, the reader is referred to Ch. ix. of Gait's History of Assam.

Marriage.—Those who have become Hindus observe a modified Hindu marriage ceremony, but the real Ahom rite is the saklang. The ritual is contained in a holy book called the saklang puthi (unfortunately no longer available). As the actual ceremony is conducted with some secrecy, and as it is said to be forbidden to divulge its details to anyone but an Ahom, the writer had considerable difficulty in finding out what actually occurs on the occasion; but two reliable authorities, Srijuts Kanakeshwar Borrpata Gobain and Radha Kanta Sandikai, E.A.C., were good enough to give him the following description. The bridegroom sits in the courtyard; the bride is brought in, and she walks seven times round the bridgegroom. She then sits down by his side. After this both go to and proceed to a room screened off from the guests. Here one end of a cloth is tied round the neck of the bride, the other being fastened to the bridegroom's waist. They walk to a corner, where nine vessels full of water, rice, and fruits, are set out. Certain leaves, the Chiring Phukan (or master of the ceremonies) reads from the saklang puthi, and three cups containing milk, honey and ghee, and rice frumenty, are produced, which the bride and bridegroom have to take. The rice uncooked rice is then brought in a basket into which, after the bride and bridegroom have exchanged knives, rings are plunged by bride and bridegroom respectively, unknown to one another, it being the intention that both will try to take out the ring and wear it on the finger. The exchange of the knives and the rings is the binding part of the ceremony. Bride and bridegroom are then taken outside and do soma (homage) to the bride's parents and to the people assembled, and the marriage is complete.

Ahoms used to be polygamous, but one wife is said to be more correct now. Ahom girls are not married till they reach a nubile age—sometimes much later. The marriage ceremony is quite out of proportion to the means of the people; for instance, a Deodhai marriage in Sibisagar was reported to the writer to have cost more than Rs. 200 (bridegroom's expenses).

Death.—Ahoms literally bury their dead; formerly they invariably did so, but now those who have accepted the Hindu religion resort to cremation. The following is a brief description of the old Ahom rites. The corpses of the poor are buried in the ground without coffins. Those of the rich are reverently laid in boxes; a water-pot, cup, dā (stick), jhdpi (or large hat), and a pārī (wooden stool) are put inside the box with the corpse. These articles are intended for the use of the deceased's spirit in the nether world. The body is then lowered into the grave, which is filled in, a large earthen tumulus (mōdīm) being thrown up over it. The Ahom kings were buried at Choraiode in the Sibisagar district, their funeral obsequies being of a much more elaborate nature. A buranny, (Ahom chronicle) describes how at the funeral of Raja Gadadhur Singh, who died in a.d. 1696,* a number of living persons, who had been the deceased's attendants, were interred with the corpse, together with many articles of food and drink, and clothes of the deceased. It is stated that some times horses and even elephants were interred alive with a dead king.

Religion.—As the Ahoms are now almost entirely Hinduised, and there are very few of the old

* Gait, History of Assam, p. 163.
Deodhais (the only persons who possess any knowledge of the ancient ritual) who remember the ancient religious customs, it is well-nigh impossible to give an accurate and connected account of the Ahom religion.

The writer has been unable to trace Buddhist influences. Possibly Buddhism had not penetrated so far as the Manipur, or the Ahoms left Mung-Ri-Mung-Rang, their ancient site; or Buddhism had become so inextricably mixed with the worship of the gods of earth and sky as to become indiscernible. Apart from the god Chum-sonde, the bamboo was worshiped by the Ahom king, assisted by the Chiring Phukan, as will afterwards be described, the Ahoms possessed various gods, amongst whom the following seem to have been the more important: Along or Phu-Ra-Ta-Re (god the creator), Lengdon (god of heaven, the Hindu Indra), Kaokham (god of water, the old Vedic deity Varuna), Lengbin and Lengdin (god and goddess of the earth), and Phai (god of fire, Hindu Agni). Chumseng, who was daily worshipped at the king's house, was not regarded by himself. According to Ahom tradition, Chumseng was given to the Ahom progenitors, Khunlai and Khuntai, by Lengdon, god of heaven. Chumseng was worshipped more as a fetish—something supernatural, possessing the power to deliver the king and his people. Chumseng was perhaps the successor, something of the nature of the Hindu sâdgrân, or even a precious stone (which the etymology of the name, i.e. chum = 'precious' and seng = 'stone,' would certainly suggest). The stone or image, whatever it was, could not have been large, as at the coronation ceremony it was hung round the king's neck. The worship was conducted with secrecy, none but the king being allowed to view Chumseng. The king could see him only twice a year. The mysticism attached to the Chumseng worship accounts for the doubt as to what Chumseng actually is. Old people say that Chumseng lies concealed somewhere in Assam at the present day.

The Ahoms performed ceremonies called saïfa aša (before the god of the earth and the State, the latter being on a grander scale than the former) and conducted by the king himself. A ceremony called sarkai, the object of which was the preventing of evil spirits from the country, was also performed, the peculiarity of this observance being that a man who had lost several of his children by death was offered up as a sacrifice. The jiklike, or expiation ceremony (lit. rik = 'call,' and khwan = 'life'), was generally performed at the installation of a new king, in times of danger, or after a victory. The procedure was as follows. The king sat in full dress on a platform, and the priests and astrologers poured holy water over his head, whence it ran down his body through a hole in the platform on to the chief billong or astrologer, who was standing below. The king then changed his clothes, giving those which he had been wearing and all his ornaments to the chief billong. Gait says that the same ceremony, on a smaller scale, was also frequently performed by the common people, especially if, on certain occasions, e.g. when a child is drowned. Much the same ceremony seems to have been celebrated in Manipur State.

Priesthood.—The priests, as has already been stated, were called deodhais. Probably this name was applied to them after the conversion of the king and his court to Hinduism, for in the Ahom language the priests were called sângmun. The Deodhais claim descent from Laoikhri, who is said to have been the companion of the two princes Khunlai and Khuntai when they descended from heaven to earth, and to have acted in the dual capacity of priest and councillor. Although in the old days of Ahom rule the Deodhais composed the king's Privy Council, they were afterwards restricted to priestly duties and to divining events, the latter being thought by the Ahoms a matter of very great importance. Tradition runs that the heavenly princes brought from above the holy triad, and hence the sanctity which is attached to these birds. Some Deodhais near Luckwa (in Sibsagar district) once performed the divination ceremony for the writer's benefit. It was as follows. An altar of plantain trees and a bamboo was set up (hence the bamboo) by the Ahom king, assisted by the Chiring Phukan, as will afterwards be described, the Ahoms possessed various gods, amongst whom the following seem to have been the more important:

- Along or Phu-Ra-Ta-Re (God the creator), Lengdon (god of heaven, the Hindu Indra), Kaokham (god of water, the old Vedic deity Varuna), Lengbin and Lengdin (god and goddess of the earth), and Phai (god of fire, Hindu Agni).

Chumseng, who was daily worshipped at the king's house, was not regarded by himself. According to Ahom tradition, Chumseng was given to the Ahom progenitors, Khunlai and Khuntai, by Lengdon, god of heaven. Chumseng was worshipped more as a fetish—something supernatural, possessing the power to deliver the king and his people. Chumseng was perhaps the successor, something of the nature of the Hindu sâdgrân, or even a precious stone (which the etymology of the name, i.e. chum = 'precious' and seng = 'stone,' would certainly suggest). The stone or image, whatever it was, could not have been large, as at the coronation ceremony it was hung round the king's neck. The worship was conducted with secrecy, none but the king being allowed to view Chumseng. The king could see him only twice a year. The mysticism attached to the Chumseng worship accounts for the doubt as to what Chumseng actually is. Old people say that Chumseng lies concealed somewhere in Assam at the present day.

The Ahoms performed ceremonies called saïfa aša (before the god of the earth and the State, the latter being on a grander scale than the former) and conducted by the king himself. A ceremony called sarkai, the object of which was the preventing of evil spirits from the country, was also performed, the peculiarity of this observance being that a man who had lost several of his children by death was offered up as a sacrifice. The jiklike, or expiation ceremony (lit. rik = 'call,' and khwan = 'life'), was generally performed at the installation of a new king, in times of danger, or after a victory. The procedure was as follows. The king sat in full dress on a platform, and the priests and astrologers poured holy water over his head, whence it ran down his body through a hole in the platform on to the chief billong or astrologer, who was standing below. The king then changed his clothes, giving those which he had been wearing and all his ornaments to the chief billong.

Gait says that the same ceremony, on a smaller scale, was also frequently performed by the common people, especially if, on certain occasions, e.g. when a child is drowned. Much the same ceremony seems to have been celebrated in Manipur State.

Coronation.—The Royal Coronation ceremony was celebrated with great pomp at Choraida hill in the Sibsagar district, the Swargadeo and his principal queen riding on elephants. On such occasions the sacred Chumseng was brought out from the Royal arcana and hung round the neck of the king, who was girt about with the sword hengsdang (the Ahom 'excalibur'), three feathers of the sacred birds (kni-chan-miung) being placed on his turban. After planting two banana trees on Choraida hill, the king returned and took his seat on a bamboo stage (holong ghar), under which had been placed a specimen of every living creature, including man. The king was bathed with holy water, which he sprinkled on the head of the king, taking the sacred sword, killed a man, a criminal being selected for the purpose. A great feast was afterwards given to the people, all of whom assembled to do homage to the new king.

As Gait says, 'The Ahoms were endowed with the historical faculty in a very high degree; and their priests and leading families possessed burumus or histories, which were periodically brought up to date. They were written on oblong strips of bark, and were very carefully preserved and handed down from father to son.'

A detailed description of the Ahom system of chronology will be found on p. 361 of Gait's History of Assam. It is interesting to note that it is of like character with that employed by the Chinese, Japanese, and other Mongols. This fact is another link in the chain of evidence in favour of China having been the cradle of the Shina race.

It is beyond the province of this article to give a sketch of the Ahom language, nor, indeed, is this necessary, since the treasures of the 'Linguistic Survey' of India have been made available to the student. Not only in vol. ii. of this series, but also in a separate monograph, Dr. Grierson has treated the Ahom language. According to Dr. Grierson, Ahom is one of the oldest forms, if not the oldest, of the Shina languages. It is more akin to Siamese than any of the modern Shina.
What is extraordinary, considering the power which the Ahoms wielded, and that they were for centuries the ruling race in Assam, is the completeness with which their language has been preserved. In the present Assamese language, we have only the authority of Dr. Grierson, there are, barely fifty words which can be traced to an Ahom origin. From the time when the Ahom kings accepted Hinduism and imported Hindu priests from Nadiya in Bengal and elsewhere, the language began to change, slowly at first, but in the end very rapidly, until at the present day there are probably not more than a few dozen men all topos who possess even a smattering of the ancient tongue. It is perhaps due to the irony of fate that Assamese, the language which displaced Ahom to the extent that it shares the same destiny; for, since in addition to Assam of Eastern Bengal with its meaning millions of Bengali-speaking inhabitants, it seems impossible that a weak vassal will be able to withstand a powerful Bengal onslaught, unless special measures are taken to protect it from being crushed out.

---

AHIRMAN.—The later Persian designation by which the devil, or principle of evil, is known in the religion of Zoroaster. The ancient form of this name is Angra Mainyu in Gathic Avesta (Bndahå, i. 10). In Younger Persian (Yasht, i. 10; Dåt-Sparam, i. 9), and Younger Avesta (Vendidåd, xxvii. 28; Sad Dar, lxx. 3), he is not a fallen angel, like his counterpart in Christianity. His standing epithet is ‘the demon of demons’ (Venddåd, xii. 1) and he is the destroyer of the world (Artá-Vîqé Yãma, ch. e.) and full of malice (Båndå, i. 10). As a pernicious power, Ahirman is represented, especially in the Younger Avesta and the Pahlavi books, as thwarting the beneficent influence of Ormuzd by means of antagonistic creations (e.g. Vendidåd, i. 1 ff.; Yasht, xii. 77; Yasna, ix. 8; Bndahå, i. 12), and in constant struggle with the spirit of light (e.g. Yasht, x. 97, xii. 13, xviii. 2, xii. 46, 96; Yasna, x. 15). He strives to persuade men to be hostile to Ormuzd and win them over to his own side (Båndå, i. 14; Zåt-Sparam, i. 8), and his greatest victory consists in inciting a human soul to rebel against Ormuzd. His complete satisfaction is found in securing a human soul on his side (Dåt-Mandag-kârit, xli. 4, 5). So mighty is his work, moreover, that even the Yasna, or ‘the Song’, did not succeed in overpowering him, and it was only Zarathushtra who confounded him (Yasht, xii. 19, 20; Vendidåd, xix.; Dinkart, vii. 4, 94 sq.). From Ahirman proceeds all disorder, and it is the source of all diseases (e.g. Yasht, xxi. 1, xxx. 5; Vendidåd, xx. 3, xxii. 2, ii. 29; Yasht, xiii. 14–13). He attacks the creations of Ormuzd, and introduces imperfections, disease, and death. He killed Gydåmart, the primeval man, and Såxihårvan, the first man (e.g. Yasht, xxvii. 10, 11, 17–19, xxviii. 1–17). Así Dakhå for the destruction of the world of righteousness (Yasht, xiv. 34). Ahirman is the head of a rabble crew of demons, fiends, and arch-fiends, who are mentioned hundreds of times as dakhås (Mod. Pârs. ‘dixås’) and drehås in the Avesta and later literature, and conceived of as abiding in hell, in ‘endless darkness’, ‘the worst life, the abode of Deceit and of the Worst Thought’ (Yasna, xxxii. 29, xxxii. 23; Vendidåd, iii. 35).

The final defeat of Ahirman is to be brought about by man. At the resurrection, Ahirman, being impotent and helpless, will bow down before the good spirits (Yasht, xii. 96), and his doom, according to the later books, is to be transported to Dât-Sparam (e.g. Yasht, xii. 97, 127), he is ingress Azí Dakhå for the destruction of the world (Dåt-Sparam, xxxiv. vii. 28–30). At that time Ahirman will be driven from mankind (Dinkart, tr. Sanjana, p. 448), and, rushing to darkness and gloom in his impotence (Båndå, xxxii. 30), will be forced to seek refuge in the earth (Westergaard Fragments, iv. 3), where he will be imprisoned (Dinkart, tr. Sanjana, p. 151) or destroyed (Venddåd, xii. 151, 157–170).

Attempts have been made to trace the beliefs between Ahirman and Ahi, the sky-serpent of ancient India, as also with the Máraka of Buddhism, but these are too few and too remote to deserve much consideration. The nearest resemblance is that between Ahirman and Satan.

Owing to the emphasis which the Avesta and later books lay upon recognizing the principle of evil as an active agent in the life of the world, Zoroastrianism is frequently spoken of as Dualism. In the Parsis, on the other hand, the term is almost without active meaning, even vigorously rejecting the application of the term to their religion, and their most advanced teachers deny attributing any personality to Ahirman except as a principle or force. Further discussion of this problem, and the attitude in ancient as well as
AHUNA-VAIRYA

modern times with regard to the subject, is reserved for the article on Dualism. See also Ormazd, Zoroastrianism.

LITERATURE.—For detailed bibliographical references on the subject, consult Jackson, The Iraniische Religion in Dieger and Kubin Grundriss der Iran., Philol., ii. 694-698, and also Spiegel, Eranische Alterthumskunde, i. 119-126, Leiden, 1885. Orbann, Ormazd, Paris, 1897, Casartelli, The Mazdaanisches Religion under den Sassaniden (in German), 1901; Steuer, Der Persische Gott Gdthds, 1898; Barani, Das Steinrelief von Ahunaver to the History of Religion.
The allusions to this formula which occur in the commentary upon it in Yasna xix, should be taken as apokryphal, or, being correct, modernized, and consequently slightly altered in the course of transmission. Though its occurrence is not very frequent, it is so unmistakable as to be almost equal in importance to the prayer In the original Avesta, however, as well as in the religious ideas which are more inclusive than those of the Gathas and the rest of the genuine Avesta. They (the Gathas) constitute a principal focus of light for the history of religious experience. But we must be content with their high claims at one point, and with searching investigation at every step. They do indeed prove to be what at first glance they seem to be; and they stand almost isolated in this respect, as being in their day among the most serious records of religious convictions and sentiments. But they imperatively demand all possible corroboration as to their value in regard to the vital consideration in question. Now the Ahunaver is one of their most important supports. Hence the high scientific value of its interpretation, although this is of a naturalistic inclination. The fact that one formula refers to the Gathas, certainly prove that the moral idea prevailed extensively in Iran as well as in India. This is extremely interesting simply as a matter of psychological experience; but it implies beyond all question a widely felt and practical religious influence of the moral idea upon the sentiments and lives of the populations amidst which this lore prevailed. Here we have a point of momentous consequence, which possibly explains also why Cyrus was so ready to further the religious as well as the political prosperity of the Jews, with all that this entailed in the return of the people and in the restoration of their sacred Temple with their established faith.

It is apparent from the translation given above that all ideas save the moral one are actually and instinctively excluded from the lines. Neither Asa, nor Vohuman, nor Khathra is here used even in its high secondary sense as the name of one of the archangels themselves, each a personification of the supreme ideas of Truth, Benevolence, and Lawful Order,—while the corresponding word of the Gathas is retained in the Arabic and Persian religious ideas, and gives the entire idea a new value.

3. Later sanctity.—The Ahunaver, having acquired a singular sanctity for the reasons given, was freely used by the religious fancy of a somewhat later age. Like the ‘sword of the Spirit,’ it becomes a weapon in the hand of saints and angels. Zarathustra himself, in his later traditional role, and in his Temptation, repels Angra Mainyu with it, while Srauta wields it as his emaithia, i.e. Asa, ‘halber.’ It would, however, be precarious simply to assert that the above-noted characteristic of the formula was the effective and immediate cause of the somewhat excessive importance afterwards attributed to it. Its sacrosanct character, if one might so express it, was probably owing to its brevity plus its allusions to the Gathas, or even to some purely accidental intellectual circumstances. It is often used perfunctorily like the Pater Noster, if not indeed almost as a potent instrument of magic.

4. Relation of the Ahunaver to the History of Religion.—The allusions to this formula which occur in the commentary upon it in Yasna xix.
AHURA MAZDA—AINUS

have been widely exploited in critical and semi-critical studies upon the subject of the Philonian-Johannine Logos; and it certainly constitutes a secondary factor to be reckoned with in our decision as to the history of exegesis at the places indicated. Such expressions as the Ahunavater being 'the word uttered before the heaven, the earth,' etc., do indeed recall the terms in the Prologue of St. John: 'In the beginning was the Word.' It has been supposed that these expressions in Yama xix. gave the idea to this 'Word' of St. John. Oppert, we believe, first suggested the connexion. But possible as such an initiative might be, the present writer does not regard it as at all probable, in view of the Greek Logos with which Philo was so familiar. Besides, there is no saying what the date of Yama xix. may be; it may even have been Sassanian. Commentary of course appeared almost as soon as a text was issued; and our Pahlavi commentary texts, however late they received their present forms, as 'edited with all the manuscripts collated,' cannot fail to have preserved hints from the very earliest ages. Naturally, these were sometimes much covered up by over-growths; and this Yama xix. must certainly have had predecessors. Philo may and indeed has some of the latter doctrine from the semi-Persian books of the Bible, from the Apocrypha, and from the exilic Talmud, so far as they were then current, and from the many related documents of which we have never known the daxis of Yama xix. may be; such religious doctrines must have reached both Jerusalem and Greek Egypt; but to suppose that Yama xix. influenced this Philonian-Johannine Logos of the Prologue seems to us utterly impossible to the question, in view of the history of Philo's development. See artt. Logos and Philo.

AHURA MAZDA.—See ORMAMZ.

Ainus. [J. Batchelor.]

1. The Ainu habitat.—The few Ainus now living—and at the present time there are less than 20,000 of them left—may be looked upon as the very last remnant of a great pre-historic race, which was, without doubt, once spread over an area extending from the North to the southern limits of old Japan. An indisputable proof of this lies in the fact that very many geographical names in Siberia and throughout the whole of the Japanese empire, Formosan islands, are discovered to be of Ainus origin. Moreover, Japanese mythology, as collected in the Japanese work known as the Kojiki, or Records of Ancient Matters,1; and Japanese history as found in their Nihon-gi, or 'Chronicles of Japan;' both of which works date back to the 8th cent. A.D., bear unmistakable evidence to the fact of the Ainus being an aboriginal race of Japan.

2. The Ainus religion pre-historic.—There is no great difficulty in determining the descent, nature, and relationship of such religions as have arisen during historic times; such as, for example, Islam, Judaism, Muh-mudanism, Buddhism, Taoism, and others of less importance. But a vast majority of ancient religions, of which there are still to be found some living examples left among scattered tribes and races, had their origin in historic times, concerning which neither specific documents nor trustworthy traditions are to be had. The Ainus religion is one of these. Indeed, like indigenous Japanese Shintòism, it is a religion without any known historic beginning, and has no recognized founder.

3. The native religion still unchanged.—That the Ainus religion is the same to-day in all essentials as it was in pre-historic times, may be inferred from the inherited genius of the language, as well as gathered by way of auxiliary from the customs of the people and their present-day practices of rites and ceremonies. It is on record that in the year 1620 the Jesuit Father Hieronymus de Angelis laid a foundation as to Ave and the religious times, concerning which neither specific documents nor trustworthy traditions are to be had. The Ainus religion is one of these. Indeed, like indigenous Japanese Shintoism, it is a religion without any known historic beginning, and has no recognized founder.

4. The Ainus religion originally monotheistic.—The term for 'God' defined.—Although the Ainus religion, as now developed, is found to be extremely polytheistic, yet the very word in the Ainu language, 'God,' being of the singular number, seems to indicate that in its beginning it was monotheistic in nature. This word is Kamui. This is a compound of three distinct roots, the chief of which is in kó, whose meaning is 'above,' 'above,' 'top,' and so forth. It is like super and κόσμος. It occurs in kando, 'heaven,' 'sky'; and is found in many words where the sense of super is to be conveyed. The fundamental meaning of με is 'spreading,' 'creeping'; and kamui, which is the oldest Japanese word for 'God,' means, in Ainu, 'covering,' 'Aton in his shrine, London, 1895, p. 7, gives practically the same derivation for the Japanese word as that which is probably connected with kōmii, 'to cover,' and has the general meaning of 'above,' 'superior.'
"creeping over." I is a particle which has the power of changing some parts of speech into nouns, as well as being a personal pronoun meaning ‘he, she, or ‘it.’ Thus by derivation Kamui means ‘that which’ or ‘he who covers’ or ‘overshadows.’ And so our thoughts are made to revert to the origins of the Aryans and to the Ten, ‘heaven,’ of the Chinese.

The term Kamui is of wide application, and may be used as a noun or adjective at will. But, however employed, it never loses this quality of chief in station, quality, or power. Thus, used as an adjective, it has the following shades of meaning. Kamui nupuri, ‘a great or high mountain’; Kamui reki, ‘mighty wind’; or a ‘terrific storm’; Kamui nonno, ‘a pretty flower’; Kamui chookiki, ‘a large animal,’ and so forth. When used as a suffix, Kamui is always a noun, e.g. Nupuri-kamui, ‘things of the mountains;’ Chokreen-kamui, ‘the gods of trees.’ Also Ya-ru-kamui, ‘gods upon the land’; Rep-un-kamui, ‘gods in the sea.’ It is not the mountain or tree or flower or land or sea that is called ‘God and worshipped, but the spirit or spirits supposed to dwell in these objects. Otherwise the construction of the term would have to be changed; as, for example, Nupuri-kamui should be changed into Nupuri-ne-kamui, and Chokki-kamui into Chekki-ne-kamui.

5. The Supreme God distinguished.—After monothelionism had given place to polytheism, it became necessary for the Ainu to distinguish between the deities. Making gods many rendered it imperative to have some term by which to denote the Supreme God. Hence, when speaking of the ‘God of Gods,’ the Ainu gave Him the name of Pass-kamui, ‘Creator and Possessor of heaven.’ All the rest are termed Yaityan kamui or ‘common deities,’ also ‘near’ and ‘distant deities’; Pass is an adjective, points to rank and authority, its first meaning being ‘weighty,’ ‘true,’ and ‘superior in rank.’ And so Pass kamui may well be translated by the word ‘chief’ or ‘true God;’ or, as the Hebrews would have said, ‘God of all.’ Thus far, then, we have reached a real basis for two articles of Ainu belief, viz. (a) ‘I believe in one supreme God, the Creator of all worlds and places, who is the Possessor of heaven, whom we call Pass-kamui, ‘The true God,’ and whom we speak of as Kodan kara kamui, Mossiri kara kamui, Kando kara kamui; (b) ‘I believe also in the existence of a multitude of inferior deities (Kamui), all subject to this one Creator, who are His servants, who receive their life and power from Him, and who act and govern the earth for Him.’

6. Special names given to the Creator.—In asking for proof of the existence of a Creator, the Ainu point to the flash of lightning and call it the shining forth of God’s glory, and to the thunder, as if it is the sound of His voice. The Milky Way is called His river. Two specially favourite names one sometimes hears applied to Him are Tuntu and Shinda. The first of these, Tuntu, may be translated by ‘brace,’ ‘support,’ ‘pillar,’ ‘sustainer,’ ‘upholder.’ God is addressed by it often in prayer when the thought uppermost in the mind of the worshipper is that of God as the upholder and sustainer of all things. The second word, Shinda, means ‘cradle.’ The Creator is so named because He is looked upon as the God in whose hands rest all the things of the universe. He is also called upon ‘our nourisher’ (Batchelor, The Ainu and their Folklore, London, 1901, p. 582 ff.).

7. Evil spirits called Kamui.—Hearing the meaning it does, it is not surprising to find that the term Kamui is applied to demons. Satan and all his angels are called Nitne kamui. Nitne means ‘stiff,’ ‘oppressive,’ ‘heavy’ as dough. Evil spirits are thus naturally looked upon as the oppressors and enemies of mankind. Indeed, as often put it, ‘they are very difficult to get along with.’ They are extremely numerous and quite ubiquitous. And they even are expressly said to inhabit the very same objects, in many instances, as the better deities themselves. Hence the good and evil genii of trees are brought to notice. Tree-blight and all accidents from trees, for example, are caused by the evil genii; while the buds, leaves, flowers, and useful fruits grow, it is supposed, through the favour of the good genii.

8. Special meanings of the term Kamui.—A careful analysis of the word Kamui, taken in connexion with the various objects to which it is applied, makes the following facts clear: (a) When applied to spirits supposed to be good, it expresses the quality of beneficence and benefaction. (b) When referred to supposed evil spirits, it indicates that which is bad and most to be dreaded. (c) When applied to reptiles, devils, and evil diseases, it signifies the most hateful, abominable, repulsive, and harmful. (d) When applied especially as a prefix to animals, fishes, or birds, it represents the greatest or most fierce, or the most useful for food or clothing, as the case may be. (e) When applied to persons, it is a more title of respect expressive of honour, dignity, and rank. Thus we should think that, because an object has the term Kamui applied to it, this in no way implies that it is looked upon as divine or as necessarily worshipped. Demons are called by this term, but many of them are not even revered, though, out of fear, they may be propitiated with offerings. Men are called Kamui, but they never have divine worship paid them.

9. God and Creation.—It has been seen (§ 5) that the supreme God is sometimes spoken of as Creator. But, to save confusion of thought, the method of creation should be explained. The ideas, matter of all kinds is considered to have existed from all eternity, and other things to have been evolved out of it. Ex nikho nikhi ft is the motto of this people, so that one is prepared to find certain ideas connected with the metamorphotic cult lurking in their theories about the origin of things. But with the Ainu metaphysicia is by no means a natural change, for upon examination it is found to partake in some instances of the nature of special creative acts performed for the specific purpose of stock. In the earth, while in others it is made to take place as a predetermined punishment by a stronger power for some evil done. Thus, for example, deer and fishes of some kinds are said to have been made to develop into their present form by of similar creatures cast out of heaven after a celestial feast (427, 289). Some snakes, so theory asserts, came out of a pole, and others out of a log of wood (360); men were changed into frogs as a punishment for some misdemeanour (340), another into a flower (360), and a child into a goat-sucker (160); the hazel-rod came from a piece of deer skin (447), and a Japanese who had lost his way in the mountains was metamorphosed into a green pigeon (444); some bears, demons, foxes, and cats were developed, so we are informed, from sparks of fire and ashes (467, 501), while hares were evolved from hair cast out of heaven (614); in some instances, eagles, we learn, came out of twisted grass (605), and in others from a piece of wood (365); squirrels, the Ainu would have us believe, were made to come out of a pair of old cast-away sandals (609); goats, mosquitoes, and eagles are said to have been evolved from the ashes of a goblin (74), and so on.

God and the production of dry land.—The legend concerning the first appearance of dry land is peculiar. A bird is supposed to have assisted in bringing it forth by hovering over the original substance, it is said, for three weeks, and then by evoking the world was a great dusty quagmire. The water was hopelessly mixed up with the earth, and nothing was to be seen but a mighty ocean of bare swampy swamp. All the land was mixed up with, and aimlessly floating about in, the endless seas. All around was death and stillness. Nothing existed in this chaotic maze, for it was altogether without another trace of animal life; nor were there any living fowls flying in the airy spaces above. All was as gloomy as the depth of the clouds had their demons, and the Creator lived in the highest heavens, with a host of subordinate deities. At last, the true God determined to make the earth habitable, and made a water-wagglet, and sent him down from heaven to produce the earth. When this bird saw the dreadful condition the world was in, he was almost at his wits’ end to perform his allotted task. He fluttered over the water with his wings, trampled upon the muddy matter with his feet, and beat
It down with his tail. After a very long time of hovering, trampling, and tail-wagging, dry places began to appear, and the waters gradually became the ocean. And so the worlds were in the raised out of waters, and caused to float upon them. Therefore the Ainu call the earth by the name Mossiri, i.e. "floating land," and hold the wagtail in great esteem.

In Ainu objects are visible or invisible in principle, and each spirit agency being necessarily conceived of as having the form (corresponding to it) an outer, visible, and substantial, though not necessarily material, form—a form by which it reveals itself, through which it acts, and by which it makes itself felt. These two naturally go together, though they may be separated for a while at times (as in dreams, for example, when the soul is supposed to leave the body for a time), owing to special causes or for particular purposes. But the normal condition is for them to act together, the inner essence through the outer form. Further, the inner spirit may, if necessary to carry out some extraordinary purpose, even assume the outer form of an object not belonging to its class, and make itself seen and heard through it. In this we discover the basis for the thought of demoniacal or other possession.

10. Ainu ideas about anthropomorphism.—Nuttall, in his Standard Dictionary, defines anthropomorphism as being the ascription (c) of a human form to deities, (b) of human affections to deities, and (c) of human faculties to the lower animals. This definition is quite Occidental. An Ainu would not think of putting it in that way. He would certainly change the order by making it clear that man is the one and only God the giver. He does not say, for example, that the deities are anthropomorphic, but that man is theomorphic in so far as his higher nature is concerned, and demon-like in everything that is evil about him. To an Ainu, whether in good or evil, are ascribed the most beautiful and the most hideous attributes of mankind. But it must not be supposed that because the people think of an object as being endowed with a personal, conscious life which can think and will and act for good or ill as it pleases, it is therefore in every instance anthropomorphic in structure. The inward and outer forms differ, and both will, it is thought, differ for ever. The outward form will always remain the same, whatever change be made of the spirit form. It will be the same with all animals and trees, or with a blade of grass or a stone. As they are here, so will they be for ever in the next world. There is to be no change in them. The only change that can take place will be in the qualities of good and evil, for then evil will become more evil and goodness better.

11. The word for ‘spirit’ defined.—In discussing Ainu religion, it is always necessary to keep in mind the meaning of the word in use for ‘spirit’ or ‘soul.’ The term is peculiarly interesting, and deserves careful consideration. Its root has nothing whatever to do with such expressions as चो, चुक, चुकुरा, ‘shade,’ ‘breath,’ and so forth. It suggests quite a different set of ideas. It is rama or ramachali, to which the Japanese term tamashii or tama is in all probability allied. But the root of rama is ram, which is a noun meaning ‘mind,’ ‘understanding,’ ‘intellect,’ and then ‘spirit,’ ‘soul,’ ‘essence,’ the ‘meaning of a word.’ The final at, which at times is heard as chi, signifies existence, the root being a, ‘to be.’ Hence it is that gods and devils, elves, fairies, gnomes, goblins, and all spirits, of whatever race or order they be, are looked at from the point of intelligence rather than that of life alone (cf. § 10).

12. The sun a nature-god.—The Ainu religion, then, being thus animistic (see § 10) and anthropomorphic (see § 12) in principle, and each spirit agency being necessarily conceived of as endowed
with mind or understanding (§ 13), the process of religious development becomes natural and easy, and nature-gods may be created both ad libitum and ad infinitum. The sun above us, for example, is seen to move; there is nothing haphazard about him; he rises and sets with the utmost regularity, and casts his light and splendour with the evident good purpose of dispensing his warming light and genial heat to the world. There is, therefore, it is thought, a living light-giving spirit (ramat) within the body or num, i.e. ‘ball,’ of the sun, by whose influence he shines and by whose power he moves. This is one, indeed, who rules us much of the Egyptian Ra, for he too was supposed to be directed by a divine agency and personal will. In his own sphere among the lesser lights of heaven this stupendous and mysterious orb is chief and king, and the region of the east, whence he rises, is held sacred. Inferior to the Creator (see § 5) yet superior to the sun in power is another spirit, malignant in nature. It is he who is supposed to be the cause of solar eclipses, and he is thought to be the very incarnate manifestation of the bodily evil. When the sun is eclipsed, this orb is supposed to be dying. That is to say, his intelligent life—i.e. his ramat— is departing from the outer visible substance and leaving the num black, cold, and dead. Yet he is never allowed quite to die, for a good superior spirit, who is either the Creator himself or His deputy, always, out of a kindly regard for mankind, graciously brings him back to his normal condition.†

15. The moon.—The moon, who is said to be the wife of the sun, is not worshipped. There is a legend about her which runs as follows:

The sun and moon are husband and wife. They are divine beings whose province it is to rule the heavens and the earth. The male is appointed to do his work in the daytime only, and the female at night. Sometimes, however, they may be seen travelling across the heavens in company. The divine sun is the larger of the two, has the brightness and best clothing to wear, and shines the most clearly. The moon is round like a cake of millet, and is clothed in dark and white garments which are worn one over the other. Now, the moon is sometimes invisible. When this is the case, it is because she has gone to visit her husband.

16. Dualism.—In mentioning the supposed cause of solar eclipses (see § 14) we were brought face to face with the fact that dualistic ideas are rampant in the Ainu religion. Indeed, they are as much in evidence among the Ainu as they are among the Avestae, where the struggle between Ormazd and Ahriman is so clearly depicted; or as they are in the Rig Veda, where Indra and Vrtra form so constant a burden. The basis of dualistic ideas may be found (in so far as the Ainu are concerned) in their conception of spirit as defined in § 13, and of anthropomorphism, as explained in § 12, taken in connexion with the antitheses of nature. The Ainu sees so many contrary things ever present both within and outside of themselves, lighting, as they suppose, so much and so often against one another. Thus, light gives place to darkness, and bad weather to fine; rejoicing may be with us to-day, but to-morrow men must weep; this morning a child is born, and in the evening it dies; disease follows health, and good is succeeded by evil. Why, the Ainu asks, is this so? The explanation is simple. He who is the origin of light and life, of health and all good, is Himself the good true God (Pase Kamui, see § 8); while the source of disease, death, and all harm and evil in this degree and kind is naturally thought to be the Nitre Kamui, and all his agents the demons (see § 7).

The Samoyedes believe in a supreme God of heaven called by this very name. The Tibetan name for God is Nuna. Is it possible that these are all connected?†

† Hardwick, Christ and other Masters, London, 1893, p. 443.

† For an account of an eclipse of the sun and the Ainu method of curing it, see TASJ, vol. xvi. part i. 1897.

No clearer illustration of the doctrine of dualism can be found than that exhibited by Ainu notions of the Kamui or superior spirits of the sea. The chief of these are two in number, named Mo-aka and Shi-aka. They are of equal rank and power, but are very different in character, and together with all the spirits of the ocean are called Rep-un-Kamui, i.e. ‘deities in the sea.’ Shi-aka, i.e. ‘wild,’ ‘rough,’ ‘strong,’ ‘uncanny,’ is continually pursuing his brother Mo-aka, i.e. ‘Uncle of peace,’ or ‘calm.’ Mo-aka is good, and is beloved, and is always, and Shi-aka is dreaded and disliked as being evil. Though he is not thankfully worshipped, he is often propitiated by means of adulatory speeches and offerings, because of the cause of all harm done by and upon the sea, while his brother rules the calm. Another good illustration of this subject is afforded by the account the Ainu give of the devil’s attempt to swallow the sun. (See AF 69.)

17. Fire-worship.—It has already been pointed out in § 14 that the greatest visible nature deity of the heights is the sun. Of like nature is the chief deity of the terrestrial globe, fire. The personal essence of fire, that is to say, its supposed spirit, when upon the hearth, is said to be of the feminine gender, and, besides being called Fuji, Unji, or Huchi as the case may be (see § 3), is also named Inou, Kamui, i.e. the divine being who rears us,” and Inou-Hu, i.e. ‘the ancestress who rears us’—Fuji or Huchi among the Ainu being, or ‘ancestress,’ and Inou to ‘sustain’ or ‘to bring up.’ She is the chief in her sphere and class, and is sometimes spoken of as a disease-destroying and body-purifying spirit. As she is of so great importance, and is held in such a position, it is not surprising to find that fire is in comparison most often worshipped. Indeed, so high is she supposed to be, that she is sometimes spoken of as the ‘Guardian of the world.’ With respect to her, there are several tabued things which go to show how she is reverenced. Thus, for example, a burning log must not be struck with anything; the ashes must not be knocked out of a pipe into it; nothing must be taken out of it with a knife; a pair of scissors must not be placed near it; nail parings, saliva, and refuse of any kind must not be suffered to fall into it. That this goddess is looked upon as superintending matters connected with the house in which she dwells and is burning, may be gathered from such a prayer as the following: ‘O thou god of fire, have mercy upon us and take care of this house. And that she is thought to attend to the wants of the family is proved by the following address and prayer made to her at the time of a marriage: ‘We have now settled to marry our son and daughter; therefore, O thou goddess of fire, hear thou my prayer. Keep this couple from sickness, and watch over them till they grow old.’ And that she is feared is proved by the fact that she is supposed to be the chief witness for or against a person in the day of judgment (see § 40). When that takes place, it is said that she will present the great judge of all with a perfect picture of every word spoken and action done by each individual being, and from her there can be no appeal. But not only are prayers said to the goddess of fire, offerings also are sent to her by means of fetishes, and libations are poured out for her acceptance. A certain beer is brewed, which is mostly done at the end of the millet harvest, and immediately before the seed-sowing time, the Ainu always make a kind of inou or fetish out of wood, which they call inumba.

INUMBA - SHUUTU - INAO OR REFUSING-CLUB FETISH.
shutu-inao, i.e. 'refining-club fetish.' This instrument is used as a messenger to the spirit of fire, and is sent to her with some leaves at the time of refining. It will be seen in the illustration here given that a hollow place is left at the top of the club. The club is called the 'seat' or 'nest,' and is made so as to hold the leaves presented. When these have been put on the 'seat,' drops of beer are offered to the various deities, and the fire is worshipped as follows: 'O divine grandmother, we drink beer to thee; we offer thee inao. Bless this household and drive away all evil. O keep us from all harm.' After this, prayer is offered to the spirit of the fetish itself thus: 'O refining-club fetish, take the leaves now placed upon thee to the goddess of fire, and thank her on our behalf for all the blessings she has bestowed upon us. Tell her of our estate and welfare, and solicit her continual help and favour.' After having been thus offered and addressed, the fetishes are sometimes reverently burnt upon the hearth while prayer is being said, and so in a way, the leaves are sent to the spirit world. Sometimes, however, they are not burnt, but set up by the doorway as offerings to the deities of doors. The husband of the goddess of fire, that is to say, 'the household inao' mentioned here, is regarded as representing that class of deities whose province it is to attend to the well-being of vegetation. They are said to be of a good nature and disposition, and are consequently worshipped. This couple seems to represent the male and female principles of nature. The natural law by which rain descends and clears away is represented by one called Pe-konchi-koro-guru, or 'He who wears the water-cap.' The Ainus say that this deity appears as a cloud. After it has appeared, they are not thought to be worshipped. There is a legend concerning him which runs as follows: 'Once upon a time the Ainus were at war. The enemy had pressed them very hard, and had set fire to their villages. Up to that time they had worshipped all the deities they could think of for deliverance. Soon a large cloud arose from the mountains, and, floating directly to the burning village, rained heavily upon it and extinguished the flames. They then learned for the first time that this cloud was a god. He has been worshipped ever since this event, and the name 'He who wears the water-cap' was then given him.' Another class is represented by one called Ikoro-koro-guru, or 'He who possesses great treasure.' Another name given him is Nupuri-koro-Kamui, or 'The divine possessor of the mountains.' He has yet a third name by which he is known, and that is San-ru-i-toro-Kamui, or 'The divinity with the large footprints.' This deity is the representative of such animals as are worshipped. When he makes himself visible, he is said to come always in the bodily form of a bear, and it is supposed to be his special business to attend to the wants and general welfare of the forests and mountains. In § 14 the god of the air is spoken of as being the god of the winds. Like the god of fire, the deities of the air are found to be very numerous. And they too may in some cases be regarded as personifications of the laws of nature. After the god of the sun mentioned in § 14 comes one called Shi-nish-e-ran-guru, or 'The person who comes down to the highest clouds.' He has a consort whose name is Shi-nish-e-ran-mat, or 'She who comes down to the highest clouds.' These are both worshipped, and they are supposed to move the clouds which they inhabit. Then follow Nochiu-e-ran-guru and his consort Nochiu-e-ran-mat, i.e. 'He' or 'She who comes down to the constellations.' It is their joint duty to attend to the shining and well-being of the stars. These also are worshipped. The last class to be mentioned is supposed to attend to the lower clouds, and are called Urara-e-ran-guru and Urara-e-ran-mat, i.e. 'He' or 'She who descends in fogs.' They are said to be worshipped by some.

20. The demons of land and air.—In all things the Ainus are firm believers in an almost co-ordinated array of hostile deities who manifest their malignant nature by creating disease, death, and every kind of evil. Speaking of these matters, an Ainu once said to the present writer: 'As the demons of fire, the air are so near this earth, it is possible for them to pay us frequent visits, and even to dwell among us. This accounts for so much that is evil in the world.' Referring to the dryads of the forests, he said: 'There are a great number of them. The men who work evil to mankind, and though dwelling in the forests and mountains, they have their real home in the air around us. They are the servants of the prince of devils.' Whirlwinds also, however small they may be, are looked upon as evil, for they are seen to arise from the fire, the outlet of which is represented by the name Nituniarase, or 'Aunt of swamps or marshes.' And she, as her name implies, is supposed to have her home in fens, moors, and other damp places. Very many of these are tied up with demons, and ghouls are thought to be her offspring, and those which owe their origin to her by the name of Toi-kekunra. The following legend gives a fair idea as to what the people consider them to be like:

All ghosts are closely related to the demon of swamps. They are very large and have extraordinarily big heads, while their hair is always rough. When seen, it is nearly always found to be standing upright. However, they do not appear after night, and are but dimly seen, one cannot tell exactly what they are like. In order to see them, they are supposed to be divided in order to bewitch people, and to do them harm. They are dreadful creatures, and, as they are true demons, are much to be feared. They come by their origin in this world. If a man has finished making the world, he throws his mattocks away among the mountains, and left them there to rot. But as they grew decayed, they changed into demons, and the people or upon the ghosts they could think of for deliverance. Soon a large cloud arose from the mountains, and, floating directly to the burning village, rained heavily upon it and extinguished the flames. They then learned for the first time that this cloud was a god. He has been worshipped ever since this event, and the name 'He who wears the water-cap' was then given him.' Another class is represented by one called Ikoro-koro-guru, or 'He who possesses great treasure.' Another name given him is Nupuri-koro-Kamui, or 'The divine possessor of the mountains.' He has yet a third name by which he is known, and that is San-ru-i-toro-Kamui, or 'The divinity with the large footprints.' This deity is the representative of such animals as are worshipped. When he makes himself visible, he is said to come always in the bodily form of a bear, and it is supposed to be his special business to attend to the wants and general welfare of the forests and mountains. In § 14 the god of the air is spoken of as being the god of the winds. Like the god of fire, the deities of the air are found to be very numerous. And they too may in some cases be regarded as personifications of the laws of nature. After the god of the sun mentioned in § 14 comes one called Shi-nish-e-ran-guru, or 'The person who comes down to the highest clouds.' He has a consort whose name is Shi-nish-e-ran-mat, or 'She who comes down to the highest clouds.' These are both worshipped, and they are supposed to move the clouds which they inhabit. Then follow Nochiu-e-ran-guru and his consort Nochiu-e-ran-mat, i.e. 'He' or 'She who comes down to the constellations.' It is their joint duty to attend to the shining and well-being of the stars. These also are worshipped. The last class to be mentioned is supposed to attend to the lower clouds, and are called Urara-e-ran-guru and Urara-e-ran-mat, i.e. 'He' or 'She who descends in fogs.' They are said to be worshipped by some.
and are very numerous. Toi-pok-un-chiri, i.e. 'The underground bird,' is especially called upon for help by hunters in times of danger; but whom he represents, no one appears to know. Akin to this one is Toikunruri-kuru, with whom is associated his wife Toikunruri-mat. These names mean (or She) close upon the surface of the earth. They are often invoked upon sea-fish by friends of hunters, and are called upon in times of danger. Hopokite-teh, who stands next in order, is said to be the demon who causes stones to roll down the cliffs and mountain sides. These are but classes of demons, for there are many kinds of demons, as the names Shu-, Tone, or Toikunruri, are very numerous indeed. They inhabit all kinds of places, such as the tops and bottoms of mountains, the flat surfaces of rocks, all kinds of flora, stony places, and localities where dust or sand prevails. The winds also have their demons, good and bad, and so have rain, mist, snow, hail, sleet, frost, ice, etc. (see AF, ch. 61).

21. Gods and demons of the sea and rivers.—All the larger kinds of fishes and sea animals have divine honours paid them, as, for example, whales, sea-leopards, sword-fish, salmon, turtles, and sea-tortoises, and so forth. These are all worshipped. So far as one can learn, the principal deities of the sea are as follows:—Rep-un-niri-kata iano uk Kamut, 'The god upon the waves of the seas.' "Whenever he allows himself to be seen, it is said to be in the form of a whale. He is looked upon as the head of all sea-deities, and has many servants, of whom the tortoise and the albatross are his favourites. Prayers are said to this god quite frequently, and the two servants just mentioned are said to act as go-betweens. Messages are conveyed through them and offerings of fetishes and beer are sent by them to him. The heads of these creatures are often to be seen kept as charms, and worshipped by the fishermen. The deity who is supposed to be next in order is called K'ai-pe-chupka-un-kuru, i.e. 'The person who resides in the eastern surf.' As the name implies, he is said to have his home somewhere near the shore towards the east. We are informed that in bodily form he is like a large fish of some kind; but what kind of fish is not now known. He is supposed to be very good, and is therefore often worshipped, and given presents of fetishes and beer. The spirits next in order are the Shi-acha and the Tui-uchi families.

There is an Ainu controversy about this couple, for some the two names are said to represent one object only, and to object the whole. So, meaning 'peace' or 'calm,' is made to apply to the sea side of him, and 'storm,' to his very large, a legend regarding him is as follows. 'Once upon a time two Ainu were out at sea fishing, when they were suddenly overcome by a severe storm. As their boat was in great danger of being swamped, they gave themselves to earnest prayer. Every known god of the sea was called upon for help, but all to no purpose. At length a very large whale, as big as a mountain, was seen to rise out of the water, and gradually came to the side of the boat. It remained there till the distress of the fishers was relieved by the wind and waves. This was no other than Mo-acha or Shi-acha. He was not known before that time, but has ever since been honoured with the prayers of the Ainu fishers.' Other names of this deity are Mo-acha-chun-rupe, 'The bringer in of the uncle of peace,' and Shi-acha-chun-rupe, 'The bringer in of the uncle of roughness' or 'storm.'

The next deity of the sea is a goddess who is known by the name of Chiwush-kot-mat. This name means 'The female possessor of the places where there is salt and fresh water.' It is said to be her duty to watch at the mouths of rivers and allow the fish, particularly the spring and autumn salmon, to go in and out. The specially evil demons of the sea are numerous. The name of the chief is Ko-noru-ru-mat, or 'He who descends upon the calm sea.' He, it is said, causes storms. Any abnormal fish, whether it be abnormal in form or colour, is supposed to be unlucky, and to belong to this demon. When caught, such fish are immediately tossed back into the sea. They are called Ikonnup, or 'things of misfortune.' This demon is married, and his wife's name is the same as his own, except that it has a feminine suffix. All mermaids are supposed to be of the idolizing this matter. He said that he and his father while fishing once caught a kind of tortoise which the Ainu call Amnup. On examination it was much whiter than the others, and this the father considered ought not to have been. On making the discovery, the old man declared it to be 'a misfortune-giving thing.' He therefore cut the foot off, and, letting the tortoise drop into the sea, said, 'Mati Eko-noru-ru-guru alure no, pivitka ne epam yun; O Ko-noru-ru-guru, i give this directly to you, take good care of it.' Next follows the demon called Koi-pok-un-guru. He is married, and together with his consort is said to 'reside under the surf' upon the seashore. Ota-pateh-guru and his wife come next, and they are supposed to be the spirits who 'make the sand fly.'

The river demons are also very numerous, and their names indicate their work. They are: Konumpikot-guru, or 'dwellers in muddy places.' They are said to reside specially near the river banks. Chikuta-pinne Kamuy-ara-kuru, 'Young deity (or feminine principal) presenter of good, and divine male current') comes next. Then there are Chiw-rak-shins and his wife ('they who send the current'), and Koshivunath guru with his wife, i.e. 'persons of the swift current,' and others too numerous to mention. The river deities are called Wakko-ush-Kamui, 'Water gods.' All rivulets and tributaries are said to be their off-spring. They are named Kamui poto, i.e. 'the little hands of the deities,' and Kamui matnepo, i.e. 'daughters of God.' Then there is Petru-shmat, 'the female of the waterways,' and Pet-otok-mat, 'the female source of rivers.' Mermaids are called Pe-boso-ko-shinpuk, i.e., 'mermaids who pass through the water.' They are also called Mihitachi and humunuchi, i.e. 'fat' and 'fleshy devils.'

22. The demons of diseases.—Although, as was shown in § 20, many demons are supposed to have their origin and homes in marshes, yet the Ainus believe that demons of disease come in great measure from the sea, as the following localities are associated with them.

Various diseases from time to time attack the body. Such, for example, are ague, fever, heavy colds, stomach-ache, and scrofula, and consumption. Now, when the Ainu have a complaint, they are supposed to meet together and go to the villages up and down the rivers, and take from each a small quantity of millet, fish, tobacco, stink-cabbage, and cow-peas. These are brought to an appointed place, where the men should also come together and pray. After prayer they carry them to the seashore, and, having made fetishes, reverently place them by their side. When this has been done, they should pray, saying, 'O ye demons of sea harbours, have mercy upon us. O ye demons of disease, ye are fearful beings: we have, therefore, with one accord met together and decided to enrich you with fetishes and various kinds of food. Do ye wait upon those of your kind who have afflicted us, and on our behalf you must, to the best of your power, treat them to take their departure. We present these articles of food for you to eat, and the fetishes are paid as fines. O all ye demons who watch over the harbours, cause the demons of disease to be taken from us.'

23. Fetishism.—The specific doctrines of Ainu religion as relating to the nature of their supposed superior spirits being such as that now stated (see especially §§ 10-13, 16, 17), the way to fetishism is short, direct, and logical. But fetishism is a term which has its difficulties, and must, to avoid confusion of thought, be defined before going further. The name is a Portuguese term derived from fetigos, and has long been in use in Portugal to designate the relics of saints, amulets, and charms in general use by Portuguese sailors. It was applied by Portuguese merchants to objects of many varieties to which the natives of the West Coast of Africa paid religious honour.* In

24. Fetishism in Ancestor-worship.—One of the most important and relatively highest fetishes the Ainus possess—and every family must have this one—is called Chisei koro inoa (the fetish who possesses the house), also called Chisei cungpine ekoaki (‘ancestral caretaker of the house’). It is the province of the spirit of this fetish to assist the goddess of the fire (see § 17) in looking after the general well-being of the family. His special abiding-place is in the sacred north-east corner of the hut, at the back of the family hearth. He is not only worshipped where he stands, but is also sometimes brought out from his abiding-place and stuck in a corner of the hearth, where prayers are actually addressed to him. In the abiding-place of the fire, which in its turn is called the ‘ancestress’, i.e. *fuji* or *hucki*. The way this fetish is made is as follows: A piece of hard wood, such as lisa, say an inch or two in diameter, is taken. This is to form the stem, and is usually about two feet in length. One part is shaved with a sharp knife from top to bottom to represent the front. Near the top a gash is cut across in imitation of a mouth, and a little below this the so-called heart is carefully bound in. This heart, when first given to it, consists of a warm black cinder freshly taken from the hearth and firmly tied with a string made of twisted willow shavings to the stem, which is called the *netoba*, i.e. ‘body’. After the heart has been bound in, a number of willow shavings are packed in to fill up all round so that the stem with its mouth and heart is quite hidden from view. After it has been respectfully made, it is reverently stuck in the ground by the fireside, and the following dedicatory prayer is devoutly said to it: ‘O fetish, you are none other than this house. The gods of the Ainus are more clearly defined by their names. At the present day the Ainus do not seem to look upon this as ancestor-worship; they do not, indeed, know what it is. But the names given them go to show that in its origin it was such.

A curious thing about the fetish is the fact that it is thought to be connected in some psychological way with the present living head of the family in which it has been dedicated. The following piece of lore explains this:

The chief fetish should be made, in so far as its stem is concerned, of lisa, because this is found to be a hard kind of wood and does not quickly decay, even if stuck in the damp ground outside of doors. It is not considered wise to use any other wood than lisa for this purpose, for in olden times a certain man made one of *cerdiphyllum*, the end of which rotted after a short time, so that it fell over. Not many months after, the hearer himself became weak and died. This was owing to the influence of the fetish having been withdrawn. For this reason it is now known that the stem should be made of lisa only, that being the most durable wood of all. However, should a person happen to be in a place where he cannot obtain lisa, he may use either willow or *cerdiphyllum*, but these must not be kept long for fear they should rot away. When they become a little old, they should either be cast away into the forest or reverently burnt upon the hearth before they have the chance of decaying. Others should then be made in their place.

25. Ancestor-worship in general.—Prayers to the dead form a fairly strong feature in Ainu religion. The necessity for them is taught the people thus:

‘If a person cultivates a spirit of selfishness, and offers nothing by way of food and drink to his deceased ancestors, the spirits of the people should warn him, saying, “Foul and wicked person, thou art a fool, and thou dost not understand; thou shalt die a hard death.” If this be said, all the people, young and old alike, will be careful to worship the dead.’ Another short counsel runs thus: ‘Should a person leave his home and go away and die in a strange land, some of his relatives must surely go to his grave and there worship and offer libations. The dead observe all deeds, good and bad; those who do what is right are blessed, and those who do what is evil are cursed by them.

Women are not allowed to take part in religious exercises in so far as the deities are concerned, but they are commanded to make offerings to their deceased husbands and ancestors. The words they are usually taught to say on such occasions are as follows: ‘O ye honourable ancestors, I am sent to present this beer and food to you.’ On being asked why this ceremony should take place, an Ainu gave this piece of lore:

‘The divine -fontina-said, “If the people do good while upon the earth and not evil, though they die young they go to heaven. When there, they have good hunting.” It is good for people on this earth to offer those who have gone before to Paradise food, beer, and libations. Not to do so shows lack of filial respect. Those who have departed still live and take an interest in those left behind. They should, therefore, be revered; unless respect is paid to them they will curse you. Those who have departed will not accept offerings from selfish people. Those who have departed still live and take an interest in those left behind. They should, therefore, be revered; unless respect is paid to them they will curse you. Those who have departed will not accept offerings from selfish people. Those who have departed still live and take an interest in those left behind. They should, therefore, be revered; unless respect is paid to them they will curse you.

The ceremony of ancestor-worship is called *shinnsurappa*, i.e. ‘libation-dropping’, and takes place outside the huts by the east-end window and a little towards the west. Fetishes and beer are offered, and a prayer such as this said: “O ye ancestors now dwelling in the underworld, we offer you beer and lees; receive them and rejoice.'
Your grandchildren have met together specially to offer these things. Rejoice. Watch over us, and keep us from sickness. Give us a long life so that we may continue to offer such gifts.

26. Private or tutelary fetish.—The fetish mentioned in § 24 was shown to belong to the family as a whole, but there is another very important one which is quite personal. It is always made of willow. Why it is regarded as of so high importance as the following legend will show: "When God made man, He formed his body of earth, his hair of chickweed, and his spine of a stick of willow. And so, the backbone being regarded as the principal part of the human body, it is looked upon as the seat of life. It is said that no warrior of old could be killed unless his spine was injured.

When a child has been born, some very near blood relative of the male sex gets a nice clean stick of willow and shapes it into a fetish. When it is made, he proceeds to worship it, after which he reverently carries it to the bedside, and there

... sent to the Creator and other superior deities with messages. And, when all is done, they are taken outside to the sacred place at the eastern end of the hut. Here they are carefully stuck in the ground, and libations of beer made; it is therefore, not surprising to find that the Ainu formerly used to reverence the willow almost as much as the Papuans did the warring tree; who, we are told, had such an affection for it that the wild tribes of Ceram used to lodge, and almost live, among its branches (East, Papuans, 110, 190).

27. Demon — worship. — The worship of demons is one of fear among this people, and is as a rule performed by way of propitiation. This becomes very clear when a certain kind of fetish called nitne-inao or nitne-hash-inao, i.e. 'evil fetish' or 'evil bush fetish,' is made and used. The purpose of it may be gathered from the prayer which follows. This kind of fetish is used especially in times of sickness, for on such occasions an afflicted person is supposed to be possessed by a demon of disease. It is called an evil fetish, not because it is itself regarded as being of an evil nature, but rather because the occasion on which it is used is a bad one. It is sent to the wicked demon of disease, this is why it is called evil. When it is made, a kind of stew called nitne-horu, i.e. 'evil stew,' is prepared and offered with it. This consists of bones of fish, some vegetables, and the remnants of any kind of food, mixed together and well boiled. When all has been prepared, the fetish is stuck in the ground upon the hearth, and the stew, which has by no means an inviting smell, is placed before it. Then a so-called prayer is said as follows:

'0 evil fetish, take this evil food, together with the disease of this sick person, and also the demon who has possessed him, and go with them to hell. When you arrive there, please make it so that the demon will not return to this earth again.

...
haste and heal this sick person.' The man who officiates at this ceremony then returns to the hut, where he again exorcizes the demon by brushing the patient down with the takusa mentioned above.

Fetishes of the following shape are also sometimes used for this purpose. The present writer has several times seen them set up in the huts of sick people, and very earnestly worshipped. After having been prayed to, the spirit of the fetish is supposed to wander about in the earth and visit the various demons of evil on behalf of the sick man, and, after having found them, is said to consult with them as to what is best to be done for the patient.

28. Special fetishes for epidemic disease.—In the event of any village being attacked by an epidemic disease, but more especially if the disease be of a severe and dangerous nature, as, for example, smallpox, the Ainus of the villages immediately surrounding the infected one get sticks of elder or cladrastis, about four feet in length, and make them into fetishes or charms. These instruments are called chikappo-chiko-mesup, i.e. 'little carved birds,' by some, and rai-shuku-inao, i.e. 'thick club fetish,' by others. They are also named kotan-bikora-inao, i.e. 'fetishes for village defence.' As soon as set up they are devoutly worshipped, when the people call upon them to drive the dread disease away. They are supposed to represent the eagle-owl, which is thought to have power over this particular evil. The slit in the top of the fetish given in the illustration is said to represent the mouth, and the shavings left on the sides are intended for feathers. Food is sometimes placed in the mouth as an offering to the demons to whom the fetish is sent. That which the writer has seen consisted in one case of putrefied fish mixed with brimstone, and in another of cynanchum Caudatum. It is said that the demons, being unable to withstand the smell of these things, will flee from them.

29. Fetishes for the sea-gods.—The fishermen have one kind of fetish which is a special favourite with them. It is called tabi-an, i.e. 'brush fetish.' This kind is made by cutting a short stick, and either splitting it at one end and inserting a shaving in the opening so made, or else by cutting a few gashes in it in an upward direction, as shown in the illustration. The gashes cut across the top are said to represent the mouth. Though willow is the favourite wood used, yet they may be made of dogwood, lilac, cerocephyllym, ash, magnolia, or oak—indeed, of almost any wood which happens to be nearest to hand. When being set up, a good representative prayer said to them runs thus: 'O ye gods who govern the waters, O ye water deities, we are now about to go fishing. Please accept these fetishes and watch over us. Grant that we may catch many fish to-day.'

30. Religious charms.—In so far as their purpose is concerned, the dividing line between the fetishes mentioned in the preceding sections and the various kinds of charms in use among this people is not very clearly defined, so that it is often most difficult to distinguish between them; that is to say, he would be a bold person who should venture to put his finger first on one and say, 'This is a fetish,' and then on another and say, 'This is a charm;' for either may be both, and both either, according to the time and purpose for which they are used. The charms are very numerous, and are used for many purposes. Among other objects, rocks in situ and also stones of various shapes and sizes may be found employed both for purposes of personal protection against evil, and as a means for working harm to others (AF 398); the skins, bones, feathers, and beaks of birds are sometimes kept as love-charms (75, 76); snake skin is thought to be a special talisman, energetic, if properly treated, in working good in the storehouses and garden seeds (209); birds' eggs and nests are special cerebral charms, while the heads of some kinds of birds are kept and used for driving away disease (219); the heart of the 'dipper' is a charm supposed to bestow eloquence and quick sight (336); bears' eyes swallowed whole are said to produce long and clear sight in hunters. The skulls of bears, foxes, bats, falcons, owls, kites, and the fore-feet of hares are also all worshipped at times and used as charms (AF, ch. 34). The horns of deer, and the stones sometimes found in the bladders of animals, are also thought much of as charms supposed to bring good luck to the happy finder and possessor (401).

31. Magic.—Following close upon the subject of fetishes and charms, and very nearly related to these objects in principle and nature, comes magic, sometimes called sympathetic magic. This has been defined by Zimmern as 'the attempt on man's part to influence, persuade, or compel spiritual beings to comply with certain requests or demands' (see Aston's Sāinto, London, 1905, p. 327). Bearing in mind the meaning of the word for 'spirit' (ramat; § 13), and that all things are supposed to have spirit in them, and remembering the definition of Kamui (God) and the various objects to which this term is applied (§ 4), and not forgetting the fact that the Ainus do not so much worship the visible objects to which their prayers are addressed, as pray to the spirits, good and evil, supposed to animate them, we find this
definition very apt in so far as this people is concerned.

The Ainu terms for magic are ichashkara, i.e. ‘a shutting up,’ or ‘enclosing in a fence,’ and ishirishuna, i.e. ‘binding up tightly,’ and it usually implies the binding together with a curse of two objects, a person and some selected fetish supposed to be powerful. Amongst are some common methods in vogue among the Ainus of practising this art. The effigy of an enemy may be made of mugwort or straw, then cursed and either buried head downwards in a hole in the ground or placed under a fallen tree. A kind of effigy is called snoka, i.e. ‘the image.’ When it is buried, the devil should be called upon to lay hold of the soul (ramat) of the person it is supposed to represent and take it to hell. By this act it is supposed that the person will sicken so that his body will gradually die as the image decomposes (AF, chs. 30, 31). Sometimes the effigy is found to be not buried but fastened to a tree with nails or wooden pegs driven into its head and other parts of the body. Again, another plan is to make two effigies and ask it to depart at once with the soul to the region inhabited by the demons. Sometimes a little boat is made of rotten wood, and the effigy of an enemy is placed in it together with an idol supposed to be a demon. When made, the demon is worshipped and asked to row the soul of the cursed one to hell. Sometimes, again, the head-dress of a person is taken, wrapped up in a bag in the shape of a corpse prepared for burial, and placed in a hole in the ground to rot. It is supposed that as this decomposes, the enemy to whom it belonged will sicken and die. The demons of some kinds of trees are also at times asked to curse one's enemies by seizing their souls and turning them into devils. But magic, as one would naturally expect, may also be used for good purposes. Thus, for example, upon returning one very cold night from a journey with the Ainu head of a family, we found some convolvolus roots set up in a warm place before the fire upon the hearth. Upon making inquiry as to the meaning of this, we were informed that it was intended as a charm to prevent our feet from being frozen during the journey. Of the frequent use of trees in magic, a full account may be found in AF, ch. 30; cf. also § 33 below.

32. Bewitching, divination, and exorcism.—That bewitching people, exorcising demons, and finding out things by divination are integral parts of Ainu religious superstitions cannot be doubted. A case of bewitching, by cutting holes in the garments of another person with a pair of scissors, which came under the writer's own observation, will be found in AF, p. 341 ff. Similarly a case of divination, by means of a fox's skull, is recorded in (ib. pp. 390, 391 ff.). A case of exorcism by means of a tree, together with cutting clothes and as to the tungwort, will be found described on p. 315 of AF; while an account of a curious method of exorcising the demon in madness, by cutting their bodies with a sharp stone, shell, knife, or razor, and then thoroughly dipping them in a river, will be found set forth on p. 312. Cats are supposed to bewitch people in some instances (294, 507); dogs in some (507); and birds, such as the cuckoo, woodpecker, night-hawk, goat-sucker, and owl, in others (409); while such animals as hare (216), rabbit (500), otters (512), and various kinds of fish (522) are also supposed to possess this power. Indeed, there is no reason to suppose that there is any living creature in the earth which cannot bewitch, should it desire to do so.

33. Tree-worship. — The Ainus suppose not only that every tree has its own personal spirit (ramat), but that the roots also, the stem, bark, wood, heart, forks, knots, buds, leaves, twigs, crown, and every other part as well, are themselves each people with innumerable spirits, some of a good, and others of an evil, disposition. That the willow is regarded as a deity, and as such worshipped, has already been shown in § 26. Other kinds of trees also, such as the actinidia and grape vines, which are supposed to have had their origin in Paradise (156–158), dogwood, oak, spruce, spindle-wood, prunus, hornbeam, black alder, magnolia, yew tree, ash, chestnut and mulberry, and others, are all worshipped on occasion (580). Some of these, as has already been shown in §§ 31, 32, are also used in curing people and for the purpose of witchcraft, being at such times treated to bring misfortune to one's enemies. For this purpose the guelder-rose, alder, poplar, elm, birch, hydrangea, and walnut are particularly employed (331, 532, 521). There are, however, other purposes, and those good religious ones, to which the Ainus put trees to moral and religious uses, as when the hearth applied to this cult is Kim-o-chispokuma, i.e. 'the doctrine of the mountains,' and this particular part of it is named Chikunai-akoshiratiki orushpe, i.e. 'news about preservation by trees.' Regarding this the Ainus say: 'When those Ainus who are acquainted with the cult of this mountain are about to start on a hunting expedition, they first, after having worshipped at the nusa * cluster, go and select a large tree and worship its spirit, saying: O thou great possessor of the soil, we are about to go and kill animals, pray help us; O see that we meet with no accidents, and prosper us.' After this has been done, they set out fully expecting to come across much game.' This is tree-worship in its baldest form (cf. also § 26), and we see by it that the hunters regard the tree genii, for the time being, as their tutelary deities and guardians. In times of sickness, also, trees are worshipped. On such occasions the tree genii are called upon under various names, as, for instance, Topochi, 'the wise one,' and Shirmamps, 'the one upon the earth.' Or, in the case of an aged person, they may be worshipped under the name Niasrangew guru, 'the person of the standing tree,' and Kisura-range shinupuru Ramui, 'the precious demon of the rough bark' (AF, ch. 38).

34. Cereal worship. — Like trees and other vegetable life, cereals also are supposed to contain living spirits (ramat), some of which are thought to be of the masculine and others of the feminine gender (AF 204), and the worship of them often takes place. Never are the garden sown with seed without prayer being first made to the Creator (see § 5), then to the sun, and lastly to the very seed itself. Many years ago, Cicero asked, in his de Natura Deorum, whether any one was mad enough to believe that the food we eat is actually a god. 'Bearing with me,' he says, 'and What else, indeed, can it be?' The prayer used at the ceremony of eating new millet at the harvest thanksgiving is very interesting, and shows clearly that it is the spirit of the food partaken of that is worshipped, and not God, the Giver of all good gifts. The prayer runs thus:

'O thou cereal deity, we worship thee. Thou hast grown very well this year, and thy favour will be sweet. Thou art our bread. The goddess of fire will give us another rejoice greatly. O thou God! O thou divine cereal! do thou nourish the people. Turels (336) continous, 'I now partake of thee. I worship thee and give thee thanks.' After having thus prayed, the persons present take a cake and eat it amid them, and from this time forward eat the food. Commenting on this, Aston says (Shinra, p. 160): 'Gratitude in the first place to, and then for, our daily bread, is an important factor in the early growth of religion. Without it

* See illustration under § 27.
we should have had no Roman Ceres, no Mexican Maize-god, Oentliotl, and no Ukemochi (cf. also p. 277, Nibi-name).

But eating the god is by no means limited to cereals among the Ainus, for the bear sacrifice partakes of quite the same nature, to which subject we shall now proceed.

35. The bear festival. — Although animals of many kinds, and birds also (see A. F., chs. 36-39), even down to a tiny sparrow, are at times first worshipped and then killed in sacrifice, it is (when considering this phase of the subject) to the bear festival that we must look for the highest expression of Ainu religion. The general name given for 'sacrifice' is iyomande, which means 'to send away,' so we must expect that when a living object is sacrificed, the spirit is supposed to be 'sent' somewhere, and for some purpose. And here it may be well to ask, To whom is the bear sent, and why? To this question it must be replied in the first place that, so far as can be ascertained, there is now (whatever there may have been in old times) no idea of substitution underlying the practice; nor, secondly, is it peculiar, for the people knew nothing of the 'shedding of blood for the remission of sins.' All thoughts, therefore, connected with the old Jewish notion of sacrifice must be left out of the question when considering Ainu ideas concerning it. The very essence of Ainu religion consists in communion with the greater powers, and the people imagine that the most complete communion they can possibly hold with some of their gods—animals and birds, to wit—is by a visible and carnal partaking of their very flesh and substance in sacrifice. At the time of offering, the living victim is said to be sent to his ancestors in another place. Still, at the same time, the bear festival is a kind of mutual feast—a feast of friendship and kinship—in which Bruno himself also participates. Indeed, the bear is offered to himself and his worshippers in common, and they are supposed to have a good happy time of communion together. But as this is a very difficult and, in some ways, a very important subject, it has been thought best to give a simple dictionary of the festival as now practised, and let it speak for itself.

That the Ainus rear bear cubs in cages and often pay them divine honours is a well-known fact. The present writer once visited a village where as many as ten cubs were caged. After they have come to the age of two, or rarely three, years, and it has been decided that a sacrifice is to take place, the father sends out an invitation to the people, which runs thus: 'T', so and so, am about to sacrifice the dear little divine thing from among the mountains. My friends and masters, come ye to the feast; we will then unite in the great pleasure of iyomande, 'sending the god away.'

Come.' This is certain to be heartily responded to. When the guests have all arrived, the men make many fetishes (inao), stick them in the hearth, and perform worship. When this has been properly done, most of the inao are reverently taken up and carried by the oldest men outside the hut and there stuck up. Next, two long, thickish poles are carefully laid at their base. The men now come reverently out of the hut, ornamented with their crowns, and solemnly approach the cage containing the bear. The women also come following and clapping their hands, for all are in anticipation of having a jolly time. Having reached their appointed place, all sit in a circle, the old men in front and the women and children behind. After all this has been arranged, an ancestor is chosen, who, having approached the bear, sits down before it and tells it that they are about to send it forth to its ancestors. He prays pardon for what they are about to do, hopes it will not be angry, tells it what an honour is about to be conferred upon it, and comforts it with the consolation that a large number of inao and plenty of wine, cakes, and other good things will be offered. After this a cage is selected for the bear, and to one side of it is placed a bed of some soft material. Two cages of similar size are placed in front of the bear, one with a large dog, the other with a large cat. The bear is now killed, and after it is cut up by the men and women, the sacred shavings are taken up and sprinkled over the head, with the words 'They that have been killed do not eat.' The bear lies down and seems to be completely at ease, and remains in this condition for about an hour. It is then killed, and the various parts are to be cut up and cooked, and the flesh is distributed amongst the guests. As a rule, the bear is but little sought after, and to one side of the cage is placed a wicker basket, in which are kept the parts which are not to be eaten. This is then carried away and thrown into the sea. The bear is then taken up and carried about on the shoulders of the people, and the bearer, with the head of the bear, makes his way to the head-quarters of the village, to which place the bear is carried by the whole village; and it is then placed in a cage, and its blood is taken on the willow sticks, as if to fall upon the earth. Should any be spilled, it must be quickly wiped up with some of the sacred willow shavings.

* The same principle holds good with regard to cereals; see § 34.
Why the shedding of blood should be thus tabued no one seems to know.* In some instances, however, the men (particularly those who are hunters) catch the blood in their cups and drink it while reeking warm. This is said to be done with the object of thereby obtaining the courage and other virtues possessed by the victim. On one or two occasions some of the blood taken at a feast has been sent, sprinkled on paper, to sick Ainus staying in our house! It has been smelled and licked with great eagerness, the recipient expecting to receive great bodily and spiritual good from it. Indeed, even the writer himself has, to his great astonishment, had some reserved and sent him.

As soon as dead, the victim is skinned and its head cut off, the skin, however, being left attached to the head. This is taken to the east window and placed upon a mat called hao-so, and ornamented with shavings, ear-rings, beads, and other things. On one occasion the present writer even saw a Japanese mirror placed before it, and some old sword hilts and guards! After all this has been performed, a piece of the animal’s flesh is cut off and placed upon the victim’s own snout. This is called Nat-yok-omago, i.e. ‘that under the jaw.’ Then a piece of dried fish called Sat-chep-shiko, i.e. ‘the bundle of dried fish,’ and a moustache lifter, with some millet dumplings, some strong drink, beast’s snout, and he is then said to be partaking of the marapto-tangi, ‘the cup of the feast,’ and ipumi-tangi, ‘the cup of offering.’ After a little time has elapsed, the man who presides at the feast says: ‘The little divinity has now finished eating; come, ye friends, let us worship.’ He then takes the cup, salutes it, and divides the contents—to every one a very small portion—for it seems to be absolutely essential that each person should take a little. Other parts of the beast are stewed and eaten, while the entrails are cut up fine, sprinkled with salt, and eaten raw. This, like the drinking of the blood, is said to be for the purpose of obtaining the prowess and other virtues of the bear. For the same reason also some of the men besmear themselves and their clothes with blood. This latter custom is called yai-zho-ashi, i.e. ‘besmearing oneself with good sport.’

The head of the brute is at length detached from the skin and taken to the nuse heap, where it is set up upon a pole called Ke-omande-mi, i.e. ‘the pole for sending away.’ All the skulls of animals set up along with it, and there are many of them, are called Akoshiiratki Kamui, i.e. ‘Divine preservers,’ and are at times worshipped. The feast lasts several days as a rule; indeed, it is not quite over till the whole of the cub has been devoured and all the strong drink swallowed.

36. Totemism. — The word ‘totem’ is said to be derived from the Ojibwa (Chippewa) word totam (see EDr, art. ‘Totemism’). ‘As distinguished from a fetish, the totem is never an isolated individual, but always a class of objects, generally a species of animals or plants, more rarely a class of inanimate natural objects, very rarely a class of artificial objects.’ Judging from the very few survivals of totemism still in existence among this people, and from their language, one is led to the conclusion that this cult never attained the proportions among them that it did among Africans, or South Australians, or the North American Indians. The Ainus are very seldom heard to speak of themselves or others as belonging to a bear, a wolf, a turtle, a snipe, a hawk, or an eagle clan, and never of any vegetable clan. Still, there are some grounds for believing that their faith was, in the distant past, somewhat tinged with the totemistic superstition. But it was a totemism which differed from that of the Indians and many others, inasmuch as the Ainus in some instances think it a praiseworthy act to kill and eat their totem if it be an animal (see § 35), and cook and eat it if it be a plant (see Chippewa, Totemism). According to the general ideas of totemism as practised elsewhere, this ought not so to be. For among the Indians it was thought that, the connexion between the man and his totem being mutually beneficent, the totem protecting the man and the man respecting the totem, it should not be killed if it was an animal, or cut if it was a plant. But the Ainus consider it a very great mutual benefit to kill and eat their totem where possible. Indeed, by feeding upon it they imagine they can get the closest communion with it,—their totem and their god,—sometimes, for example, the bear.

The clearest instance of a genuine belief in totemistic descent the present writer has ever come across among the Ainus was that of a young man who held that his forbears were, one or

---

* The same tabu is found in other religious systems, and seems based on the belief that the ground is rendered tabu by the sacred blood falling upon it (Jevons, History of Religion, pp. 172–74; Frazer, Gt B., 176 ff.).
both, descended from an eagle. (The account of this will be
found on p. 10 of AF. Just as the bear may very possibly
have represented the national totem of the Ainus, so the present
illustration may be an example showing the eagle to have been
the totem of a family. An example of the individual totem
is found in the willow tree, with which it is shown the Ainus con-
sider themselves to be very closely connected (AF 63 ff.). The
vines, grape and acanthus, used for ear-rings (165), also seem to
have been looked upon as totem; while the images of foxes,
wolves, birds, and fish sometimes found carved on the moustache
lifters used by the men when drinking, and upon the crowns
worn by them at their feasts (168-169), may point to clan
totemism.

37. Ophomancy.—Although snake-worship is still
practised to some extent among the Ainus, there is
not sufficient evidence to go upon to justify us in
saying that this cult ever attained such elaborate
proportions of worship as that among the Danhgldws
in the serpents' house at Dahomey,* or among the
Indians, or even among the ancient Japanese.†
Nevertheless, that which is now seen is probably
the last remnant of what was once a somewhat
complete system.

According to Ainu ideas, the first snake that ever was, be-
headed not to this earth but came down from heaven, though
the Ahorin tribe had their origin otherwise.
In this we are reminded of St. John in Rev 12:2; and also of
Zeus-amari mythology, in which Ahorin descended earthwards
in the form of a serpent;† But among the Ainus the original
serpent is supposed to have been a good being, and in this
respect differs from that of both St. John and the Persians
(AFH, ch. 25).

Snake-possession is called okokka-parnt, i.e.
'snake punishment,' and the women especially
are very much afraid of it. There is no par-
ticularly specified manner in which it shows itself,
for almost any disease may, so they think, be
ingowed to possession by one or more of these
reptiles. Ophomancy also appears to have their
ancestors behind. The writer of this article once knew of a woman who professed to fore-
tell future events by means of the image of a snake she kept
stowed away in a box near by. She called it her guardian, and
used to pray to it frequently. By its inspiration she pur-
posed to be able to tell the reasons for any sickness people
were afflicted with, and to discover the proper remedies for them.
But, so far as real ophomancy is concerned, we have never yet
heard of any Ainu man or woman professed to fore-
tell future events by means of a genuine serpent, dead or alive,
whether by its manner of eating or by its coils.

38. Tabu.—Besides the various small matters
forbidden in relation to one's attitude towards fire
(see § 17), the Ainus have other tabus of a religious
and semi-religious nature which should be men-
tioned. Thus the blood of a bear must not be spilt
at a bear-feast (see § 35); a woman must not pro-
nounce the name of her husband lest she thereby
cause him harm in some way (AF, 252); the cry
of certain birds, as, for instance, the cuckoo, wood-
pecker, night-hawk, goat-sucker, and owl, should
not be repeated for fear of being thrown by
them (409, 427); at childbirth also cowards is prac-
tised, during part of which time the father of
the child is forbidden to eat and drink except very
sparingly; nor must he worship the gods, hunt,
fish, or work till after the purification of the
wife, which takes place on the seventh day after partur-
tion (235-241).

39. The future life.—There is no idea more firmly
fixed in the Ainu mind than the notion that the spirit
is appointed to live for ever in another world
—a world which, for the good, is the counter-
part of this, only much better, and free from
pain, and, for the evil, is dark, wet, cold, and
dreary. The very word in use for the spirit
(ramat) demands that such a place as heaven
should exist, for a living being can neither, it is
thought, lose his life nor get rid of his own proper
personality for ever (see § 13). But the spirit is
there supposed to be clothed with a spiritualized
body resembling the present, and to live under
like conditions to those of the present life.
In the other world the spirit will require a house
to live in, tools to work with, as well as boats and
hunting and fishing implements. That the Ainus
really think this is proved not merely from their
words, but also from some of their customs prac-
tised at the time of death. The most common
word for 'to die' is ra-i oman, i.e. 'a going to the
lower place.' This does not necessarily mean that
the spirit is in every case supposed to descend into
the bowels of the earth (pokka moa-kirt, the lower
world') when it leaves the body, though some-
times it may do so;* and, to hear the people talk,
one might be tempted to believe that the Ainus
think heaven itself to be in Hades. But, accord-
ing to their expressed convictions, we may really suppose there are six (AF 60) heavens
above and six hells (gda) below us, and that the
best place is in heaven above and the worst in
Gehenna below. Ra-i oman, 'a going to the
lower place,' is not the only term for death. There
are others, such as 'to pierce the skies'; 'to
make a clearance'; 'to have space for thought'; 'to
sleep the other sleep,' and so on (548).

When a person is about to be buried, whether it
be a man, woman, or child, the spirit is still spoken
to as if it were present in the corpse, and is sup-
posed to partake of the burial feast together with

* Stories of supposed journeys to Hades may be seen recorded
both in AF (370, 572) and in 'The Language, Mythology, and
Geographical Nomenclature of Japan, viewed in the light of
Ainu studies,' Memoirs of the Literature College, Imperial
University of Japan, No. 1.

* From a word meaning 'a worried one' of unknown origin.
† An ophomantic ritual is said to have been practised in the
house of a woman living near the mouth of the Kuma. A snake
was supposed to have lived in a rock on the banks of the
river, and the woman entertained the thought that it might be
what she called 'the snake of her house.' As a result, all sorts
of misfortunes befell her, so that she had recourse to the
ophomantic ritual. It consisted in the act of placing the
snake image in a box near her, and praying to it, when she
had reason to hope that it would be affected and mention the
name of its supposed mother. A similar ophomantic ceremony
is said to have been practised by another Ainu woman in
the house of her brother, who had been cast out by his
mother. But here I am digressing, so I must conclude.

** Ino-ka ramui, or Image of Snake Used for Worship.

Sermons are worshipped most frequently at the
time of childbirth, but especially when there is
any difficulty in the matter. On such occasions the
image of a snake, which is called Ino-ka ramui, i.e.
'the divine image,' is made out of sedge
(Carex rhynchosphyza), worshipped, and then sud-
denly placed upon the shoulders of the patient.
The reason given for this is said to be that, ac-
cording to Ainu belief, all such difficulties are
brought about by the king of the evil offspring of
serpents himself; and they say that rather than
propitiate the evil one, they should go directly to
the chief serpent and ask him to keep his wicked
subordinates in check and remove the evil they
have done.

In cases of ague also snake-worship has taken
place, as well as in instances of snake-bite. These
reptiles are also sometimes worshipped as a means
for curing people, being asked to bite one's
enemies. The prayer said to them on such an
occasion takes some such form as the following:

'Oh, you thing I have a word to say to you: pray listen. I have
an enemy So-and-so by name. Remember the name. If you
ever hear of it coming along here, please bite him, possess
him, poison him, and kill him. I will then make those out of
walnut wood, and also offer you many libations. Pay at-
tention to what I say.'

74.
3 Hardwick, Christ and other Matters, p. 553.
the mourners. Many of the possessions belonging to the deceased, such as bows and arrows, clothing, means for obtaining fire, pipes, tobacco boxes, knives, cups, ornaments, and so forth, are killed (!) by being cut or broken, and so sent to the nether world for future use (AF 554–568). Huts too, which, as has already been pointed out, are supposed to possess a certain creativeness, are burned off to the other world by being burned; they are to be for the use of those who occupied them in this life.

40. The future judgment. — After death the Ainus ascend for a look about. All matters, as they say, before the tribunal where God the Creator is said to be the judge of all men, and the goddess of fire the chief witness for or against them (see § 37). Those who are accounted worthy go to the happy land, called Kamusi-kotan or Kamusi-moshi, i.e., ‘the land or country of the gods’; while the wicked must be sent to Tei-nei-pokua-moshi, i.e. ‘the wet underground place,’ where they will be for ever unhappy and perhaps frozen up in a block of ice. Whether the punishment in the Ainu hell is real or fancy, the Ainus are not certain and do not pretend to know; but that their Gehenna is not the same as the hell of the Buddhist is very clear, for there are no purgatorial fires thought of among them.

Lettre’s book has been by no means so devoted to Ainu religion, though notices of the subject occur in almost all works which touch upon the Ainus. In the year 1868, A. H. Savay published his Atone with the hairy Ainu. This book is sometimes quoted as authoritative on the matter, and, as in all his remarks true to fact, it would be the utmost importance to point out, that Landor says that the Ainus regard the Wind-gods as ‘supreme God and no intelligent creator.’ . . . The Ainu is a monotheistic people, i.e., ‘the land or country of no religion.’ . . . They are decidedly not moral, for nothing is immoral with them, and much more to the same effect. On p. 282, again, he says: ‘The Ainu language is as poor in words as the Ainu brain is deficient in thoughts. Thus it is no easy matter to explain to an Ainu what is meant by ‘religion,’ by ‘divinities,’ and by ‘worship.’ . . .’ But the Ainu language is by no means so deficient in words as Landor imagined. Dobrovolsky gives as many as 10,890 words and phrases in his Ainu-Russsian dictionary (Kasan, 1873), while nearly 14,000 words alone are to be found in Hatchelor’s Ainu Eng. Jap. Dictionary (Tokio, 1906). Landor’s idea of the Ainu as a non-religious people will not bear looking into.

A much less pretentious, but far more reliable, work on the subject is that written by B. Howard, in the second edition of his Life with the Tran-Siberian Savages. This is a pleasant book of 209 pages, and treats mostly of the Saghaliun Ainu. The account therein contained shows the religion of these people to be the same as that of the Yeofo Ainu; and subsequent personal contact with them has shown Mr. Howard to be correct in his description and generally reliable in his deductions. Indeed, so much alike did he find the spirit of religion and religious practice of the Ainu to be, and accustomed to their kind of sectaries, that he was, by reading the present writer’s work, The Ainus of Japan, to recognize the ‘books and usages of what he saw and heard on that island’ (Howard, p. 17).

Miss Bird also, in her very pleasant written Unbeaten Tracks (1888, abridged, Letter 57, pp. 279, 377), speaks of Ainu religion. She says, ‘There can be nothing more vague and disjointed of cohesion than Ainu religious notions.’ . . . ‘They have no definite ideas concerning a future state and the subject is evidently not a pleasing one to them.’ . . . ‘Such notions as these are few and confused.’ All this is not quite correct; and it would be unreasonable to suppose that Miss Bird could, even had she claimed to do so—in the short three weeks she was in Japanese waters—find every dark corner and corner in the mind of the people. She laboured under the great disadvantage also of being obliged to obtain all her information through a Japanese interpreter, and if there is any one thing the Ainus are naturally reticent and secretive about strangers, it is their religion.

AIR and GODS OF THE AIR. — Here it is proposed to deal only with those invisible beings who are supposed to hover between heaven and earth—that is, whose proper abode is the circum-ambient atmosphere, which we call Air—rather than Sky-gods, the better to distinguish them from the true celestial deities who dwell aloft in the ethereal regions, either in or above the blue vault of heaven, and have no direct contact with its enveloping waters. But the air is the least stable of the elements, ever fluctuating to and fro, with upward and downward contacts, and restlessly filling all the intermediate spaces, so that the world itself was by our imaginative forefathers called the mid międzyard—the middle region floating in the boundless ether. Hence there are necessarily continuous overlappings and interminglings everywhere, and it often becomes difficult or impossible to draw a clear line between the aerial and celestial deities on the one hand and the aerial, the earthly, and even the underground gods on the other. How true this may be is seen in the protean forms at times attributed to the ainus themselves. Although Zeus was primarily a sky-god, he also filled many other functions, as shown by such epithets as θήβη, θέμβως, θαλάσσων (Earth-, Rain-, Sea-god), while Homer speaks even of the Zeus ταμάθενος, the ‘Underground Zeus’ (H. ix. 457). So also his consort, the earth-goddess Dione, whose ‘variations show how readily sky-goddess, sea-goddess, and earth-goddess might pass from one province into another’ (A. B. Cook, ClR, April 1908, where the subject is dealt with fully). Of the aerial by the ainus, perhaps, and certainly dismissed by Prospero ‘into air, into thin air,’ or those others who ‘on the reached margin of the sea . . . dance their ringlets to the whistling wind,’ or those again who ‘hover through the fog and filthy air,’ the genesis appears to be twofold, as disputedly suggested in Hemsterhuis’ oft misquoted epigraph (in his Lucian):

‘Bia duo sunt homines; manes, caro, spiritus, umbra; Quaeas hic haec, haec enim est, haec est. Terra tegit carmen, tumulum circumvolat umbra, Orcus habet manes, spiritus astra petit.’

First come the ‘winds’, a somewhat obscure expression meaning the ‘Good Ones,’ like the Greek εὐκαίρια, the ‘Well-disposed,’ i.e. the Eriynes or Furies, and the Irish Duine Matha, ‘Good People,’ i.e. the mischievous fairies who would resent being spoken of disrespectfully. These manes, originally the ghosts of the dead, and worshipped by the greater part of mankind, constitute, with the following umbra and spiritus, the first great category of aerial beings. Many were consigned to Orcus, as already noted, and many to the grave; but others were deemed to be the souls of the beasts (winds), or to be wafted aloft as the ‘other-self’ (spiritus), and fill the aerial spaces with good and evil genii. (For these distinctions between the personal soul and the other associated entities, see art. Ethnology, § 9.)

Here it should be noted that the umbra—the human shadow—was originally regarded as a distinct being, and the belief still survives, even amongst cultured peoples, as in the English saying, ‘No man can escape from his shadow.’ So also Lucian: ‘They [the shadows], when we die, become accusers and witnesses against us, and convicts of crimes perpetrated during life, and they have the reputation of being exceedingly trustworthy, since they are always associated with and never separate from our bodies’ (Menippus, or the Oracle of the Dead in H. Williams’ Lucian, p. 573).

Naturally these arbiters of human destinies eventually received divine honours, although it was found impossible to set them, and the tombs (synda), or to be wafted aloft to the or to the other spirits of the air belonging to the first category, that is, those representing departed souls and their concomitants. They are, however, very numerous, and the Talmudists, who have had the trouble of counting them, find that the bad ones (only about 7,406,000) are vastly outnumbered by the good, who are roughly estimated at 1 quadrillion, 64 trillions, and 340 billions.

If not so called, the godly beings belong to the second category, i.e. those derived directly from the air itself, may be regarded as by far the more important of the two classes. These may, by contra-distinction, be called the Wind-gods in a pre-eminent sense, and among them must be included the winds themselves. Thus the very
first of the six groups mentioned by Epicharmos are the winds: Μέλαινα Ἀνέμοι τοῖς θεοῖς έκεν μέλαινας ἀνέμους, ὦπν, χιόν, νεφέλη (Stobaeus, Floril. xci. 29), and the dedication of the four quarters whence blew the chief winds formed the very basis of the religious systems of many primitive peoples.

This was specially the case in the New World, where the Virginian Algonquians had only five gods, and of these four were the 'Four Winds which keep the four corners of the earth.' (see art. AMERICA). Hence it is natural to find the chief wind-gods as the four deities of the cardinal points, the fundamental idea being that they are the props of the universe, controllers of the seasons and the weather, and senders of rain and sunshine, on which, in fact, all good and evil things depended. Hence in Hiousaitha (xiv):

'Γίλεχ Μανίτο τοῦ Μιθυ, ἡ Μάνιτο τῆς ζωῆς, ἡ Μάνιτο τῆς ζωῆς...

and to him is opposed

'Μίθιχος Μανίτο τοῦ Μιθυ, ἡ παλαιή Χάρα τοῦ Εὐφήλων, ἡ παλαιή Χάρα τοῦ Εὐφήλων.'

Ratzel, a leading authority on these questions, remarks comprehensively that 'in the place held by the winds among the elements is traced, in the connection of the four quarters, the basis and the germ of the stellar heavens.' In the Aztec mythology, the four winds were opposed to four deities, the god of the heavens; in the Aztec cosmology one of the four cataclysms was caused by the air; and Orozco y Berra identifies Quetzalcoatl himself with el dios de los vientos ('the god of the winds'), since he was often represented as moving through the air laden with a wind-lag which was always inflated with destructive gales, and he was born of the cloud-snake Mixcoatl, or at least of his consort Coaticue — she of the 'snake-robe.

To Quetzalcoatl corresponds the Kukulcan of the Maya, a universal deity of many functions, enthroned on the clouds of heaven and on the cross-shaped tree of the four points of the compass, also figured in the pictorial codices as dwelling in the heavens, and throwing down the clouds from which the lightning falls. He is associated, too, with the four colours — yellow, red, white, and black — which, as in the Hopi myth (see above), though in a different way, correspond to the cardinal points: 'south,' yellow; 'west,' red; 'fire,' white; 'water,' black. 'Kukulcan,' writes Dr. P. Schellhas, 'is represented with all the four cardinal points; he appears as ruler of all the points of the compass; north, south, east, and west, as well as fire, water, earth are subject to him.' (Deities of the Maya MSS., p. 17). Here we see the interminglings of divers functions and provinces above referred to. It may be added that Kukulcan shares his many-sidedness with three other Maya gods, one unnamed who is connected with the symbolic colours of the cardinal points, a second the war-god, of frequent occurrence in the codices, and a third identified by Förstemann with a storm-deity, whose features are intended to symbolize the blinding force of the wind. That the four winds would appear to have been originally defied, or presided over by divinities whose functions and ethereal realms afterwards became confused.

Lastly, the Cakchiquels, one of the most cultured Maya-Quiché nations of Guatemala, paid special homage to the four wind-gods, to whom even human sacrifices were offered. 'Sánchez y Leon states that the most usual sacrifice was a child. The heart was taken out, and the blood was sprinkled toward the four cardinal points, as an act of adoration to the Four Winds, copal being burned at the same time as an incense' (Historia de Guatemala, quoted by Brinton in the Annals of the Cakchiquels, p. 45).

In Madagascar the Four Winds are, or were, fully recognized, and, as amongst the northern Amerinds, worshipped in their order next after the supreme deity. Little is now heard of them, and they are scarcely mentioned in the missionary records; but in Robert Drury's time (early in the 18th cent.) they were invoked in all solemn oaths, thus: 'I swear by the great God above, by the Four Gods of the Four Quarters of the World, by the Spirits of my Forefathers, that, etc. (Journal, 103 of Olives Island, 21st of December, 1719). Drury tells us that at their meals the people 'take a bit of meat and throw it over their heads, saying, "There's a bit for the Spirit." Then they cut four more little bits, and throw to the lords of the four quarters of the earth' (ib. p. 280).
It is, however, to be noted that this belief may have been introduced by the later (Hova) immigrants from Malaysia, where the worship of the wind-gods had long been established under Hindu influences. In the island of Bali, east of Java, where alone Brahmanism and Buddhism still persist, the winds have expanded, as later in Greece (Aristotle, Meteorology), to sight, that is, the eight gods or demi-gods of the Rámâyana — Indra, Yama, Surya (for Nirriti), Chandra (for Isháni), Anila, Kubera, Varuna, and Agni. Of these, however, only three — Indra, Yama, and Varuna — are the entry in Celebes, the fourth place of Siva, and since in Bali the worship of Siva has in a way absorbed that of all the other gods of the Hindu pantheon, the eight cardinal points themselves are now also attributed to corresponding forms of Siva. Of the three specially mentioned, Indra has been raised, on to the head of the pantheon, she turned to Jupiter, the north, and finally to the west, and each time the priestess prayed that the deity of the wind would fertilize her. Her prayer was answered, and Luminuit, the wind god of the west, was called, and cutting them of the same length gave one (tui) to Luminuit and one (asana) to Toar, saying, "See, there are two sticks. Give you, Luminuit, to the right and you, Toar, to the left, and whenever you meet any one measure sticks in their same length you are mother and son, but if one is longer than the other she has a twin at the centre of the earth." Both went on their way, but after a while Toar met without knowing one another, and on measuring sticks they found that Luminuit was longer than Toar's, for the tui stick had sprouted out and grown. Therefore they returned to Karéina, and when they had measured the sticks she said, "You are not mother and son, therefore you must become man and wife. Be fruitful and populate the earth." So Luminuit and Toar begat many children, twice nine, three times seven, and once three. The three are the Pasilowan, of whom one was the priest at Warsendukun in the air; from the other two the people of Minahasa (North Celebes) trace their descent. This legend of the origin of the earth and of the people is full of interest to the student of cosmology. The story of the conception of Luminuit by the god of the West Wind exhibits traces of the very common myth of the origin of the earth and of Man. Luminuit is the earth, goddess, the fruitful mother of all things; the West Wind is the one which brings the rain and fertilizes the earth (S. J. Hickson, A Naturalist in North Celebes, p. 241).

In Celebes, besides the four wind-gods, there are numerous aerial beings, which are somewhat vaguely described as 'free wandering spiritual forms of various ranks, powers, and capacities for good or evil.' These are distinguished from the spirits by what certain trees and, waterfalls, and other objects are supposed to be animate, and, as 'the religion of the Minahassas was a differentiated form of Animism' (ib. p. 247), it may be conjectured that the wandering forms are believed to be disembodied souls of the dead rather than spirits derived directly from the air. This view is strengthened by the further statement that the spiritual world is inhabited by the souls of deceased chiefs, who live for ever in 'in the form of wandering ghosts haunting the scenes of their former triumphs and experiences. They believed in a series of ancestral ghosts of the rank of first-class gods, and in a crowd of lesser deities, 'dreaded demons' (ib. p. 248). And as all alike were called Empung, the generic name for the gods, but literally meaning a 'grandfather' (cf. the African Munku-lunkulu, which has the same meaning), it is obvious that ancestor-worship prevailed over pure psycho- logical worship. In the Celebes, however, it dwelt to a great extent in the ethereal regions. In fact, four heavenly villages were expressly set apart as their residence, and these villages—Kasosoran, Kalawakan, Kasendukan, and Karondoran—were so contiguous to the earth that formerly the empguns would often return and mingle with mortals, rich blessings ever following in their footsteps. In these celestial villages rice was grown, and it was from this source that the cereal now thriving in Minahasa was originally procured.

Now, the returns and still devas, since his heaven (Indraloka or Svarga) lies beneath that of Viúnu, and Viúnu's beneath that of Siva, where at last the soul attains repose and release from transmigration. In fact, Svarga still holds sway, it conducts the empguns; its inhabitants are liable to being inferred, and of ascetics who acquire supernatural powers, or at least certain powers, in the very act of daily life.

In North Celebes the four wind-gods are held in honour, and play a great part in the local cosmogony. Luminuit, mother of mankind, met the rock-born priestess Karéina, who ordered her to turn her face to the south. 'When she did this the priestess prayed, "O Cause of the East Wind, fertilize this woman." Luminuit, however, perceived nothing. Then she turned the priestess, she turned to Jupiter, the north, and finally to the west, and each time the priestess prayed that the deity of the wind would fertilize her. Her prayer was answered, and Luminuit by the god of the west wind begat a son named Toar. When Toar grew up, Karéina took him to the grave of the first man, the one who had been called ansa, and cutting them of the same length gave one (tui) to Luminuit and one (ansa) to Toar, saying, "See, there are two sticks. Give you, Luminuit, to the right and you, Toar, to the left, and whenever you meet any one measure sticks in their same length you are mother and son, but if one is longer than the other she has a twin at the centre of the earth." Both went on their way, but after a while Toar met without knowing one another, and on measuring sticks they found that Luminuit was longer than Toar's, for the tui stick had sprouted out and grown. Therefore they returned to Karéina, and when they had measured the sticks she said, 'You are not mother and son, therefore you must become man and wife. Be fruitful and populate the earth.' So Luminuit and Toar begat many children, twice nine, three times seven, and once three. The three are the Pasilowan, of whom one was the priest at Warsendukun in the air; from the other two the people of Minahasa (North Celebes) trace their descent. This legend of the origin of the earth and of the people is full of interest to the student of cosmology. The story of the conception of Luminuit by the god of the West Wind exhibits traces of the very common myth of the origin of the earth and of Man. Luminuit is the earth, goddess, the fruitful mother of all things; the West Wind is the one which brings the rain and fertilizes the earth (S. J. Hickson, A Naturalist in North Celebes, p. 241).

In Celebes, besides the four wind-gods, there are numerous aerial beings, which are somewhat vaguely described as 'free wandering spiritual forms of various ranks, powers, and capacities for good or evil.' These are distinguished from the spirits by what certain trees and, waterfalls, and other objects are supposed to be animate, and, as 'the religion of the Minahassas was a differentiated form of Animism' (ib. p. 247), it may be conjectured that the wandering forms are believed to be disembodied souls of the dead rather than spirits derived directly from the air. This view is
is especially the case with sick people, whose ailments are supposed to be caused by their spir-its leaving the body and fluttering about somewhere in the neighbourhood. Then the wailian (priest or shaman) is sent for to diagnose the patient, while all his friends go out to the fields and villages to look for his soul. They make a fire in a likely spot, and entice the spirit back by cooking rice and chicken, or by whistling and calling as they would for a dog, while the priest goes through the list of gods and gives the ceremony a religious character. This goes on for some time; a rich patient who can afford many chickens has usually to wait a longer time for his spirit to return than a poor one. At last the wailian sees it! It shows itself clearly here or there by a movement in the grass or by some other sign. The wailian advances with the greatest caution, and catches it in a sarong [the broad Malay cloth worn as a wrap], just as a schoolboy catches a butterfly in his hat. They now turn homeworks; a child leads the way, carrying a waka leaf (Limnu) for the priest and spirit from getting wet; the priest follows, carrying the spirit in the sarong, and then another priest armed with sago-sago and monn [swords and sticks], which he swings backwards and forwards to keep back the spirit. zw (demons of the air) who wish to recapture the patient's spirit. When they have reached the chamber, the priest opens the sarong over the head of the patient, and says with great satisfaction and assurance, 'Now is his soul returned.' This being done, the patient should get well again, but if he does not, it is a sign that his time has come, and his spirit can no longer be retained' (ib. p. 296). Thus we see that whistling for the wind, still practised among the pagodas, is derived from the English captain to the Malay skipper, originally meant whistling for the truant souls lurking in the wind. Innumerable other survivals, could they be traced to their source, would also be found to be deeply rooted in the superstitions beliefs of primitive man.

Nowhere can this be seen better than in China, where the aereal spaces still swarm with countless good and evil spirits, the belief in which has influ-enced the development of Chinese architecture. The fundamental notion is that the good spirits move through the air in curved, the bad in straight, lines. Hence the former are welcomed, the latter baffled by the curved form given to the roof of the houses, pagodas, gatesways, all other conspicuous structures. For the same reason, no straight highways can be laid down, and partly on this ground great objections were for years raised against the development of railway enterprises. The danger of de-sacralizing the ancestral graves was also urged; but both difficulties were overcome when it was pointed out that the burial-places could be avoided by cleverly designed curves, and that these curves would at the same time serve to thwart the wicked and beneficial winds.

So also in Korea the air is infested by many malevolent beings, such as the smallpox devil, the typhus devil, and the cholera devil. As after death some of these might again enter the corpse and revive it to kill the living, they are scared off by the vigorous beating of gongs, drums, pots and cans, which is kept up incessantly for three days and nights after the funeral. These demons always travel on the north wind, and the good spirits on the south wind. Hence the graves are usually situated on the sunny slopes of a hill, whether all good influences are wafted on the balmy southern breeze. The family vaults of the better classes are also sheltered from the evil spirits by horsehoe-shaped mounds turned northwards, that is, towards the quarter whence come the demons riding on the icy arctic blasts.

Here again we seem to divine why the horsehoe is still a lucky object even among the cultured peoples of the West, where it is nailed to the stable door to protect the farm-yard from evil influences. Originally there were two horseshoes, but its peculiar shape, that was regarded as propitious, because earthworks so constructed may have been thought favourable to the good and adverse to the evil genii.

That the demons of epidemics wander about in mid-air is a belief not confined to Korea, but pervading the religious thought of the whole Eastern world. To the Chinese of Upper Burma the cholera and smallpox are real devils who are fag and filthy air, and when some of the tribe visited Rangoon in 1855 they carried their data (knives) unheated to scare of the pestilential Flat, and passed the day hiding under bushes to escape its notice. Some even went to pacify it by the sacrifice of a slave boy, a rabbit, or a parrot, dogs (Carey and Tuck, The Chin Hills, I, passim.) So also in India, the belief in the same cholera and smallpox demons, who are supposed to be always wandering about in mid-air (Census Report for 1901), is almost universal amongst the Dravidian and Dravido-Borneo people. For details the reader must be referred to art. Asia.

In Greece the four chief winds were known to Homer, who in the Iliad groups them in pairs (Erétheia to Néva, te, li. 145; Bórisi et Zéphoros, ix, 5), and is said to have entered in the Od. (v. 295-296) mentions them consecutively:—

Συν ἡ Ἑρέθης τοις Νεόιοις τε Ζέφοροι τε δυναμένοι Καὶ Βόρεια ἀαρέγγευσιν, μέγα κίων κηδεμόνι.

Here all are personified poetically, but not yet deified, unless the 'ether-born' Bóris is already to be taken as an air-god. Even their king Aëolus is still only the 'friend of the gods,' as in Od. x. 2:—

Ἀέλων Ἐννότατος, φίλος ἀδικουκτέων θεῶν

whereas in the Iliad he is enthroned amongst the Immortals with sedet Aëolus, ope, amongst the Atenen,' i. 56-57), although still subordinate to Neptune ('Non illi imperium pelagi, saevumque tridentem, sed mihi, sorte datum,' i. 138-139).

But in the interval between Homer and Virgil the rich Hellenic mythology was developed, and then, of course, divine or semi-divine origins and genealogies were discovered for all the winds personified by Homer. Thus Herodotus tells us (vii. 189) that by his marriage with Oreithya, daughter of their (legendary) king, and the Aten, the Aten gained kindship with Bóris, and that they invoked and offered sacrifices both to him and to his consort (Usuario τε καὶ ἀναμνήσισα τὸ τοῦ Βορέας καὶ τῆς Πρότωνος). Another highly honoured wind-god was the Olympian Zéphoros, who is identified as Aëolus, with Notus and others, was born of the Titan Aëtros and the goddess Eos (Aurora). To Zéphoros the Athenians raised a temple, where his effigy was that of a gentle winged youth wreathed in flowers. Later, under the discriminating analysis of Aristotle, the four became eight and even twelve (Meteorol. 2-9). Of the last four little is afterwards heard; but the eight appear to have retained their rank as air-gods at Athens, where was raised to them the still existing octagonal Horologium of Aëolus, commonly known as the 'Temple of the Winds.' On each of the eight walls a bas-relief symbolizes the wind which it faces, and an additional element of interest is supplied by the dress and accompaniments of these eight figures, which are not likely attributed by the Greeks to the winds which they represent is described. Bóris, for instance, is depicted as a bearded man of stern aspect, richly clad and wearing strong buskins, and he blows a conch shell as a sign of his tempestuous character. Cecus, another cold and inclement wind, carries a shield, the lower part of which is full of hailstones. Notus, the most rainy wind, holds an inverted urn, the whole contents of which he is pouring out upon the earth. Zéphoros, on the other hand, who is the
The air and gods of the air

harbinger of spring, appears as a graceful youth, always unclothed, with the fold of his robe filled with flowers" (H. F. Tozer, *Hist. of Anc. Geography*, p. 195).

Italy also had its complete category of wind-gods, quite independently of the Greek, as shown by their old Italic names, such as *Corus*, *Aquilo*, *Iapyx*, *Venti*, *Mons Venti*, *Mons Aquilo*, and *Aquilo*. Favonius, of whom Horace sings (*Od. i. iv.*) that

Solvitur acris hiems grata vice veris et Favoni,

and whom Plautus contrasts with 'rainy Auster':

Hic Favonius serenius est, istic auster imberbus:

his face transillas vitium, iste spirat unum corrigi;

(*Tibullus*, vi. 35, 36). From this we see that Auster answers to the Greek Notus, while Virgil makes it equally clear that Aquilo represents Bores, as in *Geor. i. 196—

'Qualis Hyperboreis Aquilo cum densus ab oris

Inebuit', Sothyaisque hiemes atque arida differt Nubila.

It may here be stated that in Italy, as in Greece, Olymipan Jove himself had at an early date extended his sway to the earth, or rather to the nether world. Of Umbrian, a sister language of Latin, we may gather, by comparison of many *Tabulae Iguvium* found in 1444 at Gubbio, where they are still preserved in the town-hall, on Tab. II., which may date from B.C. 500, the epithet *hunte Iuvic* is twice applied to Jove (*Hunte Iuvic amans*, l. 21; and *Hunte Iuvic*late, l. 500), and this epithet, being closely connected with *hondra* = infera, means 'infernus,' so that Hunte Iuvic answers exactly to the Homeric *Zeb sera* khone. With this compare the stem *huntr-o*, which in Oscan, another sister tongue, means 'infernus,' leaving no doubt as to the force of Hunte (*The Curse of Vibla*, l. 11 in R. S. Conway's *Italic Dialects*, p. 127).

A few miscellaneous references may now be given to complete the subject, and show how thickly primitive peoples packed the encompassing atmosphere with gods, demons, and spirits of all kinds. These are nowhere more numerous and varied than in Arabia and surrounding lands, where the most dreaded are the ghouls (properly *jaq* = *ghub*), who, however, are denizens not so much of the air as of woods and deserts. They assume divers shapes and colours, and show a certain kinship with the somnambulistic spirits. Their forms are all that the women, men, animals, and dead bodies. These ghouls range through Persia and Muslim India into the Malay lands, where there is a similar 'storm fiend' who rides the whirlwind, and also a 'woman fiend named *penangalan* who takes possession of the forms of women, turns them into witches, and compels them to tell the greatest part of their bodies, and fly away at night to gather blood, and so make a vampire craving for human blood. This is very like one of the ghosts that we find in Germanic 'ghosts and entertainments' (Miss Bird, *The Golden Chersonese*, p. 304).

The other supernatural beings of the Arabs, and now generally of all Muslim peoples—*Iblis* 'Prince of Darkness,' the aistra, shehtans, and the whole host of jins—exist in pre-Mahomedan times, as is evident from Job 1, where *jaq* is rendered *hodhoh* in LXX and Satur in the Vulgate. So universal was the belief in their existence, that they had to be admitted with modifications into the Mahomedan system, which recognizes them as created intelligences under Allah—the angels formed of light, the jins of subtle fire, and man of the dust of the earth. The jins are commonly supposed to be mischievous goblins hostile to man. Some, no doubt, are good, good, and demons whose chief is the fallen angel Iblis. These reside in the lowest firmament, around the surrounding air, and haunt the commonwealth, the wells, the woods, the hill-tops, and the wilderness. They have the power of putting on any form they please, but cannot assume human form without permission. They are said to frighten and frighten the inhabitants of a friendly way; they are addicted to the most licentious habits, and they, too, in virtue of their subtle essence, pervade the solid mass of the earth and the whole space of the firmament. They are also believed to inhabit seas, lakes, rivers, and other places, and to be in a certain house in the sky. The magic formula is pronounced, 'Permission, ye blessed!' (Fehderman, *Recent Light on The Races of mankind*, p. 338). Jatler, Shureef, who speaks from personal knowledge, goes so far as to say: 'The belief of the Mahomedans is that it is not a jinn, but a shehtan, who does evil deeds' (Museum of India, pp. 284-285). This, however, does not apply to Arabia, where the had certainly predominated over the good genii, and where the above-quoted 'soft words' may be merely euphemistic. In any case, both classes belong to our second category, inasmuch as they are not of human origin but are directly created by Allah.

In general, witches and magicians, who have the power of assuming strange forms, everywhere infest the air as well as the land and water. In Aurora, Pentecost, and other Melanesian Islands, they fly about disguised as owls, eagles, or even blow-flies, and then they are most dangerous. In Lepers' Island the wizards who practise it (the magic art) are believed to have the power of changing their shape. The friends of any one suffering from sickness are always afraid lest the wizard who has caused the disease should come in this form, as of a blow-fly, and strike the patient; they sit with him, therefore, and use counter-charms to guard him, and drive carefully away all flies, lest his enemy should come in that form' (R. H. Codrington, *The Melaneseans*, p. 207). This observer mentions the case of Mottivale, a noted magician who turned himself into an eagle, or rather whose soul went out of him, and in this shape flew a long way after a ship which had carried off some natives of Lepers' Island, and in that way was able to tell them of their relatives who had been there, and reported that all had fared well except one who had died. 'Long afterwards, when some of those who were then on board returned, they said that he had brought back the truth, one of them by that time had died' (ib. p. 283).

In Guiana, not only the sun and moon, but also the wind and storms are deified, or, it would be more correct to say, are 'humanized' by indwelling spirits of an essentially anthropomorphic type. ('On one occasion, during an eclipse of the sun, the Arawak men among whom I happened to be rushed from their houses with loud shouts and yells. They explained that a fight was going on between the sun and moon, and that they shouted to frighten and so part the combatants. In many other countries exactly this proceeding of making a noise to separate the sun-spirit and the moon-spirit, or the sun-god and the moon-god, has been noticed; and it is generally supposed that in such cases a high degree of authority is attributed to these things, and any mention of anything else which shows that savages distinguish, by attributing greater authority to them, such beings as sun and moon, and very many other natural phenomena, as wind and storms, from men and other animals, plants and other inanimate objects, or from any other supernatural beings—and under this heading are included all personified natural phenomena—are, in fact, of the same kind, each with a body and a spirit. It is the old story—they differ from each other only in that some are more powerful than others in the mere matter of brute force, and none have any sort of authority over others' (E. im Thurn, *Among the Indians of Guiana*, p. 364). By the Brazilian Botocudos the air is well stocked with spirits, especially of a malevolent kind, the thunder-gods, storm-gods, and the moon itself, the 'night-fire' (*toru-guenet*), which they look upon as a sort of evil principle. All baneful manifestations are attributed to the moon, which causes the thunder-storm, and is supposed at times itself to fall on the earth, crushing all that characterizes it, and frequent the habitations of man in a friendly way; they are addicted to the most licentious habits, and they, too, in virtue of their subtle essence, pervade the solid mass of the earth and the whole space of the firmament. They are also believed to inhabit houses, ovens, and other places, and in letting down a bucket to a well, or in lighting a fire, the magic formula is pronounced, 'Permission, ye blessed!' (Featherman, *Recent Light on The Races of mankind*, p. 338). Jatler, Shureef, who speaks from personal knowledge, goes so far as to say: 'The belief of the Mahomedans is that it is not a jinn, but a shehtan, who does evil deeds' (Museum of India, pp. 284-285). This, however, does not apply to Arabia, where the had certainly predominated over the good genii.
Among the Eskimos the sir, usually reserved for departed souls, is replaced by the surrounding ice-fields as the chief abode of the hosts of wicked trolls and goblins. The Greenlander especially has a superstitious terror of the inland ice-cap. ‘It is the home of his evil spirits, his ghosts, his apparitions or shades (fakanyuluk), his trolls (timoresk and eraklik), his ice-men who are supposed to be twice as tall as ordinary people, and a whole host of other supernatural beings’ (Brögger and Rolfsen’s Fridtjof Nansen, p. 150). In pagan times the ‘sacred groves,’ or good genii, whom the Western Greenlanders, since their conversion to Christianity, have degraded to evil spirits now inhabiting the lower regions of the atmosphere and the nether world, while Torngrasuk, the Great Spirit, has become the Christian Sate. Elsewhere the souls of the departed sometimes lead a restless existence in their aërial abodes, and during their hunting expeditions the Alaskan Eskimos often see phantoms gliding over the heights; these are the ghosts of the departed returning to scare or injure their living relatives. The people of the Barrow Point district are most troubled by such apparitions, as also by Kiolys, the demon of the aurora borealis, and by Tunya, the Eskimo Zeus, who, like his classical prototype, reigns in the earth, the sky, and the sea, and is one of the numerous instances of overlapping where it becomes impossible to distinguish clearly between chthonic, celestial, and air gods.

There appears to be no work specially devoted to the subject of this article. Hence the references must be to a few of the more important treatises in which incidental mention is made of the gods of the air. Such are—A. B. Cooke, ‘Zeus, Jupiter, and the Oak,’ in CHR, April 1903; Lucjan, ed. Hraniadukis and H. Williams; Steinach, ‘Volcanoes, F. Ratze, Hist. of Mankind, Eng. ed. 3 vols. 1897; H. R. Voth, The Traditions of the Hopi, 1905; P. Schellhas, Deities of the Western Apache, 1893; E. L. Britton, Annals of the Southwestern Indians (Cakiquicheu), 1885; R. Drury, Madagascar Journal, etc., ed. P. Oliver, 1907; J. S. Hickson, A Naturalist in South Carolina, 1801; T. van Heugten, 1872; Brögger and Rolfsen, Fridtjof Nansen, 1890; R. A. H. Krane.

Aiyana.—Among the most widely known and popular of the deities of the village, the grámdavat, of Southern India is Aiyanan, the tutelary god of the place who pronounces on the divine or the human, and drives off from them by night the evil spirits of blight and ruin. His name and worship seem to be little, if at all, known north of the Deccan. In the south, however, almost every village has its shrine dedicated to Aiyanan, where offerings are presented and prayers made for the safety of the crops from drought and disease. Gathered around the shrine, and near the village, are usually to be found rude models of terra-cotta horses, often life-size, or more, an ephelant with his troop of attendants is supposed to ride when in mad career he chases away the demons. The Indian villager avoids approaching the shrine of Aiyanan after dark, lest he should be mistaken for a demon himself.

The god is represented roughly carved in human form, either seated on a throne and sceptre, or on horseback, and is sometimes accompanied by his two wives, Prranai and Pudkal, who join him in the route of the evil spirits. He is also propitiated in the incidents of the annual sacrifices. The clay models of the horses are presented by the villagers in acknowledgment of aid rendered, as thank-offerings for recovery from sickness, or in fulfillment of a vow. Except, however, at harvest-time, there do not seem to be any regular festivals held in his honour, or any definite periods of worship prescribed. Sir Monier Williams’ account of his visit to Aiyana near Madura, 1900, gives an impression that the road from Madura to Rámmad, may serve in general as a description which would apply to the majority of the places sacred to the god in Southern India.

The shrine was situated close to a road not far from the village. Under a rough stone canopy was a rudely-carved stone male idol. . . . About twenty-five toy-like terra-cotta horses, some as large as the real, were set up. When I saw no signs of any recent offerings, nor was a single worshipper of the god to be seen anywhere. I noticed, indeed, that all the shrines of A. had a deserted appearance, the fact, being that is never worshipped, in our sense of the word. He is only propitiated in emergencies. Every year after harvest-time a festival is kept in his honour, when numerous animals are sacrificed, and images of the god are decorated with ornaments, and drawn about through the village streets on the rude clay horses’ (Brahmanism and Hinduism, p. 219ff).

The name Aiyana is said to be a combination or corruption of the two names Hari-Hara, or Viṣṇu-Rāma; and the god is popularly regarded, as in other parts of Siva by Vigna, when the latter had assumed a female form. It is more probable, however, that he represents a primitive Dravidian deity, recognized and more or less adopted by the incoming Aryans, and perhaps with an image of Siva. A figure of Ganesa, one of the other two sons of Siva, sometimes stands near his shrine. But, unlike his brother, Aiyanan does not seem ever to be invoked in the strict sense of the term, or to have prayers addressed to him for blessing or positive good.

Aiyana.—Aiyana is the Anglo-Indian form of the native name Ājāṭha, a village and rang celebrated for its cave temples, situated in N. lat. 20° 32’ 30”, E. long. 75° 48’, near the frontier of the British province of Berar, but within the dominions of the Nizam of Hyderabad. It lies at the southern end of one of the principal ranges from the Indhuydā hills, dividing the table-land of the Deccan from the British district of Khāndesh in the valley of the Tāptī. The only early reference to the caves is that of the Buddhist pilgrim Huien-Tsang, or as Watters, the latest translator and editor of his journey, has called him, H. C. Chwang. He writes, speaking of the kingdom of Mo-ha-la-ch’ (Mahrāṭṭā): ‘In the east of this country was a mountain range, ridges one above another in succession, tiers of peaks and sheer summits. Here was a monastery, the base of which was in a dark defile, and its lofty halls were quarried in the cliff and rested on the peak, its tiers of halls and storied terraces had the cliff on their back, and faced the ravine. This monastery, however, was never built by the Acloras (or perhaps rather Achalas) of Western India,’ The pilgrim then relates the circumstances in the Achāra’s life which led to the building of the monastery. ‘Within the establishment,’ he adds, ‘was a large temple above 100 feet high, in which was a stone image of the Buddha above 70 feet high; the image was surmounted by a tier of seven canopies unattacked and unsupported, each canopy separated from the one above it by the space of 3 feet. The walls of this temple had depicted upon them the life of Buddha as Bodhi, including the circumstances of his attaining Bodhi, and the omens attending his final passing away; all, great and small, were here delineated. Outside the gate of the monastery, on either side north and
south, was a stone elephant, and the pilgrim was informed that the bellowing of these elephants caused earthquakes” (Watters, ii. 239).

Burgess and other authorities believe that this account, dated A.D. 642, refers to the Ajanta caves. Watters admits that this view is probable, but he doubts whether the Achala of the inscription refers to the elephants of the pilgrim’s narrative. This inscription merely states that ‘the ascetic Sthavira Achala, who glorified the faith and was grateful, caused to be built a mountain-dwelling for the Teacher, though his wishes were fulfilled.’

But the wheel (Watters, in Griffith’s Antiquary, 1879, p. 574) appears in 1819, and the earliest account of its monuments, by Alexander, appeared ten years later (Trans. R. A. S. 1829). The first scientific survey was made by Ferguson, and appeared in the same journal in 1843. His account of the wall-paintings aroused much interest, and led to an appeal to the Indian Government that careful copies of them should be made. This was done by Major R. Gill; but his drawings, except the five last executed, were unfortunately destroyed in a fire at the Crystal Palace, and they were lost, in fragments. All that remains of his work now seems to be small copies, in Mrs. Spiers’ Ancient India, of two of his pictures and of eight detached fragments from others. In 1872 the work of copying the frescoes was started afresh by Griffith, and his work, in two splendid volumes, was published by the Secretary of State for India in 1896–97.

The caves are excavated in the face of an almost perpendicular rocky scarp, about 250 feet high, sweeping round in a semicircle, and forming the north side of a wild glen traversed by a small stream, the Vaghar. Above the caves the valley terminates abruptly at a waterfall with seven leaps, the total height being about 200 feet. The site is lovely and picturesque, and, at the same time, close to a main line of ancient traffic, thus combining the three leading characteristics which guided the excavators of the rock caves of Western India in selecting places for their establishments.

The series consists of 24 monasteries (viharas) and 36 temples or meeting halls (chaityas). According to Burgess, who has made a careful survey, and compiled an exhaustive report on the caves (Arch. Survey Reports, W. India, iv. 43 ff.), the earliest group consists of two Chaitya caves (numbered IX, X), according to Ferguson’s plan of the site) and two Viharas (XI, XII) of the same age, which were excavated certainly before the commencement of the Christian era. Of the later caves, Burgess forms two groups. Nine (VI, VII, VIIA, XV. to XX.) range in date from the 5th to the end of the 6th cent. A.D. The second group (I. to V., XXI. to XXVII.) were all excavated, or at least finished, within the limits of the 7th century. This second, and by far the largest, series belongs to the Mahayana school of Buddhism, and can be distinctly marked off from the earlier group. Cave No. I. is specially to be noted. Burgess describes it as the most handsomely ornamented Vihara at Ajanta, or, indeed, in all India, and at the same time it is one of the most modern, having been completed probably in the beginning of the 7th cent., and not completely finished before A.D. 650.

The most interesting and valuable of the remains at Ajanta are the series of frescoes in the caves. These generally represent passages from the legendary history of Buddha, and from the Jatakas, or stories of the Buddha’s former births. The frescoes of Asita to the infant Buddha, his temptation by Mara and his forces, legends of the Naga, or serpent race, hunting scenes, battle pieces, the carrying of relics to Ceylon, and other incidents in the Buddhist legend. Many of the frescoes represent incidents taken from the Jatakas, of which some twelve have been identified by S. F. Oldenburg (Jour. American Oriental Society, xvii. 183; JEAAS, 1896, p. 324). Of these, perhaps the most important are the Ummadanta Jataka of king Sibi or Sivi (Cowell’s Cambridge trans. v. 107 ff.) and the Chaddanta Jataka, or tale of the six-tusked elephant (ib. v. 20 ff.). A recent discovery in one of the caves has brought to light a picture which depicts the Nidanas, or Causes, in concrete form. This picture, supplemented by Tibetan versions and Lamaistic explanations, is certainly a diagram of human life in the form of the wheel of life (Watters, in Griffith’s Antiquary, 1879, p. 576).

In the mountain scenery of the frescoes are depicted figures of birds and monkeys, and sometimes of Bihis and other forest tribes, and the fabled inhabitants of the hills—Guhyanas, Kiratas, and Kinnaras, the last of whom are musicians to the mountain gods, with human busts and legs and tails of birds. The whole series of frescoes is of the greatest historical value as illustrating the religious and social life of India between the 3rd and 8th cents. of the Christian era.

All critics have praised them, and the condition of many of these frescoes ‘The condition of mind,’ writes Griffith (in Burgess, Notes, 4 f.), ‘which originated and executed these paintings at Ajanta must have been very similar to that which produced the early Italian paintings of the 14th cent., as we find much that is common to both. Little attention paid to the science of art—a general crowding of figures into a subject; regard being had more to the truthful rendering of a story than to a beautiful rendering of it; not that they discarded beauty, but they did not make it the primary motive for representation. There is a want of aerial perspective, the parts are delicately shaded, not forced by light and shade, giving the whole a look of flatness, a quality to be desired in mural decoration. Whoever were the authors of these paintings, they must have constantly mixed with the world. Scenes of everyday life, such as preparing food, carrying water, buying and selling, processions, hunting scenes, elephant fights, men and women engaged in singing, dancing, and playing on musical instruments. Many and most gracefully, and all most graphically depicted upon these walls; and they could only have been done by men who were constant spectators of such scenes; by men of keen observation and retentive memories.’ Of the famous paintings of which we have frescoes, in the series XV., the same authority writes: ‘For pathos and sentiment and the unmistakable way of telling its story, this picture, I consider, cannot be surpassed in the history of art. The Florentine could have put better drawing, and the Venetian better colour, but neither could have thrown greater expression into it’ (ib. 58 ff.).

In many of the paintings there is ample evidence of Sasanian or Persian influence. One wall scene (Griffith’s drawing No. 5) appears to represent the reception of a Persian embassy at the court of an Indian king, and, according to Burgess (ib. 27), can hardly be earlier than the 7th cent. of our era.

**Literature.**—The literature dealing with the Ajanta caves and their wall-paintings is very extensive. References to the older accounts of travellers and the comments of critics upon their narratives have been collected by Campbell, Bombay Gazetteer, xxi. 480, where a good account of the site will be found. The later and better authorities are:Notes on the Buddhist Rock-Temples of Ajanta, Bombay, 1879, in Archaeological Survey of Western India, No. ix.; J. Ferguson and J. Burgess, the Visit to the Caves of Ajanta, 1879, pp. 550–547; J. Burgess and Bhagwanlal Indrali, Inscriptions from the Cave-Temples of Western India, Bombay, 1881; J. Burgess, Report on the Cave-Temples and their Inscriptions, 1881; J. Griffith, The Paintings in the Buddhist Caves of Ajanta, Khandesh, 2 vols., London, 1896–97.

W. CROOKE.
AJIVIKAS.*
[A. F. R. HOERNLE].

I. Introduction.—The sacred books, both of the Buddhists (e.g. A.N. iii. 276; Dial. pp. 71, 220) and of the Jains, inform us of the existence, contemporary with the foundation of Buddhism and Jainism, about the end of the 6th cent. B.C., of a community of religious mendicants, whom they call Ajivikas. From certain Jain Scriptures we further learn that the founder of this community was a man called Gosāla Mankhali-putta (Pāli Makkhali-putta, Skr. Maskari-putra). In the seventh Anga (U.D. ii. 153), a man, Saddāla-putta, is said to have been received by Gosāla into the Ajivika community and the Bhagavati Sūtra, the fifth Anga, gives us an account of the life of Gosāla, as the acknowledged head of that community. Though the Buddhist Scriptures (e.g. M.N. i. 198, 230, 515; S.N. i. 68, iv. 508; D.N. i. 52; Jāt. v. 246) also frequently mention Gosāla Makkhali-putta as one of the leaders of the six religious mendicant communities whom Buddha singles out for special animadversion, they never explicitly connect him with the Ajivikas, or state that he was their leader. But that on this point the Buddhist tradition did not really differ from the Jain, is shown by the fact that both attribute to him the holding of the religious-philosophical doctrine of the negation of free will and moral responsibility.

On the exact signification of the name 'Ajivika' we have no information. The Skr. word ājīva means the mode of life, or profession, of any particular class of people, whether they live as 'swords or scribes' among the religious mendicants, have renounced the world. Thus 'right-livelihood' (sanyag-ājīva) was in the Buddhist system (Dial. 221; B.S. 147; O.B. 146) one of the eight 'paths' incumbent on the mendicant. The word ājivika, being a derivative of ājīva, means one who observes the mode of living appropriate to his class. We shall see in the sequel that there is some ground for believing that Gosāla held peculiar views as to the ājīva of a mendicant who was truly liberated from the fetters of karma. It was probably for this reason that he and his adherents came to be known as Ājivikas, or the men who held the peculiar doctrine of ājīva. All the indications that we have tend to show that, as usual in such cases, the name was not taken by themselves, but given to them by their opponents, and that in their mouth it was meant to be opprobrious. As we shall see, Gosāla, by his conduct, laid himself open to the charge of insincerity, in that he practised religious mendicancy, not as a means of salvation (mokṣa), but as a means of gaining a livelihood, as a mere profession (ājīva). The name 'Ājivika,' it appears, was originally meant to stigmatise Gosāla and his followers as professionals; though, no doubt, in later times, when it became the distinctive name of a mendicant Order, it no longer carried that offensive meaning.

2. Personal History of Gosāla.—The fifth Anga of the Jains, commonly known as the Bhagavati Sūtra, gives us a fairly connected and detailed account of the life of Gosāla (B.S. xx. 1; in U.D. App. 1). According to this account, Gosāla's father was a mankha, a kind of professional beggar, whose name was Mankhali. Hence he was known as the Mankhali-putta or the son of Mankhali. His other name, Gosāla, was derived from the circumstance of having been born in a cowshed (gokālā), in which his parents, failing to obtain any other refuge during a certain rainy season, had taken shelter. When he grew up, he adopted his father's profession of a mankha. During his journeyings he repeatedly fell in with Mahāvīra, who, just about that time, had commenced the wandering life of a Nigantha ascetic. Seeing the great respect in which Mahāvīra was held by the people, Gosāla determined to follow his example. Though at first repulsed, he succeeded at last by his importunity in being accepted as a disciple by Mahāvīra. But the two men were so different in character and temper, that after six years, owing to the insincerity and trickery of Gosāla, the companionship was dissolved. Gosāla now set up as the rival leader of a separate community of religious mendicants, called Ājivikas, and with his followers established his headquarters on the premises of a potter woman in the town of Sāvatthi (Sravasti). After the lapse of sixteen years, Mahāvīra, who never in the meantime appears to have met his former companion, happened to visit Sāvatthi, and, hearing of the influence which Gosāla was wielding there, he took occasion to expose the false character of the propounding ascetic. On learning this, Gosāla, threatening vengeance, at once proceeded with his followers to where Mahāvīra with his Niganthas was lodging. Here he began the dispute by putting forward an ingenious argument to prove that Mahāvīra was mistaken in his identity, and that, in reality, he was a totally different person from the Gosāla whom Mahāvīra had once known as his companion. On Mahāvīra contemptuously brushing aside this sophistry, the infuriated Gosāla grossly abused his adversary; and the two rival factions came to blows. In the fight two of Mahāvīra's disciples were disabled, but in the end Gosāla, being discomfited by Mahāvīra in a personal encounter, was compelled to retire in disgrace. The taunts of his rivals, and the consequent distrust of the townsmen, now made Gosāla's position in Sāvatthi untenable. This preyed on his mind so much that it became utterly unhinged, and, throwing aside all ascetic restraint, he gave himself up to drinking, singing, dancing, soliciting the potter woman, and indulging himself with the cool muddy water of the potter's shop. Six months of this riotous living brought on his end; and with it came a momentary return of

reason and the sense of remorse. His last act was to acknowledge to his disciples the truth of Mahâvîra's statement respecting himself, and to instruct them to bury him with every mark of dishonour and publicly to proclaim his shame. The disciples, it is added, refrained from carrying out the dying instructions of their master: the last among the stories of the life of Gosâla in the Bhagavati Sûtra. The Buddhist references to his life are much briefer. Buddhaghosâ (c. 410 A.D.), in his commentary on the Dîgha Nikâyâ (S.F. pp. 143, 144, tr. in U.D. App. II.), tells of Mankhali-putta, a mendicant; and that the latter name was given to him because he was born in a cowshed. Having broken an oil vessel through carelessness, and fearing chastisement from his angry master, who had caught him, he broke away, leaving his garments in his master's house, and retired to a village, where the people offered him clothes; but he refused them, hoping to make a better living as a naked arhat, or holy man.

The two accounts—so far as we are able to judge—are quite independent. The former is connected with another of the Maru or Mauka, the other is Bhadra and the Bhuddhists and Jains, being antagonistic sects, would not adopt each other's views. Moreover, Buddhaghosâ wrote in the Jain Scribe, while the Jains Sutras, as we now have them, were composed probably in Western India. All the more valuable are the two accounts, both in respect of the points in which they differ, and in which they agree. They agree in two points: first, that Gosâla was born low parental line in a cowshed, and, secondly, that he was a naked arhat. This last fact, as it is mendicant; and, secondly, that this profession of his was not sincere, but adopted merely for the sake of getting an idle living. The ground of this is, the belief in Gosâla's insincerity, which will be shown in the sequel, was, according to both the Buddhists and the Jains, that Gosâla not only taught but also practised antinomian doctrines.

The point on which the two accounts differ is the meaning of the word in Sanskrit, 'Mankhali-putta.' According to the Jains, Mankhali is the name of Gosâla's father, and a derivation from maṅkhaka. According to the Buddhist, this is the name of Gosâla himself. The reference in the Jain Scribe from a mistaken word maṅkhaka. The Prakrit word maṅkhali is the equivalent of the Skr. word maṅkÇâra; but there exists no word maṅkÇâ, the equivalent of maṅkhaka. The latter word, in fact, has not been found anywhere but in the passage of the Bhagavati Sûtra which introduces it as the source of the name Mankhali, and it is presumably an invention ad hoc. Moreover, the meaning of the hypothetical word maṅkhâla was not certainly known to the old commentators. Thus, while Abhaya Deva (c. 1560 A.D.), in his commentary on the Bhagavati Sûtra, explains it to mean 'a kind of beggar that tries to extract alms from the people by showing them instances of malpractice of Brahmins,' his name, as the name Mankhali, is perhaps an invention ad hoc. The truth, no doubt, is that maṅkÇa-la-putta is a formation like Nâgana-la-putta or Nâgâna-la-putta, a mendicant of the Nâgâna Order. It describes Gosâla as having originally belonged to the Maṅkhalî, or Masons, class of wandering mendicants; thus, the very existence of this kind of mendicant in India is proved by the fact that the celebrated grammarian Pûkîn (c. 850 B.C.), in his Grammar (v. 1, 154), explains the formation of the name. According to him, a Mason was called because he carried a staff in his hand (bâbûr staff, mûrda). On account of this practice of carrying a staff, he was known also as Eka-danda, or a 'one-staff-man.' Patañjakâ, in his commentary on Pûkîn's statement (K.Mah. iii, 93), further explains that this kind of wandering mendicant (parivârâsaka) was called Mankhali, not so much because he carried a staff, as because he professed to have received the rules of the mendicant. The reference to the two statements is to the effect that there were two grades of these Masons or Eka-danda. In the lower grade, the ascetic carried a staff, in addition to a begging bowl and a strip of loincloth (tata-bandhana). In the higher grade of Paramâmakhancâ, he abandoned even this claiming absolute renunciation as his only staff of reliance (W.S.B. ii, 174-76).

In ancient India, at one time, the tendency appears to have been very prevalent to adopt the life of a homeless wandering ascetic. Often this life would be detached from sincere religious motives; but probably as often it was due to a mere love of vagrancy and dislike of honest work. It was not limited to any particular class of people; but it was probably more prevalent among the lower classes. Among the upper classes (the so-called 'twice-born') the Brahmanic laws gives attempted to regulate it by enacting that the early years should be devoted to education and the middle years to rearing a family and pursuing a profession, while only the declining years might be given up to the ascetic life. It may be doubted whether this wholesome regulation ever was much observed in Indian society; the tendency to devote the whole life to religious renunciation is strong. It is defined by a certain period of life, but by organizing the mendicants into communities governed by strict rules of conduct. Such men were the founders of Buddhism and Jainism. Gosâla, from all accounts, was hardly a man of that stamp. He seems, by natural disposition, to have belonged to the lower sort of Masons, who made religious mendicancy a pretext for an idle and self-indulgent life. The existence of this barser sort of mendicants in ancient India is vouched for by a curious piece of folklore. It is said, that the Tîtraks or Masons (Mankhali-putas, Chedaga, in Jat. iii, 542). The verses occurring in the Buddhist Jâtakas embody the most ancient folklore—of a much older date than Buddhism itself. In the 12th and 13th verses of that Jâtaka a mendicant of the barser sort is described, among other things, as a naked mendicant (anâchâra), which shows that he must have belonged to the class of mendicants who were known as Eka-dandins, or Masons. But what gives particular significance to this notice is that the mouth of the later commentary identifies that mendicant as an Ajivika. It is clear that in the mouth of the Buddhists, 'Ajivika' was a term of reproach applicable to a Mason or Eka-dandin of the barser sort. This seems to explain why it was that both Buddhists and Jains call Gosâla a Mankhali, and say that he was a leader of Ajivika; and very possibly he was not only himself a Mankhali; but also, as the Jains say, the illegitimate son of a Mankhali.

It is difficult to determine the motive which induced Gosâla to attach himself to Mahâvîra. It may be that the contact with that religious enthusiast temporarily woke up the better instincts in Gosâla; he made an avowal professed his motives;...
murdered him by a slow course of starvation. This murder happened in the year B.C. 490, or eight years before Mahavira, in the year of the war, and that war must have taken place in the year of Kujjya's accession to regal power, and that accession cannot well be placed at a very long interval before the murder of Seniya. All these dates are best seen by assuming that Mahavira died in B.C. 484, two years earlier than Buddha, and that consequently the death of Gosala and the war took place in B.C. 500, sixteen years before the death of Mahavira, and ten years before the murder of Seniya. Accordingly that year, B.C. 500, may be taken as the approximate date of the death of Gosala.

3. Dogtrines and practices of Gosala.—Neither Gosala nor any of his Ajivikas followers has left us any record of their doctrines and practices. Accordingly we are reduced to the necessity of forming our opinion on those two points from the occasional references to them in the records of their rivals, the Buddhists and Jains. Their statements must, of course, be accepted with caution; but it is seen that general trustworthiness is guaranteed by their agreement in all essential points. This agreement possesses the same value, as the statements, coming from two mutually hostile sects, constitute two independent sources of information.

In the Buddhist Mahajmika Nikaya (l. 514 ff., N.R. ii. 254) there occurs a very instructive statement. Buddha is represented as dividing the ascetic systems which differed from his own into eight classes. For his own system he condensed into six the sentence, 'As I see it, there is no such thing as exertion or labour, or power, or energy, or human strength; all things are unalterably fixed' (cf. S.N. iii. 210; A.N. i. 260). In the Buddhist Digha Nikaya (p. 53; Dial. 71) the pith of Gosala's system is more fully stated as follows: "There is no such thing as exertion or labour, or power, or energy, or human strength; all things are unalterably fixed." (S.N. iii. 210; A.N. i. 260). In the Buddhist Digha Nikaya (p. 53; Dial. 71) the pith of Gosala's system is more fully stated as follows: "There is no such thing as exertion or power, or energy, or human strength; all things are unalterably fixed." (S.N. iii. 210; A.N. i. 260). In the Buddhist Digha Nikaya (p. 53; Dial. 71) the pith of Gosala's system is more fully stated as follows: "There is no such thing as exertion or power, or energy, or human strength; all things are unalterably fixed." (S.N. iii. 210; A.N. i. 260)."
dreams. There are 8,400,000 great periods during which both fools and wise alike, wandering in transmigration, shall at last make an end of pain.'

To this scheme Gosāla is represented as appending his own determinist warning: 'Though the wise should hope that by some particular virtue or performance of duty or penance or righteousness he may escape this (the karma, that is) not yet mature, or though the fool should hope by the same means to get rid of karma that has matured, neither of them can do it. The ease and pain, measured out as it were with a measure, exactly in the great period of transmigration there can be neither increase nor decrease thereof, neither excess nor deficiency. Just as a ball of string, when it is cast forth, will spread out just as far as and no farther than it can unwind, so both fools and wise alike, wandering in transmigration exactly for the allotted term, shall then, and only then, make an end of pain.'

The two items in the foregoing scheme which can definitely be identified in the Jain system are—(1) the division of all living beings into those possessed of two, three, or five senses, which is fully set out in the Jain Utterādhyāyana Sūtra (J.S. ii. 213, 219; also ib. i. 3, footnote 2); and (2) the division of mankind into six classes (abhijñātā). The latter division, as held by Gosāla, is expounded by Buddhāghoja in his commentary on the Buddhist Nuśkaṭikā (P. v. 162, tr. in U.D., App. ii. p. 21). According to his account, Gosāla distinguished the six classes by six colours—black, blue, red, yellow, white, and supremely white. The black were the kings, the red, yellow, and white. The blue were the ministers, the lay adherents, the mendicants known as Bhikṣus, that is, the Buddhist monks. The red were the mendicants known as Niggaṇṭha, who wore (at least) a strip of loin-cloth. The yellow were the lay adherents of the mendicants known as Ācāryā, that is, those mendicants who wore no clothing whatsoever. The white were the mendicants, male as well as female, who were known as the Ajīvikas. The supremely white were the leaders of the latter: Nanda Vachchha, Kesā Sakkāhika, and Gosāla Mahākhalā-putta.

In Mahāvira's system, the six classes, which he termed śāra, are also distinguished by a series of six colours differing but slightly—black, blue, red, yellow, white and (white; J.S. ii. 199, 200). In the interpretation of these colours, the two systems, on the whole, go somewhat differently, but the underlying principle is, on closer inspection, seen to be the same. According to Mahāvira, the black are those who injure living beings, i.e. those who were first of the five vows of the śāra (āśīvata). The blue are those who indulge their greed or their passion, i.e., those who contravene the fourth and fifth of the vows (āśīvahā and brahmaṇa). The grey are those who are deceitful and thieving, i.e., those who contravene the second and third of the vows (āśīvahā and ācāryata). The red are those who strive to control themselves so as to keep the law, i.e., the lay adherents. The yellow are those who are firm in controlling themselves, i.e., the so-called mendicants. The white are those who have attained absolute self-control, i.e., the so-called Jaina-kṣatriya, like Mahāvira himself (J.S. ii. 199, 200).

Gosāla's scheme is practically the same, with the exception that he illustrates his meaning by quoting types. Thus for the first of the śāras he quotes 'the mendicant who is the type of the white class': for among their rivals the Buddhists had the reputation of being 'the preachers of ease' (āśīvata) who favoured 'the way of comfort' (puṣṭi-mārga, J.S. ii. 260, footnote 3; and V.D.D. ii. 332, footnote 5). The Niggaṇṭhas were the type of the second class; for they were superior to the Buddhists in renouncing comfort, but inferior to the Ajīvikas in adhering to a loin-cloth. The lay adherents of himself, the Ācārya, or the mendicants, was the type of the yellow (or Mahāvira's red) class. The 'privileged' adherents of him, and the so-called Ajīvika, who apparently also walked totally naked, were the type of the white class. He himself, and other leaders, who walked totally naked, were the type of the supremely white class. In this connexion it is interesting to note that Buddhaghoja's interpretation of Gosāla's classification is based on the Āguttara Nikāya (iii. 383), where, however, he himself is attached to the mendicant leader Pārāśara Kasapa. It is not a mere verbal error, it confirms the observation already made that the classificatory scheme was common to all the six prominent rivals of Buddha (cf. Mahābuddhara, xii. 289, v. 32 ff.)

It has already been stated (above, p. 261) that, in the main, there was no doctrinal difference between Gosāla and Mahāvira. There was, however, one point on which, according to the Jain tradition, there was a marked difference between them. They both accepted the so-called Puṇṇas, or Original Sayings. These were, later, expounded in the Dravyadā, or the twelfth Aṅga of the Jains. The first portion of this Aṅga is said to have explained 'the preparations necessary to grasp the meaning of Mahāvira's system correctly' (A.A. xx. 173). With respect to this preparatory work, Pārāśara Kasapa counted six, while others counted seven groups.

The former count was that of the orthodox Jains, while the latter belonged to certain schisms, called Ajīvikas or Terāsya, that is, as Abhayadeva (c. 1050 A.D.) explains, to the sect (pārāśāra) founded by Gosāla. These men had their name terāsya (Skṛ. trātiyā) from their practice of treating everything under three aspects (tray-ātmasa)—assertion, negation, and indifference. Thus they would say, e.g. that a thing may be true, or untrue, or that there is no being (sisī-sad-asat). This tenet, technically known as the syādvāda, or the sāyādīvāda, is distinctive of the Jains generally. It follows that the Terāsya must have made use of it in some special way, and that this special way constituted their seventh group, or preparatory discipline (parāśāra).

It may further be surmised that this seventh group was concerned with the ajīvika, or 'profession' of men; and that for this reason the Terāsya had received their alternative name of Ajīvikas, or 'professionals.' The substance of their teaching on this head is explained by Śīlānka (c. 876 A.D.) to have been that, besides the two states of man (admitted by Mahāvira), in which he was 'bound' by karma, and in which he was 'liberated' from karma, there was a third state in which he was neither truly bound nor truly liberated (J.S. ii. 245, footnote 2). The men of the 'bound' state were those who lived in the world. To the intermediate state belonged those who had renounced the world (like Mahāvira); and to the latter men, owing to their bad karma, who were not truly liberated; they had yet to pass through an innumerable series of transmigrations before they could reach that state of true liberation from karma which Gosāla claimed to have attained himself (cf. Beven 1237-1292; R.L.B. p. 253; U.D., App. ii. p. 18; see also Dial., 72) the latter is represented as himself explaining his theory of transmigration.

'According to my doctrine,' he says, 'all those who have become, or are now becoming, or will hereafter become, perfected, have to finish 8,400,000 great periods (mahākalpa), during which they have to be born, in regular alternation, seven times as a diva in a firmament (aṇamāna) and seven times as a conscious being (aṇamāna, man) on earth, finishing up with seven reanimations in seven different bodies; and having, in the course of these rebirths, rid themselves of the effects of the five sorts of karma, and of the three sorts of karma and of the fraction of it; and of the proportion, respectively, of 100,000 and 60,000 and 600 (of the 8,400,000 great periods) they attain final perfection.'

To give an idea of the immeasurable length of time involved in this process:

'The bed of the river Ganges measures 500 yojanas in length, half a yojana in breadth, and 60 dhanus in depth (a yojana= 1000 square miles, a dhanu= 500 feet). Taking a series of seven Ganges rivers of each succeeding foot at the rate of 1000 yojanas to the foot, and if one of the preceding, the last of the series is equal to 117,649 Ganges rivers; if now another's (vātika, i.e. removed, the time required to exhaust the whole of the sand of these seven Ganges rivers would be one saras period; and at the rate of 50,000 to each such sand, it would be long before mahākalps, or great period' (U.D., App. ii. p. 27, footnote 21).

In the course of its last conscious existence on earth, the soul has to pass through seven changes of body by re-animation; that is to say, the soul successively passes into, and thus re-animates, the
dead body of seven different persons. In his own case, Gosala explains, he left near the town of Rajagaha the body of Udati Kundiyayanika (when the latter died), and passed into the (dead) body of Enejjaga, re-animating it for the space of 22 years. When the latter died, he passed into and resided in the body of Mahavira for 21 years. Similarly, he re-animated in succession the four dead bodies of Mandiyi, Roha, Bharaddai, and Ajjunaga Goyamaputta for the space of 20, 19, 18, and 17 years respectively. 'Finally,' Gosala concludes, 'the Digha Nikaya (p. 166; Dial. 227) this account of the Ajivika practices is placed in the mouth of a naked ascetic.

It (fols. 125r, 1254, 1Enejjaga, Mahavira and Ajjunaga years.

This insistence by Gosala on the theory of re-animation being his own doctrine is of particular importance. It is one of those theories which Jain tradition states to have been quite peculiar to Gosala, and to have originated in connexion with certain incidents in his life. It is clearly a somewhat incongruous supplement made by Gosala to his general theory of transmigration. It must have been added for a particular purpose. What that purpose was is practically unknown.

The idea of the dissolution of the early companionship of the two men had taken place not so much by reason of a mere theoretical difference in doctrine, as on the ground of some course of conduct which was regarded by Mahavira, as well as by the people generally, as discreditable and unworthy of an ascetic.

Though the theory of re-animation was employed by Gosala for the purpose of repudiating his identity, the incident which suggested it is introduced into the text of the Digha Nikaya (fol. 1214 ff.; U.D., App. I. p. 9), at an earlier time, when Gosala was still associated with Mahavira.

Gosala, wandering together from Siddhathagama to Kumbagoua, the two men passed a large sesame shrub in full bloom. Seeing it, Gosala asked Mahavira whether or not the shrub would perish, and where its seeds would reappear. Mahavira replied that the shrub would perish, but that seeds would form in seed-vessels of the same shrub. Gosala would not believe it; so, thinking to prove him a liar, he quietly returned to the shrub, tore it up by the roots, and threw it away. As chance would have it, just then a shower of rain fell. In consequence of it, the shrub was able again to take root; and so the seeds after all formed in its seed-vessels. In the meaning which Gosala passed to Kumbagoua. On their return some time afterwards they passed the identical sesame shrub; and seeing it, Gosala reminded Mahavira of his prophecy, and asked that it was clear that the shrub had not died, and that the seeds had not formed. Mahavira replied that his prophecy had been fulfilled; the shrub had died, but believing that Gosala himself had pulled it out by the roots and thrown it away, that owing to a timely fall of rain the shrub had come to life again, and the seeds had formed in the seed-vessels. He added that similarly all plants were capable of re-animation. Still Gosala would not believe it, and went up to the plant to examine its seed-vessels; but finding, on opening it, that Mahavira had been correct, he drew the further conclusion that not only plants but also animals (including Mahavira himself) were capable of re-animation. To this generalisation of the theory of re-animation, however, Mahavira would not assent.

In this short discourse another doctrine may be mentioned which is stated in the Bhagavati Sutra (fols. 125r, 1254; U.D., App. I. p. 7) to have been quite peculiar to the Ajivika followers of Gosala. It was known as the 'Eight Finalities' (sattva chara漫tita), that is, the doctrine of the last drink, the last song, the last dance, the last solicitation, the last tornado, the last sprinkling elephant, the last fight with big stones as missiles, and the last Tirthankara, viz. Manikali-putta himself. The incidents which gave rise to this doctrine are those which attended the closing days of Gosala's life. The first four were his last personal acts as related already in the story of his life (above, p. 259 ff.). The next three are said to have been remarkable events which happened just about the time of Gosala's death. The last four were one of those fierce cyclonic storms, accompanied with torrential rain, which still occasionally visit Bengal, but which are almost unknown in other parts of Northern India. The 'sprinkling elephant' is said to have been a huge creature which had been trained to amuse the ladies of the royal harem when they bathed in the river Ganges, and the claim to the possession of which, as has already been related, occasioned a war between the kings of Magadha and Vaishali. In this war those stone missiles were to require investment with some kind of powerful catapult. The reason d'être of this curious doctrine, no doubt, is that the devout Mahavira, who felt his body to be a transitory form, would not be disquieted by any such very natural event; for there is no one of those fierce cyclonic storms which elapsed without having been felt by him. The latter refers to what is excreted by the cow, what is soiled by the hand (e.g. water in a potter's vessel), what is heated by the sun, and what drips from a rock. The latter refers to such things as water-jars, mangoes, beans, etc.

With regard to the practices of the Ajivikas, we have an instructive statement in the Buddhist Majjhima Nikaya. In the 36th chapter (M.N. i. 238; N.R. i. 376), Sachchaka, a member of the Nigantha community, is represented as explaining to Buddha the practices observed by the adherents of Gosala Manikali-putta and his friends Nanda Vachchha and Kissam Sankhichha. These three men, as we have seen (above, p. 262, also below, p. 267), were the leaders of the Ajivikas. Respecting them and their adherents, Sachchaka says:

They discard all clothing (schelaka); they dispense with all decent habits (mauddhakara); they lick their food out of their hands (kattha-wallpa, B. 253); they allow only a handful of food; they permit no food to be brought to them, or to be specially prepared for them, or to be received by them; they have no meals in the day; they trust in fasting; the food which they eat is cooked, nor food placed within the threshold or among the firewood or among the posets, nor food from a couple eating together, or from a woman with child, or from a woman giving suck, or a woman in intercourse with a man; nor food which is reduced (in times of drought), or when a dog is standing by, or when flies are swarming round; they will not eat fish or flesh, nor drink liquor made from rice or the flowers of Woodfordia; they fast from seven days to seven days; they observe their fast on the half-month; in this manner they observe various routines of fasting.

In the Digha Nikaya (p. 106; Dial. 227) this account of the Ajivika practices is placed in the mouth of a naked ascetic
Another point is worth noticing in connexion with Sachchaka's statement of the Ajivika practices. When he had finished it, Buddha inquired whether the Ajivikas were really able to sustain life as they claimed, and the mendicants, contemptuously replied that, of course, at other times they indulged in copious and excellent food and drink, and thus regained bodily vigour and grew fat. This remark is significant of the prejudice in which the sincerity of Gosala and his Ajivikas was held by his contemporaries. It only serves to confirm the suspicion of Gosala's insincerity on the far more serious point of sexual conduct, which, there is good reason to believe, caused the rupture between him and Mahāvīra.

From the way the Terāsiyas, or Ajivikas, with their peculiar doctrine respecting the seventh group of preparatory discipline (above, p. 262), are spoken of, it is clear that they were not regarded as outside the pale of the Nigāghana controversy. Their doctrine might not be acceptable to the Jainas; it may even be schismatic; but it was not condemned as heretical. It might cause friction between its propounder, Gosala, and his associate, Mahāvīra, who rejected it; but it would not have caused that total separation and intense hostility which we see taking the place of the early association of the two men. For this change clearly there must have existed a special cause not essentially connected with the Terāsiya or Ajivika doctrine. What this cause was we are nowhere explicitly told. The Buddhists are silent. Buddha, we know, disliked Gosala; but he had never been in personal touch with him, and the quarrel of Gosala with Mahāvīra did not greatly interest him or the Buddhists. It was different with Mahāvīra. In the earlier years of their ascetic life he and Gosala had been associates. But the subsequent difference and total separation could not but be a matter of importance to the Jainas. Yet even in their Scriptures—so far as we know the older treatises—no explicit statement of the cause or reason of this separation is recorded. We are left to draw conclusions from some indirect indications; nor are these at all obscure in their suggestiveness. The reported choice of Gosala's headquarters on the premises of a woman, and his attempt to repudiate his identity, clearly point to, not a doctrinal, but a practical ground of separation, to some discreditale feature in the conduct of Gosala. What this feature was may be plausibly imagined in the Suśra-krtya (J.S. ii. 245). Against Mahāvīra, Gosala (above, p. 261), that men who, like Mahāvīra, had renounced this world belonged to the intermediate state, and were still liable to be involved in karma, just as clarified water again becomes defiled, while he, Gosala himself, had reached the state of perfect liberation, Mahāvīra points to the conduct of Gosala and his followers: 'These men do not lead a life of chastity. That fact, he means to say, should be enough to satisfy 'a wise man' as to their common falsehood, otherwise of Gosala's contention. In this connexion it may be noted that, in the Bhagavati Sūtra (fol. 1275-1291; U.D., App. I, pp. 11-14), Mahāvīra is represented as ironically applying to Gosala his own doctrine of transmigration, and showing how Gosala, instead of being in the state of true liberation, had after his death to pass through an interminable transmigra-

tory series, the several steps of which he specifies, before he really attained perfection.

There is, however, a passage in the Suśra-krtya which is even more explicit in its suggestiveness. It records (J.S. ii. 409-413) a disputation which Ārakha, a follower of Mahāvīra, held with Gosala respecting the points on which the latter differed from Mahāvīra. These points were an alleged charge of inconsistency against Mahāvīra, that he at first wandered about as a single monk, but afterwards surrounded himself with many monks; secondly, a charge of misplaced severity, that he insisted on his followers regarding themselves as sinners; thirdly, a charge of spiritual arrogance as well as spiritual cowardice. The four restrictions refer to:

1. Drinking of cold water.
2. Eating (unboiled) seeds.
3. Accepting things specially prepared.
4. Having intercourse with women.

Mahāvīra forbade these actions as sinful, but Gosala maintained that no accetic committed no sin in doing them. The same four restrictions are mentioned in another place of the same Suśra-krtya (J.S. ii. 267), though with a notable difference. Here they run as follows:

1. Drinking cold water.
2. Eating (unboiled) seeds.
3. Accepting things specially prepared.
4. Serving a sick brother with food brought to him in the vessel of a householder.

The ethical item of sexual intercourse is here replaced by the ceremonial item of eating from the vessel of a lay adherent. The significance of this difference will be explained in the sequel (p. 267). At this point it is important to notice only that none of the matters in dispute is concerned with doctrine; they only represent a conflict of spiritual or moral qualities, or an effort to maintain the discipline of the sect which had lost its identity.

Considering that it was the conduct of religious ascetics that was in question, the most striking point in dispute is that respecting sexual intercourse. To this point it is necessary to remember that Pārśva, the precursor of Mahāvīra, had enjoined only four vows (yāna) on his followers (J.S. ii. 121). These were—(1) not to eat (nūrīṭa), (2) to speak the truth (niṣīṭa or satya), (3) not to steal (asteya), (4) not to own property (aparigraha or aśīṣkotana). That is, Pārśva enjoined the vows of kindness, truth, honesty, and poverty. To these Mahāvīra added the fifth vow of chastity (brahma-charya, to. ii. 91, 109, 129, 204). His reason for making this addition is explained in the Uṭkārdayāna Sūtra (to. ii. 122, 123). Before Mahāvīra it had been understood that chastity was implicitly enjoined by the other vows. The wife being accounted a species of property, marriage was forbidden by the vow of poverty, and abstinence by the vow of honesty; but the case of fornication was left open. On this specious ground, laxity of morals crept in among the intellectually or morally weaker members of the community founded by Pārśva. Mahāvīra's fifth vow of chastity was designed to reform that evil. On this point he encountered the open opposition of his associate, Gosala. There was, however, no free will, there was no moral responsibility. Indeed, there is good ground for believing that it was this very laxity of conduct on the part of Gosala that gave the occasion to Mahāvīra to introduce the fifth vow, and thus to force the withdrawal of Gosala. It will be noticed that the two statements of the four restrictions, above quoted, have the first three restrictions in common, while they vary with respect to the fourth. This points to something peculiar in those three restrictions. Now, in one place of the Suśra-krtya (J.S. ii. 313) these three particular restrictions (regarding cold water, seed, and non-acceptance of specially prepared food) alone are mentioned, adduce are referred to Suśra-krtya Sūtra (J.S. i. 65) we find Mahāvīra described as 'the wise man who enjoined three restrictions' (pārśva-ātman). On the other hand, in the Buddhist Dīgha Nikāya (p. 67; Dist. 74), Mahāvīra is made to describe himself as 'the man of four restrictions' (chatavārātman). It thus appears that the restriction regarding intercourse with women is, in fact, identical with Mahāvīra's fifth vow of chastity, which, as we have already remarked, is an addition made by him to the four restrictions of Pārśva. If the surmise is correct that it was Gosala who provided the occasion for the institution of this restriction (pāmāda), that is to say, the fifth vow (yāna) of Mahāvīra's system, it goes a long way to prove that it was Gosala's laxity which caused the disputation between him and his associate, Pārśva, with respect to the four restrictions of Gosala's sect.

* In J.S. i. 63 the phrase is wrongly translated by 'three vows,' following herein the commentators; but the word, 'vow,' is some thing different from pāmāda, restriction.
of morals that was the real cause of Mahavira's separation from him. Speaking on the ascetic's duty to avoid intercourse with women, Mahavira is represented in the Sutra-katika (J.S. ii. 261) as saying concerning Gosala: 'In the assembly of the monks he pronounces holy words, yet secretly he commits sin; but there is no one to be a deceiver and great rogue.' It was Gosala's hypocrisy in the matter of sexual conduct that caused the breach between him and Mahavira.

This, then, was the main cause; but, no doubt, there were other subsidiary causes which exacerbated the friction between the two men. They had reference to the three restrictions regarding the use of cold water and uncooked seeds, and the acceptance of specially prepared food. In order to realize the significance of these seemingly trivial matters, we must remember that among all Indian ascetics abstention from action (karma) was held to be the paramount rule of conduct, because karma bound the soul in the cycle of transmigrations. But to this rule there was one exception; seeing that without the body one cannot go through the whole of the discipline which secures salvation (moksha), such actions as are necessary for the preservation of the body (dharma-dhāra-sāriva-rakṣaṇāya) in the commentary to S.K. ii. 6, § 7, in J.S. ii. 411), e.g. the begging and eating of food, are innocuous and do not operate as a fetter (kala-pāraṇa). Hence Gosala, in his vow (vrata) or restriction (yāma) taken on himself as the ascetic was considered tacitly subject to that rule and its exception. The differences among the ascetics arose when it came to the practical application of this one unqualified restriction. Thus, while all agreed that storing food was forbidden, but that begging one's daily allowance of food was permitted, some ascetics qualified that permission by certain restrictions (yāma). Mahāvira forbade the use of cold water and of uncooked seeds; the other, or state, lost injury should be done to any 'life' (jiva) in either; both should be used only after boiling, or other safeguarding process. He also forbade the acceptance of any food specially prepared for the mendicant, lest the privilege of begging should degenerate into indulgence. Gosala, on the other hand, rejected these three restrictions.

Again, while all ascetics were agreed that besides the body the ascetic should own no other possession, they were permitted of a body only for the reception of the begged food. Gosala denied the justice of this permission, because the ascetic could and should make use of his hand for that purpose (cf. J.S. i. 57, footnote 2, and ii. 267, food found to be received into the bowl made by the palms of the joined hands, and out of this natural bowl should be licked up. Hence ascetics of this stricter observance were known as the 'hand-lickers' (hatthāpalakhamāna, D.N. 166; Dial. 227). If food, however, was required for a sick monk, it was to be carried to him in the vessel of the householder. Mahāvira objected to this practice as open to the risk of injury to any 'life' that might be in the householder's vessel (J.S. ii. 309).

In the treatment of the question of clothing may be mentioned. Some ascetics (like Pārśva) permitted the use of wrappers; others permitted only the irreducible minimum of a pudic cover (kattyā-bandhana); while, again, others went about absolutely naked. To the second class appear to have belonged the Nigantas, or the immediate followers of Mahāvira (J.S. i. 73), who, accordingly, are called by Gosala the 'one-strip men' (ekatāṭaka), and placed in his red class (above, p. 262). Though according to his Nigantas (pp. 349, 350) he for himself Mahāvira discarded the use of all clothing. On this point there was no difference between him and Gosala; both were mendicants of the achetaka, or 'clothless,' class. Indeed, it is just possible that on this point Mahāvira may have been influenced by Gosala. For we are told in the Jain Scriptures that at first, when Mahāvira adopted the ascetic life, he attached himself to the clothed community of Pārśva; it was only in the second year of that life, about the time when he fell in with Gosala, that he adopted the strictest observance of absolute nakedness. The procedure suggests that Mahāvira adopted that observance from Gosala, and that it was this circumstance that formed the bond of their early companionship, until the discovery of Gosala's hypocrisy caused the separation of their respective parties. It appears probable, however, that within the Nigantas community the general rule was to wear the loin-cloth, and the practice of total nakedness was limited to that section of it which formed the party of Gosala, and had adopted his doctrine on ājīva as formulated in the seventh group of the preparatory discipline (above, p. 262), and which hence was known as the Ajīvikas.

On this point there is an instructive story related in the Buddhist Vinaya Piṭaka (L. 291; V.P. Tr. ii. 261f.). Once, when Buddha was staying in Savatthi, he and his Nibbukus were invited by a wealthy woman, Vatukas, to the bank of the river. When the meal was ready, she sent her maid servant to call her guests. While she went on her errand, a heavy shower of rain fell, and on her arrival she found the Buddha and the Nibbukus standing disrobed and enjoying the rain. Thinking that there was a storm of winds, the Mahawira and his monks, both men and women, ran all over the ground. She then asked him where the place to which she had been directed there were no Nibbukus, but Ajīvikas. The misunderstanding, of course, was cleared up; but the incident, which being related later, shows that the Ajīvikas were naked monks, and that they were kept separate from the followers of Gosala, who, as we have seen, had established their headquarters at Savatthi, after he had separated from Mahāvira. The same point is illustrated by Gosala's sievefold classification of men (above, p. 263), in which the whole class is represented by his own party, the naked Ajīvikas, while the red class is typified by the party of Mahāvira, the one-strip Nigantas. Total nakedness of the other party of the monastic order, which continued in the connexion. For, as will appear in the sequel, it was the latter that formed the nucleus, from which, as a later date, the Digambara Order took its rise (below, p. 269).

It remains briefly to consider the two other charges preferred by Gosala against Mahāvira (above, p. 264). Thereference in the first of these is not quite clear. Mahāvira is accused of having first 'wandered about as a single monk,' but having afterwards 'surrounded himself with many monks' (J.S. ii. 409, 410). The charge is detailed in J.S. ii. 238, where Gosala claims that Mahāvira was a 'single' (sīha, p. 411). As a fact, however, Gosala also was 'surrounded by many monks,' who were known as the Ajīvikas. It is clear, therefore, that the mere fact that a leader wandered about or lived with a company of personal disciples did not count as an offence. The gravamen of Mahāvira's procedure, in the eyes of Gosala, appears to have been that, like Buddha, he instituted an Order (saṅgha) of monks. The followers of Mahāvira were scattered in various places in larger or smaller groups, but they were all organized in one community, under one Law, and one leader (Mahāvira). Gosala's followers formed but a small group that always accompanied its leader. There were, indeed, other groups of ascetics of a similarly dubious character who also bore the name of Dīnāgīna or Dīnāghāna, or Dīnāghāns, but lived apart under separate leaders, the names of two of whom, Kissa Sankikchha and Nanda Vachchha, are recorded in the Buddhist Scriptures (M.N. i. 328, 329; A.N. iii. 384). But the Ajīvikas of Gosala's time, who must be distinguished from the later Ajīvika Order of monks (below, p. 268), formed no organized community like the Nigantas (or Jains) and Buddhists. It is obvious that the antinomian tenets and practices of Gosala, and other men of his way of thinking, would form a natural basis for the formation of a widespread public organization. It may have been the consciousness of his disability in this respect that prompted Gosala's accusation against his more successful rival.
The second of the two charges against Mahāvira accused him of spiritual arrogance and spiritual cowardice. The reference in this charge is to Gosāla's theory of the three spiritual states of men (see above, p. 262). According to him, Mahāvira was in the intermediate state; his soul, though free from karma in a sense, was not truly liberated. Seeing himself as the system of spiritual arrogance in thinking that his system alone was correct and condemning those who differed from him (J.S. ii. 411, §§ 11-14, and Silānka's comment on Śūtra-kṛtāṅga, i. 1, 3, § 12; J.S. ii. 245). It was also full of spiritual arrogance to regard courts among the common people, but afraid to meet learned men who might refute him (J.S. ii. p. 412, §§ 15-18, and p. 415, §§ 19-25). The advocate of Mahāvira replies that, first, his master only teaches, as others do, what he believes to be true and right, and while condemning false doctrines, he does not condemn those who entertain them. Secondly, he never refuses to meet honest and worthy opponents, and is void of hypocrisy himself, while trying to win people for his doctrines.

The earliest mention of the Ajivikas occurs in a brief record incised on the walls of two rock-hewn caves on Barabar Hill near Gayā (IA xx. 361 ff.; S.A. 144). According to its own statement, it was made in the 13th year of the reign of the Emperor Ashoka, that is, c. A.D. 251. If, as Edgerton (K. Piyadassi, in the 13th year of his reign, bestowed this cave on the Ajivikas.'

The next mention occurs in the seventh of the celebrated Pillar Edicts of the same Emperor Ashoka, incised in the 29th year of his reign in B.C. 236 (S.I.P. ii. 82, 97; Ep. Ind. ii. 270, 272, 274; S.A. 155). It runs as follows: ‘I have arranged that my Censors of the Law of Piety shall be occupied with the affairs of the Buddhist Order (śrāvaka) as well as with the Brāhman (ascetics), the Ajivikas, the Niganthas, and, in fact, with all the various mendicant communities (pāśaṇḍa).'

A further early mention occurs in a brief record, incised on the walls of three rock-hewn caves on Nageshuni Hill in the first year of the reign of Gosāla's disciple Dāsaratha (IA xx. 361 f.; S.A. 145). It runs as follows: ‘This cave was bestowed by his Majesty Dāsaratha, immediately after his accession, on the venerable Ajivikas, to be a dwelling-place for them as long as the sun and moon endure.'

After this we meet with no mention of the Ajivikas till we come to the 6th cent. A.D. In that century, about A.D. 550, Varāha Mihira, in his astrological works Brāhaj-jātaka (xv. 1) and Laghu-jātaka (xii. 12), names them as one of seven classes of religious mendicants. These are—(1) the Sākyas or Raktapatras (men of the red robe), i.e. the Buddhist monks; (2) the Ajivikas, or, as the commentator Bhattotpala (c. 600 A.D.) explains in the Ekadandins, or ‘mendicant staff'; (3) the Nigrantha, or Jain monks; (4) the Tāpasas (ascetics) or Vanyāsanas (eaters of wild fruits), i.e. Brāhmans of the third ārama, living as hermits in the forest; (5) Bhikus (mendi-cants) or Brāhmans of the second ārama, living as homeless wanderers, and following, according to the commentator, the Mimbhās system; (6) the Vṛddha-āravikas; and (7) the Charakas, who appear also to have been two kinds of wandering religious mendicants. That these seven classes of devotees, and therefore the Ajivikas among them, were actually existing in Varāha Mihira's time, is evident from the fact that he teaches that a person is destined to enter into one of them according to the indications of his horoscope.

In the 9th cent. we have the testimony of the great Jain commentator Silānka (c. 876 A.D.) to the continued existence of the Ajivikas. And here we first meet with the interesting fact of the identity of the Ajivikas with the Digambara Jains. Commenting on the objection made by some to Mahāvira's four 'restrictions' in the Śūtra-kṛtāṅga (J.S. ii. 237), Silānka states that the reference is to the Ajivikas and Digambaras. We find, however, that in Silānka's view the followers of Gosāla, that is, the Ajivikas, with the Teriśiyasa (Sanskr. Trairāśikās), it follows that in Silānka's view the followers of Gosāla, the Ajivikas, and the Digambaras were the same class of religious mendicants.

In the 10th cent. we have a further testimony to the identity of the Ajivikas and the Digambaras. In his vocabulary, called the Abhidhāna Ratna-mālā (ii. 189, 190), Halāyudha (c. 950 A.D.) enumerates a large number of names of the two Jain divisions, the Śvetāmbaras (or white-skinned ones) and the Digambaras (or sky- clad, i.e. naked ones), or, as he calls them, the Śvetāmbara and Digvāsas. The latter, he says, are also known as the Ajiva, which is only a shorter form of Ajivika.

Lastly, in the 13th cent. we have, in certain temple records, a mention of the Ajivikas as a sect then actually existing in South India. These records are inscriptions on the walls of the Virinchipura (S.I.Inscr. i. 88, 89, 92, 108). They refer to grants of land to the temple together with 'the tax on Ajivikas,' made by the Chola king Rājarāja in the years A.D. 1226, 1239, 1249, 1259. By the editor of the records these Ajivikas are, on the authority of modern Tamil dictionaries, identified with the Jains. This, of course, means the Digambara sect of the Jains; for it is this sect whose principal seat, in those times, was in Southern India, and colonies of them are still to be found there (IA. xxxvi. 459; JGOS xxxviii. 17). The statements on the subject in the Tamil dictionaries appear to be based on the Tamil literature, and possibly on modern usage. The older Tamil literature (feste Dr. Pope) certainly uses the term Ajivika in the meaning of 'madman', and in 'dancing of the madman', and there can be no doubt, therefore, that since the 6th cent. A.D., when Varāha Mihira used the term, the name has signified the Digambara sect of the Jains.

As to Varāha Mihira's use of the term, it is to be noted that his commentator Bhattotpala, whose date is about A.D. 950, identifies the Ajivikas with the Ekadandins. This identification is based on a Prakrit verse which he quotes from a Jain writer called Kākakākhārya. That writer, who lived about A.D. 450, that is, about a century earlier than Varāha Mihira, names the same seven classes of ascetics with the one exception that he writes Ekadandina for Ajivikas (Pr.C.O. ii. 9, 430). Bhattotpala on his own part does not say that the Ekadandins or Ajivikas are devotees of Nārāyanā, that is, of Viṣṇu. On the other hand, Silānka, speaking of the Ekadandins in another connexion, declares them to be devotees of Viṣṇu (J.S. ii. 245, 417). It is clear from this apparent discrepancy that what these two commentators had in their mind was the class of ascetics who are still known as the Dāsāṅgasastra.' These ascetics are usually classed as belonging to the intermediate division of Hindus; but in the Ajivikas they are stated that they invoke not only Siva but also Viṣṇu as Nārāyanā. They carry a staff (dāsāṅga) with a piece of red cloth attached to its top, wear only a narrow strip of cloth, or go quite naked, and are enjoined to live solitarily. They hold Vedantist doctrines and any man, caste or no caste, may join them (Pr.C.O. ii. p. 1. 245). They must not be confused with Dāsanāmīs (dāsāṅga), who are a comparatively modern class of ascetics, having been founded by the reformer Ṣaṅkarāchārya and his disciples in the 9th cent. A.D., and who lived in (māha), and pay some regard to caste in the matter of admission (VAGAS xx. 66, 67).
tistinguishing tenets of his own, and also retained his old distinguishing mark, the bamboo-staff. On account of these distinctions his party within the Niggantha community was known as the Terasiya or Ajivika (above, p. 262), and apparently so also the Ekadandin, or the One-staff men. Still later, in the reign of Ashoka, there were differences of opinion between the members of the two schools as to the purity of Aja-vika ways. So, when Ashoka finally expelled his subordinates and followers, Gosala was expelled by Mahavira from the community; and with him, it would appear, were ejected also a few others of the Ajivika party who were his intimate friends and shared his teachings. The Buddhist Scriptures make no mention of these two friends, Kissa Sankicheva and Nanda Vachchha (above, p. 263). These three men, after separating from Mahavira, appear to have lived a comparatively solitary life at Savatthi at the head of small groups of like-minded followers. But there is no reason to believe that, with the expulsion of the black sheep, the Ajivika or Terasiya party as such ceased to exist within the Niggantha Order. In fact, whatever evidence there is points the other way. Thus, in the connexion, the difference already noted (above, p. 264) between the two versions of the 'four restrictions' possesses a peculiar significance. The reference to sexual delinquency occurs in that version of the 'four restrictions' ascribed to Gosala and his faction; while the other version, which substitutes the reference to the use of the householders' vessel, is, according to the commentator Silanka, concerned with the Ajivikas or Digambaras. The difference, however, which existed between the two versions, tends to show that there was a portion of the Ajivika party within the Niggantha Order which was not implicated in the antinomies of Gosala's faction. As a matter of fact, the Ajivikas, according to the present day, from the Svetambaras on the points implied in the four restrictions. Thus the restrictions respecting the use of cold water and natural seeds were intended to enforce extreme regard for any kind of life (jiva); but the Digambaras are said to be 'only moderately careful of animal life,' while the Svetambaras are extremely so (IA xxxii. 460). With respect to the fourth restriction, while both sects insist on the vow of chastity, they differ in respect to that of the vessel. While the bowl belongs to the regular outfit of the Svetambara monks, the Digambaras are not permitted to carry it, but must receive their food in the palms of their hands (Oman, p. 151). As to the question of nakedness, the difference between the two divisions is sufficiently indicated by their names. Further evidence in the same direction is afforded by the subsequent revival of the Terasiya trouble within the Niggantha community, and by the retention to this day of the distinguishing mark of the staff among the Digambaras. On admission, we are told, 'the novice is supplied with the articles allowed to an ascetic by the Jain Scriptures, a black rod or dand about five feet long, and the Suddhu (or professional monk) always carries his staff (dand)' (BG ix. pt. i. p. 107).

The case, then, stands thus: Ekadandin is a general term for a class of ascetics which includes two subdivisions, the orthodox Savite Danzins and the heterodox Jain Ajivikas or Digambaras. The Jain writer Kalkaskharya, of course, meant to indicate the latter by the word Ekadandin; and Varaha Mihs, therefore, to preclude misunderstanding, substituted the more definite term Ajivika. The orthodox commentator, Bhottottapala, misunderstanding the position, confused the heterodox Ajivika with the orthodox Danzin.

According to the tradition of the Digambaras, an acute antipathism between their own party and the party of the Svetambaras arose during the life of Bhaddabhuto, who appears to have been the last head of the united Niggantha, or Jain community (JGOS xxxviii. 14, xl. 92; IA xxi. 69). Soon after his death, about 264 B.C. (i.e. 170 years after the time of Asoka), according to the tradition in the Kalpa Sutra (J. S. 1, 290) ascribed to a man called Chhaluka Rohagupta. This man is said to have been a disciple of Mahavira, who, with the help of the people of the region, expelled to 230 B.C., and it was he who is said to have founded the Terasiya schism. The Terasiyas, as we have seen (above, p. 262), are the Digambaras as the latter are known. It is evident that the term Ajivika or Digambara Order was already in existence when the Ajivikas dedicated the Barabari Hill cave to the Ajivikas. As to Asoka's successor Dasaratha (or Sumprati, as the Jain calls him), we are expressly told that he was convinced to the extent of the fact that the Svetambaras claim him as a convert of their original leader Subastin (A. S. 10, i. 299), a contemporary (p. 269-273) and co-leader with the above-mentioned Mahavira (JGOS, xxxviii. 601). But from the fact that Dasaratha dedicated, in B.C. 257, the Nagarjuni Hill to the Ajivikas, perhaps his conversion is to be placed to the credit rather of the Digambaras; although, of course, he may, like his predecessor Asoka, have distributed his favours impartially to the principal mendicant Orders of his time. Of Asoka we know from his seventh Pillar Edict that he was a patron equally of the Buddhists, Nigganthas, Ajivikas, and Digambaras. It is evident, therefore, that this term ascribed to the latter order of the Jain sects, has been said that the terms Niggantha and Ajivika denote the two Jain Orders which are known to us as the Svetambara and Digambara, and that the Ajivikas have been assimilated (by Professors Kern and Bühler, Ep. Ind. ii. 714, J. A. xxii. 663) that the term Brahmmapa in the Edict qualifies also Ajivikas, describing them as a 'Brahmanical' Order. Irrespective of the difficulty whether at that early time there existed any orthodox or in the sense of a non-Buddhist, and in the context of the Edict it means 'a Brahmancet, that is, a person of the Brahmân caste who had adopted the rule of the fourth order of mendicants or way of life. Such a person took on himself to live a homeless wandering life as a religious mendicant. The appeal to the statement of Bhottottapala, as has been already shown (above, p. 266), is unsatisfying. A Vasipava or Savita ascetic may belong (or rather, may have been so prolonged before joining) to any caste (W. M. H. p. 106 B). These men may be said to be 'Brahmanical' ascetics because they profess to be devoted to Brahmanical deities, but no Brahman would call them 'Brahmanical.' The term 'Brahma-
cal' expresses a Western idea, quite foreign to the word brahmmapa.

The history of the Ajivikas may be briefly summed up as follows: Gosala commenced his ascetic life as a Mankhall or Maskarik, that is, as an individual of the ancient well-known class of religious mendicants which was distinguished by the carrying of a bamboo staff. After a time he renounced the acquirement of Mahayan power and turned to another class of religious mendicants known as the Nigganthas, or Unfettered Ones (i.e. unfettered from the bonds of karma), the followers of Parśva-natha. The two men, holding kindred views on the stringency of ascetic requirements (q.e in the point of nakedness (acārye) he elaborated a common system, to which, however, Gosala added some particulars of his own. Each of them had his own party among their common following; and Gosala's party was known as the Ajivikas, or 'Professionals,' on account of its leader's peculiar views on the jīva, or 'profession,' of a religious mendicant. In course of time Gosala developed antinomian proclivities; and this produced ill-feeling between the two associates and ultimately led to a schism. Gosala parted, together with those of the Ajivika party who actively sympathized with him. There is no reason to suppose that the seceders formed a large group, or that as a group they survived the death of their leader Gosala. The others of the Ajivika party who had not shared Gosala's antinomian tenets and practices remained within the Niggantha community; but they retained their peculiar views on the points of total nakedness, non-possession of a bowl, imperfect regard for life, distinction of the service mark of a sewer, and so forth. On account of these differences, there no doubt existed some amount of friction between the Ajivika party and the rest of the Niggantha community. It manifested itself especially in the time of...
of Bhadrabāha, whose sympathies appear to have been rather with the Ajivikas. But the friction came to a head only in the earlier part of the 3rd cent. B.C. when that party, which was known also as the Terasiya (Trairāśika), definitely and finally separated to form the distinct Order which is now known as the Digamaras. It thus appears that the friction between the Buddhist and Ajivika elements may be traced back to the very beginning of Jainism, it being indirectly due to the antagonism of the two associated leaders, Mahāvīra and Gossāla, who are the representatives of the two hostile sections. It is also within that period that we find detached references to Ajivika mendicants occurring in the Buddhist Scriptures and elsewhere. The Vinaya Piṭaka (i. 8; SBE xii. 90) and Majjhima Nikāya (i. 170; N.R. i. 271, II. 454) relate how Buddha, immediately after his enlightenment, met an Ajivika of the name of Upaka, who, however, received Buddha's account of his spiritual experiences rather contemptuously. The Majjhima Nikāya (i. 31; N.R. i. 45) further relates the story of an Ajivika Panduputta who had been originally a carriage-driver, who was converted to Buddhism by his own belief. In the Vinaya Piṭaka (ii. 284; SBE xx. 370) we are told also of an anonymous Ajivika mendicant who gave the Buddhist monk Kassapa the first information of his master's death. These men probably were members of the Ajivika party in the region of Kusinagara. In another place the Vinaya Piṭaka (ii. 130; V.P.T. x. 132) relates how on one occasion certain Ajivikas, meeting with some Buddhist monks who walked under a Buddhist sunshade, jeered at the un-acetic conduct of their rivals. In the Mahābhāṣya (xiii. 67) there is a curious notice of a group of Ajivikas which existed in Ceylon in the time of King Pandu-kabhaya about B.C. 426, and on whose behalf that king is said to have built a house (gaha). This notice, however, considering its very early date to which it refers, must be accepted with much reserve. Another very curious notice of the Ajivikas occurs in a little book on Hindu Logic as preserved in China and Japan, by Sadasjaya Sugīra, ed. by Mr. Edgar W. Sīnger, tr., in the Philosophical Series [No. 4] of the Publications of the University of Pennsylvania.

In the Introduction, p. 16, the author says: 'Two more schools are frequently included by Chinese and Japanese authors among the sects of ancient India (i.e. the western countries). They are called Niganditas and Ashikas, and are quite similar to each other. They both hold that the penalty of a sinful life must sooner or later escape being imposed, since it is impossible to escape it, it is better that it should be paid as soon as possible, so that the life to come may be free for enjoyment. Thus their practices were ascetic: fasting, silence, immovability, and the burying of themselves to the neck (Nyukuron-no, i. 28), were their expressions of penance. They were probably offspring of the Jainist or some other Hindu sect.'

... The 'Nikandita and Ashikha' of this statement are obviously the Niganthas and Ajivikas, that is the Svetambara and Digambara Jains.

A. F. R. Hoernle.

AJMER, AJMER (the mere, or sacred mountain, of Ajayarāja, who is said to have founded the city in the 2nd cent. A.D.).—The capital of the British district of Ajmer-Meherwār, in the province of Rājpūtāna. It is noted for two important religious buildings, a mosque, and the shrine of a noted faqir, or Muslim saint, who bears the name of Āhā Din ka Jhūpār, 'the shed of two and a half days,' is a converted Jain temple; and the most probable explanation of the name is that the Sultān Quṭb-ud-dīn or Alāmshah, when he visited the place, ordered that on that spot a mosque should be converted into a mosque for his devotion. It is now the finest existing specimen of the early style of Muslimān mosque in India. Inscriptions fix the date of its erection between A.D. 1211 and 1236, in the reign of Alāmshah. It is thus of the same age as the celebrated mosque near the Kuth Minār in Old Delhi, and Cunningham supposes that both were probably planned by the same architect and erected by the same body of workmen.

The faqir's shrine, or dargāh, marks the resting place of the much revered Khwājah Mu'in-ud-dīn Hasān Chishti (A.D. 1142-1236), who was born in Sijistān or Sīstān, eastern Persia, whence he journeyed to India in 1183, and retired to the seclusion of a hermitage at Ajmer. In the case of these hagiographic literary works, which round this personage, many wonders and miracles wrought by him are recorded. The Emperor Akbar made a pilgrimage to his tomb, and to the present time the merchants of the Dargah Bāzār, which adjoins the tomb of the saint, daily lay their keys on the steps of the shrine before they open their shops. The custody of the shrine is in the hands of the eldest lineal descendant of the holy man, and all the descendants of the Khwājah still enjoy such consideration throughout India that the Nizām of Hyderābād will not sit in their presence, and even the Hindu Mahārājas of Jaipur, Gwālīr, and Jodhpur place them on the same seat with themselves. The annual festival of the Saint is held in the month Rajab, when enormous caravans of horses, goats, and other condiments are fitted at the expense of rich pilgrims to the shrine, and while the food is still in a state of boiling heat it is scrambled for by the mob of fanatical devotees who attend the fair, and who highly value even a small fragment of the sacred food. It is counted among the miracles of the Saint that he never lost on such occasions, though burns are frequent.

LITERATURE.—La Touche, in Rejuttana Gazetteer (1879), II. 64 ff.; Ferguson, Hist. of Ind. and Eastern Architecture (1890), 292, 510 ff.; Indian Antiquary (1897), xxxv. 164. For the history of the saint, Aini-Akhtab, tr. Jarrett (1884), iii. 301.

AKALI.—The sect of the Akalis differs essentially from all the other Sikh orders in being a militant organization, corresponding to the Nāgas or Gossais among the Hindus. Their foundation is ascribed to Guru Govind himself, and they steadfastly oppose all attempts at religious innovations. The term akali, or 'immortal,' is said to be derived from akali-purāya, 'worshippers of the eternal,' but probably it is a self-assumed title, bearing its obvious meaning. The Akalis wear blue chauri dresses, with bangles or bracelets of steel round their wrists, and bangles of steel in their lofty conical blue turbans, together with miniature daggers, knives, and an iron chain. §

The tenth and last Guru of the Sikhs, 1678-1708.

Murray's Hist. of India and Persia (London, 1822), ii. 117. The term akali means 'deathless,' i.e. 'God,' and Akali is simply 'God's worshippers.'

Malcolm points out that Kalgir, elder brother, Bala Rām, wore blue clothes, whereas he is called Nīlabār, or 'clad in blue color,' and Sittār, or 'the blue clad' (Acadian Researches, xi. 291).

§ A few Akalis wear the fojd or top-knot, but not all. Those who do not, only use 'dur and lōd' water; and also smoke,
In their military capacity the Akalis were called Nihangs, or reckless,* and played a considerable part in Sikh history, forming the Shahidis, or first of the four dehra.

At the siege of Multān in 1615 a few Akalī fanatics† carried the fauās-brayes into preparation, and precipitated the fall of that fortress. The career of Phulā Sirāj illustrates both their defects and their qualities. This Akālī first came into notice as the leader of the attack on Mautāsalī’s escort at Amritsar in 1609. He was then employed by Ranjīt Singh, who stood in considerable awe of him, to conquer the Indus valley, where he was guilty of atrocious cruelty towards the Muhammadan population, and in Kashmir.‡ Finally, Phulā Singh and his Akālij contributed to, or rather virtually won for Ranjīt Singh, the great Sikh victory over the Yamānatris at Teri in 1623. In this battle Phulā Singh met with a glorious death, and his tomb at Naushaṅrah is now an object of pilgrimage to Hindus and Muhammadans alike.

Under Phulā Singh’s earlier leadership, and perhaps before his rise, the Akalis had become a terror to friends and foes alike, and they were dreaded by the Sikh chiefs, from whom they often levied contributions by force.§ Ranjīt Singh, after 1823, was not able to reduce their power, and the order lost its importance.

The Akālij headquarters were the Akālī Bāṅga at Amritsar, where they assumed the direction of religious ceremonies and the duty of convoking the khalsa. In good fortune was held an advantage to enemy generals, and a general leadership of the Khalsa. Since Ranjīt Singh’s time Anandpur has been their real headquarters, but their influence has to a large extent passed away, and some of them have degenerated into begging ascetics.

As an order the Akalis are celibate. They have, says Trump, no regular chief or disciple, yet one hears of their gurus, whose leavings are eaten by their disciples (smauk or chela). They do not eat meat or drink spirits, as other religious bodies do, but consume inordinate quantities of bhang.

H. A. Rose.

AKBAR.—1. Life.—The emperor Akbar, whose full name was Abū-l-Fath (or Abū-l-Mozaffar) Jalal-ād-dīn Akbar Ghāzi, was born at Umarkot ('the fort of Umar') on 15 Oct., O.S., 1542, which the jōtā-wearers may not do. Others, again, wear a yellow turban, but the white one, so as to show a yellow hand across the forehead. The story goes that a Khāfsī of Delhi (Kandīlāl, author of the Zaligāz-nama) desired to see the Guru in yellow, and Govind Singh granted his wish. Many Sikhs wear the yellow turban at the Basant Panchnām. A couple erroneously ascribed to Bhā Gurdās says:

Sīth eufed, uerd, sātādns
Jo palhe, soq Gurdān,
'They who wear dark mūs (the Akalis), white (the Nirmalas),
(red the Udaisins), or yellow, are all brothers in the Guru.'

1 Ibhetton, £251. Cunningham (p. 370) says registers 'naked' or 'hymne' has the meaning literally (cf. Piatt, s.v.); but in Sikh parlance the word undoubtedly means 'free from care or caution, and so 'reckless.' In Hindustān it bears its original meaning.

† They were headed by one Jasā Singh, called Mālā ("royal") Singh, from his piece. He denied himself the use of bhang, the only intoxicating drug used in the Akalis. See Carvkar’s Myths of Emperors of Mughals, p. 145.

A religious opinions.—This side of Akbar’s character and beliefs has received such little attention, that the question of his real greatness. After all, Akbar was a king immersed in affairs, and religion was only the occupation of his leisure hours. He was a great conqueror and administrator, and was more in his place at the head of his troops, or when engaged in revenue reforms, than when seated in his Hall of Worship. It is certain, too, that he never seriously entertained the idea of becoming a Christian, and that the devoted Italian and Portuguese missionaries were sadly deceived in their hopes about him.

Father Goldie very sensibly remarks: 'How far Akbar was sincere in his search for truth, how far he had towards it a
feeling akin to the agnosticism of our day, or whether he was merely bent, from the very first, on making for things new and old, or he must be referring to some posthumous accounts of Sulaiman's behaviour.

Undoubtedly Akbar has received more credit than he deserves for the depth and fervour of his religious feeling. He was an active mind and delight was his greatest passion, and his religious opinions have been discussed by Hindus, Muhammadans, Pariss, Christians, and freethinkers, and we have details about them in the Akbar-Nama, Badayuni, the Dastân, and the writings of Jafri, Bartoli, Vais Kennedy, Wilson, Elphinston, Rehatsek, Blochmann, Count Noer, General Maclagan, and others. We have also Tennyson's poem Akbar's Dream. Akbar's Nama, written by a Hindu mistress for the emperor, is nearly the only piece of Akbar's experience, which is still in existence. We can only tell the things we know, or we must either be confusing things new and old, or he must be referring to some posthumous accounts of Sulaiman's behaviour.

had a remarkable experience which is described as
a case of jasha, or attraction. He had gone out to
the banks of the Jhelum—the Hydaspe of Alex-
ander—to enjoy hunting, and had appointed officers
to organize an immense gamarghād, or batte. It
was one of the most extensive of country from
Girjak—supposed to be the Bucephala of Alex-
ander—to old Bhera. They were ten days engaged
in driving the game, and had nearly completed the
work, when something came over Akbar, and he
suddenly broke up the hunt, and set free all the
animals, even to Abū-l-Fażl, the chronicler, of
Niẓām ad-dīn, who by mistake puts the event into
the 24th year, calls it a case of a strong attraction
(jasha gawī), and says that Akbar bestowed alms on
jāfīrī and others, and ordered a garden to be
laid out and a house built on the spot where he
had sat under a tree and experienced the call.
Shortly afterwards he made a rapid ride to Ajmir,
in order to pay his annual visit to the shrine and
be present at the anniversary of the saint's death.
In this year also he revised the discussions
in the Tādiyānā, and we are told that the Ṣafā,
the philosopher, the rhetorician, the lawyer,
the Sunnite, the Shi‘ite, the Brāhman, the Yātī, the
Buddhist, the atheist, the Christian, the Jew, the
Sūfī, the Christian, the Muslim, and the Jadal to
capture enjoyed the pleasure of seeing Akbar place himself in the pulpit and
preside over the debates. The date given for
the commencement of these discussions is 20 Mhr
A.H. 936 or 3 Oct. 1578. Abū-l-Fażl puts Father
Bucharski, according to his approbation and
the Hijrah of Worship into this year, and tells an apocryphal
story about the Father's challenging the Muham-
madan doctors to the ordeal of fire; but unless
Abū-l-Fażl is giving a consecutive account of the
discussions, this has only a connection with the
theological order, there is a mistake in his narrative,
for Aqūavīna did not arrive at Fatḥāpur till
February, 1580. According to Abū-l-Fażl, Akbar
spoke at one of the meetings as follows:

"Formerly, from asseSSing to the opinions of apostate, wicked
men, we thought that outward conformity and the letter of
Muhammadanism profited even in the absence of inward
conviction. Hence we by fear and force compelled many believers
in the Brāhman (i.e. Hindu) religion to adopt the faith of our
ancestors, and in the light of truth there is no truth upon
soul, the brilliant illumination has possessed us that in this
distressful spot of contrarieties (the world), where the darkness
of unbelief and the blackness of presumption are gathered
under a single head and unity, that single step cannot be taken
without the arrow having for its target the beneficent creed
which adopted with the approval of the intellect. To repeat the
words of a creed, to remove a patch of skin (i.e. to become
circumcised), and to make a moving image of the thing on
the road of idolatry, to show forth the Priest in the land of
 slogans and the Prophet in the land of the Prophet, is
the turning away from the Truth.

"Obduracy is not the placing your forehead in the dust; put
Truth forward," for sincerity does not dwell in the fore-
head.

"The first step in this perilous desert is with a high courage
and a lofty resolve to do battle with the poison and pre-
sumptive carnal soul, and by vigorous self-knowledge to bring
Anger and Lust into subjection to Sultan Reason, and to erase
from the soul the image of evil habits. May the Sun of
Reason in this year be an effective help of your Counsel and
truth conveys one to a worshipper of the Truth. Afterwards, he may
be inspirer to others, and the succession of the later, by an error of
judgment, has fallen into the pit of heresy, assuredly he shall not be stained
with the dust of blame. We blame ourselves for what we did in
accordance with the veil of Error and convert one into a worshipper of the Truth.
"I persecuted men into conformity with my faith and deemed
it desirable even in this knowledge, I was unseemly to force
others to become such. What constancy is to be expected from
persecutors? One, who has been made known to us."

These words may be compared with two sentences in Akbar’s
Memorabilia at the end of the 4th. "Formerly," he states,
"I persecuted men into conformity with my faith and deemed
it desirable even in this knowledge, I was unseemly to force
others to become such. What constancy is to be expected from
persecutors? One, who has been made known to us."

It is declared that Akbar (who could neither read nor write) was
most learned theologian (alams), and that, if mag-
takids differed in opinion about any trivial point, they
should decide between them, and that his decision was final; also
that if he issued any new order, the followers of
it, provided that it was not opposed to the Qur‘an, and should
be for the public benefit. If any one opposed such an order, he
would be ruined spiritually and physically, and be subject to
final damnation.

Budāyün tells us that the 'ulāmā, with the
exception of Mubarak, signed this document unwillingly, but that Mubarak added to his signature the statement that he was heart and soul in agreement with the paper, and that he had for years been awaiting its execution. Badayuni adds that after Akbar had procured this document, the road of ihtikād (degree-giving) became open, the supremacy of the intellect was established, and no place remained for opposition. There was an end to the resolving of questions and to prohibitions. The intellect of the imām became the Law, and Islam was called bigotry.

At the commencement of Muharram, the copy of the execution of the document and of its effects is naturally very different from Badayuni’s. According to him, all the doctors were eager for its execution, and the reluctance was on the part of Akbar, who was unwilling, as he expresses it, to come out from behind the veil. He yielded to their entreaties only because he came to perceive that, in leaving his position as commander of the spiritual world, and accepting the rank of muttahid, he was in reality placing a veil over himself. The result of this, as he well knew, was, the wandering in the desert of doubt attained certitude, and that distracted souls obtained reposes. Almost immediately afterwards, he admits that Akbar’s conduct gave rise to many misconceptions, and that his religion of claiming the Godhead Dei and that of being a Hindu. He says that one special reason for such ideas was the appearance of Christian philosophers in the meetings, and the discomfiture of some of the pretenders of learning.

It was probably in order to counteract these ideas that Akbar, shortly after this, paid a visit to the shrine at Ajmīr* (he did not go there at the usual time, that is, at the saint’s anniversary), and that he paid extraordinary reverence to a stone which was brought from Ajmīr, and was said to bear an impression of the Prophet’s foot. Abū-l-Faţıš tells us that the impression was not genuine and that Akbar knew this, yet that he completely silenced calumnies by his politic conduct on this occasion.

Akbar’s innovations in religion, added to his interference with the sīfl-holders, led to the rebellion of Bihār and Bengal. Maulānā Muhammad Yazdī, the chancellor of Jaunpur, issued a decree to this effect that it was a duty against Akbar. Akbar retaliated by having him and another leading rebel—Mu‘izz al-mulk of Mashhad—arrested, and contrived that they should be crowned in the Jumna. This rebellion made Akbar proceed more carefully with his new religion, and the Christian missionaries found him less disposed to listen to them. After the rebellion was suppressed, however, he advanced further in the path of heresy, and formally instituted the Divine Faith and practised sun-worship. At the same time he was intolerant to some heresies. A sect calling themselves Ithās sprang up, but Akbar had the members seized and sent off to Sind and Afghanistan, where they were bartered for horses!

Akbar had a theory that the Muhammadan religion could not last for only a thousand years from its origin. This was apparently a part of the Mahdāv movement which, as Blochmann’s preface to the translation of the ʿAin shows, began in A.H. 900, that is, at the beginning of the 10th. (In accordance with the faith in the approaching termination of the Muhammadan religion, Akbar proceeded in the year A.H. 990 still further with his innovations. Among other things, he ordered a history to be written which he called the ʿTarīkh Alfi, or *Chronicle of a thousand years.* At this time only ten years were wanting to complete the chilid according to the ordinary reckoning from the Flight to Medina, but Akbar disliked this era, on the ostensible ground that the word Flight was of ill omen, and that it implied the success of the enemies of the Faith. He therefore directed that the history should begin ten years later, from Muhammad’s death. It appears, however, from a passage in the Dabistān, that he was also inclined to date the thousand years from the Tartar invasion of Persia when he was forty years old. If this were the date, then the thousand years would begin in A.D. 610; and so in 1582 the thousand Muhammadan years were more than complete, for each of them is eleven days shorter than the solar year. Next, he prohibited the killing of cows, and interdicted, or at least greatly restricted the use of beef. In the same year, also, he wrote to Goa, asking for missionaries and for copies of the Penta-

* On his way back from Ajmīr, Akbar seems to have been ostentatiously pious, fitting up a large tent furnished with prayer-niches, and praying in the congregation five times a day. Of extracts from the Zudsūṭa-i-Tauschīr (Ritchie, vi. 189).
that to the sharī'ah is not dated, but it evidently was written about the same time, for it refers to the year 989 as having passed away.

Some years afterwards, viz. in A.H. 994 (1586), we find him writing a letter repelling the charge of impiety brought against him by 'Abdullāh Khān, the ruler of Transoxiana. 'Abdullāh had been so dissatisfied by the reports about Akbar's heresies that he had dropped correspondence with him. In reply Akbar wrote two long letters to him, denying the charge and asserting his orthodoxy. But 'Abdullāh opposed the charges himself with sending an Arabic quatrain which 'Abdullāh could construe into a denial of his apostasy: but the letter goes farther than this, and is a serious denial, backed by supposed proofs, of the truth that he was no good Muslim. In it he appeals to his temporal successes as proofs of his being sound in the Faith, for otherwise God would not have favoured his arms; he refers to his having introduced Islam into places where it was previously unknown, and to his having subdued temples of infidels and heretics having been turned by his instrumentality into mosques and holy shrines for the orthodox. He also speaks of his great desire to destroy the Feringhīs, i.e. the Fārsīs, who oppressed the Persians. The truth probably is that, though Akbar had become disgusted with the 'ulamāʾ on account of their greed and their quarrels among themselves, and also because they held that he had more wives than the Prophet, and he was determined to be the head of the Church and the supreme arbiter in religious matters, he never entirely divested himself of his early religious beliefs. He was a dīpychus, like his secretary and pānegyrist, who, while professing a bond religion, and presiding over a fire-temple, was yet secretly engaged in the pious work of multiplying copies of the Qurān, and was sending copies of his father's commentary thereon to foreign princes. Akbar, too, was before all things a politician and a man of the world, and was in no mood to endanger his sovereignty for the cause of religious truth. He was willing that his followers should exhibit what he called the four degrees of devotion, i.e. to submission, prayer, fasting, and holy war. He recommended prayers and Fasts, and sent orders to the secretaries of State to make use of them; but he showed no eagerness to make such sacrifices himself. He was not an enthusiastic about the Divine Religion, and hence, though he was a mighty monarch, he was far less successful the the contemporary Bayzādī in making proselytes, and founded no enduring school.

In the Dabistān-al-Maṣḥūḥ, a singular work written in the time of his grandson Dārā Shikoh by a Sūfī who apparently professed Mussalmānicism, but who afterwards was a Pārāvī or a follower of the Dīn Iḥlālī of Akbar, we have what purports to be a specimen of the disputes which were carried on in the Dabistān, but they are probably imaginary. For real accounts of them we must go to Bādayūnī and Abūl-Faṣl. The chapters in the 'Ain (Blochmann's it.), which bear on the point are the 'Ain 18 of the iṣbāḥat mimahmatum and 'Ain 77 of the same book on His Majesty as the Spiritual Guide of the People." The later portion contains an elaborate Ordinance of Divine Faith. There are also two valuable chapters on the subject in the third volume of the historical part of the Akbar-nāmah. The latter, however, was combined with a worship of light and fire, especially as represented by the sun, which is not to be distinguished from the religion of the Parsees. Indeed, it was Parsees from Parsi in Gujarāt and from Persia who taught Akbar. Upon this point the interesting article of 'The Parsees at the Court of Akbar' by Jessenfeld Modl, Bomb. Branch of the R.A.S. (1902) may be consulted. Reference, too, may be made to the chapter in the fourth of the constellations and plant department when Akbar's meditations on the.BorderFactory to the two volumes of Akbar's meditations on the Border and the conversion to Islam brought about their decline.

Akbar never published any catechism of his religion, and, though Abūl-Faṣl meditated writing a separate book on the subject, he never did so. We therefore have to draw our knowledge of his tenets from scattered passages in Bādayūnī and from the short section in the 'Ain entitled 'Ordinances of the Divine Faith' (Blochmann, 166). Akbar called his religion Din Iḥlālī, or 'the Divine Faith,' and also the Taḥtāb-l-iḥlālī, or 'Divine Monotheism,' in allusion to His making the one fullness of the Obedience of the One who is the Monarch. With this however, he couple the statement that Akbar was God's Khalīf, or Vicar. Bādayūnī writes: 'His Majesty had now (A.D. 987, or A.D. 1579) determined to use publicly the formula 'There is no god but God, the heavens and the earth are His representative.' But as this led to commotions, he thought better of it, and restricted the use of the formula to a few people in the Harem. Akbar also adopted the doctrine of transmigration, and observed: 'There is no religion in the world from which this light fār-saʿīdī, the Divine Light,' and the tongue of antiquity called it Kīyān Khoorah, "the sublime halo" (Blochmann, iii.).

Evidently Persia and the old Persian religion had a strong influence over him. Persia came to him from Nāsurī in Jāmāt, and he also went to Persia and fetched a learned Zoroastrian named Ardashir. He adopted the Persian Naurūz (New Year) festival and some twelve others, and enjoined their observance on his provincial officers (see his firman of A.H. 992 (1584). Akbar then composed Abūl-Faṣl his instructions to the viceroys and to the police (Jarrett, iii. 41, etc.). In the firman he also gives his reasons for establishing a new era, which he called the Divine era, and in his instructions to the kotwal (Jarrett, iii. 45), he becomes so bigoted in his asceticism as to direct that whoever should eat or drink with a butcher should lose his hand. If the association did not go so far as this, the penalty was the loss of a finger. This, as Elphinstone well remarks, was a law worthy of Man, and no doubt it was prompted by the zeal of his Hindu advisers who wished to put down the killing of cows. Widows were not to be compelled to perform satī, but were not to be prevented from voluntary immolation. Circumcision was to be deferred till the age of twelve, the object being not to make children Musalmāns until they could judge for themselves.

Some of the flatterers suggested that he should introduce the New Faith by force, but his natural mildness and tolerance prevented him from following their advice. As Bādayūnī says, His Majesty was convinced that confidence in him as a leader was a matter of time and good counsel, and did not require the sword.'
the sun was in the meridian. In the Akbar-ndmah, iii. 364, one instance of such initiation is recorded. Faith Dost, the son of the Barbegi or Master of Requests, importuned Abi-f-Pal and Akbar consented, and at length Akbar consented to recite over him the formula ‘The pure shtet and the pure glance err not.’ But the initiation was not a success, for two days passed and no change took place, and Akbar thought the unfortunate initiates. It was observed that he had not even fulfilled his promise, and Dost, on the 6th of his subscription, went to the court, and said, ‘Akiba was being initiated, and the time for reciting the Shema’ (Hear, O Israel, the Lord our God is One God), and they were combing his flesh with coma of comas. But in this case, but he persisted in reciting it, in the afternoon. The next day, he came to him, saying that he had endured enough. Akiba replied, ‘All my days I have been troubled by you not, shall love the Lord with all thy soul (or life), even if He should take away thy spirit (or breath). When, said, will it be in my power to fulfill this? Now that I have been initiated, I cannot fulfill it.’ As he was lengthening out the word Owe, till he expired at Ox, the Bath Kof went forth, saying, ‘Happy art thou, Akiba, that thy spirit went forth at Ox.’

It is interesting to compare this with the account in the Talmud (Bab. K. 7a): ‘Akiba was on the point of undergoing the extremity of the law in the presence of the impious Turnus Rufus, when the moment arrived for reciting the Shema’. He began it, and it fulfilled that old man!’

Father Ruffoldo Aquaviva left when he found Akbar bent on establishing a new faith. He and other missionaries saw they made no impression on Akbar, who refused to accept Christianity unless the mysteries of the Trinity and of the Sonship of Jesus Christ were made intelligible to him. He also withdrew from their society when he found that the alleged heretics were provoking a rebellion in Bengal. He returned to playing with the subject when the danger was over, and Father Jerome Xavier was with him to the end, and wrote for him a Life of Christ and a Life of St. Peter, and also some controversial tracta. But Akbar never was so well-disposed to Christianity as his son Jahangir, and died as he had lived—a sceptic.

AKIBA BEN JOSEPH (50-135 A.D.)—A great Rabbi who largely modified Jewish thought after the destruction of Jerusalem, and was not without influence on the early Christians. Graetz describes Akiba as beyond doubt the most gifted and influential of the Tannaim. Much legendary material clusters round his early history. He was a great traveller. He went to Rome in the autumn of 95 as one of a embassy of Domitian from the cruel edict, only stopped by the emperor’s death. His companions were Gamalafl, Eliezer ben Asaria, and Joshua (Erubin, 84; and Sukka, 23).

When on board ship, he erected a tabernacle, which was blown down in a gale, and his companions laughed at him for being over-righteous. At Rome he was in favour at the court of the Emperor Nerva, where Flavius Clemens (consul and Domitian’s nephew) and Domitilla and Akylas (or Aquila), afterwards Akiba’s pupil, became proselytes. But when Trajan succeeded, bad times arose for the Jews, and he returned to Palestine. Thence he went to Babylon, and preached and taught in Nehardea (see Talmud, ad fin.). Afterwards he lived at Gaza (Ab. Zara, 54a).

Before the outbreak of Bar Cochba’s rebellion, Akiba made a final journey throughout Parthis and Asia Minor, and spread the Messianic prophecy, preaching against Hadrian and his legions. We read of him as in Phrygia, Galatia, Galicia, and Armenia (Bab. Rosh ha-Shanah, 30a; Jemmam, 12a; Baba kamma, 112a; Sifra, Ni. 5, 2.). The earthquake which had just destroyed Csesareas inspired Akiba and the Jewish rebels with confidence; for as its rise had coincided with Jerusalem’s fall, so should its fall result in the restoration of the Jewish capital.

The disastrous failure of Bar Cochba’s rebellion resulted in Akiba’s imprisonment and execution by the Romans.

E. A. Abbott, in From Letter to Spirit, quotes the Talmudic description of his martyrdom. The Talmud Babli (Bab. K. 55b) says: ‘Akiba went and died, but how, when Akiba was being initiated, and the time for reciting the Shema’ (Hear, O Israel, the Lord our God is One God), and they were combing his flesh with coma of comas. But in this case, but he persisted in reciting it, in the afternoon. The next day, he came to him, saying that he had endured enough. Akiba replied, ‘All my days I have been troubled by you not, shall love the Lord with all thy soul (or life), even if He should take away thy spirit (or breath). When, said, will it be in my power to fulfill this? Now that I have been initiated, I cannot fulfill it.’ As he was lengthening out the word Owe, till he expired at Ox, the Bath Kof went forth, saying, ‘Happy art thou, Akiba, that thy spirit went forth at Ox.’

It is interesting to compare this with the account in the Talmud (Bab. K. 7a): ‘Akiba was on the point of undergoing the extremity of the law in the presence of the impious Turnus Rufus, when the moment arrived for reciting the Shema’. He began it, and it fulfilled that old man!’

The story of the ‘ten martyrs’, including Akiba, still forms the theme of a touching Selicia, and of an elegy in the Jewish ritual for the Day of Atonement and the Fast of the Ninth of Ab.

But legend does not leave Akiba with his death. As with so many saints, there is a popular tradition of miraculous events attached to his memory. One tradition is that Akiba, who died at 130, became the patron saint of Cairo, but the popular story is that he became the patron saint of the city of Gaza. The story is told of a poor woman who had a daughter of 12 years of age, who had been thrown into prison after the capture of Gaza by the Romans. The woman, who was very poor, was unable to pay the ransom for her daughter, and the girl was imprisoned. But a angel appeared to Akiba in a dream and told him of the girl’s imprisonment, and Akiba went to the emperor and interceded for the girl, and she was released. The story is often told of Akiba’s intervention in other cases of imprisonment and persecution.

Perhaps his most famous pupil was Aquila, whose literal literal translation of the new text of Scripture was held in high esteem by all Jews, though Jerome sneers at it. Every enclitic is translated by a sw. And the Talmud of Jerusalem (Kid. 59a) says: ‘Aquilas the proselyte translated his Targum (text) into Greek. This was because of his practice of Akiba’s theory, and accounts for the popularity of his translation amongst the Jews, who in Talmud and Haggadah quote Aquila no less than fourteen times (see de Rossi, Moer Epist. vi. 45). But that popular translation did not preserve his Targum, for the Greeks forgot their Greek; and it was not till 1903 that Burkitt was able to rescue and identify an important fragment out of the Cairo Genizah. Of Akiba’s other pupils, we must mention the Jewish Assop, Meir, who was the link between his Mishna and
ours, and Simeon ben Johai the mystic, to whom the foundation of the Kabbala is attributed.

With mysticism, however, as with gnosticism, Akiba had no sympathy. He is the only one of the four Rabbis who is said to have entered the erva, the mystic garden, and come out again without hurt. One died, one became insane, and one an apostate—probably to Christianity. The last was the famous Acher, Elisha ben Abuyah. There was much coquetting with Christianity in those times. Even the famous Eliezer ben Hycranus, Akiba's teacher, was taunted with being a Christian because he listened with pleasure to a parable recited to him in the name of Jesus. But Akiba's was an exact science which left no room for eschatological speculations. He sought for mathematical proofs of his principles of the Jewish religion, and found them in the apparently superfluous terms, words, letters, and ornaments of Scripture upon which tradition and usage were to found new doctrine. This method he derived from his teacher, Nahum of Gimzo, but Philo had applied it a century earlier to the relations of ethics and philosophy. Akiba applied it to Halakhah, and Akiba's view ultimately prevailed in the Talmud. It is in reference to this doctrine that Mt 5:23 and Lk 10:27 record that 'till heaven and earth pass, one jot or tittle shall in no wise pass from the law' (Loga ev 7 ha kephalai va tov y'mo min kephalai y'se'el). Sharpe translates kephalai by 'one tip of a letter.'

Akiba's chief antagonist was R. Ishmael. The true test of the Akiba literature regarded as consisting of anti-opponents, like Hillel and Shammai, and other pairs such as those described in Aboth, cap. 1. The fundamental distinction between them was in their treatment of pleonasm in Scripture: Ishmael regarded the oral interpretation as essential to the Law, and Akiba held them to be essential portions of the Law. He never took the particle na as a sign of inflexion, but 'expounded (exp) all the na in the Torah,' and his pupil Nehemiah of Emmaus seceded from his school in consequence of the risk which such an interpretation involved in such a passage as 'Thou shalt fear (na) the Lord thy God,' which, according to R. Akiba's view, implied fearing somebody or something with the Lord. Akiba said of the Torah, Akiba was the true Torah, and it meant just as well mean another god. Another of such rules was that dealing with the word saying (tov'ma): Wherever the word saying is used it must be expounded (Sifre, Na 57). Finally, he insisted on his teachers and governors speaking pleonastically in the text. 'R. Akiba expounded the yom (Tosefta, 388). A further difference between the men was that whereas R. Akiba did, R. Ishmael did not allow himself to treat conclusions out of Scripture as the premises for further conclusions (Jer. Kidd. i. 2, and Nasir, 572).

It was in opposition to this perhaps extravagant mode of interpretation that the more sober R. Ishmael altered rules of interpretation to his father, Mitzvah, so that it be represented logic and his great opponent allegory. The thirteen principles are really based upon the seven rules laid down by Hillel.

The Midrash were originally drawn up as abstract rules by Hillel, and were variously interpreted and modified by his successors, but Akiba and Ishmael and their scholars specially contributed to their definition, Akiba on the grammatical and exegetical side, and Ishmael on the logical. In their final form these rules are the thirteen exegetical principles by which the Law is expounded, and which constitute the Baraita de R. Ishmael to be found in the Jewish Daily Prayer-Book.

(1) From minor to major.
(2) The inference from similarity of phrases.
(3) If an enumeration of particulars succeeds a general proposition, such general proposition is limited to articles ejusdem generis, but if it precedes, the general proposition may be extended.

(6) Interpreting a passage according to one of similar content in another place.
(7) Deducing a passage from its context.

In (6) and (7) Akiba and Ishmael disagree. Where two Scripture passages conflict, a third would be deduced to constitute one of the conflicting digresses and reject the other. Ishmael would thereby modify both such digresses. This opposition of the two schools gradually decreased and finally vanished, so that the later Talmud do not discriminate between Akiba's axioms and Ishmael's.

The effect of Akiba's system was epoch-making. He really gave his contemporaries a new point of view. The Temple had been destroyed, the country vanished, and the Jews of the time were like sheep without a shepherd, having lost all hope and all belief. Scripture seemed insufficient to provide for one's daily needs or satisfy anybody's ideals. The Oral Law was doubted. It had enemies without and within. The forces of barbarism and Rome had conquered, and Christianity was a redoubtable foe from within, which, with its Messianic mysticism, must have offered comfort to the hopeless exiles. Then came R. Akiba, and showed that there was authority for all the Oral Law. He gave the solid rock of Scripture as the foundation for all the structure of observances, rules, and usages prevalent in his time, and at the same time enabled his pupils and followers to build on the foundation. So that he surprised his contemporaries, and even his teachers, so that R. Joshua, once his teacher, could ask (Sota, 276), 'Who removed the earth from the eyes of R. Johanan ben Zaccai, so that he may see how Ishmael of Emmaus seceded from his school in consequence of the risk which such an interpretation involved in such a passage as 'Thou shalt fear (na) the Lord thy God,' which, according to R. Akiba's view, implied fearing somebody or something with the Lord. Akiba said of the Torah, Akiba was the true Torah, and it meant just as well mean another god. (2) The inference from similarity of phrases.
(3) If an enumeration of particulars succeeds a general proposition, such general proposition is limited to articles ejusdem generis, but if it precedes, the general proposition may be extended.
Three people are happy, and their consciences may be tranquil, namely, (1) he whose prayer is glib in his mouth, for prayer must come free from the heart, not from the mouth; (2) he in whom men have satisfaction, God has satisfaction, and his neighbours also; (3) he who is satisfied with that he possesses, that is a good sign for satisfaction, but when he is satisfied, that is a bad sign.

As for sin, at first it is like a thread of a spider's web, but in the end it is as strong as a ship's rope. He who in anger tears his own throat, he will crock his neighbours at the end, for this is how the evil inclination works. It says today 'tear your clothes,' and to-morrow 'serve idols.'

He who in anger throws his hands on the ground and scatters his meat, he will not leave them until before he has to bury them for money. Akiba mocked at the weaklings who could not withstand the inclination to sin, but there is an Aryan in his heart, that he himself had once more succumbed to temptation (Gdtd. Bia), when Satan presented himself to him in the guise of a lovely woman.

Like Akiba, Aba's great principle was that of Le 19, "Love thy neighbour as thyself," and this principle he applied with characteristic ingenuity to marriage. An unequal match he condemns as offending against this principle. "He that marries a wife who is not fitting to him commits five sins. He transgresses the three commandments, not to bear a grudge, or be angry with his brother in his heart, as well as the two as to loving one's neighbour. If he hates his wife, he defaces the object of marriage. It is better to leave the world than take upon oneself to be stronger, because it is said, 'Fear thy God that thy brother may live with thee.' The greatest sin is usury, the most virtuous vice, to have a nick in the web. Aba Akiba noted three things that pleased him much. The Medians carve at table, they kiss the hand only, and they have the table in the open field. (These preferences reflect his fears as a conspirator against Rome.)

There are five persons whose sin can never be forgiven: (1) he that feeds his daughter, or his wife, on an idol; (2) he who breaks up a marriage; (3) he who leaves his wife in times of want; (4) he who eats in his wife's absence; (5) he who eats food in any woman's presence. Five rules he gave to his pupil Simeon ben Johai when he was in the Roman prison: (1) 'If thou wouldst hang thyself, hang on a large tree; (2) teach thy son out of a correct book; (3) do not cook in a pot in which thy neighbour has cooked; (4) seek to keep thy capital and have an income besides; (5) in both milk and mirth have to provide for a wife and children.'

Abodh d. R. Nathan other six rules are laid down: (1) Go not into the society of mockers, lest thou learn from their actions; (2) avoid the table of a priest who is an idler, lest he teach thee that which is not holy; (3) be not free with thy promises, lest thou break thine oaths; (4) account not thyself to be a great man, lest thou hast to make a large repayment; (5) be not to the poor; (6) commit not thyself to doubtful things, lest thou and thy children are cut off. (A) in the name of the God of hosts; (B) in the name of the God of Jacob; (C) in the name of the God of Father Jacob; (D) in the name of the God of the House of Jacob. (B) Tell of the Unseeable; (C) see the Unseeable."

Lal-gir's case is unknown, nor is there any record of the origin of the special theory which is the basis of the religion. That the Supreme Deity is indescribable, void of all qualities, and incomprehensible, is a commonplace of nearly all phases of Hindu belief, but this has been materially qualified and modified during the past thousand years by the spread of the Bhakti-marga (q.v.), which superadds to it the idea of devotion to a personal God, who is the Supreme Deity become incarnate in cognizant form out of pity for man's weakness and sin. The greatest exponent of the Bhakti-marga, Tulsi Dasa (1582-1625 A.D.), was never weary of dwelling on the incomprehensible nature of the Supreme Deity, and arguing from the fact that He was manaka-bhakta-bhakatam bhakata (i.e. beyond the reach of thought, act, and speech) to the conclusion that the only way of salvation open to a human being was the exclusive worship of a personal incarnation of that Deity under the form of Rama. The tenets of the Alakhiyas, based as they are upon the rejection of the idea of a personal God, may well have been put forward as a protest against the view of the Bhakti-marga, and as a counter attempt to popularize the idealistic theology of the advaita Vedanta philosophy, the aim of which is knowledge of the unknowable, rather than the adoration of the comprehensible. In this connexion the most important, as amongst Saivas, it is employed only by those who claim spiritual descent from Sankaracharya (q.v.), the great founder of the advaita Vedanta. Lal-gir was also probably influenced by the doctrine of the Jains (with which his teaching has much in common), who are
ALAKNANDA—ALBIGENSES

numerosous and influential body in Rājputānā. Still more striking is the agreement of his teaching with some of the doctrines of Buddhism, but we have no reason to suppose that he can have been alive when that religion flourished in India. The earliest mention of the Alakhiya that the present writer can find is in a short poem attributed to Tūlā Dās. That reformer is said to have entered into a controversy with one of them, and his argument, as contained in the poem, was that the only way to 'see the Unseen' was to see him through the personality of the gods.

A modern sect, akin to the Alakhiya, was founded about the year 1850, in Orissa, by one Mukund Dās, who was, according to his followers, an incarnation of Alekhi (sic) himself. He, however, claimed only to be in special communication with this Alekhi, whom he described as a formless, spiritual being, omnipresent and omniscient. In other respects his teaching was identical with that of the Alakhiya of Northern India. He died in 1875, and the sect that thereby originated, is still in existence in some force in the district of Sambalpur, immediately to the west of Orissa.

LITERATURE.—Regarding Līlā-gir, see p. 195 of the Gazetteer of Bihār, by Major F. W. Powlett (1859); also W. Crooke, The Tribes and Castes of the North-Western Provinces and Oudh (1896), L. p. 78 (mostly based on Powlett); cf. also H. V. Roper, The Alakhiyas of Orissa (1895), pp. 235, 236, 238; and the present writer's 'Notes on Tūlā Dās' in Indian Antiquary, xxii. (1900) p. 271. As for the followers of Alakhiya, see Proceedings of the Bengal Asiatic Society for 1885, p. 29.

GEORGE A. GHIBERN.

ALAKNANDA (Skr. alaknanda, 'a young girl').—A sacred river in the district of British Garhwal, one of the tributaries of the Ganges. It has several sacred junctions (sangamāya) along its banks, at which religious bathing fairs are held—Nandprayāg, where it is joined by the Nandā; Rudraprayāg, by the Pindār; Rudraprayāg, by the Mandāki; Devaprayāg, by the Bhagirathi, after which it is styled the Ganges (which see). Though the Alaknanda in volume and position is superior to the Bhagirathi, the latter is popularly regarded as the source of the sacred river.

LITERATURE.—Raper in 11th vol. of Asiatic Researches; Oakley, Holy Himalaya (1899), 141.

W. CROOKE.

ALBIGENSES.—A sect which derived its name from the cathedral city of Albi (Lat. Albige), situated on the south bank of a confluent of the Garonne in France called the Tarn, which gives its name to the modern department. The city of Albi was conversely with those of Carcassonne and Toulouse, all three the dioceses being in the province of Narbonne, and owing a common allegiance to the metropolitan of that city (Longnon, Geogr. de la Gaule, pp. 520–521; Devie and Vaissette [ed. 1872], vi. 6). The associations of Albi were consequently chiefly with those counties to the south; but when, in the 11th cent., it was placed under the rule of a vicomte, his jurisdiction extended north as far as the course of the Aveyron. In this belief, however, that of Toulouse is connected mainly with that of Septimania, the extensive region between the Rhone and the Pyrenees.

As early as the 6th cent. St. Amaran, had been the protector of Albi, and his worship was associated that of Eugenius, the bones of both being interred at Vieux, some 18 miles west of the city. Diogenianus, its third bishop, is the first with respect to whom we have any information; he is referred to by Gregory of Tours (Hist. Franci, ii. 12) as one of those who faced a battle with the Visigoths toward the end of the first half of the 5th century. Septimania, from the 5th to the 8th cent., was ruled by the Visigoths, who had his capital at Toulouse, and the territory is consequently, at this period, often referred to as Gothia. The Goths professed the Arian faith, and supported it, although not coercively, among the populations whom they had reduced to subjection, but whom they aimed at assimilating rather than effacing. They were themselves industrious cultivators of the soil, and understood the working of metals; the Roman cities remained intact beneath their sway, and the Roman law was administered concurrently with their own. The chief impediment to peaceful relations between the two races was the pertinacity with which the Catholic bishops of the conquered opposed the religious creed of the conquerors. Arianism, however, continued to spread, and, during the reign of Theodoric (453–466), became the national faith of the Suevi in northern Spain and of the populations of Cantabria and the Spanish March. If, indeed, the same conciliatory spirit towards the Roman clergy as was shown by Theodoric the Ostrogoth in Italy, had been shown by the Catholic bishop towards the upholders of the Arian creed in Septimania, it is probable that the Albignesian creed would have been averted. In the 6th cent., under King Enoric, the Visigoths had extended their rule over the greater part of the Spanish peninsula, while in Gaul it reached the Loire; but the persistently aggressive policy of the latter of the Arian clergy roused the latter to a retaliatory course of action, which still further embittered the relations of the respectively adherents of the two chief religions of Western Christendom. In the following century, on the other hand, the envoy of the Ostrogoths in Italy to Belisarius, could defy their enemies to prove that their monarch had ever resorted to unprovoked aggression on those professing the Catholic faith (Procopius, de Bell. Goth. ii. 46), so that Theodoric the Great was characterized by such exceptional tolerance towards his Jewish subjects as to make them his firmest supporters against the common enemy (Vaissette, Hist. de Languedoc, i. 656–660; Dahn, Urgesch. d. german. u. roman. Volker, i. 362–368, 240–250; Milman, Lat. Christianiti, ii. 3. ch. 3).

It is to be noted, again, that political aims weighed considerably with Clovis, the Frankish monarch, when, after his defeat of the Alemann, in 496, he embraced the Catholic form of the Christian belief. Ten years later, when he marched against the Visigoths, it was as 'Arian heretics' that he proposed to sweep them out of the land (ibid. ii. 27); and, as a result, consequently, was to rouse the Burgundian and other Teutonic monarchies, which professed Arianism, to a common resistance. From the struggle which ensued, Theodoric emerged lord of Provence as well as of Italy, while Gothia became yet more closely allied to the Visigothic power in Spain. In both these great monarchies, aversion from, and a spirit of resistance to, the Frankish invader became a tradition alike with the Teutonic conqueror and the native element—an element which in turn was largely modified by ethnic admixture.

The Albigeois, probably recovered by the Goths in the early part of the 6th cent., was again wrested from them a few years later, and the capture by the Franks of Alais, Uzès, Lodève, (Lutetum), and Carcassonne followed shortly after. The last-named city was thus constituted a Catholic see,—Sergius, the first bishop, afterwards appearing as a supporter of the Roman creed at the third Council of Toledo in 658, over which Recared, the Visigothic monarch, presided. Recared had recently been converted to Catholicism; and, stimulated by his example, and aided by the great preponderance of the ecclesiastical over the lay element, the Roman party secured on that
memorable occasion an easy victory, eight bishops of Septimania, those of Maguelonne, Lodève, Agde, Beziers, Narbonne, Carcassonne, and Elne, headed by the metropolitan of Nimes, making their submission and subscribing the condemnation of their former Arian tenets. Recarded's example was readily followed, however, by many of his subjects, and in Septimania a frequent submission ensued [Manai, Concilia (ed. 1644), xii. 128-130; Dahn, op. cit. i. 393-394].

Early in the 8th cent. the kingdom of the Visigoths was overthrown by the Saracen, and the new conquerors maintained their ground in GOTHIA for fifty years. In certain features, Muhammadanism and Arianism are alike, especially in their common denial of the Divinity of Christ, and also in the aversion with which both regarded the innovations which were then taking place in the Roman Church, in the direction of saint-worship and the concomitant veneration of images and relics. The new conquest was attended also by another racial admixture which would imperceptibly incline the population of Septimania to listen favourably to the doctrine of those teachers whom many of them were, before long, to imitate the doctrines of Manicheism. Fauriel has pointed out how, during this period, the industries, architecture, language, and learning of Septimania were affected by the dominion of the Saracen emir, who, thence passed at his leisure in the Eucharist, and of the lawfulness and duty of marriage (in opposition to the Petrobrusians)—were unquestionably those of the Albigenses (D'Achéry [1753], i. 604-605; Dollinger, Beiträge, i. 62-65; Bouquet, Recueil, x. 36-38).

There is, however, strong presumptive evidence of the existence of such doctrines in northern France before the 11th cent. In 991, the eminent Gerbert, on being consecrated to the archiepiscopate of Rheims, made solemn declaration of his belief in the articles of the Catholic faith, at the same time expressly specifying certain other tenets which he accepted with no less sincerity,—the resurrection of Christ and also that of all mankind, the Divinely inspired origin of both the OT and NT, the general moral and moral spirit (which was evil non per conditionem sed per arbitrium), the lawfulness of marriage and of second marriage, and of the eating of meat, the remission of original sin by the rite of baptism (Gerberti Epistolæ, ed. Harvit, 161-162; ib. ed. Olleris, 242-250; Schmidt, Gerberti, Hist. et. Doct. des Gérar. i. 33). As all these were tenets specially repudiated by the Cathari, it is difficult not to concur in the view of Schmidt, Harvit, and others, that Gerbert's declaration was designed as a protest against the growing activity of the sect in the province which he had been called upon to administer. As uttered by the metropolitan of the French kingdom, Gerbert's pronouncement acquired special importance, and it is probable that any manifestations of such heresy within the Channel States were promptly suppressed with exceptional rigour. But all around the comparatively circumscribed limits of the realm of France in those days, we have evidence that the doctrines of the Cathari were spreading rapidly.

Arras, if Slanders (whose counts rendered to the French Crown a homage that was purely external), there appeared in 1025 an Italian named Gundulf, whose preaching attracted so large a following that Reginald, the bishop of the city, ordered his arrest. He succeeded, however, in effecting his escape, and anon the papal politic to deal mercifully with the heretics. He descended to argument, but was baffled by the discovery that they admitted no written authority in doctrine save the NT, while they altogether rejected the OT. His inquiries failed to elicit any expression of opinions which could be pronounced
Manichean, a fact which Schmidt (i. 36) explains by supposing that the humble textores of Arras were not yet fully initiated. Yielding to Reginald's gentle persuasions, they abjured their errors and implored forgiveness, whereupon they were again admitted to the fold. Among the tenets to which they confessed was the denial of the worship of the Cross and of its use as a sign—an early instance of opposition to this feature in the Roman ritual (Mansi, Concilia (1759), xix. 423; Schmidt, op. cit. i. 35; Döllinger, Beiträge, l. 66-67). In 1043, we learn Roger, bishop of Châlons-Marne, excom- muning Wazon, bishop of Liége (an ecclesiastic in a repute both for his learning and piety), with respect to certain secret meetings frequently held by the Cathari in his diocese, especially at the fortress of Montmener; near Chalons, Wazon advised that, in the first instance, Roger should limit his interference to simply instructing the faithful throughout his diocese to abstain from communion and intercourse with such as were known to attend the gatherings. As, however, no satisfactory result followed, the Council of Rheims, in 1049, determined to issue a sentence of excommunication against not only those who were known to be members of the sect, but also against all who should persist or protest against it (Mansi, op. cit. i. 35, xix. 742). This stringent measure appears to have had the desired effect; and, for some sixty years after, all traces of Catharists in northern France entirely disappear.

The same instances may here suffice to ex- emplify the treatment of heresy under the earlier Capets—a treatment far more rigorous than that to be noted, in the 11th cent., elsewhere. Both Hugh and his son Robert II. were strenuous supporters of the Church. Pope Sergius of Rheims and Sens were immediate feudal lords of not a few of the civil magnates in the French kingdom. In Burgundy, Normandy, and Aqui- taine, on the other hand—provinces which in the 11th and 12th cents. were held by their rulers in what was virtual independence of the French Crown,—although there is evidence of a con- tinuous growth of Catharist doctrines, the evidence that would have necessarily resulted from such opposition was not to be observed. A decree of the Council convened at Toulouse by Calixtus II. in 1119, and re-enacted at the Lateran Council of 1139, throws considerable light on the general situation. The 'secular powers' are there declared to be the agents against those whose the Church has visited with its anathema; should they, on the contrary, endeavour to protect them, they are to be regarded as accomplices (Mansi, op. cit. xxi. 226, 252). The researches of Lucchaire supply an excellent commentary on those edicts. The atti- tude of the seigneur in his fief, as well as that of the citizen in his walled town, was at this time becoming less and less friendly towards the Church; the former often found his territorial claims in conflict with those of the latter, while the latter's chief pride was in the newly acquired freedom and privileges of his ville franche; both were thus inclined to sympathize with the persecuted sectary rather than with the imperious per- secutor. In 1147, Bernard of Clairvaux, accom- panied by the cardinal legate of Ostia, made a progress through Septimania, in the hope that, by means of his powerful oratory, he might succeed in winning back the population to the paths of ortho- doxy. He found the churches deserted, for the most part, by their congregations, and in many cases by their clergy. The laity, on the other hand, whether seigneurs or artisans, were firm supporters of heresy, if not actually professing schismatics, while the powerful count of Toulouse and the almost equally powerful vicomte of Beziers could only be regarded as sympathizers with the movement (Opera (ed. 1719), l. 235).

According, indeed, to William of Neuburg, writing in 1160, the Cathari, 'commonly called Pub- licani,' existed in 'countless numbers' not only in France, but also in Spain, Italy, and Germany (Hist. Rerum Angl. ed. Hamilton, i. 120). And at nearly the same time, Hildegarda, the 'in- spirited' abbess of Eibingen, near Bingen, addressed to the clergy of Mainz and Cologne her fervid appeals; enjoining them, 'if they would not that destruction should come upon them,' to eject from their territories these nefarious men, worse than Jews, and like unto the Sadducees,' whom she further describes as 'contemnous of the Divine command to increase and multiply,' 'meagre with much fasting and yet addicted to incestuous lusts,' and 'despirers not only of God's commands and of his Church's laws, but of the Prophets, but also of those of Christ' (Migne, PL xcvii., Epp. 47 and 48, pp. 247-253; Trithemius, de Viris Illus. Ord. S. Benedicti, ii. 119). At the Council of Tours in 1183, like tenets are described as en- countered during a visit from Toulon to France, and bishops are enjoined to use all possible means to prevent their flocks from being brought under the influence of the preachers of such heresy (Mansi, op. cit. xxi. 1177). At the Lateran Council of 1179, Alexander III. enacted a sentence of excommunication against both preacher and pervert, and commanded the secular power to proceed against these heretics,—'quos ali Catharos, ali Patrinos, ali Publicanos, ali alii nominibus consentant—against heresies by incurring an anathemas, to give them shelter, either in their houses or on their lands (Mansi, Concilia (1644), xxvii. 460-461). If we may trust the Church History published at Leyden in 1589 with the sanction of the Vigiliers, large numbers of heretics, bearing the same appellations, were burned in Flanders and various parts of France about the year 1183 (Viguer, Hist. de l'Eglise, p. 391). Two years later, we find the cardinal bishop of Rome, on the appearance of a heretical movement with a view to their forebidding suppression. But the first organized measures of this kind date from the decree of the Council of Verona in 1184, where, although the Cathari are indicated only in general terms, the decree was addressed to them by which they were especially distinguished, and the bishop of each diocese is instructed to search out heretics, and, on due further inquiry, to hand them over to be dealt with by the secular authori- ties (Lavisse and Rambaud, ii. 272).

It was not, however, until the pontificate of Innocent III. (1198-1216) that the decree of the Council of Verona appears to have been put into execution. A member of an illustrious Roman house, he applied himself with singular ability and penetration to the task of that most lamentable of the results of the popes, the carelessness by which the popes in their zeal to repel the heretics, and free the Church from idolatry, had succeeded in introducing the heretics, and free the Church from idolatry, had succeeded in introducing a process of extirpation which threatened the whole Church. The dangers which confronted the Church at this time, the spirit of the times, the conflict with the Church, and the desire of con-
vincing their foes by argument, to the famous schoolsof Paris, Chartres, Chalons, Orleans, Rheims, and Lourcine (Haureau, Innocent III., p. 12). In Spain, it was rumoured, they were seeking to form an alliance with the Saracens against Christianity, and, like Hildegardes, the pontiff in Rome and the troubadour in Languedoc alike denounced their heresy, as the worse of the two (Joachim in Apocryphorum, l. 134; Fauriel, Hist. de la poésie provençale, l. 77).

It is now that the territory of the Albigenses, having become their chief centre in Languedoc, appears first to have given its name to the sect. But wherever they congregated in large numbers—in Flanders and Picardy, for example, as Piphili, a corruption of Paulliciani; farther south, as Bulgors or Bougres. But their most widely spread designation, after that of Cathari, was Patarini, the name which they had brought with them from Italy, where again, at certain centres, they sometimes bore a local appellation, such as Concentrico, from Concentro noto, or Monza, from Alba in Piemont, and Bagnotenses, from Bagnolo near Brescia. Even Agen, though but a few miles distant from the Albigenses, gave them a distinctive appellation,—Aggenenses [see in Döllinger's Beiträge (ii. 58-59), the text of a MS compiled in 1295, and entitled Supra Stella].

It does not, however, appear that these widely scattered communities were at variance among themselves, as was notably the case, in the 17th cent., with those Pisan representatives of the Cathari who settled, as exiles, in Holland and in Germany. They are rather to be regarded as successive waves of a great exodus from Hungary, Croatia, Bosnia, Bulgaria, and Dalmatia, breaking now on the north-western shores of the Adriatic (where Venice became their chief centre), and now on the coast of Apulia, but finding, both among the rising communes of Lombardy and the unruly barons of the south, a sympathy which deepened into admiration and bore fruit in numerous con-

vocations and conferences. To the north and west of the Catholic Church, indeed, whether in the lands which these exiles had quitted or in those in which they settled, was not so much to inspire them with much reverence for its institutions. In Bosnia there was but one church, a despotic, and they were poor and ignorant. In Hungary, a public official might be a Jew, a Muhammadan, or a pagan; and the monasteries there, which professed the Benedictine rule, were fain to seek their novices in Germany and Italy, and existed in almost complete isolation from the surrounding populations. Those of the Greek Church, on the other hand, while regarded with dislike by the Latin clergy, often sheltered within their walls not a few for whom the refined subtleties of the Manichæist dualism possessed almost a fascination. The overtures of the Cathari, whom the Perfects of the Cathari were able to preach in the vernacular, their simpler faith and ascetic life exercised a scarcely less potent influence. Among those of them who became converts to Manichæism (see Bogomils) the aversion from the doctrines and example of the Old Rome was so strong that large numbers became converts to Manichæanism. The Paulicians, however, who formed an important body in the New Rome, migrated to Italy and to Lyby, what might there be observed of the life of the higher ecclesiastics and the state of discipline in the Church at large, it may here be sufficient to cite the declarations of a contemporary Pope and the candid admissions of a living Catholic prelate. It was in May, 1204, that Innocent III. addressed to his legate in Narbonne a letter calling attention to the demoralized condition of the clergy in that province, a state which he attributes largely to the misrule of the metropolitan, Berenger II. He describes the superior clergy as 'dumb dogs who had forgot how to bark, simoniacs who sold justice, absolving the rich and condemning the poor, themselves regardless of the laws of the Church, accumulators of benefits in their own hands, conferring dignities on unworthy priests or illiterate lads.' 'And hence,' he adds, 'the incontinence of the heretics and the prevailing contempt both of the Paulicians and the people for His Church.' 'Nothing,' he goes on to say, 'was more common than for monks even, and regular canons, to cast aside their attire, take to gambling and hunting, consort with concubines, and turn jugg-
glers or doctors' (Epist. bk. ii. No. 75, Migne, PL cciv. 356-357). "We are bound, in good faith, to admit," writes Mgr. Donaus, "the: 'the clergy of the 12th cent. were not simply wanting in the power to withstand the revolutionary designs of the new Manichæans, but themselves offended them but once pretext and an excuse.' " (Albigenses [1880], p. 287). In the year in which Innocent himself was elected Pope, the citizens of Lodève, in the territory of Beziers, had plundered the palace of their bishop, and compelled him, by threats on his life, to grant them fresh privileges (Luchaire, Innocent III., p. 27). It is, in deed, undeniable that at this time most of the chief seigneurs in Languedoc regarded Catholicism with indifference, if not hostility, and were friendly at heart to the Catharists; while, if their arch-

exucer, Peter of Cernay, may be credited, the counts of Foix, Beziers, Toulouse, and Béarn took special delight in encouraging the desecration of churches and in offering insults to the officiating clergy (Historia Albigensium, Migne, PL ccxlix. cols. 565, 566, 579, 600-609). That such outrages were instigated by the Catharists themselves, or that they were the result of their teaching, is, however, at least doubtful, although there certainly are instances of similar action on their part under extreme provocation. But, generally speaking, by the admission of the same writer, they were known among their supporters as the domi homines, the 'bons hommes,' whose simple blameless life offered, in most respects, the strongest contrast alike to the self-seeking and self-indulgent habits of the clergy, and to were poor the majority of the seigneurs (ib. col. 552).

Prior to the reign of Louis VII. (1130-1180), the counts of Toulouse had been among the most independent of all the vassals of the French Crown; but in 1184 the marriage of Raymond v. with Constance, the sister of Louis, ushered in a material change in these relations. Shortly after, and for the first time within a century, a French monarch visited Languedoc in person; in 1158 his aid was invoked to repel the forces of Henry II. of England from the Oise near Paris. For they had become the policy of Louis and of his successor, Philip Augustus, to cultivate direct and friendly relations with the clergy of these southern provinces; and a series of charters granted to the bishops of Maguelonne, Narbonne, Nimes, Uzès, and Agde, and to the churches and abbeys of Toulouse, raised them to comparative independence of the local seigneurs with respect to their temporalties,—the King and the Pope thenceforth representing their suzerains (Luchaire, Instd. des premiers Capétiens, i. 281).

It was at the time when this important political change was becoming operative, about the year 1187, that the chief leader of the Paulicians in Constantinople, whose name was Nucetias (or Nigintas), arrived in the Toulousain to preside
over a Synod of the teachers of the Catharists which had been convened in St. Felix de Caraman near Toulouse. His account of the prospects of the sister Churches in the East was well calculated at once to reassure those whom he addressed, and to remove the apprehensions of those of the Latin Catholic clergy to whose ears it might come. His own church of Melanigia, in close proximity to Constantinople, stood firm; as also did each of four others, among which he had made a visitation before crossing the Mediterranean: (1) that known as the Pyrgo Calani, (2) that in Rumania, (3) in the Bulgarie (with Philippopolis as its centre), (4) the Dalmatian,—at the head of each being its duly appointed bishop, duly fortified for the spiritual life by the reception of the Consolamentum. Before he left the Toulousains, Nicaetan had either confirmed or instituted five new bishops for Septimania and the adjacent counties, among whom was Sicard Cellerier, bishop of Albi (Vignier, Histoire de l'Eglise, 1601; Döllinger, Bétrage, i. 116, 121, 122, and n. 63).

According to Döllinger (ib. p. 200), the above-named Synod reasserted the Manichaean doctrines of the sect in their most aggressive form; and in 1201, another 'Perfectus,' one Julian of Palermo, as the Imperator, seeks audience at Albi. He had long been known by his labours among the warlike race which sheltered in the gloomy gorges of Albania, and his fervid oratory now so wrougth upon the Albigenses, that almost the entire population, from his teaching, were received with open arms in most of the chief towns of Septimania. It is to be noted, accordingly, that at the very time when Innocent resolved upon the Crusade in Languedoc, the doctrine of the Cathari had assumed a form which can only be described as subversive, not merely of the teaching of the Western Church, but of Christi
tanity itself.

The Church of the Cathari most resembled, perhaps, that of Rome, with respect to its organization. It appears to have had its Pope, although this is somewhat doubtful (see Schmidt, Histoires, ii. 145); but it is certain that, in the New Rome, Niquinta had been styled 'Papa,' and Julian of Palermo as Imperator, and perhaps he had won for himself the recognized right to bear a designation which implied his superiority to human frailties and passions. Under his teaching his flock learned to repudiate the Divinely instituted ordination of marriage and to ignore the rights of individual proprietorship, the ties of social existence and of civic organization being alike thus cast aside. Self-detachment from the world, while engaging in secular duties and pur
suits, the Catharists, having been their dominant conception of the religious life, all contact with the material involving a certain deification, while life itself was a kind of purgatory, of which the Catharists rejected the Roman doctrine, maintaining that the soul, after death, entered forthwith into a state either of perfect happiness or of eternal suffering (see Eckbertus, Migne, PL clxii. col. 15). Their abstention (of Manicheistic origin) from all animal food included even milk and eggs, all matter being regarded as the creation of the Spirit of Evil, but especially that which was the outcome of sexual propagation. Labour was justifiable so far as it served to sustain life; carried beyond that point, it was useless for those who were debarred from the possession of anything that could be called personality (Schmidt, ii. 84, 85). Such was the creed imposed by the Perfectus on the believers (credentes); but besides the believers there were the 'hearsers' (audite
tores), who listened to the words of the teacher but failed adequately to put in practice what he taught. With regard to their theology, the evi
dence is perplexing, not to say contradictory. Their Christology, while evidently influenced by Arianism, differed from it in some important re
pects. Christ, they held, was not God, but a manifestation of the Divine Nature, and one with it only in respect of will and intention,—an Archangel among the angels and appearing upon earth in this celestial form (see Docetism), but neither Incarnate nor Ascended, the very miracles which He wrought being explained away as purely meta
phorical, and designed simply to symbolize the power of the spiritual over the earthly nature. At the time of the commencement of the Crusade, indeed, the dualistic and anti-materialistic theory which had obtained such influence in Languedoc, and possibly, to the teaching of Nicaetan and Julian, that, according to some teachers, the Christ of the Evangelists was really an emanation of the Spirit of Evil, permitted to appear on earth as the Word made man, evidently found its support in the teaching of the Catharist, and was thus a further indication that work of man's salvation which was being accomplished by the true Christ in heaven (Peter of Cernay, op. cit. col. 546; Schmidt, ii. 37). The views inculcated with respect to the Third Person in the Trinity were equally strange and impossible, no one being able to say what it was or what it was about. The Catharists were calculated to scandalize and alarm the devout Catholic, the theory of the Consolamentum must have added yet further to his dismay, supplanting as it did the ordinances of the Church in relation to baptism, to the Eucharist, and to absolution. This singular and elaborate ceremony, described at length by Schmidt (ii. 119—129, commencing with the renunciation of the Church of Rome and followed by a declaration of acceptance of the Catharist faith, and a solemn promise to observe it), was, according to his teaching, to be administered by the Consolamentum to those who were seriously ill, the individual, we are told, would not infrequently refuse all food, and either voluntarily or at the behest of the Perfecti submit himself to the endura, so as to die of starva
tion, and thereby expiate his immediate passage into eternal felicity (Liber Sentent. Inquisitionis Tolosanae, p. 134; Schmidt, ii. 102, 129). With the Consolamentum were associated two other doctrines which may be said to have completed the Catharist theol., the first of which savoured of Roman Catholicism,—the above-men
tioned repudiation of the doctrine of Purgatory, and the theory that the efficacy of the ceremony would be lost, if the officiating Perfectus were not himself pure from sin. The admission, indeed, with which the teaching of the Perfecti was associated, akin to that of the heretics of Septimania and the citizens of Milan and Toulouse, is largely to be attributed to the fact that the Perfecti actually exemplified in their lives the austere virtues which they inculcated, thereby presenting a marked con
trast to the life and aims of the great majority of the Roman clergy. The attitude, again, of the Catharist towards those who were not of his pers
uasion cannot be described as intolerant; he
preached and he prayed, but he did not persecute; and here, again, he contrasted favourably with the Catholic, and won the sympathy of the seigneur. It is, indeed, implied by William of Puylaurens (Chronica, passion), that under the protection of the knights of Languedoc a man could profess almost any religion that he pleased. The whole laxity of the faith and the diversity of tenets appeared only to call imperatively for intervention; and his experiences, since his accession, in his own dominions might well seem to show that such intervention, if judiciously and steadily pursued, might result in a conversion. Peter would have nothing to do with it—except in the case of the Catharists, and they were very naturally refused. Thereupon Peter pronounced him excommunicate, and placed his residence, in his capacity of archbishop, within the city walls (Acta SS. vol. Iviii. Mai). At Viterbo (one of his favourite residences), in 1205, several Catharists had been elected consuls, and their Perpetus, one John Tiniosi, had been returned for the office of papal chamberlain. Remonstrances having proved ineffectual, Innocent himself, in 1207, had repaired to the city; the leaders fled on his approach; he commanded that their houses should forthwith be demolished and their property confiscated; while the podesta and the consuls were compelled to swear that, in future, they themselves would mete out like punishment to all heretics (Epist. x. Nos. 105, 130, 139; Migne, PL ccxx. cols. 1200, 1220, 1231). Like punishment was inflicted on Orvieto, and with the close of the year 1207 the submission of the city was complete, and the independent Viterbo had been raised to the rank of a cathedral city; while Innocent was now able to direct his attention to where it seemed most required, namely, to Languedoc. His intervention in that province was materially aided by a political change which had taken place since his accession (Schmidt, i. 148-149).

In 1137, the kingdom of Aragon had been acquired by the count of Barcelona, Raymond-Berenger IV., and the crown had become hereditary in his house. In 1204, his descendant, Pedro II., following the example of the French monarch, had proclaimed himself the vassal of the Roman pontiff; and, in consequence, various fiefs which had been ceded to the counts of Toulouse (among them those of Carcassonne, Albi, and Nîmes) became detached from their former fealty to that of the kings of Aragon, the first two cities, it is to be noted, being in the same episcopal province, with Narbonne as their common metropolis (B. Haurean, Bernard Dilucius, p. 12).

It was now, therefore,—when the Fourth Crusade had resulted in the reduction of the Eastern Empire to the condition of a French dependency, when the disastrous ten years' war between France and Germany had been ended, and Otto IV., under solemn promise to restore the lands which he had wrested from the Holy See, was looking forward to his coronation in Rome,—that the time seemed to have arrived for effective measures in the Toulousain. Throughout his letters, Innocent lays emphasis on the fact that his great aim is the conversion of the heretic, not his destruction; and in Nov., 1206, three legates had been sent by him from Rome to Narbonne instructed to make yet another attempt to bring the Cathari to reason by force of argument. They were at the same time directed to lay aside all pomp and ostentation, and to win the sympathy of observers by a humble demeanour, to go meekly clad, imitating the poverty of their great exemplar, and by the force of their own example and convincing speech (documentum sermonis) to recall the heretic from the error of his ways (Epist. 185), as recorded by Luchaire that four months before this letter was written, Diégo de Acevedo, the bishop of Osma in Spain, accompanied by Dominic de Guzman, the founder of the Dominican Order, had had audiences of Innocent in Rome, and on their return journey had, by accident, fallen in with the above three legates (one of whom was Peter of Castelnau) at Castelnaun, when the bishop of Osma had given them much the same advice as that which soon after reached them as a mandate from Rome.

In the bishopric of Aragon, a burning question was present when this advice was given, we may fairly accept the assertion of Vignier that the self-denial, self-devotion, and fervid oratory which distinguished the Dominican friars were, to a great extent, evoked by the urgent necessity of combating the success with which had attended the exhibition of the same characteristics on the part of the teachers of the Catharists (Histoire de l'Eglise, p. 405; Luchaire, Innocent III., 90-91). Dividing themselves into little bands, the Dominicans now appeared at different centres,—Sarvion, Beziers, Verfli, Montreuil, and Pamiers,—inviting the leaders of the Catharists to amicable disputatio on the chief points of disagreement. At each of these centres the disputation extended over from seven to fourteen days, and was listened to with intense interest by crowded audiences; but as the only accounts which have come down to us are those preserved in Catholic sources, they can hardly be supposed to be impartial. But if it be true that at Montreuil, Oton, the Catharist professor, was seized, and maintained as his accuser the identity of the Church of Rome with the Babylon of the Apocalypse, and even ventured to style the former the ‘Synagogue of the Devil’ (Vignier, pp. 407, 410), the Catharist can hardly be credited with any such compliant opponent (Devis and Vaissette (1879), vi. 249). At the expiration of two years thus spent, Dominic is recorded to have expressed himself deeply charmed at the small result of their collective labours (Pierre de Cermay, op. cit. cc. 1-5; Schmidt, i. 211-217; Luchaire, Innocent III., 92-93).

But however sanguine Innocent may originally have been of their success, he had already determined on the employment of other means, and, early in 1207, Peter of Castelnau had received instructions to urge the Catharist leaders of Septimania (of whom Raymond of Toulouse himself was one) that they should lay aside the feuds which, unhappily, were rife among themselves, and combine in a Crusade against the heretics. That it was designed, by this proposal, to isolate Raymond admits of little doubt, and he himself fully aware of the net that was now closing round him. The other barons, allured by the prospect of rich plunder, to be reaped at small risk, readily assented; but the count of Toulouse, apart from his open sympathy with his opponent, who composed a large proportion of his own subjects, recoiled from the prospect of seeing his own domains overrun by the enemies of his house, and very naturally refused. Thereupon Peter pronounced him excommunicate, and placed his
territory under an interdict, at the same time justifying this extreme course by alleging the count’s laxity and extortion in the administration of his seigneur, — laxity, as shown in his partiality to Jews and heretics; extortion, as attested by his conduct on the temporalities of the Church (Vaissette, iii. 149); he de Vaissette (1879, vi. 249-250). Innocent followed up the action of his legate by confirming the sentence of excommunication, and, addressing to Raymond a letter in which he upbraided him with seeking ‘to preserve to the count his dignity in the deed involving himself with the foes of Catholic truth’ (Epist. x. No. 99; cf. Devic et Vaissette, op. cit. vi. 255-257).

In the first instance, Raymond is said to have feigned submission, but he failed to give practical effect to the promises which he is alleged to have made; and Innocent now, for the fourth time, proceeded to invoke the aid of King Philip, entreating him to come in person and place himself at the head of the Crusade. The letter, although himself involved in hostilities with John Lackland, at length feigned compliance, but in doing so he stipulated that Innocent, in turn, should undertake to bring about a two years’ truce between France and England, and also demanded from the clergy and nobles of the French kingdom to defray the expenses of the Crusade. This, however, was altogether beyond Innocent’s power; and it was while he was probably hesitating as to the course he should next pursue that his perplexities were suddenly terminated by the assassination of Peter of Castelnau, who, on his way to St. Gilles, by one of Count Raymond’s officers. The incident itself is enveloped in obscurity, and not less so the exact date of the count’s death. According to the statement made by Innocent to King Philip, Raymond, feigning penitence, had invited Peter to St. Gilles, there to receive his submission, and had then contrived the murder. But this statement is invalidated, to a certain extent, by the pontiff’s admission, when referring to the subject some four years later, that positive proof was wanting (Epist. xi. No. 36, xii. No. 108). His immediate action, however, assumed the semblance of complicity. (10 March, 1208) to the churches of Languedoc, Raymond was again excommunicated, his person and his territory were declared to be no longer under the protection of the law, and his subjects and lands were declared to be excommunicated; but rows of fideles or compact (Epist. xi. No. 26). Should he, however, give proof of his penitence, he might even yet be received again into the bosom of the Church, but only on condition that he expelled the heretic from his dominions (ib. Migne, PL xxv. col. 1557).

A Crusade was then proclaimed, and Arnaud Amalric being appointed chief leader, with Simon de Montfort as his lieutenant, while all who refused to listen to the summons were forbidden the enjoyments of social life and interdicted from Christian burial. Raymond had the duty of preaching the great expedition throughout the realm, and for the fifth time an appeal was made to Philip (Devic and Vaissette, vi. 265-267). The king, however, still stipulated that the two conditions which he had before specified should be carried out, while he at the same time intimated (in a letter subsequently erased from the royal registers) that, as he was advised by his councillors (Raymond’s guilt as a heretic being still unproven), the pontiff had exceeded his powers in declaring his lands subject to confiscation. Such, indeed, was the attitude which he continued to maintain until his death, influenced partly by his disinclination to appear personally as the abettor of religious bigotry, but still more by the desire to employ the military resources at his command for other purposes, and not least by the apprehension lest, under the rule of a too powerful vassal, Languedoc might recover its former virtual independence (Luchaire, M. 126-127).

The first phase of the Crusade, accordingly, was that of a religious war, directed mainly by the papal legate and headed by French nobles, among whom, next to de Montfort, the duke of Burgundy, and the counts of Nevers, Auxerre, St. Pol, and Geneva, were the most conspicuous,—the Dominicans, like Peter the Hermit, moved on a grand scale before, lending his aid as an orator to rouse the enthusiasm of the multitude, while his efforts were seconded by the Troubadour, who, in his Chanson de la Croisade, vaunted that more than 20,000 fully armed knights and 200,000 foot had rallied to the standard of the Cross (ib. p. 129). Raymond himself, completely dismayed, now again made his submission, and (18 June, 1209), after a humiliating ceremony, was reconciled to the Church by the papal legate in the cathedral at St. Gilles; he was compelled to swear on the Gospels and in the presence of holy relics that he would treat all heretics as personal foes, expel the Jews, proclaim a Truce of God, and himself take the Cross. In the oaths taken in the crying of a special Crusade at Raymond and Milo, the legate, on this occasion, see Devic et Vaissette, vi. 277-279; Migne, PL cxxv. cols. 90-91. A like submission made by the vicomte of Beziers was not accepted, although he was named pope’s lieutenant in brother-in-law of Peter, the king of Aragon. In July, Beziers itself was taken by storm, when a general massacre of the inhabitants took place. Raymond Roger, the vicomte, fled to Carcassonne, and shortly after received a papal bull absolving him in brother-in-law of Peter, the king of Aragon. The story, however, is at least doubtful (Hurter, Gesch. Papst Innocenz des Dritten, ii. 345; Devic et Vaissette, vi. 295; Migne, PL cxxv. cols. 138-141). Narbonne saved itself from a like fate only by an anticipatory execution of a number of the Cathari. Montpellier, owing to its long and approved loyalty to the Church, altogether escaped; but rows of fideles or compact castles and villages were reduced to the appearance of a desert. So great, indeed, was the scarcity of supplies, that the French leaders, having completed their forty days’ term of service, and seeing no prospect of further plunder, were fain to return home. Simon de Montfort, fourth earl of Leicester, alone remained. In the Íle de France he held only a petty seigneur, and having been appointed successor to Raymond as viscount of Languedoc, he was appointed viscount of Languedoc, and at the same time was ‘marcher’ of Beziers and Carcassonne, he found himself virtually an autocrat in the government of the desolate province. Although he was by education and conviction an ardent Catholic, his religious enthusiasm was probably fanned by a sense of personal wrong. In 1107 he had been mulcted by John of England of all the estates which he inherited through his father in that country. Raymond of Toulouse, on the other hand, had married Joan, John’s sister, and daughter of Eleanor of Aquaine. If we add to these considerations the fact that King John of England was at this very time excommunicate, owing to his maltreatment and defiance in England of that same episcopal order whose power de Montfort was pledged to restore in Languedoc, we
cannot but see that hatred of heresy can hardly have been the sole motive which urged on the stern Norman knight in his merciless career. Before the year 1210 had passed, John himself received intimation that his own barons were plotting to place the crown which he wore on the head of Simon de Montfort.

Opinions under which Simon was now called upon to administer his territory were, however, sufficiently discouraging. Funds began entirely to fail him, and this at the very time when the few knights who had remained with him perceived the advantage they should have for the absence of the plunder which the country no longer afforded. In his difficulties he appealed to Innocent. The pontiff, already overburdened by the demands consequent upon the Fourth Crusade (see Crusades), was unable to respond with pecuniary aid, but wrote to the Emperor Otto, the Kings of Aragon and Castille, and 'numerous powerful knights and ladies,' to invoke their assistance (Migne, PL cxxii. cols. 141–157). At the same time, we find him grateful for the support of the papal see, and Simon had reason in restoring to the papal exchequer the hearth tax of three pennis per annum which the lawless barons of Languedoc had, in many cases, been diverting to their own uses.

In the meantime, Raymond, sorely pressed by the demands imposed on him by the papal envoys, was reduced almost to desperation by being for a third time excommunicated, the sentence having been pronounced by a Council at Avignon, 6 Sept., 1206. He resolved on a personal appeal to Innocent, before whom (Jan., 1210), having been admitted to an audience in the Lateran, he laid a statement of his grievances. Accounts differ with regard to what actually took place on this occasion; but it is probable that the pontiff, moved by the suppliant posture of his adversary, was prevailed upon to grant a remission of the sentence. The former of these explanations is preferred, as the chroniclers attribute to Simon's envoys a double purpose: to be received into the service of the Lateran, of which they stood in need; and to introduce their master into the Society of the Knights of Malta (ib. cols. 171–173). His instructions, however, either arrived too late, or were wilfully disregarded by his legates, to whom Toulouse was now called upon to submit. But the dwellers in the city and in the faubourg alike, having been forced by the oath of allegiance to their seigneurs, refused compliance; and it was with difficulty that the archbishop of the city, a staunch supporter of Simon, succeeded in inducing a certain number of the citizens to support the latter, under whose leadership the city once more received its former appellation of Toulouse. At the strong fortress of Minerve, near Narbonne, 140 Perfecti were hured or threw themselves on to the burning pyre (Devic and Vaissiè, vi. 329–331). At Lavaur, taken after a stubborn defence, the gibbet is struck into which the widowed 'Lady of the City,' the bounteous Giraldis, and her daughter, were flung, and stones rolled down upon their bodies. The governor and eighty knights were either suspended on the gallows or put to the sword. Ternes, Castres, and other towns were the scenes of similar horror, and Montauban being, eventually, the only two which remained in the possession of Raymond (Guillelmi de Poldo Laurentii Hist. Albig., cc. 17, 18, in Duchesne (A.), Hist. Franc. Script., v.); Devic and Vaissiè, v. 342, 356–358, 384; Peter of Cernay, Migne, PL cxxii. cc. 57, 55, 53; la Chan-

son de la Croisade, stanzas ixvii.–lxiv. (ed. Paul Meyer, ii. 83–91); Voyage en France (35me série), 269).

The war itself must now be regarded as assuming another phase, and Innocent himself became aware that a reaction was setting in throughout Languedoc, as, to quote the expression of Paul Meyer, 'it became clear that the Crusade could accomplish nothing less than the substitution of some enterprising adventurers from France for the ancient seigniorial families of the South' (La Chanson, etc., Intro. p. xxiv; Fauriel, Hist. de la Croisade, i. 122–123).

The doctrines of the Catharists were again openly espoused, as a powerful incentive to renewed resistance. The Count de Foix, Raymond Roger, reverted to his former defiant attitude. The Catholic leaders, on the other hand, perceiving how closely political supremacy was involved in the suppression of heresy, began to assert their position with increased emphasis. Arnold Amalric, the abbot of Citeaux, usurped to himself the title of duke of Narbonne (Luchaire, Innocent III., 302–307) and prevailed upon the king and his Norman party to acknowledge fidelity and homage on the former subjects of Raymond of Toulouse. Simon, however, with his habitual astuteness, professed, in the first instance, to ignore his own position, and, writing to Philip (Aug., 1211), said that he had instructed his envoys to assume possession of all the territory wrested from Raymond, and to hold the same until the rightful owner should be declared (ib. 178). By the middle of the following year, however, his representatives in Rome preferred the stronger demand for his recognition as lord of Languedoc; and in a charter of 14 Sept., 1212, granted by the abbot of Moissac, that dignitary expressly declared that 'God has justly assigned to Simon de Montfort the territory of his adversary' (ib. 347). In the following December, Simon himself convened an assembly at Pamiers, to which the seigneurs, the clergy, and the citizens of the province were alike summoned,—the great political revolution which was in process being thinly disguised by their being themselves invited to become members of the Commission which was then appointed, and by whose action the 'customs' of Paris, the 'use' of Northern France, and the supremacy of the Church (acting through its ecclesiastical courts), were substituted for the feudal liberties and customs which had hitherto existed. As Luchaire points out, however, Simon de Montfort posed as the 'saviour of the land, whose mission it was to establish order, centralization, and peace; and for a time there were those who firmly believed that they should obtain these blessings at his hands.

The king of Aragon was still Simon's suzerain, and, with the support of Innocent, was able to assert his rights. He regarded with no small alarm his great vassal's monopoly of influence and the impending political change. No less threatening, as the Crusade was pronounced by Innocent to be at an end (Jan., 1213), Peter's first endeavour was to submit to a Council convened at Lavaur (16 Jan.) a memorandum, drawn up with the design of showing that Raymond himself had never been proved a heretic, and that neither he nor his cousin, the count of Comminges, nor the count of Foix, nor Gaston de Bearn, had ever accepted the Albigenian doctrines. It was the design of the Crusade to unite the count's ruin rather than to afford him the opportunity of regaining the confidence of Innocent, and counter-representations were made at the Lateran, couched in terms of such urgency, that the pontiff, notwithstanding his distrust of Simon and the Norman party, was prevailed upon...
to change his attitude completely. ‘The supporters of heresy,’ he now wrote to King Peter, ‘are more dangerous than the heretics themselves,’ at the same time plainly intimating that further obduracy would be visited with another Crusade (Epist. xvi. No. 49; Migne, PL. cxvii. col. 561). Simon, after his removals were resumed; and Peter, along with his allies, now appeared at the head of a great army outside the walls of the strong fortress of Maret, where Simon, with a small body of knights, awaited their attack. The disastrous defeat which the confederates there sustained, involving, as it did, the death of the king and the dispersion of his forces (12 Sept., 1213), sealed the fate of Raymond’s party. He himself is next heard of at the court of John Lackland, at Périgueux, proffering a now worthless homage. Simon’s son, Amaury, now married Beatrice, the heiress of Dauphiné; Toulouse surrendered to Montfort, and the whole of southern France became incorporated with the French kingdom. Towards the close of the year, the Troubadour William of Tudela, gives place (line 2768) to his successor in the Chanson, which henceforth becomes of primary value as a contemporary historical source, being at once highly original and always lucid. It was received with i. xci-xcii.,

In 1214, Innocent rescinded the prohibition to preach the Crusade, and in the course of the year a hundred thousand ‘pilgrims’ poured into Languedoc. Their first military achievement was the capture of Maine-Camargue, on which occasion Simon, once more, finds his reference to the Waldenses, seven of whom were burnt ‘with great joy’ as incorrigible in the attestation of their errors (Devic and Vaissette, vi. 449). Concurrently with this movement, the war was conducted by the royal forces. At Bouvines (27 July, 1214) broke the power of the kings throughout the realm, and was hailed by the clergy as an auspicious triumph for the cause of unity in the Church. At the Council of Montpellier (8 Jan., 1215), Simon was unanimously elected ‘prince and sovereign’ of Languedoc; and in the following April, Prince Louis, accompanied by the new lord of the province and by Peter of Beneventum, the new papal legate, set out on a crusade. The Troubadour poet Ottol in his Chanson of the Rhone (De la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134) describes how, to, the crusaders, the ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, Hist. de la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134), was selected as its rightful lord, and subsequently, when called upon to arbitrate in the fierce contention between Simon and the abbot Arnold for the dukedom of Narbonne, gave his decision in favour of the monastic dignity.

At the memorable Lateran Council of Nov., 1215, Raymond was once more, and finally, confronted with his accusers; and here, again, we find the pontiff strongly urging that the exiled count should be reinstated in the Toulouse. His supporters, however, imported six bishops, whose counsel Peter of Cernay does not scruple to stigmatize as that of an ‘Arithophel’ (Hist. Albig. c. 83; Migne, PL. cxvii. col. 700), and it was rejected by a vast majority. The brief allusion of the monkish chronicler to the fact of this divergence of opinion is illustrated at length by the contemporary Troubadour, in a manner which brings home to us the fact that this famous Council, to quote the language of P. Devic, was really more than a political congress, at which the passions, ideas, ambitions, and secular aims of the time are to be discerned, for the moment, in actual open conflict’ (Hist. de la Poésie Provencal, ii. 158). In the sequel, Innocent himself was under the necessity of issuing a decree whereby Raymond was adjudged to have forfeited his right to govern, and condemned to pass the remainder of his life as a penitent, only a small annuity being granted him, which, together with his wife’s dowry, was deemed sufficient for his maintenance. The Council signed to de Montfort all the territories which he had wrested from the heretics, along with Toulouse and Montauban, but it was ordered that the conquered lands ‘in Provincia’ (beyond the Rhone) should, for a time, be held in commission, and that in the event of the count’s only son (a youth of fifteen, against whom no imputation of heresy had been preferred) giving proof, by his ‘fidelity and upright conversation,’ of genuine merit, provision should ultimately be made for him therewith (Hist. Albig., col. 701; Guill. de Pod. Laur., c. 34; Vaissette, iii. 280; Devic and Vaissette, vi. 475, 477).

To all outward seeming, Raymond was now permanently excluded from a public career. The decisions of the Lateran Council had, however, been received throughout both the Toulousain and Provence with a general dissatisfaction which embodied both father and son to sail, in the spring of 1216, for Marseilles, where they were received with i. xxiii-xiv. So soon as the Count, with all his confederates, had arrived at the Rhone and into Aragon, while large subsidies arrived from England. A conflict ensued, of which the Provençal poet supplies us with an annalistic description..override the important fortress, were stimulated to the work of reconstructing the defences by the promise of inducements held out by Raymond’s chaplain, and both knights and ladies applied themselves assiduously to the toil; while, in the following year, when Simon de Montfort appeared outside the walls of revolted Toulouse, he stood scarcely in happier relations to the Church than Raymond had been himself, having been, by the Council of Lateran, declared at variance with the ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, Hist. de la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134). As it was at a period when the imperialists of the wise order of the Banquier (Peter of Cernay), the insurgents, after capturing that important fortress, were stimulated to the work of reconstructing the defences by the promise of inducements held out by Raymond’s chaplain, and both knights and ladies applied themselves assiduously to the toil; while, in the following year, when Simon de Montfort appeared outside the walls of revolted Toulouse, he stood scarcely in happier relations to the Church than Raymond had been himself, having been, by the Council of Lateran, declared at variance with the ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, Hist. de la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134). As it was at a period when the imperialists of the wise order of the Banquier (Peter of Cernay), the insurgents, after capturing that important fortress, were stimulated to the work of reconstructing the defences by the promise of inducements held out by Raymond’s chaplain, and both knights and ladies applied themselves assiduously to the toil; while, in the following year, when Simon de Montfort appeared outside the walls of revolted Toulouse, he stood scarcely in happier relations to the Church than Raymond had been himself, having been, by the Council of Lateran, declared at variance with the ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, Hist. de la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134). As it was at a period when the imperialists of the wise order of the Banquier (Peter of Cernay), the insurgents, after capturing that important fortress, were stimulated to the work of reconstructing the defences by the promise of inducements held out by Raymond’s chaplain, and both knights and ladies applied themselves assiduously to the toil; while, in the following year, when Simon de Montfort appeared outside the walls of revolted Toulouse, he stood scarcely in happier relations to the Church than Raymond had been himself, having been, by the Council of Lateran, declared at variance with the ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, Hist. de la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134). As it was at a period when the imperialists of the wise order of the Banquier (Peter of Cernay), the insurgents, after capturing that important fortress, were stimulated to the work of reconstructing the defences by the promise of inducements held out by Raymond’s chaplain, and both knights and ladies applied themselves assiduously to the toil; while, in the following year, when Simon de Montfort appeared outside the walls of revolted Toulouse, he stood scarcely in happier relations to the Church than Raymond had been himself, having been, by the Council of Lateran, declared at variance with the ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, Hist. de la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134). As it was at a period when the imperialists of the wise order of the Banquier (Peter of Cernay), the insurgents, after capturing that important fortress, were stimulated to the work of reconstructing the defences by the promise of inducements held out by Raymond’s chaplain, and both knights and ladies applied themselves assiduously to the toil; while, in the following year, when Simon de Montfort appeared outside the walls of revolted Toulouse, he stood scarcely in happier relations to the Church than Raymond had been himself, having been, by the Council of Lateran, declared at variance with the ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, Hist. de la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134). As it was at a period when the imperialists of the wise order of the Banquier (Peter of Cernay), the insurgents, after capturing that important fortress, were stimulated to the work of reconstructing the defences by the promise of inducements held out by Raymond’s chaplain, and both knights and ladies applied themselves assiduously to the toil; while, in the following year, when Simon de Montfort appeared outside the walls of revolted Toulouse, he stood scarcely in happier relations to the Church than Raymond had been himself, having been, by the Council of Lateran, declared at variance with the ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, Hist. de la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134). As it was at a period when the imperialists of the wise order of the Banquier (Peter of Cernay), the insurgents, after capturing that important fortress, were stimulated to the work of reconstructing the defences by the promise of inducements held out by Raymond’s chaplain, and both knights and ladies applied themselves assiduously to the toil; while, in the following year, when Simon de Montfort appeared outside the walls of revolted Toulouse, he stood scarcely in happier relations to the Church than Raymond had been himself, having been, by the Council of Lateran, declared at variance with the ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, Hist. de la Croisade, 3999-4014; Lea, Hist. of the Inquis. i. 134). As it was at a period when the imperialists of the wise order of the Banquier (Peter of Cernay), the insurgents, after capturing that important fortress, were stimulated to the work of reconstr
in the appearance of Prince Louis at the head of an army, whose achievements in the field are remembered only by the massacre at Marmamné, when 5000 men, women, and children were put to death by order of the bishop of Saintes, on the sole ground of their assumed heretical beliefs, and the city itself was burnt (Guill. de Pod. Laur. p. 18, 536-537). The Albigenses suffered like exemplary punishment on Toulouse was baffled, and, after laying siege to the city for forty days, on 1 Aug., 1219 Louis struck his camp and returned to France. The Albigenses took from many of their converts, the possessions which they had been wrested from them by the sword of Simon were now recovered. Eventually, after a war extending over two more years, Amaury de Montfort was slain to brieve the French monarch to renewed interference, by offering to surrender to him the entire territory which had been adjudged to his late father. It was at this juncture that Raymond VI died (Aug., 1222); his interment in consecrated ground was forbidden; and for nearly a century and a half the remains,, decency of the action of the bishops at the third Council of Toulouse (1229, 1249, 1274), was re-enacted by the dispositions of the bishops of Toulouse in their instructions to the Inquisitors. The disturbances with the French of the sixteenth and seventeenth centuries, which obtained in the south of France, the English, and the French, the attempts at a new crusade against the Albigenses (L. Reg. I. Inv. Inquis. 1. 151). Eventually, after a long and gallant struggle, Raymond VII submitted; and was compelled, by the Treaty of Meaux (1229), to accept a series of onerous and humiliating conditions—the demolition of thestrongholds of the knights of Toulouse, the cessation of warfare in the French Crown, and the surrender of two-thirds of his father's dominions (of which, however, a part had been included in the surrender, above mentioned, by Amaury), the cession to the Roman See of the marquisate of Provence (the portion of Provence on the left bank of the Rhone), while in Toulouse itself he was required to institute a school of studies, which subsequently developed into the university, but was now conciliated by the Inquisition, the wise and farsighted predominance of strictly Catholic teaching (Martin, Hist. de France, iv. 149-150).

In asserting the foregoing conditions, Raymond can have been actuated by no other motive than a conviction of the political unwise of prolonging a racial conflict against forces which were overwhelming; but in promising his active and unsparring co-operation in the extermination of heresy, and subsequently befriending the Inquisitors, he was actuated by political considerations. That he was giving expression to a contrite sense of the perversity of a policy which had brought such ruin on his house, and that the manner in which Innocent had compassionated his helpless hoard may have instilled into the young count a genuine admiration of his protector, and sympathy with his designs. That sagacious pontiff had seen very clearly, some years before his death, that, however effective fire and sword might prove in the temporary extirpation of heresy, something more was needed to prevent the reoccurrence of an ancient faith, namely, the law, however wrongfully held. Notwithstanding his habitual tendency to temporize, he had accordingly drawn up a series of instructions which represent an important innovation upon preceding methods (Douais, L'Inquisition, 1495). The manuscript of this, in a judge's court, at that time, was still that of the old Roman tribunal; the magistrate always awaited the appearance of an accuser before he intervened to punish the malefactor. But, however adequate such a method might be found in dealing with offences against the person or against property, Innocent perceived that it failed altogether to reach a particular class of citizens, distinguished generally by their blameless life and inoffensive conduct, but lying under grave suspicion owing to the prescribed forms of public worship, and their secret gatherings. If such conduct were really a shelter for rumoured malpractices, it was certain that stronger motives were required to induce the accused Inquisitor to come forward, and he established the institution of the inquisitor system of inquiry, authorized in legal form and terminology, for bringing home to the offender a definite charge. As early as 1183, Lucius III. had enjoined upon the bishop of each diocese the necessity of seeking out and passing sentence on heretics (Manuel [1644], xxviii. 6), although Luchaire appears to be in error in supposing that his instructions were actually formulated as a decretal (Douais, op. cit. pp. 28-30); the inquisitor, moreover, postulated the existence of an Inquisitor, and if it was not until the wide-spread activity and devotion of the Dominican Order had become manifest that Innocent could discern the instrumentality for which he had been looking.

Between the years 1204 and 1213 he issued four decretals (subsequently re-enacted at the Third Lateran Council, 1213 [4]), in which the system of secret inquiry was formally recognized (ib. op. cit. 6, 7), and direction given that investigations should be instituted throughout the province of Arles, and in the dioceses of Agen, Lodève, Verocei, Tarragona, and Perpignan (Pothinus, 6th Dec., 1204). It is, however, maintained by Douais that even these instructions were general in their scope, specifying, as they do, no particular offence or persons. But when the dioceses to which they were sent (as specified by himself, pp. 6-8), together with the time of their promulgation, are considered, it is difficult not to infer that they must have been directly aimed at the Albigensian heresy. By the machinery thus brought into operation, the Inquisitor, who was not required to date his first proceedings from the year 1229) obtained the evidence on which its first proceedings were grounded, and was enabled to arrogate to itself a function beyond the power of the already existing ecclesiastical courts; while the Inquisitor, if we accept the view of Douais, represented an authority which the supreme pontiff alone had the power to delegate (L'Inquisition, pp. 9-13).

From the year 1229, accordingly, the history of the Albigenses becomes mainly associated with the proceedings of the Inquisition, and will here be found treated under that heading; while for an admirable illustration of this later period, the experiences of Bernard Delicieux, as described by B. Haureau (1877), should also be consulted. With the advance of the fourteenth century, the Catharist almost disappears in Western Europe,
although occasionally showing a bold front against the Dominicans in Toulouse. In the East, in their ancient home in Bosnia, on the other hand, they more often held their ground, even compelling the Franciscans to retire from the kingdom (see Josset, lit.); and, more recently as 1576 a paragraph in Le Temps de la guerre, that the Waldensians, even their independent existence becomes, in consequence, more difficult to trace. In Germany the Catharist becomes lost in the "Ketzer" (Schmidt, Hist. i. 141, ii. 292-323; Lombard (Alex.), Pauliniaca, etc. (Paris, 1685)). For the last four centuries they have often been confused with the Waldenses, on their alleged presence in the Germanic countries, and their material is very difficult to trace. In Germany the Catharist becomes lost in the "Ketzer" (in the same account the date is 1482). In 1685 a paragraph in Le Temps de la guerre, that the Waldensians, even their independent existence becomes, in consequence, more difficult to trace. In Germany the Catharist becomes lost in the "Ketzer" (Schmidt, Hist. i. 141, ii. 292-323; Lombard (Alex.), Pauliniaca, etc. (Paris, 1685)). schor has re-edited the Corpus Chemicorum in a manner to conform to modern demands. (On this question compare W. Meyer, Verzeichnis der Handschriften im preussischen Staate, i. 1, 5, 1893.)

The notices of the ancients themselves in regard to the history of alchemy are scarce. The alleged mentions of the 'science' in the post-Manlius (ant. Theophr. in Pliny's HN xxxiii. 79, referring to an attempt of Caligula to make gold, are more than doubtful. The first authentic testimony points to the time of Diocletian. According to Suidas (Διοκλητιανος και Σημεία), this was the Egyptian books on the art of making of gold and silver to be burnt. We are thus taken back to the beginning of the 3rd cent. of our era, a period which teemed with secret, magical, and astrological writings. To the same time points a notice of the Byzantine historian Georgios Synkellos (8-9 cent.), that Julius Africanus mentioned the science of chemistry (576, 10, ed. Bonn). During the 4th cent. the possibility of alchemy was denied by Themistius (Or. iv. 214, ed. Petavi), and Aenesid of Gaza (5th cent.) is unimpressed by it. But the evidence is not explicit. None of these authors, however, uses the modern name. This was formerly believed to be secured by a passage in the astrolabe and Christian writer Firmicus Maternus (5th cent.), but the passage is a late interpolation. (cf. the edition by Kroll.)

The notice in Suidas points to Egypt as the original home of alchemy. To the same country the legendary history of the pseudo-science also points. The ancient alchemists knew a great many stories about the mystic origin of their art. It was said to have been taught by the fallen angels, by Isis, by Miriam the sister of Moses (the last trace of that legend has been preserved in the 'bian-marie' of modern chemistry), and so forth. But even their best tradition ascribed the invention of the 'holy mystery' to the philosopher Democritus of Greece. This tradition takes us at once to Alexandria, where a luxuriant growth of forgeries under the name of the atomistic philosopher had sprung up, largely ascribed to a certain Eleazar. This name, living to the beginning of our era. (The literature in Berthelot, Hist. de l'alchimie grecque, Paris, 1882; cf. Pauly-Wissowa, i. s. v. 'Alchimie'.) To Egypt the very name also points (Hoffmann, Hdbb. der Chemie, 5th ed., 1882, Art. Alchimie). The extant works on alchemy fall into two classes, roughly represented by the Leiden Papyrus and by the Collection. The former class is purely technical, not yet infected by mystical ideas, and designed for practical purposes. The second class starts likewise from practical works, but from the outset is indissolubly interwoven with mystical thoughts. As time went on without bringing the alchemists any nearer to the solution of the eagerly sought mystery, speculation and hallucinations overlaid the practical nucleus in ever increasing masses, until towards the end of the Middle Ages the writings of the adepts had become one vast farrago of allegories, each one in its turn calling forth a series of additional commentary, until the 16th cent. brought about a revolution in the return from practical work, and began the modern science of chemistry.
