We shall now rapidly pass in review the extant works. The Leiden papyrus is a group of papyri found together in Egypt in the early part of the 18th cent. and purchased by the Leiden Museum. Among these, three stand out prominent as a series of chemical commentary, under the letter X (our papyrus papyri X, Y, and W). The last two have of late come into greater prominence by the excellent treatment to which they have been subjected by Albrecht Dörich (α,β, τοιούτος Μάγια!') in Jahn, f. Philologie, Suppl. vi. i. Abruza, Studien zur Religionsgesch. des späteren Altertums, 1891). They are our most valuable source for studying the syncretic religion of later antiquity as reflected in the mind of the vulgar. With these our X must be grouped, as it was found with them. The great mass of its recipes, it is true, contain nothing but prescriptions for the apprentices of some cheating gold and silver. But these prescriptions are intermixed with others referring to superstition. Small wonder, for the art of the metal-worker was to be specially connected with magic; witness the legends of the miraculous creations of Berenice, of his Thelxion, and his wife of the name of Isis (see Roscher's Lex. der gr. u. röm. Mythologie, s. c.), and the northern legends of the smith Wieland. Trace of these belief have lasted into our own times. Even in the title of a chemical book usually 'the wise man,' if not actually the wizard, of his village.

Alchemy in the proper sense of the word cannot be said to be found in X. But a large number of recipes are on the end to produce an alloy of baser metals which cannot be distinguished from the gold in the article, so much so that a member of the guild shall not be able to detect them. But two of these prescriptions use a 'never-ending material' and a chemical kind of assurance. This second, originally the Egyptian name (aenem) of an alloy of gold and silver, perhaps the so-called elektron, is here conceived as a material which can give the student the means of the transformation of metals in so speak, as a leaven, changing the base foundation into gold as leaven changes flour into bread; in other words, we are face to face with a real chemical action.

At this point the second group of chemical literature sets in. Its most important, may fundamentally, in the form of Democritus, bears in its recipes the closest resemblance to the prescriptions of the papyrus (cf. Berthelot's analysis, both in the Histoire and in its existing state, 1893). None of these authors, however, uses the modern name. It was thus still preserved in the 'bian-marie' of modern chemistry, and so forth. But even their best tradition ascribed the invention of the 'holy mystery' to the philosopher Democritus of Greece. This tradition takes us at once to Alexandria, where a luxuriant growth of forgeries under the name of the atomistic philosopher had sprung up, largely ascribed to a certain Eleazar. This name, living to the beginning of our era. (The literature in Berthelot, Hist. de l'alchimie grecque, Paris, 1882; cf. Pauly-Wissowa, i. s. v. 'Alchimie'). To Egypt the very name also points (Hoffmann, Hdbb. der Chemie, 5th ed., 1882, Art. Alchimie). The extant works on alchemy fall into two classes, roughly represented by the Leiden Papyrus and by the Collection. The former class is purely technical, not yet infected by mystical ideas, and designed for practical purposes. The second class starts likewise from practical works, but from the outset is indissolubly interwoven with mystical thoughts. As time went on without bringing the alchemists any nearer to the solution of the eagerly sought mystery, speculation and hallucinations overlaid the practical nucleus in ever increasing masses, until towards the end of the Middle Ages the writings of the adepts had become one vast farrago of allegories, each one in its turn calling forth a series of additional commentary, until the 16th cent. brought about a revolution in the return from practical work, and began the modern science of chemistry.

We shall now be able to trace in a very few words the development of alchemy. Starting from the purely practical basis of fraudulent craftsmen, in Egypt, famed from olden times for her knowledge of metalwork and crude chemical knowledge, (cf. the Egyptian literature) it found its further development in that home of all mystic humbug, Alexandria. Here it fell under the influence of that mixture of religions, of mysticism, and of philosophy which we call either Gnosticism or the gnostic religion. As a result of knowledge found its 'Bible' in the forged treatise ascribed to Democritus. Also in the manner of that kind of literature, counter-claim met counter-claim; hence the various traditions as to the real inventors of alchemy. Conforming partly in ideas and in expressions to Christianity, it escaped the
fate of other superstitions,—the condemnation of the Church,—was carried to Constantinople, and then reached Europe, where it was received with credulous avidity, and flourished until superseded by truly scientific methods, thus finally flowing into the broad stream of true and modern chemistry.

It remains now to speak of the relations between alchemy and philosophy and religion. The researches of Usener (Religionsgeschichte. Untersuchungen, Bonn, 1889-1897), of Dieterich (I.e.), and of Schmekel (Untersuchungen zur Geschichte der Mittleren Stoa) have shown how enormous was the influence of the Stoic school on the development of popular beliefs in the last cent. n.c. and the 1st cent. A.D. In regard to alchemy, however, the proof had been furnished as early as 1856 by Frantl (Deutsche Vierteljahresschrift, 1856) in an article which still contains the least exposition of the philosophical elements in ancient alchemy. The Stoics, in their endeavour to prove that the whole cosmos was permeated by the Divine, and that all phenomena of life were only emanations of the supernatural raised by these pseudo-sciences, and so they became the ardent defenders of magic, alchemy, and astrology (for the latter see Bouché-Leclercq, Hist. de l'Astrologie grecque). Vice versa these often adopted the apparency of the Stoic arsenal of proofs.

When the Decretianic theory constantly harps on the refrain: 'Nature overcomes nature, nature rejoices in nature, nature rules over nature,' the alchemists simply followed Stoic precedent. Nay, this very tenet is considerably older than the extant works on gold-making. It is ascribed to the mythical Egyptian king Nechepso, the patron saint of astrology, whose forged works found their entrance into the world of letters about the beginning of our era. The maxim, too, upon which the Leyden Papyrus bases its prescriptions, that a little leaven leaves a whole loaf, belongs here. When later, in the 2nd and 3rd cents. of our era, the so-called philosophical works of Herennius the Ionian were... 

ALCHEMY (Muhammadan) — I. Authors.—

The most ancient Arabic author who wrote about alchemy was a royal personage—Hâlid, son of Yazid, son of Muhammad—probably flourished between the 8th and 9th centuries (cf. Leclerc, l. 64). Compositions ascribed to Hâlid and translated into Latin are published in the Theatr. Chemicum and in the Bibliotheca Chemic, where 1500 are listed.

The second name to be mentioned is that of Geber. This famous person, who became illustrous and legendary in the Christian Middle Ages, is known under the Arab name of Abu Masar Jâbir, son of Yazid, of the Harwan school. His life is not well known, but it is certain that he was a pupil of Geber.

Lastly, there is occasionally coupled with the name of Geber the epithet 'Sûfî'; this is explained by the fact that Geber, having been converted from Sabaeism to Islam, is said to have exhibited great zeal for the Musulman faith; the title must have been added, however, at a later period.

We should clearly pay no heed to a view mentioned in the Fibris (p. 354 ff.), according to which...
Geber is a mythical personage. This famous alchemist did certainly exist; but very little is known about his life. A reliable tradition represents him as usually residing at Kufa; he is sometimes connected with the Barmecides (Fihrist and Hajji Ḥalfa, iii. p. 388). He flourished about the year A.H. 100 (A.D. 715), and his works are attributed to him; their titles are generally symbolic, and their number exceeds two hundred. There are twenty-two Arabic works placed under his name in our libraries. Berthelot and Houdas have published five of these treatises under the title of Geber; Book of Observances; Book of Mercy, a work revised by a pupil; extracts from the Book of Concentration; and Book of Oriental Mercury. The Latin treatises ascribed to Geber do not correspond to the Arabic works; besides, they exhibit a more advanced stage of chemical science. Some of these are: Geberi regis Arabum summa perfectionis ministerii, Gedani (Dantzig), 1882; Geberi philosophi de alchemia libri iii., Nuremberg, 1545 (cf. Steinschneider, ZDMG xliii. 484). The Latin treatise, entitled Book of the Secret of the Firmament, is, it is said, the only one which seems to have preserved some fragments of Geber or his pupils, judging from the resemblance between the titles of its chapters and those of a work of the same name which the Fihrist mentions and ascribes to al-Mari, MS 7156, Paris; cf. Berthelot, La Chimie au moyen âge, i. 323.

There were several alchemists in the 3rd cent. A.H.; the two most famous are the ascetic Dhu-n-Nun al-Misri of Ikhmin (d. 245= A.D. 859) and Ibn al-Walshihya, the imaginative author of the Nabatean Agriculture, who wrote during the second half of that century. We possess three works of Dhu-n-Nun on alchemy—in poetry, dialogue, and miscellany (cf. R. A. Nicholson in J.R.S., 1896, p. 311 ff.). We have various works of Ibn al-Walshihya, especially Alchemies, an essay on ancient Egyptian paintings; and that of Uthman, son of Suwad al-Ikhmimi, who disputed with Ibn al-Walshihya.

In the 4th cent. (10th A.D.) appears the medical philosopher Razas, Abu Bakr Muhammad, son of Zayd ibn Khashabah. He was an enthusiastic student of alchemy, and almost a martyr to this science. As he had dedicated his famous book on medicine, Al-mansuri, to the Samaïd prince Abu Sahlih Mansur, son of Ishak, he afterwards also presented him with his poem, 'The Establishment of Alchemy' (Kitab tibbati al-kimya). The prince asked him to verify some of his experiments, and, finding him unable to do so, he struck him across the face with a whip, and blinded him. He died in A.H. 311 or 320. We may mention his Kitab al-asur, 'Book of Secrets,' Alchemies, Aromatic, placed under his name, is published in the Theatrum Chemicum, iii. No. 64.

To the same century belongs another important writer, Maslama al-Majriti, i.e. of Madrid. This learned encyclopedist (d. 305 or 310= A.D. 1004 or 1007), while travelling in the East, brought together, in his own country a collection of the famous works of the 'Brethren of Purity,' of which he probably made a new recension. Being skilled in alchemy, he wrote especially on this subject a Kanz al-fadilat, 'Treasury of Accomplishments,' dated 385.

We may mention in passing another prince, who was reputed to be an alchemist, the celebrated Fatimid Hafis al-Mansur al-Ḥakim (d. 411= A.D. 1020), the founder of the religion of the Druzes. The only famous names that we find after him are those of Ghuzzali the great philosopher, Tughrul, and Jildaki. Ghuzzali (451-505= A.D. 1111) believed in alchemy, and wrote some articles on the subject; one of them is extant at Berlin, Magāla al-fauz, 'Lecture on Preservation.' Tughrul (al-Rasān, son of 'All), who died about 515, wa'iz of the Fatimid Caliph, wrote the Kitab al-Muqaf, on no reliable account as an alchemist, wrote on alchemy, Jamāl al-asrār, 'Compendium of Secrets,' an article on the philosopher's stone, and a commentary on Geber's Book of Mercy. Jildaki (Ali, son of Aidamur, son of 'Ali), who died in 743= A.D. 1342, is the author of several works on alchemy, and the search for the 'elixir' (cf. on this author S. de Sacy, Notices et extraits, iv. 108; Leclerc, ii. 280).

Alchemical studies continued in Islam during the time of the literary decline and down to the present day. In the 10th cent. A.H. (16th A.D.) authors like Muṣḥif al-Dīn Bostān Efendi of Ašīr, or Ali Beg of Iznik, are found writing Alchemies, and in the 11th cent. the physician Maulā Sāliḥ, son of Naṣrallāh al-Ḥalabi, adapted Paracelsus. It is said that there are still alchemists in Morocco and at Mecca.

2. Doctrine.—The doctrine of alchemy appears among the Arabs under very philosophical aspects; it implies certain ideas on the nature of physical matter which are derived from general philosophy. In this connexion with philosophy, we have also the attachment of the romances of the 'arbalas,' that we come upon treatises beginning with real philosophical introductions; e.g. the 'Treatise on Concentration' goes so far as to speak expressly of the doctrine of the categories, which it ascribes to Pythagoras, saying that there are ten things which form the universe: essence and its nine accidents.

It is not difficult to see with what philosophical school the alchemists are, as a rule, connected. It is with the great school of Neo-Platonic origin, which developed in the Musalmān world when the Greek sciences were being studied there, and attained its height about the 10th cent. of the Christian era (4th A.H.). The alchemists are connected more especially with the branches of this school which propound the so-called 'illuminative' doctrines. In these seems a disposition to syncretism, which prevailed: according to them, truth was possessed in the different nations by wise men who expressed it in different ways, and who are at one time mythical personages, at another well-known philosophers of very discredited science. This inclination towards syncretism is shown in the alchemical writings. The alchemical authors do not know whether they owe their art to Egypt rather than Persia, or to India rather than China. The ancestors whom they claim are at one time quite mythical, e.g. Hermes and Agathodemon; at another historical, or semi-historical, e.g. Qarūn, the Korah of the Bible, brother-in-law of Moses, whose treasures are mentioned in the Qur'an (xxvii. 76, xxix. 33, 50) or, again, Queen Cleopatra, the emperor Heraclius, or Bilgis, the daughter of Ceyx. To these soothsayers and kings the alchemists add the philosophers and scholars of classical antiquity, especially Pythagoras, Plato, Aristotle, Democritus, Diocletian, and Galen. This grouping would not give any very clear information, if we did not know from the history of philosophy that the list is framed according to the usage of the Alexandrians and the Sabaeans, and that therefore it was in these two groups of scholars that the Musalmāns found their masters. As regards the Sabaeans, we have already remarked that Geber probably belonged to their sect; they carried the practice of syncretism to a great length; they collected and fixed a large number of legends of various origins. The addition of the Talmudic legends of Qarūn and of Bilgis, of the Persian names of Jamsal and of
Maghis the sage, to the Egyptian legends of Hermes and Agathodemon, must have been their work. More especially Alexandrian are the legends, of frequent occurrence in the alchemical writings, which refer to the Pyramids and the great ruins of Egypt, and represent these monuments as ancient laboratories, or at least having been used as deposits for the secrets of the sciences. The tradition which makes Cleopatra a scientist is undoubtedly Alexandrian, as is also the one which represents another woman, Mary the Copt, as lecturing on alchemy in the presence of various learned men (cf. Kopp, Beiträge, i. p. 402; Steinschneider, Mathem. § 140; Berthelot, La Chimie au moyen âge, iii. passim). One of the Arabic treatises published by Berthelot and Houdas bears the name of an Egyptian sage Ostanes.

Another tendency which appears from time to time in the alchemical writings certainly arises from Neo-Platonism, viz. the tendency to mysticism. It makes itself evident in two ways: (1) by founding the art of alchemy on a revelation which was received by the ancient prophets, e.g. by Hermes or by Qârûn; or (2) by making moral conditions intervene in the production of the great work: God co-operates in the undertaking, and the alchemist must prepare himself for this Divine co-operation by purity of heart. Even in the cases in which this condition is not formally laid down, the alchemistic writings bear a strongly religious stamp.

It is a very wide-spread custom among writers on occult subjects to connect the metals with the planets. Gold is held to correspond with the sun, silver with the moon; the other metals, mercury, iron, tin, lead, correspond respectively to Mercury, Mars, Venus and Saturn. This connexion was made long ago, but the Muslims ascribe it more especially to the Sabeans; and this provides a new proof of the important part which that sect took in the transmission of ancient ideas, Greek as well as Jewish and Chaldean.

The part played by Syrian scholars in this work of preserving and handing down scientific knowledge was greater even than that of the Sabeans; and it is better known. It was through Syria that the Muslims became acquainted with the chief Greek alchemists, especially Zosimus (cf. Berthelot, La Chimie au moyen âge, ii.).

Now, what exactly is the doctrine, or rather the postulate, on which alchemy is based? This problem, in its essential elements, is very simple. It holds that metals differ from each other in degree, but not in nature, and that any one of the baser metals, like lead or copper, may be transmuted into a more perfect metal like silver or gold. This postulate is connected with or implies a curious idea frequently expressed by alchemists, that of the ‘life’ of the metal. The metal or the mineral is really regarded as a living being, which is engendered and develops in the womb of the earth, where it is subjected to various conditions which hinder or promote its perfection. This theory is expressed, e.g., in the treatise of the ‘Brethren of Purity’ devoted to mineralogy. Dieterici, the editor of that treatise, remarks that it is conceived on Aristotelian, one might say modern, Neo-Platonic principles, and that it is inserted in a series of treatises based on those of Aristotle, although we do not know any work on minerals by that philosopher.

In that treatise the doctrine is presented thus: From the elements which are the potentials in the womb of the earth, there are first of all formed, as energies, mercury and sulphur; from these two there are afterwards formed, as entelechies, metals, or bases; and these two, as entelechies, become the basis, or cored, of metals. It is on these elements in these circumstances. It is only in consequence of certain injuries undergone that the material does not become silver or gold instead of lead or tin. Alchemists endeavour to repair these injuries (Dieterici, p. 12). The same idea is expressed in the Cosmography of Qazwîni (ed. Wustenfeld, i. p. 207), and in this work also it is said: ‘The metals in their mines undergo certain defects—as unpleasant odour, softness, and a disagreeable smell. In this book also, means are given by which some of these defects are suggested.

In the works of Geber published by Berthelot, and especially in the Book of Mercy, whose authenticity appears most certain, this notion of the life of metals is consistently expounded; a regular anthropomorphic theory is applied to mineralogy; not only the idea of ‘generation’ applies to metal, but also the ideas of ‘maturity’ and ‘education’; all these conditions, it is said, are necessarily the same as in the case of a human being. This doctrine is expressed with equal force in the treatise by al-Âbîb, published in the same collection and apparently quite ancient. According to these various alchemists, the formation and the life of metals require time, like our own; to bring the metal in the womb of the earth to its perfect state, which is the state of gold, nature makes a very long time, more than a thousand years; and according to the most wide-spread alchemical tradition, the work of alchemy is to imitate nature, and at the same time to discover more rapid means than hers for the development of the metal.

The anthropomorphic theory of alchemists has one more aspect; it applies to chemical bodies the ideas of life and death, of body and soul, of matter and mind. In this sense the idea of occult forces is very interesting; these subtle, intangible, invisible forces are compared to spiritual forces, the force of the magnet, which attracts iron through other materials, and that of poison, which permeates the organism, are called ‘spiritual forces’ (Berthelot, Geber: ‘Traité de la métri- cordes,’ p. 175). In bodies, substances earthly and gross, and others pure and light; the former are called ‘dead,’ the latter ‘living’; these notions of death and life are also employed in a relative way: e.g. sulphur and arsenic are living when they are mixed with substances inferior to them, such as tale; but they appear earthly and dead when they are united with live mercury (ib. p. 178). In every body, and a fortiori in every combination, it may be supposed that there is a material part, which corresponds to a soul and a body. The soul is infused into the body; its nature is superior to that of the body, refines it, and gives it a kind of immateriality. A common task for chemists consists in giving a soul to each body, by first purifying its souls and bodies, and then infusing into each body the soul which suits it. Geber, still following the idea that there were certain injuries caused by nature, even speaks of ‘restoring’ to the body the soul which ‘has gone out of it’; this is another aspect of a chemical operation; thus, mercury is the soul which suits gold and the other metals. The spirit also is capable of a sort of education; not only must it be fit to unite forcibly with its body, and for that reason be pure, but it must also be firm, it must resist fire, and to this end must, as far as possible, partake of the nature of fire.

In practice, the aim of the alchemist’s efforts is to find the substance, a living substance, ‘elixir’ or spirit, which, when combined with the body of the imperfect metal, previous to its being purified, will change it into perfect metal. Alchemists use various means, and look in various places to find this substance; they do not regard it as exclusively mineral; they even make use of organic bodies in its preparation; they discuss whether it is excre- ment, the body of a stone, the body of a beast, or the body of a man, etc.; it is called ‘the stone’; it is the Philosopher’s stone, the very precious stone.’ This stone is afterwards ground down, and during the grinding it is sprinkled with
water mixed with drugs and simples. The liquid obtained in this way is the 'elixir.'

3. Discussions of the doctrine.—During the course of Arabic literary history, various persons assumed an attitude of opposition to the alchemical doctrine. This opposition led to discussions. It must, however, be stated that the objections raised are in some cases against the study of human bodies and their properties, but only against the assumption peculiar to alchemists, concerning the possibility of the transmutation of metals. In the 3rd cent. A.D. the philosopher al-Kindi declared himself in favour of the alchemists, as an treatise on 'the error of those who think that gold and silver can be obtained otherwise than in their mines,' and another on 'the deceits of alchemists.'

A pupil of al-Kindi, Dubais, took up the cause of the alchemists, however, and wrote two treatises on their science, cited in the Fārābī. Razes composed a 'refutation' of the objections of al-Kindi. Fārābī believed in alchemy, but Avicenna (Ibn Sinā), was opposed to it (see AVICENNA). Tūghrāʾ afterwards defended alchemy against Avicenna.

Avicenna's objection in saying that the seven metals differ in their specific qualities, each of them forming a definite species with real characteristics; Fārābī believed, on the contrary, like the alchemists, that all metals were of the same species, and he considered their qualities merely as accidents, Tūghrāʾ, bringing in the Divine power, observes, in addition, that it is not a question of producing a specific difference in the metal treated, but of making it fit to receive this difference from its Creator. Avicenna also objects, like al-Kindi, that it is incredible that there can be a shorter way of bringing metals to their perfect state than that which is followed by nature.

The other objections brought forward against alchemy are: that no one has ever been pointed out with certainty as having achieved the great work; that it is especially poor people who study alchemy; that alchemists circulate counterfeit gold, and in that way wrong the public, and are liable to punishment by law. This latter accusation applied to the cases in which alchemists succeeded in giving a metal to what they called a dye, i.e. in covering it with a layer which had the appearance and some of the properties of gold. The alchemists replied, weively enough, it is true, to these objections, by saying that this 'dyed' was fast, and would last several centuries.

The cosmogonist Dimishtī (ed. Fraenh, p. 97) and the historian Ibn Bāḥūl (Prolegomena, de Slane's Fr. tr. iii. 207 ff.), opponents of alchemy, speak in an interesting way about alchemists, and relate the objections which were raised against them.

4. Special contribution of Muslims to alchemy.—It is very difficult to determine exactly the share due to Muslims in chemical discoveries. It was, apparently, very slender. The most ancient Arabic works are adaptations of, or commentaries on, Greek works; that of Crates is typical. The discoveries which Western tradition has ascribed to Aelian, Pliny, Dioscorides, alchemical works of silver are not found in the Arabic works placed under this alchemist's name, but only in some Latin pamphlets at the end of the 13th cent.; it seems, therefore, that the admiration felt by the Western peoples for Muslim alchemists is due not so much to their real worth, as to the general custom of looking to the East for masters, especially of the occult sciences.

It is, however, probable, that Muslims made progress in chemistry as applied to medicine, in dyeing, and in the art of enamelling. Al-Kindi, besides others, wrote about colour matters, glaze-making, the processes of removing stains from cloth, and other similar subjects. These particular industries have not yet been studied minutely enough.

Every one knows that our languages are indebted to Arabic chemistry for certain words, which are preserved in various words in modern languages preceding the Arabic article; e.g. alchemy, alembic, aludel, alcohol, elixir. The word alchemy has been derived from χημεία, 'mixture.' Wiedemann has shown that this word originally denoted the very substance and art of accomplishing transmutation, the elixir, and not the sum of the words which help to find it (Wiedemann, Beiträge, ii. p. 351; J. Gildemeister, ZDMG, 1870). The kohl, which has given its name to alcohol, was originally a very fine powder; it is the black powder which Oriental ladies use for blackening round their eyes. The use of the word was generalized and extended to various powders and to liquids. Elixir is said to be derived from Greek ἕλικωρ, 'dry powder' (J. Gildemeister, l.c.); it is possible, however, from the point of view of the etymological form, that an Arabic word, and belongs to the root kasaara, 'to grind,' al-ikāwī being 'the thing ground,' the powder.

LITERATURE.—Berthelot, La Chimie au moyen âge, 1886, p. 1, Essai sur la transmutation des métaux, au moyen âge, Paris, 1898, pt. iii. with the collaboration of O. Houdas, D’Alchimie arabe, 1893; Eilhard Wiedemann, Beiträge zur Geschichte, der Naturwissenschaften, 1864-1903. On the Arabic authors see Brockelmann, Geschichte der arab. Literatur, 2 vol., Weimar and Berlin, 1897-1902. Latin works on alchemy are given in the works from Arabic are found in the following collections: Theatr. Chem., 8 vol., Strasbourg, 1599-1611; Bibliotheca Chemica, Geneva, 1702; Ars usw. per quam chemiam coeunt duo vol., Bille, 1672; Ars chemica, princeps, Bille, 1672. A famous work entitled Pars philosophorum, is found in a collection in the artis usw.; a 'Alchemy' ascribed to Avicenna, Liber.Ab Cat. BIBLIAE VULGATIS, 1897. Box. 0. 1530. DE VAUX.

ALCHEMY (European).—The study of alchemy in Europe is traceable to the schools of Spain. J. Ferguson, in his notes to the 'Catalogue of the Alchemical, Chemical, and Pharmaceutical books of James Young of Kelly and Durris,' notes which form the latest storehouse of information on the history of alchemy in Europe, says, under the head of Michael Scott: 'It was in Spain, to which it had been brought by the Arabs, that the art first found place in Europe' (Bibliotheca Chemica, Glasgow, 1906).

The Khalifate of Cordova reached its highest splendour under the rule of Alhakam III. (A.D. 912-961) and Al-Hakam II. (961-973). The libraries of the rulers, the nobles, and persons of importance, numbering in some cases 400,000 volumes, attracted students from all parts of Europe (Rafael Altamira de Creves, Historia de España, i. 275).

I. Among the first to profit by this revival of learning was Gerbert, afterwards Pope Sylvester II. (999-1003). While still a student in the Abbey of Arville in Anjou, he attracted the attention of Borel, Count of Barcelona. He returned with him to Spain, and is said to have visited Cordova during the reign of Al-Hakam II. It was in the schools of Spain that he studied the sciences of arithmetic, geometry, astronomy, and chemistry, which he professed on a later date; upon him is based the modern science of magic or wizardry. During the Papacy of John XII. (965-973) he visited Rome in the company of Count Borel and Hatto, Bishop of Vic. He then made the acquaintance of the Emperor Otto I., and was recommended by him to the notice of Adalbero, Archbishop of Rheims. By Otto II. (973-983) he was
apPOINTED Abb O of Bobbio. Driven from Bobbio by the neighbouring nobles, he returned to Rheims, where he taught the 'whole range of human science.' On the degradation of Arnulf, he was made Archbishop of Rheims in 991. Forced to make his way to Spain, he took refuge at the Court of Otho III. (983–1002), and by his influence in 996 he became Archbishop of Ravenna. In the following year he succeeded to the Papacy. Thus by the close of the 10th cent. the learning of Spain was introduced into France and Italy and the Imperial Court (Milman, Lat. Chr. ii. pp. 331–345).

2. The influence of Gerbert did not end with his death. His pupil, Fulbert of Chartres (1007–1028), continued his work. Adelmannus, Bishop of Brescia, in a letter to Berengarius, speaks of their joint studies 'in Academia Carnotensi, sub nostro illo venerabili Socrate, nemen Fulberto' (Bar. Ann. Eccl. 1004, 6). The Schools of Berengarius in Tours and Angers to some extent carried on the same work. Behind the theoretical controversy of the early Scholasticism of the 11th cent., the tradition of the wide learning of Gerbert may be traced as one cause of the recognition of the philosophical studies of Spain in the 12th cent. (Cobbe, 'The Church and the Papacy in the 12th cent.,' ed. 1862, ch. iv. Ed. 1893, ch. ii.).

3. The fall of the Khalifate of Cordova in 1013 did not check the progress of learning in Spain. The kings of Seville, Cordova, Malaga, Granada, Almeria, Denia, Zaragoza, Toledo, and Badajos vied one with another in form and size they gave to philosophy and science. The studies of the former period were continued, and special attention was given to the natural sciences—medicine, chemistry, botany, and astronomy. Ibn al-Baitar of Malaga made a large collection of minerals and plants, and under the Muwahhid Khalif Ya'qub al-Mansur (1196) the Giralda of Seville became the chief observatory in Europe. In philosophy, Averroes of Cordova (1126–1190) won a European reputation as the commentator of Aristotle and Plato.

4. The conquest of Toledo by Alfonso vi. of Castile in 1085 was another step in the propagation of the Arabic learning in Europe. A school of translators was founded at Toledo which reached the height of its fame in the reign of Alfonso vii. (1130–150). Among those who were attracted to Spain were Hermann of Dalmatia and Hermann of Germany, Gerard of Cremona, the Englishmen Daniel of Morlay, Robert the Archdeacon, and Matthew Scott (Kaf. Almir. 1203). Altamira Crevea, op. cit. i. 484–514). It was in 1182 that Robert Castrensis translated the Liber de compositione Alchemiae, associated with the names of Hâlid and Morienus. To the same period belongs the teaching of Alain de Lille, so called 'Doctor universalis,' who had been a monk at Clairvaux, and was afterwards Bishop of Aixerre.

5. Michael Scott was among the first to bring alchemy into prominence in Europe under the patronage of Frederick ii. (1194–1250). He dedicated his Historia to Frederick in 1239. He studied Arabic in Sicily, and spent ten years in Spain. At Toledo he translated Aristotle's treatise On Natural History from the Arabic, with the help of a Jew. In 1217 he translated an Arabic work on the sphere. This is a link with the studies of Gerbert, who in a letter to Remigius, a monk of Trèves, excuses himself for not sending a sphere, owing to his time being occupied with civil business.

From Toledo he went to Cordova; in 1220 he returned to Sicily, and in 1229 he was at Oxford. He died in 1235. Ferguson says of him:

'At Toledo he learnt magic for which the city was famous—natural magic or experimental physics and pugnac, as well as black magic, involving the invocation of the infernal powers. There, too, he experimented in Alchemy' (Bibl. Chem., art. Michael Scott).

His Liber de Alchemiae is the result of these studies.

6. Albert the Great has the merit of having brought the study of alchemy as a branch of philosophy into touch with the progress of the Middle Ages. The Great Chronicle of Belgium in 1480 speaks of him as 'magnus in magia, major in philosophia, maximus in theologia.' Born at Lausingen in Swabia, he studied at Paris and Padua, and in the early part of the 13th cent. taught in the Schools at Cologne. In 1228 he was called to Paris, but after three years he returned to Cologne. He was the most distinguished amongst the Dominicans of Germany. In 1260 he was summoned to Rome by Pope Alexander iv., and was made Bishop of Ratisbon. He resigned the see after three years, and retired again to his studies and his lectures at Cologne, where he died in 1280.

He was the master of Thomas Aquinas (Milman, Lat. Chr. ix. 1277, 264, cit. op. cit. vol. xxxvii.) is a practical treatise on the transmutation of metals, the structure of furnaces, and the various methods to be used in the study of alchemy. The Preface is valuable as indicating the wide-spread interest which was then shown by all classes in the study:

'Inveni multos praeviditos litteratos, Abbates, Prepositos, Canonicos, Medicos, et illusteres, qui pro re ore nuncius sequiri expensas atque labores, et tamen desiderio multae curae nescient expensas atque labores, et tamen desiderio multae curae nescient.' (Col. de Alch., Prest.).

He considers it a true art:

'Probat artem Alchemiam esse veram' (Cec. c. 3).

He believes all metals can be transmuted into gold and silver, represented in astrological terms as Sun and Moon:

'Et ut breviter dixam, omnia metallia transsubstantiantur in Solem et Lunam' (ib. c. 10).

He speaks of the Elixir:

'Et quia eam spiritualem et tinctura quae dicitur Elixir arabice, fermentum latine' (ib. c. 10).

Fermentation and chemical reaction seem to be used as equivalent terms.

7. Thomas Aquinas was the pupil of Albert the Great at Cologne and at Paris. He, like his master, was a member of the Dominican Order. He graduated at Paris, and taught not only at Cologne under Albert, but at Paris, at Rome, and at other cities in Italy. He refused the Archbishopric of Naples, and died at the Abbey of Fossa Nuova near Piperno on his way to the Council of Lyons in 1274. Ferguson, in his Bibl. Chem., discusses the authenticity of the Theurum Alchomiae secretissimae ad fratrem Reinaldum which is attributed to him, and leaves it an open question. The Summa contains one or two passages which directly or indirectly refer to alchemy, although his similes are drawn from animal and plant life rather than from the mineral world. The principle of the transmutation of metals may be inferred from one of the earliest definitions of the Summa:

'Respaddo concidendum quod Deus est omnino immutabilis, omnis autem creatura aliquid modo est mutabilis. Secundum est enim, quod mutable potest aliquid diei dupliciter. Uno modo per potentiam, quae in ipso est. Allo modo per potentiam, quae in altero est' (Summa, pt. i. qs. ix. art. i.).

God alone is immutable; all else is mutable, in different ways. In one place Aquinas refers to the relation that exists between the minerals and the stars:

'Ad primum ergo dicendum, quod effectus alicuius inventur assimilari causa agenti dupiliter. Uno modo concidendum

ALCHEMY (European)
eandem speciem, ut homo generatus ab homine, et ignis ab igne. Alio modo secundum virtualem...
 Westminster, after studying the art for thirty years, worked at Westminster in the reign of Edward III.

The De considerationibus quinque essentiae, the Speculum alchemiae, the Speculum secretorum, the Secretum secretorum naturae de laude lapidis Philosophorum, the Semita recta alchemica, and Theesaurus philosophorum, were published in Latin (Little, 'The Grey Friars in Oxford', Oxf. Hist. Soc. Publ. vol. xx. pp. 191-211).

9. The most prominent names among the alchemists of the last part of the 13th century are Remondus Lullius and Arnold of Villanova. The former of these, the Raymond Lully of the later English alchemists, was born of noble parentage in Catalonia, and held, in his early years, a high position in the Court of Aragon. Disappointed in his romantic attachment, he announced the errors, and gave himself up to a life of study and mission work in Africa. His work witnesses to a remarkable combination of spiritual devotion and scientific research, with a passionate enthusiasm for the conversion of the Moors. He devoted himself at first to the study of Arabic. He undertook his first mission to Africa in 1271, but met with little success. He was at Paris in 1281, where he became acquainted with Arnold Villanova. In 1287 he visited Rome, and in 1291 Montpellier. During these years he was to be found amongst the Franciscans, and in 1291 he was received into the Order. His works, and especially his Speculum alchemiae artis ac philosophiae reconditarum traduntur, says that he converted 22 tons of quicksilver, lead, and tin into gold. The tradition is that he was brought from Rome by Cremer, Abbot of Westminster, and that he coined the rose-nobles for Edward III., but does not seem to rest on historical fact (Ferguson, Bibl. Chem.).

Arnold of Villanova, his contemporary, was probably also a Spaniard. He was born in 1245, and died in 1310. He studied amongst the Arabs of Spain; and it is stated, on the authority of John André, that he succeeded in the genuine conversion of iron bars into pure gold at Rome (Bibl. Chem. p. 95). At least these alchemists of the 13th century, in their researches seem to have discovered the secret of a long and useful and strenuous life. Albert the Great died at the age of 97, Roger Bacon at about 87, Raymond Lully at 80, and Arnold Villanova at 65, at a period when the average life was not so long as it is now.

10. The most distinguished pupil of Lully and Villanova was Pope John XXII. He also lived to the age of 90. He worked at alchemy in the Papal palace at Avignon, and is said to have left behind him 25,000,000 florins. At the same time he wrote a letter in which he censured the black magic which was practiced 'in nostra cura' by certain clergy. —Joannes de Lemovicis, 'Jacobus dictus Brabantinus,' and a barber-surgeon, described as 'Joannes de Amanto, medicus,' or, in another place, 'barberius' (Raynaud, Ann. Eccl. 1317, 53).

12. The practice of the art of alchemy was continued throughout Europe in the 14th cent. on the lines laid down by the masters of the 13th cent. John Cremer, Abbot of Westminster, after studying the art for thirty years, worked at Westminster in the reign of Edward III. (1297-1297).
Rupecissa, or Jean de Roquetaillade, was a Franciscan of Aurillac in Aquitaine. He was imprisoned by Innocent VI in 1356-1357. He quotes Geber, Lullius, and Villanovan. In his Liber lucis is the picture of a furnace, in which was practised 'the incanulation of the philosophic egg whence issued the marvellous quinta essentia.' Petrus Bonus of Ferrara was the author of the Preciosa novella de Thesauru ac pretiosissimo Philosophorum Lapide. It was written in 1390, and published at Venice in 1546. The term 'fermentum,' used by Albert the Great as the Latin of the Greek duvate, is applied by Petrus Bonus to the philosopher's stone. It is also used as the means of perfecting it:

'Aput philosophorum fermentum duplicitor videtur: uno modo ipsa lapis philosophorum et suis elementis composita, adeo completus in comparationes ad metalla; alter modo illud quod est perfectionis lapis et ipsum completus.'

The chemical reactions due to it are compared with the working of yeast:

'Verde primo modo dicimus quod sic fermentum pastas vincit pastam et ad se convertit semper, sint et lacis contortas, ad metalla reliqua. Et sic contus par fermenti pastae habet convertit partes pastae et non convertit, sicut et lapis habet convertit pluris partes metalorum ad se, et non converts.' (Petrus Bonus, op. p. Schittenberger, On Fermentation, p. 139.)

His epitaph says of him:

'Bona sua in pauperes distribuenda collo-

13. The 16th cent. saw a further development of alchemy into the more exact sciences of chemistry and medicine. Paracelsus, in his student wanderings an alchemist, became by practice a physician, by experience an adept and wizard, scepetic and critic. He wreaked his work by his bombast, his lies by his self-indulgence. At the same time, to use Browning's words, 'the title of Paracelsus to be considered the father of modern chemistry is indisputable.' Gerardus Vossius says of him: 'Nobilissimum medicinae partem, diu seplatum avorum etate, quasi ab orco revocavit Th. Paracelsus' (de Philosopha et Phil. sectis, ix. 9). It appears also from his treatise de Philobotomia that he had discovered the circulation of the blood. Lavater says that 'though an astrological enthusiast,' he was 'a man of prodigious genius' (de Natura Rurum, Holcroft's tr., vol. iii. p. 179). There is a reference to his use of laudanum on the evidence of his secretary, Oporinus:

'Alii illud quod in capite habuisset, ab ipso Azzoth appellatum, medicinae fulis preustissimam aut lapidem Philosophorum putaret' (Melch. Adum. A Zuil.uldum sword was no laughing matter in those days, and it is now a material feature in the popular idea; to Azoth was simply 'laudanum suum.' But in his time he was commonly believed to possess the double tincture—the power of curing diseases and transmuting metals. Oporinus often witnessed, as he declares, both these effects, as did also Franciscus, the servent of Paracelsus, who, in a letter to Neander, describes a successful projection at which he was present, and the results of which, good golden ingots, were confided to his keeping.'

Paracelsus, otherwise Philippus Aureolus Theophrastus Bombastus ab Hofheim, was born at Einsiedeln in 1493. He studied medicine under his father at Villach, and alchemy under Trithem, Bishop of Spanheim, at Würzburg. The character of his studies at Würzburg is best seen in the letter dedicatory, written in 1510, by Agrippa to Trithem:

'Quaam super tecum, R. P. in consobro tuo apud Herbipolium (Würzburg) aliquando conversatus, multa de chymia, multa de magia, multa de cabalistica, castcharque quae adhibu in occulto dilettescant, arcana scientiae atque arthus una contulissimae,' etc.

It was partly in rebellion against these traditional methods, partly to gain as wide an experience as possible, that Paracelsus spent his early life in travel:

'Patria auxilium primum, deinde proprium industria doctissimae viros in Germania, Italia, Gallia, Hispania, allisque Europae regionibus, nactus est profectores' (Melch. Adam, in Vit. Germ. Medic.). The passage illustrates the wide interest in alchemy throughout Europe at the close of the 15th century.

Under the patronage of Sigismund Fugger, Paracelsus learnt much in the mines of Bohemia, and himself speaks of his researches into folklore:

'Ecce anatomem adolescentem difficilissimi Hineris hand piget, ut venustam saltem puellam vel feminam sapientia' (Definitiones Septem art. c. quinto iii. 1527.: 'de peregrinationibus et exile.'

In 1526 he was called to a chair of physic and surgery at Basel. Here his over-bold denunciation of Avicenna and Galen made him many enemies. In 1528 his fall was brought about in the case of a canon of Basel named Liechentfels. This man was cured by Paracelsus, but refused to pay the recognized fee. His refusal was supported by the magistrates, and Paracelsus was ejected. He was at Nuremberg in 1529, at St. Gall in 1531, at Pfeffers in 1535, and at Augsburg in 1536. He then visited Moravia, Arabia, and Hungary. In 1538, when at Villach, he dedicated his 'Chronicle' to the States of Carinthia, in gratitude for the many kindnesses with which they had honoured his father. He died at Salzburg in 1541, at the early age of 48. He seems to have been generous in the practice of medicine. His epitaph says of him: 'Bona sua in pauperes distribuenda collo-
candaque erogavit.' A sceptic and fierce critic in alchemy, he appears to have been no less so in theology. Quenstedt says of him: 'Nec tantum nove medicina, verum etiam nove theologice autor est' (De Patr. Doct.). Delrio places him among those who were: 'partim atheos, partim hereticos' (Disquis. Magist. i. 8). At the same time, he is justified in the last words he places in the mouth of Paracelsus:

"If I stoop
Into a dark tremendous sea of cloud,
It is for a time; I press God’s lamp
Close to my breast; its splendour, soon or late,
Will turn and transmute the weeds to roses,
I shall kneel and kiss the feet of the rose."

You understand me? I have said enough?"

An inventory taken at his death shows that the only books he left were the Bible, the New Testament, the Commentaries of St. Jerome on the Gospels, a printed volume on medicine, and seven manuscripts. His works were published by F. Bitianius in 3 vols. fol. in 1658; the Hermetic and Alchemical writings by A. E. Waite in 2 vols. in 1614.

Jules Anger says of him: 'He is the pioneer of modern chemists, and the prophet of a revolution in general science' (Encyc. Brit. art. 'Alchemy'). Browning sums up his study of Paracelsus in the words:

'Meanwhile, I have done well, though not all well.
As yet men cannot do without concept;
'Their for their good, and therefore fit while
Treated, rejected the weak, and scorn the false,
Rather than praise the strong and true, in me:
But after, they will know me.'

(Paracelsus, 1835, and notes.)

The new influence in the 16th cent. is shown by the violent death of Beuther, who was alchemist to the Elector Augustus of Saxony from 1575 to 1582, and in the title of Libavius' great work published in 1595—Alchymia recognita, emedita, et aucta. It has been called the 'first text-book of chemistry.' It contains a chapter on the philosopher's stone. In England, Thomas Charnock published his Secretary of Philosophy in 1587, his Exigus of Alchemy in 1572, and his Memorandum in 1574. He was instructed in the use of gold-making powder by Bird, who received it from Ripley. It was only those who were well-to-do who could be on these experiments. The furnace alone cost Charnock 30l., or £150. The Alchemical Testament of John Gybbys of Exeter in the time of Elizabeth has been published by James O. Halliwell (London, 1854).

There does not seem to have been much interest taken at this time in Oxford, early part of the century. The Day Book of John Donne in 1520 contains but few references to alchemical works. There is one copy of the Commentum Arnoldi de Villanovae (fol. 5, a. 1); there are three copies of a Chirurgamia de manu (fol. 1. a. 1, s. b. 2, 13. a. 1); and two copies of Albertus, de mineralibus (13. a. 1, 13. b. 2). There is also a copy of Theoriae planetarum (15. b. 1) (Fletcher, Collectanea Oxf. Hist. Soc. vol. v. p. 71 ff.). In the catalogue of books belonging to William Cyn, drawn up by his executor, Linaec, in the same year, there is the same absence of such books (Mont. Burrows, Collect. Oxf. Hist. Soc. vol. xvi. p. 317 ff.). Oxford had at this time other interests, especially the new learning associated with the names of Groen, Linaec, Foxe, and others. The training of Linaec, the founder of the English College of Physicians, the friend of Politian and Chalcondylas, and the great Venetian publisher, Aldus Manutius, is in marked contrast to the restless wanderer of Paracelsus.

14. It was long before the new sciences cut themselves altogether adrift from the ideas of the alchemists. In the early part of the 17th cent. the brotherhood of the Hermetic philosophers known as the Rosicrucians (wh. see) brought the occult mysteries of the earlier alchemists again into notice. The brotherhood claimed descent from Christian Rosencreutz in 1459; but no evidence for this exists beyond their own publications. The controversy centred round a work entitled, Chymische Hochzeit Christiani Rosencreutz anno 1483, written by Johann Valentin Andreæ in 1616, and published at Strasburg. Among the most prominent of the Rosicrucian brotherhood, and one of Michael Maier, physician to the Emperor Rudolph II. (1576—1612), he published Examen fuscorum Pseudochymicorum in 1617, Atlanticus fugiens in 1618, Symbola aureae mensae in 1617, and the Tripus aureus containing three treatises, "Rationale Valentinae Practica ex Germania, the Creda Miki seu Ordinale of Thomas Norton, and the Testamentum of Cremer, Abbot of Westminster. Robert Fludd introduced the brotherhood to the notice of English physicians. Born in Kent in 1574, he matriculated at St. John's, Oxford, on November 10, 1592, and took his M.A. degree in 1598. One of the three questions discussed by him for Inception in Medicine in 1605 was: 'Chymicum extractum minus molestiae et periculo affert quam quod interior et naturale.' (Reg. Univ. Oxon. Soc. vol. ii. pt. i. 193, ii. 191, iii. 194). In the same year is discussed in Comitisi: 'Incantatio non valet ad curam morbi.' Fludd went abroad and studied the works of Paracelsus and the mysteries of the Rosicrucians. On his return he practised as a physician in London, and died in 1637.

The Hon. Robert Boyle, one of the first promoters of modern chemistry, and a leading member of the Royal Society on its incorporation in 1662, believed in the transmutation of metals. In 1659 he brought to Oxford the noted chemist and Rosicrucian, Peter Stthael of Strasburg. Anthony Wood began a 'course of chemistry' under him April 23, 1663, paying 50s. in advance, and the balance of £3. at the conclusion of the class, May 30, 1663. 'A. W. got some knowledge and experience; but his mind was still busy after antiquities and music.' Among the members of this famous chemistry class at Oxford was 'John Lock, a man of turbulent spirits, eloporous, and never contented' and 'Mr. Orographer Wren, afterwards a great knight, and an eminent virtuoso.' In 1664, Mr. Stthael was called away to London, and became operator to the Royal Society; and continuing there till 1670, he returned to Oxford in November.

The Rosicrucian ideas and alchemical methods survived to some extent at Oxford. Elias Ashmole was the contemporary of Robert Boyle at Oxford, but as a member of Brazenose it may be deemed as 'a sojourner.' In 1650 he edited a work of Dr. John Dee, who died c. 1608, of whom Wood says: 'I have heard some say that he was a mere mountebank in his profession' ('Wood's Life and Times, Oxf. Hist. Soc. vol. xix. p. 306). In 1654, Ashmole wrote The Way to Blies in three books. 'The author says that motion is the father of heat, and doth yet beget and purchase it of nothing, theoretically anticipating modern doctrines' (Bolton, Catalogue, 84, in loc. It treated the Philosopher's Stone. In 1677 he offered his curios and MSS. to the University, on the condition that it would build a Museum and Chemical Laboratory. The foundation-stone was laid September 14, 1679, and the building was finished March 30, 1682—1684.
ALCHEMY (European) 297

The inscription describes this first public laboratory in Oxford:

‘Museum Ashmoleanum: Schola Naturalis Historiae: Officina Chemicorum.’ The three largest rooms were public; ‘The University’s private chamber’ was in a building to the rear. This middle room is the School of Natural History, where the professor of chemistry Dr. Robert Boyle, reads three times a week. ‘The lower room, a cellar, ... is the Laboratory, perchance one of the most beautiful and useful in the world’ (L. Costes, ‘Museum Ashmoleanum,’ 3rd ed., vol. xvi. p. 55).

It was thus under the direction of Ashmole, perhaps the last of the Oxford alchemists, that the study of chemistry was placed on a sound and public footing. Ashmole died in June 1692, a year after Robert Boyle.

In the sister University, at the same period, Newton, who became Fellow of Trinity in 1667, directed his studies for some little time to alchemical methods, and investigated the Philosopher’s Stone. But at Cambridge, as at Oxford, the newer scientific methods set aside the dreams and theories of the older alchemists, and opened the way to modern chemistry.

15. In the 18th cent. alchemy was finally discarded in the person of Dr. Price of Guildford, the last of the alchemists, a distinguished amateur chemist, and Fellow of the Royal Society. In May 1783 he professed to transmute mercury into silver and gold in the presence of a select company. Several of the members spent three months in investigating the propositions of George III., and Price was made M.D. of Oxford. The Royal Society then pressed him to repeat the experiments in their presence. He hesitated, refused, and only on the pressure of the President, Sir Joseph Banks, was last reluctantly consented. He withdrew to Guildford, prepared an ample amount of laurel water, and then began to manufacture his projection powder. On the 3rd of August he invited the Royal Society to Guildford. On the morrow he was invited to the reignitation. He received them, and then committed suicide in their presence.

In Germany, alchemy was laughed out in the person of Semler. He received the ‘Salt of Life’ from Baron Hirschen, and, treating it as the Philosopher’s Stone, was surprised to find gold deposited in the crucible. Klaproth analyzed the ‘Salt of Life,’ and found it to consist of Glauber’s salt and sulphate of magnesia. In the Salt sent by Semler, Klaproth discovered gold, though not in combination. Klaproth again consented to analyze Semler’s solution before the Court, when, instead of gold he found a kind of brass called tombac. On further investigation, it was disclosed that Semler’s old servant, eager to honour his master, had slipped pieces of gold leaf into Semler’s chemical mixtures. The servant entrusted the secret to his wife, that in his absence she might purchase the gold leaf as before. She, however, bought brass instead of gold, and spent the balance on drink. In this way alchemy was laughed out of Germany (Chambers, Book of Days, i. 602).

The theories of the alchemists did not die out at once. They were still held in the close of the 18th century. The Antiquary says that Dosterriswivel ‘exhibits himself as a perfect charlatan—talks of the magisterium—of sympathies and anti-sympathies—of the dividing and undividing—and all the trumpery with which the Rosicrucians cheated a darker age, and which, to our eternal disgrace, has been revived under the garb of chemists’ (vol. ii. p. 185).

The Lives of the Adepts in Alchemical Philosophy was published in London in 1814, and contained reports and extracts of many works on alchemy. Bulwer Lytton’s Satan was written in 1842 as a study in the mysteries of the Rosicrucians.—George Eliot in 1871 wrote: ‘Drugs, ‘the first hypothesis of practical chemistry that set on one side the theories of the alchemists:

The observation of the Law of Equivalents and the Law of Multiples ‘led to the idea that the elementary bodies are made up of indivisible particles called atoms, each having a constant weight peculiar to itself; and that chemical combination takes place by the juxtaposition of these atoms, 1 to 1, 1 to 2, 1 to 3, and so forth. This is the atomic hypothesis of Dalton’ (W. H. Wau, Inorganic Chemistry, 1853, p. 207).

Immutability has been the recognized law of the elements:

‘Our molecules, on the other hand, are unalterable by way of the processes which go on in the present state of things, and every individual of each species is of exact uniform mass and magnitude. ... In speculating on the cause of this equality, we are thereby led to imagine that the composition of each atom is exactly fixed, and that no other is possible.’ (L. F. S. Hume, Chemical Philosophy, London, 1876, p. vii.) In treating of the Periodic Law and Mendeleev’s Table, he says: ‘This table requires a few remarks on the first principles from which it may ultimately be built, namely, the idea of a fixed number of elements, as, for instance, copper, silver, gold, for which a place cannot readily be found. Silver is undoubtedly said of molecules identical in all respects with our own?’ (Clark-Maxwell, Theory of Heat, 1885, p. 331).

Thus, under the most advanced theory of Chemistry and Physics in the 19th cent., the transmutation of elements was inconceivable. Yet there were masters of chemical philosophy who entered a caution against the exclusion of possibilities.

Diderot writes: ‘The molecular theory has been adopted in a somewhat rigid form, not by reason of any special conviction of my own regarding its permanence as a scientific truth, but because I am satisfied by long experience that it may be of use, and I cannot dispute its almost indispensable place in the hands of teachers. ... In the hands of the public, it has no value whatever, as is shown by the fact that it is not very closely, with sodium, whilst it is also connected with copper on the one hand and with mercury on the other. Gold again is unquestionably traded at 200 shells to which it is most nearly related exhibit even atomicity’ (p. 543). There still remained something behind which was not altogether clear, and this, too, in the indefinitely divisible nature of gold and gold.

17. The discoveries of the Becquerel rays and the isolation of the element radium by M. and Mme. Curie in the opening years of the 20th cent. have opened up far-reaching possibilities, and have induced many leading chemists to conceive the idea of the transmutation of the elements. At the Leicestershire Meeting of the British Association on Aug. 1, 1907, Lord Kelvin challenged these inferences. He maintained that it was almost absolutely certain that there are many different kinds of atom, each eternally invariable in its own specific quality, and that different kinds of atoms, as, for instance, copper, silver, gold, for which a place cannot readily be found. Silver is undoubtedly said of molecules identical in all respects with our own?’ (Clark-Maxwell, Theory of Heat, 1885, p. 331).

The discussion on 3rd Aug. 1907 was an event in the history of chemical science. Professor Rutherford, in opening the debate, held that the discovery of the electron had not as yet disproved the atomic theory. All attempts to find an electron with a positive charge of electricity had failed. ‘... Though we can liberate the electrons of matter very freely, there is no evidence that the liberation of the electron tends to the integration of an atom.’ Sir William Ramsey, as a chemist, disagreed with Lord Kelvin and Professor Rutherford.

The latter had said that there was no evidence that the loss of electrons altered the atom. Perhaps not. But there was evidence that the gain of electrons did alter the atom. Without placing radium hermetically closed in a glass vessel, the electrons, emanating from the radium through the glass, and falling on a nickel bar placed in juxtaposition, hit the atom after a certain time, of covering the bar with a film of radioactive matter, which could be separated by chemical treatment. His conclusion was that some kind of matter, converting the nickel into some other substance, this being characterised by its radioactivity. In his reply, said that the discovery of the properties of radium had been most suggestive, and had opened our eyes to other discoveries, never suspected or thought of. When Ramsey then announced a further discovery. He had proved that when radium was isolated in a bottle, after a lapse of time it gave off an emanation, and the new radium again that emanation was isolated, it produced helium and something else, which is conjectured on possible grounds to
be lead. Again, when that emanation was dissolved in copper solution it produced the new element called argon, but now, when the radium emanation was dissolved in water, the resulting product was of the nature of helium, but its kindred element neon. These marvellous properties of radium thus described by Sir William Ramsay seem almost like the ancient dreams of the alchemists. Has it all been reserved for the chemists of the 20th cent. to find in radium the Philosopher's Stone, and to prove it to have the power of turning base metals into gold?

**TOMAS THOMAS.**

**ALCHERINGA.**—The name applied by the Arunta, Kaitish, and Unmatjera tribes of Central Australia to the mythical past in which their ancestors were formed, and their ceremonies and regulations were instituted. According to Spencer-Gillen (3: 164), the word ancestor is the equivalent of the Hermetic word kahor (not of the Adept of Thelema), and is associated with the term 'Dreamer.' Analogous beliefs are found in other tribes to the north of the Arunta; the Warramunga term corresponding to Alcheringa is Huktu.

1. In the Alcheringa existed at the outset, according to the Arunta myth, the ancestors whose spirits they regard as incarnated in the men of the present day; they were at least semi-human, but possessed more than human powers, and are credited with the formation of natural features such as the Macdonnell Ranges; in the Alcheringa period these amorphous inapertuwa, who were transformed into human beings and later underwent initiation ceremonies, travelled over the country in totem companies, each carrying a churinga (see AUSTRALIANS), and at the spots where they camped are the present okmanikili, or local totem centres. The Arunta distinguish four Alcheringa periods: (a) creation of man from the inapertuwa; (b) institution of circumcision; (c) institution of the mica opera; (d) regulations regarding marriage. Originally the country was covered with salt water, which was withdrawn towards the north; two ungambukula (= self-existing?) in the western shell went the east south; the knives they released the half-formed arms and legs, slit the eyelids and so on; after circumcising the men they became lizards. Some of the uncircumcised men were eaten by orunche (evil spirits), who were killed by men of the lizard totem. In the next two stages an okmhrabala (sage) introduced circumcision with the stone knife, and taught the little hawk totem group to perform the operation; they also formed the four intermarrying classes, but without associating them with marriage regulations. More inapertuwa were produced by the wild cat totem instituted the mica ceremony, and the order of the initiation ceremonies was arranged. Finally, the Emu people introduced the present marriage restrictions. According to the Unmatjera and Kaitish, the inintintu (the Arunta inapertuwa) were formed into human beings by an old crow; he returned to get his stone knife with which to circumcise them, and in his absence two lizard men from the south circumcised and subcruised the men and performed the corresponding operation on the women. Another Kaitish tradition makes the transformers two boys to whom Atnata (a god) sent down stone knives. Some of the ancestors were men (etunts) when they were first formed. In the Kaitish tribe the travels of the groups of totemic ancestors are almost wanting, or possibly forgotten; the various spots are said to have been peopled by one or two ancestors, who sometimes carried churinga.

2. The Urubunna, the neighbours of the Arunta on the other side, also have their mythic period, named Ularak; the ancestors of the totemic groups were semi-human and lived on the earth or beneath it; they had superhuman powers, and each totem group at the present day were few in number, and there is no myth of the churinga being carried. The Urubunna belief thus differs widely from that of the Arunta and Kaitish, and comes near that of the Warramunga, and so on. The semi-human totemic ancestors of each totem group at the present day were few in number, and there is no myth of the churinga being carried. The Urubunna belief thus differs widely from that of the Arunta and Kaitish, and comes near that of the Warramunga, and so on. The semi-human totemic ancestors of each totem group at the present day were few in number, and there is no myth of the churinga being carried. The Urubunna belief thus differs widely from that of the Arunta and Kaitish, and comes near that of the Warramunga, and so on. The semi-human totemic ancestors of each totem group at the present day were few in number, and there is no myth of the churinga being carried. The Urubunna belief thus differs widely from that of the Arunta and Kaitish, and comes near that of the Warramunga, and so on.

3. The Unmatjera hold that every totemic ancestor had his class as well as his totem; the totem changes in their belief, as in that of the Arunta, in successive incarnations, the class seldom or never.

4. The Warramunga, Walpari, Tjungill, and other tribes held that every one is the incarnation of a Wilgara ancestor; but these latter are regarded as having been fully formed men, and all the members of a totemic group at the present day are looked on as the descendants of one ancestor who wandered over the country leaving spirit children in trees and rocks; they believe that if a woman strikes one of these trees with an axe, the spirit child will enter her body. The ancestor began his travels under ground, and then came up to the present world. When the ancestors of a man first appeared, the totem stories were told, and the spiritia of the group engaged in feasting. These beliefs are shared by the Umbaia and Gnsuni, but the latter hold that women have no mounia, or spirit part, consequently spirit female children, though they exist, do not take human form. The Bimbingsa hold that one totemic ancestor was the founder of a group, and left Uljani spirits which eminated from his own body.

5. In the Arunta tribe at the present day a man marries a woman of his own or any other totem; in the other tribes totemic exogamy is enforced. Tradition says that in the Alcheringa times men invariably married women of their own totem; the classes, too, were originally non-exogamous, and the present regulations came down from the north. It is obvious clear that the knowns of the Tjingu are from north to south corresponds with the facts; but there is much division of opinion as to the value of the remainder of the myths. They are treated as mere atiological myths by Andrew Lang and others, as genuine historical traditions by Spencer and others. It seems clear that some part of them cannot be historically true; for the totem groups are represented as living exclusively upon their totems; and some of these, such as gusubs and plants, are not in season for more than a portion of the year.

**LITERATURE.**—Spencer-Gillen, Native Tribes, 1899, pp. 119-127, 387-429, Northern Tribes, 1904, pp. 145-175, etc.; FL xlvi. 493-533, gives the views of the Southern Arunta. For remarks on the Alcheringa legends see Lang, Social, 1903, and Secret of the Torn; Durbridge's art. in ASoc iii. (1903) 50, etc.; we also Van Gennep, Mythes et Legendes d'Australie, 1906, p. xlvii. T. THOMAS.
ALCOHOL.
The use of alcohol in some form or other has been familiar to man from a very early period in his race-existence; in all ages of which we have any record, in all climates, amongst tribes of the most varied degrees of culture, it has been used and still is an agent with marked effects on the individual and the race. This name is an Arabic origin (al-kohl, 'collyrium,' the fine powder used to stain the eyelids).

Alcohol, as we know it in ordinary use, is properly named 'ethyl alcohol,' and is one of the series distinguished in their properties from one another by their boiling point, their specific gravity, and their poisonous effects—consisting of carbon, hydrogen, and oxygen. The difference between their names and chemical forms are—Methyl alcohol (CH₃OH), ethyl alcohol (C₂H₅OH), propyl alcohol of the type C₃H₇OH, butyl alcohol (C₄H₉OH), and amyl alcohol (C₅H₁₁OH). Methyl alcohol is obtained from distillation of wood, and, being nauseous in taste, it is added to ethyl alcohol, so that the latter may be sold for industrial purposes without tax as methylated spirits. Fuel oil contains anil and ethyl alcohol as well as other by-products of fermentation, and is usually present along with other analogous substances in distilled alcoholic liquors; but as their amount is small and their action subsidiary, they will not be further referred to.

Alcohol is formed from sugar by the action of the yeast-fungus, a unicellular organism which excites fermentation in saccharine solutions. A molecule of sugar is thus split up into alcohol and carbonic acid (along with some collateral products). The general limit of the alcoholic liquor which is thus formed (apart from the amount of sugar present) when alcohol reaches a strength of 16 p.c. by volume, it stops further fermentation. Most 'natural' wines, such as those called only from 8 to 12 p.c. alcohol, as it is rarely that the grape-juice is sugary enough to allow of the formation of alcohol to the highest possible extent. Stronger wines, such as port and sherry, are 'fortified' by the addition of alcohol. It should be noted that mankind has in all ages made naturally fermented drinks from any available material. By more complicated processes, beer or ale is produced either from barley-malt or some substitute, the strength in alcohol varying from 3 p.c. or less up to 8 or 9 p.c. The strongest drinks, such as brandy, whisky, rum, gin, and liqueurs, are manufactured with the aid of distillation.

1. Physiological effects of alcohol. Alcohol is a stimulant in a dose proportional, that is, for the soft plastic material which is the essential constituent of every one of the minute cells that make up living organisms, whether animal or vegetable. Its poisonous effect in very dilute solution is easily shown on animals in the form of the experiment of Kohn, 1898, 'Pathology of Alcoholism.' In Kelyneck's 'Drink Problem,' pp. 52-66, and the more finely organized cells are most susceptible (Overton, 'Studien über die Narkose, Jena, 1901'). Let us briefly trace the effects of alcohol when taken into the human body in moderate quantity.

(1) With the feeling of warmth in the stomach, there is an increased secretion of gastric juice such as is produced by any irritant. Of the two constituents of the gastric juice, pepsin as the hydrochloric acid that is thus secreted, and recent research indicates that the digestive quality of the secretion depends very largely on the nature of the stimulus. Hence it is probable that the gastrin is but an auxiliary and digestive aid. By quickening the movements of the stomach and intestines, it helps the expulsion of gases. If taken in concentrated form or in too great quantity, it decidedly retards digestion, and frequent repetition of such doses is apt to bring on gastritis.

(2) Alcohol passes in about 15 minutes into the blood and lymph vessels, and is thus rapidly diffused through the various tissues; it forms a compound with the colouring matter of the blood which takes up and gives off oxygen less readily (Woodhead, Lc. p. 57). Hence the normal changes in the tissue cells are interfered with, and this is one of the causes of the accumulation of fat in certain alcoholic states. The waste products are apt to be retained too long by the cells.

(3) The nerve-cells of the brain, the most highly and delicately organized, are also early affected. Largest numbers of pyecnometric experiments under conditions of the greatest accuracy prove that alcohol in small dietetic doses exercises a distinctly paralyzing effect on the working of the brain. Some mental processes are quickened for a short time, and then a retarding effect shows itself, which is prolonged and much more than cancels the apparent beneficial result. With the early facility there is apt to be loss of accuracy (Horsley, 'Effects of Alcohol on the Human Brain,' Brit. Journ. of Inebriety, 1905; Pflüger, 'Arbeiten, ed. E. Kraepelin, 1901-1905; Neild, 'Psychometric Tests on the Action of Alcohol,' Brit. Journ. of Inebriety, Oct., 1905). The greater the demands made on psychic activity, the more alcohol is needed. The invariable result is that the person experimented on has the delusion that he is doing better with alcohol than without it. The depressing results of a slight intoxication may last from 24 to 36 hours (Fùrner, 'Zwickau, hist. des alkohol. Congress, Basel, 1906). The effect of the regular consumption of alcohol—say 1 to 2 litres of lager beer per diem—is distinctly prejudicial to all kinds of intellectual effort (Kürz and Kraepelin, 'Psychol. Arbeiten, 1900); and in general the more difficult mental operations are more impaired than the easier. As for the idea that habituation produces a certain immunity to alcohol, this is probably due to a blunting of the nerves. Such a result is apt to be associated with a dangerous tendency to augment the dose in order to experience the agreeable effect, just as with morphine (Kraepelin, 'Münch. Med. Woch.,' 17th April, 1906).

Experiments on the sensory functions (sight, hearing, touch, etc.) show, from the first, diminution in accuracy and rapidity of the motor functions of the body are generally influenced favourably by alcohol at first (Frey, 'Alcohol und Muskelermuđung,' Leipzig, 1903; Schynder, 'Pflüger's Archiv, 1903; Destree, 'Journ. Med. de Bruxelles, 1897); the amount of work is increased, and is more easily performed; but after a brief period extending at most to 20 or 30 minutes, there comes a prolonged reaction, so that the total effect is distinctly disadvantageous. The popular belief that alcohol is not so much a loss as a gain in working capacity is accountable for a vast amount of drinking among the working classes.

(4) The effect of alcohol on the circulation (Monro and Findlay, 'Critical Review of the Blood Alcohol and the Cardio-Vascular System,' Med. Temp. Rev. 1905-1906; Abel, 'Pharmacology of the Action of Ethyl Alcohol,' Med. Temp. Rev. 1904-1905) is to cause a first a dilatation of the small vessels, especially of the skin, shown by flushing of the face and a feeling of warmth. A slight acceleration of the pulse is frequently but not always produced by small doses, but the average for the whole day may be lowered. If the pulse tension is low to begin with, alcohol will not raise it. On the whole, experiments show that alcohol does not
strengthen the heart, but rather the reverse. There may be a short stimulating effect through reflex action just after its administration. Large doses are strongly depressive.

(5) The tissues, we have seen, have their oxidation interfered with by alcohol. There is, further, increased loss of heat from the body, with lowering of the temperature through the dilatation (paralysis) of the blood-vessels. Hence comes quickened and deeper respiration, so that alcohol is indirectly a respiratory stimulant (Binz, Therapie d. Gegenwart, 1899). 

The nutritive value of alcohol is still the subject of keen discussion (Rosemann, Pfäger’s Archiv, 1901, vol. 86, also vols. 94, 99, and 100). All admit that large quantities of alcohol are poisonous, and it would seem that the most minute doses that have any demonstrable effect act prejudicially on the nervous tissues. Still it is conceivable that in other ways alcohol may be serviceable to the body. In small doses, from 90 to 98 p.c. is oxidized; heat is thereby produced, and alcohol, it is said, can thus take the place of other materials, such as fat or carbohydrate, in the work of nutrition, and may be said to have a nutritive action on Metabolism of Matter and Energy, Washington, 1892). The same may be said about glycerine, or fusel oil (amyl alcohol), whose total effect is distinctly poisonous. Alcohol can neither build up new tissues, nor add any favourable effect that it has in producing energy, probably so closely balanced by its poisonous effect, either directly or by means of intermediate products, while the tissues are dealing with it (Schäfer, Textbook of Physiology, vol. 1. p. 882). This conclusion of physiological science is in harmony with the experiences in actual life of army leaders, travellers, climbers, employers of labour, etc. The good effects of alcohol are similar to those obtained from other more or less dangerous stimulants and narcotics.

2. Acute alcoholism (Intoxication).—When enough alcohol is taken to produce intoxication, judgment, self-control, perception, and the other higher faculties are affected first. With greater facility in thought and speech, there is a certain disregard of the environment; a quiet person may become lively and witty, un wonted confidences are given, and there may be assertiveness and quarrel some ness. Singing, shouting, and other noisy disturbances indicate the free play of the emotions; then comes motor impairment, shown in the speech and gait, incoherent and staggering gait; drowsiness, muscular paralysis, and even coma may supervene; the temperature may become dangerously low, and in the worst cases respiration and circulation may be paralyzed. Short of this, after 6 to 12 hours the man awakens from his drunken sleep with a enjoined tongue, loss of appetite, thirst, flushed face and eyes, headache, and mental confusion. These phenomena vary according to the amount, strength, and character of the liquid, and to the condition of the body in consuming it, and the stability or resisting power of the person imbibing. Persons with a special cerebral susceptibility may develop wild maniacal excitement with a comparatively small dose. Such persons may suffer from a neurasthenic or alcoholic heredity, epilepsy, injuries to the head, or antecedent insanity. An automatic dream-state, in which complicated, it may be criminal, actions are performed quite unconsciously, is sometimes induced by acute alcoholism (Sullivan, Alcoholism, pp. 41-43).  

3. Chronic alcoholism.—Excess has been defined as anything over that amount of alcohol which the body can completely dispose of in 24 hours, but a complete definition must include cases where any permanent mischief is produced during a lifetime. Since 1864, when Anstie declared 1/2 oz. of absolute alcohol to be the physiological limit, the tendency amongst scientific writers has been steadily towards reduction of this. Abel (l.c. Sept. 1905, p. 275) concludes that the ‘moderate’ or average permissible quantity of alcohol is represented by one, or at most two, glasses of wine (10 p.c.) in the 24 hours; that is about half an ounce of beer, the technic of the outside. Other writers, Max Gruber, quoted by Woodhead, Brit. Journ. of Inebriety, Jan. 1904, p. 166) hold that as soon as such a small quantity may impair function, it would be rash to assert that this would be harmless to the vast majority of mankind if taken habitually and indefinitely. The ordinary signs of chronic alcoholism are due to the habitual taking of much larger quantities. Such are loss of appetite, especially for breakfast, foul tongue, bad breath, with often a peculiar easily recognizable odour; morning vomiting, expectation of yellow tough mucus, dyspeptic and intestinal disorders. Very fine tremors, most marked in the morning, are present in tongue, fingers, and lower limbs. Sleeplessness is frequent; speech shows a loss of crispness; memory, especially for names, is defective; there is difficulty in decision or in concentrating the attention, and a disinclination for bodily or mental exertion. The victim of alcohol shows a want of initiative, and may give promises with the intention, but without the power, of keeping them. The speech is impaired, and by so much, neglect of wife, children, and other dependants, loosening of self-control and want of truthfulness, the moral deterioration is signalized.

Dyspomania, or periodical inebriety, is more frequently shown in women than in men. After an interval of abstinence, complete or relative, comes an overmastering impulse to drink. The time of recurrence may be quite irregular, in other cases it may be every day, fortnight, month, or at even longer intervals, and the duration of the attack is also variable. We are all subject to periodicity, even in regard to our brain force, and in dyspomaniacs there is usually a more than average instability of nerve. They show a close analogy to the condition found in epileptic alcoholism.

Delirium tremens is a form of acute alcoholism supervening almost invariably on a chronic condition. There may have been a period of specially heavy drinking without taking food, or the onset may have been precipitated by some shock to the nervous system, such as pneumonia. A frequent early symptom is distaste for drink, whilst hallucinations, with restlessness, nervousness, and insomnia, become more and more marked. The hands are constantly at work, picking at the bedclothes, going through the actions of some occupation, etc. Tremors become coarser, and are present all over the body. The mind is incessantly active, talking incoherently, seeing horrifying visions, hearing whispers, plot tings, insults. Terror and suspicion are constant; the bodily functions are all deranged, the temperature is raised, and complicating diseases are apt to supervene. After an acute stage of 3 or 4 days the patient usually falls into a refreshing sleep, and awakes a different man. But the risk of a fatal result increases with each succeeding attack. Delirium tremens is comparatively rare in women, and is much more common amongst drinkers of spirits than amongst those who take wine or beer. Closely allied to delirium tremens is a form of continuous alcoholic delirium (delirium alcoh. mania a potis), which often sends patients to asylum. Alcoholic dementia is not uncommon as the final state of chronic drinkers of alcohol; the symptoms point to an exaggeration of the ordinary mental state, developed by alcohol, as described above. Loss of memory, irritability, lowering of
mental tone, and loss of self-control may become so marked as to require asylum treatment.

Besides those definite forms of alcoholic insanity, alcohol may bring about a number of mental disorders. It is probably the most powerful predisposing factor, after syphilis, in causing general paralysis of the insane. Kraepelin (Munch. Med. Woch., 1898) states that 80 p. c. of cases of paralysis would not occur if alcohol were banished from the world. The exact percentage of asylum inmates due to alcohol is a matter of some uncertainty, owing to varying ways of compiling statistics, and difficulties in getting at the facts of the patients. In a series of 20 p. c. of the insane are so through drink, and in recent years this percentage has tended to increase, especially in large cities (Clouston, Mental Diseases, p. 26). The percentage of women to men thus afflicted in Italy 1 to 11, in Germany 1 to 16, in Austria 1 to 5, in New York City 1 to 2, in Paris and Edinburgh about the same. Taking Great Britain as a whole, the proportion of nine men to one woman, or 1 to 2½, significant evidence of the amount of drinking amongst women in this country (Hoppe, Tabatiden, etc., p. 274). Bowntree and Sherwill, Temperance, Problem, Appendix, p. 464). Allowance must be made for the likelihood that many who succumb to alcohol would in its absence break down mentally in some other way, in virtue of their unstable nervous system, and it has been noted that the habitual inebriates of the London police courts rarely become certifiably insane (Cawresw, Scottish Med. and Surg. Journ., 1898, ii, p. 386). Genuine epilepsy may be produced by alcohol; if once acquired, it is invariably made worse by drink. Not seldom one sees cases of epileptic convulsions coming on after a long course of inebriety; they are less likely to be produced by a specially severe bout. Not the brain only, but other divisions of the nervous system, are very apt to be damaged by chronic alcoholism. Most characteristic is multiple neuritis, and this may result from the feet and hands and advancing upwards if the cause persists, till a fatal result occurs. Evidence in this respect is afforded by such terms as 'needles and pins,' pains, great muscular tenderness, diminished sensibility to touch; there is loss of power going on to complete paralysis, and there is mental deterioration. The disease may be brought on by alcohol in any form; it is often associated with the secret drinking of women. It is most aggravated by small quantities of arsenic, as was shown in an epidemic which occurred recently in Liverpool, Manchester, and other towns in the north of England. The cause here was the excessive drinking of beer manufactured from invert-sugar, in which arsenic was present as an impurity. Several other neurologic and spinal-cord affection may be caused or aggravated by chronic alcoholism.

4. Tissue changes caused by alcohol. — Most of the disorders that we have been describing are associated with pathological changes, easily recognized through the microscope. The various parts of the body are able to recover from the poisonous effect of even a large dose of alcohol. And, so far, the functional disturbance in the cell eludes the best methods of examination that we have. However, when the toxic dose is repeated indefinitely, there comes a time when organic changes occur, and these are usually irre- mediably. Thus degeneration, indicated by changed microscopic appearance, may be found in the cells of the liver, of the spinal nerves, in the brain, in the muscle, the walls of the blood-vessels, the liver-cells, etc.; and at the same time there may be an increase of fibrous tissue, 'the lowest structure in the body' (Woodhead in Kelyanck's Drink Problem).

5. The effect of alcohol on morbidity. — Besides the purely alcoholic forms of disease, such as cirrhosis of the liver and alcoholic neuritis, a large proportion of the illness found in hospital and in the population in general is directly or indirectly due to alcohol. According to Jacquet, Prisee Med., 1899, p. 338. Not only are the diseases directly damaged, but the resisting power of the body to disease is greatly lowered by excessive drinking.

Pneumonia, for instance, is more apt to occur, and more likely to be fatal, in alcoholic persons. If the body is weakened in its resisting power, by starvation, by chill, or by a poliomyelitis, microbe infection in the system must necessarily follow. Pneumonia in drinkers is about 2 times as fatal as amongst the temperate. So also with choleras, plague, yellow fever, malaria, and even cancer in the presence of friends. In these cases, the state of present-day medical opinion is opposed to the view that alcohol lowers the resistance of the host. When the liver system is lowered in tone, alcohol greatly helps the development of the disease. This is proved by the death-rate from phthisis in alcoholic insanity (B. Jones). Amongst tradesmen, in which the tubercle is from 14 to 3 times more frequent in every organ of the body liable to it than amongst persons following other occupations (Dickinson, Treatment, 1887, p. 529). When one further takes account of the unhealthy conditions in which chronic alcoholics live, one cannot doubt that

drink is largely responsible for the wide-spread prevalence of tuberculosis. Venereal diseases are very frequently acquired in the intoxicated state, when the lower passions become supreme, and the alcohol lowers the resistance of the soldiers than among non-abstainers. In their treatment, abstinance from drink is the first thing to be insisted upon. Syphilis is more than a mere destructive among chronic drinkers: in the plainest point of view, the worst cases for operation are those of chronic drinkers. They take anesthetics badly, their cases are severe, they are liable to septic complications. Clinical experience is confirmed by numerous experiments on animals; rabbits, guinea- pigs, fowls, etc., have been shown to die of phthisis if fed on alcohol in even moderate doses, to be much more susceptible to the various forms of tetanus, cholera, tetanus, diphtheria, etc., than non-alcoholized animals (Abbot, Delardure, Laitinen—work summarized by Woodhead in loc. cit.).

6. Alcoholsm and mortality. — The mortality returns of the United Kingdom give a very imperfect idea of the number of deaths due to alcohol (Vacher, Practitioner, Nov. 1902). Seeing that certificates of death are not treated as confidential by coroners, or by the clergy, or by the local authorities, it is usually attributed to the diseases of the liver, kidneys, lungs, or nervous system, instead of to their primary cause — alcoholism. The Swiss returns of mortality, on the other hand, are reliable, and they show a death-rate from alcoholism in the 1891 and 1892 returns of 381. It is estimated that in this country alcohol accounts for 100,000 to 120,000 deaths per annum (Kerr, Inebriety, p. 381).

7. Alcoholism and crime. — There is universal testimony as to the close relationship between excessive drinking and breaches of the moral law and the laws of the State. This is a direct consequence of the paralysis of the higher faculties, intellectual and moral, and the resulting free play given to the lower inclinations. Alcohol is not only a direct cause of crime, but it acts powerfully along with other conditions, such as hereditary nervous weakness, sickness, or instability of the brain, or it may be due to loss of work, poverty, and starvation, so often the results of indulgence in alcohol. A distinction has rightly been drawn between the lighter and the graver violations of the law which are due to drink. It is fortunately true that the great majority are of the former class. To them, however, — in order to give some idea of the degrading effect of excessive drinking, — we must add the vast number of cases where similar offences are committed with impunity, escaping the notice of the police through the sheltering influence of friends. There is no doubt that there is a disposition on the part of the police, magistrates, the public generally, at a trial, to view the drunken offender with utmost leniency. The large proportion of habitual inebriates charged with due time after time shows that many, perhaps most, of the drunken offenders are not drunk at the time of the crime, but somewhat about than usual. In 9 cases out of 10, the drunken of our police courts figures also as the wife-beater, the beggar, the drunk in the gutter, the grave robber of the county, in which crimes of acquiescence are not connected with alcoholism. On the other hand, alcoholism is probably the cause of some 80 p.c.
of homicidal offences, and of a smaller, though still considerable, proportion of crimes of lust. Nearly always in homicidal crimes, and very frequently in sexual crimes, the alcoholic condition with which the delinquent is chronically intoxicated and not casual drunkenness. (Sullivan, Alcohohism, 1806, ch. IX.)

8. Alcoholism and the future of the race. — Alcohol is specially dangerous to children, as their delicate systems are highly susceptible to the poisonous effects of alcohol. Most disastrous results follow its administration in the early years of life—a practice which is far from uncommon amongst the ignorant. Besides the direct effects, such as stunting of growth, blunting of intellectual and moral faculties, and organic changes, which are directly attributed to the multiple and various evil influences of the social environment in drinking families. Hence the incidence of sickness and mortality in the families of parents who are one or both given to drink is extremely heavy.

The Report on Physical Deterioration (1866) draws attention to the incidence of drinking amongst women of the working-classes, with consequences extremely prejudicial to the care of the offspring, not to speak of the possibility of children being born permanently disabled. If the mother drinks heavily during lactation, the quality of her milk is much impaired and there may be present in it a certain amount of alcohol. Still more serious for the child is drinking on the part of the mother. Not only is the child badly nourished but alcohol is found to pass freely into the blood from the mother's. Hence we find in such conditions a great predisposition to abortion. Alcoholism decreases the weight and size of the infant and the infant is apt to be the subject of disease or deformity. There is passed on many cases not only a nervous excitability, but a tendency to give way sooner or later. While it may be true that 80 to 85 p.c. of all children are born apparently healthy, whatever defects they may have is highly probable that the first 10 or 15 years of life, even under the best conditions, would reveal diseases tendencies that were present in a latent condition.

Notwithstanding the ancient and widespread belief that the condition of intoxication in one or both parents at the time of conception has a malign influence on the offspring, this cannot be said to be scientifically proved. The prevailing scientific view is that no acquired characters can be contributed to the germ to child; but when polonium is circulating in the blood, such as the alcoholic or alcoholic, it is practically certain that they have a modifying effect on the germ cells (Sa法律s, p. 78). On the other hand the tendency to degeneration through alcohol would be at once arrested by the removal of the cause, and civilised races would rapidly improve in physique. Races that have been accustomed only to their own fermented drinks, such as the North American Indians and the West Africans (Kühl, Archiv für Rassen-und Gesellch. Biologie, ii. 1905), have shown a tendency to die out when habitually taking imported distilled liquor. Previously there was no race of alcoholics under conditions which had lasted for hundreds of years, their relatively weak drink being obtainable only at special seasons of the year, and on special occasions. The degenerate community in this and other countries is largely due, according to the best authorities, to alcoholism. Mckaye and Johnson (Poison and Insanity, London, 1806) have clearly shown that those who become insane in this way have their balance upset by an amount of alcohol much less than can be taken without injuring organs of the nervous system. In such cases alcohol reveals some latent defect, just as in other cases the imbalance, the epileptic, or the degeneracy, or alcohol to join the criminal classes. Suicide (Sullivan, Alcohohism; Prinzing, Trümpelzelt und Selbstmord, Leipzig, 1805) becomes more frequent in recent years in almost all civilised States, its rate being specially heavy amongst persons who are exposed to alcoholism. Great Britain has a larger proportion of women suicides than other lands, this being connected with the greater amount of female drunkenness. 80 p.c. of all cases of attempted suicide in England, while only 30 p.c. of cases of completed suicide are so classified. Alcoholic suicide may result from mental disease, such as morbus dementia, melancholia, idiopathic depression, or simply the condition associated with hallucinations; or it may come from the poverty, squalor, and indigence which is the result of alcoholism. The association of alcohol with accidents of all sorts is brought home to us by the daily newspapers and otherwise, but the statistics can vastly number of cases where the lowering of the mental functions by alcohol without admitted excesses. Many railway companies in America have an absolute rule against drinking on part of their officials, and more or less strict measures of this nature amongst companies. Comparatively little has been made public about the official, the impairment of attention, presence of mind, and efficiency in the railway servants may endanger hundreds besides himself. The moral strict the rules against drinking—such a rule the more free it is from accident. Again, accidents are much more common on Saturdays and holidays; any hospital can prove this, and also that alcohol is largely associated with them. Many insurance societies often give abstainers a discount of 10 p.c.

9. Alcoholism and poverty.—Drink, according to Cuvier and the Endowment of Old Age, is the most prolific cause of pauperism, and it is the least necessary. From one-third to one-half of those who receive poor relief owe their position directly to drunkenness as the principal cause. (The total cost of poor relief in England and Wales annually is about £12,000,000). To this should be added a large percentage in which drink is the indirect cause of pauperism, through disease or injury; and besides this, just above the pauper class is the enormous amount of comparative poverty from mispent earnings, loss of working time, and general impairment of efficiency. It is calculated that at least half the taxes accruing from drink are consumed in the population of children. Hence amongst those who take drink to mislead the expenditure is enormous, and means such a deduction from an income which is little better than a living wage, that not enough is left for food, clothing, good housing, etc. Here we are face to face with the most serious problem of all.

As the average drink expenditure per head in England was £3, 15s. 11d., and per family of 5 persons £18, 10s. 9d.; but it must be remembered that millions of adults drink no alcoholic liquor, and that over 15,000,000 of the population are children. Hence amongst those who make the expenditure is enormous, and means such a deduction from an income which is little better than a living wage, that not enough is left for food, clothing, good housing, etc. Here we are face to face with the most serious problem of all.

10. Treatment.—In dealing with acute alcoholism, the skill of the physician and attendant is often severely taxed. Apart from purely medical measures, the main reliance is placed in complete withdrawal of alcohol, administration of liquid nourishment in abundance, and the procuring of mental and bodily rest. Neither treatment, however, the patient may be helped by full explanations of the action of alcohol on the body, by appeals to his better nature, by any measure that will strengthen the will power, whether religious or moral, or by placing them in tone society, or by being removed for a sufficiently long time (at least three years) from temptation. In the way of prevention much is to be hoped for from the wider diffusion of scientific knowledge, along with the spread of education (see 'The Teaching of Temperance,' by E. Claude Taylor in Kelynack's Drink Problem [a good bibliography of teaching manuals is given]). Improvements in housing and domestic cookery, higher rates of pay, and the consequent bettering of bodily, mental, and moral health, all favour temperance. The influence should be enjoined on certain classes: those who are sedentarily predisposed, through inebriety in parents or in grandparents, or through want of nerve stability; those whose occupations are closely associated with the heavy drink mortality; those who have given way to drink, A. P. (who have suffered from diseases of the brain or nerves, or injuries to the head; and all children and juveniles. See also artt. DRUNKENNESS, INEBRIETE ASYLUMS.

J. MACKIE WHYTE.
ALEUTS.—1. The religion, mythology, and
folk-lore of the natives of the Aleninl Islands—
the ‘stepping-stones’ from Alaska to Kamchatka
—and of the much narrower group of southern
Aleut of Alaska as far as the river Ugashik, are
especially important, since their long isolation in
a peculiar environment has caused them to de
velop in particular directions more than any other
known race. Many of the ritual practices of the
island Eskimos still remain, the variation being
especially evident in their language, religious exercises, and certain details of
handicraft, such as embroidery and grass-fibre
weaving (Dall). The language is rich in verbal
forms and has many peculiarities of vocabulary,
but is, nevertheless, undoubtedly Eskimoan in
type, not ‘transitional between Samoyed and
Eskimo’ (Henry). The harpoon attains in the
southern portions of the Aleutian area a ‘fineness
in structure and appearance nowhere else seen’;
they are used ‘delicately’ and‘inexorably’.
white and black beautiful; and the ‘exquisite weaving’ displayed in
the Aleutian beach-grass work ‘will compare
with that of any basketmakers in the world’
(Mason). The kuyak, the characteristic skin-boat
of the Aleuts, remains intact and is seen even to
anese and brought, perhaps, from the adjacent
American Indians, and primarily confined to the
female sex. Dall reports the practice of wearing
labrets as having ‘died out within two generations’
(ante 1878). Besides labrets, the Aleuts possessed
many forms of ornament, both figured in their dances and religious
and ceremonies, and were also placed on the faces
of the dead. In physical type the Aleuts differ some-
what from the Eskimos proper, being rather brachy-
cephalic and of darker complexion; in facial ex
pression also some difference has been noted.

Their constant use of the kuyak and the cramped
position they are forced to assume for long hours
have affected their gait and the condition of their
limbs. In the management of these boats the
Aleuts have been very skilful. Veniaminov, the
Russian priest who was among them in the early
part of the 19th century, writes, ‘the Seals skakas,
rider of marine mares’; they were bow-legged,
too, like the famous horsemen of the Czar.

The Aleuts have been in their present environment,
into which they came from the interior of Alaska
the probable scope of the primitive dispersion of
the Eskimo race, or, at least, of a considerable
part of it), for a very long time. Dall’s investiga-
tions of the ancient village-sites, shell-heaps,
mummy-caves, etc., of the Aleutian Islands demon
strate the continuity of occupation of the region
by this people, and their apparent progress through
three periods of culture (hittoral, fishing, hunting).
The earliest forms of some of their art-objects (e.g.
labrets) are preserved in the burial-caves and shell
heaps, and their variations may be traced down
the times of the modern Aleuts and the advent of
white influences, in consequence of which their
ancient culture has tended more and more to dis
apper.

Like the Eskimos of continental Alaska, the
Aleuts seem to have been influenced in several
ways by the peoples of north-eastern Asia. To
such contact Dr. Franz Boas attributes the use of
ornaments of arrows, harpoons etc., something as
yet unrecorded of the Eskimo tribes
outside of Alaska (Amer. Anthrop. vol. i., N.S.,
1899, p. 613). By inspection of the harpoons in a
dead, stranded whale, it is possible to discover the
character of the weapon which killed it, and who,
when notified, takes possession of the animal, dividing it
with the finders. These property-marks ‘occur
almost exclusively on weapons used in hunting,
which, after being despatched, remain in the
hands of large game’, and in each village the
natives of a certain group—a boat’s crew, family,
house community, or any other social unit—use a
 certain decoration for their weapons, which, in
connexion with certain lines, forms their property
mark.’ From the Russians, through the Siberian
natives, and northerly, next, from the Aleuts, the
Alaskan Eskimos acquired the knowledge and use
of tobacco, according to Murdoch (Amer. Anthro
p. vol. i., 1888, p. 328). The modern Aleuts ‘use
nothing but civilized methods of smoking,’ and are
not current smokers. The minimum in size
connected with the use of tobacco among the
Aleuts, is another evidence of the non-American
mode of its introduction. On the other hand, the
Aleuts have adopted something from the American
Indian tribes, as, e.g., in all probability, the habit, just
mentioned, of wearing lip-ornaments, some art
matifs, etc. The institution of slavery prevailed
among them as it did among certain Indian tribes
of the North Pacific coast.

2. The burden outside the and marriage-customs of
the Aleuts are of special interest. When a girl
reaches the age of puberty, she is isolated from
the rest of the community in a small barrabara,
or, but, and no one except her slave, if she possesses
one, is permitted to visit her. The ceremonial
lasts seven days, and the breaking of the tabu
by a man is the theme of one of the most wide-spread
tales, which has many variants.

The couple concerned are often brother and sister, and some
times the woman is forcibly ravished, while at other times
she yields consent readily enough. After the discovery of
the offence the two young people flee, pursued by their parents
and others (who resist the interference of the tale as an
unanswerable crime), and ultimately buri themselves from a
cave into the sea, becoming the first two sea-cotters, or (in some
versions) hair-seals. In one version of the tale the girl, who is
ravished in the dark, after the fire has gone out, cuts the sinews of her assaulting’s legs as he escapes.
through the roof. The man, who dies from a fall on the rocks, turns out to be her own brother. She finds him,

... among the Aleutians. The dances in which the sexes took part together are reputed to have been more decorous. The ir...
remarkable performance of this sort, however, was the great moonlight dance held in December, which had considerable religious significance. In connection with these dances, wooden figures or images were set up, one for the women and one for the man. The sexes danced apart from each other, masked and masked, on the snow under the moonlight. The huge masks employed on these occasions were so made that the wearer could look only at the ground, since to see or look at the images, upon which the spirits were believed to descend during the ceremonies, was death to the individuals so doing. After the dance was over, the images and masks, which seem generally to have been made for the particular occasion, were broken in pieces and thrown into the sea. Although mention is made of wooden figures carried from island to island, and associated with certain ceremonies, permanent 'idols' and 'temple' hardly existed. There were, it appears, certain 'sacred' high places, or rocks, where, with mysterious ceremonies, old men, or men only (women and youths not being allowed to approach these spots), made offerings. Events like the casting up of a whale on the beach were the cause of dancing and other festivities. In some of the dances the participants put on all finery and finery, while in others they danced naked, except for the large wooden masks, which came down to their shoulders, and often represented various sea-animals. The masks used in the ordinary dances were different from those used in the religious ceremonies, the former being evidently copied from the Aleut type of face, while the others, when human faces are represented, seem to differ much from it. The dancing-masks are often grotesque. Some of the carved masks used in certain ceremonies were deposited in caves. Masked ceremonies were also connected with the spring-time festivals.

6. Besides their religious dances and like ceremonies, the Aleuts had others of a dramatic and educational nature. Myths and legends were acted out in pantomime and dance by the members of one village, who would invite the inhabitants of another to witness the 'play.' On such occasions special songs would be composed and sung. In these 'plays' men and animals alike were imitated and represented. Similar events on a smaller scale took place in individual huts, the larger ones in the 'village-house.' Veniaminov and Golder give an account of a performance called lemas, or 'play,' the appearance of the devil, the object of which was to frighten the women into obedience and 'keep them under' properly. The essentials of the performance were as follows:—When it was thought necessary to impress the women and girls, certain of the men left the village on a pretended hunt. At night, after they had been gone a few days, the men at home made believe some calamity was about to overtake the community, and, by pretending great fear, made their way in the huts. While they were thus frightened, strange noises were heard, and the 'devils' arrived, against whom the men made the show of a violent defence. After the 'devils' had been driven away, it was found that one of the villagers was missing, and a woman, previously agreed upon, was carried out as a ransom for him. By and by both were brought back, the man apparently dead. He was gradually revived by being beaten with inflated bladders, addressed with invocations, etc., and was given to the man who had taken him. The lost hunters then came in and expressed surprise at what had occurred. This 'play' is clearly analogous to the 'Mumbo Jumbo' ceremonies of the Negroes of West Africa and to the initiation rites of the Australian aborigines.

7. The early Aleuts had very many stories and legends and much folk-lore. According to Veniaminov and Golder, their tales and legends were chiefly of three kinds: purely narrative, satiric or moralizing, and mythological. Comparatively few of the stories of the Aleuts have been preserved.

According to Veniaminov (1820-1840), and Golder at the close of the last century.

One of the Aleutian ancestor stories tells of the adventures, so disastrous to the people, of Ch'oneg, grandson of Aegir, the son of the sun, and son of Raylonich. Another is concerned with the doings of the son of 'the woman fond of intestines.' One of the origin-legends describes the beginnings of the Aleuts, who came down from the sky in the form of a dog. Another version of this myth of canine ancestry, found and belies that of the Eskimo territory, makes the Aleuts descend from a female dog belonging to Unalsakin and a great dog which swam over to her from the island of Kadiak. Still another one of these being attached to the dog-mother, Mcnakh, and an old man named Fraglidakish, who came from the north to visit her. Another legend makes the gods of the Aeukins return to their homes on the islands of Kadiak and Kodiak. Golder calls attention to the fact that the Aleutian stories are very realistic, there being, as he says, 'not a single story that could not have happened in real life. Supernatural incidents occur, to be sure, but they come in only after the main narrative is over.' It is, as Golder remarks, 'as if the gods were called in to help out the story-teller, when he gets into a tight place.'

8. As may be seen from their religious ceremonies and other practices, as well as from the evidence in their tales and legends, the Aleutians had much spirit-lore. The shamans were able to obtain the assistance of spirits by their incantations, and the spirits (mganas) of power descended into the 'idols' during the course of the ceremonies. The Aleuts believed that their dead relatives acted as guardian spirits, helping them out in all dangerous situations and trying conditions. They also relied much upon these spirits in their schemes of revenge, etc. Belief in amulets of various kinds was common,—the warrior, e.g., wore a belt of sea-weed with magic knots. Mention is also made of the khimkoe, a marvellous pebble, which all animals were unable to resist when it was thrown into the sea. The Aleuts of Cook's Bay, to whom Veniaminov had access, have preserved much of the rich mythology and folk-lore of their ancestors, the conversion to the Greek Church, which took place in the time of Veniaminov, and the course pursued by the Russian priesthood having resulted in the passing away of institutions, ceremonies, and customs, and habits of the olden time. To this process the Aleuts appear to have taken some what readily, a fact which further hastened the disappearance of what was purely national and racial.

ALEXANDER F. CHAMBERLAIN.
ALEXANDER OF ABONOTEICHOS—ALEXANDER THE GREAT

ALEXANDER OF ABONOTEICHOS in Paphlagonia owes his fame to a treatise of Lucian, who was his contemporary. The piece is full of the minutest details of Alexander's life. But Lucian makes no concealment of the contempt and hatred which he felt for one whom he regarded as a venal and impudent impostor, trading on the selfish sympathies of a people in great want of some one to lead them to new prosperity. In his war against the credulity of his age, Lucian has evidently exerted all his art to blacken the character of one who seemed to him to represent its worst excesses of superstition. Yet, apart from the fact that Alexander was a vociferous impostor, Lucian's life of Alexander is probably more trustworthy than his life of Pergurinus.

Alexander was a Greek of Abonoteichos, with splendid gifts of mind and body, and a charm of manner which, Lucian admits, left on casual acquaintances the impression of a high and simple character. He began his career with a wizard physician connected with the circle of Apollonius of Tyana. On his death, Alexander formed a partnership with a Byzantine adventurer, and dabbled in mediaeval means. He chose the passion of the time for any means of forecasting the future, determined to exploit its hopes and fears by founding an oracle which should rival the fame and wealth of the old seats of prophecy. They managed, with a.fair serpent, to get in the precincts of Apollo at Chalcedon they buried two tablets, predicting that Alexander would come to Pontus with his father, and make his home at Abonoteichos. Alexander knew his countrymen. The promise of the epiphany soon spread, and the people of Abonoteichos at once began to build a temple for the coming god. Soon Alexander appeared among them, with white tunic and purple cloak, and a scimitar in his hand, reciting an oracle which proclaimed him 'the seed of Perseus, dear to Apollo.' Fits of prophetic frenzy still further raised the general excitement. One morning at dawn, almost naked and scimitar in hand, he bounded into the market-place in all the orgiastic excitement of a votary of the Great Mother, leapt upon the altar, and with a handful of Hel-rew or Chaldean phrases, announced the coming of the god. He then rushed to a ditch which ran round the foundations of the new temple, fished up a goose's egg in which a young snake had been secretly enclosed, broke the shell, and displayed to the awe-struck crowd the nascient deity.

Multitudes thronged to Abonoteichos, and Alexander, sitting on a divan, held a lewé, in which he displayed, coiled about his shoulders, the trained serpent from Macedonia, to which a very simple art had attached a human head. Crowds poured through the darkened room, jostling one another to see the new god so miraculously mature, so human and so divine. The great miracle drew crowds from Bithynia, Thrace, and Galatia, and even beyond the frontiers of the Roman province, flocked to the spot to express the likeness of the new deity in colours, or bronze or silver, 'Glycon the third of the seed of Zeus, a light to men.'

Alexander had studied the system of the older oracles, and he determined to make a new one, while he carefully displayed a reverence for the ancient seats of Claros or Didyma. For a small fee of 2 obols he received on stated days sealed packets, which he ceremoniously returned apparently unopened, with the sealed answer. A hot needle and a delicate hand concealed the fraud, although Lucian by means of an obsolete seal once exposed the fraud. The oracle, like so many of the time, was mainly of healing, and, skilfully managed, with an army of officials and interested envoys and missionaries to spread the fame of its efficacy throughout the Empire, it gathered in a revenue of nearly £7000 a year. Its fame spread to Rome, and great nobles like Severianus the governor of Cappadocia, and Rutillianus, one of the most experienced statesmen of the age, were drawn into the net. Alexander had many questions of a dangerous political curiosity put to him, which would not bear disclosure. Rutillianus, at the mature age of seventy, proposed to marry Alexander's daughter, his boast being that Alexander had been captivated as by another Endymion.

In the great plague of A.D. 167, a memorial verse, dictated by the high Roman envoy, was inscribed over the doors of houses throughout the Roman world. Even the circle of the philosophic Emperor yielded to the imposture. When the Marcomannic war was at its height, an oracle from Abonoteichos was received at headquarters, ordering two lions to be thrown into the Danube. The ceremony was followed by a disaster to the Roman army, which was glibly explained by classical precedent.

Alexander, with all his daring and ingenuity, was scrupulously conservative in adhesion to ancient forms. He could not live without the temple, the oracle, and the gods. He renewed the mysteries on the approved model, from which Christians and Epicurean freethinkers were excluded under a solemn ban. The ceremonies lasted for three days. Scenes from old and new mythology were played before the Macedonian, or a representation of the labours of Leto, the birth of Apollo and Aeklesius, the epiphany of Glycon, and the celestial origin of Alexander himself. Lucian believed that the new religion was tainted with the foulest immorality. Alexander had many enemies, and there is no doubt that he was surrounded by a gang of confidence-hawks who, like Lucian, scorned and derided the superstition of the time. They openly assailed the new oracle, and strove to convict it of deceit. For his own scurrilous incredulity, Lucian once nearly paid with his life. And Alexander, by the command of the god, ordered that the blasphemies of the atheists should be punished by stoning. He finally triumphed over all opposition, and rose even to divine honours. His statute was an object of worship at Peumum in the time of Athenagoras. Inscriptions of Dacia and Asia, show the wide extent of his influence. In the third century, the religion of Glycon still flourished at Ionopolis, the new name which Alexander had given Abonoteichos, and which still survives under altered form. Coins of Nicomedia bear the device of the serpent with a human head.

LITERATURE.—Lucian, Alexander; Athenagoras, Logique pro Christianis, ch. 28; O. H. iii, 1021 f.; Ephem. Epicr. in C. L. suppl. ii. 531; Renan, L'Eglise christienne (1870), 481 f.; and, A. Aurre (1880), 80; Gregorovius, Hadrian (1886), x. 15.

S. INY.

ALEXANDER THE GREAT (his place in the history of religion and ethics).—1. Synopsis of his reign.—Alexander III., afterwards surnamed the Great, was born at Pella, in Macedonia, in 356 B.C. He was the son of Philip II., king of Macedonia, and Olympias, a Molossian princess. In 338 he succeeded to the throne, and two years afterwards set out on his Eastern expedition. S. W. Asia was subdued by his victories at the Granicus (B.C. 334) and at Issus (B.C. 333). His attention was then turned to Egypt, and in the course of the expedition an opportunity occurred for a visit to Jerusalem, which may perhaps be regarded as historical. Alexandria was founded in B.C. 331. Campaigns against the northern provinces, the destruction of Sogdiana, and the subdued, and gradually all the districts over which the kings of Persia exercised sovereignty were subdued. Alexander then forced the Kyber Pass, or, more probably, another pass 80 miles to the north-east, crossed the Indus, and occupied the Panjāb; but his further designs were thwarted by
the discontent of his army, and in 323 at Babylon his brief and meteoric career was brought to a close.  

2. Preparations for Alexander’s work.—Alexander’s greatest work was the spread of Greek influence, less from set purpose than as a result of the method of recruiting his armies and organizing his conquests, and in ways that made this influence permanent and controlling. The conception of such spread may be found before his death as a part of the political theories of men who were feeling the defects of the various kinds of autonomy prevalent within Greece, or were eager for a fuller and richer life than was possible there. Isocrates in his letter to Philip of Macedon transcends the limits of city patriotism, and contemplates the spread of Greek culture, possibly also of the Greek race, by means of conquest. The school of Socrates was familiar with wide views, and impatient of parochial strife and politics. Xenophon was one of his disciples, who never ceased to be a Greek, but yet considered travel and military service agreeable; and a Pericles in Athens, whilst amongst these soldiers poor Greeks formed the more numerous section, there were included also adventurers from the leading cities, who were men of parts as well as enterprise. Whatever their motives at first, they in the days of Alexander to be regarded merely as means of defending a weak satrap or adding to the dominions of a strong one. To Cyrus and his associates and successors they were friends to be courted. Bearing the Lamentations of Greek settlements coincided with the increasing Greek demand for expansion. Emergence from the narrow area and narrow interests of the little native cities was becoming a necessity. Agesilaus might have effected it but for the dissensions and rivalries that showed the impossibility of Greek overlordship on any large scale. And in political theory on the part of thinkers, both as a practical means of escape from the imposse to which the affairs of Greece were brought, the whole spirit of a process that had been going on for several generations, a preparation for Alexander’s schemes of conquest was laid long before he was born.  

3. Policy of Alexander, and its general results.—The practical life of Alexander was his greatest achievement in the establishment of a fully organized administration in the districts which he traversed and subdued. At first he appears to have appointed merely a military governor and a fiscal agent, who were supported by a small band of veterans capable of acting as minor officials in the maintenance of order, in the collection of the taxes, and in the training of recruits. As opportunity served, this temporary arrangement was supplemented by effective increase in the number of settlements or cities, each of which was designed to serve as a centre of defence or influence. Seventy such cities, ranging from Kandahar to Alexandria, were founded by Alexander himself, and claim in various dialects to perpetuate his name. The inhabitants were partly Macedonian and partly Greek, veterans, discontented troops, camp followers,—with natives swept in from the neighbouring villages or transported from remote and unmanageable lands. Some of these cities were an ancient foundation, to be outdone by others, others were placed as convenient marts upon the great trade routes; but all were invested with the privileges of partial autonomy. In military affairs the Macedonian element predominated, whilst the Greeks were put in charge of the local administration, and made themselves felt supremely in matters of thought and culture. A similar policy was followed by Alexander’s successors, with the difference that the distinction between Macedonian and Greek gradually disappeared. One result was that Greek became the language of politics, trade, and intellectual intercourse from Macedonia to Persia and from Bactria to Egypt. Before his birth Greece had supplied Macedonia herself with the standard of excellence in taste and civilization; and at his death the joint Greek-Macedonian influence was the rising factor in the whole evolution of private life, and strengthened the bond of union supplied in the Eastern world by a common language.  

4. The philosophical schools, and their relative influence.—Amongst the changes of position in philosophic thought and its estimation during this period, two are of special importance in the history of the process of Hellenization. (a) On the one hand, the philosopher, though neither ceasing to indulge in abstract speculation, nor allowing himself to be drawn into the thick of political strife, becomes the adviser of all parties, and the person to whom appeal is addressed in emergency. Aristotle was one of the teachers of Alexander, but does not appear to have been consulted by the king on any political question. The dialogue of one hundred and fifty political constitutions, was conceivably an object of amusement to the practical man. Yet two philosophers were selected to rouse the king out of the gloom and remorse into which he had been plunged by the murder of Cat. Xenocrates took no active part in the faction strife of Athens; yet the Athenians more than once chose him as their emissary to Philip, just as afterwards they used him in a similar capacity during the Lamentations. The policy of Alexander continued. The leading philosophers thus became a class or group of men outside the political arena and above it; they were consulted in practical emergency as well as in speculative perplexity, and their influence in spreading the culture they represented was both detached from dangerous entanglements and quickened by association with general human interests. (b) The period of Alexander witnessed a considerable change in the relative estimation of the two great philosophic schools. After the passing of the period Aristotle’s authority was felt to be decayed, and considerable progress was made by the followers of Epicurus. Metaphysics for a time yielded the ground to ethics. Plato and Aristotle proved less attractive than men who were inferior to both in range and keenness of intellect, but who touched more nearly that which the practical man could appreciate. The retirement of the princely thinkers was but temporary, and before many centuries passed they re-emerged in new guises or relationships, of which the number is not yet exhausted. They were both theorists and transcendentalists; and what the Greek world wanted at a time when it was busily engaged in spreading and rooting itself everywhere was not so much speculation as experience, a law of duty rather than a golden rule. As soon as the conditions of life became more tolerable and for Aristotle alike a splendid revival was fated; but the philosophy of Hellenism in its first progress eastwards, as in its later subjugation of Rome and Italy, was of another type.  

5. Pyrrhonism, Stoicism, Epicureanism.—Pyrrho is said to have taken part in Alexander’s expedition to India (Diog. Laert. ix. 63), but it is not until afterwards that traces of his teaching can be found to any extent in Greek thought. The rise of the new Academy, which to the time of Plato was equal to the old, is quite the contrary of the rise of Plato and Pyrrho, in reality the date when the Greek mind began to take refuge in conclusions that were other than positive; for the appeal of scepticism is of necessity met in a practical age with a tardy response, and the discomfort caused
ALEXANDRIAN THEOLOGY

by the disturbance of earlier beliefs is an unwelcome diversion when the mind is bent on activities. Pyrrho's influence in this period is twofold. He scattered seed, of which the fruit was late in appearing; but, when it did appear, the crop was plentiful; and the sceptical or captious inquirer, interested in every form of thought but captivated by nothing because of it, was a not infrequent product of Hellenistic genius. And he illustrates the reflex influence upon Greek culture of the beliefs of some of the districts which Alexander traversed or visited. That Pyrrho learnt his theories in Persia or India rests upon the statement of an inquirer, whether the latter is later or not, is probably incorrect (Diog. Laert. ix. 61). With more confidence it may be asserted that his natural equanimity was raised by his Eastern experiences into the worship of imperturbability. The Greek joyousness was transformed into a careless immobility, upon which in part may well be based alike the fatalism of various later creeds and the independence of external circumstance which the Stoic coveted and the Cynic mingled with bitterness.

The Eurasian city remained the centre of only schools of philosophy that could be regarded as of appreciable present value were the Stoic and the Epicurean, of which the former, especially, gradually became identified with the extension of Greek culture. Epicurus was a dozen years younger than Alexander, but his teaching was so considered that he was entered seriously upon his philosophical studies at the age of fourteen. He claimed to be independent of his predecessors, but was certainly influenced by the teaching of Democritus, and he articulated in a system conceptions and tendencies that were floating in the air and creating the intellectual climate of the Greek world in Alexander's days. Zeno, too, was probably a little younger than the great king; but his teaching also links itself on to that of Socrates and the Cynics, and, as developed by his immediate successors, it soon became the standard of Greek ethical thought in its spread among the nations. Both schools indulged but little in abstract speculation, but endeavoured to teach men how to secure the happiness which was, in their view, a better and more natural end than knowledge. Epicureanism denied the existence of anything like Providence, declined to anticipate a judicial readjustment of experiences after death, and bade the sage carefully balance all possible pleasures and choose the path of prudence. Stoicism, on the other hand, had an elementary theology as well as an ethic. Other knowledge was held to be attainable than that given by the senses. The so-called gods were manifestations of a Supreme God, who ruled over human lives and ordained for each man the part he should play in the world. Happiness was to be reached indirectly by the discharge of duty, without much consideration of conditions or consequences. Wisdom and peace lay in keeping in tune with the divine will and plan of life; in which case a man became, whatever his outward circumstance, royal and free. Such a philosophy, unlike the Epicurean, involved the fusion of all distinctions of creed or race or country, and consequently pointed to a people with civilizations also were fusing, and a rule of life was in request that could survive national decay and still serve for guidance in any change of fortune. Stoicism may be regarded as the leading philosophy in the Greek culture that became cosmopolitan, but separated itself at length on the banks of the Tiber, and penetrated even through the thick shell of Hebraism, affecting the thought and the phrases of St. Paul himself.

6. Alexander and the Jews.—Though Alexander possibly visited Jerusalem, according to the tradition preserved in the Talmud as well as by Josephus (Ant. ix. viii. 3-4), and though he enrolled Jews in his armies, granted them special privileges, used them as an intelligence department, and settled many favourably in his new towns and colonies, there are no indications of any direct or immediate influence upon their creed or practice. Indirectly, they opened or reopened the channels of communication by which the East and the West were brought into contact both with one another and with Egypt and Cœle-Syria. Along those roads, in subsequent ages, came teachers from India and Persia as well as from Greece; but the Hebrew did not really assimilate any writer, whether Hellenistic or other. The cause is to be found in the strictness of his monotheism as well as in the exceptional solidarity of the race. The Greek language was tolerated and even adopted in the course of time, but Greek culture was regarded with abhorrence in the inner circles where Jewish traditions were most sacredly preserved; and the complete coalescence of Hellenism with Hebraism proper has not yet taken place.

LITERATURE.—Freeman, Hist. Essavs, 2nd ser. (4th ed. 1892). Essay 6 discusses the sources of Alexander's history. For the Rabbinical traditions see Dersenough, Hist. de la Pal. (1891).—R. (1879) are of special value, and so also is von Karrntes (1894), in brilliant for some of the philosophical tendencies. Add Mahaffy, Gr. Life and Thought (1896).—Preuß, Geschichte von Alexander's Ehrenr (1900), and Seeley, Eng. with His Enemies (1904); and Durm, All. d. Alexanderzeit (1895).—R. W. Moss.

ALEXANDRIAN THEOLOGY.

[W. R. INGE.]

Scope of the Article.—Some of the best-known histories of 'Alexandrianism,' or 'the School of Alexandria,' have been really histories of Neo-Platonism. This is a mistake. Neo-Platonism, which will be dealt with in this Encyclopædia under its own name, is the latest stage in the development of Greek thought. Its connexion with Alexandria is less than is commonly supposed. In this article the local limit will be observed. Secondly, this article will deal with theology, not with philosophy. Although Neo-Platonism was essentially a religious philosophy, and Alexandrian theology a philosophical religion, it is possible to maintain the distinction. And we may speak of an Alexandrian theology, though not of an Alexandrian philosophy.

Thirdly, the Hellenic schools of religious thought which flourished at Alexandria are omitted, as belonging rather to the precursors of Neo-Platonism than to our present subject. The justification for omitting them lies in their subordination of positive religion to philosophy, which was almost an axiom among the Pagans; e.g. Galen expresses surprise that some Christians, who cannot follow philosophical arguments, ' have progressed as far in self-directed parallel with the genuine philosophers.' Moreover, in spite of the resemblance in metaphysical and especially in ethical principles between these Hellenic schools and the Judeo-Christian Alexandrians, their attitude towards the Greek tradition and culture is decisive. There is a great cleavage in this respect even between Clement and Plotinus. In reformed Pagan circles it seems to have been a matter of good taste not to mention Christianity, and Judaism was regarded with equal contempt. It is very doubtful whether the Jewish-Alexandrian theologians had any direct influence upon Neo-Platonism. In fact, national and, still more, religious prejudices counteracted the cosmopolitan tendency of thought which began under the successors of Alexander. In spite of the common parentage of many ideas, and the parallelism of development under similar conditions, the separa-
tion is sharp between the three forms which religious philosophy assumed in the 2nd and 3rd centuries: (1) Jewish and Christian Platonism, both of which stand on the basis of Jewish monothelism; (2) the Hellenic religious philosophy, of which the best representative is Platonism; (3) the barbaric Platonism of the Gaonics. In each of these there appear the following characteristics, though often qualified by other tendencies: (a) an abstract notion of God as the transcendent, absolute Unity; (b) a tendency to call in intermediary powers (the Logos, spirits, etc.) to bridge the gap between God and the world; (c) a tendency to connect matter with the evil principle, (d) self-discipline as a means to clearer vision of Divine truths. But the emphasis, which was laid on these several doctrines differed widely in the three classes above named.

This article deals only with the first—Jewish and Christian Platonism, as developed at Alexandria. And the three representative names, round which our discussion must range, are Philo, Clement, and Origen.

1. Precursors of Philo. It was inevitable that the Judaism of the Diaspora should diverge further and farther from the Palestinian tradition. Egypt especially, where the Jews comprised nearly half the population of the capital, and were numerous throughout the country, a vigorous independent life was sure to appear in all departments of mental activity. The Egyptian Jews could not maintain an attitude of aloofness from the secular culture of the world around them. To say that they were Hellenized is only to say that they were not self-excluded from the civilization of the period, for Hellenism was a factor in all the religions, philosophy, and ethics of the lands where Greek culture penetrated. But when we speak of the Hellenizing of Judaism, we mean more than the pervading influence of the secular civilization. There was a definite attempt made by the Jews to interpret their own religion in a form acceptable to the Greeks, from which cannot be separated an attempt to interpret Hellenism to themselves by stretching it upon a framework of Jewish orthodoxy. This was a result of the rapid decay of faith in the statutory Judaism among the educated, a decay which was exhibited both by the increasing inwardness and spirituality of the really religious, and by the increasing exteriorization of the popular religion. In the Diaspora, a liberal Judaism sprang up which was merely a cultured Unitarianism with strong ethical convictions. The old dream of a theocracy was forgotten, and Messianism aroused no interest. The Greek doctrine of immortality was given a moral turn by conceiving of the future life as primarily the scene of rewards and punishments; and the national hatred of Rome (after the Roman conquest of the East) was gratified by the belief in a day of universal doom, and ushering in the great assize. The statutory basis of this religion was furnished by the Old Testament, which was asserted to contain the sum total of all Divine and human wisdom. The 'books of Moses,' in particular, were treated with unlimited reverence.

The Septuagint is perhaps our earliest specimen of Jewish-Alexandrian literature, for the traces of Greek influence in Sirach are very disputable. Dahe has shown that the translators frequently modified the 'from the Philhellenism of the Old Testament, substituting, e.g., the 'power' for the 'hand' of God, and His 'glory' for His 'robe' in Is 6'. In Gn 2* they seize the opportunity to introduce the Platonic distinction of matter and form, and in Ps 40 the Greek ùμετερωμα του'seems itself. The third book of the so-called Sibylline Oracles, which probably dates from the middle of the 2nd cent. B.C., is a remarkable proof of growing respect for Greek thought and religion, since the main object of the composition is to support Jewish monotheism and Jewish national hopes, under the form of heathen prophecy. But the characteristic features of Alexandrianism, even among the Jews, are not more marked than they are among the Gnostics. Neither allegorism, nor ecstasy, nor asceticism, can be found in them. In the so-called Wisdom of Solomon, though the form is that of Hebrew poetry, the matter is far more Hellenic. The 'reason here is identical with Philo's Logos, and the 'Spirit' is also half-personified, being, indeed, only the Wisdom itself under a slightly different aspect. The 'Word,' on the other hand, is used, as in the Old Testament, as the vehicle of the truth of God; there is no approximation to the Philonic use of 'Logos,' even in 18:18, where there is a poetical personification. On Messianic hopes the author is silent, like the other Wisdom-writers; and the book was not written for Palestinian Jews, but not accepted by them as Scripture. The influence of Greek (Platonic and Stoic) philosophy appears chiefly in the conception of a harmonious order of the world, directed by an immanent principle (Wisdom). The most striking deviation from orthodoxy is to be found in the doctrine of pre-existence, which is clearly stated in 8:12: 'I was a child of comely parts, and had obtained a good soul; or rather, being good, intruded into an undefiled body.' This can only mean that the soul has displayed goodness in a previous state of existence. The body is thus no essential part of the personality, a view which leads easily to the notion that it is, if not the source of moral evil, yet the 'muddy vesture of decay' which presses down the soul. The eschatology is vague. There will be no bodily resurrection; but the souls of the righteous will be rewarded, at the inspection, with everlasting felicity, and those of the wicked will be excluded from their true life, and cast into eternal darkness.

2. Philo. Passing by the Letter of the pseudo-Aristeas, a manifest forgery, and the fragments of Aristobulus (a Hellenist who lived in the middle of the 2nd cent. B.C.), which have also been suspected, we come to Philo. Philo (born about 20 B.C.) was a member of a well-known Alexandrian family, being brother of Alexander the Alabarch, the head of the Jewish community of the capital. Philo himself lived a life of retirement and contemplation, until an outbreak of anti-Jewish fanaticism, fomented by the Roman governor Flaccus, led to his being sent to Rome with a deputation from the Jewish community (A.D. 38-40). He was then elderly, and had already written most of his books.

Philo believed himself to be, and was accepted by his contemporaries as being, an orthodox Jew. He is an apologist, who defends Judaism against atheism, polytheism, and scepticism. More particularly, since Judaism for the Alexandrian Jew was a book-religion, he was concerned to prove that the highest forms of revelation and of human wisdom were contained within the compass of the Old Testament. Disrespect to the sacred text is in his opinion a crime of the deepest dye; he knows of an impious man who, after laughing at some story in Genesis, soon after hanged himself for no particular reason—a manifest judgment (de Mut. Nom., 8). His theory of inspiration is that God speaks through the prophet, who is merely a passive instrument. This inspiration takes place when the instrument is in a kind of trance, such as Philo himself has experienced. His mind suddenly becomes full of images, and ideas pour forth from it, while he is insensible to all externals (de Migrat.}
ALEXANDRIAN THEOLOGY

Abrah. 7). The description resembles Böhme's account of his manner of writing. At the head of all the prophets is Moses, who alone had seen God face to face. In his writings the sum of human wisdom is contained.

This conception of revelation, as given once for all to a single individual, led Philo to great difficulties. If he had been content to argue that this was the more spiritual faith of his day, it was contained implicitly, in germ, in the Pentateuch, he might have made out a good case. But the doctrine of development, even in the limited application afterwards made by St. Paul to the Greek Church, he can admit of no inferiority in Genesis as compared with Isaiah. And since the OT, understood in its natural sense, contained many things which could not but shock the conscience as well as the intelligence of a cultivated Alexandrian acquainted with Greek philosophy, the expediency of allegorism was necessary (see ALLEGORY). This method was no invention of Philo, or of his contemporaries. Greek moralists had long treated Homer in this way, quoting lines from him as quo verses from the Bible, to enforce moral lessons. This system was elaborated by the Sophists, and still more by the school of Anaxagoras; but it is rejected by Plato, who will not admit unifying myths into his State, 'either with or without allegories.' It may be said that to a certain kind of exposition is justified.

In the higher kinds of literature, the perception of some sort of allegory or double meaning is almost necessary. The mere literal or grammatical sense cannot satisfy the student of any poetry or imaginative prose. But when Homer is made by the Stoic to prove such philosophic theses as that virtue can be taught, or that the sage is 'apathetic;' by the Pythagorean to teach that silence is golden, and by the Epicurean that pleasure is the guide of life; and when Moses is made by Philo to indicate the eternal motion of the heavens under the figure of the cherubim's flaming sword, we have a right to protest. So arbitrary and unscientific an exegesis is a fatal obstacle to understanding the religious books of mankind—a task in which we cannot succeed unless we realize that the thoughts of the past are relative to the past, and must be interpreted by it. Philo himself calls it the method of the Greek mysteries. In these rites everything was represented as being at once a thing and the covering of a thing, an outward sign and an inward truth.

Allegorism, then, is simply the sacramental method applied to history and literature. It was becoming the common property of all the higher religions, and was the easiest refuge for educated men who wished to belong to an established religious body, without forcing themselves to accept immoral or absurd beliefs. The general view was that all revelation is a Divine cryptogram, which serves the double purpose of concealing the truth from those who are unworthy to receive it, and of magnifying it, for the choicer spirits, by an indirect and mysterious mode of presentation (ἡ κρυφὴ ἡ μυστικὴ συμπεριφέρεται ἐν διαφοραῖς).

The following summary of Philo's principles of exegesis may give some idea of the method in practice. (1) When nouns are repeated, a hidden meaning is indicated. In "νεφελής, μαθηματική σχόλη," "νεφελής" means that Abraham was made clear from the transcendent nature of the flesh. There can be no tautology in Scripture, and no change of a word without a meaning. If Moses says "shepherd" in one place and "keeper of sheep" in another, he between a good and a bad kind. (2) Plays on words are frequent, e.g., "θεός is the most commonly used word for God in the Greek Bible, and is frequently used for the adjective, not corresponding with its English equivalent. (3) Double meanings of words often give the clue to the higher meaning, e.g., since "rib" is sometimes used for "strength," the word "Adam's rib" means that the almighty God compasses things forth out of the void. (4) Numbers are always important; one is the number of God, two of the creature, three of the body, four of potential completeness, five of the sensible life, and so on. (5) Animals are symbolic: the camel of memory, the ass of the irrational nature, the snake of lust. Inanimate objects are treated in the same way. (6) The proper names in the Pentateuch are allegorized according to their affinities. Philo speaks of allegorism as the 'moral,' as opposed to the 'natural' interpretation.

It is plain that the principle of allegorism offered great temptations to evade the letter of the Mosaic law. This misuse of the method is condemned by Philo, who protests against those who thus 'spiritualized' the ceremonies enjoined in the Pentateuch (de Migrat. Abrah. 16). He also distrusts the symbolic study of nature, as raising more problems than it solves. We shall learn more by studying our own minds, and the sacred literature.

In considering Philo's theology, we must expect to find the Greek and Hebrew elements imperfectly fused. It would surpass the genius of any man to harmonize the logical, analytic thought of Greek theism, with the vague, indefinite intuitions of Hebrew prophecy. But the way had been prepared for him by approximations from both sides. The Jews of Alexandria had universalized Jahweh till He had lost the characteristics of the tribal God of the Hebrews; and, on the Greek thought was now more favourably disposed to the transcendence of God than when Stoicism reigned supreme. Philo has no difficulty in explaining the anthropomorphisms of the Pentateuch as more accommodating God, in truth, not a Being who can feel anger, jealousy, or repentance. He is without body, invisible, the most universal of beings, above goodness, above knowledge, above even the absolute Good and Beautiful. We apprehend His existence partly by analogy: as we have an invisible mind, which is sovereign over the body, so must the Universe be guided by an invisible mind, which is God (de Mundi Opif. 33). Also, the world shows traces of design, but the principle of causality cannot reside in matter, which has nothing noble in itself, but only the potentiality of becoming all things (de Mundi Opif. 5).

A higher mode of apprehending God is by spiritual intuition, which under certain conditions culminates in knowledge of Him. But, since like cannot be known by like, we are prevented by the limitations of our finitude from forming an adequate conception of the mind of the Universe. We cannot get out of ourselves, and understood existence is incomprehensible to us. 'We must first become God, which is impossible, in order to be able to comprehend God' (Fragm. ii. 654). We approach most nearly to the truth when we strip off from our idea of God all that is characteristic of finite existence. This process still leaves Him with the attributes of goodness, freedom, and activity. Creative activity (τὸ τραοῦ) is characteristic of God as receptivity (τὸ πάθειον) is of the creature, and God 'never ceases working.' The φυσικὴ νοηματικὴ logically leads to a God who is without qualities (ἀρνητικόν*); but Philo here takes refuge in agnosticism. 'God has revealed Himself to us, and we cannot say that the First Cause is material or immaterial, with or without qualities' (Leg. All. iii. 73).

The bare fact of His existence (ἦν ἦν ἄρχων ἡμίτοιο Ἰσραήλ, Καὶ Ἰδοὺ ἐπέλειμ. 11) the mind can apprehend, but no more. He was revealed to Moses as the Nameless Existing. Nevertheless, we cannot, without contradiction ascribe to God the attributes of omnipotence, omniscience, and the like, which can be applied only to the Supreme Being; and such attributes, according to Philo, in their full meaning can be applied only to Him. 'Those things which among men are called truth and justice, are symbols only; but those which are

* But properly acrētikos means not 'having no attributes,' but 'incapable of being classified': God does not belong to any class or order of being, but is above all classification, being unique.
so with God are prototypes or ideas,' God is 'the most generic' as excluding nothing; but He transcends even the highest genus, τὰ λογικά. He is 'older than the monad;' by which Philo means that the unity of God is not merely the negation of plurality, but that His nature is the archetype of the monad's unmediated concept.

One of the most difficult parts of Philo's system is the doctrine of the Divine 'Powers.' These Powers could be fully apprehended only by pure Intuition; to us they are revealed in their action. They exist, however, in the external world, for they are infinite, like God Himself. Their function is to give to matter those forms in virtue of which we are able to say that things exist. In themselves, the Powers are the eternal forms of God's thought; their activity is stamped on the whole order of nature, which in the regularity of its changes reflects the persistence of the creative ideas. These Powers, or ideas, are not of equal rank. The highest of them is the Logos, which stands nearest to the Godhead, even as the reasonable soul of man is that part of him which reaches most nearly to the Divine.

It has been usual with critics of Philo to condemn with great severity this conception of 'Powers.' It is said that he uses them as an expedient to mediate between two irreconcilables, God and the world, and that the contradiction reappears, in no way disguised, in the mediators assigned to the mediating agents. The Powers are sometimes identified with God, and sometimes separate from Him (it is said) as a transparent device to bring God again into contact with the finite, from which He has been jealously excluded by another line of argument. It is perhaps worse, for the whole system without regard to God as something more than a finite spirit among other spirits, has succeeded in explaining how an all-pervading, omnipresent, and eternal being can really act in space and time. Philo is possibly not more successful than others who have attempted to do so; but a fair estimate of his teaching may be that he acquired him of the puerile expedient of creating substitures to act in God's place. 'God, being outside creation, has none the less filled it with Himself,' he says in one place (De Leg. Alleg., 5); and this is not an isolated acknowledgment of the Divinity. He 'extends' His Powers in creation just as man is said to 'extend' the energies of his soul to God. It is true that we read that 'the Blessed One must not come into contact with indeterminate matter;' and this is why He used the immaterial Powers, whose real name is ideas, that every genus might be taken possession of by its proper form. But surely this is merely to assert the transcendence of God, without denying Him immanence. The notion of the Powers as substrata for logos or fountains of mind and creative potential may be even be discussed without wandering far from his standpoint. Discordant records a very opposite parallel from Athanasius: 'The Father said, "to all creation, outside of the whole of His essence, but in all things by his powers... containing the whole of things and not containing, being wholly and in every respect, Father and author of all things, but only."' Both in Philo and Athanasius the phrases denoting spatial externality and its opposite externalization are to be metaphors. In the same way, when the Powers are symbolized as the agents and ministers of God, the poetical form ought not to have been misunderstood as a literal statement of fact. Philo is extremely fond of personification: e.g. for him 'all the virtues are virgin,' just as, par revocem, the wives of the patriarchs are 'not women but virtues.' Nothing can prove more strongly that Philo did not sacrifice personality to the Powers, than the fact that he everywhere distinguishes them from the angels (in spite of Zeller and others). The angels are incorporeal souls, created, finite, and localized: they are 'powers,' no doubt, doing God's will in ways different from the 'Powers' of Jewish Ideas. These latter are the active manifestations of the energy of God, which is His creation in the reality, as well as all the outward and beautiful, which it possesses.

In the hierarchy of Powers, the Logos of God is, as already remarked, second to God Himself (Leg. Alleg., i, 21). The name Logos comes from Stoicism, but for the content of the word Philo is more indebted to Plato. The Stoical notion of Logos as active and quickening force is less prominent than the Platonic expressions 'idea of ideas' and 'archetypal idea.' The Logos of Philo, in fact, coincides with the Logos of Mos. This Jewish recultified word is used in the mode which he assumes in creating: 'in the Logos are inscribed and engraved the constitutions of all other things.' As the principle of orderly differentiation in the natural world, he is called the 'Cutter' (ραμεύς). The inferior ideas, gathered up in the Logos, constitute the multiplicity in unity of God's creation. A difficult question is raised by the distinction between the inward (ἰσχυρός) and the uttered (ῥητός) Logos in man, which corresponds to a distinction in the universal Logos. The Logos is double both in the universe and in the nature of man (Vit. Mos. iii, 13). The 'seal' of the Logos upon matter is the expression of the thought of God—is not called the 'uttered Word'; but the distinction in the universal Logos seems to be between the thought of God in itself and the same thought made objective.

Another problem is the relation of the Logos to the personified 'Wisdom' of the early Jewish-Alexandrian literature. Philo disliked the gender of 'Wisdom'; and though he explains that 'its nature is masculine, not feminine,' he found the word less dignified as well as less plastic than Logos. 'Wisdom' is chiefly used by Philo of the Logos as informing the human soul, hardly ever of God's creative power. The word 'Spirit' is sparingly used of the Logos or Wisdom inhabiting the soul of man. The question as to the personification of the Logos is better undiscussed. Neither Philo nor any Greek cared to define personality, a concept which has no name in the Greek language. He sometimes speaks of Logos in the plural, with no more hesitation than when he uses 'reason,' differently of 'the law' or 'the laws' of nature. For this very reason he employs poetical or mythic personification quite freely. The Logos is the constitutive principle of human individuality; he is not himself individual. The doctrine of Philo is therefore nearer to what, in Christianity, became Monarchianism than to the Arianism with which it has been compared, or to the Athanasian orthodoxy. See, further, the article LOGOS.

As the Logos of God is the archetype of human reason, the mind of man is nearer to God than any other created thing. The human soul is the only worthy temple of God; those in whom God dwells may justly be called His sons. Knowledge of God, gained by imitation of Him and likeness to Him, is the highest good for man. Evil consists in separation from God, and ignorance of Him; the soul of evil, the end of moral evil is sinfulness (ἁμαρτία), especially when combined with arrogance and conceit (λαύτρυπα). 'To speak, like Ésaú, of "my birthright," and "my blessing," is proof of boundless ignorance, and of a mean, servile disposition;' for God alone is called 'Mine' (Leg. Alleg., iii, 70). Philo does not identify evil with ignorance; for he clearly teaches that sins committed in ignorance are pardonable; but he is careful to distinguish between the Ignorance which we cannot help and that which is due to pride or selfishness. The corruptible body always tends to press down the soul; not that it is evil in itself, for matter has no moral significance, good or bad, apart from our use of it; but, as a matter of experience, the bodily needs and appetites are a clag upon spiritual progress. To those in sense, though Divine gifts are, irrational, urging us to their own gratification without thought of consequences; but to make this gratification our object is wrong and ruinous. The passions (ψύχη) for the most part operate in opposition to reason, and are therefore bad; but the good man is not destitute of such μετανοίαν ψύχη as pity and love.

The great helper of mankind in the ascent to God is the Logos; and here Philo tries to unite the Logos with the Godhead. The Logos is the mediator between God with his Platonic idealism. His description of the virtuous life is on the whole very modern in sentiment. Self-discipline is not an end in itself. Such exercises as fasting, abstinence from the bath, and sleeping on the ground are useless and unprofitable labours, which injure the soul as well as
as the body (Quod. det. pot. 7). It is true that we
have a war to wage, the most difficult and trouble-
some of all wars, against our bodily appetites, and
that in practice we must often regard our bodies
as by nature evil; but Philo advises neither ascetical austerities nor withdrawal from the
world. Power, as he sees, does not lie in the
wilderness; it is safer to live in the world, to
accept responsibilities and dignities, and show how
such a career can be followed without contamin-
ation and to the good of others. Those who
assume a solitary and melancholy appearance, and
say that they escape the gaiety of the world, as

Alexandrian theology

This page contains a discussion of Alexandrian theology, focusing on Philo of Alexandria. The text mentions the difficulty of distinguishing between religious practices and the world, and the role of Philo in attempting to reconcile these. It also touches on the importance of truthfulness in speech, the avoidance of oaths, and the contrast between Philo's view of the world and that of resurrection. The text references various commentators and scholars, including Jerome and Zeller, and mentions the importance of Philo's work in the development of Christian thought. The text concludes with a discussion of the influence of Philo's writings, particularly his Logos doctrine, on later Christian thought and literature.
ALEXANDRIAN THEOLOGY

in the later half of the century, the remarkable Catechetical School, the earliest διδακταλίον in close relation to the Church. (The schools of the Apologists—Justin, Tatian, etc.—were private ventures.) The oldest Gnostic schools for the study of religious philosophy were in Egypt, and the Christian Catechetical School may have been modeled partly upon these and partly upon the Jewish high schools (cf. Euseb. HE v. 10, εἰς ἀρχαίον ἑταῖρ διδακταλίων τῶν τειχων λόγω πάντι συνεργίας). The school emerges from darkness under Pantaenus, but its teaching came to light (Pierius, ad Sen.), and the management either under him or under Clement. There were no class-rooms or collegiate buildings. The head of the school gave informal instruction in his own house, sometimes by lectures, sometimes by conversation classes (Orig. c. Cels. vi. 10). The usual course was three years ( Const. Eccl. Eyp. iii. 42). No fees were charged. The lecturer was supported by free gifts from rich students. The education was on much the same lines as that advocated by Philo. The aim was the acquisition of γνῶσις—the higher theology and religion. The preparation consisted partly of moral discipline and partly of the study of philosophy, to which must be added the art of expounding, in accordance with the principles of allegory which contain the special revelation. The Christian teachers placed Greek philosophy and the Old Testament Scriptures side by side as pedepedaleutic to the higher knowledge; and among philosophers, though the Platonist and Stoics were most studied, none were excluded except the 'godless Epicureans.' The commentators of Origen show that Biblical study held a very important place in the course. The list of Heads of the School is given as follows: Pantaenus, Clement, Origen, Heraclus, Dionysius, Pierius, Theognostus, Seraphon, Petrus, Marcarius! ... Didymus, Rhodon. (Arius, according to Theodoret (HE i. 1), was catechist; but it is very unlikely that he was ever Head of the School). The Catechetical School lost its importance during the Arian controversy, and was further weakened by the attacks upon Origen's orthodoxy. It was destroyed in the unhappy struggle between Theophrastus of Alexandria and the barbarous orthodoxy of the Egyptian monks.

(a) Pantaenus, the first Head of the School, is said by Eusebius to have been a Stoic, by Philip of Side to have been an Athenian, a Peripatetic. In accordance with his study in Greek philosophy, he is said to have been an adherent of the Platonic and Stoic schools. He was a student at Alexandria before his appointment at Alexandria. The notices of his teaching indicate that he led the way in the allegorical interpretation of Scripture. His work seems to have been more catechetical than literary, and the most interesting fragment of his teaching has been preserved in the form of question and answer. 'Pantaenus, being asked in what manner Christians suppose God to know reality, replied, He neither knows sensible things by intelligible things by intellect. For it is not possible that He who is above the things that are should apprehend the things that are according to the things that are. We say that He knows things that are as acts of His own will (οὐ θεατηρία, Maximus Conf., Schol. in Greg. Nys.).' Clement was almost certainly a hearer of Pantaenus (not vice versa, as Philip of Side says); and it is highly probable that Pantaenus is the 'Sicilian bee' whom Clement discovered 'hiding himself' in Egypt, as he 'found rest.'

(b) Clement of Alexandria.—Titus Flavius Clemens was born about A.D. 150, not at Alexandria; perhaps at Athens (Epiphanius). After many years of leisurely travelling in Italy, Greece, and the East, he came to Alexandria, where, about 200, he succeeded Pantaenus as Head of the Catechetical School. In 202 or 203 he was compelled by the persecution under Severus to quit Alexandria, probably for Palestine and Syria. He was still living in 211, but dead in 216. We do not know at what period of his life he embraced Christianity, or what were the stages of his conversion.

The works of Clement are as follows:

(1) The Ἀργυροὶ Προτάττομοι παρὰ Εὐαγγελῆς, an exhortation to the Greeks (not 'Gentiles,' as Jerome mistranslates it) to abandon paganism. This treatise is probably too little known about. (2) The Παθητάκτης, written after the last-named, a practical instruction dealing chiefly with the conduct of social and personal life. The Tutor little abounds in wisdom, and is for the most part a commonplace manual. (3) The Στρομάτων (title in full κατὰ τὸν ἅγιον Φιλοσοφὸν τοῖς ἑρμηνευόμενοι στρομάτων, Strom., i, 20), Miscellanies, a much longer treatise, in seven books. It contains a great many books. (The fragment of a logical treatise called Book viii, does not seem to belong to the Στρομάτων, and the end of Book vii promises another treatise rather than another Book: οι Αργυροί προτάττομοι εἰς τὸ πρώτον.)

The Miscellanies, which are issued in a uniform shape, are a set of knowledge may not be made too plain to readers who are not sufficiently informed as to the understanding of Clement's theology. (4) Τα άραιά and the Excerpta ex Theodoto, have been discussed with different results by Zahn, Ruben, von Armin, and Faye.
it is seldom necessary to read between the lines in Clement. He was not a profound thinker, but a well-read and able man, who accepted in an intelligent manner the syncretistic philosophy popular in learned circles at Alexandria. He has been called cloudy and rhetorical, and has been accused of taking his quotations from anthologies and apocrypha. But the obscurity is rather of arrangement than of thought, and the rhetoric is not often obtrusive. In Clement an ardent and impetuous imagination is joined to a serene soul and a clear intelligence. In fact it is worth observing in view of the criticism that is leveled against him that rhetoric, the 'evil genius of Greece,' infected Greek Christianity, that Minucius and Tertullian are much more 'rhetorical' than Justin or Clement. Clement, as a Christian philosopher, is aware that he has to encounter prejudice and mistrust. Gnosticism, at this time, was much more drenched in the Church than fifty years earlier, when it was really a formidable intellectual force. At the end of the 2nd century, the Christians were better educated, and the growth of rationalism and speculation in the Church severed them from the schools; since, therefore, Clement may be trusted to have been influenced by that, his 'theses philosophorum' (Ie Præscript. 7) should be banished from the Church; and Clement is well aware that the majority agree with him. 'Philosophy,' he says, 'is a goblins who runs in the blood of us, as the vulgar think' (Strom. vi. 10). It is not the privilege of the few; 'with us, philosophers are those who love Wisdom, the Author and Teacher of all things' (Strom. vi. 7). But he feels that the obstinacy, with their cry of πάντως καὶ ὑπόλογοι πάνω (Strom. i. 43), are formidable; he must even vindicate his right to publish a book at all! Must literature be left only to pagans and atheists? he asks. Must teaching be only by word of mouth? His doctrine is not his own, but handed down from the Apostles; and, lastly, people are not obliged to read him. Such a defence throws much light on the Christian distrust of culture even at Alexandria. To turn to Clement's theology. God is a Being (ὁ Θεός), but above space and time, 'beyond even the One and the Monad,' and strictly nameless, though we are obliged to give Him names. In a doubtful fragment (on which see Bigg, Bampton Lectures [1886], p. 64) he has been thought to deny to God the consciousness of the world; this, however, probably Clement only means that God knows reality not as external to Himself. He certainly does not teach that the Father has no consciousness except through the Son. God takes pleasure in our salvation, and in that only (Strom. viii. 3; Protrept. 94, 95, 116); His nature is profoundly moral: He is good because He wills to do good, not like fire, which radiates heat automatically (Strom. viii. 42, and esp. Strom. vi. 104, εἰπὲ καὶ ἰδὼν ἡμᾶς ἁγιάσας ἐκεῖ, παρακάτω μὴ μαχαιρεῖς καὶ καθαρίσου... τοῖς ἐνσέφανίσθαι, καὶ θέσω σε καὶ παρθένι ἁγιάσῃ ὑμᾶς). Such passages must be considered as well as those in which he tries to outdo Plato in emphasizing the transcendence of God. Nor need we insist that no man cometh to the Father except through Christ, the Logos. He rejects the Stoic pretension to 'resemble God' (cf. however, Strom. vii. 113, quoted below), and quotes very pertinently the words of Christ Himself: 'Heareth for the disciple to be as his master.' His Logosconception in his Christology, is less metaphysical and more religious than that of Philo. Although the direct dependence of Clement on Philo, as regards his conception of the Logos, is less than in his principles of allegorical interpretation, established by Siegfried, it is plain that, while Philo is mainly preoccupied with the desire to explain the formation and government of the universe, Clement is much more interested in religious psychology. In the 150 years which elapsed between the two writers, the centre of gravity in 'philosophy' had changed from metaphysics and cosmology to religion and ethics (ὅς ἐστιν... διακοσμίων μετὰ τῶν τῶν Ἐρωτικῶν τῶν Ἀρχέων Ἀρχέων, he says). The immanent Logos of the Stoics was now more thought of than the Platonic. 'Idea of Ideas.' Clement's attempt to combine the two conceptions may be the excuse for Photius' charge that he taught 'two Logoi.' Or perhaps Clement was perplexed about the Father's consciousness while the Son was incarnate. But the 'two Logoi' do not appear in his extant treatises. The Logos in Clement is the instrument in creation (He is often called 'creator'); he introduces harmony into the universe, of which He is the 'pilot.' He created man in His own image. He is spoken of as 'the Will of God,' 'a power, or energy, of God,' and in particular as 'Saviour,' a term to which, we think, there is no parallel in Philo. He was a 'lover of mankind' from the beginning (I. 26). In vain does he strive with the Church; and Clement is well aware that the majority agree with him. 'Philosophy,' he says, 'is a goblin who runs in the blood of us, as the vulgar think' (Strom. vi. 10). It is not the privilege of the few; 'with us, philosophers are those who love Wisdom, the Author and Teacher of all things' (Strom. vi. 7). But he feels that the obstinacy, with their cry of πάντως καὶ ὑπόλογοι πάνω (Strom. i. 43), are formidable; he must even vindicate his right to publish a book at all! Must literature be left only to pagans and atheists? he asks. Must teaching be only by word of mouth? His doctrine is not his own, but handed down from the Apostles; and, lastly, people are not obliged to read him. Such a defence throws much light on the Christian distrust of culture even at Alexandria.
ALEXANDRIAN THEOLOGY

are necessary to each other, and closely related. Faith is defined as 'a voluntary anticipation (προληπτικής) of things unseen,' an unifying assent to an unseen object, the foundation of rational choice.

Voluntarily to follow what is useful is the first condition of understanding it. Unless knowledge is based on faith, it remains merely intellectual assent, and is neither stable nor effective. The motive powers of faith are hope and filial awe. 'God is just, because He is merciful.' Faith, however, must go hand in hand with inquiry (προερωτημένοι): it is the nature of living faith to develop into knowledge (γνώσις). The perfect Christian, therefore, is the 'Gnostic,' a word which Clement will not abandon to the sectarian s who at last monopolized it. The portrait of the Gnostic is given in Strom. vii. It is of supreme importance for the understanding of Clement as a teacher, because it anticipates the final part of his scheme, which was never executed. He does not expand his Gnosticism, but he does show us its fruits. The Gnostic is the man whose character has been formed by the complete religious philosophy for which the earlier books of the Stromateis are a preparation only.

The aim of the Gnostic is to 'become like to God.' Origen is not afraid, speaking as a Greek, to say that he μετατρέπει εις θεόν (Strom. vi. 118). The Divine attribute of which he is thinking in such expressions is the higher knowledge, that which has for its object the 'intelligible world.' In his view (Strom. vii. 47) the Jewish language that the highest contemplation is knowledge of God, which is inseparable from likeness to Him. In Stoical form he says (Strom. iv. 20) that Gnosis is the purification of the ruling faculty of the soul; and hence the necessity of moral even more than intellectual training is insisted on. In the seventh book the 'canons' of the Gnostic character are said to be 'gentleness, kindness, and noble devotion,' and the 'achievements of the Gnostic faculty' are 'to know what is right, to do what is right, and to help others to do it.'

'The is the true athlete, who in the great stadium, this beautiful world, is crowned for the great victory over all his passions.' He is persuaded that the instruction that has been given is always towards something better, till they are brought to the Great High Priest, in the vestibule of the Father.' Exceptional prominence is given to the two words δύναμις and δύναται, the former of which is the equivalent of power, the latter of which the passions are no longer even felt: εἰρεται ἡ δύναμις καὶ ἡ δύναται (Strom. vii. 79); and still stronger Strom. vi. 75): and the latter is the climax of the whole Christian life, the end which, like the beginning, faith, is not matter of teaching (τὰ δὲ ἐξ ἀκα- κείτα). The statement that Clement exalts the intellect above the affections is untrue. The words κυριοτάτη πάσης ἐπιστήμης ἐπίστημα (Strom. vi. 68) are typical. The 'intellectual love of God' affords peace to all our faculties, and unites the entire personality. 'Conduct follows knowledge as surely as the shadow the body.' The will is not neglected. Faith in the first instance is an affair of the will, and is the necessary foundation of knowledge, the superstructure (Strom. ii. 11, v. 2, vii. 55): 'but both are Christ, the foundation and the superstructure too.' Faith exists in a higher and a lower form—πιστείᾳ ἐπεισιμοϊκῇ and προδεσιακῇ (Strom. ii. 48).

As a thinker, Clement is most important as the author of a consistent philosophy of religion, fusing Platonism and Stoicism in a Christian mould. In Stoicism he found a natural religion, rationalism, moralism, and a predominant interest in psychology and apologetics, in Platonism a cosiology, doctrines of revelation, redemption and salvation, and contemplation as the highest state. 'In Clement,' says Hort, 'Christian theology in some important respects reaches its highest point... There was no one whose vision of what the faith of Jesus Christ was intended to do for mankind was so full or so true (Ante-Nicene Fathers, p. 93).

Lertorat.—The best edition of the text of Clement is in Stahlin, Gr. christl. Schrifsteller der drei ersten Jahrhunderte (1906). Important for the study of Clement are Zahn, Vorstudien zu Celsus und den Auslegungen des Celsus, etc., vol. iii. (1884); Bigg, Christian Platonism of Alexander (1886); P. M. Barnard, Isis Dieses Saeculit (1857); de Faye, Clement d'Alexandrie (1898); Capelle, Die Moral der Clements von Alexanria (1903); Hort and J. B. Mayor, Clem. of Alex. Miscellanies, Book vi. Clem. also dedicated by the present writer in Church Quarterly Rev. for July 1902.

(c) Origen (Origines Adamantii—the latter a real name) is said by Epiphanius to have been 'an Egyptian by race,' which probably does not mean a Copt. Porphyry calls him 'a Greek,' and his father, the martyr Leonides, has a Greek name. He was born about 185, was carefully brought up as a Christian, became a pupil of Pantaenus and Clement, and already in his 18th year occupied informally the position of Head of the Catechetical School, the older teachers having been scattered by the persecution under Severus. For many years he was occupied in laborious study and teaching, mainly on the Bible; but he took the name of Ammonius Saccas, and was himself consulted by many non-Christians. In 215 he was driven from Egypt by mob-violence, and taught for some time at Cesarea, even preaching in the churches, though still a layman, in more Christian language than Demetrius. He became the矜ane if the Saccas, and was himself consulted by invitations to visit Palestine, Greece, and Asia Minor (about 227). In Palestine he received orders from the bishops there, without the consent of Demetrius. That prelate resented his action as contumacious, and Origen left Alexandria for the last time in 231. The Egyptian Synod condemned him, and even declared his priesthood invalid; but the sentence was disregarded in Palestine, where Origen laboured (at Cesarea) for the last twenty years of his life. He was again summoned to the Ecumenical Council of 235, and was recalled by the Cæsarea; but the Decian persecution (250), and, broken in health, died at Tyre in 253.

A complete list of Origen's works would occupy too much space here. The following are the principal dates of publication, when various editions have been published.

235-239. Commentaries on St. John, Genesis, etc.; Miscel-
naries; de Principiis.
239-243. Commentaries on Isaiah, etc.
240. Letter to Julitta Africanus; Commentaries on Canticles (10 books).
246. The eight books contra Celsum.

Of these the most valuable for an understanding of Origen's theology and philosophy are the de Principiis, the Commentary on St. John, and the contra Celsum; to which may be added the beautiful treatise On Prayer (date uncertain; before 231), and the collection of extracts from his writings called Philocalia, made by Gregory of Nazianzus and Basil.

Principles of exegesis.—Allegorism in Origen is an instrument of apologetics, and at the same time a device to gain freedom of thought. He insists that no word or letter of Scripture can lack meaning, and that every historical text has a body, soul, and spirit, i.e. a literal, moral, and spiritual sense. History is compared to a ladder, of which the literal facts are the lowest rung (in Joh. 1. 20).
This metaphor would bind us to do justice to the literal meaning first. But Origen, like Philo, at times expresses almost contempt for the literal narrative. ‘What man of sense,’ he says (cf. Philo, frag. 1 and second and third day, and the evening and morning, existed before a sun and moon and stars? Or that God walked in a garden in the evening, and that Adam rose a tree?” Or that the devil took Jesus into a high mountain, whence He could see the kingdoms of the Persians and Scythians and Indians’? (de Princ. i. 16). All such passages, for their higher meanings. ‘All things are some passages,’ he says, ‘which are not literally true, but absurd and impossible. (ibid. v. 18).’ So ‘some of the laws of Moses are absurd and others impossible.’ Moses orders the sacrifice of an animal (the θυσία) which does not exist in nature. Moses deduces from this some of the laws of Moses. ‘Scripture contains an unhistorical element, inwoven with the history. And in such a case the worthlessness of the latter may drive us to seek the spiritual meaning.

We may wonder that Origen did not make more use of the theory of a progressive and gradual revelation, which he asserts in several places. But his main object was to save the OT (which was attacked and ridiculed by the Gnostics) for the Church, while at the same time repudiating the obligation to obey the Law, which was still pressed on the Christians by the Jews. The allegoric method at both ends also be remembered that the ‘homily,’ as established by custom at Alexandria, necessitated a very plastic treatment of the text. The preacher or lecturer was expected to go straight through some book of the Bible, or even something from Genesis in a chapter. What could he say about Joshua but that the Canaanite kings were ‘non tam reges quam vitiorum nomina’? The tone of these interpretations is often half-ironical, though the moral lesson is present here with a seriousness. His treatment of NT difficulties shows even greater boldness, and is quite startling. The discrepancies between the four Evangelists are, he thinks, fatal to their credit unless we look for their truth in the ‘spiritual sense.’ There is (so Jerome makes him say) an Eternal Gospel, of which the actual Gospel is only the shadow. We must separate the αὐθεντὸς ιεραγῆναι from the συντόνω καὶ συναγωνίζοντο. He judges the Fourth Gospel as a symbolic treatise, much as Loisy and others do now. But in his eyes all this nonsense was not worth the hours of human ingenuity, but the gift of the Holy Spirit. Much of it was traditional: Clement seems always to copy, not to invent, his allegorists. Origen, without making any boastful claim, believes himself to be literally correct.

**Doctrine of God.** — As ‘Spirit’ and ‘Light.’ God is a simple intellectual nature, in whom is no greater nor less, higher nor lower, the Monad, Unit, Mind, and Fountain of all Mind (de Princ. i. 1). As against the Christian Stoics, he asserts that God is incorporeal, and he is more careful than Clement to avoid Stoical phrases savouring of materialistic pantheism. God is spaceless and timeless, ‘everywhere and nowhere,’ ‘natura simpliciter et tota mens.’ Being unchanged, He cannot feel anger, hatred, or repentance. Punishment is not His work, but the necessary consequence of sin. And yet He is long-suffering, merciful, and pitiful: He has ‘the passion of love’ (in Ezech. Hom. vi. 6, Bigg. p. 158). God is not infinite, but self-limiting (in Matt. xii. 569): His all is limited by the wise and good. Thus the wisdom (c. Cels. iii. 493). Origen has not solved the problem of reconciling these moral attributes with the Platonic transcendence; for a fine but vague passage on the subject see in Num. Hom. xiv. 21. His method is to limit the wisdom to the vita negativa as a path to reality; the most intimate knowledge of God is gained not by abstraction, but by direct revelation; grace is implanted in the soul μεν τόν θρόνον εὐθυμον. On this side he is much more Clementian than Origen. But he emphasizes the attribute of Goodness (καλότερος) rather than that of self-existent Being, he gives the idea of God a richer and more ethical content.

But the doctrine of God in Origen involves at every point the problem of the Trinity. The Son or Logos is the centre of his theology. He is co-eternal and co-equal with the Father. There never can have been a time when Wisdom, the Word, and Life were not. (de Princ. ii. 6.) But we must distinguish between those attributes (τινῶν) which belong to the Son essentially, and those which are assumed for the purpose of redemption. To the former class belong Wisdom, Word, Life, Truth; to the latter, Firstborn from the dead, Propitiation, Light, Shepherd. The former class are σώφρον, the latter ἀλεθρόν. ‘Happy are they who need the Son of God no longer as Physician, Shepherd, Redemption, but as Wisdom, Word, Justice, and the other perfect attributes’ (in Joh. i. 22). He is willing to identify the Logos with the Platonic αἰθιόπης (in Joh. xix. 5; c. Cels. vi. 63), only protesting against subjective idealism (de Princ. ii. 3, mundum in sola plantas et cogitationum lurbo consistentem). The Son is therefore essentially eternal and unchanging, not merely by nature, but by participation in the Word of God. He is absolutely Good. Prayer may be addressed to the Son or to the Spirit, but the highest prayer is that which is addressed to the Father in Christ’s name.

The charge of subordinationism in Origen’s Christology cannot be maintained. It is unlikely that he used the word ἱεροσόλυμον, in the Nicene sense, of the Son, because for a Platonist it is hardly correct to speak of the θεία of God, who is ἱεροσόλυμον; but words like ὃς καὶ μεγαλότερον ἀλλὰ ὡς θεών ἔστιν (Scil. in Psalm. 115) should have been enough to establish his orthodoxy on this side. The doctrine of τρούμα (see above), varying with the grade of spirituality attained by the believer, explains some apparent inconsistencies of expression, and his reverence for Scripture (e.g. ‘My Father is greater than I’) explains others. The sonship and filiation, which he teaches is one of person and office, not of essence. ‘The Son is less than the Father, as reaching only to rational beings; while the Father, holding all things together, reaches to everything. The Holy Spirit is less (than the Son), as extending to the saints only’ (de Princ. i. 3). In the Incarnation the Son united Himself with a soul which had remained absolutely pure in its pre-existent state (de Princ. ii. 6). Like other souls, it was eternally united to the Word. It was free, like other souls, but so perfectly and inseparably did it cleave to the Word from the beginning, that the union of the two is like a molten mass of metal always radiating a white heat. By this union it was saved from all possibility of sin. His body was also pure and perfect. It was real flesh and blood, but of transparent beauty to those whose spiritual sight was purged. He rose from the dead, not in this flesh, but with that *spiritual body* of which St. Paul speaks. ‘Origen’s view of the God-Man—a term which he first employed from Clement—was that of an ideal type of the nature and office of the Holy Spirit in the Trinity. He is co-eternal and co-equal with the Father and Son. ‘The Spirit of the Father and
the Spirit of the Son is one and the same' (in Rom. vi. 13). He understood St. Paul well enough to observe that no distinction is made by him between the action of the Spirit and of the Son (de Princ. i. 3). But in one remarkable passage (in Joh. ii. 6) he raises the question whether the Spirit came into being through the Word (διὰ τοῦ λόγου ἐκ τοῦ πνεύματος), or whether He has no separate essence (τρίγυς οὐίας) from the Father and the Son. These speculations are so inconsistent with the strong Trinitarian doctrine elsewhere maintained, that they cause surprise. They show how fluid dogma still was when Origen wrote. But the influence of his teaching (in spite of the charges brought against him) certainly operated against subordinationism. With some hesitation he pointed to the true view that the sources of Essence, of Revelation, and of Inspiration must be completely equal—must be God in the same degree. The opposite view removes the supreme God from life and experience, and makes Him finally unknowable. Other significant dicta about the 'trinity and development' of the scheme, as designed by perfect Wisdom. God created the world 'out of nothing': matter, the lowest of the creatures, was created by Him immediately after the 'fall of the souls,' to prevent the 'world from being diabolic' (de Princ. ii. 1). God is neither the whole nor a part of the whole: the former conception contradicts His simplicity, the latter His sovereignty. His Spirit is no all-pervading subtle element, like the Stoic ψεύζων. The world is distinct from God; it is His creation. It is eternal in the sense that it had no beginning in time; the entire scheme that we know is only a brief phase in an innumerable series of worlds. The original creation, Origen teaches, was of innocent spirits, designed 'according to the perfection which God possesses essentially.' Their fall from perfection was voluntary. Some (the angels and the stars, to which Origen attributes souls) remained in their first estate; others (the evil spirits) fell in various degrees, and can be restored only through the discipline of suffering. This world is constructed as the appropriate scene of their training, affording scope for the treatment proper to every degree of guilt. The fall of the souls was thus antecedent, but Origen teaches no metempsychosis. The story of the Fall in Genesis he is disposed to treat as mere allegory (c. Cels. iv. 40). The most succinct statement of his doctrine is in de Princ. ii. 5, ending νῦν πας οὐ· χάρις ἐκ τοῦ πνεύματος ὀκτώμενος, which throw light on his psychology. 'Soul' is 'mind' in a fallen state; it is an adventitious principle, intermediate between 'flesh' and 'mind' or 'spirit.' In reality his psychology is dichotomous, though not of respect to St. Paul he preserves in words the distinction between 'soul' and 'spirit' (see esp. in Joh. xxxii. 2; in Levit. Hom. ii. 2).

The discussion as to whether Origen teaches the immateriality of the soul has been conducted on wrong lines. The soul for Origen is certainly immaterial, but it implies the body. Thus he says, 'is with the soul as a master and director, associated with it to remind it of the good, and to accuse and punish it for its faults. If the soul is disobedient and obstinate in revolt, it will be divided from the spirit after it leaves the body' (in Rom. ii. 9). The soul which is exalted by following the spirit, and not only following but being transformed into spirit, must put off its nature as soul, and become spiritual (de Orat. 10). Here the 'spirit' resembles the impersonal ρῆς of Neo-Platonism; but the question whether it belongs or does not belong to our ego can be answered neither for Origen nor for any other mystical thinker. It is an essential part of his teaching that the existence of God and other fundamental truths of religion are 'sown in the soul' as matters of immediate apprehension (deprinc. ii. 2). So long as we keep them, the Logos never leaves us' (in Joh. xix. 3). This σήμερον is made to cover such sensuous experiences (of sight, hearing, smell) as the later Catholicism accepts under the name of mystical phenomena (c. Cels. i. 48); but such communications, though from a Divine source, are only externalized by our minds; 'God never speaks to us from outside' (in Psalm. xxvii. 1). From these 'seeds' spring the flowers and fruits of Divine knowledge. Origen, revealing Himself under various aspects as the soul is able to receive Him. Corresponding to this psychological dispensation is the historical economy which, after the partial theophanies of OT, culminated in the Incarnation. The two are parallel aspects of the same plan; it is meaningless to ask whether the historical Incarnation is the 'cause' of the soul's restoration. At the same time it must be admitted that Origen has a less firm grasp of the ideas of progress and development; and not the least incoherent point, is his indifference to the 'fall of Adam,' and in consequence his philosophy of history is both gloomier and less scientific than Clement's. His view of secular culture is also less sympathetic.

Eschatology.—Clement had represented men in the future life as placed in different grades according to their moral deserts. The wicked will be subjected to disciplinary punishments till they are forced to own their guilt. Origen developed further the notion that all punishment must be disciplinary, since 'God can hate nothing,' and it is no part of His nature to render evil for evil. Moreover, immortal spirits (εἰμπατοι ψεύζων) cannot be consigned to perdition or predestination, or to the perfection which God possesses essentially.

Here it is plain that Origen encountered great difficulties in reconciling his philosophy with the traditional Church teaching about the resurrection, last judgment, heaven and hell. He says, that the Gospel must not be understood literally. The 'saints' could not 'fall from heaven upon the earth, which is much larger than the earth.' Our material bodies, which are dispersed among other organisms, cannot be reconstituted in the future resurrection. Can we suppose that the disciples 'grasped their teeth'? No, he says; it is the 'spark,' or vital principle, which survives, and will make a new abode for itself, the resurrection body. Even when the soul becomes pure spirit, it will need a kind of body, for God alone is incorporeal spirit. Punishment must continue after death: 'even Peter or Paul must come into that fire.' But will any remain in torment for ever? Origen hopes and thinks not, but will not dogmatize; he remembers the guest who was cast into outer darkness, with no promise of pardon. There are passages in Origen which imply at least a passport dimissary never to be made good; but he would hint at any degree of punishment. He must have dreamt that the doctrine of the resurrection, the last judgment, and eternal punishment is consistent with the idea of salvation, as a spirit made in the image of God, through, as devil, he would be destroyed (in Rom. v. 2). The final consummation is complete likeness to God; 'God and all'; i.e. he will be all in each individual (de Princ. v. 6). Then there will be no more diversity, when all shall have reached the highest degree of perfection.

Esoteric Christianity.—Origen believes that the Logos enlightens all men according to their capacities. Current Christianity is the best that the average man can assimilate. It includes mythical stories, which exist both in OT and NT. But rewards and punishments as inducements to virtue, and communicate truths in veiled forms and images. But it is not a matter of indifference what symbols are presented to the 'common man;' it is the religion of Christ alone which must be accepted by
ALEXANDRIAN THEOLOGY

all, though under different aspects. The Gnostic
learns that the objects of religious knowledge have
only a supramundane history: the 'eternal' or 'spiritual' Gospel 'places clearly before men's
drives all things concerning the Son of God, both
the mysteries shown by His words, and the things of
the world that were not yet made' (in Joh. i. 10).
Such passages have been harshly interpreted as implying that the
Gnostic has no further need of the historic Christ; but this is
true only in the same sense to which it might be said of St.
John—in other words, the statement is quite misleading. The innate
knowledge of God, which he asserts, is the work of the Logos-Church.

The first fully disclosed Himself in the historic Incarna-
tion. On the actual effect of the death of Christ, as a transaction,
Origen suggests various views, already current, in a tentative
manner, in order to discuss the idea of a ransom paid to the God
which was popular at this time. He certainly did not regard
the historic work of Christ as a mere appearance or exhibition,
though, for the Gnostic, Christ is us is far more important than
Christ for us.

Apostle of Origen.—The double achievement of
Origen (carrying on what Clement began) was to
destroy Gnosticism, and to give philosophy a recog-
nized place in the creeds of the Church. The
second was the price which the conservatives had
to pay for the first. Henceforth the Church pos-
sessed a God and a plural who were far more attractive to the
educated mind than the barbaric Platonism of the Gnostics. It was,
indeed, another possible nor desirable to teach the
philosophy to the masses, for whose benefit the Church
had combined with imaginative wonder at
miracle, and sensuous symbolism, was developed
side by side with the progress of scientific theology.

In their relation to tradition, the Alexandrians
mark a stage in a conflict which ended in a com-
promise. The great Gnostics of the 2nd cent. could
be maintained to maintain their footing in the Church.
Clement succeeded in doing so, though not without
suspicion; Origen, after much hesitation, was con-
demned. The Cappadocians endeavoured to re-
concile faith and knowledge by mutual concessions,
while the process was completed, after a fashion, by
Cyril of Alexandria and by the theologians of the
6th century (Harnack, Hist. of Dogma, iii. 5).
The first conflict in which Origen's theology
was deeply involved was against Sabellianism.
Dionysius, bishop of Alexandria, in attacking
the Monarchians fell under the charge of Tritheism,
The Roman see pronouncing against him, and laying
down a via media between the Alexandrian and the
Sabellian doctrines. This condemnation had not
overthrown; and Arianism, which flourished
unaccounted till the end of the 3rd century. Modifications, however, were intro-
duced, involving a doctrine of subordination in the
Trinity of the Neo-Platonic type, and upholding
the notion of the Logos as the great original con-
tribution of Christianity to ethics. Gregory Tha-
smatargus (who is said to have called the Son a
krisis) taught the Trinitarian doctrine of Origen
in a form nearer to Monarchianism than to Tri-
theism.

The first serious attack on Origen was that of
Methodius, who, however, in spite of his bitterness,
seems only to advocate a compromise between his
friends and the rule of faith. In the controversies
that followed in the 4th cent., which need not
be described in detail, we mark a gradual hardening
and crystallizing of theological thought under the
chilling breath of authority. Origen's teaching
was disintegrated, selections being made from it
without regard to consistency, and he himself was
at last condemned as a heretic. After Athanasius,
the Logos-doctrine began to decay in importance,
as the notion of an economic and relative Trinity
gave place to that of an absolute Trinity. The
identification of the Logos-Christ with the spirit of
the cosmic process fell into disrepute. In this
change may also be described as part
of a transition from Platonism to Aristotelianism
in the Church. The school of Antioch led a revolt
against the Alexandrian exegesis of Holy Scripture,
and founded a more critical method, in which the
literal sense was always at least considered, and
the Messianic allusions in OT very much curtailed.
Origen's idea of pre-existence had still many sup-
ports in the 4th cent., but was more and more
discredited, till it was finally condemned at
Constantinople in 533. The rival theories—that the
soul is begotten with the body, and that God
creates souls and plants them in the embryos—
were left to contend with each other.

The doctrine of the Fall of Man, based on the
idea of redemption, was discredited, till the
theory of an extramundane Fall was excluded. The question whether Christ
would have become incarnate if Adam had not
sinned is never, we think, discussed at length
except by those who answer it in the negative.

But in the long Arian controversy the name of
Origen played a curious part. The Adoptionist
theory of a Jesus who gradually becomes God
was totally at variance with Origen's doctrine;
but Arians found in the Neo-Platonic cosmology a
support for his theory of a mediating Logos,
between the inaccessible Father and the world.
In denying to the Logos any essential
unity with the Father abandoned decisively the
Arian Christology. 'With Arians, Christ belongs
in every sense to the world of created things'
(Harnack); with Athanasius He belongs in
every sense to God, the essential aspect being virtually
preserved. Arabianist theologian,
and the restatement of Alexandrian theology,
necessitated by his labours, fell to the Cappa-
docians, of whom Gregory of Nyssa is most in
sympathy with Origen. This writer avoids some
of the most obnoxious speculations of his master,
but on the whole reproduces his teaching, which in
this way has found and maintained a footing in
the Catholic Church, for Gregory of Nyssa has
never been condemned.

But the growing power of tradition had already
begun to kill religious philosophy, and the regres-
sive degradation of Christianity into a religion
of cultus affected Christian Platonism in precisely
the same way in which Neo-Platonism suffered
between Plotinus and Jamblichus. Dionysius
the Areopagite is the representative of this application
of Alexandrian allegorism to ritual and dogma.
The first vogue of this extraordinary writer co-
incided with a reaction in favour of Origen.
Among later developments of Christian Platon-
ism, one of the most influential of their inspiration to the
Alexandrian theology, it is necessary to mention
not only the philosophical mysticism of Eckhart
and his successors, the 'Cambridge Platonism' of
the 17th cent., and in our own day the theology
of P. D. Maurice, Westcott, etc. Among philo-
sophers, Leibniz has many points of resemblance to
Origen.
Permanent value of the Alexandrian Theology. — With the attempt of the Alexandrians to Christianize the current philosophy of their age legitimate? The question has been very diversely answered. Writers like Deissmann, Wernle, and Hatch, and the Ritschelian school generally, regard the "Hellenizing" of Christian doctrine as an alien graft upon the enthusiastic revivalism of primitive Christianity, and deplore, with Harnack, the 'secularizing' and 'depotentiation' of the religion which ascribe to the influence of Alexandria. On the other side, it has been pointed out that, unless we ignore St. Paul's Epistles, the Epistle to the Hebrews, and the Fourth Gospel, there is much of 'Hellenism' in the NT; and also that philosophy in the first two centuries had ceased to be 'secular' and had become religious. The later Stoics and Platonists were 'not far from the kingdom of God,' and were by no means inclined to undervalue strictness of conduct. Moreover, the fusion of Greek and Jewish thought was so inevitable that to deplore it is to take a pessimistic view of intellectual development. "Secularization" is in its nature a brief phase; an intellectual system must follow it, or the whole effects of the movement must disappear. The Alexandrians satisfied the legitimate need of their age by providing 'a scientific doctrine of religion which, while not contradicting the faith, does not merely support or explain it in a few places, but raises it to another and higher intellectual sphere, namely, out of the province of authority and obedience into that of clear knowledge and inward intellectual ascent emanating from love to God' (Harnack, History of Dogma, Berg. transl., vol. ii., pp. 334 f.). This recognition, from a writer whose view of religion is strongly anti-intellectualist, is remarkable, and it does no more than justify to the great constructive effort of Clement and Origen, by which the best of Platonism and Stoicism was incorporated in Christianity. The permanent value of their syncretistic schemes will always be differently judged while men continue to be 'born either Platonists or Aristotelians'; those who would cast metaphysics from theology can have but scanty sympathy with the Alexandrians. But if speculation on Divine truths is permissible or even necessary, no Christian theologians deserve a higher place than Clement and Origen, who made a serious and not unsuccessful attempt to combine in their creed the immanence and transcendence of God, universal law and human freedom, the universal and the particular in revelation, a lofty standard of practical ethics and worldly-mindedness, and, what is most to be desired, a Christian contribution to Christian theology has been quoted. Westcott says of Origen, 'We have not yet made good the positions which he marked out as belonging to the domain of Christian philosophy' (Ibid. Thought in the West, 222), W. R. INGE.

ALGONQUINS. (Eastern.) — I. Divisions. — The existing representatives of the Algonquin or Algic race may be separated linguistically into three divisions: the Blackfeet of the extreme western part of North America, whose idiom differs most from that of all the other Algonquin tribes; the Cree-Ojibwas of the middle west, whose language embraces a number of closely allied linguistic variations; and the so-called Wabanaki races of the north-eastern American coast, with whom the present article is especially concerned.

The term Wabanaki or Ohebanaki means both "land of the dawn east" and "man or person from the east." The name is at present applied to five distinct clans; viz., the Passamaquoddies, Penobscots, Canadian Abenakis or St. Francis Indians, Micmacs, and Delawares or Abnaki. All of whom are plainly descended from one common family which probably first established organized tribal relations along the Canadian and New England north-eastern coast. There is no reason to consider that the term Easterners-Wabanaki has any meaning going farther back than this into the origin of these peoples, who, in all probability, came eastward at a comparatively early date from some unknown western habitat. "Unless modern Americanists are to accept the theory that the eastern tribes crossed from Europe by way of some long since vanished land-bridge, the theory of a western origin for all the Indian coast-races is literally forced upon us. It will be seen, therefore, that the name Wabanaki-Easterner must have for us a geographical rather than a racial-historical significance.

(1) The Passamaquoddy Indians of Pleasant Point, Maine, now numbering about 500 in all, are identical with the Micmacs or Etchemins of New Brunswick, the so-called Chipewyan Abenaki. The name Passamaquody is a purely local term, meaning 'speakers of pollock-fish' (problástum). The correct form is Pestumokakedownyik, which has been corrupted by the whites into Passamaquoddy. These Indians are by far the most interesting remnant of the Wabanakis, as they still retain an unusually extensive oral literature, including love poems, legends, and historical tales of considerable value. It should be stated that the nucleus of the material relating to the primitive religious conceptions of the Wabanakis has been collected by the present writer from the Passamaquoddies primarily, and secondarily from the Micmacs.

(2) The Penobscot Indians of Maine now number not more than 350, most of whom live on the Indian village of Biddeford on Penobscot River near Bangor, Maine. These people still speak a characteristic Algonquin language, which is more closely allied to the idiom of the Abenakis of St. Francis, near Pierreville, Quebec, Canada, than it is to that of the Passamaquoddies. The language of the Penobscots, the Passamaquoddies. In short, there can be no doubt that both the Penobscot and the Abenaki dialects are sister idioms which have sprung from a common original at a very recent date (cf. the present writer in Kulóskap the Master, p. 30).

(3) It is well known that the Abenakis of Canada are the direct descendants, of course with some admixture of French and other blood, of the majority of those who escaped from the great battle of the Kennebec in Maine when the English commander Bradford overthrew their tribe on 3rd December, 1679. Many of the survivors at once fled to French Canada, where they established their habitat at their present village of St. Francis, near Pierreville, Quebec. Others again, who wandered into Canada at a slightly later date. There can be no doubt that the Indians now called Penobscots, from their residence near the river of that name, are the descendants of those of the Wabanakis who eventually submitted themselves to their English conquerors. The Canadian Abenaki is the only one of the Wabanaki clans which calls itself generically by the comprehensive name Wabanaki (Kulóskap, p. 31).
(4) The Micmacs are the easternmost and by far the most numerous to-day of the Wabanaki remnants. They are to be found in various places in the Canadian provinces of Quebec, New Brunswick, Nova Scotia, Prince Edward's Island, and Newfoundland. Their grade of Intelligence is much lower than that of the other members of the same family, and they are still poorer in a vast store of folklore, legends, and poems, which is perishing for want of interested collectors. Their language differs so greatly from the dialects of the Passamaquoddies, Penobscots, and Abenakis, that the Micmacs themselves use French or English when communicating with their Miacmac neighbours, while an intelligent Passamaquoddy can understand without difficulty be understood by a Penobscot or Abenaki, if the dialect is pronounced slowly.

(5) The story of the enforced westward wanderings of the ill-fated Delawares or Lendape has been told in detail by a distinguished authority, the late Dr. D. G. Brinton, in his comprehensive work, The Lendape and their Legends, pp. 122-123. At the present day, this famous tribe, around which a century of romance has been woven, is the only lit by the well known American author, Fenimore Cooper, in his Leatherstocking Tales, is scattered literally to the four winds of heaven. The three Delaware clans, the Minsi, the Unami and the Onunatchi, who are the prominent Christian race in Delaware, Pennsylvania, New Jersey, and parts of New York State, are now represented by a few bands living in Indian Territory, in Western Canada, and in Ontario, Canada. The Delawares of Indian Territory, numbering about 500 persons, have quite lost their tribal identity, as they have been incorporated by the Cherokee nation, by whose chief and council they are governed. In Ontario there are only about 500 in all: 100 situated at Hagersville on the Reserve of the Six Nations (Iroquois), 100 at Muncetown, and the same number at Moraviantown, which is the seat of a Moravian mission.

2. Religious conceptions. — All the Wabanaki clans at present existing, save only the Delawares, are, with very few individual exceptions, of the Roman Catholic faith, a fact which is most fortunate for students of comparative religion, as the Catholic priests have made little if any effort to stifle the ancient ideas regarding witchcraft and spirit worship, which formed the elements of the earlier shamanistic faith. For this reason, nearly all our material, upon which this and other studies of Algonquin religious ideas are based, comes from the Catholic tribes, and not from the Delawares, who are all Protestants, belonging for the most part to the Church of England or to the Moravians.

The religious system of the primitive eastern Algonquins was, as already indicated, purely shamanistic, viz. a faith which, although admitting in a vague way the existence of a Supreme Being, laid its chief stress on individual exceptions, of the Roman Catholic faith, a fact which is most fortunate for students of comparative religion, as the Catholic priests have made little if any effort to stifle the ancient ideas regarding witchcraft and spirit worship, which formed the elements of the earlier shamanistic faith. For this reason, nearly all our material, upon which this and other studies of Algonquin religious ideas are based, comes from the Catholic tribes, and not from the Delawares, who are all Protestants, belonging for the most part to the Church of England or to the Moravians.

In the lore of the Wabanakis, the general principle of good may be said to be represented by the rather clear division to the Passamaquoddy as Kulaskop and to the Penobscots as Klubshk, who, as Mr. Leland has aptly put it, personifies the principle of good nature rather than of goodness. Kulaskop's twin brother, Malemum the wolf, was the type of the Indians, and it may perhaps be called the Ahriman of the Wabanakis, although this is almost too dignified a term. It is highly interesting to notice that these twins were born from an unknown divine mother, and the evil Kulaskop in the natural manner, and the evil wolf through the woman's side, a method which he maliciously chose in order to kill his mother. In spite of his name, which means 'the liar,' the tendency of Kulaskop was a general benevolence, and he, contrary to accepted opinion, is very highly developed.

In the end, owing to the evil ways of man, Kulaskop sailed away over the water, the shining waves of Minas; and they looked in silence at him, until they could see him no more. Yet when they had
cessed to behold him they still heard his voice in song, the wonderful voice of the Master! But the sounds grew fainter and fainter and softer in the distance, till at last they died away. Then over them all was silence, till a wonder came to pass: for awhile, which had not been used but on common language, now talked in different tongues!

Here again we seem to have a perverted echo from the missionaries. After Kulóskap had left the land, the bird which had loved him most, the Great Snowy Owl, ‘went far into the North, into the deep dark forest, where to this day his children sing to the night “Kúktúskúta,” which meaneth in our language “sorrow, sorrow, sorrow.” And the loons who had been his hunters go back and forth over the waters, seeking in vain for their master, the lord whom they cannot meet; ever wailing, wailing sadly, because they find him not’ (op. cit. p. 216). Micmac tradition in various forms still associates Kulóskap (or Gloscaap, as he is there called) with Cape Bretonian, a bold headland projecting into the Bay of Minas, Nova Scotia.

It will be evident even from the above very brief sketch, that Kulóskap, as he at present exists in the memories of his former children, is a mixture of traditions. The element that Christianity has entered very markedly into this lore, curiously compounded with what are undoubtedly native elements. For example, it is quite clear that all the stories of the exploits of the demi-god are based on the conception that he was a supernatural Indian and the father of all the conjurors, a class which still exists among the Catholic Wabanakis. This same culture-hero appears in the legends of the entire Algonquin family, although often under another name. It is highly probable, therefore, that the idea of a great Divine man was brought by these eastern Indians from their primitive western home.

The Wabanakis saw a spirit in every tree and water-fall, and a malignant or benevolent influence in many animals; and, in order to propitiate these beings, the class of sorcerers became, of course, a positive necessity. These people, who are called by the Passamaquoddies of the Greenland coast ‘brave magic men,’ who by their methods of exorcism, had very peculiar powers. We see from the tales that the conjurer could transform himself into an animal at will; that he could cast a spell on an enemy, even though the latter might also be a módélici; that he could make the lame to walk in hard ground, sticking up to the ankles or knees at every step; and, finally, that the wizards could communicate with each other telepathically. One need hardly comment on the first two or the fourth of these wonders, as they are common among all shamanistic conjurors; but the third phenomenon, the power to sink into hard ground while walking, seems to be characteristicly Micmac. Rink states that this is not an unusual feat among the conjurors of the Greenland Eskimos, who frequently sink into rocky or frozen ground ‘as if in snow.’

The trick is probably done by some peculiar method of stooping, or else is merely suggested by means of hypnotic influence. Leland compares here, however, the Old Norse statements regarding their wizards, who occasionally sank into the ground, and who had power to pass through earth with the same ease as through air and water (Algonquin Legends, p. 342). It seems hardly permissible to draw a parallel between the ancient Norsemen and the northern Indians on this account, as the case Leland cites is that of a conjuror who disappeared into the ground head downwards when stabbed at by a foe. The present writer has been told by old Passamaquoddies that they had personally seen conjurors ‘soften the ground’ without any apparent means of performing the wonder. On this account, the theory of suggestive hypnosis seems the most acceptable one.

Religious cannibalism appears also to have existed among the Wabanakis. In one tale, the High Wizards eat the murdered comrade, evidently with the idea of absorbing into themselves some or all of his power. As is well known, the Fijia and the New Zealand Maoris often ate their enemies with the same object in view; viz., to become as brave as the fallen foe had been. All authorities tend to show, however, that cannibalism was extremely rare among the American races, and was resorted to only in isolated cases such as the one here noted. In one Delaware tale, the wizard, who is also an evil spirit, desires to devour a very old worn-out man. This seems to be a relic from primitive times, when it was probably not unusual to devour the aged, perhaps for a double purpose: both to get rid of them, as was the case until recently among the islanders of Tierra del Fuego, and also possibly to absorb sacramentally into the living members of the family the essence of the dead parent, whose soul is thus prevented from becoming entirely extinct.

Especial attention should be called at this point to the remarkable prevalent among the Wabanakis regarding the cohabitation of women with serpents (Kulóskap, p. 225). Such a conception may seem strange, coming as it does from a land where there are no evidences large enough to warrant such a superstition. Although involving the risk of seeming fanciful, the present writer deems it not impossible that we have in these hideous tales some relic of far distant pre-historic days when human serpents were not unknown. It should be added, moreover, that in every case of such sexual relations between serpents and human beings among the Wabanakis, the serpent was always a wizard in disguise,—a fact which shows that, in the later superstition at least, the unusual character of such monstrous serpents was fully appreciated.*

It will appear evident from this sketch of the religious ideas of the Eastern Algonquins, that the legends of these people are well worthy of preservation, from the point of view of poetry and of science. Mr. Leland, in his preface to Kulóskap the Master (p. 14), remarks on the very common reproach of Europeans, that Americans have a land without ancient legends or song. He adds: ‘Nature so far from impeding, rather aids when we had in our lap a basket full of treasure which we would not take the pains to open.’ The fact is that almost every hill and dale of New England has or had its romantic native legend, its often beautiful poem or curious myth. Many of these fancies have disappeared for ever through the deliberate ignorance of the average white settler, who even to-day, when the Indian has almost vanished from the land, is inclined to preserve the old Indian Eskimo as if he were a dead Indian.’ Rand’s Legends of the Micmacs (New York, 1894), Leland’s Algonquin Legends of New England (Boston, 1885), Kulóskap the Master, and the present article must perhaps suffice, then, to present to the English-speaking public a few interesting and characteristic specimens of the religious traditions of the rapidly disappearing race of the Wabanakis,—a race which, fifty years hence, will, in all probability, have hardly a single living representative who shall know its language or lore.

*It may be noted that similar marital relations between serpents and mankind, though generally with a different motif, are found not only among other stocks of North and South America, but also in Europe, Asia, Africa, and Polynesia (cf. MacCurleoch, The Childhood of Fiction, London, 1905, pp. 263-259, 264-257).
ALGONQUINS (Prairie Tribes, viz. the Kickapoos, Pottawatomies, Sacs, and Foxes). These tribes, with their Algonquin allies, the Chippewas, and their Siouan friends, the Osages and Iowas, have their strongest bond of union in their return, between the years 1830 and 1884, to their ancient beliefs. Many of them had been, in name at least, Roman Catholics, but they were Presbyterians and Methodists, though all, except the Pottawatomies, revered the clan totems as saints, and all continued to wear their medicine-bags, and to guide their actions by their dreams. Those who remained heathen in name, we deemed to have forgotten the old gods, and merely showed a superstitious faith in the power of their "medicine," as their fetishes were called, the incantations of their shamans or wizards, the "warnings" of their dreams, and a vague impression that somewhere, above the firmament or in the bowels of the earth, dwelt a company of immortal, gigantic animals—the totems, or ancestors—from whom the various clans of the tribes were descended.

As early as the middle of the 17th cent., the Jansenists endured every sort of hardship and danger to convert these peoples, who, at that time, were living at the head of the Green Bay of Lake Michigan (Parkman, La Salle and the Discovery of the Great West, p. 34), and they had some reason to believe that they had succeeded. In 1673, Father Marquette wrote that, when he and M. Joliet went among the tribes of the Green Bay Indians, he was rejoiced to find in one of their villages a great cross set up, adorned with white skins, red girdles, and bows and arrows, as votive offerings (Marquette, A Discovery of some New Countries and Nations in the Northern America, printed as an appendix to Hennepin's America, p. 323)—a proof to him of the success of the mission of Alouez and Dablon, established in 1669-70. Hennepin, the Franciscan friar, had, however, not much confidence in these conversions. He aver's that these 'salvages' would 'suffer themselves baptized six times a day for a Glass of Aqua Vite or a Pipe of Tobacco' (America, pt. ii. p. 56), and adds this statement as to what they really did believe: "Some of that, if they were acquainted with the Sun for their God... Others will have a Spirit that commands, say they, in the Air. Some among'em look upon the Skie as a kind of Divinity, others as an Otkon or Manitou, either good or evil. They think there is a Bone oppresed with such defects, and serve instead of Prophecy, Inspiration, Laws, Commands, and Rules, either for undertakings in War, Peace, Trade, or Hunting. Nay, they are a kind of Oracles in their Eyes. You would say, to see'em at their Devotion, that they were of the Sect of the Pretent Insipid. The Belief they have in their Dreams imposes upon them a kind of Necessity of believing likewise, that they are forewarned by an Universal Mind of what they ought to do or avoid. Nay, this Infatuation, or superstitious Delusion, which is supported by their People, was surprized by the Sioux and exterminated. From the setting of the sun till its rising all lay dead, but when its beams fell on the Woman—her name is too sacred to be spoken—she revived, and heard a voice saying to her, 'Get up and take the drum.' When this command had been four times repeated, she rose up and found a drum and twelve drumsticks beside her. She took a stick and began to beat on the drum, and immediately the other beads began to beat it also, and they played the drum. At once her strength was restored, and her scalp-lock, which had been torn away, was renewed, a most important miracle, as the soul is supposed to be in the small bulb which lies at the roots of the scalp-lock, and one is a slave in the spirit land to the holder of the scalp. Then the voice...
spoke again. 'Go to the other hand of the Chippewas and to all who will be my friends;' so she set out, travelling night and day, feeling no need of food or rest, and listening to the instructions of the Voice. Thus she travelled for eighty days, at the end of which time she reached her people, called them together by the roll of her drum, and told them that Geechee Manitou wished them to take leave of the gods of the white people, politely, and turn again to him. He desired a dance house built for him, and a dance, to be called the Remembrance or Religion dance (One-wom-een-ee), to be performed in it by strong young men, without physical blemish, who had practised, prayed, and denied themselves all pleasures for eighty days. This dance was to continue four, seven, or twenty-one days, to the accompaniment of the drum and songs of praise to the Manitou (pronounced 'mani-toh' by the Indians), while all the people feasted and made offerings of the smoke of tobacco and the steam of cooked food, beginning with the offering of a white dog. In addition, all the old customs were to be revived, and an effort was to be made to induce all other Indians to conform to them again. When the people had purified themselves by fasting and by being sweated in the sweat-lodge, they were given to drink a potion which is heated and then drenched with cold water to produce a vapour in which the devotee stands naked to have the devils that produce disease or wickedness sweated out of him while he recites his prayers. At this time, she had taught the Gechee Manitou by prayers and praises, she taught them the Religion dance, put them in mind of some forgotten beliefs, and then disappeared, no one knew where; nor did she return to the world, according to the custom of her people. As a result, there was a great revival of old practices, to which they invited their relatives the Pottawatomies, who in turn proselytized the Kickapoos and their friends and neighbours, the Osages, Sacos, and Foxes. A little later the Sacos won over the Iowas and Otoes, but in spite of strenuous efforts they have never been able to add any other Siouxan tribes to this coalition.

Besides Geechee Manitou, these tribes believe in other great gods. He is the first, the creator, and he lives in a golden boat, which we call the sun. Meechab Manito is the god who lives in the cold, wet, slippery cavern in which the souls of the wicked wander and shiver for ever. He is the beneficent god in this life, he is the father of an innumerable number of devils that produce war, pestilence, famine, aches, pains, quarrels, and all other ills of body and soul. Some of these are the offspring of witches with whom he has consorted; others sprang from his breath, his sweat, his saliva, even his words and the scent of his footsteps. The Brothers, 'twin sons of the woman who fell down from heaven,' spend their time, one in ruling over the happy hunting-ground, or place of the happy devil; the other in sailing in the moon through the sky and the month, et cetera, at the year in which he divides his business being to show the good their way to the happy hunting-ground, and the bad their way to the cavern of Meechab Manito. These Brothers lived a long time on earth, destroyed many devils and wizards (some tribes were in the world before these two gods, and had become very wicked), received additional physical and spiritual power from the totems, founded the Fox tribe, and then took their way—one to the spirit land, the other to the road that a man clothes having a white face. The reason the world was this: on account of the good works of the Brothers, the devils and wizards endeavoured to destroy them, and succeeded in killing the younger, Cold Hand; but when the elder, Hot Hand, mourned so terribly as to flood the earth with his tears, and draw it, which had hitherto been flat, into hills and valleys by his sobs, the devils and wizards, terrified by the commotion, worked four days and nights with their enchantments to 'make the dead alive.' When he was made alive, he went to his brother, but Hot Hand was not pleased. He said he was ashamed, because he had been heard to mourn so terribly, and he went into his wigwam and shut Cold Hand out. Presently he thrust forth a kettle, fire-sticks, tobacco, and a whistle to call ghosts. Cold Hand took these things and went away. He sat down on the edge of the world to dream. When he came out of his dream, he 'made a place for good souls. Before that they had no place; they blew about in the wind. Since that time, death has been better than life' (M. A. Owen, Folk-Lore of the Musquaque Indians, p. 15).

The totems are patron saints. Each clan or subdivision of the tribe is named from the giant animal from which it is supposed to be descended. Judging from the old legends told by tribe historians, all the tribes at one time had many clans, each with its clan Secret Society which did homage to its totem, as its shamans or medicine-man directed; but so many clans were exterminated by their wars with white ances, that the totem system is only a memory, and in others there are many more sticks to the sacred drum than there are drummers to hold them—each clan having but one drummer playing at a time.

The hereditary chief is the high priest of the faith, nominally, but he does nothing without first consulting the shamans, who are presidents of the special societies, prophets, physicians, and exorcists all in one, besides filling some other offices (referred to by Hennepin as sacs) as well. A shamans is much like our ministers, and is supposed to possess an infinite number of malignant devils and sprites, as well as vampire ghosts, which are always on the alert to do mischief except when rendered torpid by extreme cold, and as only the shamans know the secret of casting them out or spell-binding them, it will be readily comprehended that, so long as the ancient beliefs prevail, the shamans will be the real autocrats of the tribe. Generally speaking, a son succeeds his father, as the heir-apparent in the totemship, but sometimes the son is not clever enough to be a shamans; in that case, any boy in the clan may be selected to be trained, thus keeping the succession in the family, as everyone in the clan is related. Some day, a boy is found in another clan, the shamans takes possession of him, and, in rare cases, a boy has been brought from another tribe. In the latter case he is adopted by a member of the shamans's tribe who has lately lost a son of about the same age.

The white witches of the tribe are the 'women-with-spots-on-their-faces.' These spots are round dabs of vermillion, and each one stands for a Religion dance given for the man with spots-on-the-face, or puberty, by her father. These dances and the severe usage to which she is subjected from a very early age, make her a healer and a bringer of good fortune. She insures safe delivery to women in childbirth, not by being present, but by chanting and praying at a distance, or refusing to hear all entreaties to be present; she names the newborn infants after something that belongs to the father's clan (this is the real name, not much used, not the nickname given from some exploit or peculiarity); and that most important, she indicates that in some cases the safety of the woman; any one with whom she is friendly is lucky, any one with whom she is unfriendly may look for misfortunes.

The ceremonial of the faith may almost be described by a word—'dancing.' There are fasts,
prayers, and hymns before dancing, and feasts, prayers, and hymns during dancing; these are parts of the same thing. There are dances for planting and dances for harvest, dances to bring rain and to cause it to cease, for peace, for war, for puberty, to restore health, and to honour the dead, totem dances, and dances for every great event in the life of a person; and the Kickapoo has kept birth, marriages, and the too frequent divorces.

Kickapoos.—The Kickapoos consider themselves foreigners. ‘This is the only tribe among all our Indians who claim for themselves a foreign origin,’ says the Rev. Father Allouez, of the Indian Department, Washington, U.S.A., speaking of the Shawnee tribe, of which the Kickapoo is a division.

‘Most of the aborigines of the continent believe their forefathers ascended from holes in the earth; and many of them assign a local habitation to these traditionary places of the nativity of their race; resembling, in this respect, some of the traditions of antiquity, and derived, perhaps, from that remote period when barbarous tribes were troglodytes, subsisting upon the spontaneous productions of the earth. Their father had no name; nor ancestor the name of a foreign land, which, for some unknown cause, they determined to abandon. They collected their people together, and marched to the seashore. Here various persons were selected to lead them, but they declined the duty, until it was undertaken by one of the old men of the tribe; he was the head of the procession, and walked into the sea. The waters immediately divided, and they passed along the bottom of the ocean until they reached this “island” (M’Kenney, North American Indians, vol. ii. pp. 293–294). This writer goes on to state, what the traditions of the Kickapoos confirm, that the Shawnees were, in their days of power, divided into twelve tribes, and these again into ‘families,’ such as the Eagle, the Turtle, etc., each named from its totem or ancestral animal; but two of the tribes were annihilated, six were merged, and four kept their names and tribal government. These four were the Kickapoos, Pickaways, Chilicothes, and Makostakes.

It is not known exactly when these people were driven, by the Iroquois, some of whom were as far back as the Savannah river, nor is it known when they left that region and separated the tribes. In 1673, Father Marquette found the Kickapoos on a river which passed into the Bay of Puans (the Green Bay of Lake Michigan, as it was then called, the Lake of the Illinois), and he refers to Father Allouez as having a mission among them. He adds that, in comparison with their neighbours, the Miami, they are boors (Marquette, A Discovery of some New Countries and Nations in the Northern America, in Hennepin’s America, pt. ii. p. 323). On Hennepin’s map, published in 1698, they are north of Lake Winnebago, but, in his account of the retreat of Tonti when he was endeavoring to land his large party at La Salle after the destruction of Fort Crèvecoeur (A.D. 1680), he speaks of their home as being on the west side of the Bay of Puans (America, pt. i. ch. 75, headed ‘The Savage Kickaupou muturvh Father Gabriel de la Rihet, A Recollect Missionary’), though bands of their young men were wandering in the south-east in the hope of surprising small companies of their enemies, the Iroquois. Hermann Moll’s map, published before 1716, shows them on the west side of the bay. In 1763, when they were engaged in the conspiracy of Pontiac to form a federation of all the Indian tribes with the intention of preventing the encroachments of the whites or destroying them, they were living on the Miami and Scioto rivers (Parkman, Conspiracies of Pontiac, vol. ii. p. 188 and map). Colonel Bouquet reported, when he had forced the Indians to sue for peace (1764), that the ‘Kickapou’ had three hundred warriors and a total population of fifteen hundred. He placed them on the ‘Ouabache’ (Wabash) river (19th Annual Report of the Bureau of American Ethnology, p. 1108). On May 22, 1804, Captain William Clark, of the Lewis and Clark Expedition, wrote as follows: This tribe resides on the heads of the Kaskaskia and the Wabash rivers, on the other (east) side of the Mississippi, but occasionally hunt in Missouri’ (Elliott Coues, The History of the Lewis and Clark Expedition, vol. i. p. 7); but this could have been but one band of them, for, in 1808, the Po’or and Kickapoos, led by Tecumseh and his brother, the Prophet, a tract of land in Indian, lying along the Tippecanoe river. These two most distinguished Kickapoos, Tecumseh, or Flying Panther, and the Prophet Ten-skwataw-waw, endeavoured to form a confederacy like the one Pontiac projected, and, in 1811, became engaged in a war with the whites, which terminated disastrously for the Indians at the battle of Tippecanoe, much to the surprise of the red men, who had believed that the incantations of the Prophet would assure them the victory. In the war of 1812, Tecumseh and his people joined forces with the British (Eggleston and Seelye, Tecumseh, chs. xxii.–xxxiii.). Catlin visited the Prophet and his people in Illinois in 1831, but his map, printed in 1840, shows them on the west side of the Mississippi river. During the Civil War, one band, with a contract of Pottawatomies, went to Mexico, but have since returned. Smithsonian Report, pt. ii. p. 185, states: ‘Kickapoos at Pottawatomie and Great Nemaha Reservation, in Brown County, Kansas, August 20, 1885, 235. Kickapoos, Mexican (mixed band with Pottawatomie), Indian Territory, 346.’ The numbers are at this time much smaller, so that the report of the Commissioner for Indian Affairs for 1901 gives the number of Kickapoos in Kansas as 199, and of Mexican Kickapoos in Indian Territory as 221. It is a dying people.

The Kickapoos are sickly, melancholy, and severely religious. In addition to a dance house, they have a ‘house of silence’—a wooden structure which was built, as a chief was commanded in a dream, in silence and fasting. It is used for prayer and praise, but not for dances. Another revelation of late years causes them to flog their children for misdemeanours—something unknown in others. It was originally applied only at puberty as a trial of endurance. A flogger is chosen once a year by lot, and his duty is to make the rounds of the wigwams every Saturday with a mask over his face. In consequence, no one is at home on Saturday but the culprits; the rest of the family sit in the bushes on the river bank and weep. The culprits do not weep during this (supposedly) religious exercise. These people have but one council-fire and one set of totems. This refers to the Brown County Kickapoos, not to the Mexican, who are considered Pottawatomies. They pay more reverence to the Rain Serpent than other Indians, and this may partly account for their sickness, since their reservation is so infested with venomous reptiles as to render cattle-raising almost an impossibility; in consequence of which their staple flesh diet is pork. (It is well known that the bite of a serpent has no effect on a hog). As an antidote for themselves and their ponies, they make use of a tea and wash of infused leaves, roots, and blossoms of the arrow-leaved violet (Viola sagittata). It was once a maid, sister to Rattlesnake, and as good as he was wicked; whomsoever he poisoned, she healed. In rage at this he killed her. Geechee Manitou, compassionating her and those she could befriend, changed her into this healing plant. It grows wild
Another cause of their inferior physique may be their marrying in the clan—something contrary to the religious scruples of most other Indians. Their tribal name means 'smooth,' and undoubtedly runs in some stream by which they have lived, and not to their tempers.

Pottawatomies.—These people have no legend of ever having lived anywhere but in the north-west. The French missionaries and fur traders found them, during their first explorations, in what is now the state of Michigan. Early in 1600 the Pottawatomies were occupying the lower peninsula of Michigan, in scattered bands, whence they were driven westward by the Iroquois, and settled about Green Bay. The French acquired much influence over them, whom they joined in their wars with the Iroquois (Smithsonian Report, 1885, p. 135). The Jesuit Relation, 1655, refers to them as being the nearest tribe to the settlement of St. Michael, near the head of Green Bay. A band of the Pottawatomies joined Marquette when, in 1674, he set out to found a new mission, the Immaculate Conception, at the principal town of the Illinois; and it was the Ottawas, the elder branch of this family of Indians, that, in 1676, carried the bones of Marquette to St. Ignace. Early in 1678, thirty canoes, and took part in the funeral services (Parkman, La Salle and the Discovery of the Great West, pp. 68-71). It is evident, therefore, that the Pottawatomies are considered Christians; but when they joined in Pontiac's conspiracy, many a hundred years later, reliable witnesses declared that they ate the bodies of their most valiant enemies. Again, in the war of 1812, they were guilty of the same practices. One of the best attested instances is that of Captain Wells, who was killed in the capture of Chicago in 1812. This man, who had been a long time among the Indians, having been taken prisoner by them at the age of thirteen, had acquired a great reputation for courage, and his name is still mentioned as that of the bravest white man with whom they ever met. He had almost become one of their number. . . . At the commencement of hostilities . . . he sided with his countrymen. Wells was killed. . . . His body was burned, and his head was the most certain spell for courage, and part of it was sent to the various tribes in alliance with the Pottawatomies, while they themselves feasted upon the rest. . . . Mr. Barron has seen the Pottawatomies, but were defeated the following year by the whites, and their wars continued until the end of the century. . . . Among some tribes cannibalism is universal, but it appears that among the Pottawatomies it is generally restricted to a society or fraternity, whose privilege and duty it is, on all occasions, to eat of the enemies' flesh; at least one individual must be eaten. The flesh is sometimes dried and taken to the village. Not only are the members of this fraternity ended with greatest care, but it is imparted to them, by means of spells, to any individual they wish to favor (W. H. Keating, Keating's Narrative, compiled from the notes of Major Long and Mesers. Say, Keating, and Calhoun, vol. 1, pp. 102, 103).

Since Keating's narrative was written (1825), missionaries have again laboured among these people, and with considerable success. Among those who still cling to tribal life there are Methodists, Presbyterians, and Roman Catholics, as well as worshipping the Manitou in a form possibly impossible for them to be the reason the tribe did not increase in numbers more rapidly, for their adversaries quickly retaliated. The Outagamie or Fox town was almost deserted (Carver, Travels, pp. 46-49). Both tribes were too busy fighting the Sioux and Chip-
pewas to take part in the war of the Revolution, but the Foxes and part of the Sacs were on the side of the British in the war of 1812. The same division took place in the Black Hawk War (1831–32), when the band of Sacs under Keokuk refused to fight the U.S. There are at the present time between four and five hundred Sacs in Indian Territory, who recognize Keokuk (Keokuk) died in Aug. 1903, and about two hundred in the Pottawatomie and Great Nemaha Reservation, in Kansas, under Margrave, a Pennsylvanian German, to whom they gave the place of the war chief, deposed for drunkenness. The Foxes are at Tama, Iowa; a small, rich tribe, numbering scarcely more than three hundred, if we exclude visiting Pottawatomies. As to this division, the agent wrote, August 1855: 'Our Indians, the Sac and Fox of the Mississippi, disclaim any connection whatever with the Sac tribe, and claim most earnestly that they are Foxes only.' Later, the Sacs expelled the few Foxes in their midst. The Sacs are more agreeable than pious, the Foxes more pious than agreeable. The Sacs are also more fun, the Foxes the last affectionate to their dignity. The Sacs are stalwart, and with a leaning towards civilization; the Foxes sickly, and with a profound regard for the wisdom of their ancestors.

The Sacs have eight totems from which they are descended. The Foxes have ten totems from which they are not descended, since they trace their lineage to a boy and girl, one of whom came from the shoulder of one of the Brothers, the other from the side of his twin. Saukie is said to mean 'yellow clay,' while o-saukie means 'mouth of the river,' and O-ke-gan means 'red clay.' Musquakie, the name by which the Foxes call themselves, means 'fox.'

MARY A. OWEN.

ALALLAH is the proper name of God among Muslims, corresponding in usage to Jehovah (Jahweh) among the Hebrews. Thus it is not to be regarded as a common noun meaning 'God' (or 'god'), and the Muslim must use another word or form if he wishes to indicate any other than his own peculiar deity. Similarly, no plural can be formed from it, and though the liberal Muslim may admit that Christianity is a religion 'upon Allah,' he could never speak of the Allah of the Christians or the Allah of the Jews. Among Christians, too, a similar usage holds. In the current Arabic Bible versions, 'God (الله) is used singular, and 'The God' (الله) occurs, it is rendered ar-rabu-l-Illah, 'the Lord, the Ilah,' where 'the Ilah' is an uncompressed form, retaining its force of a common noun with the article, from which Allah has been derived. The Muslim usage, the Muslim, too, who usually derives and explains Ilah, 'worshipped,' uses it and its plural Allah in the broadest way, of any god, explaining that such is possible because worshippers believe that their god is Allah alone, to which many, almost all, asnām, āthān, refer. The origin of this goes back to pre-Muslim times, as Prof. Nöldeke has shown below (Art. ARABS [RELIGION OF THE ANCIENT]). Muhammad found the Meccans believing in a supreme God whom they called Allah, thus addressing their god. With Allah, however, the chiefs worshiped other minor deities, some evidently tribal, others called daughters of Allah. Muhammad's reform was to assert the solitary existence of Allah. The first article of the Muslim creed, therefore, —La ilāh āthān—all Muslims, according to God's teaching, there exists no god except the one whom you already call Allah.

Naturally, this precise historical origin is not clear to the Muslim exegetes and theologians. But that Allah is a proper name, applicable only to their God, is more or less universally admitted, mostly recognizing that its force as a proper name has arisen through contraction in form and limitation in usage. At-Tabari (d. A.H. 510 = A.D. 923), the greatest commentator on the Qur'an, divides the consonants are a little on the word. He gives only one derivation, namely, that it means 'the worshipped,' the second meaning of the contraction of the Syriac ḥādh (i.e., 'the worshiped'), proving the existence of such a root in Arabic, and the possibility of the contraction of the Arabic āthān to Allah (Tafsir, i. 40). The Syriac derivation is apparently neither the etymological nor the paleographical, and this question had become important for his time. It is very different in the next greatest Qur'an commentary which we have, that by ar-Razi. The great systematic theologian (d. A.H. 583 = A.D. 1209) he deals with it twice, in one passage considering whether God can have a known proper name (Muqaddas al-Dawlah, i. 61), and in another, the meaning, derivation, etc., of Allah (i. 35 ff.). The first position, he says, the earlier theologians desired. The objection is then raised, the thing named from other things; but if the thing named could not be known, as in the case of the peculiar essence of God, there was no use for the name, it signifies knowledge of Himself to some particularly chosen beings. He might have a name for them. As this name, then, would be the greatest of all names, which know no division, things and beings, material and spiritual. It would be, in fact, the Most Great Name of God, the ineffable name of the Jews, by which miracles could be wrought, and of which Muhammad had evidently heard. That such a name exists ar-Razi believes; traditions from Harun, that of true God and also, is well known, though not in the Arabic in the time of Muhammad as a plain Arabic word, and as such much accepted. Of the others, who say it is a name used in religion, and those who derive it are of two schools, on which reference to Lane, Lexicon, pp. 889ff., will suffice.

4. Broadly, Allah is used most frequently in the first instance, al-āthān; but the latter can by extension be applied to any god, as Allah Himself applies it in the Qur'an. Thus, of course, is a complete reversal of the historical fact.

5. Certain peculiarities of this Divine Name which distinguish it from all other names or gods: e. g., it is the only name, it remains continuous significant for God, and the formal confession of the Muslim faith consists not in applying only to this name, and not through any of the descriptive epithets, such as the Merciful One, 'The Holy One,' etc. With the Qur'an commentary of Balbawi (d. A.H. 685 = A.D. 1288) we reach a serious step. In the hadiths, e. g., for example, in the name of the Prophet, az-Zamakhshari (d. A.H. 538 = A.D. 1148) —a combination of rationalism and precise grammatical and lexicographical interpretation—it has no room for a priori theories or dreams of a wonder-working name. Allah is a contraction of al-āthān and has come to be used as a proper noun did not have this in origin. A number of possible derivations are given with examples of such transformation. It is shown that God's existence in itself, taken in most respects, real or imagined, is unintelligible to mankind, and so cannot be expressed by a separate word, even though especially revealed to His saints, as ar-Razi suggests; nor does it involve 'shir' in the theological sense, one thing having part in another; it means names have part in a common idea and formation. The Syriac derivation is mentioned without criticism.

Other commentaries give modifications only of the two atti
tudes of ar-Razi and al-Baidawi. Thus Abu-s-Su'ud (d. A.H. 982 = A.D. 1574) paraphrases and elucidates al-Baidawi. The following statement from him (margin of Miftāḥi al-shabāb, i. 19) shows how far such interpretation could attain: 'Know that what is meant by the negation in the first article of the creed, I.e., He is the rightly worshipped One, and the sense of that article of the creed is, 'No right worshiped individual exists except that rightly worshipped One. In this way only we are to regard the gift of the god for his name (Plutarch, which

ALLEGY, ALLEGORICAL INTERPRETATION.—The word 'allegory' is derived from the terminology of Greek rhetoric, and means primarily a series of metaphors ('Iam cum fluctuerunt plures tralationes, alla plane fit oratio. Itaque genus hoc Graeci appellant 'Doragwlos' a Dio, Orea, iii. 166). Seeing that the later classical poets studied in the schools of rhetoric, it is not surprising that Horace, in the ode in which he compares the State to a ship (Od. i. 14), had an allegory in view, as is recognized by the rhetorician Quintilian (viii. 6, 44). Thus we see that the conception of allegory as formulated in rhetoric, and, owing to the close connexion between ancient rhetoric and hermeneutics, as used also in explaining a work of literature, has a rather narrow range. The meaning of the word 'allegory' has been extended to mean a wide sense which it has to-day when we speak, for instance, of allegorical figures in art. On the contrary, we must keep in view that allegory is a form of representation which a reader or hearer of the work is invited to bring to his mind, and his part is to do with the actual truth of the matter, and for the most part springs from the natural desire to conserve some idea which, owing to its age, has come to be regarded as sacred.

These remarks are necessary for the proper understanding of allegory among the nations of antiquity. It is a misuse of the word to find in Homer and the poets of the subsequent period unconscious allegorical ideas, as is done, e.g., by Decharme (La critique des traditions religieuses chez les Grecs des origines au temps de Plutarque, xvii. 94; of these plays see in Homer (II. ii. 426), in Archilochus (Fragm. 12), or in Sophocles (Antig. 1907) of ἤφαιστος for fire is neither allegory nor a conscious substitution of the gift of the god for his name (Plutarch,
ALLEGORY

Quom. adol. poet. and. deb. p. 2Zab), but a direct identification of the god with his earliest form of earthly manifestation. Hephæstus is here, to adopt Ússer's terminology, the 'divinity of the moment' (Gotternamen, p. 270 ff.). A similar explanation must be given of the Cyclops—Brontes, Steropes, Arges (Hesiod, Theog. 140), and of Scaenius, Scaeus, and Scaenius Dionysus in Homer and stream, as well as of Uranos, Gaia, Demeter, Chaos, etc. There are figures, which in the later evolution unite themselves to the elementary divinities, whose names and natures are identical, e.g., Íris (Hesiod, Theog. 761 ff.), Hesper, Hesperides at Ephesos (Hesiod, Op. 16, 24, 28, 804, Theog. 225, etc.), Phobos, Deimos, Kydnos (Ili. IV. 440, xiii. 299, xiv. 119, v. 593, xviii. 555), Zelos, Nike (Hesiod, Theog. 384), and others. Only the most superficial consideration, however, can call such a usage allegorical. It is simply owing to the difficulty we have in analyzing such a pantheon of abstract conceptions and such a theology, and for want of a better term, that we call them personifications. It is quite impossible in such cases to speak of an allegorical explanation of the word itself and the gods it dealt with in the allegorical reinterpretation of such a figure as the personification of the birth of Zelos, 743, 5-54), Diomedes, Ode 11, 20; and cf. C. Pfleger, Stüd., p. 209, 25), it may be mentioned in passing that in the person of Crates of Mallus this method of explanation is saved the old tradition, but it is not, properly speaking, allegorical. In the place of a sable fable we find a new and no less silly myth. Such a proceeding, however, is not allegorizing (cf. also Decharme, Lc. 295).

Up to this point we have constantly spoken of 'allegory', as if this expression were found in the philosophes themselves. This is, however, by no means the case. We find a number of writers giving allegorical interpretations, who never use the word itself. For instance, when used till 'allegory' occurs in the 1st cent. B.C. (cf. Cicero, Orator, 94 ; Plutarch, Quom. adol. poet. and. deb. p. 19 f.), it was ἱρώτοαν. Thus Xenophon uses the word in the well-known passage of his Symposium (iii. 6), where he adduces Stesimbratus of Thasos and Anaximander (cf. Plato, Ion, 530 D, who mentions Glaucon by the side of Metrodorus and Stesimbratus) as teachers of Antisthenes in this method of explaining Homer. As a matter of fact, the Cynical school had with conscious purpose reduced the allegorical interpretation of Homer to a system. The writings of Antisthenes were largely occupied with the poetry of Homer and the figures it contained (Diog. Laert. vii. 1, 171) ; and we learn from the fifty-third oration of Dio Chrysostom (p. 278 B), that he distinguished in Homer between ἵππος and ἵππων, and that he allegorized the poet (cf. Schrader, Lc. 387 f.; Dio Chrysost. viii. 283 R; Xenoph. Memor. i. 3. 7; Dümmler, Antisthenes, 22 ff.) in spite of their utter denial of the existence of a plurality of gods, and their emphasis on the rejection of the figures of Homer by the Cynics were quite unable to free themselves from the spell of the Homeric poetry. Plato is the opponent of Homer and Antisthenes; he often treats with playful sarcasm the attempts of the 'great Homer exegetes' to interpret the gods allegorically (Cratylos, p. 407 A, Plut. Phdr. 229 Ö; Repub. 378 D, where again the word ἱρώτοαν appears).

Thus the beginning of a system of allegorizing had been made. The Stoics undertook its completion, and their views passed on later to the Jews and the Christians, and thence more or less directly to our own time. The passage from Dio referred to above mentions the Stoic Zeno as the follower of Antisthenes in his method of explaining Homer, and the pupil of the founder of the Stoical school bear witness to his allegorical point of view (Arnim, Stoicorum veterum fragmenta, i. pp. 43, 167 ff.). Chrysippos, the head of the Stoical school, has, of course, taken great delight in working out this method. Zeus is for him the Logos, who orders all things; he derives his name from his life-giving activity (ὥς). Male and female virgins do not exist: Ares is the water, the river, the air, the earth, Zeus ether, Heroes reason. Almo-i- t-he all the names of the gods suggest such an interpretation, at ραπαθος comes from poison, Hecate from fire, onie, religious questions excited in Athens in the middle of the 5th cent., how, for instance, Aristophanes ridiculed the new doctrines of philosophy (Nub. 326, 380 ff.), and we remember that the rationalistic historians from Hecateus and Herodotus onwards have stripped the old miraculous legends as far as possible of their supernatural character, it is easy to understand that a related, if not an entirely identical, movement had to make itself felt in poetry as well. Euripides, the pupil of Anaxagoras (cf. Fragm. 487, 839, 877, Naučk), is by no means an allegorist, although he, too, resolves Zeus into ether (Troades, 884 ; Fragm. 941). The true allegorist, as we have seen, has a fixed system. The poet Euripides, moved as he is by doubts, appears now as a believer, and again as a skeptic. In his later years he wrote the Bacchae, in which he gives a purely rationalistic explanation of the birth of Deimos, 733, 3-51) of the Stoics (cf. Chrysippus), but we may mention in passing that in the person of Crates of Mallus this method of
interpretation extended itself to the exposition of Homer as a whole (Wachsmuth, de Gratete Mallota, p. 62). Two unsatisfactory though not uninteresting writings which are still extant, the Allegoriae Homericae of Heraclitus and the Theologia Graecorum compendium of Cornutus, prove to us that the allegorical method of explanation was not only capable, as far as new, of treating Homer, it also had the merit of not exceeding the allegorical method of interpretation is capable. Of the two, Heraclitus is the less annoying; he at least has some feeling; he hates Plato and Epicurus (cap. 4), in fact all those who syncretistic enthusiasm admired of his beloved Greece. Accordingly, he endeavours to meet the old objections raised against the weakness and sins of the Homeric gods.

Thus the chief of Anti-christ (II. iii. 277) is explained as the union of the elements (53); the hurling of Hesiodus through the air (I. 692) signifies the earthy fire, which is weaker than the heavenly flame (thus Hesiodus is πρόως); the wounding of Aphrodite and of Ares (v. 356 f., 358 f.) is to be understood as the defeat of the barbarian army (ἀποτροπὴ = ἀποκλεῖσθαι), which sends forth unceasingly noises (30, 31); the union of Aphrodite and Ares (Od. viii. 208 f.) is in the combination of love and strife in harmony. These interpretations are so general that they even applied this line of thought is Carneades, who practically advocated the views of his teacher, Arcesilas; his attack is contained in the third book of Cicero's de Natura Deorum, and in Sextus Empiricus, adi. Mathem. ix. He regarded the interpretation of the myths as entirely meaningless, and reproached the Stoics for regarding as wise the inventors of such unspeakable stories (Cicero, I. c. iii. 24, 62).

The Epicureans expressed themselves to the same effect; they refuted all these allegorical gods of the Stoics, but not so much by, as much as the great majority of the church. The Wisdom of Solomon is under the influence of Plotinus, and the allegorical interpretation of the Jewish law is found in the letter of Aristides (§ 143 ff.). Just as symbolical explanations occur among the Essenes (Philo, Qum. or. prob. lib. ii. p. 468, Mangey). Philo, however, is the chief representative of this direction of thought. Attempts have been made to trace back his allegorical exegesis of the Scriptures to the Haggada. And this much, at any rate, is certain, that there was before Philo made under the same method of explanation, for he frequently refers to such expositions of the Old Testament.

Those 'physicists' had explained Abraham as the θεός, and Sarah as virtus (Philo, de Aedr. ii. 15, Mangey); again, the king of Egypt was the θεός as ruler of the body (de Jos. ii. p. 63, Mangey); they interpreted the rise of the Passover as referring either to the purification of soul or to the creation of the world (de Sepheon, i. 291); and in this way a number of Scripture passages obtained a moral interpretation (e.g. On 219, Dc 391; Dc 491, de Plant., Sec. i. 237; de Spec. i. 290), though they may have been more definite rules for this exegesis (de Somn. i. 621, 611, 664).

But Philo not merely followed in the footsteps of his predecessors; his aim rather was to reduce the world of the allegorical exegesis to a spiritual one. There is no writer who shows more clearly than he the origin of the allegorical method. Philo tells us often of the different attacks which the opponents of the Scriptures, i.e. the Greeks, made on the Biblical narratives. He reprimands the detestable people who express amazement at God's changing his opinion, and writes against them the pamphlet, Quod Deus sit immutabilis; he is well aware that the same persons mock at the tower of Babel (de Conf. Lang. i. 405), smile at the serpent in Paradise (de Mund. Op. i. 58), explain the swearing or wrathful God of Israel as a monster (Leg. all. i. 129; Quod Deus s. imm. i. 282), and make merry over Joseph's dreams (de Jos. iv. 59). This Greek criticism, which lasted from the days of Philo till the fall of paganism, compelled the Jews, and after them the Christians, to give an allegorical meaning, a τρεπόν, to the sacred Scriptures, just as, at an earlier date, it had compelled the faithful among the pagans. But, besides this, by which the Scriptures are best regarded as an allegory (de Jos. ii. 46; here, again, the term τρεπόν is used); the allegorical exegesis is the soul of the sacred text, the literal meaning only its body (de Migr. Abr. i. 450), a comparison which Origen later adopts (see below). The literal meaning of a passage would, according to Philo, lead to absurdity and impiety,—here, too, Origen is his pupil,—and literal obedience to the precepts of the Law would be the preposterous (e.g. Leg. all. i. 439; de Somn. i. 425; de Somn. i. 391; de Spec. Leg. i. 329; de Agric. i. 324, etc.). We cannot here go on to speak of the reasons which, according to Philo, caused the Deity to give such incomplete representations of Himself, nor is it possible to introduce a large number of individual allegories. The history of allegorical exegesis is tedious enough owing to the want of diversity in the method. Accordingly it may suffice to give a few instances, which any one can easily amplify for himself. The book Philo von Alexandria als Ausleger des AT. Pp. 160-272.

Philo recognizes in Paradise the ἀρχαιοτάτος of the soul, in the tree of life the fountain of life, and in the city of Jerusalem the four rivers of Paradise are the four cardinal virtues (de Post. Caini, i. 260; Leg. all. i. 66); Abel is pure without intellect, Seth the virtuous man of fineness (the same kind of plain, in the sand which is imbued with wisdom (Qum. pot. qua. ii. 137; de Sacrif. Ab. et Caini, i. 183; de Post. Caini, i. 341), Enoch hope (Qum. pot. qua. ii. 217; de Prom. and Prom. ii. 410), etc.; Hasar signifies the θεός κατακεκλείσα; Sarah virtus and wisdom (de Cherib. i. 180 f.; Joseph is the type of the statesman (de Jos. iv. 41); his coat of many colours indicates that his political policy is intricate and difficult to unravel (Qum. pot. qua. ii. 192); in the Law (De 219-7) the one beloved is the Scriptur, the other who is hated is virtue (de Sacrif. Ab. et Caini, i. 197) and so on.

Seeing that the allegories crowd in on Philo in such a way, it is natural for him to interpret the same passage in different allegorical ways (de Prof. i. 572); moreover, the same facile hand occasionally changes the text, just when it suits his allegory to do so (Qum. pot. qua. i. 200). The Jewish method of interpretation was carried over into Christian exegesis, although the influence of Philo did not make itself particularly felt till the 2nd and 3rd centuries. Thus St. Paul, as well as the writer of the Epistle to the Hebrews, makes ready use of allegorical exegesis (cf. Gal 4:19; 1 Co 9); and the Epistle of Barnabas, with its search for a spiritual meaning behind the letter, is a product of the Jewish tradition. This need of allegorizing is seen still more plainly in the Apologists.
This is particularly true of Justin Martyr, who interprets a number of Old Testament prophecies in a most daring fashion; thus Gn 49:1, 'he hath washed his garments in wine, and his vestments in blood of my eyes,' means that he will punish the faithful in whom the Logos dwells, with his blood, which, like the juice of the grape, comes from God (Apol. i. 22); when it is said that the servant shall be on his master's right hand (Is 50:10), the meaning is that Christ would be hung on the cross. The Gnostics another day in their Origenian manner not only the Old Testament, but also the New, discovering in the simplest words and incidents ever their 'Demiurgos,' the 'Achamoth,' and their 'Wisdom' (Iren., i. 17. 15; Ch. Influence of Gr. Ideas and Usages upon the Christian Church, p. 75).

The simplicity of the syncretism of the 2nd cent. drew allegory into its circle. When we see Greeks and Christians contending with one another, we become quite bewildered with the confusion of terms. The Apologists unite with the Sceptics in their opposition to allegory (Aristides, xii. 7; Seecberg; Tatian, Adv. Grec. 21; pseudo-Clem. Rom. Hom. vi. 17, etc.); but they themselves calmly use allegorical interpretation. Celsus is perfectly justified in his attack on this method, which he designates as a retreat of shame at the immoral stories of the Bible (Cels. i. 17, iv. 48). But again, Celsus is an allegorist himself (Loc. vi. 42), and so both parties, Greeks as well as Christians, tread the same erroneous path.

Allegory had, in fact, become to the men of this time a religious requirement. Although Irenæus and Tertullian repeat the Gnostic interpretations, yet the method took firmer hold, and, along Philo's lines, developed just as luxuriantly as in the Graeco-Judean empire. The language of Clement of Alexandria, revealing as it does in symbolic pictures, at once betrays the allegorist; but it is not worth our while to go into his individual allegorical interpretations here (Strom. i. 3. 23, vii. 94; Past. ii. 8. 62), as they do not essentially differ from those of other Theosophists. Then, Hippolytus is an allegorist, in the full sense of the term, in his commentary on Daniel (cf. i. ch. 13 ff.), and especially in the Canitics, where the interpretation follows that of the Jewish Rabbi Akiba. Origen gave the allegorical method a kind of scientific basis. He also commented on the Canitics, and here we find allegory, as distinct from allegory, in itself, is not the same as allegorical interpretation. Thus the understanding of Scripture stands in the most intimate relationship to human nature. There are, however, in Scripture all kinds of σκέπασμα, πράσωψις, and historical impossibilities. Origen, well instructed in the heathen polemics, agrees that there could have been many days before the creation of the stars, and that God could not, like a gardener, plant trees or take walks. It was also impossible to talk of God's father from whom Christ hid himself. Then the Gospels, as well as the OT law, contain precepts which are not to be literally followed (e.g. Lk 10:9, Mt 5:22; cf. 1 Co 7:1). And there is no lack of stories which are absurd when taken literally, as, e.g., that Satan brought Jesus to the top of a high mountain (Mt 4:3). Now it would be quite false to reject the whole on account of such peculiarities; on the contrary, where the literal meaning is unworthy of the wisdom of revelation, it is the proper thing to look for the ἐνδοτικός. The σκέπασμα, but not the σκέπασμα, goes through the whole of Scripture; in some passages the latter is impossible. Thus the allegorical wisdom received its academical consecration, and it made little difference that Porphyry, the passionate opponent of Christianity, declared himself against the method (Euseb., Ἐφ. vii. 19. 4), seeing he himself, as is well known, did no better (cf. the case of Celsus, above). A more threatening opposition arose from the Apologists, opposed the heathen allegories, wishes to adopt in the interpretation of Scripture a via media between the Apologists, and, above all, Theodore of Mopsuestia, who wrote, among other works, five whole volumes against the allegorists (cf. for him, Kihn, Theodor von Mopsuestia und Juniuss Africaeus als Exegeten). These men, of course, did not think of bluntly rejecting the pneumatic exegesis as unjustified; they only sought, by calling in question the sole supremacy of the allegorical interpretation, to restore the true oral basis, which was destroyed by the allegorists. This they did by attempting to disclose the typical meaning after having ascertained the verbal significance. But they could not in this way really reach consistency. They held that the allegorical method was, after all, more logical than the exegesis of the school of Antioch, which, in recognising typology and in distinguishing a double meaning in Scripture, again came nearer to the allegorical interpretation, and, particularly by accepting Messianic passages in the OT, made its own position untenable. Theodore himself is the best example of this. It is quite refreshing to learn his opinions regarding the Book of Job and the Canitics (Migne, Patrologia Graeca, lixvi. 697 ff.); the former resembles a Greek drama, the latter a love poem, in which Solomon celebrates his marriage with an Egyptian woman. The Psalms, too, were explained historically by Theodore. But then, again, comes the reaction. Although Theodore does not deny that, e.g., Zee 9:23 refers to Zerubbabel, although he expresses himself strongly against those who interpret one passage as applying to him, and another part as referring to Christ, still he finds a kind of mediation in the thought that a considerable part of the prophetic message is to be understood 'hyperbolically,' i.e. its full truth was first foretold by Jesus (cf. Comment. in Zach. i. p. 554 f. 11). Similarly, he interprets Pr 54 as referring to Onias, but, at the same time, as being αἱκαιροφροσυνή (cf. above, Origen, and Theodore himself [p. 555]) of the sufferers of our Lord. Another excellent example (Jl 22:2) is given more fully by Kihn, loc. cit. 137. Theodore's exegesis continued to flourish in the school of Nisibis, and obtained, by means of Julius Africanus, an entrance into the West (Kihn, loc. cit. p. 215 ff.).

The allegorical method was not emphatically enough combated by this new method, which in the place of the one ἐνδοτικός only set another, notwithstanding the vigour with which the champions of the doctrine of Antioch in thoroughly Greek style carried on the contest. It was now no longer possible to overthrow the method, which had already become far too necessary an element in Greek thought. Gregory of Nyssa seems to have quite made up his mind not to reduce the Scriptures to an allegory (Hexameron, i. p. 6. 45, 46); but then, again, he takes a delight in giving new representations, and gives some himself, particularly in his explanation of the Canitics. Gregory of Nazianzus, who, like all the Apologists, opposes the heathen allegories, wishes to adopt in the interpretation of Scripture a via media between
ALL FOOLS’ DAY

The practice of April Fool’s Day (Orat. xlv. 12), but he also declares: "hominis praeceps et filius regum" (Orat. xxxii. 3).

Allegorical interpretation flourished also in the West. Its rules had been taught at an early date in the rhetorical schools (cf. Jerome, Com. on Ep. ad Gal. ii. 4. 24). Alongside of Hilig, and Antichorius, the great name to be mentioned here is that of Jerome, who lays down the maxim (Comment. in Mal. vi. 255, Migne). ‘Regula scripturarum est ut, ubi usque ad servitutem nostram de futuras textur, for incerta allegorica minores, sed sunt,’ but who at the same time explains Leah as Judaism, Rachel as Christianity (Ep. cxxiii. 13, i. p. 910, Migne), and declares (ad Am. lib. i. 2. 1 ff., vi. 255, Migne): ‘Qui legiit introisse Judam ad Thamar meretricem et ex ea duos filios processerat, si turpitudinem sequatur littera et non ascendet ad decorem intellectus spiritualis, comurat ossa regis Iudaee.’ Augustine here, as in all other departments, occupies a prominent place.

He follows in his writing, de Doctrina Christiana, the seven hermeneutic rules of the Donatist Tychonius (iii. 30), and gives a lively and delightful representation of the duties of the expositor. In spite, however, of the breadth of his view, he too appeals to the old tradition, and says that the letter and the spirit, therefore, we kill our souls when, in following the letter, we subject our intellectus to the flesh (cf. Origen, above). But Augustine in many Biblical passages recognizes not so much an allegorical meaning as a literal one. ‘Scribunt ergo in locutionibus figuratis regula haudiusmodi, ut tantiu veretur diligentis consideratione quod legiatur, donec ad regnum caritatis interpretatio perducatur.’ It requires, however, no more than the seven rules of Tychonius to show us that the allegorical exegesis was threatened with a schematicism which, in a short time, prevailed. Cassiodorus, who in like manner makes use of Tychonius, postulates in his book Institutiones divinarum et secundarum literarum six modes of intelligente, and Eucherius proceeds according to the same example in his Formula spiritualis intelligente, which now furnish us with a copious table of individual allegories. Thus a special meaning is afforded when Scripture speaks of the shepherds, of the diversities pecorum; the winds are sanctus; the shadow is protector divina; the stones are either Christ or ecclesi; roses are martrea a rubeo sapunidia; the raven is migrato; the dove is voluntaria et daemonia; the bull is dominus; the bear is diabolus auro doccit suai; but the wolf and the wild bear are also representations of the devil; the tiger is humanitas interiorem interjecti; the cannon is divers rebus socii omni et moribus diversi.

After winning these triumphs, the Middle Ages fall asleep, and it is impossible for us here to trace the vagaries of allegorical interpretation further. The interpretation, which finds expression in the following well-known couplet, becomes quite a fixed rule:

Littera gesta docet, quod crede allegoria,
Moralis quid agas, quo tendas analogia.

Bernard of Clairvaux is an enthusiastic allegorist of the Canaries. Thomas Aquinas (Summa Theol. i. art. 10) distinguishes the sensum historicum vel litteralis from the sensum spiritualis, quae super litteralem fundatur et eum supportit, and this distinction prevailed for centuries. It was not till the Reformation that this way of interpreting was called in question. Luther, who confesses that as much as he had allegorized, seems, along with the other Reformers, only for the sensum litteralis (Heinrici, in Hauck, Pre? vii. art. ‘Hermeneutik’). Of course he still interprets Canaries allegorically, but does not express himself so enthusiastically regarding it as either the theologians of the Middle Ages or many later

The Canticles, in fact, have been to a large extent the test for the later Biblical interpretation. Generally speaking, the allegorical method has in modern times fallen into disuse. Men like Cocceius belong to the exceptions, and Biblical criticism on a historical and grammatical basis has, particularly since the end of the 18th cent., almost annihilated allegorical exegesis. Still the interpretation of the Canticles, which held its place in the Canon, has again and again raised up friends of the old method. Although H. Grotius, as early as the 17th cent., treated the poem to a large extent historically and grammatically, and Herder, at the end of the 18th cent., offered a purely historical and literary explanation, still there have been even in our times men like O. von Gerlach and Henzenberg, who have more or less preferred the old interpretation of the Canticles as referring to Christ and the Church. This is the exegesis which still prevails in the Roman Catholic Church.

A few words remain yet to be said with regard to the Jewish allegorists. The 2nd cent. of our era produced quite a succession of these exeges. We have already noted above (p. 330) that the allegorical interpretation of the Canticles is due originally to Ith (ii. 36), and among the Jews, no less than among the Christians, keen controversies have raged, and the 13th cent. in particular is remarkable for the passions which this dispute called forth. Among the Jewish interpreters of the Bible at the present day the prevailing method is the interpretation which finds most general favour.

JOH. GEFFCKEN.

ALL FOOLS’ DAY.—This has been authoritatively defined as a humorous name for the First of April, the day which has been popularly appropriated to the custom of playing the fool by means of practical jokes at the expense of a person’s credulity. The term is of comparatively modern use; the practice is wide-spread, but of obscure origin.

The phrase is used by Swift in 1712: ‘A due donation for All Fools’ Day’ (Hone’s Every Day Book, i. 289). It occurs in 1760 in Poor Robin’s Almanack: ‘I eyes of God are His insight, His mouth is His speech, and so on.

But, in addition to that, every individual thing has its definite meaning: duxites pecorum; the winds are sanctus; the shadow is protector divina; the stones are either Christ or ecclesi; roses are martrea a rubeo sapunidia; the raven is migrato; the dove is voluntaria et daemonia; the bull is dominus; the bear is diabolus auro doccit suai; but the wolf and the wild bear are also representations of the devil; the tiger is humanitas interiorem interjecti; the cannon is divers rebus socii omni et moribus diversi.

After winning these triumphs, the Middle Ages fall asleep, and it is impossible for us here to trace the vagaries of allegorical interpretation further. The interpretation, which finds expression in the following well-known couplet, becomes quite a fixed rule:

Littera gesta docet, quod crede allegoria,
Moralis quid agas, quo tendas analogia.

Bernard of Clairvaux is an enthusiastic allegorist of the Canticles. Thomas Aquinas (Summa Theol. i. art. 10) distinguishes the sensum historicum vel litteralis from the sensum spiritualis, quae super litteralem fundatur et eum supportit, and this distinction prevailed for centuries. It was not till the Reformation that this way of interpreting was called in question. Luther, who confesses that as much as he had allegorized, seems, along with the other Reformers, only for the sensum litteralis (Heinrici, in Hauck, PRE? vii. art. ‘Hermeneutik’). Of course he still interprets Canticles allegorically, but does not express himself so enthusiastically regarding it as either the theologians of the Middle Ages or many later
therefore, to accept the theory that it was due to the transference of New Year's Day from the First of April to the First of January. In France this is said to have been due to an order of Charles IX. in 1564, and it is suggested that for the *étronnés*, or New Year's gifts which were transferred to the First of January—

"on ne fit plus que des fêtications de plaisanterie aux personnes qui s'accommodaient avec regret au nouveau régime. On était mieux n'envoyer à ses amis des cadeaux simulés ou par des faux messages, et finalement, comme au mois d'avril le soleil quitte le signe solidaire des Poisons, nos amis constrent à ces similitudes le nom de poissons d'avril." (Nouv. Dict. Larousse Illust.)

But is not this itself a plaisanterie? New Year's gifts were, at least in England, given at the beginning of January before 1564. It is on record that they were presented to Henry VI. between Christmas Day and 4th Feb. 1428 (Rymer's *Fadestor*, x. 387).

And 'Sol in piscibus' stood of old in the calendars much as the phrase 'Sun enters the sign Pisces' stands in the calendar for 1907 against 19th Feb. The *poissons d'Avril* were caught under the Ram. They cannot even come under the category of the Irish 'Bull.'

Other suggestions have been made as to the origin of this practice of making an April-fool, or 'hunting the gowk,' as it is termed in Scotland. Some see in it a parody of the changeableness of April weather. Others regard it as a reminiscence of the solemn fooling in the Miracle Plays. Another sees in it a relic of the Roman Cerialia, held at the beginning of April.

"The tale is that Proserpine was sporting in the Elysian meadows, and had just filled her lap with daffodils, when Pluto carried her off to the lower world. Her mother Ceres heard the echo of her screams, and went in search of the voice; but her search was a fool's errand,—it was hunting the gowk or looking for the April-fool. (Brewer's *Familiar Quotations*.)"

May not this be numbered among the fables, the *Cerealia* being kept from April 12 to 19?

Fooling similar to that which characterizes the First of April takes place at the Hol cuts festival in India; and Maurice (*Ind. Ant. vi. 71*) says:

"The First of April in England and the Hol Festival in India had their origin in the ancient practice of celebrating the Vernal Equinox."

The similarity of the fooling in India and the Celtic lands of Western Europe, taken together with affinities in religion and folklore, illustrated by the cross-legged figure of the Celtic deity Cernunos in the Bordeaux Museum, points to a common origin in very early times, and supports Maurice's conclusion. The same conclusion is expressed in other words in Brockhaus' *Konversations Lexicon*:

"das er der Rest eines alten heidnischen vielleicht altkeltischen Festes ist, welches mit dem Beginn des Frühlinges im Zusammenhange stand."

In whose honour this old Celtic Festival was held, and what religious mystery or rite underlay the fooling, has yet to be traced. It is only possible to suggest the lines along which the solution may be found.

Two points have to be noted. The rite—if such fooling may be dignified by the name of rite—must be performed at the passing of March, i.e. on the First of April. It must also be before noon. These points are confirmed by two rhymes.

In North Staffordshire, if the joke is played in the afternoon, those who are trying to practise the joke are met with the retort:

"March is gone, and April come;
You're a fool, and I'm none."

In South Staffordshire the rhyme runs:

"April-fool's dead and gone,
We've ten fools to make new one."

These rhymes, preserved in a district still strongly versed in old Celtic folklore, point not only to the antiquity of the custom, but to its being associated with some ancient pagan rite, celebrated between the evening of the last day of March and the morning of the First of April.

Is there any means of tracing the origin and affinity of the rite? The First of April was kept in ancient Rome as the Feast of Venus and Fortuna Virilis. Ovid says that Fortuna Virilis was worshipped by women that she might preserve their charms, and thus enable them to please their husbands (*Fasti*, iv. 140-149). How the men occupied themselves during the two days of April fastigium was presumably worshiping at the shrine of Fortuna Virilis, or whether they suspected they were being fooled by the women, cannot be known. As Fortuna Virilis was also the goddess of boys and youths, it is not impossible that the old garment, 'blind-man's buff, or 'hoodman-blind,' as it is in Shakespeare, was a relic of the rite practised by the men on the occasion of this Festival. Or the fooling may be specially associated with this Spring Festival of Venus. It is on record that Q. Fabius Gurges, the Consul, at the close of the Samnite War, founded the worship of Venus Obsequens and Postvorta (Smith, *Class. Dict. art. *Venus*). Full details may be found in Livy (*Hist. xi.*).

It is to some Celtic form of this worship of Venus on the First of April that the origin of All Fools' Day must be traced. Rhys in his *Celtic Lectures* shows an affinity between Venus and the maiden-mother Arianrhod, the daughter of Don.

"These remarks on the parallelism between the Celtic Sungod and Baider would be incomplete without reference to the latter's mother, Frigg. She is proved, by the Anglo-Saxon word *Frigedeg*, now Friday, and by the old Norse habit of calling the planet Venus *Frigg's star*, to have been treated to a certain extent as a counterpart of the Latin Venus. Her dwelling in a manor called Fenain, the Hall of the Fen or Swamp, recalls Lien's mother, Arianrhod, and her sea-girt castle (Rhys, *Hibb. Lect. p. 545*).

And perhaps it is not merely accident that some of the most exquisite fooling in the *Mabinogion* is in 'Math, the son of Mathwyw,' Arianrhod was the mistress of the Culture Hero, Gwydion, son of Don. By her he had two sons, Llew or Llic, the Sun-hero of Celtic mythology, and Dylan. The boy Llew was reared at Dinas Dinlle, on the Carnarvon coast near the southern end of the Menai Straits. A little distance to the south-west is a sunken reef known as Caeer Arianrhod, the sea-girt Castle of Arianrhod in the *Mabinogion*. This was the scene of the magic fooling by which Gwydion won a name for his son Llew, and forced Arianrhod to invest him in the armour in which he was to shine. Llew's twin-brother was christened by order of Math, and immediately made for the sea.

'He swam as well as the best fish in its waters, and for this reason was called Dylan, the son of the wave' (Gusm's *Mabinogion*, ed. Nutt, pp. 65-71). His name is commemorated in the headland Menidulan on the same coast.

Llew and Dylan are held by Rhys to represent the principles of light and darkness, and it would be natural that any rite connected with the victory of the Sun-god Llew over Arianrhod and his twin-brother Dylan should be associated with the First of April. This suggestion also affords an explanation of the French phrase, 'Those who were fooled at the First of April, and suffered the discomfiture of Dylan, would suitably be named after his fish-like propensities, poissons d'avril.'

All Fools' Day may therefore be the relic of a Spring Festival of Llew. In the shining armour of the Sun, which he had won by his magic from Arianrhod, he triumphed at the close of the year over the cold gloom of the winter sunlight personified in his brother Dylan. These early myths took shape in religious rites, and were preserved in folklore and in popular rhymes and customs. Rhys, writing of the feast held on the First of August in honour of Lug, another name of the Sun-hero Llew, says:

'Look at the position of these places (Lyons, Laon, Leyden, all variants of the older Lugdunum) on the map, and take into
ALMSGIVING—ALTAR

In the most general sense of the term, an altar may be defined as a surface, usually elevated, but occasionally level with the ground, or even depressed beneath it, prepared or adapted to receive a sacrifice. It is thus, by implication, intimately connected with sacrifice (q.v.), and has seemingly been developed as a ritual adjunct to the oblation. Sacrifices are, however, not commonly made to natural objects by casting the offering into them. Thus, amongst the Indians of Brazil, the human sacrifices to the volcano Masaya or Popocatepetl were cast into the crater of the mountain, and amongst the Hurons tobacco was thrust into the crevice of a rock in which a spirit was believed to dwell (Taylor, Pr. Celt. Assoc., ii. 207-208); while, in similar fashion, pins and other trifles are dropped into holy wells in Cornwall and Armenia; and in Swabia, the Tyrol, and the Upper Palatinate, meal is flung into the face of the gale to placate the divinity, and even in the Alemannic region it is well known to require more than an allusion, and it is again exemplified both in Guinea and North America; while, in like manner, offerings are made to the earth by burying the sacrifice, as amongst the Khonds of Orissa (a mode of sacrifice which also occurs elsewhere in offerings to the dead), and to the fire by casting the offering into it, as amongst the Yakuts and the Carinthians (Taylor, op. cit. ii. 377-378, 407-408). Sacrifice to the dead may be made simply by casting the offering away at random, as in Melanesia (Cordington, Melanesians, Oxford, 1891, p. 128).

Sacrifices may also be offered either by placing the offering simply on the ground, as amongst the Indians of Brazil and the African negroes (cf. Jeovins, Introd. to Hist. Rel., London, 1896, pp. 134-135); or by hanging the oblation on trees or poles, as amongst the ancient Swedes and the modern Semites, Armenians, Hindus, and some of the African tribes (cf. Tylor, op. cit. ii. 228; Curtiss, Prim. Semit. Rel. To-day, New York, 1902, pp. 91-92; Abeggian, op. cit. p. 59; Cooke, Pop. Rel. and Folklore of N. India, London, 1896, ii. 99-100, 102; Ellis, Ewe-Speaking Peoples, London, 1890, p. 42).

In considering the primitive purpose of the altar, it may not be amiss to discuss the etymology of the words denoting it in Semitic and Indo-Germanic. In the former group of languages an altar is represented by the Hebrew mizbeah (Arab. madkhab), a derivative of nāšā, to slaughter, thus clearly indicating that the Semitic altar was for the slaughtered victim or its blood, not for the burnt-offering (the burnt-offering being of later development among the Semites; cf. W. R. Smith, pp. 350 ff.), and this is curiously confirmed by the fact that amongst the modern Semites there are no burnt-offerings, but only the slaughter of victims without burning (Curtiss, op. cit. p. 229).

But if we turn to the Indo-Germanic words for altar, a striking diversity of terms awaits us. First and foremost is the Latin altāre, borrowed in many languages (e.g. Old High German altār, Old Pruss. altār, Old Church Slav. olātār, Lith. altėvės, Russ. altar), and defined by Festus as follows: *altāria, m. in quo sacrificiatur.* The word is commonly derived from altus, *high*; but this must be rejected, since not only is the meaning unsatisfactory, but linguistic evidence is against it. -ārius (-ārio) being used in Latin only to denote adjectives or nouns derived from a stem in -āre, *to sacrifice.* The term *altāria* is used in this sense by Festus, and it is the most probable etymology of the word, since the root alt is very difficult, unless one may assume in it the presence of a root-determinative *t* (cf. Persson, Wurzelerweiterung und Wurzelvariation, Upsala, 1891, pp. 28-58), though this method of etymology is rejected by many scholars). The second Lat. term for altar is ara, Umbrian axa, which is most probably connected with areo, *burn* (Walde, op. cit. p. 40).

The Greek terms for altar are ἔσυς, ἔσυς, and θυατήριον. The first of these, which stands in Attic-cancel with Doric ἔσυς (Attic ἔσυς), *step,* itself occasionally means *step* (e.g. Odyssey, vii. 100); while the last two are both connected with θεός, *to sacrifice,* especially by burning (cf. Latin sufficio, *fumigate,* etc.). Finally, in Germanic we have the Icelandic stañt, Anglo-
sacrifices to Pele were hurled into its depths; for there seems to be no differentiation of kind between the besmearing of the sacred stone and the casting of an oblation into the ocean or into a crater.

The evolution of the altar will be considered more fully in the following sections devoted to it amongst different individual peoples, but a brief allusion may be made to two forms of this rite as such as in the opening sentence it has been stated that the altar may sometimes be 'level with the ground, or even depressed beneath it.' In the former case, we have a very primitive type indeed—but a step even earlier in evolution, in which the offering was removed from direct contact with the ground by interposing a layer of sand which serves as an altar. The typical example of this form is the Hopt altar, which is discussed in ALTAR (American), though an analogue may be traced in the Semitic use of the threshold as an altar (see Trumbull, The Threshold Covenant, London, 1896, passim), or in the oot-altars of the ancient Egyptians; as well as in the herbs on which the flesh of slaughtered victims was laid by the Persians (Herodotus, i. 132; Strabo, p. 732 f.).

The altar described by the author of the work from which he has been so freely quoted (cf. E. Schröder, Wörterbuch der slavischen Sprachen, Vienna, 1886, p. 410)—a concept which, is, perhaps, borrowed from Christianity. It is thus evident that amongst the Semites the altar was primarily the place where the victim was slaughtered, and amongst the Indo-Germanic peoples the place where it was burnt.

It is clear from what has already been said that the altar, essentially an adjunct of the sacrifice, has been evolved later than the offering, for many peoples did not, or have not, still so, without altars; and there are considerable areas, particularly in Africa and South America, where the altar is entirely unknown, while the late development of the altar amongst them is exemplified in the provision made by Schrader, RE der indogermanischen Altertumskunde, Strassburg, 1901, pp. 855, 861), and receives a striking exemplification in the relatively late evolution of the Indian vedi (see ALTAR (Hindu)). The latter represents, indeed, a curious type of altar, in that it is primarily a fire altar in a trench strewn with grass, evolving later into the common form of a raised altar for burnt-offerings. Its development thus shows all three forms of the altar—depicted below the ground, practised level with the ground, and elevated above the ground (cf. Ludwig, Der Räuchera, iii., Prague, 1878, p. 364 f.; Hillebrandt, Ritual-Litteratur, Strassburg, 1897, p. 14).

Allusion has already been made to the widespread practice (cf. e.g. of op. cit. p. 34) of hanging offerings on sacred trees, and oblations are likewise placed on sacred stones. The best example of the latter phenomenon is perhaps found in the case of the Heb. masaghbah, 'upright stone, pillar' (from ס, 'to take one's stand,' and massag 'object set up, idol'); for other cognates and for literature, cf. Oef. Hebr. Lex. c. 662-683), which was regarded as a Divine abode and anointed with oil (e.g. Gn 28:19). In like manner the Arab. anṣāb (plural of nusb 'idol,' which is derived from ṣab-a = az, and is thus linguistically connected with massaghbah) were anointed with blood (W. R. Smith, pp. 184, 321).

It is held by many that the sacred stone or tree and the altar 'originally were identical in use and purpose' (cf. Jevons, op. cit. pp. 34). But this view seems at least open to question, despite the support given to it by the history of the Semitic altar. Though the distinction may be deemed academic and subtle, the present writer feels, that, while the altar is believed to be in the sacred stone or the sacred tree, he is never held to dwell in the altar. The altar is, in other words, from its very inception, the table on which the offering to the god is slaughtered, burnt, or deposited. The oil and blood of the offerings were cast into it in honour of Poseidon, or the crater of Mauna Loa as an altar since human
might also be made of a pile of stones, or even of earth. As the shrine or temple (q.v.) was evolved, the altar was placed at first outside it, because of the small dimensions of the primitive shrine; but later it resumed its original place in front of the object in which the divinity was believed to dwell, or which symbolized the deity to whom sacrifice was made. With the development of art, the altar, which had long ceased to be left in its natural shape, despite the conservative character of religious ritual (cf. Ex 25:8), became varied in form, and was frequently in accord with the best abilities of those who constructed it. The theory of the altar, however, is unchanged, whether victims be slaughtered on it, or whether it be used for burnt-offerings, or to receive and bear animal, vegetable, or other oblations (as in the Roman lectionarium, the Jewish table of shewbread, or many Polynesian altars), these distinctions belonging properly to the subject of sacrifice (q.v.).

The human body has been used in at least two cults as an altar. In the Aztec Ochpaniztli, a broom feast, the woman who was to be sacrificed by decapitation was held by a priest on his back, he constituting an altar (Bulletin 24 BE, p. 174); while in Satanism (q.v.) the body of a newborn infant forms the altar on which the Mass is parodied.

LOUIS H. GRAY.

ALTAR (African).—Nowhere, except in South America, is there so general a lack of the altar as in Africa—a phenomenon which closely corresponds to, and is in part indicative of, the primitive religious conditions of that continent, and a general explanation of the simplicity of the characterizing fetishism (q.v.), the prevailing type of religion there; though temples, or ‘fetish huts,’ are by no means unknown, even amongst tribes which have no altars, such as the Bantu Basogas (cf. Waits, Anthropol. der Naturvölker, ii. Leipzig, 1860, pp. 184–185; Johnston, Uganda Protectorate, London, 1902, pp. 717–718). Thus, amongst the Hottentots, and even the Hovas of Madagascar, we find no traces of the altar (Waits, op. cit. p. 197) while the East and West Coast, whose religion has been perhaps the most carefully studied, this feature of the cult plays relatively a very minor rôle. Attention should here be directed, however, to the sacrifice which was made by the Fon-speaking peoples to Legba, the phallic deity, to whom on extraordinary occasions a human sacrifice is offered, the victim is disembowelled, the entrails placed in a dish or calabash before the image, and the body suspended on a tree or post in front of the shrine, where it is suffered to remain till it rots and falls to pieces’ (Ellis, Ewe-Speaking Peoples, London, 1890, p. 42). Here both the dish and the tree (or post) represent a primitive form of altar, and in like manner we may regard the post on which the girl was impaled at Lagos to secure fertility for the ensuing year (Waits, op. cit. p. 197) as a crude altar.

On the other hand, in the ‘customs’ of Dahomey (cf. Ellis, op. cit. pp. 120–138), the sacrificial victims were merely slaughtered on the ground, nor can the usage of burying living human beings when houses or villages were set up in Grand Bassam, Yarriba, and Dahomey (cf. the same custom in Polynesia), or the practice of staking out a victim in the path of a threatened invasion, where he was left to starve to death to deter the foe, be cited as referring in any way to the altar. Nevertheless, in Dahomey a rude form of altar is found in the small piles of earth placed at the foot of trees, the turning of roads, the entrance to houses or villages, and in open spaces, on which are set manioc, maize, palm-oil, and the like, as offerings to the spirits (Schneider, Rel. der afrikan. Naturvölker, Münster, 1891, p. 115).

Amongst the Tahi-speaking peoples of the Guinea Coast the country stool (egnou) of the god, ‘which is washed with the blood of human victims sacrificed in honour of the deity, whose own image receives a similar ablation, this being expressly recorded of the divinities Dobowissi, Ithari, Bon’abua, and Faofa (Ellis, Tahiti-Speaking Peoples, London, 1897, pp. 23, 51–53, 65). But neither the stool nor the image can properly be termed an altar, any more than the elevations on which the idols are set in Dahomey temples, where ‘the images of the gods are placed, inside, usually on a raised rectangular platform of clay; and before them are the earthen pots and vessels, smeared with the blood, eggs, and palm-oil of countless offerings’ (Ellis, Ewe-Speaking Peoples, p. 81).

Against this rather negative material may be set at least one African altar of a degree of development approximating to that found, for instance, in Polynesia. This is the one in the ‘ju-ju house’ at Bonny, thus described by de Cardi (in Mary Kingsley’s West African Studies, London, 1899, p. 515):

‘The altar looked very much like an ordinary kitchen plate rack with the edges of the plate shelves picked out with goat skulls. There were three rows of these, each shelf a row of grinning human skulls; under the bottom shelf, and between it and the top of what would be in a kitchen the dresser, were eight uprights garnished with rows of goat’s skulls, the two middle uprights being supplied with a double shelf—below the top of the dresser, the bottom, or mask, of which was a piece of painted white and blue, was arranged a kind of drapery of filaments of palm fronds, drawn asunder from the centre, thus exposing a round hole, by which offerings, to the simple-minded, are ostensibly received by the blood of the victims and libations of palm wine. To one side, and near the altar, was a kind of roughly made table fixed on four straight legs; upon this was displayed a number of human bones and several skulls; leaning against this table was a trunk looking very like a chair which walked on to the table; this was also garnished with horizontal rows of human skulls—here and there were to be seen human skulls lying about; outside the ju-ju house, upon a kind of trails work, were a number of shrivelled portions of human flesh.’

LOUIS H. GRAY.

ALTAR (American).—1. Among the Indians of North America the altar, although, curiously enough, the Jesuit missionaries in New France make no mention of this adjunct of religious cult. This silence may be explained, at least in part, not only by the fact that these heretic and devoted Ewe souls were mere slaves, but also by the circumstance that the Algonquin and Iroquoian stocks among whom they laboured were essentially nomadic, and thus had neither temples nor altars sufficiently striking to attract the missionaries’ attention. We know, however, that the Indians of Virginia had ‘altars, which they call Pawcorances, placed in their fields, where they sacrifice blood and fat of savage beasts, and offer tobacco when they return from war or the chase’ (de laet, L’Histoire du Nouveau Monde, èééé, jut LAI). Thus, however, had a large temple, in the centre of which was an altar with a perpetual fire; while the Cadoan Assinai temples contained a wooden altar, on which stood leathern coffer, filled with leather dishes and musical instruments (Waits, Anthropol. der Naturvölker, iii. 204, 220–221). The perpetual fire, it may be noted, was also maintained in Louisiana and amongst the Muskogees (ib. pp. 203, 208).

Altar-mounds, found in connexion with many of the structures of the ‘mound-builders,’ contain altars of clay or, more rarely, of stone. They vary greatly in size and shape, but are seldom over twenty inches high, and are near the ground in the centre of the mound; while in their top is
a basin-shaped hollow, usually filled with ashes (Bancroft, *Nat. Races of the Pacif. States*, iv. 774; cf. Thomas, *RB E W* v. pp. 57–58 [West Virginia]; Holmes, *ib. xx*. pp. 36–37). Here, again, numerous variations from the general type are known. Thus, on the top of a mound near Sterling, Ill., was found an oval altar plate composed of various stones. It was composed of flat pieces of limestone which had been burned red, some portions having been almost converted into lime. On and about this altar I found abundance of charcoal. At the sides of the altar were fragments of human bones, some of which were charred, a usual practice in the altar phenomena of the ancient Maya. In some of the reredos of Peru present no example of the vertical or lateral slats of the reredos. Two supplementary uprights were fastened to the main reredos, one on each side. These were decorated at their bases with symbolic pictures representing maize, surmounted by rain-cloud figures. The ridge of sand between the uprights of the altar supported many smaller rods and slate, the one in the middle being represented with a picture of an eagle's comb. In all the elaborate character of these reredos, however, they are truly reminiscent of those of the Aztecs. It is clear that the character of the reredos did not change, and of which they are palatable; even though, as in some of the Zulu altars described by Mrs. Stevenson, the reredos is guise—permanent, while the sand-altar must be removed for each ceremony.

Amongst the Zulu, as already intimated, we likewise find elaborate altars showing the same general type, but of a larger and more imposing fabric. In some of them the principle of sympathetic magic seems to be present, as is clear from Mrs. Stevenson's detailed description of them (RBEW xviii. pp. 245–246, 428, 432–434, 454, 491, 529, 543, 550, 551).

2. Turn to Mexico and Central America. The altar in the great temple at the City of Mexico in honour of Huiztilopochtli, the god of war and the chief Aztec deity, was a green block, probably of Jasper, 5 ft. long by 3 broad and high, curved convexly on the top, so that the human sacrifice was offered up by being thrust upon it for the excision of the heart (Bancroft, *Nat. Races of the Pacif. States*, ii. 582–583). The Aztec altar, moreover, had an adjacent, not found elsewhere, in the sacrificial yoke, a heavy stone of green Jasper, curved in a U-shape, and placed on the floor of the human sacrifice at the time of his immolation, to assist the priests who held his arms and legs, to keep him in a proper position for the chief celebrant.

Our general knowledge of the details of the Aztec altar must, however, be drawn from the sacrificial stones of neighbourng peoples, which may be inferred to have been analogous. The Maya altars, as found in the ruins of Copan, Honduras, and of Quiriguá, Guatemala, are 6 or 7 ft. square and about 4 ft. high, taking a variety of forms and being covered with sculpture somewhat less elaborate than the statues of the divinities themselves (Bancroft, *op. cit.* ii. 689, iv. 94). As in many Semitic altars, their tops were intersected with grooves to receive the blood of the sacrifices offered upon them (ib. iv. 94–95, 111–114, 341). Besides formal altars, the ancient Mexicans, Maya, and Guatemalans also had braziers and small altars in which copal, which here corresponded to the Oriental incense, was burned in honour of the gods. The altars in these structures, found at Palenque in the Mexican State of Chiapas, being 16 in. high and 4 ft. in circumference (ib. i. 997, ii. 584, 690, iii. 336, iv. 343–346). Like the "mound-builders" of N. America, the Maya erected altars on the graves of the dead (ib. ii. 799), and in Nicaragua flat stones have been discovered which apparently served as altars (ib. iv. 32, 61–62).

Both in Mexico and in Central America generally, the altar, like the temple itself, was placed on the summit of the tower. It was a pyramid of considerable elevation; so that it has been not inaptnetly said that 'a Mexican temple was essentially a gigantic altar, of pyramidal form, built in several stages, contracting as they approached the summit' (Réville, *Natives Religions of Mexico and Peru*, London, 1884, pp. 47–48). In places, however, as at Quemada, in the Mexican State of Zacatecas, a small structure, 5 ft. high and with a base 7 ft. square, was set in front of a pyramid, apparently as an altar (Bancroft, *op. cit.* iv. 687–698).

3. In South America the altar seems to be unknown, thus giving yet another proof of the cultic inferiority of the South American Indians to those of North and Central America. Even the archeological remains of Peru present no example of the
ALTAR (Celtic)—ALTAR (Chinese) 337

altar, so seeming to confirm the words of Garcilasso de la Vega (Royal Commentaries of the Incas, iii. 29, tr. Markham, London, 1869, i. 271) that 'these Indians did not know anything of building an altar.' Nevertheless, there are not infrequent allusions to sacrifice, in the works of the early Spaniards, both of fruits and animals, so that it would seem, in view of the high civilization of the empire of the Incas, as though the Peruvians may very probably have known of the altar, despite the lack of archaeological evi-
dence.

LITERATURE.—Rough, Handbook of American Indians (Bull. 29 B.F.), p. 44 (Washington, 1907); Waitz, Anthropologie der Naturvölker, iii. (Leipzig, 1882); Bancroft, Native Races of the Pacific States, iv. (San Francisco, 1883).

LOUIS H. GRAY.

ALTAR (Celtic).—The data concerning the Celtic altar are extremely scanty, since all native records of the pre-Christian period are lacking, while the altars still preserved date from the Roman period, and are modelled upon Roman originals. The chief sources, then, for a knowledge of the altar, as of other portions of Celtic cult, are a few early classical authors. Caesar, in his brief account of Gaul, vii. 44 of De Bello Gallico, vi. 13-18 makes no mention of any altar, and is followed in this silence, which may not be without significance, by Strabo (iv. 4-5). On the other hand, Tacitus (Annals, xiv. 30) distinctly states that the Druids of Mona 'behold it right to besmear the altars with the blood of captives'; and this practice is extended to the whole of Gaul by Pomponius Mela (iii. 18). By far the most famous passage, however, in this connexion, is found in Lucan's Pharsalia (i. 443-444):

* Et quibus inimite placatur sanguine dixo Teutates, hornesseque feri altarbus Nausae,
Et Taranis Scytaceae non mitter armas.*

(On the identification of these deities, see Rhys, Lectures on the Origin and Growth of Religion as illustrated by Celtic Heathendom, pp. 44-47, 61-73.) The same poem contains a brief description of a Druid temple (iii. 399-402) at Marseilles, which was destroyed by Caesar. It seems to have consisted simply of a gloomy wood, the oak being mentioned as one of the trees containing 'altars built with offerings to the dead' (structura sacris ferialibus are) and rude, artless images of the gods, roughly hewn from logs. Although Caesar expressly states that the Gauls differed widely from the Germans in cult, that of Marseilles (De la Gallice, vi. 21), Lucan's description of the temple of Marseilles recalls involuntarily the statement of Tacitus (Germania, 9), that the ancient Teutons made neither images nor temples for the gods, but worshipped them in groves. A large number of Celtic altars of the Roman period have been preserved, but are practically valueless, as being modelled entirely on classical prototypes. It was supposed by older archaeologists that the dolmens or cromlechs, formed by laying six stones across two or three stones which had been placed erect, were Druidical altars, a hypothesis now abandoned, since these structures are merely sepulchral chambers which were frequently covered to a greater or less extent with earth, and more or less of the date from the neolithic period, and it is impossible, therefore, to state that they are specifically Celtic. The only conclusion which can be reached, in the light of the data now available, concerning Celtic altars is that the Druids probably had simple structures placed in their sacred groves and used for sacrifice, though the altar was not indispensable, since the wooden and osier cages filled with men and other victims and burned as a holocaust (Cesar, de Bello Gallico, vi. 16; Strabo, iv. 4. 5) could scarcely have been offered on any but a special structure or on the ground.

LOUIS H. GRAY.

ALTAR (Chinese).—The Chinese sacred books inform us that burnt-offerings were made to Shang-ti, the Supreme Ruler, upon mountain-tops from time immemorial; and the fact that, even to the present day, the worship of Heaven or Shang-ti is conducted upon a circular mound would seem to be a reminiscence of this ancient practice. As early as the days of the Emperor Shun (B.C. 2200), a distinction appears to have been made between the 'round altar' upon which the sacrifices—arranged in a circle, and hence called the 'round sacrifice'—were offered to God, i.e., Shang-ti, and the 'spread-out sacrifice,' and others, which were associated with the worship of subordinate deities or spirits, and which, as the names imply, were arranged in other ways. The distinction between the shape of the altar of heaven and that of earth is observable even now in China, and may serve to illustrate the early methods as represented in the classical works.

The celebrated 'Altar of Heaven,' in the Chinese quarter of Peking, stands in a beautiful park some 3 miles in circuit, and is a magnificent structure of white marble, 27 feet high, composed of 3 circular terraces, the lowest of which is 210 feet in diameter, the middle 150, and the upper 90 feet. It is approached by 4 flights of steps, corresponding to the 4 points of the compass. Each terrace is protected by a marble balustrade. The top is paved with marble slabs arranged in concentric circles, the innermost slab being round in shape, corresponding to the shape of Heaven, around which are arranged a circle of slabs, 9 in number, and, outside of this, other circles in multiples of 9 until the square of 9 is reached in the outermost ring. Five marble stands support the altar furniture, consisting of censers, candlesticks, and vases. Close to the altar there is a furnace of green tiles, 9 feet high by 7 feet wide, approached by steps on three sides, intended for burnt offerings which are here burned on the great occasions when the Emperor represents the whole nation in his high-priestly capacity. In the chapels adjoining, where the tablets of Shang-ti and the Imperial ancestors are preserved, this circular arrangement is also maintained.

The 'Altar of Earth,' as described in the Law of Sacrifices, was a square mound in which the victims were buried, while those offered to Heaven were burnt. The passage reads as follows: 'With a blazing pile of wood on the grand altar they sacrificed to Heaven; by burning in the grand mound they sacrificed to the Earth.' The Great 'Altar of Earth,' in the Chinese quarter of the city of Peking, consists of 2 terraces of marble, each 6 feet high. The lower terrace stands on 100 feet of stone, and the upper one 60 feet. The altar is situated in a park on the north side of that which contains the 'Altar of Heaven' above described. The coping of the wall which encloses the park is of yellow tiling, corresponding to the colour of earth.

The 'Altar of Prayer for Grain,' popularly known as the 'Temple of Heaven,' is separated by a low wall from the 'Altar of Heaven.' It also is circular in shape, but is protected by a triple roof of blue tiling, 100 feet in height. The local altars on which sacrifices to Earth are periodically offered consist of low mounds of earth, about 5 feet square, and perhaps a foot high. They

* An engraving of the altar, from a photograph, is given in Bible in the World, March 1907, p. 79.
are not ornamented or distinguished in any way, except at the time of sacrifice, when they are specially prepared for the occasion.

In Christian temples, whether Confucian or Buddhist, the altar usually consists of a stone table, rectangular in shape, the proportions varying with the size of the building. The altar furniture includes a ciborium, two candelabra, and sometimes a pair of vases of bronze, porcelain, or stone. When Ancestor Worship is conducted in private houses, the offerings are laid out upon ordinary dining tables placed close together.

Permanent altars are erected in front of tombs for the half-yearly sacrifice to the spirits of the dead. They consist of a single stone slab supported by two others, thus forming a table. A smaller altar of similar construction is found at grave sides, intended for the sacrifices to the local spirits or deities.

In the majority of Chinese dwellings there are to be seen miniature altars, where incense is burned, and small offerings of food presented, either to the spirits of deceased relatives, or such popular divinities as the ‘God of Wealth.’

W. GILBERT WALSHIE.

**ALTAR (Christian).—1. Nomenclature.—(a) GREEK.—St. Paul, in a passage dealing with the Eucharist, uses the word ἱερόν (this is a term frequently employed by the Greek Fathers after the 3rd cent., and constantly by Eastern liturgical documents, as a designation of the Christian altar. The word θυσιαστήριον—the ordinary equivalent of LXX for ἱερόν—occurs in his writings (1 Co 9:15, 16), but only with reference to the altar of the old dispensation. The writer, however, of the Epistle to the Hebrews may refer to the Eucharist when he says, ‘We have an altar (thereof) they have no right to eat which serves the tabernacle’ (He 13:10); but most commentators explain this passage otherwise (cf. Rev 8:9). There is no other reference to the Christian altar in the NT.

In the sub-apostolic age it is difficult to find any direct reference to the altar. The Didache is silent on the point, but in the letters of Ignatius the word θυσιαστήριον occurs in passages dealing with the Eucharist; and this writer in at least one passage (ad Philad. 4) appears definitely to apply this word to the Eucharistic altar.

In the second century, Irenaeus (c. Ἰουν. iv. 18, 6) says that the sacrifice of bread and wine should be frequently offered on the altar. Eusebius designates the altar of the basilica at Tyre, dedicated in the year A.D. 314, as ἱερόν ἱεροσοιαστήριον (HE x. 444), and speaks in the same place of the altar erected throughout the world after the Peace of the Church. The word θυσιαστήριον also is defined by pseudo-Athanasius as θυσιαστήριον (Disput. cont. Arián. xvii.), and in the term usually employed in the liturgies; it is also common in many of the Greek Fathers. Sometimes the word stands alone—ἡ θυσιαστήριον, ‘the table’ par excellence (e.g. Chrys. Hom. iii. in Epist. ad Ephes.). Sometimes, as in 1 Co 10:1, it is ἱερόν Κυρίου (e.g. Orig. c. Cels. viii. 24). But very often adjectives are added, such as θεὸς, ἅγιος, μωτερίτης, and the like.

βυθός, as contrasted with θυσιαστήριον, is used in the OT for heathen altars: e.g. 1 Mac 14:12 τὸ βυθὸς τῆς ἑλέους ἐκ τῆς θυσιαστηρίου (note the use of the word in Ac 17:22—the only place in which it occurs in the NT). This usage is generally followed by Christian writers. Exceptions, however, are met with, e.g., in Synecedit (Katastasis, 19 [Migne, PG lxxvi. coll. 1572, 1573]), who speaks of βυθὸς ἐκ θυσιαστήριου. Clement of Alexandria uses the word βυθός, but in a figurative sense, when they say that the soul of the faithful is the true Christian altar.

(Clem. Alex. Strom. vii. 81-82; Orig. c. Cels. viii. 17; for θυσιαστήριον see Diony. Ep. 8, ap. Euseb. HE vii. 9).

In the passage just quoted from Origen he expressly admits the charge of Chaldea that Christians had no material altars. This admission, coupled with the fact that so few references to the altar are to be found in early Christian literature, might suggest that the altar was not in early times an adjunct of Christian worship. Nor is Origen alone in his admission; other writers say practically the same thing. But the preservation of the Discipline of Arsenius during this period sufficiently accounts for the reticence of ecclesiastical writers on this as on all other subjects connected with Christian worship and the administration of the sacraments. Further, it must be remembered that some of these writers, who appear to deny the existence of altars, deny also the existence of temples, stating that God can be worshipped in any place, and that His best temple is in the heart of man. It would appear, then, that the same arguments which would exclude the exist. of Roman temples, also apply to the Christian church in the period now under discussion, and we have positive evidence in disproof of any such statement (see Duchesne, *Christian Worship* [Eng. tr.], ch. xii.). The object of these writers, no doubt, was to differentiate between the pagan sacrifices and the ‘unbloody sacrifice’ of the Church. In the pagan sense, it is true, Christians had neither temples nor altars.

With the passage cited from Origen may be compared Minucius Felix, *Octavius*, c. x.; *Apologie*.

The word μανδρά is employed by the Syrians, both Jacobites and Nestorians, *manerchoukí* by the Copts, and *khurán* by the Armenians, to designate the altar (see Brightly, *L. A. G. Armonia*).

(b) LATIN.—The term usually employed by the Latin Fathers and Western liturgical documents to designate the altar is *altare*. This word is used already by Tertullian, who describes the Lord’s Table as *altare* (de Euchar. Cistil. ch. 10). Cyprian also frequently uses this term, and applies it to an exclusively Christian significance, contrasting *ara Diaboli* with *altare Dei* (Ep. 64 [85]); nevertheless, in one passage of his writings we find the phrase *Diaboli altaria* (Ep. 50 [63]). *Altare* is also commonly used by Ambrose (e.g. *de Fide*, ch. 18) and Augustine (e.g. *Sermon* 159, par. 1). The appellation *Mensa Dominii* or *Mensa Dominica* is also employed by Augustine (e.g. *Sermon* 90, par. 5) and other Latin Fathers.

*ara*, the Vulgate rendering of βυθός, is not applied to the Christian altar by any early ecclesiastical writer except Tertullian, who uses the phrase *ara Dei* (de Ort. 14 [19]). The word *ara* is, however, used occasionally in inscriptions: e.g. in one generally supposed to be of Christian origin and of early date—SANCRO DEFECTO (CIL, vol. vii. s. 6704). Minucius Felix, in a well-known passage, writes: *Delubra et aras non habemus* (Oct. ch. 32). Prudentius uses *arae* as the designation of the base of the altar: *Altarum aram funditus pessumdata* (cf. *Res Flevit*, x. 49); and in
ALTAR (Christian) 339
this usage he is followed by other writers. The plural altaria is sometimes used with the significance of a singular. The singular altarium is used sometimes by late writers for altar. Altarium is also used as a designation of the free space around the altar.

The word mensa came to be applied to the slab itself on which the Elements were placed. Altaria occurs, e.g., in Cæsarius of Arles, Hom. vii.: the elements to be consecrated 'sunt altaria altissimus mons.' Possibly the plural is used in this way by Ambrose (Ep. 60, ad Marcellinon) in a passage which has been quoted to prove that in his time altaria was considered more than one altar (see below). For altarium, cf. Council of Auxerre (A.D. 578), can. 10; Mass is not to be said more than once a day, 'super uno altarium.' For the connexion of the altarium with the mensa, see Greg. Tur. (Hist. ii. 14), who speaks of a church having four altaria, ad alios mensae, Mosam, p. 6.

2. Material and form of the altar.—Altars were constructed of wood, stone, or metal.

(1) Altars of wood.—It is generally agreed that the earliest altars were made of wood. This would appear from the following considerations. The earliest churches were, no doubt, ordinary dwelling-houses adapted to the special requirements of Christian worship (see Duchesne, op. cit. ch. xi. p. 399 ff.). It would seem probable that in the beginning the Eucharist was celebrated at the tables usually to be found in such houses. It is also known that at the beginning of this era such tables were usually made of wood, either square or round in shape. This view is supported by certain very early frescoes which have survived, and which have for their subject the consecration of the Eucharist. One of these, known as the Fractio Panis, is attributed to the first half of the 2nd cent.; and another, discovered in the cemetery of Calixtus, belongs to the latter half of the same century.

From both these frescoes it would appear that in very early times the Eucharist was consecrated at a small three-legged table, similar in form to those in use at the period for purposes of repast. No doubt, at a comparatively early date, special tables were reserved for the Eucharist, and their form was differentiated from that of those ordinarily in use; but for this period of transition we have no definite evidence. That these tables were made of wood is corroborated by certain relics preserved at Rome in the churches of St. John Lateran and St. Pudenziana. These are alleged to be the table used at the Last Supper, and altar used by St. Peter. For our purpose the only point which deserves attention is that these relics are of wood, thus evidencing the traditional belief that the earliest altars were of that material. A number of passages of an incidental character in the writings of both Greek and Latin Fathers give the ultimate confirmation of this view. Opatus, Augustine, and Athanasius all mention altars of wood.

(See Optatus, de Schism. Donativi, vi. where he says that the Donatists used the altars of the Catholics as firewood; also Aug. Ep. 155, par. 57, that he states that the orthodox bishop Maximian was beaten with the wood of the altar. Athanasius, ad Monach., expressly states of the altar destroyed at Alexandria by the Count Heracleus, that it was of wood (_flags_u); these words, however, may imply that he was familiar with altars made of other materials).

It will, then, seem fair to conclude that in the earliest period altars were of wood, round or square in shape, and resembling the ordinary tables used for domestic purposes, from which they were gradually differentiated.

It was not till after a considerable period that wooden altars were altogether superseded by those of stone. Although condemned by the local Council of Epona (A.D. 517), they continued in some places to be used for several centuries later. In England it is related that the ancient wooden altars were demolished by the order of St. Wulstan, bishop of Worcester (A.D. 1062–1093), and there is evidence of their occasional retention in France and Spain at a later period.

In the East the material of the altar does not seem to have been regarded as of great importance; it is, however, stated that the use of altars of wood was forbidden by the Nestorians, and by John bar-Algari, at the end of the 9th century.

[See Council of Epona, can. 26—the earliest decree on the subject; also Capitulary of Charlemagne (A.D. 768), c. 14, Migne, Patr. lat. Lxxxv. 1314. For England, see Report of the Commissioners appointed by Gesta Pontifici Angli., who relates the demolition by St. Wulstan of 'altarum lignum jam inde a praeclaro dicera in Anglia.' For France, see the anonymous author quoted below, p. 3419, and the case of the altar of the monasteries of St. Corentin and Dom Daniel, in the Antiquit. Eccl. Ritus, i, p. 111, for Spain, Hardouin, Concil., vi, c. 1026. For the East, Aesamani, Biblioth. Orient., iii. p. 238.]

(2) Altars of stone.—It is certain that from a very early date stone altars were in use, and it is scarcely to be doubted that there is a very close connexion between them and the tombs of martyrs. It would seem that probably, during the same period at which the Eucharist was celebrated at the wooden tables described above, in the houses which served in early times for the purposes of Christian worship, it was also celebrated on the stone slabs (mensae) which covered the relics of martyrs and formed part of their tombs (arosolios). That the celebration of the Eucharist on these tombs was a custom of great antiquity is indisputable; it is expressly ordered in the Apostolic Constitutions, where (iv. 17) the faithful are commanded to assemble in the cemeteries for the reading of Scripture and recitation of Psalms (i.e. the services of the nocturnal vigils) for the martyrs, saints, and all the faithful departed, and also to offer the Eucharistic sacrifice in churches and cemeteries. It is possible that the same custom is referred to as early as A.D. 155 in the Liber Pontificalis, relating the martyrdom of St. Polycarp. After mentioning that they have placed the relics of the martyr in a suitable place, they pray that they may be permitted to gather themselves together in that place, and to celebrate the anniversary of his martyrdom (Martyr. Polycarp. c. 18). In the Liber Pontificalis it is stated of Pope Felix I. (A.D. 209–237): 'Hie constituit supra memorias (al. sepulcras) martyrum missas celebrat.' It is possible, however, that this means only that he regulated an already existing custom. (See Lib. Pontif., ed. Duchesne, i. p. 156). The cemeteries themselves afford abundant evidence of the existence of altars, but it is impossible here to enter into any discussion of the many disputed points arising from the investigation of these monuments. It is certain that not all the tombs (arosolios) now existing were used for the celebration of the Eucharist, but it is agreed on all hands that many were used for this purpose; and instances occur of the slab covering the tomb being provided with rings, which would enable it to be drawn out for the purpose of the Eucharist. The intimate connexion between altars and the relics of martyrs is evidenced by such passages as the words of the author of the treatise de Alescortibus, who writes: ‘Martyribus presentibus supra mensam Dominicam’ (CIL i. pt. 3, p. 108); or of Augustine, who thus writes of the altar erected on the site of the martyrdom of Cyprian: 'Mensa Deco construeta est: et tamen mensa dicitur Cypriani ... quae ipsa immolationis sanctissima mensa, non in qua pascat sive pascatur, sed in qua sacrificium Deo, cui et ipsae oblatus est, offeratur' (Aug. Sermo cccx. p. 2, in Nat. Cyp. 2). In this connexion may also be quoted the famous lines of Prudentius on the altar and tomb of the martyr Hippolytus:

'Talibus Hippolyti corpus mandator operatis, Propter ubi adposita est ara dicta Deo.'
During the era of persecution, while the churches were for the most part in private houses, it was necessary for the faithful to betake themselves to the cemeteries and catacombs for the purpose of celebrating the Eucharist at the time of interment, or on the anniversaries of the martyrodoms. But after the Peace of the Church the custom arose of building churches immediately over the sites of the martyrdoms of famous saints, or of translating the relics of two churches prepared for their reception as also, at a somewhat later period, by burying ecclesiastical personages beneath or in proximity to the altar in already existing churches. It was not considered necessary to possess the entire body of a saint or martyr; fragments of it would suffice, or even a piece of linen soaked in his blood. These relics were placed within the altar, so that its tomb-like character was for the most part preserved. In later times it was considered unlawful to consecrate an altar without relics; and if these could not be obtained of the Church, or even a consecrated Host, was placed within it. (See Duchesne, op. cit. p. 403, and canon 2 of Council of Celichyth [Chelsea] quoted there).

Two forms of stone altar appear to have existed in the one square, resembling a table; the other oblong, and resembling a tomb. It appears, however, that from the 4th cent. onwards many forms were in use. We meet with several instances of the table form supported by one or more columns, and sometimes with a combination of both with a table form. An instance of this latter is the altar of St. Alexander, consisting of a table-like structure, the mensa of porphyry supported on columns of marble, having a substructure, in the form of a tomb, containing the relics of the saint. Generally speaking, however, the altar was probably of the form of a cube, and in the East it has retained this form. The present oblong form, common in the West, dates from the period when it was customary to place relics of saints in a sarcophagus, and right angles to the altar, was immediately behind it, having its end looking westward and supported by the altar itself. (See § 3, and Ed. Bishop, On the History of the Christian Altar, p. 14 ff.)

The very full description of large numbers of these altars will be found in the DACL. Much information will be found in the art. 'Altar,' but more detailed accounts are given under the names of the particular altars are presented for instance, see e.g., 'Aurél (Aurél d'),' in. col. 3161 ff., with its representation of the famous one-legged stone altar preserved there. See also the bibliography at the end of the present article.

(3) Altars of metal.—The earliest notice of an altar of metal is probably to be found in Sozomen (HE ix. 1), who mentions the altar of gold presented to the Church of St. Sophia at Constantinople, by Pulcheria, daughter of Arcadius, in the early part of the 5th century. In the next century we have a very full account of the magnificent altar presented by Justinian to the new basilica of St. Sophia, constructed by him between the years 532 and 533. This description is by Paul the Silentiary, who tells us that the Holy Table was of gold, adorned with precious stones, resting upon pillars of gold, and that it was surmounted by a dome or ciborium, supported by pillars of silver gilt, and terminating in a great cross of gold. Paul Silentiary, DACL, ed. Bona, v. 682 ff.). In the West also, at about the same date, we have mention of altars of precious metal; but it is not clear whether they were constructed of metal or of wood which was covered with metal. These notices occur in the Liber Pontificalis, and date probably from the latter half of the 5th century. Especially worthy of mention in this connexion is the altar of St. Ambrose at Milan, probably erected before the year A.D. 835. It is 7 ft. 3 in. in length, 4 ft. 1 in. in height, and the mensa is 4 ft. 4 in. wide. The front is of gold, the back and sides of silver. It is decorated with square medallions in relief and with enamel work. It is probably the most elaborate specimen of its kind which has survived.

(For a reproduction see DACL, fig. 1189; and for the extensive literature connected with this altar see the same work, vol. 1 col. 3171, n. 8.)

3. Site and accessories of the altar.—The earliest Christian churches were of the form of a basilica, and the altar was usually placed on the chorum of the apos. Around the apos were arranged the seats for the clergy, the bishop's throne being placed in the centre, behind the altar. Sometimes, however, it was placed more forward, nearer the centre of the church; but this was not common. Usually it was raised on steps, and separated from the body of the church by a screen of sufficient height to hide it from the view of the congregation. In later times, beneath the steps of the altar, was constructed a small vault (confessio) to contain the relics of a saint. It became customary from an early date for the altar to be covered by a canopy or umbraculum, having a hemispherical dome-shaped and supported on pillars, called the ciborium (εκβολή). The ciborium was made of metal or stone, and richly ornamented. It served a double purpose. Firstly, being provided with curtains hung between the pillars, it served to veil the altar at certain points in the service. Secondly, it did honour to the altar, providing it with a canopy or umbraculum, as in that period was customary with the seats of great personages.

The date of the introduction of the ciborium is uncertain; it must, however, have been considerably earlier than the 6th century. A distinction must be made between the custom of the East and the West. In the West it had been, and for the most part it is, customary to allow the altar to stand unprovided in view of the people. In the East, at least from the 4th cent. onwards, the reverse has been the case. The ciborium with its veils is found in the West probably from about the 6th cent. onwards, and possibly owing to Byzantine influence. Another reason for the ciborium is that it is necessary to give its shape the change in the shape of the altar, and the custom of placing a shrine containing relics upon it. The ciborium was well suited to the original cube-like altars, which, as we have seen, were in use in early times, but quite unsuited to the oblong altars evolved in the Middle Ages in the West. The ikonostasis, or heavy screen, hiding the bema from the rest of the church, and in general use in the East at the present day, represents to some extent the veil of the ciborium.

In early times nothing was placed upon the altar except the cloths and sacred vessels necessary for the Eucharist, and the book of the Gospels. Not even relics or the reserved Sacrament might be placed upon it. This custom appears to have prevailed in the West for some centuries, but in the 9th cent. a homily or pastoral charge, attributed to Leo IV. (A.D. 855), permits a shrine containing relics, the book of the Gospels, and a pyx or tabernacle containing the Lord's body, for purposes of tapt. St. Sophia, ibid. ed. Bona, v. 683 ff.). From this period onwards, in the West, the ornaments which had formerly decorated the ciborium were transferred to the altar. At first these appear to have been placed on the altar only during the celebration of the liturgy, but gradually it became customary to place them there permanently. Thus the cross,
which had surmounted the dome of the ciborium and had depended from it, was placed on the altar itself. In the same way with lights, first a single candlestick was placed on one side of the altar opposite to the cross, later two candlesticks are found, on either side of it. All this had been accomplished by the 4th century. Meanwhile, the ciborium having practically disappeared in the West, and the altar becoming more and more loaded with tabernacle reliquaries, candles, etc., and having generally been placed as far back as possible, the altar itself is Bede, in the 7th century, the first to make its appearance,—as also the small canopy now generally in use,—which may be regarded as directly descended from the ciborium and all that we now have to represent it.

The earliest description of the interior of a Christian church is a passage in the Didascalia Apostolorum, incorporated in the Apostolica Constitutiones, bk. ii. ch. 57. For the ancient custom, with regard to relics, cf. St. Ambrose (Ep. xxii. 15): 'Ille (Christus) super altare... lapidem (martyres) sub altare.' The holy distributed to Leo iv. is probably a document of Gallic origin, and is the ground-work of the address of the presiding bishop in the Ordo Synodum of the present Benedict, found preserved in Eusebius, P.L. clxxi. For this section see especially Edmund Bishop, On the History of the Christian Altar.

Number of altars.—The primitive custom appears to have been that each church should have only one altar. This custom has prevailed in the East to the present day, although altars are found in παρεκκλήσια, or side-chapels—these being regarded as separate buildings. In the West the multiplication of altars has been common from a comparatively early date.

[O. Ignat. ad Philad. 4, cited above: ψαλτάδας ὑπὸ ἅγιαν εὐκοπίαν] Eusebius mentions only one altar in his description of the great basilica at Tyre (H.E. x. 4). The passage from Augustine, sometimes quoted in this connection, proves nothing. He speaks of the existence of two churches in one town (citatis) as a visible sign of the Donastian schism (in Epist. Joh. ad Farthis, Tract. Ill. 6), but his words obviously refer to schismatic worship in general. Contrast St. Basil (Hom. x.), who speaks of more than one altar in a single church.

It has been suggested that the multiplication of altars in a single church originated in the cemetery chappels, in some of which several arcosolia, or altar tombs, are to be found. But it is dangerous to draw any inference from this fact, because it is generally agreed that many of these arcosolia were never used for the purpose of celebrating the Eucharist. More probably the reason is to be sought, on the one hand, in the growth of the Church subsequent to the Pentecost, and, on the other hand, the increasing desire of the clergy to celebrate, rather than only to communicate, as often as possible. It is, however, difficult to find passages which imply the existence of more than one altar in a single church earlier than the 6th century. It is not till the time of St. Gregory the Great that we have definite evidence; but it is clear that by that time the custom was well established, because at the request of St. Gregory, Palladius, bishop of Saintonge, the pope sent relics for the consecration of four of the thirteen altars which Palladius had set up in his church (Greg. Magn. Epist. vi. 49). From this time onward the evidence for the multiplication of altars in a single church is abundant.

The passage from St. Ambrose, cited above, p. 399, is inconclusive: 'militia irretens in altarum, occulis significat podium insignis' (Ep. 112). cf. also St. Paulinus of Nola, Ep. xxxii. 13. For later evidence see Greg. Varr. de glor. Martyrum, i. 35; Bede (H.E. v. 20), who states that Acoa, bishop of Hexham (636), having collected a number of relics of apostles and martyrs, exposed them for veneration, 'altar, distincta porticus in hoc ipsum infra muros ejusdem ecclesiae habet.' In the 6th century, the plan of the church of St. Gall, in Switzerland, provided for the erection of seventeen altars. See also Council of Auerzne, can. 10; quoted above; Wulfrid Strabo, de Rer. Nat. o. xxii.; Capitul. Regum Francorum, ed. Bainz. i. 422.

5. Portable altars and 'antimensium.'—The oldest example of a portable altar which has survived is that which was found with the bones of St. Cuthbert, and is now preserved in the Cathedral Library at Durham. It measures 11 in. by 65 in., and is made of wood covered with very thin silver. On the wood are found two crosses and part of an inscription, IN HONOR . . . PETR. The earliest writer who certainly refers to portable altars is Bede, who relates (H.E. iii. 10) that in the year 692, two English missionaries to the Saxons on the Continent carried with them an altar stone ("tabulum altaris vice dedicatam"). The following description is given of the portable altar of St. Willebrand: 'Hoc altare Willebrandi in nobile Domini Salvatoris consecratum, supra quod in intinere Missarum oblationes Deo offerre consuevint, in quo et contineuntur de ligno crucis Christi, et de sudore captis ejus.' (Brower, Annu. Tresvirens, lib. vii. p. 584). From this and other passages it would appear that portable altars contained also relics. Portable altars are designated altaria portabilia, gestatoria, viaticia. Sometimes ara is used for a portable altar.

It has been suggested that portable altars were in use in the time of St. Cyriacus, but the passage quoted from his writings (Ep. iv. 2), in which he makes provision for celebration in the home, is inconclusive. As portable altars are mentioned in the church of St. Maria, in Capitelli, said to have belonged to St. Gregory of Nazianian; but it is not regarded as authentic. We have also find other portable altars, which, like the Willebrand, are from a later date, as that of St. Wulfran (c. 740), the altars of Frisia (Ep. Mult. iii. 294) and of St. Boniface. Mention is also made of a wooden board, covered with a linen cloth, used by the monks of St. Denys, who accompanied chariages in his campaign against the Saxons (Greg. St. Dionys. i. 50; Acta SS. SSB., ed. Paris, 1672, iv. p. 560).

In the East, in place of a portable altar, the antimensium (Gr. ἄντιμεσιον, a word of somewhat doubtful origin) is used. It consists of a piece of cloth consecrated, with various ceremonies, at the time of the consecration of a church. It is to be used apparently in oratories which do not possess a properly consecrated altar, and in other places where it is doubtful if the altar has received consecration.

[See Bona, de Reb. Lit. i. xx. 3 (end); Neale, op. cit. p. 188.]

Goar, Euchelopoeia, p. 648. See also Suicer, Therauria, i., and the authorities there cited; also Renanot, op. cit. i. 129.

6. Consecration of altars.—It would appear that prior to the 6th century, the dedication of a church was accomplished in the solemn celebration of the Eucharist in it. No special form of consecration existed. But in the case of churches destined to contain relics,—and in the latter part of this period nearly all churches possessed them,—these had to be solemnly enclosed in the altar before the celebration of the first mass in the church. Indeed it is possible that the later forms of dedication originated to a great extent in the ceremonial accompanying this depositio of the relics (pignoria) of saints, and, as these rites illustrate the history of the altar, they may be briefly mentioned here. A study of the earliest liturgical documents, dealing with the consecration of churches with their altars, reveals the fact that in the West two types of service existed side by side—the Roman and the Gallican; the latter as might be expected, closely resembling the Byzantine formulae of dedication. Briefly it may be said, with regard to the ceremonies of the consecration of the altar, that the Roman rite is of a funerary character, while the Gallican and Eastern rites resemble the ceremonies of Christian initiation. In the latter the altar is first consecrated by unction with holy water and anointing with chrism, these corresponding to the rites of baptism and confirmation. These cer-
monies having been performed by the bishop in the presence of the people, he leaves the church and proceeds to the spot where the relics are awaiting him. Having brought them to the church, he takes them to the altar. But before the depositio a veil is let down, so that the concluding ceremony of enclosing the relics within the altar is not witnessed by the people—who meanwhile chant the Psalm, Cantate Domino canticvm novum with the Antiphon Exultabunt Sancti in gloria. In the Roman rite, which is of a funerary character, the bishop first enters the church, then stands on the steps, and prays with water, and, on the other, from a table for offering such as was often placed in a temple or before a god at a ceremonial banquet. The special name for this type was probably hotep. Such tables are also found in the ruins of temples, where they may have been placed for the service of the deity’s temple. The type persisted down to the Roman period; it is rare during the New Kingdom, but was revived after its fall.

Temple altars on a large scale are very rare in Egypt. Down to the present time only four examples have been discovered, and none have survived in the latest period of the religion, with the exception of the Temple of the Fifth Dynasty, in the temple of the Sun at Abusir (Borchardt, Das Re-Heiligtum des Königs Ne-Woser-Re, i. pp. 14, 43). It is formed of five great blocks of alabaster; in the middle is a slightly raised circular a. 71.75 ft. above the floor, oriented precisely to the cardinal points. Its extreme measures are some 15 ft. each way. Most of the surroundings are now destroyed to the level of the ground. The altar stood in a court before the great obelisk-shaped monument, and was raised only a few inches above the level of the floor; beside it was a wall especially prepared for the slaughter and cutting up of victims. At Karnak, in an upper chamber close to the Festal Hall of Tethmosis III., is a great oblong rectangular altar or altar-base of white felspar, bearing the name of Rameses III. (Dyn. xx.), having each side shaped as a hotep. Tethmosis himself is recorded to have dedicated a similar one.

A different type of temple altar is a raised rectangular platform, reached by a flight of steps. There is a well-preserved example in the temple of Hatshepsut at Deir el-Bahari (Naville, Deir el-Bahari, i. Pl. 8; see also plan of temple in Archaeological Report, 1894-95, or in Baedeker’s Egypt). It measures about 16 by 15 ft., and stands in the centre of a small court about 5 ft. above the floor. The usual Egyptian cavetto cornice runs round it, and the top is flat except for some slight crowning or cresting near the edge. Built of white limestone, it is dedicated to the sun-god, and is called a khetu, or the altar of the inscription, like the stands of offering. Another raised altar is at Karnak, dedicated by Tethmosis III.; and a third is stated to be in the largest temple of Gebel Barkal, dating from the early Ethiopian Kingdom in the 8th or 7th cent. B.C. (Borchardt, i.c.). These are all that are known to exist. The sculpture on the altars of el-Amarna show the chief altars of Aton to have been of this form (Lepsin, Denkmaler iii. 96, 102; Davies, El Amarna, i. Pl. 12, 25, 27-28, ii. Pl. 18, iii. Pl. 8, 10). It seems as if the sun-gods in particular (Re, Aton, Amen-Re) were honoured by great altars.

**ALTAR (Egyptian).—** According to the sculptures, offerings were laid on mats or stands. A common form of the latter was a pillar-shaped upright of wood or stone, on which a bowl, censer, or tray could rest, and sometimes the bowl or tray was made in one piece with the upright. In tombs and temples the typical scene of offering shows a tray or stand covered with sliced loaves of bread or with meat, vegetables, and other food, placed before the deceased man or the god; such stands are often accompanied by a variety of food on mats. At el-Amarna the stands of provisions to which the sun-god Aton stretches his radiating hands are often surmounted by flaming bowls, perhaps censers, perhaps lamps. The food, drink, incense, and water were provided for the god or the deceased, as they would have been for the banquets of a living man; most flesh and vegetables seem to have been eaten raw, but in the standard lists of offerings roast meat was included. Amongst the varieties of the symbol kḥēsu, ‘altar,’ in the New Kingdom, is 𓊧, the picture of a stand with a flaming vessel upon it; and in the scenes of that age the offerer sometimes presents such a stand in his hand, with a plucked goose in the midst of the flames. Possibly this represents a kind of burnt sacrifice rather than a summary kind of offering.

The root of the name kḥēsu is spelt by the figures of a bivalve shell ⲏ𓊧, which suggests that a shell may sometimes have replaced the bowl as the receptacle for the offering. An other kind of stand for offerings—a wooden frame to hold jars of liquid — was named ṣwtu, this name being equally applied to those used at banquets.

In early tombs a flat slab for offerings, commonly called a ‘table of offerings,’ was placed before the niche containing a statue of the deceased, or in some other place corresponding. The table was oblong, with a projection like a spout in front. It was generally sculptured with a, a loaf upon a boul or soap, and often with water vessels, and sometimes with a lamp. The special name for this type was probably hotep. Such tables are also found in the ruins of temples, where they may have been placed for the service of the god. The type persisted down to the Roman period; it is rare during the New Kingdom, but was revived after its fall.

**ALTAR (Greek).—** The altar, in Greek religion, is a raised place, usually an artificial structure, which is used for the purpose of making offerings to a god or gods. It is thus to be distinguished, on the one hand, from a sacrificial trench or pit, such as was often used for offerings to the dead, to heroes, or to the infernal deities; and, on the other, from a table for offerings such as was often placed in a temple or before a god at a ceremonial banquet.
But there is no very strict line of demarcation in either case. The distinction sometimes made between *boule* as an altar for the Olympian gods and *erechthe* for offerings to heroes, though laid down by Pausanias and others, is not strictly observed by classical authors. And, on the other hand, a portable altar, such as was used for incense or minor offerings, is not easy to distinguish from a sacred table.

A more essential distinction, at first sight, might seem to depend on the nature of the offerings for which an altar was used,—whether, for example, it was only for bloodless libations, for incense, and for gifts of fruit and flowers, or for the slaughter of victims, of which portions were burnt upon it. The ritual and offerings admissible in each case were prescribed by the nature of the deity worshipped and by the sacred regulations of the local cult. and the shape and constructor, prop the altar must have depended upon these. But, apart from purely practical considerations, there does not seem to be any essential distinction observed in the form of the altar according to the various purposes for which it was intended.

Some confusion of thought is found in the case of sacred stones or other objects that were anointed with offerings of blood, oil, or other liquids, bound with sacred woolen fillets, and otherwise treated in some way as a sacred stone. This fact has led some writers to assert that an altar was sometimes regarded not merely as the symbol of the god, but as having him immanent in it. These sacred stones, which are a survival from primitive rite, are not, however, to be regarded as altars, though they may have been sometimes thought of when religious thought had advanced to less crude conceptions of the deities.

And from these, an altar seems to derive its sanctity merely from its association with a god, or its dedication to him. There was nothing in Greek religion to prevent a sacrifice being made to a god on any occasion or in any place; and, in such cases, the convenience of the sanctuary would suggest the use of any outstanding rock or natural mound, or, in the absence of such help, the piling together of stones or sods to make an improvised altar (*abrotrxeia* *erchepa*, Paus. v. 13. 5); and a similar primitive form, often heaped together out of ashes, was employed in many of the most famous altars, such as those of Zeus at Olympia and of Hera at Samos. This, however, implies the repetition of sacrifices at the same place; the selection of such places was due to various reasons. These may, according to Hermann's well-known division, be natural, social, and historical; but before we examine instances of these three classes, it is necessary to consider the relation of the altar to other objects connected with worship, especially the precinct, the image, and the temple.

The normal equipment of a sacred place in Greece consisted of a *temple*, an altar, and a precinct. In later times the temple was the most conspicuous and the most important, and usually contained the image of the god; but even then the altar was the essential thing for ritual purposes. If possible, it was placed in front of the temple, and in its main axis; but so that the person sacrificing faced east, with his back to the temple. Examples of this are the altars in front of the temples of Aphaia at Erechthe, of Apollo at Delphi, and of Aphrodite at Naoukratis. Often, however, it was difficult or inconvenient to place the altar in this position, and it was placed elsewhere in the neighborhood, as in the case of the altar of Zeus at Olympia, and of Athene at the Acropolis at Athens. In addition to the main altar, there might be others in the precinct, whether dedicated to the same god as the main altar or to other deities. An extreme case is offered by Olympia, where as many as 60 other altars are recorded as existing in the sacred Altis of Zeus. There was usually, in all probability, a small altar for incense and small offerings within the temple; traces of such altars have rarely been found (an example is in the temple of Sarapis on Delos (IBC vi. 299)); but they may often have been small portable ones.

It must always be borne in mind in this connection that a temple in Greece was not usually intended for the performance of religious services or ritual acts, much less for congregational use; it served chiefly to house the image of the god and his most precious offerings. Assemblies and services, including sacrifices of all kinds, took place for the most part outside the temple, at an altar which was its real centre; provision was sometimes made close to the altar for the accommodation of worshippers and other spectators. Thus at Olympia there were in the Amphiprheum and at Olympia there was accommodation for worshippers near the great altar of Zeus. But the altar of Artemis Orthia at Sparta, where the ceremonial dragging of the bloodless offering to the altar took place, a regular amphitheatre was erected in Roman times; the altars, for example of the association of an altar with the provision of accommodation for spectators is the *erchepa* placed in the orchestra of the theatre. Here the altar was the original centre round which were placed first provisional seats, and afterwards the great buildings which we find as theatres on numerous other sites. At Priene, where alone the *erchepa* is still extant, it is placed on the side of the orchestra farthest from the stage.

Altars were, however, not always associated with temples. The sanctuary of an ash was sometimes dedicated to a god, especially in domestic and civil surroundings. It was usual to have an altar of Zeus *Epexeis*, the protector of the property, in the courtyard of every house; traces of such an altar are found even in the palace at Tiryns. Here it was usual for the head of the house to offer sacrifice, especially on festival days. In addition to this there was the *hestia* or hearth, usually circular, and sacred to the goddess of the same name. Such a hearth is usually found in the hall of palaces of the Mycenaean age: its position in the house of historical times is doubtful. We should expect to find it in the *poias* or open recess opposite the entrance, according to Galen's description of the primitive house; but some suppose it to have been placed in the *adkakos* or dining-room. The hearth was the centre of domestic life, and it was accordingly sought by a suppliant who claimed the right of hospitality; at the wedding, fire was carried by maidservants to the new home by the bride's mother, thus ensuring the continuity of the domestic worship. The hearth of the royal palace was the centre of the worship and hospitality of the State in monarchical times. Just as the god was classified according to the god's feeling, this should be transferred to the hearth of the State as the focus of civic life; such a hearth, itself usually circular, was often enclosed in a circular building called a *tholos*; and the Prytaneum, where public hospitality was dispensed, was associated with it. The original character of the public hearth as an altar of Hestia was not, however, lost sight of; the Prytaneum at Athens regularly offered sacrifice there. On the sacred hearth in the Prytaneum at Olympia was preserved the fire of the Olympic day and night. It was also customary to set up altars in a market-place (*aeragoreia*), a gateway, or other places of concourse; and the sacrifices which preceded any assembly for political or other purposes implied the provision of an altar for offering them. Such altars were frequently, as a custom, set up without being attached to any particular temple or precinct.

This summary of the relation of altars to other appliances or conditions of religious or social life throws light on the classification of the reasons that led to the choice of various places for altars. We may assign to natural causes the erection of altars on mountain-tops or in groves, beneath sacred trees, in caves, beside springs, or in other situations distinguished
by their natural surroundings; to the same category may be assigned altars dedicated to Zeus Karabîos where lightning had struck, and others in commemoration of extraordinary phenomena; e.g. the altar to Phosphorus—perhaps an epitaph of Artemis—dedicated by Thrasylus in honour of the miraculous light that led his adventurous boat back to Mynæs from Phocaea in 455 B.C. Many of altars which owe their origin to social causes have already been given, especially those of the house and of the agora. In addition to the usual gods of the marketplace (Συνελεγμένοι θεοί) we sometimes find altars of more ancient significance; the altar of Pherecydes, the altar of Δεήσις (pity) and of άνθρωπος (sense of honour) at Athens. Many of the altars attached to temples or in precincts would belong to this class. Altars that owe their origin to historical causes are not so common; a good example is the altar dedicated by the Greeks to Zeus Eleutheros at Platae after their victory over the Persians. This class might be indefinitely enlarged if we include in it all altars that were set up for a special sacrifice and left as a memorial of it. Such were especially common in later times; a favorite is offered by the "taurobolos" of Roman date.

The form and size of altars vary very greatly, from a small portable block or table to a structure resembling a stadium in length, and from a mere mound or an elongated block to a combination of architecture and sculpture like the great altar to Minerva on the Acropolis. The form of a round or oval mound, with the addition probably, in larger examples, of a retaining wall of some sort to hold it together, was to be found in many of the oldest and most sacred altars. That of Zeus at Olympia, which was constructed of the ashes of victims, including those brought from the sacrifices on the sacred hearth at the Prytaneum, had a circumference, on its lower platform, of 129 ft., and of 32 on its upper portion, and a total height of 22 ft. The altar of Apollo at Delos, which was counted one of the seven wonders of the world, was said to be constructed of the horns of victims (σκύδοι ἰμαδίου). The other form of altar which may be regarded as primitive is an upright block of rock, or stone, either in its rough state or cut to a rectangular form. The great altar of Athene on the Acropolis at Athens was a trac of natural rock, quite uneven on the top, but cut to a more or less square shape at the sides; it was about 50 or 90 feet square. Another rock-cut altar, of a more regular sort, with a platform and steps, is that in the middle of the Pryx from which the orators addressed the people. Altars were, however, more frequently made of stone or marble, cut out from a single block if they were small, or built up like any other structure if they were large. Small altars might be either round or rectangular; there does not seem to be any ritual distinction between the two, except that the hearth (σπηλαῖα) was usually circular; and so, perhaps, were those built and called by later authorities στερεός; but rectangular altars to heroes were not unusual, e.g. that in the Heroum at Olympia.

When the altar was of any size and importance, the rectangular form prevailed; and the altar was usually mounted on a base which projected on one side, and so provided a platform (προπύλειον) on which the sacrifice stood. This was usually so placed that he faced towards the east; thus, in the normal positions of altar and temple, he would turn his back on the image of the deity in the temple,—a fact which alone would suffice to prove that the altar was the most primitive and most essential object in religious rites. This platform was of considerable extent in great altars, and was the place where the victims were slaughtered, the portions that were selected to be burnt were consumed on the altar itself. Altars intended for the sacrifice of many victims at once, or for hecatombs, were necessarily of very large size. The dimensions of the great altar built by Hieron II. of Syracuse (which is about 215 yards in length and about 25 yards in width), of the altars of Zeus at Olympia and of Athene at Aegina already mentioned; another example, of medium size, is an altar near the theatre at Megalopolis, which measures about 36 ft. by 6 ft. 6 inches.

Where stone was not readily available, an altar might be constructed of other materials; thus at Olympiwe the altar, with its steps and προφυγη, in the precinct of Aphrodite, is built, like the temple, of unburnt brick and faced with stucco. Altars of any considerable size usually consisted of a mere outer shell of masonry, the inside being filled with rubble or with the ashes from sacrifice; they thus offered a convenient surface on which to kindle the sacrificial fire. In the case of small stone altars which were used for burnt-offerings, some special arrangement was necessary to place on the top. As a rule, extant small altars are either on the top; sometimes they are set at an angle, as if to hold libations or drink-offerings; occasionally we find a drain to let the liquid run away, as in the altar found at Paphos (JHS ix. 239). Sometimes an altar had the form of a table supported upon stone legs; a good example of this type was found in the early Dionysos west of the Acropolis at Athens. The Boeotians used to build an altar of wood on the summit of Mount Cithereon, and to let it be consumed together with the sacrifice.

It was usual to give some architectural form to an altar, if only in the step or steps on which it was raised and the moulding that ornamented it at top and bottom. Where something more elaborate was attempted, it often took the form of Ionic volutes at each end of the top moulding; these were often joined at the sides by rolls such as we see on the capitals of Ionic columns. Large built altars are sometimes ornamented by a Doric frieze of triglyphs and metopes, occupying the whole height of the structure. An example of this occurs in the large altar already mentioned at Megalopolis. Often in later times the decoration of an altar, in architecture and sculpture, became more elaborate. The altar of Athene at Priene was decorated with an attached Ionic colonnade, and with figures in relief between the columns; on the top corner of Ephesus is said to have been full of the work of Praxiteles. The great altar of Asklepios at Cos was an elaborate structure; but the chief example of this kind was the great altar of Zeus at Perga. This consisted of a great basis, about 100 ft. square, ornamented with the well-known frieze of the gigantomachy. A broad flight of steps on the west side led up to the top of this basis, which was surrounded by a colonnade; in this space was the altar proper, consisting of heaped up ashes. An even larger altar is said to have existed at Parium on the Propontis. A remarkable architectural development of the circular altar is to be seen in the Tholos or θυμηλε (its official name) at Epidaurus; it has the form of a circular temple, with colonnades inside and outside.

Inscriptions are not usually found on altars in Greece. An early example is the altar with ἔργον or ἔργα painted on its stucco face in the Heroum at Olympia; the chief altar attached to a temple or precinct would not require any such means of identification, though, where it was a special dedication, this might be recorded, e.g. the great altar of Apollo at Delphi states that it was dedicated by the Chians, and a smaller inscription on its corner adds that the Chians received the privilege
of piyavrvia for their gift. In the case of altars to other gods than the one to whom the precinct belonged, inscriptions would be useful, but were by no means universal. They would be required also on altars in public places; e.g. the inscribed altar in the Dipylon gateway at Athens, dedicated to Zeus Herkeos, Hermes, and Acamas. Where the object of an altar was commemorative rather than for practical use, the inscription would of course be essential. But ritual ordinances as to sacrifices were usually inscribed, not on the altar itself, but after setting it up beside it, or on some other convenient place in its immediate vicinity.

For the ritual of sacrifice, and the manner in which altars were used in connexion with it, see SACRIFICE. But it should be added here that an altar was usually dedicated to the service of a particular god, and was not used for offerings to any other. A good example of this is seen in the sixty-nine altars of Olympia, each of which had its proper destination, and was visited in its proper turn in the monthly order of sacrifices. This rule did not, however, preclude a common dedication to several gods of one altar (εἰδαρχοι, εἰδαρχοί θεοί). There existed altars of all the gods, or of the two or more most interesting in Series, produced to ensure the worship of some powers that might otherwise be overlooked, is offered by the altar of the unknown gods at Olympia. The example of this title quoted by St. Paul at Athens (Ac 17?) was, however, the only altar of this kind that was worshipped at the same altar; a classical instance is provided by the six twin altars mentioned by Pindar in Ol. v. 12 (see Schol. ad loc.). In Athens, Poseidon and Erechtheus shared a common altar in the Erechtheum, and in the Amphiareum at Oropus the altar has been enlarged so as to accommodate several deities (Πραξιτέα Αρχ., Er. 1804, p. 91).

In addition to these for the ritual of sacrifice, altars were also sought by epigrafeis, who often sat upon the steps, and especially by those seeking sanctuary. The altar in a house, whether the hestia or that of Zeus Herkeos, often served this purpose; and in a temple a suppliant would naturally place his offering there, either by clasping his image or by seating himself on the altar or beside it. It does not, however, appear that in Greek religion there was any peculiar power in this connexion that belonged to the altar more than the two or more gods it was dedicated to. The right of sanctuary usually had clearly defined limits within which it was inviolable. It is worthy of note that when Cylon's followers had to go outside these limits, it was to the early image, not to the altar, that they attached the rope to which they trusted for protection.

ALTAR (Hindu).—Altars, or raised platforms, play an important part in the Hindu ceremonies. The Sanskrit word for a Hindu altar is śāvā, which is defined as 'an altar or raised place made of Kuśa grass, or strewn with it, and ordered for an oblation, for placing the vessels used at a sacrifice, a place or ground prepared for sacrifice' (Monier-Williams, s.v.). The original śāvā was a trenched variety of shape, in which the sacrificial fires were kept, dug in the sacrificial ground. In early times in India, when the gods were worshipped by each man at his own fireplace, it was a duty incumbent upon every household to set up the sacred fire in the altar, from the very day on which the ceremony of the Agn.yādāna, or the setting up of sacrificial fires, had been performed. On that important occasion the sacrificer chose his four priests, and erected sheds or fire-houses for the Gārhapatyas and the Āhavanīya fires respectively. A circle was marked for the Gārhapatyā fire, and a square for the Āhavanīya fire; a semicircular area for the Dakṣināgni or southern fire, if that also was required. The ādhaṇaya or officiating priest then procured a temporary fire, by introducing it by means of the āmazon from the village, and, after the usual fivefold lustration of the Gārhapatyā fireplace, he laid down the fire thereon, and in the evening handed two pieces of wood, called araṇi, to the sacrificer and his wife, for the purposes of producing by attrition the Āhavanīya fire the next morning.

There were different vedis for different kinds of offering, as, e.g., the large Sona altar (mahāśāvā) and the pāvātē śāvā, used for animal sacrifice, which resembled the uttarā śāvā, or northern altar; the latter was an altar raised with earth excavated in forming what is called a chātuvaīla, or hole. The Satapatha Brāhmaṇa compares the shape of an altar to that of a woman. The altar would be broad at the front, narrow in the middle, and broad again on the eastern side; for thus shaped they praise a woman. The shape of sacrificial altars was considered a matter of so much importance that there were special altars dedicated to Sun, Earth, and Moon, each of which an altar is set up facing east. On the day of the ceremony the boy is bathed and is seated on a low wooden

...
stool which is placed upon the altar, and his father and mother sit on either side. The chief priest kindles on the altar a sacred fire, into which he throws offerings. On the occasion of a marriage in the same caste, an altar about six feet square and one foot high is raised. The bride and bride- 
groom sit on the marriage altar, and two men hold a cloth between them. At the lucky moment the cloth is drawn aside, and each for the first time time sees the other's face. Afterwards the priest kindles a sacred fire on the altar, and clarified butter and parched grain are thrown in. The marriage altar, which is thrice kindled, is raised. Some heaps of rice are made on the altar, and a betel-
nut is placed on each of the heaps. The bridgegroom lifting the bride's right foot places it on each of the seven heaps successively. Among the Deshastha Brāhmans of Bījapur, boys on their initiation are led to an altar called bahuhe, where the priest girds them with the sacred thread, to which a small piece of deerskin is tied.

ALTAR (Japanese).—In Japan little distinction is made between the table and the altar. No special sanctity attaches to the latter. In Bud-
dhist temples there is a stand on which incense is burned, called Kōtan or Kōtana ('incense-
stool'). Shinto offerings are placed on small tables of unpainted wood. The old ritual prescribed that in the case of Greater Shrines the offerings should be placed on tables (or altars); in the case of Lesser Shrines, on mats spread on the earth. Each house may have its Buddhist domestic altar, or rather shrine (butsudan)—a miniature cup-
board or shelf where an image of a Buddha is deposited, or a Shinto altar (kamidana) where Shinto tokens, pictures, or other objects of devotion are kept.

ALTAR (Persian).—1. In none of the ancient Persian records, whether literary or inscriptive, do we find a generic term for 'altar.' Nevertheless, to infer the absence of such a term in the existing records that no kind of altar was employed in the Zoroastrian ritual during the period represented by the Inscriptions and the Avesta, would be to press the argument from negative evidence too far. Moreover, if the limited vocabulary of the Inscrip-
tions contains no word for 'altar,' yet the royal sculptor has left an unequivocal witness of the existence of altars in the Mazdism of the early Achaemenians, in the representation of the altar in bas-relief over the entrance of the tomb of Darius Hystaspis on the rocks at Naksh-i Rustam.† The statements of Greek and Roman authors as to the absence of altars, and of temples and images, in early Persian worship, would seem, on the first view, more difficult of a satisfactory explanation.† Herodotus, claiming to speak from personal ob-
servation and research, states (i. 131 ft.) that the Persians "think it unlawful to build temples or altars, imputing folly to those who do so." Therefore, when about to sacrifice, they neither erect

† The dédiyya gātu of the Avesta (Vend. didd., vii. 80, 86; xiii. 17) is exceptional: for, etymologically, it means no more than 'legal or consecrated place,' and is synonymous rather with ' temple than with altar. See, however, Jackson, Grandr. Iran. Phil., ii. 701; Persia, Past and Present, p. 500, by the same author.

† See Dihlouly, L’Acropole de Susa, p. 392.

ALI (Persian).—E. P. Russell, "The Essenes," in Bulletin of the British Museum, 1889-1890; E. J.eca, "A産-

symbol and truest visible manifestation of the presence of that divinity, namely, the sacred fire.

The figure on the rock is, therefore, a Fire-altar, attesting the use of such altars amongst the Persians long before the death of Darius.

Of the fact that the Persian reverence for fire goes back to a very early period, Quintus Curtius (c. 64 A.D.) would scarcely think that this portable altar would include the massive support which seems to have characterized the temple altar * (see on Sasanian altars, below, § 2).

Sebeos (wrote c. 650-675 A.D.) states that the portable altar was less elaborate than that in use in the Atash-gah. However, asserts that these royal altars were made of silver.† The latter statement may refer only to the Atash-dān. Tabari, the Arabic historian (6. 539 A.D.), relates how Yazdijird III., the last of the Sasanian kings, carefully departed with him the sacred fire, in its fit receptacle, from place to place in his hurried flight before the conquering Arabs.

From the representations on the coins of the period,† we learn that the sacred fire was not distinguished upon the altar during the Parthian domination (B.C. 250-A.D. 226). Unfortunately, these coins do not assist us very materially in ascertaining the form of the altar at this time. Although the Fire-altar is a common type on the reverse of the pieces of the period, they contain only the Atash-dān, having as support the lower part of the Fire-temple or Atash-gah; that is, it is only a convention. Still they serve sufficiently to show that in its main element, the Fire-altar of the Achaemenians had persisted and survived the shock given to Zoroastrianism by the conquest of Alexander and the rule of the Arsacids.

It is possible, though this is by no means certain, that it was during this period that the sacred places on the high mountains, under the influence of foreign cults, gave room to temples, in the classical sense (leper), and consequently there arose the accompanying altar (bātāt) for animal sacrifices (cf. Strabo, loc. cit. § 15, also Xi. vi. 4; Pausanias, loc. cit.).

Other high authorities | are strongly inclined to assign what are, admittedly, the extant remains of one of these temples, the famous temple at Kangavar, to the time of Artaxerxes II. (Numen) (404-358 B.C.), when, as we learn from several sources, there was a serious decadence from orthodox Zoroastrianism, and a re-revivalism of ancient cults (cf. J. H. Moulton, Thinke, 1892, vol. ii. pp. 498-499). The last word on this matter is yet to be written.

On any theory, we are certain that in the first century before our era two classes of altars, at least, were used in Zoroastrian ritual, namely, the Fire-altar of the Atash-gah, and the sacrificial altar attached to the temples erected to specific Persian divinities.

Was there not yet another altar in use at this period? Certain statements in the terse account which Strabo gives (loc. cit.) of the religious practices of the Persians would seem to justify the inference.

We know that the temples of those Persians were: *

Outre les somptueux pyræ construits dans les villes, il existait encore des pyræ en natures pour reposer dans une tente spéciale, et le roi n’entrait jamais en campagne autrement qu’accompagné de mages et de pyræ (Journ. Archéol., 1666, p. 112 (Sebèso, 60)). For a somewhat different view of this passage, see Dr. Heinrich Hübschmann, Zur Geschichte der Armenischen Religion (in den Armmischen Denkblättern), Leipzig, 1873, p. 7, n. 1.

† Ordo autem arsanis erat tallis. Ignis, quem ipse sacrum et aeternum vocabant, argelids alatarium praebauit. Magi proximi patriam cernere censabat (III. 3, 91).|

These coins were not part of the national issues, but belonged, probably, to the semi-independent kings of Iran, in the narrower sense. See Numismata Orientalia, 'Parthian Coinage,' by Percy Gardner, p. 30; Num. Coins, vol. ii. Athens (1842-44); and especially Justi, Otrandi, Iran. Phil. ii. pp. 486-492; G. de la Numismatique, Oxford, 1900, Etude sur la Numismatique de la Perse, p. 63-97. For similar, but less extensive, and especially Justi, Otrandi, Iran. † Ordo autem arsanis erat tallis. Ignis, quem ipse sacrum et aeternum vocabant, argelids alatarium praebauit. Magi proximi patriam cernere censabat (III. 3, 91).

These coins were not part of the national issues, but belonged, probably, to the semi-independent kings of Iran, in the narrower sense. See Numismata Orientalia, 'Parthian Coinage,' by Percy Gardner, p. 30; Num. Coins, vol. ii. Athens (1842-44); and especially Justi, Otrandi, Iran. Phil. ii. pp. 486-492; G. de la Numismatique, Oxford, 1900, Etude sur la Numismatique de la Perse, p. 63-97. P. iii. by Altecke de la Fuye; Donz, Kol-
divinities were separate and distinct from the Fire-
temples or Atash-gahs (Strabo, loc. cit. § 15). But
Strabo adds that to whatever divinity the Persians
sacrificed, they first addressed a prayer to fire, all
their devotions then, as now, being performed in
the presence of the sacred element. Further, in
describing the sacrifice to water as mentioned and
adds that the blood of the firstborn of every
kind of the blood should spurt into the fire. The fire,
in this case, cannot have been that of the Atash-
gah, but a fire on some kind of altar or brasier
present at the place of sacrifice (§ 14). This fire
was to be of all kinds and used in the Atash-gah, and
correspondingly it is quite conceivable that it may have served both for boil-
ing the flesh * and for representing the fire of the
Atash-gah as the symbol of the nature and pres-
cence of the deity. (See below, § 3).

If the inference is correct, we have here the parent,
so to speak, of the Fire-altar employed at the
present day in the Izashnah-Gah, or place
where the religious rites are performed.

2. On Sasanian coins of all periods, the Fire-altar
is a fixed, modified, and therefore
an alter of the same time.

On some of the earlier pieces we observe that there are,
at the sides of the altar, metal feet or in the form of lions' paws, which seem
to rest upon what were probably intended for
handles or legs on which to carry the altar. It is, how-
ever, conceivable that these were a feature of only
the movable altar already described, but were not
characteristic of the altar of the Atash-gah. How-
ever, in the later coins of the period this feature disappears, and we have merely the central sup-
port in the form of a short column with a base,
and crowned, as in the older coins, by the Adoshit,
which, in turn, supports the Atash-dans.‡

Whether it was the great reform of Zoroastrian-
ism inaugurated and developed by the Sasanian
kings that abolished the practice of animal sacri-
fices, or whether it had fallen into disuse before
the rise of that dynasty (cf. Dieulafoy, L'Acro-
pole de Susa, p. 402, Note 2), there can be no doubt that
from Sasanian times onwards no places for real sacrifices are to be counted among Zoroastrian
altars.

The dāitya-gātu was no doubt more extensive
than any shrine for the Atash-dans of the
Bahram Fire, but its remaining part was the shelter
of a brazier, only inferior, Fire-altar, already con-
jectured to exist elsewhere. At one of the
small fire-altar of the Izashnah-Gah (as witness of
this, see the elaborate ritual of Avesta, Vend. v. 39,
etc.). These are the two classes of altars in use
among the Zoroastrians of Persia and the Parsees
of India at the present day.

3. Modern Fire-altars, while always retaining the
two most essential out of the three parts of which
Sasanian and, probably, as we have seen, earlier
altars consisted, namely, the Adosh and the Atash-
dans, vary somewhat in the form of the latter from
those found on the coins and sculptures.

The Atash-dans seen by Anquetil du Perron at
Surat (see Zend Avesta, ii. pl. x.; Darmesteter, Le Zend Avesta, i. pl. iii.), consisted of large round
vases of metal, much like our garden flower-vases,
with a foot like a goblet and widening upwards,
the larger one measuring three and a half feet in
height, and three in diameter at the brim. Each
stood upon its Adosh, about six inches in height.
Thus size and degree of elaboration which char-
acterize the Atash-dans depends in the first place
upon the wealth of the community worshipping

* See Rawlinson, Fire Great Monarchies of the Ancient

Pl. I.
‡ See Num. Chron. vol. xii. pl. v. and, in general, Dorn,
op. cit.

at its shrine, and especially upon the quality
of the fire it contains: whether it is the Bahram Fire,
the purest and most sacred of all earthly fires, or
the Atash i Adaran, the fire of the second grade,
or only that used in the Izashnah-khānah.

The latter of the two fire-altars which Anquetil
sees was that of an Atash i Adaran, placed, of
course, in the care lest that one was
that in use in the Izashnah-Gah. The latter
contains the lowest grade of the hierarchy
of sacred fires; it is the representative, though not
the equal, of the fires of the Atash-gah (Darme-
steder, Le Zend Avesta, i. pl. iii.). The fire upon
the altar the priestly rites and religious ceremonies
are performed (see SACRIFICE and OFFERINGS).

In large temples, such as that at Kolabs, described
by Darmesteter (op. cit.), there are as many as six
of these small altars, where as many pairs of priests
are able, simultaneously, to perform their minis-
trations. This is the class of altar found in the
numerous dādgahs, or small chapels, which have
no Atash-gah attached.

Unlike the sacred fire on the altar of the Atash-
gah, the fire of the small fire-altars may be allowed
to burn out, and be kindled again whenever the faithful
Zoroastrians assemble to perform their devotions
and ceremonies. A small altar of this class is found
also in all pious and orthodox Zoroastrian
homes (see Dieulafoy, L'Acròpole de Susa, Pl.
vi.);

LITERATURE.—The principal works have already been re-
ferred to in the body of the article. Dieulafoy's L'Acro-
pole de Susa, p. 380 ff. (Paris, 1884-87); is the only work
that treats, with anything like fulness, of ancient as well as
modern altars. Scattered references in Greek and Roman
authors have been collected and translated by (1) Wilson, Paré
Religion, p. 182 ff., Bombay, 1842; (2) Hang, Essays on the
Sacred Language ... and Religion of the Parsees, p. 175,
London, 1884. These two works contain the details relating
On modern altars, see Anquetil du Perron, Zend Avesta,
C. de Harlez, Avesta, Livre Sacré des Sectateurs de Zoroastre,
vol. ii. p. 10ff.; Darmesteter, Le Zend Avesta, vol. i. p. ix-

E. EDWARDS.

ALTAR (Polynesian).—The Polynesian altar,
or fata, was essentially a table for the gods,
and was constructed of wood, thus forming a striking
contrast to the stone altars and other religious
buildings of other parts of the world. In Tahiti, the altar
was situated either before or in the marae, or temple
(Moerenhout, Voyages aux îles du Grand Océan,
Paris, 1837, i. 470-471); while in Hawaii, where
the temple was much more than a simple shrine,
the figure of the god was put in the inner
apartment to the left of the door, with the altar immedi-
ately in front of it (Ellis, Polynesian Researches,
2nd ed. London, 1832-1836, iv. 89). The usual type
of the Polynesian altar is admirably described by
the missionary William Ellis, as follows (l. 344-345;
rf. Cook, Troisième Voyage, Paris, 1785, ii. 152-153,
330, iii. 388): 'Domestic oraltars, or those erected
near the corpse of a departed friend, were small
and smaller structures; those in the public temples
were large, and usually eight or ten feet in height;
the face of the altar was supported by a number of
wooden posts or pillars, often curiously carved and
polished. The altars were covered with sacred
boughs, and ornamented with a border or fringe
of rich yellow plantain leaves. Beside these, there
were smaller altars connected with the temples;
some resembling a small round table, supported
by a single post fixed in the ground. Occasionally,
the carcass of the hog presented in sacrifice was
placed on the large altar, while the heart and some
other internal parts were laid by it, which was
called a fata aia. Offerings and sacri-
fices of every kind, whether dressed or not, were
placed upon the altar, and remained there till de-
composed.' A Tahitian altar is described and pic-
tured by Wilson (Missionary Voyage to the Southern

Pacific Ocean, London, 1799, p. 211) as being forty feet long and seven wide, and resting on sixteen wooden pillars eight feet in height. It was covered with thick matting which hung down the side in fringes, and on it was a rotting pile of hogs, turtles, fish, plantains, coconuts, and other offerings. Since the Polynesians had no burnt-offerings, and since the sacrifices to the gods were, of course, *tafu*, this unsavoury procedure was unavoidable. In Tahiti, the victim was usually dead when placed on the *fata*, and there were also stone altars on which the heads of human victims were placed. The type of altars here described did not differ materially from the class represented by the Hawaiian *rere*, on which human victims were laid face downward, covered with sacrifices of sacred pig, and left to decay (Ellis, iv. 169).

The same distinction which prevails among the Melanesians (wh. see), is found in the Polynesian altars, which include not only the *fata* here described, but also the *fata tupaau*, or altar for the dead, which was six or seven feet in height, and received a corpse immediately after death. This *fata tupaau* was covered by a cloth which protected the dead body from the elements (Moerenhout, i. 470-471, 547); to the corpse food was offered and *mauilo* thrown on its body. The covering is also extended in the Marquesas, where altars to the tikis and spirits of the dead are frequent along the roads and by the houses (Waltz-Gerland, *Anthropologie der Naturvölker*, vi. 387, in *Zeitschr. f. Ethn.*, II. 301), to the small *mara* (Serant in *L’Anthropologie*, xvi. 475-484). At the *mauilo fata*, or altar raising, the altar was decorated with mero branches and coconut leaves, while the offerings were pigs, plantains, and the like, but not human sacrificial victims (Ellis, i. 34).

**LOUIS H. GRAY.**

**ALTAR (Roman).**—Much of what has been said about altars in Greek religion applies to Roman religion also, especially in the case of customs or rituals borrowed from Greece. Indeed, most treatises or articles do not make any distinction between the two. Here only those cases will be mentioned in which we have independent evidence for Roman practice, or in which Roman practice differed from Greek.

1. As to *names*, Varro (as quoted by Servius, *Ad. En. ii. 555*) asserts: "Dis superia altar, terraeque* sumis* facios facing seven days, and the *dēxφa* in Greek, is by no means universally observed by Latin writers, though there seems to be a general impression, in accordance with the etymology, that *altar* is usually higher structures than *ara*.

Lfty altars were thought suitable to Jupiter and the gods of heaven, low ones to Vesta and Earth. Natural or improvised altars, especially those built of turf, are familiar in Latin literature (e.g. Horace, *Od. III. viii. 9-4*: "Posuitque carbo in crepitis vivo"). Small altars are set up amidst trees in confection with sacred groves or trees; but they tended, as Greek influence spread, to be superseded by altars of stone or marble. Some of the earliest and most sacred altars in Rome seem not to have been attached to any particular temple; among these were the *ara maxima*, sacred to Hercules, and the mysterious subterranean altar of Consus, which was uncovered only once or twice in the year during festivals.

2. When altars are associated with temples, their position varies. Vitruvius (iv. viii.) states that altars ought to face out, and should be placed on a lower level than the images of the gods in the temple, in order that the worshipers may look up to them. The orientation of temples being much more varied in Italy than in Greece, that of the altar varies also. Roman temples are usually raised upon a high substructure approached by steps; and the altars at Pompeii are usually placed either in the open area in front of the steps or on a platform part of the way up. The sacrificer appears, from the position of the altars, to have stood, in some cases, with his side to the temple, in some cases with his back to it. Here, as in Greece, the usage seems to show that sacrifices offered to a god on his altar were not directly offered to the image which symbolized his presence—that, in short, we have not cases of genuine ‘idolatry.’ But, in the scenes of sacrifice frequently represented on Roman reliefs, it is common for either a recognizable temple or a small statue of a god to be indicated behind the altar, probably as an artistic device to show to whom the sacrifice is offered.

3. There were also altars in Roman houses. It appears that, in primitive houses in Italy, the hearth served both for sacrifices to the domestic gods and for cooking purposes; this must have been in the atrium or central living-room. In farmhouses, where the kitchen with its hearth was still the principal room, we find a survival of this arrangement in the shrine for the household gods, which in a small country house or in a villa example occurs in the villa at Bosco Reale. In Pompeian houses the hearth has been transferred, for practical purposes, from the atrium to the kitchen; and that its religious functions accompanied it is shown by the small shrines, or alae, in which painted figures of the domestic gods are often found in the kitchen near the hearth. More frequently, however, the household worship was more conveniently carried on at a small shrine provided for the purpose, either in a special room or in one of the foundations in the atrium, peristyle, or garden. Such shrines usually consisted of a niche, with either statuettes or painted images of the domestic gods, the *lares* and *penates*, the genius of the house, and serpents; and in front was placed a small altar of a usual type. In one case a small fixed altar was found in a dining-room; probably portable altars were generally employed for the offerings which usually accompanied all meals, when they were no longer held in the atrium proper, or in the peristyle or garden.

4. Of the common hearth of a city we have the most familiar example in that of Vesta at Rome, where the undying fire was tended by the Vestal Virgins. This was, doubtless, circular, as was the temple that crowned it. Small shrines of many kinds are commonly placed in the streets, usually with a niche, or at least a painting on the wall behind, to indicate the gods to whom the altar was dedicated—sometimes the *lares compitales* or street gods, sometimes other deities.

5. As regards the form of altars in early Italian religion, we have not much information. The Ara Volcani, discovered in the recent excavations of the Forum, was an oblong mass of natural rock, with its sides scarped away; it was restored with semi-circular steps and a colonnaded area and was open in quite early times, possibly at the Gallic invasion. Among the primitive objects of cult found underneath the famous black stone was a rectangular block, which was probably an altar. Roman altars were probably influenced in form considerably by Etruscan custom, which seems, from vase paintings and other evidence, to have favoured some curvilinear and fantastic shapes. But we have little evidence of this in Roman monuments. From Imperial times the evidence is abundant; the forms are in their origin dependent upon those of Greece, though they soon enter on an independent development of their own. The magnificent architectural structures of Hellenistic times found a counterpart in the Ara Pacis Augustae, which was surrounded by...
reliefs with allegorized and ceremonial scenes, and is perhaps the most characteristic example of the
sculpture of the Augustan age. Smaller altars, both round and square, are provided with artistic
decoration in the naturalistic garlands carved in the marble, where the Greeks would have hung real
ones, and in the reliefs, frequently representing sacred facts including many appropriate
subjects. In these it is possible to trace a develop-
ment which, however, concerns the history of sculpture rather than that of religion. Simpler
architectural decorations follow the Greek models; 
rather crowded altars and bands of triglyph ornamentation, are very common.
We also find sometimes on reliefs an
ornamental canopy built on the top of an altar.
In Roman custom, altars were far more frequently
than in Greece erected merely in commemoration
of a sacrifice, whether actually made upon them or not; in such cases the inscription was the essen-
tial thing, the altar form being little more than a
convention. On the other hand, altars for actual
use were frequently supplied with arrangements
convenient in use, such as seats to receive libations, and ducts to carry away the liquids.

6. Smaller portable altars, either for incense or
for minor offerings, were frequently used; some
have been found at Pompeii and elsewhere, but
they are not easy to distinguish from tripods or
other vessels. Sometimes the pedestal is differsub-
bulum or marble table, frequently found behind
the impluvium in the atrium of Pompeian houses,
should be considered as an altar in origin. If, as
has been suggested, it originally stood beside the
hearth it would serve this purpose, though it may
have been merely a dresser. A peculiar interest attaches to this table in the matter of
religious evolution, if we accept its sacred signif-
icance; for it plays an important part in the theory
of the development of the plan of the primitive
Christian church from the atrium of the dwelling-
house.

Between the tablinum and the open part of the atrium stood
an ornamental stone table, the only reminder of the sacred
hearth. It is a very striking fact that in this precisely the
position of the holy table in the basilica; when we take into
account the similar use of the altars with the
ancient (Christian) altars, we can hardly fail to admit a close
relation between them (Lewry, Christian Art and Archaeology,
London, 1901, p. 102).

7. The association of altars with tomos in Roman
custom is somewhat confusing. Tombs frequently
form a table resembling an altar (tippus) and it is
natural to associate this offerings to the dead,
even if the altars be merely cing them into the
not intended for actual use; the word ara
is even applied to tombstones in inscriptions.
On the other hand, Vergil describes a funerary
pyre as "ara sepulcri" (Aen. vi. 177). This altar, on
which offerings to the dead were consumed together with his
body, may be symbolically represented by the
altar-tomb.

LITERATURE.—The fullest and most recent account of
altars, Germania's Reich in Bayern (Itz-Wissowa,
'Altar,' where references to earlier authorities are given.

E. A. GARDNER.
stone, so that it served at once as an emblem of deity and as an altar. It was a bethel (Gn 28:17).
Sometimes such a pillar stood alone, sometimes one or two lonely stones were placed by it,1 sometimes the number of stones was made seven,2 and at Gezer the whole number of these standing pillars is given. High places with such stones have in recent years been discovered at Tell es-Safi,3 at Petra,4 at Megiddo,5 and at Gezer.6 When the number of stones is more than one, it is usually easy to identify the bethel, as it is worn smooth by the continual libations.7 These altars were common to both the Hamitic and the Semitic world,8 and developed in course of time into the Egyptian obelisk.

5. Meat cooked in a pot hung on three stakes.—At this early time probably the larger part of each sacrifice was cooked and eaten by the worshipper, as in 1 S 11:5. Probably in the earliest period the flesh was boiled in a pot, as described in Samuel and Jeremiah.9 And as on some early Bab. seals and in the early hieroglyphic inscription.10 The Bab. pictures represent the pot as resting in the crotch of crossed stakes, as in course of time the fashion of roasting the meat instead of boiling it came in. The transition in Israel is noted in 1 K 8:64. It is quite probable that the temple marked a stage of culture which was attained at different periods in different parts of the Semitic world, and that one of its consequences was the institution of burnt-offerings—or offerings consumed by fire, of which we have already spoken to inhale the smoke. This transition led to the creation of fire-altars. These were ultimately of several kinds, and the evolution of them proceeded along two lines.

6. Altars cut or made to stand on a rectangular stone, called a masgibah. This was actually done at Aksum in Abyssinia, where such structures have been found.† Perhaps the 'ariels' of Moab, mentioned in 2 S 23:19 and on the Moabite Stone (lines 12 and 17), were structures of this nature. They were structures which could be dragged away, and were connected with the shrines of Jalweh, as well as with those of other deities. This is evident from line 17 of the Moabitc Stone, and from Is 29:7, where the name is figuratively applied to Jerusalem.

W. R. Smith supposed that the pillars of Jachin and Boaz, which stood before the temple of Solomon at Jerusalem, were used as pillars for fire-altars at the four cardinal points. Herodotus (li. 44) tells us of two such pillars at Tyre, one of emerald and the other of gold, which shone brightly at night. This latter fact was possibly due to some sort of incrustation or impurity, which rendered them a natural substitute, connected with them. Possibly all these pillars were developed, like the altar-magazines of Aksum, out of the primitive pillar.

7. Rock-cut altars.—Another development from the primitive mountain crag was the rock-cut altar. This represents a later stage of culture than the altar of unhewn stones. That was an artificial imitation of a mountain crag, but it was built of stones on which man had lifted up no tool. Human labour has placed the stones one upon another, but was confined to that alone. Rock-cut altars, on the other hand, are projections of natural rocks of which human hands have fashioned into a form better suited to the purposes of sacrifice. One such was unearthed by Sellin at Taanach.† This consists of a stone about half the height of a man, roughly rounded at the top, but square at the base. At the corners rude steps have been cut in the stone, and the top is slightly hollow. It appears to have been used for libations only, and never for fire offerings.

Another example of a rock-cut altar is found in the rock-cut high-place which was discovered at Petra in the year 1900.† This altar is 9 ft. 1 in. long, 6 ft. 2 in. wide, and 3 ft. high. It is approached by a flight of steps, on the top of which the officiating priest could stand. On the top of the altar is a depression 3 ft. 8 in. long, 1 ft. 2 in. wide, and 3½ in. deep. This was apparently the fire-pan of the altar. On three corners of this altar there are depressions cut, which have suggested to some the possibility that, when complete, it was adorned at the corners with horns of bronze. This is, of course, only conjectural.

Just to the south of this altar, and separated from it only by a passage-way, is a platform which seems to have been used for the preparation of sacrifices. It is 11 ft. 9 in. long from north to south, 16 ft. 6 in. wide, and 2 ft. 9 in. high. It is ascended by four steps at the north-east corner. In the form of the altar it consists of two concentric circular pans, the larger of which is 3 ft. 8 in. in diameter and 3 in. deep, and the smaller 1 ft. 5 in. in diameter and 2 in. deep. From the lower pan a rock-cut conduit, 3 ft. 2 in. 9 in. wide, and 3 in. deep. This platform was, no doubt, used for the slaughter of the victims, and these basins were designed to catch the blood, and the conduit to conduct it away.†

When we remember the importance attached to the blood by the early Semites, and their feeling that it should be offered to the deity (cf. 1 S 14:42 and Dt 12:16-18), it becomes clear that this platform was as important a part of the altar as the other. Some scholars have called it, because of the circular basins cut in it, the 'round altar.'† Analogy makes it clear that the trench of the Samaritans, referred to above, is in reality a part of an altar. Probably every altar of earth in ancient times was accompanied by a slaughtering-place similar to the one described above.

8. Altars of incense.—A still later form of the altar—later from the standpoint of cultural development—was a small portable altar carved out of a stone. Such altars were developed in many parts of the Semitic world, and are described as portable altars of the different nations. They were used for the burning of fat or of sweet-smelling incense, and probably came into use at a time when, in ordinary sacrifices, such parts of the offering only were given directly to the deity, the other and more edible parts becoming the property of the priests.

9. Bronze altars.—At the farthest remove culturally from the primitive Semitic altar stands the bronze altar. Not made of an unmanufactured product like stone, it is an altar of a civilized, and not of a primitive, people. Such altars are found among the Babylonians, Assyrians, Phoenicians, and Hebrews. Our knowledge of their forms is set forth below in describing the altars of these nations.

10. Arabian altars.—The only large altar that can in any sense be called Arabian which has, so far as the writer knows, been studied by Europeans, is that of the Nabataeans.† See Sellin, Tell Ta'anak, p. 38.

† See the Fifth dynasty temple restored in Erman's Egypt. Rel. 46.

† See Schell, Delegation en Perse, ii. 130, and compare Barton in JOAS xxii. 122 n. 31, and 125 n. 9. A similar scene is figured on a seal with the writer's impression.

† See Theodore Bent, Sacred City of the Ethiopians, 150 ff.

† Rel. of Sem. ii. 488 ff.
is the great altar at Petra, described above (§ 7). That rock-cut altar may, however, be an Edomite or Nabataean work, and indicative of their civilizations rather than of the civilization of the Arabs. Indeed, the use of tools upon it makes it probable that it was constructed by people who had lost the primitive simplicity and poverty of thought which was attached to all things Arabian in early times.

The purely Arabian altars were, as they still are, spurs of natural crags, or stones containing hollows to receive the blood (see Curtiss, Bibl. Hist. 256).

From South Arabia a very interesting altar of incense has come, which is now in the Berlin Museum. It is a little over 2 ft. high. It tapers slightly as it rises, until within about 7 in. from the top. At this point a slight shoulder projects, above which the stone broadens again. On one side, in an ornamental framework carved in stone, rises a pyramid, the blunt apex of which is surmounted by the thin crescent of the moon. The horns of the crescent are turned upward, and a star or representation of the sun-disc occupies its centre.

Petrie discovered three such altars of incense in the temple at Serabit el-Khadim in Sinai. It is true that this was ostensibly an Egyptian temple, but a little doubt exists as to whether the temple and altar were built by the Semites. Whatever the Semites had in mind, the square nature of it is a significant fact. This altar, probably the best known, is represented in the Metropolitan Museum. In addition to the altar, a smaller, square altar is seen in the bottom of the frame, which is almost identical in size and shape to the altar above it. The base of the altar is flat and wide, and the only feature of interest is a small square base set into it. This base is not a true altar, but a platform on which the altar was placed.

11. Aramaean altars.—In 2 K 16:10, we are told of an altar in Damascus which the Judean king Ahaz saw, and which so pleased him that he had one made like it and placed in the Temple at Jerusalem. Probably the altar described by Ezekiel (45:3-7) is a description of it. If so, it was built of stones, and consisted of a base 27 ft. square and 18 ft. high, along the top of which ran a moulding 9 in. wide. On this arose a square of 24 ft., which was 3 ft. high; on this a square of 21 ft., which was 6 ft. high; and above this arose the heart of the altar, 6 ft. high. It was approached by steps on the east side. The whole structure was about 17 ft. high, and at its corners were projections of some kind called 'horns'. It is only by inference that we carry these dimensions back to the altar at Damascus. Of course, between Ahaz and Ezekiel there may have been modifications, but when the influence of religious conservatism is taken into account, our inference seems to be justified.

As noted above (§ 10), the altar at Petra was probably a Nabataean structure. If so, it should be counted an Aramaean altar.

A few smaller Nabataean altars, of the kind called altars of incense above, have been discovered. One such was found at Kanath, and bears a Nabataean inscription. On one side of it is a bullock, which is cut in a rather primitive type of art. Another Nabataean altar of similar type from Palmyra is also described in a text from Palmyra. It is a stone altar, and consists of a large stone block. It is not a true altar, but a platform on which the altar was placed.

lock, *betrays such excellent artistic workmanship that it can hardly be Nabataean, but is probably Greek. Another Nabataean altar, found by the Princeton expedition, is pictured by Littmann. It consists of a straight stone, the shoulders of which are rounded at the top is approached. This is set in a large base. The upper edge of the base is carved into a moulding. Another Palmyrene altar has straight sides, and at its top an ornamental moulding projects, making the top larger than the body of the altar. Altars of similar kind, probably of Nabataean workmanship, may now be seen in Palmyra and Petra.

12. Babylonian altars.—Our knowledge of early Bab. altars comes in part from the pictures on old Bab. seals. These altars may not be purely Semitic, as the Semites themselves may be dated back to the Sumerians. No. 141, Collection de Clercq, No. 808.

Another interesting inscription, inscribed on a large altar at Palmyra, § 11. These altars were not all exactly alike. Sometimes the middle of an altar was small, sometimes it was large; sometimes the top was larger than the base; and sometimes the reverse was the case; sometimes the narrowest portion was at the top, sometimes it was nearer the bottom; but the hour-glass form describes them all.

A third altar, figured on a seal of the de Clercq collection, is perhaps older than either. It consists of flat stones, or possibly large flat bricks, placed above one another in a simple pile. Still other forms appear on later seals. One such altar is of stone, and is triangular in form, broad at the base, sloping toward the top, and surmounted by a fire-pan. Just below the fire-pan runs an ornamental ledge. That the Babylonians had bronze altars is made probable by another seal, showing a low structure supported by three legs, on which a sacrificial fire burns. That the Babylonians had larger altars corresponding in function to the rock-cut altar at Petra is not only probable a priori, but is confirmed by the explorations of Dr. Haynes at Nippur. This is the best description of these is by William Haynes Ward in Appendix G of S. I. Cortes' Primitive Chicago Religion Day.

∥ See Littmann, 'Der moderne Tempel' in Reuter's 10th K. Bibl. 101. [1892] Littmann, Die Ornamentik des Semitischen, p. 147, where he compares the structure at Petra with a large altar at Palmyra.

** See Curtius, Bibl. Hist. 256.

†† See Curtius, Bibl. Hist. 256.
excavator found a structure built of sun-dried bricks, 13 ft. long and 8 ft. wide. A ridge of bitumen 7 in. high ran around the top. The structure was covered with a layer of white ashes several inches deep, and was separated from the surrounding space by a low wall or curb. Near it was a cauldron containing several hundred bushels. Dr. Haynes rightly regarded this as an altar. He found it 3 ft. below the pavement of Naram-Sin, so that it belongs to the pre-Sargonic period.†

Herodotus (1. 183) bears witness to the fact that two kinds of altars stood in the temple at Babylon. He says the smaller altar was of gold, but is silent as to the material of which the larger altar was constructed. These correspond to the 'altar of burnt-offering' and the 'altar of incense.'

Assyrian altars.—The altars of the Assyrians consisted, no doubt, of the two varieties employed by the Babylonians. Those which explorations have brought to light belong to the smaller type, or the class of 'altars of incense.' These are sometimes of stone and sometimes of bronze.

The stone altars are of three forms. The oldest is from the time of Adad-nirari III. (B.C. 812-783), and is in the British Museum. It consists of an oblong stone 55 cm. long and of the same height, so that the appearance of the top is that of a sofa without a back. The lower part is ornamented by a few horizontal symmetrical lines. The second type is made of a block of stone so carved that its base is triangular, and is ornamented by horizontal lines. Sometimes the corners between these ledges a lion's foot is carved. This base is surmounted by a circular top. The third altar is shaped much like the Nabatean altars, but with a castellated top. Both these last are surmounted by a piece of Sargon (B.C. 722-705), and are in the Louvre.

The Assyrian bronze altar is pictured for us on the bronze gates of Balawat,§ on a sculpture of Ashurbanipal,|| and on other sculptures.¶ These altars, in spite of variations in detail, were built on the same pattern. Each was a table-like structure, sometimes half the height of a man, sometimes a little higher. The legs at each corner were moulded, somewhat like the legs of a modern piano. The legs were joined to one another by horizontal bars. Sometimes there was one, sometimes two, and sometimes three of these, and their distance from the ground was determined by the fancy of the maker. From the middle of the side of the altar (or from the centre of it, the perspective perfect that it might be either), a leg descended to the lowest of these cross-bars. The top of the table was slightly hollow and formed the fire-pan. One of these representations shows the sacrifice burning on it. Such an altar could be taken with the army on a campaign, as is shown by the bronze gates of Balawat.

Canaanite altars.—In ancient Canaan the altars of burnt-offering were sometimes of native rock, as at Taanach (see § 7), sometimes structures of wood (§ 9), and sometimes heaps of earth (§ 3). These have already been sufficiently described (§§ 2, 3, 7). A Canaanite altar of incense was, however, found at Taanach, which is unique. It was made of earth moulded into a rounded trunk, broad at the base and tapering considerably towards the top. It was ornamented by many heads—both human and animal—in relief.**

Phoenician altars.—The Phoenician altars which have survived are all 'altars of incense.' They present a variety of forms. Sometimes they are square with a large base and top, the central portion, though smaller, being of the same size all the way up. Sometimes they are of the same general shape except that they are round, and the base and top join the central portion in an abrupt shoulder instead of being tapered down to it. Such is an altar found at Malta.† Another altar found at the same place has its central portion carved into panelled faces in which a vine is cut for ornamentation. Still others are variations of the hour-glass form.‡

Bronze altars are mentioned in Phoenician inscriptions as having been erected at Gebal, Kition, Larnax Lapethos, at the Pireus, and in Sardinia, but we have no knowledge of their form. Perhaps they were made on the pattern of Assyrian bronze altars. We know that in many ways the Phoenicians copied Assyrian art.

Hebrew altars. — According to Ex 20:24-25, early Israelitish altars were constructed either of earth or stone. These have been described in §§ 2, 3. Solomon, when he erected his temple, introduced a brazen altar after Phoenician fashion. The description of this has been omitted by redactors from 1 K 6, because it was not made of orthodox material (so Wellhausen and Stade). Its presence is vouched for by the story of 2 K 16:14-15 and by the late and confused insertion (so Kittel), 1 K 8:18. The Chronicler (2 K 16:14-18; 1 K 8:18) speaks of a structure 30 ft. square and 15 ft. high, and modern scholars have often followed his statements. As the altar had perished long before the Chronicler's time, and as it was smaller than the large stone altar which Ahaz built: near it (2 K 16:14-18), and which was but 27 ft. square at the base, we may conclude that the Chronicler's measurements are unhistorical. It is much more likely that Solomon's brazen altar was of the Assyrian pattern. If it was, we can better understand why king Ahaz was so eager to supplant it with a stone altar which would be better adapted to the offering of large sacrifices. This bronze altar had disappeared by the time of the Exile. The stone altar of Ahaz is described above (§ 11). Such an altar, built of unhewn stones, continued to exist down to the destruction of the Temple by Titus (cf. 1 Mac 4:30-45 and Jos. B.J. v. v. 6). According to 1 K 6:25-26, a golden altar, apparently of incense, stood before the Holy of Holies in Solomon's temple, but we have no description of its form.

The altars described in the Priestly document as made for the Tabernacle were the altar of burnt-offerings (Ex 27), made of acacia wood and overlaid with brazen, and the altar of incense (Ex 30) made of acacia wood and overlaid with gold. Modern scholars regard both of these as fancies of priestly writers, as it is clear that neither of them would stand a sacrificial fire. The altar of incense of this passage was possibly patterned on that of the Temple, if so, it would have been 15 ft. square and 3 ft. high.

Horns of the altar. — Various explanations have been offered for the 'horns of the altar.' Stade ** suggested that they arose in an attempt to carve the altar into the form of an ox, while W. R. Smith †† believed that they were substituted for the horns of real victims, which at an earlier time had been hung upon the altar. Josephus (B.J. v. 6) says of the altar of Herod's temple that 'it

had corners like horns,' suggesting that the term was originally applied to some ornamentation which surmounted the corners. As no horns appear upon any Semitic altar yet discovered, but the altar frequently appears surmounted with ornaments, it is probable that, as in Jer 17, the word 'horns' is figurative.

Table of shewbread,' a counter-part to which is figured in Assyrian reliefs, might in one sense be called an altar, but, strictly speaking, it is an altar only in a secondary sense.

GEORGE A. BARTON.

ALTRUISM.—Nearly all the literature has been mentioned above. In addition, mention may be made of art. 'Altar' by Addis in EBi, that by Kennedy in Hastings' DB, and that by Green, in Hebrew Altars, by Nowack, Heb. Arch. (1894) ii. 17 f.; Benzingier, Heb. Arch. (1894) 378 f.; Curtiss, 'Places of Sacrifice among the Primitive Semites' in Biblical World, vol. xxii. 245 f.; Greene, 'Hebrew Rock Altars,' 2d. vol. ix. 223 ff.; and W. H. Ward, 'Altars and Sacrifices in the Primitive Art of Babylonia' in Curtiss' Primitive Semitic Religion To-day (1903), Appendix C.

C. J. GASKELL.

ALTER.—The social ‘other,’ fellow, or socius of the personal ‘ego.’ In current social Psychology and Ethics the ‘alter’ is the fellow of the social environment or situation in which the personal self finds itself. It is a contrast-meaning with ‘ego.’ The term ‘altruism,’ therefore, involves the use of the same word, meaning conduct or disposition favouring or advancing the interests of another rather than those considered advantageous for oneself. The development of less individualistic views in Sociology, Psychology, and Ethics has rendered important, indeed indispensable, the notion of personality as in some sense more comprehensive than individualism was able to allow. Various views of collectivism, social solidarity, general will and self, rest upon a concept of the ‘ego’ which essentially involves and identifies itself with its social self. The present writer has developed (reference below) such a view in detail, using the term ‘socius’ for the bipolar self which comprehends both ‘ego’ and ‘alter.’ On such a view, the ‘ego’ as a consequence is to be considered in its matter—and also, in consequence, in its attitudes, sympathetic, emotional, ethical, etc.—with the ‘alter.’ The self-thought is one, a normal growth in the interplay of the influences of the social milieu and the individual is not a social ‘unit,’ to be brought into social relationships, but an ‘outcome’ of the social forces working to differentiate and organize common self-material. The altruistic or ‘other-seeking’ impulses are on this view normal and natural, because in fact identical with the ‘ego-seeking’ impulses of the common group of less specialized movements in the process that constitutes personal consciousness in general. Recent work in Social Psychology has shown the place of imitative and other processes whereby the ‘ego-alter’ or ‘socius’ meaning is developed.

LITERATURE.—Rousseau, Contrat social; Bosanquet, Philosophical Theory of the State (1890); Baldwin, Social and Ethical Interpretations (1897), and Dictionary of Philosophy and Psychology, in loco.

J. MARK BALDWIN.

ALTRUISM.—The use of the term ‘Altruism’ is due to Comte, who adopted it to describe those dispositions, tendencies, and actions which have the good of others as their object. He contrasted it with ‘Egoism’ (wh. see), which has self-interest
as its direct object. Comte maintained that 'the chief problem of our existence is to subordinate as far as possible egoism to altruism.' Herbert Spencer adopted the term, and gives considerable space in his *Data of Ethics* to the discussion of the contrasted elements of Egoism and Altruism, and to their differentiation. Briefly, the contrast set forth in the terms 'Egoism' and 'Altruism' was indicated by former writers on Psychology and Ethics by the distinction between self-regarding and other-regarding, that is, benevolent or disinterested tendencies.

The two terms have been widely used by more recent writers. We may distinguish between the use of the terms in Psychology and in Ethics. In Psychology 'Altruism' means the disposition which has as its object the good of another. Some are disposed to limit the meaning of the word to those dispositions which are consciously directed towards an object, and to deny the application of the term to mere spontaneous and unreflective action. In other words, they limit Altruism to conscious beings, and to them when they have attained to powers of reflexion, and have learned to constitute objects for themselves. They exclude from the sphere of Altruism also the gregarious and instinctive groupings of animals or plants. In Ethics, 'Altruism' is used to denote those dispositions and actions which have the welfare of others or another for their motive and object. It lays stress here, of course, on the ethical aspect of the disposition.

While many would limit the use of the terms 'Egoism' and 'Altruism' to dispositions and actions which arise only within a self-conscious being, and arise as the outcome of a process of reflection, there are others who strive to trace the origin of egoistic and altruistic tendencies backwards to those instincts of love and hunger, the rudiments of which seem to be present in all forms of life. The conception of Evolution and the acceptance of it as a working hypothesis, at least, by all manner of workers, tend to lay great stress on this line of investigation. Evolutionists tend to regard the behaviour of each species of animals as illustrative of an ethical code relative to that species. Order dominates the Gentoo penguin and Thomson, look on the processes of life as a 'materialized ethical process.' Professor Henry Drummond laid stress on the two great struggles; namely, the struggle for the life of self, and the struggle of the life of other individuals.

Writers on this topic from the point of view of Evolution may be divided into two classes. There are those who, with Professor Huxley, describe the process of Evolution as a gladiatorial show, and nature as 'red in tooth and claw with ravin.' They affirm that the very existence of ethical life depends on the possibility of man's ability to combat the cosmic process. In popular literature, in scientific articles, in learned treatises, it has been affirmed that the animal world consists of a struggle between the individual and the social. The solution of this struggle, in the process of individuation and the acquisition of new dispositions in the individual, are, in turn, the cause of the increase of the period of helplessness and the tend to make the individual more self-sufficient and independent.

Woe to the vanquished!' was put forward as the universal cry. Competition was described as strongest between animals of the same kind, and it was through this competition and the premium on success that species was supposed to advance. On the other hand, there were those who questioned the reality of the struggle, and who questioned whether the struggle for existence occurs, developed it, and painted it in every darker colours, they apparently forgot that he had written in other terms in the *Descent of Man.* In this work he had set the problem before him of tracing the evolution of man from simpler forms of life, and an evolution of all the features of human life, physical, psychological, ethical. Thus he was led to lay stress on the social character of many animals, on their co-operation, on the evolution of sympathy and mutual helpfulness, until in certain parts that kind of struggle which was prominent in the *Origin of Species* tended all but to disappear. The unit in the struggle changes before our eyes; it is no longer the individual who struggles, gains an advantage, it is 'those communities which included the greatest number of the most sympathetic members that would flourish best, and rear the greatest number of offspring' (Descent of Man, 163). Even from Darwin's point of view here is a new factor introduced into the struggle for existence. Sympathy, mutual help, or union between members of the same species for the attack or defence, has been recognized as a decisive factor in the evolution of life. The community has taken the place of the individual, and mutual help is as much a fact of life as mutual competition.

While many evolutionists had apparently forgotten that Darwin had set forth the great influence of the social factor in the evolution of higher forms of life, others took up the hint, and have traced the wak and the self-regarding motive as far as to trace mutual helpfulness in the lower forms of life, and their influence on the development of altruistic affections. Nature did not appear to them to be a mere gladiatorial show; it was a sphere of co-operation, in which each was for all, and all for each. They delighted to trace co-operation throughout the sphere of life, they pointed out to men such forms of co-operation as *symbiosis,* as the co-operation of bacteria with wheat, with tree, with insects, and generally they were able to show that, competition notwithstanding, the world was a system that worked together. Then they pointed to the evolution of socialistic tendencies in gregarious animals. They showed us a herd of cattle banded together for defence, with the cows and calves in the centre, and the bulls to the front. They showed us a pack of dogs under the rule of a leader, organized for hunting, with the social order dominating the individual, each individual, with sanctions for obedience and penalties for disobedience. Then they traced for us the evolution of those psychological qualities the ethical character of which we distinctly recognize in self-sacrifice on the part of others. Trust, obedience, recognition of the order of the pack, or of the herd, consciousness of fault and expulsion from the herd if the order is disregarded, are all depicted by those who trace for us the social evolution of life.

Stress has been laid by some on the relation of parents and children, on the care for offspring as the source of social affection; and attention has been called to the fact that a prolonged infancy calls forth a great development of parental care. Man has inherited an instinct which, with the increase of individuation there goes the increase of the period of helplessness in infancy; and thus they are able to indicate an increase of social affection. Still this source of Altruism does not carry us very far, for the relation of parent and offspring is only temporary, and does not form the basis of a lasting relationship.

It is in the aggregation of animals together for mutual benefit that most evolutionists look for the source of Altruism. It is not possible to enter here into the controversy between those who hold that acquired qualities can be transmitted through heredity, and those who maintain that such trans mission has never been proved. It is an important question in itself and its consequences. But
Altruism

For our purpose it is not needful to take a side on this question. For the present purpose, the denial of the possibility of a transmission of acquired qualities has directed attention to, and stimulated inquiry into, the possibility of social transmission of acquired attainments from generation to generation. Is there a tradition among animals? Is there transmission of mental and intellectual gains of a species? Or is the only way of transmission that of organic change inherited from parents by their offspring? We quote the following from Professor J. Mark Baldwin:

"The fact that the whole is the wide operation of imitation in carrying on the habits of certain species; Weismann shows the importance of tradition as against Spencer's claim that the good of the whole is more than the sum of its parts. I have observed in detail the action of social transmission in actually keeping young tows alive and so allowing the perpetuation of the species; and Wesley Mills has shown the imperfection of instinct in many cases, with the accompanying dependence of the creatures upon social, imitative, and intelligent action." He adds: "It gives a transition from animal to human organization, and from biological to social evolution, which does not involve a break in the chain of influences already present in all the evolution of life" (Development and Evolution, 1902, p. 148).

Nurture, imitation, social transmission seem to contribute something in the evolution of the individual life, and especially of the social life among animals. While it is true that a chicken almost before it has shaken itself free from the shell will peck at a fly and catch it, yet there is evidence to show that in other forms of life the young have to learn from parental experience how to spend their time appropriately. In some animals of a kind is given. There is sufficient evidence, at all events, to affirm that the higher animals, whose young need parental care for some time ere they can provide for themselves, have to learn how to make their living. Parent birds teach their young to fly, and teach them to recognize the approach of danger. On this there is no need to dwell, save to remark that in such races of life, where parents and offspring are for a time associated, where parental care for offspring and offspring of parents, there is room and there is need for the exercise of what may be called social affections. Nor need we object to the fact that we find in lower forms of life the germ and the promise of what comes to flower and fruit in self-conscious beings. We know the race of man, that the laws of life are similar in all the ranges of life. It seems to proceed on one plan, and we need not be surprised that rudimentary forms of the higher may be found in the lower layers of life. But the fact is, if we compare the social life of these beings does not appear till we come to self-conscious beings who can look before and after, and reflect on their own experience.

While, therefore, we receive with gratitude the testimony of the students of life to the existence of the germs of social life in the lower spheres of living beings, it must be insisted on here that the advent of self-conscious beings into the world has made a great difference. The advent of rationality has given a new meaning to the phenomena of life as these are manifested in beings like those of man. Appetites, passions, desires, affections are no longer what they were in lower forms of life. Appetite is a different thing in an animal which eats only for the sake of hunger, and drinks only to assuage thirst, from what it is in civilized man, who brings the wealth of his artistic nature and the powers of his memory and imagination to enhance the beauty of his festival. Even into appetite the wealth of his whole nature may enter. If this is the case with appetite, it is still more so with the other emotions, such as fear, desire, and so on. Take surprise, and we find that while we call by the same name the similar phenomena of an animal and a man, yet surprise is relative to the experience of the individual. We are not surprised at railways, telegraphs, telephones, motor cars; these have become the commonplaces of civilization. Thus Comparative Psychology has in all its comparisons to remember what a difference self-consciousness has made in the character of the feelings, and to make allowance accordingly.

Thus in the discussion of Egoism and Altruism, while help of a kind may be obtained from the lower life, they do not carry us very far. In the lower forms of life the individual is sacrificed to the species: in a bee hive the hive seems to be all-in-all, and the individual bees, whatever their function is, are steadily sacrificed to the hive. Numerous intrusions are at hand. But in a human society such a solution must be found that neither shall the individual be sacrificed to the whole nor the whole to the individual. The individual has a claim on the whole for the opportunity of living a full, rich, and gracious life; and society has a claim on the individual for devoted and whole-hearted service.

Looking at the history of our subject, and at the actual history of man, we find many curious things. Early societies steadily sacrificed the individual to the tribal sense, and the individual was made to have any but a tribal consciousness. The discovery of the individual seems to be a late discovery. (The individual must not in any way depart from the custom of the tribe; he must believe their beliefs, follow their customs, and in no way think or act spontaneously. Individual worth and freedom were neither recognized as desirable, nor tolerated, because inimical to the welfare of the tribe. Late in history, and mainly through religious influences, the worth and value of the individual won recognition, human life was recognized as sacred, and freedom found a place amid human worths and interests. In truth, we find in history the pendulum swinging from one extreme to another; now the individual is in bondage to society, and then the individual tends to make society impossible. Here there are long stretches of history where the authority of society dominates the individual, and then a reaction, when men regard the individual worth to society as a thing one, and the social life as mere action and trouble. If one casts his eye back to the beginning of modern philosophy and reads Hobbes and Descartes, and follows out the principle of individualism to the French Revolution, its culminating period in modern history, he will find the struggle between the two, and in simplicity, in all the grandeur of his so-called rights, is the object of all study, the beginning of all speculative thought. He is real, his rights are his own, and he is prepared to defend them against all comers. He is in a state of war, he is a free and independent creature, and if he is to live in society he will do so only when he has made terms with his neighbour. So he makes a social contract, he surrenders so much, and he obtains a guarantee for the other rights. He is supposed to be naturally selfish, egoistic, to regard others only as instruments for his own good.

Looking at man from this point of view, those who hold it are laid under the heavy burden of attempting to derive Altruism from Egoism, and it need hardly be said that they have failed in the task. Altruism can no more be derived from Egoism than Egoism can be derived from Altruism. The truth seems to be that each of them goes down to the very foundations of life, and life must be made bare true or false. If it be true that life comes only from life, then life must be sacrificed in order to produce fresh life. That is Altruism, whether it is conscious Altruism or not. It is vain to ask for the genesis of Altruism, it is as deep as life; it is vain to ask for the beginning of Egoism, for it is
proverbial that self-preservation is the first law of life. In fact we are here, as we are so often, the victims of our own abstractions. We cannot really separate the individual from society, or society from the individual.

It may be well, at this stage, to point out that what we may distinctly call the Ego feelings have also a social reference. In one sense all feelings which refer to the interests of the individual are Ego feelings. Personal pains and pleasures, desires and aversions, exist only for him who feels them. It would on the whole be an improvement in our use of words if we limited the title ‘Ego feelings’ to those feelings which belong to a self-conscious subject, and which depend not upon consciousness, but on self-consciousness. ‘Ego feelings’ thus would mean, not passive pain or pleasure, but feelings actively related to our self-esteem, to our self-assertion, or to any manifestation of the activity of the self by which the impression of its own worth is enhanced. In these feelings the Ego is at once the subject which feels them and the object of which they are qualities.

Limiting Ego feelings to those which thus refer to the self, we observe that it is precisely this reference to self that determines the value of an experience of mental life. We would lose these pleasures and pains if they did not depend largely on being connected with self as their subject. Any worthy achievement, any feat performed, is estimated not by the passive sensations accompanying it, or by the physical endurance, but by the self-feeling which is aroused. The man who does a daring deed, or performs a notable task, has a sense of power and efficiency, and delights in the deed as his own. Men delight in deeds and rejoice in things which are loved, not so much for their inherent worth, as for the fact that the deeds are their own. Our experiences are of value, and we account them of abiding worth, not because they gratify our sensibility, but because we have put so much of ourselves, of our personality, into them. Thus we can never form pleasures into a sum and measure their value quantitatively as Hedonism tries to do. All values in experience are constituted by their reference to self in self-consciousness.

Self-knowledge, self-reverence, self-control, the activity of self in constituting its objects, are thus determining elements in pleasure and pain. The passive pleasures are almost without value; one chooses the nobler part, though the choice may be less certain. A slave may always be able to feel the anxiety, the hardship of the free man, but then a slave can never have the exaltation of self-feeling and self-respect which comes from knowledge and freedom and manhood. It is, then, the reference to self that gives to rational pleasure its distinctive note. But it is next to be observed that even the reference to self has its social aspect. It always refers, even in its most egotistic mode, to a social standard. In fact, the self-feeling of pleasure is a social object, and pleasure in an incommensurable degree. Man sees himself as with the eyes of others. ‘As Nature teaches the spectators to assume the circumstances of the person principally concerned, so she teaches this last in some measure to assume the feelings of spectators’ (Adam Smith, *Moral Sentiments*, p. 39). The self looks at itself from a spectator’s point of view, and estimates itself accordingly. Thus it may have an added misery: social slights, feeling of poverty, looked at from a spectator’s point of view and reflected by the self on itself, enhance the feeling of misery till it may become unbearable. On the other hand, a sense of social appreciation, a looking at one’s self through the eyes of others, may enhance pleasure till it becomes ecstasy. Pride, vanity, ambition, and other Ego feelings of the same kind need the reference to self for their justification, and cannot without the social reference the reference to self would lose its value.

Without the reference to self, values would cease to have a meaning, and pleasure would be merely of the passive sort. As, however, pleasure and pain, the meaning of life and the worth of life, can exist for each person only in his own consciousness, and without the conscious possession of these things a man can never enter into sympathy with others, so a full, broad, intense Ego life is the condition of a full, deep, and wide social life. The chief problem of our life is thus not, as Comte said, ‘to subordinate egoism to altruism,’ but to develop Egoism to its proper proportions, in the belief that the higher and fuller a personality is, the more he has to contribute to the happiness of mankind. Selfishness does not consist in a man valuing himself according to his intrinsic and social worth, but in ignoring or denying the rights, claims, and worth of others: ‘Thou shalt love thy neighbour as thyself.’

Egoistic feelings would lose their value without the social reference. So also the social feelings and the social reference are indispensable to the self to give them value. There is no necessity for any lengthened reference to the abstract man who has figured so picturesquely in philosophical treatises from Hobbes downwards. Nor is he quite dead yet, since this abstract man is a being endowed only with egoistic impulses. Self-preservation is for him the only law of life: his natural life is a state of war. How is such a being to be constrained to live in society? He may be made to save himself from above or from without urging him, by means he does not know, to become social even when his reason compels him to think that selfishness is his highest interest. But usually the way to make a selfish being social is to endow him with a desire for approbation, to make him seek society to win approval, or to make him see that others are needful to him if he is to carry out his purposes; and a wise selfishness takes the form of benevolence. The attempt is very subtle and very penetrating, but it is a failure. Men never became social in that way. They are social from the beginning. All that can be said is that man is naturally selfish and naturally social, and the field for the exercise of Ego feelings and of the social feelings is to be found in society.

Look at the individual from any point of view we please, everywhere we meet the social reference. Begotten by social union, born within society, he grows up within society, and is equipped by society for the battle of life. The achievements of society form his inheritance. Social customs are learned by him before he is aware of the process; social beliefs become his beliefs, thought becomes possible because it is embodied in the social action, in the language of the people with whom the individual lives. In this social sphere the individual lives, here he learns, makes himself heir to the treasures of learning, science, and knowledge, without which individual life would be only rudimentary. A human being in isolation would not be a human being at all.

Jeremy Bentham in the beginning of his *Principles of Morals and Legislation* says, ‘A community is a fictitious body, composed of individual persons who are considered as constituting, as it were, its members,’ It is a characteristic definition. Nor does that phase of thought appear in Jeremy Bentham alone. It is characteristic of the century in which it appeared. No body of any kind is constituted by the members alone. Any unity
has to be looked at from two points of view, and is never the sum of its parts. Regard must be had to the wholeness of the whole as well as to the parts. But society or a people is not a fictitious form of being, nor the sum of its parts, nor yet a social panacea, but simply a means of nourishing the individual.

... Amana, therefore, is neither a political tenet, nor an economic theory, nor yet a social panacea, but simply a means of nourishing the individual; the motive and effects of action are constantly intersecting the boundaries of egoism and altruism" (Paulsen, A System of Ethics [Eng. tr.], pp. 38-4).

Professor Paulsen proceeds to show that every duty towards individual life can be construed as a duty towards others as well. Care of one's own health might appear to be purely selfish, yet on reflection it appears that the possession of good health may add to the happiness of a community.

The ill-humour which results from an improper mode of life is not confined to the guilty person; he is cross and irritable, and his moodiness and moroseness are a source of annoyance to the whole household. In case of serious illness the condition of his sufferer is a matter of concern to all. It is therefore not possible to separate self-interest from the interest of society. The worths, values, and interests of the individual are inseparably bound up with those of society. It is society that gives life, warmth, and colour to the Ego feelings, and as such they are for the latter. The Ego feelings, their intensity and their sweetness, are needed for the vitalization of society. The analogy of the organism holds good with regard to the social organism. But the idea of a social organism as a systematic whole, indeed the idea of a world as a system, cannot exist as long as the individual is conscious of the unity of his individual life as connected with an organism which is a unity. But to pursue this further would open up issues wider than fall to be discussed here. The observation that the individual is a part of the social organism, and that the antithesis between Egoism and Altruism is both misleading and ultimately unanswerable.

It is not our purpose to name, far less to discuss, the various forms of Hedonism. It may be observed, however, that from Butler's time an enlightened self-regard is recognized to be a legitimating form of moral sentiment; while a regard for the welfare of others enters also into all forms of virtue. A rational regard for the welfare of others expresses itself in every one of what by way of title might be called the cardinal virtues; - in courage, temperance, and constancy; in wisdom, justice, truth; in kindness and benevolence. But, again, these virtues are concrete facts which have their being in some individual person. They are not something in the air, or something that has merely an abstract existence. And then, just as they belong to some individual, so they flourish only as he finds himself rooted in society. The higher features of human character, which these virtues possible in the individual, have emerged in human history through the social effort of man. The higher faculties of man, and the virtues evolve with them and through them, grew in him as a social being,—a being who must live with his kind, who works with his mates, who can come to himself and to his fruition only in fellowship with his fellow-men.

The antithesis may be put, finally, in another way. The individual seeks his own good, his own happiness, his own satisfaction; what does he mean by these terms? A desire for good is not a desire for mere pleasant feeling. It is a desire for self-satisfaction, for a better, truer, more real self; for a self which shall approach nearer to that ideal of a self which has been pursued by his predecessors. A wider thought is thereby expressed; a deeper and a purer feeling; a power of activity which shall bring his ideal to reality—these express some aspect of the good a man desires. But it is only through the social bond and by means of social effort that the making of such a self is possible. It is not too much to say that it is only through social effort and through social life that man becomes a living soul.

It is in virtue of the social solidarity of mankind that the individual man enters into the inheritance and obligation of all the past. It is through this social bond of effort that he has subdued the earth and made it his servant. It is in his social life that man has come to the conclusion that he is the crown and sum of things, that the cosmos has toiled and worked upwards towards him, and in him has become conscious of himself and his meaning. In this association man feels that he can make physical powers fetch and carry for him, make the winds his messengers, and harness the lightning to his carriage. It is not necessary to enumerate the social achievements of man. But it is not one of them which has not originated in the thought of a solitary mind, and then become the common possession of many minds. Yet the thought would never have come to the solitary thinker unless he had previously been prepared to think through his social environment, and by the great tradition of the ages. It is on this fact that we lay stress as the reconciliation of Egoism and Altruism, for it is the refutation of the idea which persists in so many quarters of mind that is inherently selfish, and has regard only to his self-interest, that he is naturally egoistic, and altruistic only in a secondary and fictitious fashion.

Even Reason has been so spoken of, and the Synthetic Reason has been described as a selfish, analytic, destructive faculty, as if it were possible to enable its possessor to survive in the struggle for existence.

JAMES IVERACH.

AMANA SOCIETY.—The Amana Society, or Community of True Inspiration, is an organized community of about 1800 German people who live in seven villages on the banks of the Iowa River in Iowa County, Iowa. This unique society owns 26,000 acres of land, which, together with personal property, is held in common. Indeed, the Amana Society is thoroughly communal both in spirit and in organization. And yet it is in no sense a product of communalistic philosophy. Primarily and fundamentally, so the community is a Church, organized for religious purposes, to work out the salvation of souls through the love of God (Constitution of the Society, Art. I.). The communism of Amana, therefore, is neither a political tenet, nor an economic theory, nor yet a social panacea, but simply a means of
serving God 'in the inward and outward bond of union according to His laws and His requirements' (ib. Art. 1.).

1. History.—As a Church, or distinct religious sect, the Community of True Inspiration traces its origin back to the year 1714 and to the writings of Erhard Ludwig Gruber and Johann Friedrich Rock, who are regarded as the founders or 'Fathers' of the 'New Spiritual Economy' of True Inspiration. Both Gruber and Rock were members of the Lutheran Church who had become interested in the teachings of the early Mystics and Pietists. Having studied the philosophy of Spener, they endeavored to improve upon and formulate especially the doctrines of that little band of Pietists whose followers during the last quarter of the 17th century, were called 'Inspirationists,' and who are said to have 'prophesied like the prophets of old' (cf. Perkins and Wick, Hist. of the Amana Soc.).

The unique fundamental doctrine of the founders of the 'New Spiritual Economy' was present-day inspiration ("Instruments"); they were simply passive agencies through whom the Lord testified and spoke to His Church (Gruber, Divine Nature of Inspiration).

Divine inspiration did not come, however, to all members of the Community, but only through those who were especially endowed by the Lord with the 'miraculous gift of inspiration.' These especially endowed individuals, called Werkzeuge ("Instruments"), were simply passive agencies through whom the Lord testified and spoke to His Church (Gruber, Divine Nature of Inspiration).

The nature of the 'new word and testimony,' as revealed through the Werkzeuge, and its relation to the earlier revelations, has not yet been clearly set forth by Gruber in these words: 'Its truths are in common with the written word of the prophets and the apostles. It aspires for no preference; on the contrary, it gives the preference to the word of the witnesses first chosen [prophets and apostles] just after the likeness of two sons or brothers, in which case the oldest son has the preference before the younger son who was born after him, though they are both equal and children belong if one and the same father.' Again he says: 'Both the old and the new revelation, of which we here speak, are of divine origin; the testimony is a revelation of the Spirit of God and of Jesus Christ, just as the sons mentioned above are equally children of one and the same father though there exists a slight difference between them' (Gruber, Characteristics of the Divine Origin of True Inspiration).

Not all, however, who aspired to prophecy and felt called upon to testify were to be accorded the privilege. For there were false as well as true spirits. Gruber, who wrote much concerning true and false inspiration, records in his Autobiography his own sensations in detecting the presence of a false spirit:

'This strange thing happened. If perchance a false spirit was among them [the congregation] and wished to sell me to the enemy, dishonestly, or if an members wished to distinguish himself at our meeting in prayer or in some other manner, then I would see a kind of visage upon the face and shivering of the mouth; and it has been proven a hundred times that such was not without significance, but indeed a true warning, whatever the one who is unaided and inexperienced in these matters may deem of it according to his academic precept and literal conclusions of reason' (Articles and Narrations of the Lord, given in Inspirations-Historie, vol. ii. p. 32).

The appearance of false spirits was not uncommon is evidenced by the many instances, given in the Year Books, or Testimonies of the Spirit of the Lord, where aspiring Werkzeuge are condemned, and by the fact that Gruber's son was 'especially employed [by the Lord] to detect false spirit' and made themselves conspicuous, and to admonish them with earnestness to true repentance and change of heart' (III * ii. 41).

Gruber and Rock, who had 'the spirit and gift of revelation and inspiration . . . went about preaching and testifying as they were directed by the Lord.' They travelled extensively through Germany, Switzerland, Holland, and other European countries, establishing small congregations of followers. They have the 'New Spiritual Economy' and enjoy the blessings of 'True Inspiration' were asked such questions as—

(1) 'Whether he (or she) intends to behave as a true member of the Community of Jesus Christ, and to be called in the inward and external bond of union according to His laws and His requirements?' There is no reason to believe that God has in any way changed His methods of communication; and it is evident that this question is as useful in the earlier as in the latter times. Gruber will lead His people to-day by the words of His Inspiration and the Spirit of Truth (Christ, Gal. 5:17, 20, 24).

Having desired to improve upon and formulate especially the doctrines of that little band of Pietists whose followers during the last quarter of the 17th century, were called 'Inspirationists,' and who are said to have 'prophesied like the prophets of old' (cf. Perkins and Wick, Hist. of the Amana Soc.).

Although the number of congregations established during the time of Rock and Gruber was not large, considerable religious fervor was aroused by their teachings. Moreover, their attacks upon the outer hollowness and formalism of the established Church, and their bold denunciation of the 'godless and immoral lives' of many of the clergy of that day, aroused the antagonism of the orthodox Church to active opposition. They also encountered the opposition of the political authorities, who refused to perform military service or to take the required oath of allegiance. They refused to 'serve the State as soldiers, because a Christian cannot murder his enemy, much less his friend.' On the other hand, they refused to take the legal oath as a result of their literal adherence to the commands given in Mt. 5:24-37: 'But I say unto you, Swear not at all; and 'Let your communication be, Yea, yea; Nay, nay; for whatsoever is more than these cometh of evil.'

Concerning the arrest of himself and his companions, because they would not upon one occasion take the prescribed oath, the younger Gruber, writing in 1717, says: 'Before the city gate the executioner united us in the presence of the sheriff. The latter held in his hand a parchment with the oath written upon it and bade us to raise three fingers and to repeat it. We replied that we should not swear. He urged us forcibly with many threats. The brother (H. B. Glenn) repeated again that we should give a promise with hand raised, and our word should be as good as an oath, yet he would leave us. I said: 'Tell me, brother, whether I should not swear, since our Saviour had forbidden it' (III ii. 124).

Furthermore, both the Church and the Government were irritated by the refusal of the Inspirationists to send their children to the schools which were conducted by the Lutheran clergy. Opposition soon grew into persecution and prosecution. And so the believers in True Inspiration were fined, pilloried, flogged, imprisoned, and stripped of their possessions. In Zürich, Switzerland, 'their literature was by order of the city council burned in public by the executioner' (III i. 65). Naturally, as their persecution became more severe, the congregations of Inspirationists sought refuge in Holland, or in the Low Countries. Amsterdam and Utrecht were the chief centers of this religious sect, which enjoyed a certain measure of toleration in the German states of the 18th century.
his native country. In the year 1714, when he counted 5 times 7 years, so fast came to him the gift of the Spirit of and Prophecy, and he made until 1742, in 4 times 7 years, over 100 lesser and great journeys in this service. In the year 1728, when he was 7 times 7 years old, he lost his faithful brother, E. L. Gruber. And in 1742, with 9 times 7 years, he ceased to travel into distant countries and spent the remaining 7 years (of his life) largely at home' (Testimonies of the Spirit of the Lord, 1749).

With the death of Rock in 1749 the congregations of the spirit of prophecy were soon founded, and under the name of 'Ebenezer Society' began to decline. Left without a Werkzeug, the members relied chiefly upon the writings and testimonies of Rock and Gruber for guidance and spiritual consolation.

"At the beginning of the 19th cent. but few of the once large congregations remained; even these few had fallen back into the ways of the common world, more or less, preferring the easy-going way to the trials and tribulations suffered by their fathers' (Noe, Brief Hist. of the Amana Soc., or Community of True Inspiration, Amana, Iowa, 1800, p. 6).

The decline continued until 1817, when it is recorded a new age and period dawned for the Community' (I H i. 429), and that 'Michael Kraussert was the first Werkzeug which the Lord employed for the now commencing revival.'

The Revival, or 'Awakening,' or 'Reawakening' of 1817, and from which the settlement at Ronneburg, whose first inspired utterance was given to the congregation at Ronneburg on September 11, 1817, as a summons in these words: 'Oh Ronneburg, Ronneburg, where are thy former champions, the old elders of faith! They no longer are at your present day, and affections dear in the cladded. Well, then! Do ye not desire to become strong? The eternal power is offered to you' (Testimonies of the Spirit of the Lord, 1817).

Michael Kraussert was a journeyman tailor of Strassburg, who had been converted to the faith of the Inspirationists through the writings and testimonies of Rock. With great zeal and much religious fervour he seems to have played an important part in the 'Reawakening. And yet it is recorded that he lacked courage in the face of persecution; that 'at the arrest and subsequent examination at Bergzabern he showed fear of men and resulting weakness'; that in the presence of hostile elders he 'became timid and undecided, as if dumb, and even fell silent in the cladded'; and that 'through such fear of men and reluctance for suffering he lost his inner firmness in the mercy of the Lord, went gradually astray from the Divine guidance, and soon fell back into the world' (I H iii. 34, 429).

After the 'fall' of Kraussert (whose connexion with the Inspirationists was therewith severed), the spiritual affairs of the Community were directed by the Werkzeuge Christian Metz and Barbara Heinemann, who came to be regarded as the founders and leaders of what was sometimes called in the records the 'New Community.'

When Michael Kraussert, Christian Metz, and Barbara Heinemann appeared as Werkzeuge at the time of the 'Reawakening, a century had elapsed since the Schuyler and Rock preached the doctrines of the 'New Spiritual Economy.' But the persecution of independents in religious thought had not ceased; and so these new prophets were repeatedly arrested, and their followers 'were attacked and beaten, and driven from the streets and elsewhere' (I H iii. 70).

As a century before, so now the growing congregations of Inspirationists sought refuge in Hesse, where on October 31, 1831, it is recorded, 'the Lord sent a message to the Grand Duke of Hesse - Darmstadt as a promise of grace and blessing because he had given protection to the Community in his country' (I H iii. 96). It was at this time that the far-sighted Christian Metz conceived the idea of leasing some large estate in common which should serve as a refuge for the faithful, where each could be given an opportunity to earn his living according to his calling or inclination.

And so, in the year 1836, it came about through the mediation of the Landrath of Büdingen that a part of the castle at Marienborn was given in rent by the noble family of Meierholz, which was very convenient for the Community, since it lay near Ronneburg, the home of the principal elders (I H iii. 68).

In all, four estates were rented, and to the administration of these four estates, located within a radius of a few miles and placed under one common management, are traced the beginnings of the communitarian life of the Inspirationists. Communism, however, formed no part of their religious doctrines. It was simply a natural development out of the conditions under which they were forced to live in their efforts to maintain the integrity of their religion. Under a common roof they hoped to live happily and peaceably, the true Christian life. And so rich and poor, educated and uneducated, professional man, merchant, manufacturer, artisan, farmer, and labourer met together as a religious brotherhood to worship and to labour together.

But independence and prosperity were not yet fully won. The day of complete religious and economic freedom for which they hoped had not come. Cherished liberties relative to military service, legal oaths, and separate schools were still denied. Rent became exorbitant, while excessive heat and drought destroyed the harvests.

It was in the midst of their depression that the Lord revealed through His instrument, Christian Metz, that He would lead them out of this land of adversity to one where they and their children could live in peace and liberty' (Noe, Brief History, p. 15). Indeed, this 'hidden prophecy,' uttered by Christian Metz on May 20, 1826, was now recalled: 'I proceed in mysterious ways, saith thy God, and my foot is seldom seen openly. I found my dwelling in the depths, and my path leadeth through great waters. I prepare for me a place in the wilderness, and establish for me a dwelling where there was none' (Testimonies of the Spirit of the Lord, so at the close of the first chapter, as pointing the way to America. And so there was much discussion concerning emigration to the wildernesses of the New World. Finally, there came through the Werkzeug, Christian Metz, these words from the Lord: 'Your goal and your way shall lead towards the west, to the land which is still open to you and your faith. I am with you, and shall lead you over the sea. Hold Me and call upon Me through your prayers when storms or temptations arise. . . . Four may then prepare for yourselves' (I H iv. 26-29). Christian Metz and three others were named through inspiration to visit America; and they were given 'full power to act for all the members, and to purchase land where they deemed best' (Noe, Brief History, p. 15).

After a voyage of many hardships and privations, the committee of Inspirationists reached New York City on October 29, 1842. After three months of careful deliberation they purchased a tract of five thousand acres of the Seneca Indian Reservation lands in Erie County, New York. During the three months of the purchase the first village of the Community was laid out and peopled. They called it Ebenezer.

Other villages were soon founded, and under the name of 'Ebenezer Society' the Community was

* Hereafter referred to as TSL.
formally organized with a written constitution. It is recorded that during the 'planting and building of the new home' the Lord 'gave precepts, directions, and explanations concerning the external and internal affairs of that time' through Brother Christian Metz.' Since the death of Barbara Landmann no Werkzeug has been called in the Community; but, as in the previous years, the Community brought enthusiasm, industry, moral earnestness, and religious zeal.

The first village on the Iowa purchase was laid out during the summer of 1855. 'The time had come,' writes Gottlieb Bleibtreu in his History of the Community, 'that the new settlement in Iowa was to receive a name.' When the Community emigrated from Germany and settled near Buffalo in the State of New York, the Lord called that place Ebeenezer, that is, 'Hitherto hath the Lord helped us.' New He again led them out from there to a new place, which, as the work proceeded, was to be called Bleibtreu. 'This had been laid into the heart of the Werkzeug, Christian Metz, who later poured it forth in a song beginning thus:

'Bleibtreu soll der Kanne sein.
Dort in Iowa der Gemeins.'

Since, however, it was difficult to express this word or name in English, it was proposed instead to use the Biblical name Glaspur (Amana). The name Glaspur or Glaspur 'believe faithfully' (cf. Song of Sol. 4), to this, it is recorded, the Lord gave His approval in a song on September 23, 1855. Henceforth the new home of the Community was known as Amana (1855).

The removal from the old home to the new, from Ebeenezer to Amana, covered a period of ten years. In addition to the first village, which was laid out in 1855, additional villages were laid out by the year 1862—West Amana, South Amana, High Amana, East Amana, and Middle Amana. This was at this time that the Society, in order to secure railroad facilities, purchased the small village of Homestead. Twelve hundred members had come from Ebeenezer; and by the time the sale of the Ebeenezer Lots had been completed, the Community's territory in Iowa consisted of twenty-six thousand acres.

In the year 1859 the Community was incorporated in accordance with the laws of the State of Iowa under the name of 'The Amana Society.' The Constitution, which was also revised, came into force on the first day of January, 1860. This instrument is a 'Declaration of Mental Independence,' or a scheme for a 'One World-wide Socialistic Fraternal Brotherhood,' but a very simple, business-like document of ten articles.

On July 27, 1867, six years after the establishment of the last of the seven Iowa villages, and two years after the sale and the removal of the last detail of the Community to the new home in the West, Christian Metz, the so hoch begabte und begnadigte brother, 'through whom the weightiest and greatest things were wrought and accomplished,' was, after fifty years of effort and labour, recalled from the field of his endeaveur at the age of 72 years, 6 months, and 24 days (III ii. 878).

Half a century—the most eventful years of the Community's inspiring history—bridges the interval between the 'Days of the Revolution.' Then the rapid growth of the city of Buffalo (only five miles distant) caused such an advance in the price of real estate that the purchase of additional land to accommodate the growing Community became necessary. And, finally, it became evident that the young people of the Community were too near the worldly influence of Buffalo to persevere in the injunction of Gruber, who said: 'Have no intercourse with worldly minded men, that ye be not tempted and led astray.'

And so a committee was directed to go to the new State of Iowa, and there inspect the Government lands which were for sale. Out of one of the garden spots of Iowa they selected and purchased eighteen thousand acres of contiguous land.

A better selection for the new home could scarcely have been made. Through it meandered the beautiful Iowa River, bordered by the black soil of its fertile valley. On one side of the valley the bluffs and uplands were wooded, and on the other side the river stretched the rolling prairie land. To this splendid new domain, all ready for the men, the women and children, the Community moved, under the guidance and leadership of the 'Lord.'

After the death of Christian Metz 'the work of grace' was carried on by Barbara Heinemann, now Landmann (who lost her gift at the time of her marriage in 1829, but regained it in 1844 and retained it to the time of her death at the age of ninety), and by the elders in whom the 'Lord manifested Himself so strongly and powerfully during the last illness of Brother Christian Metz.' Since the death of Barbara Landmann no Werkzeug has been called in the Community; but, as in the
period following the death of Rock, 'well founded Brethren endowed with divine mercy, who are still living witnesses of the great blessing of Inspiration, carry on the work of the Lord in the Community.' How long the coming generations will 'fill the widening gap' with no Werkzeuge for their spiritual guidance, and with the shaking of the link in the 'perpetuating of the faith and regeneration of mankind,' which binds them to the past with its inspiring history, 'is ordained only in the hidden counsel of God.'

2. Religion.—Although communions may appear to the casual observer to be the most characteristic feature of the Amana Society, a careful study of the history and spirit of the Inspirationists reveals the fact that the real Amana is Amana the Church — Amana the Community of True Inspiration. Religion has always been the dominating factor in the history of the Community.

The basic doctrine of the Amana Church is present-day inspiration and revelation. That is, to use the words of the Werkzeuge Eberhard Ludwig Gruber, 'God is ever present in the world, and He will fill all days as in old times by the words of His Inspiration if they but listen to His voice.' Indeed, it is the belief of these people that, ever since the beginning of the 'New Spiritual Economy,' the spiritual and temporal affairs of the Community has been inspired under Divine direction according to the 'decisive word of the Lord' as revealed through His specially endowed instruments the Werkzeuge. And so it appears throughout their history that in all important undertakings and changes, nay in the very undertakings and changes of the Community, the Werkzeud had to bear the bulk of the burden and care, since the Lord ordained and directed everything through him directly.

Thus Divine inspiration and revelation came through the Werkzeuge. Perhaps the best exposition of the nature of Inspiration, as understood by the Inspirationists, is found in Eberhard Ludwig Gruber's Die Nature of Inspiration, where, in reply to the charge that he was an 'instrument of the Devil,' he sets forth his own 'convictions' as follows.

1. Right-handedly and without test and experience come the approval of these things.
2. Only those persons, although being at first adverse to me, have not in the least troubled me, nor aroused and stirred my emotions, as certainly would have happened to some extent if they had originated from a wicked and dark spirit.
3. Because I have not been hindered thereby in the usual quiet way to turn to Inspiration.
4. Because during such a deep and earnest self-examination all sciences and objections to this must have occurred, without effort on my part, so completely removed and dispersed that not one remained which irritated me or which I could not comprehend.
5. Because such prayer, which was absolutely without prejudice in the matter, has again won for me the precious gift of tears, which had become almost unknown to me.
6. Because the assemblies of prayer recommended by the Spirit, and up to that time vainly attempted to implore the gift of Divine mercy and assistance were established in my heart, and I indeed was made willing and confident to throw myself behind me, and to take upon me all the disgrace and suffering of this service, often confirming my faith under tests and trials which are not mentioned here, but known to God and all others.
7. Because the inner word was laid open and led forth from the depths of my heart, whither no divine creature, much less a satanic spirit, could reach, deeper and more abundantly than I ever possessed it before.

Because those inner emotions known to me from youth, have now become stronger and more powerful, for they held me back from some evil deed, or encouraged and urged me to some good act.

Because they of the inner emotions) last with certainty reveal to me the presence of hidden false spirits rising against me or others.

Because in all this I do not found my conclusions on the inspiration alone, as may be the case with others, but upon the undeniable work of God in my soul. With this long years out of sheer mercy, and which under this new economy and revival is becoming ever more powerful.

Because my son, together with me, who now has been brought into a state of deepest repentance and wholesome anxiety of mind through the powerful Testimony of the Spirit in the inspired persons.

Because the Word of the Lord was unsealed to him (the son) by the very first emotions (of the inspired one).

Because the Spirit of Inspiration promptly appeared, as when it had been foretold that a certain married woman (die Mel- chiorin) would testify on the day mentioned in Heimberg.

Because my son came to testify (make utterance) with great fear and trembling, nay even through the severest struggle, and surely not through his wish and vain desire.

Because he was enabled and compelled in his first testimony, as a forerunner of the future, to denote with great certainty an inspirable spirit, to the inexcuseable by the gift, letter.

Because he (the son) was led in these ways of Inspiration, contrary to inclination and habit of his youth, to deep introspection and seclusion, and was also endowed with many extraordinary gifts of mercy.

Because he made, far beyond his natural abilities, such pure, clear, and penetrating statements (utterances) that many well learned in divine and sacred things were startled.

According to the belief of the Community of True Inspiration, the word and will of the Lord are communicated to the faithful through the specially endowed Werkzeuge, whose inspired utterances are in fact the Bezeugungen, that is, the Testimonies of the Lord. These are either written or oral. The gift of oral prophecy or testimony (Aussprache), being regarded as the highest form of inspiration, was not enjoyed by all the Werkzeuge. Indeed, the 'miraculous gift of Aussprache' was sometimes preceded by the humbler gift of Einsprache, when the Werkzeug, unable to give voice to his inspiration, committed his testimonies to writing. Thus the 'specially endowed' Werkzeug, Christian Metz, seems to have entered upon the 'service of the Lord' with only the gift of Aussprache, which was later followed by the combined gift of Einsprache and Aussprache, and still later by the combined gifts of Einsprache and Aussprache. Sometimes the Werkzeuge were deprived of the gracious gifts of Einsprache and Aussprache, which were restored on or after a period of God's severe purifying.

The inspired testimonies of the Werkzeuge, as recorded in the Year Books, or Testimonies of the Spirit of the Lord, vary in length from a few sentences to many pages. Some were uttered in rhyme; and there are instances where a testimony is given through two Werkzeuge speaking alternately. Under the date of Jan. 12, 1819, such a testimony was given by Michael Krausser and Barbara Heinemann (TSL, 1819). From the records it appears that testimonies were addressed sometimes to the whole congregation of the Community, and sometimes to individual members.

As to content, the Testimonies touch a great variety of subjects, from the routine affairs of daily existence to impassioned admonitions to live the holy life. Many contain promises of the love and mercy of the Lord. Others take the form of appeals of the 'God of Salvation' for more spiritual life. Some are warnings against Lichtenstein, pride, and the 'sinner's pride; and especially are the selbstdändig and eigenmächtig learned against the wrath of God, and all the vengeful denunciations of the wicked, and there are threats of 'the judgment, the wrath of God,' and the 'glorying abyss' for those who do not repent.

But many more there are that teach and instruct to obedience to the will of the Lord, self-denial, and repentance. Throughout, the testimonies suggest a wide familiarity with the Bible language of the spiritual world.

The testimony of Christian Metz, given as a warning and admonition to Kraussert, is typical of the utterances of the Werkzeuge. It runs thus:

'Thus speaketh the eternal God: I will give a word of testimony to my servant Kraussert, who knoweth not now how to
begin, so bewildered he is. But listen, then. What hath
prompted thee to act and deal thus according to thine own
inclinations? Thou hast run before thou wast sent away, saith
the Almighty God of Love. Alas, how troubled is thy spirit
that thou hast failed thus, and dost not want to be found again!
Oh, do thou give me to know the title of brotherhood which I have established, and which I have
again strengthened through thee. Thou runnest about thus,"A man who has hallowed
him to his flock and deserted. Is this the true faithful
ness of the shepherd? Do faithful servants act thus, when the
wild beast is baying, howling into the great valley, and we
ward off harm?... Canst thou, then, say that I have deserted
thee? And when thou hast deserted thee, and a trembling of
tiny weakness is felt for holy unity, how long wilt thou
alone? Have I not ever helped thee again and satisfied thee?
Hear, then, what the God of Eternal Love furthermore
teacheth thee; Thou wast in thine office as a shepherd, and thou
doest not sufficiently submit thyself in to my will; thou hast
become too self-willed, and thou dost not want to heed the
others, whom, too, I have summoned, and through whom I
instruct thee. Alas, I do not wish to make known and have
recorded all that I have to record against thee, saith the
mighty God. But, nevertheless, thou shalt never succeed in
the latter if you returnest not soon and quickly again in
and to the training of my love, and dost not more carefully tend my
flock at present. Oh, I still love thee and see thee in thine
everlasting state; return, then, and care more diligently for the
souls whom I have called.

In the end, and always have helped thee! Why,
then, dost thou lose courage now and desert ere thou wast sent
away? Hath it ever been heard of, that my witnesses whom I have
brought to a true love of self, and to a positive charity and thus believed the
they knew no fear? And though the whole world should rise
sail, and a trembling of terror is felt for holy unity, how long
should we be so weak that they could hardly stand on their feet,
I will still be their God and their mighty protector, if they trust
me as they trust now; but may I take no pleasure at all in thy present
action of course.

'Alas, my soul is troubled that the wild beasts have broken in
through thee,' saith the Lord. But, too, turn a hireling and scatter
the sheep which I so miraculously have led together, saith the
mighty God. Also, return then again and lead them on as
a faithful servant and shepherd; with the staff of the true love of
the shepherd seize firmly upon faith; then will I assist thee again
and be thy inward peace, thy simplicity. Sure is my utterance to this punishment, for it is my will that it may be
known known that no mortal may boast of his import-
ance.' (Psa. 119.)

The giving or uttering of oral testimonies by the
Werkzeug seems to have been accompanied by a
more or less violent shaking of the body (Bewege-
zung), which is described by one of the scribes in
the words:

'With regard to the Bewegungen, the Werkzeug were not
alike; although they were all moved by one Spirit, there was
considerable difference in regard to their different communicants or
convulsions. When they had to announce punishments and judg-
ments, it did not with great force, many gestures, strong motions, and with a
true voice of thunder, especially if this occurred on the public streets or in churches.
But in order to speak of the true love of God and the glories,
the children of God, then their motions were gentle and the gestures pleasing; but all, and in all attitudes assumed by them,
speaking or when they had, some time previously experienced the
Bewegung, a feeling of its approach. Again they were especially
done in all their gestures, and by night, and sometimes
when they were aroused from their slumber, and had to testify
frequently on the public highways, in fields and forests. In
short, they were instruments in the hands of the Lord, and
had no control over themselves.

'Violent as the commotions of the body were, still
they did no harm to the body; on the contrary, the said
and often as remedies if the Werkzeug were ill, as on the occasion of
the Werkzeug on a journey by seriously ill at Hall, Saxon,
and was very weak in body, when he suddenly, to the
terror of those present, was seized with violent convulsions and had to testify. In the utterance he received orders to start
the journey, at which all were surprised. After the testimony the
Werkzeug arose and was well the very moment, and on the
Werkzeug departed.' (Psa. 119.)

The belief in the genuineness and Divine nature of the
Beweegungen is set forth in an account of an
interesting interview which took place between the
younger Gruber and his Schreiber and two Jewish
Brothers who werecoming at Frankfort. This
which is recorded under the date of Jan. 30, 1716,
is a comparison of the manner of prophesying by the
Werkzeug of the Inspirationists and the old
Hebrew prophets. It reads in part:

O Lord, prepare our heart and question us.
This is the reason why I have recorded the happenings.
They asked, in the first place, where we had our home. Answer:
No, sir, I do not know; I do not know. Then they asked:
Are we Christian and Jews. I denounce ourselves Christians. They said they believed that,
and that they knew full well that not all are Christians who call
themselves Christians, just as, among themselves, not all were
Jews who called themselves Jews; and that they asked only for
the sake of the outer distinction. Thereupon I replied that
one of the Werkzeug had been reared in the Reformed Church, the other among
the Lutherans. They asked: Which of you is, then, the Prophet
and the Lord? I pointed to the father of the
(bewegt) to rule and master your thoughts.

IV. Without, to avoid all unnecessary words, and still to
study silence and quiet.
V. To abandon self, with all its desires, knowledge, and power.

VI. Do not criticize others, either for good or evil, either to yourself or to others. They contain yourself, remain at home, in the house and in your heart.

VII. Do not disturb your serenity or peace of mind—hence the absence of sorrow.

VIII. Live in love and pity towards your neighbour, and into this the one who is not thus disposed. So will you understand.

IX. Be honest and sincere, and avoid all deceit and even secretiveness.

X. Say every word, thought, and deed as done in the immediate presence of God, in sleeping or waking, eating, drinking, and give him at once an account of it, to see if it is for your good or for your evil.

XI. Be in all things sober, without levity or laughter, and without vain and idle words, deeds, or thoughts, much less levity toward the opposite sex, or in anything that is against nature.

XII. Never think or speak of God without the deepest reverence due to love and love, and therefore deal reverently with all spiritual things.

XIII. Bear in inward and outward sufferings in silence, complaining only to God; and accept all from Him in deepest reverence and obedience.

XIV. Notice carefully all that God permits to happen to you in your inward and outward life, in order that you may not fail to comprehend His will and to be led by it.

XV. Never do anything to lose your health, and particularly with new things, which may not be advantageous to you.

XVI. Have no intercourse with worldly-minded men; never see, hear, nor speak with strangers, and never without need; and then not without fear and trembling.

XVII. Therefore, what you have to do with such men, do in haste and time in perfect places and worldly society, lest you be tempted and led away.

XVIII. Fly from the society of women-kind as much as possible, and especially from that which near and far is ungodly.

XIX. Avoid obedience and the fear of men; these are death to the soul, for they permit life to be corrupted, which is the instruction of God.

XX. Sinners, weddings, feasts, avoid entirely; at the best there is sin.

XXI. Be constantly practise abstinence and temperance, so that you may be as wakeful after eating as before.

The 'Twenty-four Rules for True Godliness' appear as a part of a lengthy testimony in which the Lord commands a renewal of the Covenant. In these words the face of God himself shines from the presence of the holy angels and of the members of your community, which ceremony is still observed in the community by shaking hands with the presiding elder in open meeting. The concluding paragraph of the admonitory introduction and the 'Twenty-four Rules for True Godliness' are as follows:

Hear then what I say unto you. I, the Lord your God, am holy; and therefore ye, too, shall be and become a holy community. Do abide in godliness therefore you shall henceforth resolve.

And all subliterate out of your hearts, that they may no longer befool you and mislead further to idolatry against your God, that He name be not defamed and He go no more in your thoughts and with the narrowest and the innermost.

II. I desire that ye shall have nourished in common with the fruitless works of darkness; neither with the grave sins, and sinner, nor with the subtle within and without you. For a relationship and likeness hath My holy temple with the temples of pride, unchastity, ambition, and seeking for power, and of the useless, superfuous, condensing prattling, which steals time away from me? How could the light unite with the darkness? How can ye as children of the light unite with the ungodly, the lies and their works, the scoffers and blasphemers, who are nothing but darkness?

Ye shall henceforth in your external life conduct yourselves so that those standing without find no longer cause for sports and for defaming of my name. Rather suffer without if ye are abused. But above all let your friends and your associates be such as hinder you from growing in godliness. All mockers and scoffers those who recommend you unto vanity, ye shall shun, and have no dealings with them.

Ye shall also perform your earthly task the longer and the more diligently the day to day according to your conscience, and gladly desist from that which My Spirit showeth you to be sinful—very, very long, for I am the Lord, Who can and will care and provide for the needs of my children, and this ye may not give cause to censure to the scoffer. The time is very near, very, very near, therefore, see to it well that My hand may bring forth and create a new man within you.

III. Ye are warned you, be far from you all falseness, lying, and hypocrisy. For I say unto you that I will give the spirit of discernment to them that are open to me in your households, and Him and the Spirit of Prophecy, and that ye shall cast away metal and metal be together? Would it not make for me a useless vessel, which is not necessary? But let my household have to cast away with the refuse? Behold, my children, I have chosen you before you were many, many, and have promised to be unto you a fiery, a recherche, against the defence of your inner and outer enemies.

Verily! Verily! I shall keep My promises, if ye only endeavours to fulfill what ye have promised and are promising.

IV. Ye shall, therefore, none of you, strive for particular gifts, and envy the one or the other. Let your concern be to see if ye shall let yourselves be prepared in humility and patience according to my will. Then ye, too, shall speak with tongues different from the tongues ye now speak. For thus the gift of prayer or maybe of wisdom. For such the enemy of My glory seeketh ever to instil into you, especially into the inward and outward mind to the cross, and is destructive to the soul. Ye shall, all, all, all of you be filled with My pure and spirit wind which shall not depart, as if ye shall let yourselves be prepared in humility and patience according to my will. Then I shall be able to communicate with you most intimately.

VII. Put aside henceforth all backbiting, and all malice of the heart toward others, and to keep faithfulness and sincerity. None of you are free from it. Behold I shall command the Spirit of My love, that He, as often as ye assemble for prayer, be not the true simplicity of heart and life, but the seignior mists with His influence and may flow through the channels of His love into the hearts he finds wanting. Then I shall be able to communicate with you most intimately.

VIII. Ye must make yourselves willing for all outer and inner suffering. For Satan will not cease to show unto you and to you on the contrary, reveal myself ever more powerful, more power. It is also pleasing to Me and absolutely necessary for you that ye be tried through continuous sorrow, suffering, and the cross and bowing of your will. This shall be the tie with which ye can bind and hold Me. Behold I accept you this day as slaves of My will, as a nation under My Lordship, to a fulfilling growth My seed, which I have concealed therein.

XI. Behold, My people! I make with you this day a covenant which I bid you to keep faithfully and sincerely. I will daily wander amongst you and visit your place of rest, that I may see how ye are disposed toward Me.

XII. Guard yourselves and turn you against indifference towards this covenant of grace and against neglect, indifference, snobbery, and lazziness, which turns away most part your rulers and have controlled your heart. I shall not depart from your side nor from your midst, but shall Myself, on the contrary, reveal Myself ever more powerful, holier, and more glorious through the light of My face in and amongst you, as long as ye will bring forth to Me the riches and silver bowers of your hearts.

XIV. Your children, ye who have any, ye shall endeavour with all your power to nurture in Me and lead to Me. I shall give you in abundance, if ye only keep close to Me inwardly, wisdom, courage, understanding, bravery, and earnestness mingled with love, that ye yourselves may be able to live before them in the fear of God, and that your training may be blessed, that is, in those who wish to submit to My hand inwardly through Me. But those who scorn you and do not heed My voice, in and through you and otherwise, shall have their blood drawn upon their associations, with which you and with your children and dwell day by day. See therefore to this, that ye prove ye only heads and glory of My household which, however, always stand under their faithful Head, your King, in that ye may bring your help-mates to true conduct and fear of God through your words and your actions, and thereby strive to make ever more faultless, more earnest, and many.

XIV. Your children, ye who have any, ye shall endeavour with all your power to nurture in Me and lead to Me. I shall give you in abundance, if ye only keep close to Me inwardly, wisdom, courage, understanding, bravery, and earnestness mingled with love, that ye yourselves may be able to live before them in the fear of God, and that your training may be blessed, that is, in those who wish to submit to My hand inwardly through Me. But those who scorn you and do not heed My voice, in and through you and otherwise, shall have their blood drawn upon their associations, with which you and with your children and dwell day by day. See therefore to this, that ye prove ye only heads and glory of My household which, however, always stand under their faithful Head, your King, in that ye may bring your help-mates to true conduct and fear of God through your words and your actions, and thereby strive to make ever more faultless, more earnest, and many.

XV. Do now your part as I command you from without and frequently inwardly through My Spirit; do not desist, just as if ye never were called by Me. Whosoever thou art, whithersoever thou be abide in My grace and save your souls. And such women and children shall hear the fruits of their sins as do not wish to bow them when they are abused, and for which ye shall find no longer tolerate those grave offences among you and the rest, that is, if ye will to see the fruits which ye have sinned in and through Me. The dew of blessing shall flow from the blessed head of your High Priest and Prince of Peace into your houses and shall dwell upon you and into your help-mates, and through both man and wife into the offering and children, so that all your
seed shall be acceptable, pure, and holy before the Lord, since
HeHimself hath nourished and will nourish the same among you.

XXVII. And none of your grown-up children shall be per-
mitted to attend meetings who have not previously re-
ceived from their parents a good testimony according to the
testimony, without self-deception, as also among the
elders and leaders, especially from the one who with his
fellow-workers hath to watch over the training of the children,
who cried, and called upon the Lord, and did not do it without severity and harshness. This training is to be watched
closely with all earnestness, and should the parents be neglecting
and the case require it, then shall the latter be temporarily
excluded [from the prayer meetings] for their humiliation.

XXVIII. And as the people whom I have established for an
eternal monument to Me, and whom I shall impress upon
My heart as an eternal seal, so that the Spirit of My
living Father will be with you and within you, and work according
to His desire.

And this is the word which the Lord speaketh of these
strangers who so often visit you and cause so much
disturbance. None whom ye find to be a scoffers, hypocrite,
mocker, sinner, derider, and unexpecting sinner, shall ye
admit to your community and prayer meetings. Once for
all they are to be excluded, that My refreshing dew and the
content of My special grace may dwell among you. But if some should come to you with
honest intentions, who are not known scoffers, hypocrites,
and deriders, though it be that they have come of the
world, if, as to your knowledge doth not come with deceitful
intentions, or will not own it, I shall give you My
faithful servants and witnesses, especially the spirit of
discrimination, and give you an exact feeling whether they are
sincerely and come with honest intentions or otherwise.

XXIX. If they then desire to visit you more frequently, ye shall
acquaint them with their proper offices in your Community, ask them whether
they will submit to these rules and to the test of the elders.
And then ye shall read to them My laws and commandes, who is
that ye see that they are earnestly concerned about their souls, then ye shall gladly receive the
weak, and become weak with them for a while, that is, ye shall,
with the help of My Spirit, repent of their repentence of their own.
But if a scoffer or mocker declare that he repenteth,
he ye shall admit only after considerable time and close
scrutiny and examination of his conduct, if ye find the latter
to be righteous. For Satan will not cease to try to launch you
at your back against such people. He therefore shall be your
watch, and watch lest the wolf come among you and seize you,
and destroy the sheep.

XXX. And those who pledge themselves with hand and
mouth after the aforesaid manner to you shall make public
proclamation before the community, and also make an open
profession of their resolve, and I shall indeed show you if this
latter cometh from their hearts; the conduct of those ye shall
watch closely, whether they live according to their profession
and promise or not, lest the dragon defile your garments.

XXXI. Ye shall not form a habit of anything of the
external exercises (forms of worship) and the duties committed
to you; or I shall be compelled to forbid them again.
On the contrary, your meetings shall make you live call of the
more earnest, more zealous, in the true simple love towards
each other, and be united to the Prince of Peace,
immanuel.

XXXII. This the members and brethren of the community
shall sincerely and honestly pledge with hand and mouth to
My Head to the Assembly, after they have carried, that they have considered it, and it shall be kept sacred ever after’ (TSL,
1831–1835).

The records it appears that the members of the Community of True Inspiration are graded
spiritually into three orders (Abtheilungen) according
to the degree of their piety. Ordinarily, the spiritual
rank of the individual is determined by age,
since piety increases with years of sincere
regeneration and striving for the true humility of spirit. Nevertheless, it remains for
the Great Council of the Brethren at the yearly
spiritual examination to judge of the spiritual
condition of the members irrespective of age, and
to take out of the middle order, here and there,
come into the first, and out of the third into the
second, not according to favour and prejudice, but
garding to their grace and conduct’ (The Supper
of Love and Remembrance of the Suffering and
Death of our Lord and Saviour Jesus Christ for
1865). Moreover, reduction in spiritual rank
follows the loss of piety, or as a punishment for
evil doing. During the days of the Werkezeuge
this spiritual classification of the members into
Abtheilungen was made with ‘great accuracy’
through Inspiration.

There are three important religious ceremonies
which are observed by the Community of True
Inspiration with great solemnity. These are the
renewing of the covenant (Bundesschliessung), the
spiritual examination (Untersuchung oder Unter-
redung), and the Lord’s Supper or Love-feast
(Liebeschmahl).

Formerly the ceremony of renewing the covenant
(Bundesschliessung) was appointed and arranged
by the Werkezeuge; but it is recorded in IH iii.
722 that in 1863, when the annual common Thank-
giving Day [ordinarily the last Thursday of
November] of the land came round, the Lord gave
direction through His Word that henceforth this
day should annually be observed solemnly in the
Community of Volunteers, as it has been
ever since and is still observed.’ Every member of
the Community, and every boy and girl fifteen years
of age or more, take part in this ceremony.

Following the usual religious exercises of hymn,
silent prayer, reading from the Bible, and an
exhortation by the head elder, the elders pass in
turn to the head elder, who gives them a solemn
shake of the hand, signifying a renewed allegiance
and the faith, and a pledge to ‘cleave unto the ways
of the Lord, that they may dwell in the land
which the Lord sware unto their fathers.’ Then
the brethren one by one and according to age
and spiritual rank, come forward and similarly pledge
themselves by shaking the hand of the head
erlier and his associates. Finally, the sisters
come forward, and in the same manner renew
their allegiance to the work of the Lord.

The spiritual examination (Untersuchung), which
is held annually, seems to be based upon the words
of the Bible (Ja 53), which say, ‘Let no faults
be taken from another, and pray one for another,
that ye may be healed.’ It serves as a prepara-
tion for the Love-feast (Liebeschmahl) which follows.

This ceremony of confession, with its sanctification
and purification to be performed by every man,
woman, and child in the Community. It is now
conducted by the first brethern, although formerly
it was the office of the Werkezeuge to ask the
appropriate questions and to judge of the
spiritual condition of each individual. Nor did
the Werkezeuge hesitate to condemn the short-
comings of the members as revealed in this
examination. And frequent were the exhortations
to holier living, such as: ‘Oh that ye were not
only fruitful in the external, and that your eyes
were directed inward! Pray the Lord your
salvation, and live more sincerely for the true
spirit of humility’ (TSL, 1845).

Through the Untersuchung the people of the
Community were prepared for the most elaborate
and solemn of all the ceremonies of the Inspir-
ations, namely, the Lord’s Supper or Love-Feast
(Liebeschmahl), which is now celebrated but once
in two years. A special feature of the Love-feast as
carried out by the Community of True Inspiration
in the Westphalian Assembly. The ceremony is observed
at this time by the higher spiritual orders. Gottlieb
Scheuner, the scribe, records, in reference to a
particular Love-feast, the following:—

*The entire membership, excluding the young people under
15, was divided into three classes according to the conviction
and insight of the brethren and the Werkzeug (Barbara Landmann) concerning the spiritual state of the respective people. Likewise the servants for the foot-washing, for the breaking of the bread, and for the distribution of bread at the supper, as well as the singers and scribes, had to be chosen and arranged. The number of servants had to be determined in proportion to the great membership. Thus there were appointed for the foot-washing at the first Love-feast, 13 brethren and 6 sisters... Likewise 13 brethren and 4 sisters were chosen. Besides those, the best singers among the brethren, and from the respective class selected and were joined to the leaders, so that the whole choir consisted of 20, sometimes 21 persons, who then performed the meal at a separate table in the middle of the hall. To write down the testimonies of the Lord, those then being teachers at the different communities were appointed (IH 45, 75).

The regular or extraordinary religious exercises of the Community of True Inspiration are extremely simple, for the Inspirationists believe that 'forms and ceremonies are of no value, and will never take a man to heaven.' In the several villages prayer meetings are held every evening in rooms according to class. On Wednesdays, Saturdays, and Sunday mornings the people meet by orders (Abtheilungen), while on Sunday afternoon there is held from time to time a general meeting. Thus, exclusive of special exercises, there are eleven religious services held each week in the Community.

With the exception of the prayer-meetings, all the religious gatherings are held in the churches, of which there is one in each village. The church is very much like the ordinary dwelling-house, except that it is larger. The interior is severely plain. White-washed walls, bare floors, and unpainted benches bespeak the simple unpretentious faith of the Community. In the general meetings the elders sit in front facing the congregation, which is composed of the men on one side and the women on the other.

The services are all solemn, dignified, and impressive, and never accompanied by excitement. There is no regular pastor or priest. In the exercises, which are conducted by the elders, there is no national prayer, no special prayer. The silent prayer is followed by a hymn sung by the congregation. Then the presiding elder reads from the Bible or from the testimonies. Again there is prayer, which is sometimes given extemporaneously and sometimes the prayers are derived from supplicatory verses by the members of the congregation. The presiding elder announces a chapter in the Bible, which is read verse by verse by the members of the congregation. There is, of course, no sermon—simply a brief address of exhortation from an elder. After the singing of a hymn and the pronouncing of a benediction by the presiding elder, the people leave the church, the women going first and the men following. Nothing could be more earnest, more reverent, more sincerely genuine than the church services of the Community of True Inspiration.

As texts for religious instruction, the Community has published two Catechisms, one for the instruction of the youth, the other for the use of the members of the Community. The former was re-edited in the year 1872, and the latter in 1871. The title-pages are almost identical, and read: 'Catechetical Instruction of the Teachings of Salvation presented according to the Statements of the Holy Scriptures, and founded upon the Evangelic-Apostolic Interpretation of the Spirit of God for the Blessed Use of the Youth (or Members) of the Communities of True Inspiration.'

The one supreme object of the 'pilgrimage on earth' in the Inspirationist's system of theology is the salvation of the soul. The Community is but a school of preparation for the next world. The awful fact, after death, of the soul that has not been thoroughly purified and sanctified during its earthly sojourn is perhaps best described in an old Bezeugung, which reads: 'Such souls will wander in pathless desolation; they will seek and not find; they will have to undergo torment and grief, and be wretchedly plagued, tortured, and tormented by misleading stars' (TS, 9th Collection, 2nd ed. p. 104).

'Behold how good and how pleasant it is for brethren to dwell together in unity,' said Ephesians, 4:9, his congregation of fellow-believers in the days of the apostles. And nowhere, perhaps, is this simple Amoan doctrine of 'brothers all as God's children' more impressively expressed than in the Amoan cemetery, where there are no family lots or monuments, but where the departed members of the Community are buried side by side in the order of their death, regardless of natural ties. Each grave is marked by a low stone or a white painted head-board, with only the name and date of death on the side facing the grave. There lies the great-hearted Christian Metz by the side of the humblest brother.

3. Religious and moral instruction.—The stability of the Community of True Inspiration and the perpetuity of the faith of the 'New Spiritual Economy' nearly two centuries ago is a measure to the instruction and training of the youth; for the Inspirationists have always insisted on training their children in their own way according to the faith of the fathers (Urgrosseltern).

To-day there is in each village of the Community a school organized under the laws of the State and sharing in the public school fund. But since the whole of Amana Township is owned by the Society, the Society levies its own school tax, builds its own school houses, chooses its own school directors, and employs its own teachers. Thus the education of the youth of Amoan is under the immediate guidance and direction of the Community.

To preserve the earnestness and religious zeal of the fathers (Urgrosseltern) is the real mission of the Community school. Here the youth is taught that "What our youth need more than text-book knowledge," says the Kinderlehrer, 'is to learn to live holy lives, to learn God's commandments out of the Bible, to learn submission to His will, and to love Him.' Indeed, to love the way the founder and leader of the COMMUNITY, Gruber, never to reject or despise the good and sincere admonitions of the brethren, constitute the foundation of the ethical and religious training of the Amoan child, who, between the ages of five and fourteen, is compelled to attend school six days in the week and fifty-two weeks in the year. In addition to the branches that are usually taught in grammar schools outside of the Community, there is daily instruction at the Amana school in the devout, the devout, and the instruction of is this religious instruction suited or performed in a perfunctory manner. Said one of the Community schoolmasters: 'It is my profound belief that no other children on the whole earth are more richly instructed in religion than ours.'

The spirit as well as the scope and character of the instruction and training of the youth of Amoan is beautifully expressed in the 'Sixty-six Rules for the Conduct of Children' which are given in the catechism. To live up to these rules is indeed the first step toward the child's perfection.

In order to ascertain and promote the spiritual condition of the youth in the schools, there are held each year two 'solemn religious meetings,' which are conducted by the first brethren. One of these meetings, the Kinderlehrer, consists of a thorough review of the principles and doctrines of the Com-
amunity and of the supreme importance of keeping the faith. The other, called the Kinder Unterred-
wing, is indeed the children's part of the yearly spiritual examination (Untersuchung).

Graduation from the schools of the Community, which may take place either in the autumn or in the spring, is attended with solemn religious exercises. The children who are about to leave the schools are carefully examined as to their knowledge of both spiritual and temporal things. It is at this meeting that each child reads his 'graduated to receive back' which is a simple childlike review of his school life, of his faults, of his aspirations, and of his intentions as a member of the Community.

Graduation from the schools is, in a sense, a preparation for the Bundesschlüssung which follows, and in which the children are first permitted to take part at the age of fifteen. It is not, however, until the boys and girls come to the legal age of twenty-one and eighteen respectively that they are admitted as full members of the Society.

4. Membership.—Besides those born in the Community, who become members by signing the Constitution when they have arrived at the legal age, any outsider may join after a probation of two years, during which he agrees to abide by the regulations of the Community, and demand no wages. If, at the close of this period, the candidate gives 'proof of being fully in accord with the religious doctrines of the Society,' he is admitted to the full membership, after conveying to the Society all his property, taking part in the Bundesschlüssung, and signing the Constitution. Members who 'may recede from the Society either by their own choice or by expulsion, shall be entitled to have back' moneys paid into the common fund and to interest thereon at a rate not exceeding 5 per cent. per annum from the time of the adjustment of their accounts until the repayment of their credits' (Constitution, Art. VIII.). Few, however, withdraw from the Society; and most of those who do leave return in the course of time. The records show that formerly many outsiders (from Germany) were admitted; but in recent years the increase is almost wholly from within.

5. Government.—The entire conduct of the affairs of the Amana Society rests with a board of trustees consisting of thirteen members, who are elected annually by popular vote out of the whole number of elders in the Community. The members of the board of trustees are the spiritual as well as the temporal leaders of the Community of True Inspiration, and as such are called 'The Great Council.' One of their own number, the trustees elect annually a president, a vice-president, and a secretary.

With a view to keeping the members informed concerning the business affairs of the Society, the board of trustees exhibits annually in the month of June to the voting members of the Community a full statement of 'the personal and real estate of the Society.' The board itself meets on the first Tuesday of each month. Besides its general supervision of the affairs of the Community, the board of trustees acts as a sort of court of appeal to which complaints and disagreements are referred. With their decision the case is finally and emphatically closed.

Each village is governed by a group of from seven to nineteen elders, who were formerly appointed by Inspiration, but who are now (there being no Werkszug) appointed by the board of trustees. Each village has at least one resident trustee, who recommends to the Great Council, of which he is a member, a list of elders from the most spiritual of the members of his village. From these lists the Great Council appoints the elders for each village according to spiritual rank. The governing board of each village is known as the 'Little Council,' and is composed of the resident trustee and a number of the leading elders, who, on call into conference the foremen of the different branches of industry and such other members of the Community as may, on occasion, be of assistance in arranging the village work.

It is this Little Council of the village that appoints the foremen for the different industries and departments of labour, and assigns to any individual his apportioned task. To them each person desiring more money, more house room, an extra holiday, or lighter work, must appeal; and these allotments are, as occasion requires, 'revised and fixed anew.'

The highest authority in matters spiritual in the village is the head elder; in matters temporal, the resident trustee. If the latter should die, the village has a member of the Great Council itself, which is the spiritual head of the Community, in the village church the head elder ranks above the trustee. Each village keeps its own books and manages its own affairs; but accounts are finally sent to the headquarters at Amana, where they are inspected, and the balance of profit or loss discovered. The system of government is thus a sort of federation, wherein each village maintains its local independency, but is under the general super-
vision of a central governing authority, the board of trustees.

6. The Amana Villages.—The seven villages of the Community of True Inspiration lie from a mile and a half to four miles apart; but all are within a radius of six miles from 'Old Amana.' They are connected with one another, as well as with most of the important towns and cities of the State, by telephone. Each village is a cluster of from forty to one hundred houses arranged in the manner of the German Dorf, with one long straggling street and several irregular off-shoots. At one end are the village barns and sheds, at the other the factories and workshops; and on either side lie the orchards, the wood, and the railway station.

Each village has its own church and school, its bakery, its dairy, and its general store, as well as its own sawmill for the working up of hard wood. The lumber used is obtained largely from the Society's timber land. At the railway stations there are grain houses and lumber yards. The station agents at the several Amana railway stations and the four postmasters are all members of the Society. The establishment of hotels, in no way a part of the original village plan, has been made necessary by the heavy visits of strangers who visit the villages every year.

7. The Amana Homes.—The homes of the Amana people are in two-story houses built of wood, brick, or a peculiar brown sandstone which is found in the vicinity. The houses are all quite unpretentious; and it has been the aim of the Society to construct them as nearly alike as possible, each one being as desirable as the other. The frame-houses are never painted, since it is believed to be more economical to rebuild than to preserve with paint. Then, too, painted houses are a trifle worldly in appearance. The style of architecture is the same throughout the entire Com-
community—plain, square (or rectangular) structures with gable roofs. There are no porches, verandas,
or bay windows; but everywhere the houses are (in the summer time) half hidden with grape vines and native ivy. The uniformity is so marked that it is only with the aid of an inconspicuous weather-beaten sign that the stranger is able to distinguish the 'hotel' or 'store' from the school, church, or private dwelling. Grass lawns are not maintained abroad, but the lawn is everywhere the sign of the Amana Society. Surrounding with a riotous profusion of flower beds.

In the private dwelling-house there is no kitchen, no dining room, no parlour—just a series of 'sitting rooms' and bed rooms, which are furnished by the Society and the families each provide for themselves. Each house is occupied by one, two, or sometimes three families. But each family is assigned certain rooms which constitute the family home; and in this home each member has his or her own room or rooms. There is no crowding in the Amanas; for the same spirit which led the Society to adopt the village system has led it to provide plenty of house room for its members.

8. Domestic Life.—At the time of its inception the 'New Spiritual Economy' does not seem to have been popular. But with increasing religious fervour among the Inspirationists callicamy was to be regarded with much favour; while marriages were in certain special cases prevented by the Werkzeuge. It does not appear, however, that marriage (although discouraged) was entirely abandoned. Each day there seems to be no opposition; and the young people marry freely, notwithstanding the admonition that 'a single life is ever a pleasure to the Lord, and that He has bestowed upon it a special promise and great mercy' (TSL, 1830, No. 74). The newly married pair are, indeed, still reduced to the lowest spiritual order. A young man does not marry until he has reached the age of twenty-four years, and then only after permission has been given by the Great Council of the brethren one year in advance. Marriage in the Community of True Inspiration is a religious ceremony which is performed in the church by the presiding elder.

Divo is not recognized in the Community of True Inspiration. The married couple are expected to abide by the step they have taken throughout life. But if, for good and sufficient reason, such a life union is impossible, 'then one of them, mostly the man, is told to separate himself from the Community and go into the world.' Second marriage is not regarded with favour.

The number of children in the Amana family is never large—ranging usually from one to four. Indeed, with the birth of each child the parents suffer a reduction in spiritual rank. There are, however, very few childless families in the Community.

The newly married couple begin their home life in rooms which are provided and furnished by the Society. Housekeeping with them, however, is a very simple matter, since there are neither maids nor cooking in the home. At more or less regular intervals in each village there is a 'kitchen house,' at which the meals for the families in the immediate neighbourhood are prepared and served. At each of these common eating places provision is made for from sixteen to forty persons. The preparation of the food and the serving of the meals are done by the women.

In the dress the members of the Society are and always have been very 'plain.' There is nothing distinctive about the clothes of the men. Their 'best clothes' are made by the Community tailor, but ordinarily they wear ready-made garments—except a few of the elder brethren, who still wear trousers with the old-fashioned broad fall front, and a coat without lapels. With the women utility and comfort (instead of adornment) are chiefly regarded. Plain calicoes of gray or blue or brown are worn for the most part. The bodice is short and very plain; while the skirt is long and full. An apron of moderate length, a shoulder-shawl, and a small black cap complete the summer costume. The only headdress is a sun-bonnet with a long caper. The winter dress differs from this only in being made of flannel; while a hood takes the place of the sun-bonnet. Every woman makes her own clothes; and every mother makes the clothing for her children.

9. Industrial Life—Agriculture, which is one of the chief industries of the Community, is carried on, with the German proclivity for system, according to the most modern and scientific methods. The general plan of the field work is determined by the board of trustees; but a field 'boss' or superintendent is responsible to the Society for the proper execution of their orders. He sees that the farm machinery is kept in good condition, he appeals to the elders for more men to work in the fields when necessary, and he obtains from the members of the accommodation the horses that are needed. From fifteen to eighteen ox teams are still used for the heavy haulage.

The Amana Society is perhaps best known in the business world through its woolen mills, which have been in active operation for forty-two years. Over half a million pounds of raw wool are consumed in these mills annually. It has always been the aim of the Society to manufacture 'honest goods,' and they have found a ready market from the Atlantic to the Pacific coast. The hours of labour in the woolen mills during the greater part of the year are the usual Amana hours of 7 to 11 in the morning and 12.30 to 6 in the afternoon. But during the summer months, when the orders for the fall trade are being executed, the mills run from half-past four in the morning to eleven at night (the factories being lighted throughout by electricity).

In spite of the long hours and the busy machinery, there is a very unusual factory air about the Amana mills. The rooms are light and airy. There is a cushioned chair or stool for each worker 'between times.' An occasional spray of blossoms on a loom frame reflects the spirit of the workers. Here and there in different parts of the factory are well-equipped cupboards and larder tables, where the different groups of workers eat their luncheon in the middle of each half-day. In the villages where the factories are located the boys of thirteen or fourteen years of age who are about to leave school are employed in the mills for a few hours each afternoon to 'learn.' If the work is congenial, they are carefully trained and are given every opportunity to 'work up'; but if this employment is not agreeable, they are at liberty to choose some other line of work.

In Old Amana there is a calico printing establishment, where four thousand yards of calico are dyed and printed daily. The patterns for the calico are designed and made by a member of the Society. This 'colony calico;' as it is called, is sold throughout the United States and Canada, and is quite as favourably known as the woolen goods.

The industrial efficiency of the operative in the Amana mills and factories is noticeably great even to the casual observer. Each worker labours with the air of a man in physical comfort and peace of mind, and with the energy of a man working for himself and expects to enjoy all the fruits of his labour.

Besides these mills and factories, the Society owns and operates seven saw mills, two machine shops, one soap factory, and one printing office.
and bookbindery. The job work for the stores and mills, the text books used in the schools, the hymn books used in the churches, and other religious books commonly read in the community, are all printed at the Amana printing office. The Society publishes no newspaper or magazine, official or otherwise, although it subscribes for several trade journals.

In three of the villages there are licensed pharmacies. The quantity of drugs prepared for the outside market is not large, as no effort has ever been made to build up a sizable trade. A rule, only special orders are executed. Some physicians of the State prefer to get their supplies here rather than to send farther east for them. The Society were the first people west of Chicago to manufacture petroleum lamp oil. The manufacture is still considered one of the best in the market.

In addition to the aforementioned industries, each village has its shoemaker, tailor, harness-maker, carpenter, blacksmith, tool-smith, waggon-maker, etc. These tradesmen, as a rule, do not devote their entire time to their occupations, but only make and repair what is needed in their line by the people of the village. During the busy season they stand ready to be called to the factory or the fields, if needed, or they are engaged on the farm.

LITERATURE.—Constitution and By-Laws of the Community of True Inspiration, compiled by the officers of the Community; [vol. i.]; Life and Works of Bishop Ludwig Greinner; Autobiography of Johann Friedrich Rock; Year Books of the Community of True Inspiration (published by the Societies); the lifetime of the Werkzeuge and containing the Basenung in the order of their utterance, with brief introductions relating to the circumstances under which the Basenung were given; Art, etc. By Bishop Christian Mord, The Day Book of Brother Christian Mord, Inscriptions—Historic—compiled from various accounts, some of them printed, some written by Gottlieb Schone, a priest and scholar, who gave them to the community; of the founding of the Prayer-Meetings and Communities; [vol. ii.] Various articles and narratives of the work of the Lord in his Ways of Inspiration; [vol. iii.]; Historical Account of the New Revival, Gathering, and Founding of the Community of True Inspiration; [vol. iv.]; Description of the works of the mercy of the Lord in the Communities of True Inspiration; Catechetical Instruction of the Teachings of Salvation, part i., for the youth of the Communities; Part ii.; Psalms after the matins. David for the Children of Zion; ... particularly for the Congregation of the Lord; The Upper and Lower Rooms of the Death of our Lord and Saviour Jesus Christ (published during the lifetime of the Werkzeuge after each visitation of the mission, and the Basenung uttered during the sermon ceremonies); numerous pamphlets and essays found only in the records and libraries of the community. These works are all in German, but a few English translations are also printed chiefly at Ebenezer, N., and Amana, Iowa. Reference may also be made to Nordhoff, Communitarian Societies of the United States, 1880, New York. 1879; Hinds, American Communities, pp. 282-288 (Chicago, 1902); Knorr, Die wahre Inspirationsgemeinde in Iowa (Leipzig, 1880); and Perkins and Wick, History of the Amana Society (Iowa City, La., 1891).

BERTHA M. H. SHAUMBAUGH.

AMARAVATI.—A small town (lat. 16° 34' 45" N., long. 80° 24' 21" E.) on the south bank of the Krishna River, about 30 miles southeast of Madras Presidency, the ancient Dranarkota, or Dhanukaataka. It is famous as the site which has supplied a multitude of fine sculptures, chiefly bas-reliefs, of the highest importance for the history of art and Buddhist archaeology. The sculptures, executed almost without exception in white marble, formed the decorations of a stūpa, which was totally destroyed at the end of the 18th and the beginning of the 19th cents. by a local landholder, who used them for other purposes. The surviving slabs are only a small fraction of the works which were in existence about a century ago. Most of the specimens rescued from the lime-kiln are in either the British Museum or the Madras Museum. The body of the stūpa was cased with marble slabs and surrounded by two railings or screens, of which the outer and earlier stood 13 or 14 feet in height above the pavement, the inner and later one being only six feet high. The casing slabs, and every stone of both railings, including the plinth and coping, were covered with finely executed bas-reliefs. The basal diameter of the stūpa was 138 feet, and the height of the inner rail was 521 feet, and that of the outer rail 803 feet. It is estimated that the separate figures on the outer rail must have numbered 12,000 or 14,000. The multitude of figures on the inner rail, carved on a narrow scale, is still more astonishing.

The so-called Græco-Buddhist art of Gandhara, or the Peshawar region, on the contrary, was influenced,
not directly by Alexandria, but chiefly by the schools of Pergamum and other cities of Asia Minor, which practised a cosmopolitan style of art, sometimes designated as Greco-Roman. The balanced composition of the Gandhāra reliefs closely resembles that of many Roman works, Pagan or Christian, and is as much superior to the recent Indian Indra, the chief god among the Greeks.

2. The Iliad mentions two wars in which the Amazons were involved: a war with the Lycians, and a war with the Trojans. The Amazon was named among the Greeks.

The Amazons were a mythical race of women, dwelling in the northern part of Asia Minor, or still farther north, who had proved their prowess in conflict with the greater heroes of Greece. Something about the conception of feminine warriors made it very attractive to the Greek story-teller. Women who had asserted their independence of conventional bonds, and who kept their power by masking or blinding their male children; women who wore a man's short chiton, and who had cut away the right breast that they might wear the freely handle arms; withal beautiful women to inspire with love those Greek heroes who fought against them—such were the Amazons. According to Pherecydes (frag. 25), their nature was explained by the fact that they were descended from Ares and the naiad nymph Harmonia; Hellenikos (frag. 146) makes them a race of women living apart from men and perpetuating their kind by visits to neighbouring peoples. They were both 'man-haters' (Esch. Prom. 724) and 'manlike' (Hom. Il. iii. 189).

In the epics they use the same arms as do other warriors. Pindar (Ol. xii. 125) and Aeschylus (Suppl. 288) speak of them as skilled with the bow, and in art they ordinarily wear a quiver. Their proper weapon in later myth was the axe—either the axe with blade and point, such as Xenophon found in use in the mountains of Armenia (Anab. iv. 16), or the double-headed axe (Plut. Quaest. Græc. 45, 301 f.). The Latin poets (e.g. Virg. Æn. xi. 611) refer to them as fighting with war-chariots, but Greek poetry and art represent them as going into battle on horseback (Eur. Hipp. 207, 585).

The story of their mutilated breasts is probably due to a false etymology (ext- privative and μαστός 'breast'). What the name did originally mean is not quite clear; with some probability Götting (Comment. de A. 1344) has suggested that it referred to their uniform character that they have nothing to do with men (ē- and μαστός).

The names of individual Amazons are in the main genuine Greek names, added as the myth found favours among the Greeks.

2. The Ænides mentions two wars in which the Amazons were involved—a war with the Lycians,
which led the king of the Lycians, Isobates, to send Bellerophon against them (vi. 186), and a war with the Phrygians, in which Priam fought on the side of the Phrygians (iii. 189). Strabo (xil. 552) notes the inconsistency of this story with the existence of Penthesileia and her companions. According to the later epic, the "Amphione" of Ariknos, she came to Troy after the death of Hector to aid the forces of Priam. Achilles inflicted a mortal wound on Penthesileia, only to be touched with love at her beauty as he lay dying in his arms.

The story of Herakles and Hippolyte is a later myth about an earlier generation. It was one of the twelve labours of Herakles to fetch the girdle of Hippolyte, queen of the Amazons, for Admete, Eurythymus' daughter. According to Apollodorus (Bibl. ii. 5. 9. 7), the queen fell in love with Herakles, and gave him the girdle; but as he went to board his ship the other Amazons, invited by Hera, attacked him. Suspecting treachery on the part of Hippolyte, Herakles shot her with an arrow and sailed away. In the more common form of the story, sometimes connected with the Argonautic expedition, Herakles made war on the Amazons, overthrew them in battle, and triumphantly carried off the girdle (Diod. Sic. iv. 16; Apoll. Rhod. ii. 967).

A somewhat similar story is told of Theseus and Antiope, namely, that Theseus made an expedition against the Amazons, and either by love or by force Antiope to be his bride. The importance of this expedition was that it furnished the occasion for the expedition of the Amazons against Athens. As the story is told by Plutarch (Thes. 27), its form is determined by several Amazon stories in Athens, by the position of the Areopagus in front of the Acropolis, and by a place called Horkomosion, where a treaty of peace was made. In this war Antiope met her death, and was buried by the Ionian gate of Athens. The story was significant in that it furnished Argonauts and artists with another instance of the superiority of civilization to barbarism, as in the battle of gods and giants in the war between Athens and Persia.

Locality.—On the north coast of Asia Minor and well towards the east, the town of Themis-kyra by the river Thermódon was the generally accepted seat of the Amazons. Rarely were they located farther to the north or north-east. It should be observed, however, that although there are no bands of Amazons or a band of Amazons finds a place in the local legends of many very cities on the north coast and the west coast of Asia Minor. 'Herakles turned over to the Amazons the region between Pitane and Mykale' (Herod. Pont. frag. 94); and such cities as Smyrna and Ephesus are the main local centres of Amazon legend. In Greece proper, on the other hand, there are graves of Amazons and places which they visited, but they are present only as visitors from outside.

Expulsion.—Any effort to understand the Amazons must start from these facts. (1) The Amazons were warriors, armed with weapons such as the Greeks associated with eastern Asia Minor and regions still farther to the east and north. They were closely associated with the 'Tiriacian' god Ares; he was their reputed father, they sacrificed horses to him, and their camp at Athens was on the hill of Ares. (2) They were also connected with Artemis, especially the Ephesian Artemis. It was the cult of this goddess which was, to the Thracian Phrygians, connected with the Amazons, and that here they performed war dances and choral dances in honour of the goddess (Paus. vii. 2. 7; Kullim. Hymn to Artemis, 237 f.; cf. Il. ii. 814). (3) The legends of the Amazons are in the main connected with the coast towns on the north and west of Asia Minor.

K. O. Müller suggested (Dorier, i. 390 f.) that the conception arose from the large number of hierodoulous connected with the worship of Artemis at Ephesus and elsewhere in Asia Minor. It is more probable that the presence of women with these peculiar weapons in the armies of northern and eastern races started the legends, that incursions of these races into Asia Minor determined the locality with which they were associated, and that war dances performed by women in the worship of Ares, Artemis, etc., aided the growth of the legends. To bring the Amazons into conflict with Bellerophon, Achilles, Herakles, and Theseus was the natural means of emphasizing the prowess of feminine warriors.

Literature.—Bergmann, Die Amazonen in 'Historia und Geschichtc, Berl., 1888; Rulhelm, Die Amazonen in der alten Literatur und Kunst, Stuttgart, 1875.

AMBER.—An ancient, now ruinous, city in the native State of Jaipur in Rajputana. Formerly it was held by the non-Aryan Minas, from whom the Kachwahas sept of Rájpúts conquered it in 1057 A.D. It then became their capital, and is considered to be until 1729, when Jai Singh II. founded the present city of Jaipur, and Amber became deserted. It was in olden days much frequented by pilgrims from all parts of India, but its glory has departed. At a temple of Káli within the city is daily sacrificed, a substitute, as is believed, for the human victim offered in former times to the goddess.

W. CROOKE.

AMBITION.—'Ambition,' derived from Lat. ambítio, the 'going round' of a candidate for office canvassing for votes, signifies primarily a desire for a position of power or dignity; thence a desire for eminence of any kind, and so, by an easy but well-defined and recognized extension (in the absence of any other word to cover the idea), the will to attain, obtain, or perform anything regarded by the user of the word as high or difficult. The same term thus becomes applicable to Jaques' 'ambition for a motley coat,' and the desire of Milton to write something which the aftertimes would not wish to forget. In other words, almost any desire may in certain circumstances become our 'ambition' in this third sense, which may, therefore, be dismissed at once—especially as in default of a qualifying term one of the first two is always intended. The present article will accordingly be confined to these. The motive in question holds a unique position for two reasons: its moral position is more uncertain in general estimation than that of any other, and it is reported by tradition to have been the first sin. These points will be taken in order.

1. Bacon, in his essay, 'Of Ambition,' says of it that it 'is like choler, which is an humour that maketh men active, earnest, full of alacrity, and stirring, if it be not stopped; but if it be stopped and cannot have his way, it becomes obdurate, and thereby malignant and venomous.' Spinosa (who defines it, however, as an 'excessive love of glory') says: 'Ambition is a Desire by which all the Affections are nourished and strengthened; and on that occasion that particular Affection hardly be overcome. For so long as a man is influenced by any Desire at all, he is inevitably influenced by this' (Ethics, pt. iii. Appendix). The opinions of these high authorities imply no particular censure. A reference to any Dictionary of Quotations, however, will reveal it indeed as
AMBITION

'divine' and 'accursed,' 'blind' and 'eagle-eyed,' 'base' and 'sublime'; but for one epithet of honour ten will be found of blame. At the same time, this proportion does not appear accurately to represent the average man's feeling towards it, which may be described as two parts of fear and one of secret admiration. Now, amid this clash of opinion, it is clear that ambition is in itself non-moral; for power is never, in the last analysis, desired for itself, but always from an ulterior motive, namely, for the opportunities it affords, whether for enhanced activity, for the exercise of faculty and the furtherance of a desired end, or the gratification of vanity. Logically, therefore, it should be judged by the motive behind; and, in fact, the soundest defence of it may be based upon this consideration. But such a plea avails little against the prosecutor, whose main, if often unrealized, ground of attack (apart from religion) rests upon the means by which the ambitious are tempted to gain their ends.

The reasons for the conflicting views entertained on the part of such men as may be assumed up thus, the attitude of religion being reserved for separate treatment. From the point of view of society, it is natural and right that public opinion should be directed to check rather than to encourage ambition. But it is not so much the danger of an excess than that of a deficient supply. Morally, such a desire can in no case be generally considered virtuous, in view of the obvious personal advantages which power, from whatever motive sought, confers upon the possessor. To many philosophers, again, it is especially anathema as a chief enemy of that peace of mind and independence of external which is the Nirvana of their creed. These reasons apply to the desire for power in any degree of development; but what is after all perhaps the chief cause of the invincible sense attaching to the word 'ambition' lies in a subtle implication which modifies the meaning, without equally restricting the use, of the term itself. In the words of Aristotle (Ethics, ii. 7), 'There is something in it as a due and proper desire for distinction; the desire may also be excessive or defective: the man who is excessive in this desire is called "ambitious," the man who is deficient, "unambitious"; for the middle state there is no name.'

The verdict of religion upon worldly self-aggrandizement could hardly be doubtful, and in all countries it is unanimous in condemnation. For Greek religions thought it was the direct forerunner of δρόμος, which is visited upon the children to the third and fourth generation; in Buddhism it is a rule of māyā, entangling the soul in the world of being, and for Confucius it is an enemy of peace; to the Muhammadan it is a choosing of this present life and its vanities, for which there is nothing in the next world but the fire. In the Bible, it is, for itself does not occur, and in the OT hardly even the idea. The Jewish historians confined themselves practically to the acts of kings, lesser men being introduced only when they came into contact or conflict with the king. But a violent change in the kingship of a people essentially and always theocratic, in the view of the writers, was ascribed as a rule to the direct intervention of God using a man as His instrument; and any private motives of such an instrument were disregarded. Thus it is not unlikely that such men as the Jewish historians regarded ambitious, but they are set in action by the word of a prophet. The Prophets again scourge the sins of the people, of which ambition was not one. The absence of any reference to it in the Wisdom literature' of Solomon is noteworthy.

Even Ecclesiastes, in considering the vanity of human wishes, travels round the idea rather than refers to it directly, in a way which suggests that power as a direct object of desire was unfamilial to the author. The view of the NT, so far as expressed, is uncompromising. In the Christian community there is no room for ambition. The 'Kingdom of Heaven,' or Church of Christ, is for the poor in spirit (Mt 5:3); 'Who- 

soever would become great among you shall be your servant' (v27): 'Set not your mind on high things, but condescend to things that are lowly' (Ro 12:3). Quotations need not be multiplied: the humility and renunciation of the things of the flesh, which are the badge of the followers of Christ, leave desire for distinction and inseparable from ambition. What (if any) modifications of this rigorous doctrine may be involved in or justified by the transition of Christ's Church from a limited and purely religious community to the creed of nations, it is not within the province of this article to discuss.

2. It is a current belief that ambition was the first sin which disturbed the harmony of heaven. 'Cromwell, I charge thee, fling away ambition: by that sin fell the angels' (Henry VIII. iii. ii. 440). The origin of this tradition, which has no authority in the Bible, is obscure; but it may perhaps be traced to the old identification of the 'king of Tyre' in Ezek 28 with Satan. ("Thine heart is lifted up, and thou hast said, I am a god, I sit in the seat of God" [v7].) 'Less affluent than the infirmity of a noble mind. For, whatever its own demerits, it is generally found in company with the qualities most admired in Western civilization — ability and energy. It implies also a certain length and largeness of view, in themselves admirable, and in many cases can only with difficulty be distinguished from its twin-vice — aspiration. Finally, it is a motive with which, though perhaps faulty, the world, in the present condition of religion, could ill afford to dispense; for positions of power are after all the arena to be given to those who not only desire, but also in some degree at least deserve, them, and the noble actions, prompted either wholly or in part by ambition, fill not a few of the most distinguished pages in history. Licet ipse visum sit, tamem frequenter causa virtutem est' (Quintilian).
AMBROSE OF MILAN

I. Life. - Ambrose was born, probably at Trèves, the seat of government of his father, the Frankish prefect of the Gauls. The family was noble; his father was one of the four highest officers in the empire; his elder brother Satyrus became the governor of a province, name unknown (de excessu Saturi, i. 49, 58). The family was also Christian in sympathy; Ambrose's great-aunt Sotheria had suffered as a martyr in the persecution of Diocletian (de Virgini. iii. 7; Exort. Virg. xii. 82). The year of Ambrose's birth is a little uncertain. Either 332 or 340 A.D. will suit the data given in his letters (Ep. lix. 3, 4; see PL xiv. 68, for a full discussion). But probably 340 best meets all the circumstances. On the death of his father, his mother removed with her family to Rome (352), and there Ambrose received the education. Of Latin authors, Vergil was his favourite; he was also well read in Greek literature. In the doctrines of Christianity he was instructed by Simplicianus, whom he loved as a father (Ep. xxvii.; not to be confused with the Simplicianus to whom succeeded him). Adopting the law as a profession, he rose very rapidly. When he was but little over 30 (372), Valentinian I., on the advice of the Christian Probus, the prefect of Italy, appointed him 'consul' of Liguria and Aemilia. The Popes had already voiced the lawful authority and integrity. In 374 both Dionysius the Catholic and Aurelius the Arian bishop of Facto died. Both parties strove hard to secure the election of the successor, for at that time Milan was perhaps the first city in Europe in population and importance. Ambrose, in whose province it lay, went to preside at the election, and to suppress the customary tumults. But while the consul was addressing the people in the church on the duty of voting oratorically, a voice was heard proclaiming, 'Ambrose is bishop.' The cry, according to Paulinus, first started by a child, was taken up by Arians and Catholics. In spite of the protests of Ambrose — on which Paulinus entered (Ep. 280) — in his usual language about truth and to the good name of his hero, judged, that is, by modern ideas — the sanction of Valentinian was given to this irregular election, which won the approval also of the bishops of East and West (Basil., Ep. iv.; for Ambrose's statements about the election see de Offic. i. 1, 4, Ep. lxxiii. 65, de Pontit. ii. 8, 72. Ambrose says that Valentinian promised him 'quietem futurum,' Ep. xxii. 7). Ambrose was as yet only a catechumen; he had shrunk from baptism under the common form of asceticism, which led him to postpone the same until near death — the dread lest he should lose the baptismal grace. Within eight days of his baptism he was consecrated bishop (Dec. 7, 374, Migne, xiv. 71). His first step was to resign his property to the poor and the Church. The administration of his household was handed over to Satyrus (379), who left his province that he might serve his younger brother (de excessu Saturi. i. 201). Ambrose's life as a bishop was one of incessant work. His moments of leisure were filled with self-culture in theology, which, however, for the most part he learned by teaching (de Offic. i. 1, 4). Throughout his diocese Arianism almost ceased to exist, largely through his constant preaching and the care he bestowed on the preparation of catechumens. The Arians, thus bitterly disappointed in the bishop they had elected, found an opportunity for attacking him in his sale of Church plate to provide funds for the release of Roman prisoners captured in Illyricum and Thrace by the Goths, after their great victory at Adrianople (Aug. 9, 378). Ambrose's reply was characteristic: 'Which did they consider to be the more valuable, church plate or living souls? (de Offic. ii. c. 28.)

Of his life at this time Augustine has given us a delightful picture (Conf. vii. 3, Ep. xxvii. 17). He was surrounded by a band of movie persons who kept me from him. He was the servant of their infirmities, and, when they spared him a few minutes for prayer, he would implore the food necessary, and nourished his soul with reading... Often when I entered his retreat I found him reading softly to himself. I would sit down, and, after waiting a while, I would ask him for a long time in silence (for who would have dared to disturb attention so profound?), I would withdraw, fearing to disturb him if I troubled him in the short time he rescued to himself out of the tumult of his multifarious business.'

In his opposition to the Arians, Ambrose did not limit his efforts to his own diocese. At Sirmium in 380, in spite of the threats of Aviana Justinus, the Arian widow of Valentinian I. (Nov. 17, 375), Ambrose succeeded in carrying the election of the Catholic Anemius to the see. In 381 the Gracian — who became Emperor at 378-381 lived chiefly at Milan, and followed in most things the advice of Ambrose, whom he called his parens, and who composed for his instruction (see de Fide. i. 8). His treatise against Arianism, entitled de masse (378) — was inserted in the synodal council, which met in September at Aquileia. Through the influence of Ambrose, who presided, the council deposed two more Arian bishops, Palladius and Secundinus [see the Gesta Conc. Ag. in i. 131, after Ambrose Op. cit. (Migne. xvi. 918), or, more fully, Mansi, iii. 599 ff., and C. Ep. i. ix. xii.]. If in the following year he attended the abortive council at Rome, he seems to have taken no part in its deliberations. (For this somewhat uncertain council, see Mansi, iii. 599 ff.)

The murder of Gratian, who had estranged the soldiers by foolish and unpatriotic conduct, at Lyons (Aug. 25, 385) by the agents of the British usurper Maximus, led to the appeal of the young son Valentinian II., to persuade Ambrose to journey to Trèves as her ambassador (de Obitu Valentin. 28). As the result of his visit (winter, 383), or rather of the delays caused thereby, and the knowledge of new hostilities, if necessary, the forces of Theodosius, Italy seems to have been secured for Valentinian II., Spain, however, falling to the usurper (Ep. xxiv. 6, 7).

On his return to Milan, Ambrose came into collision with Q. Aurelius Symmachus, the prefect of Rome, Pontifex Maximus, Prince of Senators, the leader in the Senate of the conservative and pagan majority (on this question of the majority, Ambrose, Ep. xvii. 10, 11, is untrustworthy). In 384, Symmachus ad sought from Valentinian II. to construe to the Senate of the ancient golden statue and altar of Victory, whose removal had been ordered by Gratian (382). This Relatio Symmaci (Op. Sym., ed. Seeck, x. 3, in M.G.H.,) was as Migne, PL xvi. 966, or defence of paganism, followed the usual line of argument of the times. Symmachus traced the greatness of Rome to the help of the gods; her decline and recent disasters, including a famine in the previous year, to the new credence. He eloquently appealed to the charm of old traditions and customs. Ambrose's answer (Ep. xvii. 6, 7) was a stormy appeal to Valentinian; Ep. xviiii. more matured; cf. Ep. ivii. 3, not altogether happy in its claim that Rome owed her greatness not to her religion, but to her own intrinsic energy—a weak concession to secularism. For
the rest, he dwells on paganism as the world’s childhood, Christianity as the evolutionary and progressive factor and result. The request of Symmachus was refused, as also were three other similar requests [332 to Gratian, 388 or 391 to Theodosius, 392 to Valentinian ii. (Amb. ep. lvii. i)] under the threat of Ambrose’s and the denunciation of the heretical orthodoxy of Theodosius. To Theodosius we owe the final triumph of Christianity by the series of his edicts which prohibited pagan rites, culminating, so far as sacrifices were concerned, in the deadly nulius omnino of Nov. 8, 388 (Amb. de obitu Theod. i. 24; and for the penance of Theodosius, Amb. de obitu Theod. 34]. The relations of Theodosius and Ambrose were.

Theodosius took up his abode at Milan. Emperor and bishop were soon in conflict. The first struggle is of some moment in the history of the growth of Christianity in Mesopotamia had burnt down a conventicle of the Valentinians and a Jewish synagogue. Theodosius ordered the bishop of Callinicum to rebuild the same at his own expense. Ambrose protested in a long letter written at Aquileia (ep. xii.); he seemed to glory in the act; for the Church to rebuild the synagogue would be a triumph for the enemies of Christ. On his appealing to Theodosius in a verbose and rambling sermon at Milan (ep. xii.), the emperor yielded. ‘Had he not done so, Ambrose had permitted nothing, not even the elements’ (ep. xii. 28). In such incidents as these we see the beginnings of the claims which culminated in Hildebrand and Innocent iii. Of almost equal importance is it to notice the conflict which the Valentinians with the Athanasian view in a chapel as if it were no better than a heathen temple (ep. xii. 16), and considers the death of Maximus to be the Divine retribution for his ordering in 387 the rebuilding of a synagogue in Rome (ep. xii. 22).

Whatever may be thought of his arrogance and intolerance in this matter of Callinicum, in his next conflict with Theodosius Ambrose was grandly in the right. The story is too familiar to need much detail. Angered by the murder of Botherich, the barbarian governor of Ilyria, by the people of Thessalonica, Theodosius gave orders, retracted all too late, that the whole populace should be put to death. The gates of the circus were closed; for three hours the massacre went on of those within (April 20, 390). According to Theodoret, 7000 perished. On learning the news, Ambrose wrote to Theodosius a noble and tender letter exhorting him to repentance (ep. li.). What answer Theodosius returned we know not; but on presenting himself at Milan at the door of the church (S. Ambrogio), Ambrose, rebuked him for his sin, and bade him depart until he had given proofs of his penitence. For eight months, if we may trust Theodoret, Theodosius abstained himself from all worship (Theod. v. 18). He felt his exclusion bitterly. ‘The Church of God,’ he said to Rufinus his minister, ‘is open to slaves and beggars. To me it is closed, and with it the gates of heaven.’ The intercession of Rufinus was in vain; so Theodosius laid aside his pride, and, probably on this his last visit to Rome, he approached the emperor solemnly depositing under the altar of the new basilica then awaiting dedication, which Justina had claimed, and which Ambrose now called by their name (ep. xxii.; August. Civ. Dei, xxii. 8, conf. ix. 7; Paulin. Vita, c. 14, 15; for Ambrose’s view of the miracles, ep. xxii. 17-20).

Realizing its hopelessness, Justina abandoned the struggle, the more readily that she needed the bishop’s help. In 397 she requested Ambrose again to act as her ambassador with Maximus (de obitu Valentinii 29). She promised a second visit to Trèves that Ambrose refused to communicate with the followers of the Spanish bishops Ithacius and Idatius, because they had perverted Maximus to sentence and torture to death Priscillian and certain of his followers as heretics (see Prisclianism), and also because they held communion with Maximus, the slayer of Gratian. We see the same resoluteness in his refusal to give Maximus at the first interview the customary kiss of peace, and in his demand for the body of Gratian. We need not wonder that his embassy was unsuccessful, and that Ambrose was ‘himself thrust out’ (Trèves ep. xxiv; and for Ithacius, etc., cf. ep. xxvi. 3). Ambrose crossed the Alps (Aug. 387), and for a short time occupied Milan itself. During this usurpation Ambrose withdrew from the city, while the death at that time (Bury’s Gibbon. iii. 177 n.) of the exiled Justina rid the bishop of all further trouble from the Arians. As regards Ithacius, it may be added that Ambrose presided in the spring of 390 over a council of bishops from Gaul and Northern Italy at Milan which approved of his excommunication.

The relations of Theodosius and Ambrose were...
henceforth undisturbed. During the usurpation of Eugenius (392–394), whom Arbogast the Frank, after strangling Valentinian ii. at Vienna (May 15, 392), had elevated from the professor’s chair to the purple, Ambrose retired to Bologna and Florence. He was there so greatly revered and stood so loyally by Theodosius, in spite of all the friendly overtures of Eugenius. In Eugenius he rightly detected the danger of the recrudescence of paganism, as part of his political programme (Ep. i. v.; Paulin. Vita, 28, 31). No one, therefore, rejoiced more than Ambrose in the death of St. Augustin, over the puppet emperor at Hippodamia (or Wibpach b), Sept. 6, 394 (Ep. lxi. and lvi.; Enarr. in Psal. xxxvi. 22; Paulin. Vita, 25–34; August. Civ. Dei, v. 26), though he was careful to intercede with Theodosius not to punish the people in general. A few months later Theodosius died at Milan (Jan. 17, 395), in his last hours sending for Ambrose and commending his sons Arcadius and Honorius to his care (Amb. de Obiit. Theod. 39). It was Ambrose also who in the presence of Honorius pronounced over the dead Theodosius the funeral oration. The death of Ambrose two years later (Good Friday, April 4, 397) was more than the passing of a great bishop: ‘It is a death-blow for Italy,’ exclaimed the valiant barbarian decurion in Munich (Paulin. Vita, 40). Ambrose was buried under the altar of the great church which he had built and consecrated to Protaisius and Gervasius (see supra), but which now bears his own name (S. Ambrogio).

On his name — The reputation of Ambrose must always rest upon his courage and skill as a practical administrator of the Church in most troublous times. In spite of sacratical claims which later were to bear much fruit, few would grudge him the tributes of their admiration (Lambeth Lectures, i. 76). He was of the loftiest qualities of the Roman senator with the goodness and self-denial of the true Christian. Though his methods may not always commend themselves to our modern notions, in his results Ambrose was usually in the right. He saved Italy from Arianism, and restored her to the faith. Even the growth of sacratical claims was not without its services. In the approaching barbarian deluge it was no small gain to civilisation that Ambrose had at his disposal a power which should not be despised. This is one side of his famous saying at the Council of Aquileia, ‘Sacerdotes de laiciis judicare debent, non laici de sacerdotibus’ (Gesta Conc. Aquil. 51; see supra, p. 273). The other side of this development is the deeds and theories of Hildebrand.

By his introduction of antiphonal singing (on the details of which see Groves’ Dict. Music, new ed. a.v. ‘Antiphony, Ambrosian, Gregorian’), Ambrose enriched the Western Church for ever. His own hymns, though repeatedly imitated in later days (see the full list of hymns falsely attributed to Ambrose, Migne, PL xlvii. 1171–1222), are few in number, according to the Benedictine editors now most generally adopted (Ambros. in Migne, PL xxxvi. 1410), but of great interest and value. Their construction is uniform: 8 strophes in Iambic acatalectic dimeter (υυ–υυ–υυ–υυ–υυ–υυ–υυ–υυ–υυ–υυ–υυ). The ascription to him of the Te Deum as composed at the baptism of St. Augustine is a legend of late growth. His morning hymn, Aetera verum conditor, Splendor paternae gloriae (‘O Jesu, Lord of heavenly grace’), his evening hymn, Deus creator omnium, his Christmas hymn, Veni redemptor gentium, and his hymn O lux beata Trinitas, are among the most important contributions of the Church to modern sung devotion (Trench, Sacred Lat. Poetry, 80–86; Julian, Dict. Hymn. 56 and a.v.).

The reputation of Ambrose as a writer and thinker must not be rated high, in spite of his being regarded as one of the four Latin Fathers of the Church. Gibbon is correct; ‘Ambrose could act better than he could write.’ His compositions are . . . without the spirit of Tertullian, the copious elegance of Lactantius, the lively wit of Jerome, or the grave energy of Augustine’ (iii. 175 n.). As a thinker he is completely overshadowed by his great convert St. Augustine, whose baptism in S. Ambrogio, at his hands, is one of the great spiritual events of the world (April 25, 387). But his influence was strongly exerted in certain directions, some of which we may deplore, all of which had later developments. His extravagant regard for relics (Gervasius, supra), and his enthusiasm for virginity (see especially the three books de Virginitate addressed to his sister Marcellina) and asceticism were signs of the times and indications of the future. His theory of the Sacraments (de Sacramentis libri sex) tended to the emphasis of materialistic conceptions; for instance, he praises his brother Satyrus for tying a portion of the primary eucharist round his neck when shipwrecked (Amb. de excessu Satyri, i. 43, 46). He deduces the necessity of daily communion from the clause of the Lord’s Prayer (tiernoios; supersubstantialis, Vulg. quodiansus [de Sacr. vi. 21], a view much decried by St. Augustin; see supra, p. 168). His sermons are remarkable for their manliness and sober practicality, enforced at times by felicitous eloquence. His letters are more valuable as materials for the historian than because of any charm or personal revelation. In his exegetic writings, as we might expect from his lack of special study, contain little that is original, and are excessively allegorical after the fashion introduced by Origen (cf. August. Conf. Epist. 33). But his combined devotion to his church, and his ability to enrich Latin theology with many quotations from the Eastern Fathers, e.g. Basil and Gregory of Nyssa. Jerome, in fact, by reason of his dependence on these sources, especially Basil, compares him to a crow decked out in alien feathers (Rufinus, Instruct. ii.). We see this dependence in his de Bono Mortis (The Blessing of Death), written about 387, in which his exceedingly mild view of the future punishment of the wicked is plainly a tyrannical attempt to make it more serious, ‘he writes, ‘to live in sin than to die in sin’ (op. cit. 29). Nevertheless he ‘does not deny that there are punishments after death’ (ib. 33).

As a moral teacher Ambrose is seen at his best. His de Officis Ministerum et Sacerdotum, Ordinis of Cicerio, is an attempt to establish a Christian ethic on the basis of the old philosophic classification of four cardinal virtues (virtutes principales)—prudentia or sapientia, justitia, fortitudo, and temperantia (i.e. i. 24). Of these he identifies prudentia with a man’s relation to God (‘pietas in Deum’; de Offic. i. 27). The classification is essentially faulty, as it leaves no place for humility, a grace unrecognized by pagan writers, and which Ambrose, who had no difficulty in bringing it (de Offic. ii. 27), speaks of as an immortal to the Stoics, but rather the means to it. Ambrose further follows the Stoics in distinguishing between perfect and imperfect duties (‘officium medium anti perfectum’; concilium evangelicum and praecepta de Offic. l. 11, 168; iii. 21, 443, a doctrine later developed into the mediaval ‘works of supererogation.’) His exegesis of the Sermon on the Mount is literal. The taking of interest is unconditionally rejected; the Christian should not even defend himself against those who attack him (Paulin. Vit. 169), though, remembering his Old Testament, Jesus did not go so far as absolutely to condemn the soldier (i.e. L. 40). As was usual in the early Church, he disapproves of capital punishment, though he shows that he was somewhat embarrassed by the position
in the matter of Christian judges (Ep. xxv.). We
see his leanings to monasticism in his declaration
that charity is thus the partial adjustment of a wrong,
and, as such, able to cancel sin (de Elia et jejuniosis,
c. 20, from Tobit 12; Sermo de eleemosynae, 30, 31).
We see the new note of humanity in his declara-
tion that strangers must not be expelled from a
city in time of famine (de Offic. iii. 7).

LITURGISTS.—A. For the life of Ambrose we are dependent
on the materials to be found in his own works (first arranged
by Baronius) and on the Prol. of Paulinus, his secretary. This work,
developed from his sermons, is most unsatisfactory, and full of
abundant, predigions (with which of. the contemporary Sulpiac.
Severus, Vitae S. Ambrosii, ed. Migne, CSEL, cs. 1 § 97; 7, 32;
Dial. I. 56, 56, 1 of 5, § 63) It will be found in Migne, PL
xv. 27-46, or ed. Benz. App. An anonymous life in Greek
(Vita C. Ambrosii, ed. Martini, 51, PP. 110-117) is well
enlightened from the Augustinian, etc., are indicated in the text.

B. The chief editions of the works of Ambrose, including
a great many that are spurious, are: (1) the editions of Erasmius,
esp. the Bazel ed. of Froben in 1527; (2) the Roman ed. in 6 vols.
1585-1587; (3) the Benedictine ed. of de Frisches and de Nourry,
Paris, 1608-1609; (4) Migne, PL xiv.-xvii. (the last vol. most
spurious; Migne has excellent notes); (5) the new ed. in pro-
gress, by PI. Joh. Hafniense and others, ed. by Ab. Martini,
unfortunately as yet [1807] not printed); (6) the ed. of Baulenn (Milan, 1875).

C. Of modern works, mention may be made of Th. Fohrer,
Ambrose, Eine Studie (1881); of G. Friedmann, Studia Ambrosiana
(1888); of R. Pruner, Die Theol. d. Amb. (1882); of Deutsch. Des
Amb. Lehrte von d. Sünde und Sündenitigungn (1887); of P. Bier, Der
Einfluß der Geschichte auf die Bibel bei Amb. (1888).

For the historic setting, Gibbon, ed. Bury; and Hodgskin, Italy
and her Invaders (1886, vol. I), are indispensable.

H. B. WORKMAN.

AMERICA (Ethnology, Religion, and Ethics*).

—Although many of the ethnical questions presented
by the American Indians, as some now propose to
be called the American aborigines, wrongly named 'Indians' by the Spanish discoverers,
still await solution, the more fundamental problems affecting their origin and cultural
development may be regarded as finally settled.

Little is now heard of the 'Asiatic school,' which
debated their origins and all their works from
the Eastern Hemisphere in comparatively recent times,
that is, when the inhabitants of the Old World—Egyptians, Babylonians, Malays, Hindus,
Chinese, Japanese—were already highly specialized;
and that the mind and character, religious and social systems,
failed to discover any close contact with those of the Old World, but pointed rather to
development out of the Pithing to forms. In other cases, of course, the influences except the common germ of all human activities.
Direct contact or importation might, for instance, be shown by the survival of some language clearly traceable to an Eastern source; or some old buildings obviously constructed on
Egyptian, Chinese, or other foreign models; or some inscriptions on such buildings as might be
interpreted by the aid of some Asiatic or European script; or some sailing craft like the Greek trireme,
the Chinese junk, or Malay prau, or even the Polynesi-
can canoes, or some exotic plants and products as wheat, barley, rice, silk, iron; or
domestic animals such as the ox, goat, sheep, pig; or
poultry; things which, not being indigenous, might supply an argument at least for later inter-
ference. Of course all this evidence must be gathered.

The list might be prolonged indefinitely without
considering any cultural links between the two
hemispheres beyond such as may be traced to the
Stone Ages, or to the common psychic unity of
mankind. Mention is made of the oil-lamp, which,
however, is confined to the Eskimo fringe, and was
no doubt borrowed from the early Norse settlers
in Greenland. There are also the Mexican pyra-
maids, which have been likened to those of Memphis
by archaeologists who overlook the fundamentally
difficult that the Eskimos ceased to build pyramids some 3000 years
before the Mexican teocalli were raised by the
Toltecs. Lastly, recourse is had to the Aztec and
Maya calendric systems, although they proved, not
Oriental borrowings, as Humboldt wrongly thought,
but normal local developments, and are totally
different from those of the Eastern astronomers.

Mainly on these grounds, the late J. W. Powell
finally rejected the Asiatic theory, holding that
there is no evidence that any of the native arts
were introduced from the East; that stone imple-
ments are found in the Pleistocene deposits every-
where throughout America; that the industrial arts of America were born in America; that the
forms of government, languages, mythical and
religious notions of the New World are not totally
different from those of the Eastern astronomers.

Mainly on these grounds, the late J. W. Powell
finally rejected the Asiatic theory, holding that
there is no evidence that any of the native arts
were introduced from the East; that stone imple-
ments are found in the Pleistocene deposits every-
where throughout America; that the industrial arts of America were born in America; that the
forms of government, languages, mythical and
religious notions of the New World are not totally
different from those of the Eastern astronomers.

Recently exploration, especially in South America,
supports the view that this 'general homogeneity'
is not primordial, but the result of a somewhat
imperfect fusion of two original elements—long-
headed Europeans and round-headed Asians—
which reached the New World in pre- and inter-
glacial times by now vanished or broken land
connexions. The Europeans, who most probably came
first by the Faroe-Iceland-Greenland route avail-
able in the east and stationing in the eastern side of the continent, and ranged in
remote times from the Eskimo domain to the ex-
treme south, where they are still represented by the
Botocudos, Fuegians, and some other long-headed
isolated groups. Thus the veteran palæo-ethno-
ologist, G. de Mortillet, suggests that the Palæolithic
men, moving with the reindeer from Gaul north-
wards, passed by the then existing land bridge
to America, where they became the ancestors of the
Eskimos. This view is anticipated by Topin-
medard on anatomical grounds, and now confirmed for
South America by A. Nehring and F. P. Outes.
Nehring produces a long-headed skull from a
Brazilian shell-mound at Santos, which presents
characters like those both of the European Nean-
hthal and of the still older Japanese Pithecan-
1896, p. 710). And in Patagonia, Outes describes
eight undoubted Palæolithic stations and two Pleis-
tocene types,—a long-headed arriving from the
North-east and a short-headed from the North-
west (Les Edaines et la pedra en Fotogamia, Buenos
Aires, 1906, section ii.).

The two streams of migration—Asiatic short-
headed (North-west) and European long-headed (North-
west)—are thus seen to confluence in the extreme
south as early as the Old Stone Age; that is, prior
to any marked somatic and cultural specializations
in the Eastern Hemisphere. The Asians, following
the still bridged Bering route, appear to have
arrived a little later, but in larger bodies, which
explains the predominance of round heads along
the Pacific seaboard from Alaska to Chili. But
in such eras were inevitable, and the result is
that the Amerinds as a whole are a composite
race, in which the Mongolic (Asiatic) characters
are perhaps more marked than the Caucasian (Eu-
pean). Thus the complexion is reddish-brown,
coarse, or yellow, but not white; while the
hair is uniformly black, thick, often very long
and round in section, like that of all Mongols.
The high cheek-bones, too, point to Mongol descent,
as does also the low stature—5 feet and under to
5 feet 6 inches—in the west (Thinikets, Eskimos,
Haidas, Puelbos, Aztecs, Peruvians, Aymaras,
Araucnians). On the other hand, the large con-
vex or aquiline nose; the straight though rather
small eyes, never oblique; the tall stature (6 feet
6 inches to 8 feet and upwards), especially of the
Frisian Redkins, the Brazilian Bororos, and the
Patagonians, as well as a curious Caucasian expres-
sion often noticed even amongst the Amazonian
aborigines, bespeak a European origin, more par-
ticularly for the eastern and central groups.
The consensus of the generalizations which have
previously been propounded by students of the
Civilization of the American Indian, are showing
more and more that they must be modified, if not
entirely discarded, as the new facts which are
being brought to light appear to indicate that
the first wave of immigration was by the seafaring
people, who followed the Bering route, and not
by the smaller body of land builders who
initiated the meandering route of the Mississippi
valley. And the new facts also point to the
arrival of a race that was clearly a mongrel, with
European, African and Asiatic elements inter-
mixed. This current of immigration likely came
from the Asiatic Mediterranean, and reached the
Americas in two large groups, perhaps with a
third small group in between, who migrated by
the Bering strait route.

But before we enter into the history of the
languages, it may be well to point out that the
first great division of mankind is that between
the European and the Mongolic races, and that
the history of the latter is that of the conquerors,
who, in the course of time, have subdued the
inhabitants of the world. The European race is
the most advanced, and has the most complex
religion, the most highly developed sciences,
and the most refined arts. The European
languages are the most highly developed, and
have the most refined and refined forms.

However, the Mongolic languages are the
most highly developed, and have the most refined
and refined forms. The European languages are
the most highly developed, and have the most refined
and refined forms.

But before we enter into the history of the
languages, it may be well to point out that the
first great division of mankind is that between
the European and the Mongolic races, and that
the history of the latter is that of the conquerors,
who, in the course of time, have subdued the
inhabitants of the world. The European race is
the most advanced, and has the most complex
religion, the most highly developed sciences,
and the most refined arts. The European
languages are the most highly developed, and
have the most refined and refined forms.

to Panama (Familias Linguisticas de Mexico, etc., Museo Nacional, 1902). The imperfectly explored South American section has already yielded over fifty stocks, of which the more important are the Quichua-Aymaran, the Tupi-Guaranian, the Cariban, Arawakan, Gesean, and Araucan. But some of these are lumped together in large groups, such as Algonquian and Purusian, the classification of which will, on more careful analysis, probably be found to comprise several stocks (Keane, Central and South America, 1901, vol. i. ch. ii.).

So uniform are the physical characters, that system of Algonquian we had something to do with the classification of the Amerind races on strictly anthropological data. Hence all current classifications are mainly linguistic, and make no claim to scientific accuracy. Thus Sir E. im Thurn declares that for Guiana, where "it is not very easy to describe the distinguishing physical characters," and where "there are no very great differences other than those of language," this factor "must be adopted as the base of classification" (Among the Indians of Guiana, 1883, p. 181). At the same time he adds that "the physical descent, which is often even informing, as we see in the northern fringe, where, owing to the astonishing tenacity with which the Eskimos cling to their highly poly-synthetic language, their pre-historic migrations may still be easily followed from Greenland to Labrador round the shores of the frozen ocean to Alaska, and even across the Bering waters to the opposite Asiatic mainland. So with the Algonquians, whose cradle is shown to lie about the Hudson Bay lands, where Cree, the most archaic of all Algonquian tongues, still survives."

Perhaps even more striking is the case of the Siouans (Dakotans), hitherto supposed to have been originally located in the prairie region west of the Mississippi, but now proved to have migrated thither from the Atlantic slope of the Alleghany uplands, where the Catawbas, Tutelo, Woccon, and other Virginian tribes still spoke highly archaic forms of Siouan speech within the memory of their people. So also the Niquirans, Pipils, and others of Guatemala and Nicaragua, who are known to be of Nahuan stock, not from their somatic characteristics, but solely from the corrupt Aztec language which they have always spoken.

As the tribe is thus identified only or mainly by its language, these also have become important in the distribution of the Amerind tongues in their several areas. It is noteworthy that the great majority of Powell's families, about forty altogether, are crowded in the great confusion along the narrow strip of seaboard between the coast ranges and the Pacific from Alaska to California: ten are dotted round the Gulf of Mexico from Florida to the Rio Grande, and two disposed round the Gulf of California, while nearly all the rest of the land—some six million square miles—is held by the six widely-distributed Eskimoic groups, sometimes known under the vague name of Iroquoian, Siouan, and Shoshonean families. Similarly in Mexico, Central and South America, about a dozen stocks—Opata-Piman, Nahuatl, Maya-Quichéan, Chortegan in the north; Cariban, Arawakan, Guayanan, Taapan, Aymara-Quichuan, Araucan in the south—are spread over many millions of square miles, while scores of others are restricted to extremely narrow areas. Various theories have been advanced to explain this strange distribution, and, at least in the North American prairie lands, the Venezuelan savannahs, and the Argentine pampas, a potent determining cause must have been the scouring action of fierce, pre-existing deserts, such as here, in Central Asia, most of the heterogeneous groups huddled together in contracted areas may perhaps be regarded as 'the sweepings of the plains.' The chief stocks, with their more important sub-groups, will be found in art. ETHNOLOGY, Conspicuous.

None of the Amerind languages has ever been reduced to written form except by the missionaries, and in one instance by a Cherokee native (Sequoyah, George Guess), working for himself. Its profoundest influence is on Old-World prototypes. Even the more cultured Peruvians had nothing but the guipo, a knotted string of varying thickness, colour, and length, used for recording dates, statistics, and events. The more artistic, but less serviceable, records of the Algonquians, in the form of rebuses, go back to the time when squared and squared the scribes of the land round, lived, and worked, as in the historical treaty between Penn and the Delaware Indians. But various rude pictographic systems, inscribed or painted on rocks, skins, earthenware, or calabashes, were almost universal, ranging from the extreme north (Eskimos) to Argentina and Central Brazil. The Matto Grosso aborigines, recently visited by the Bohemian explorer, V. Fric, have developed quite an ingenious method of 'taking notes,' using dried calabashes for the purpose. Everybody goes about with one of these, which contain as many as forty different incised lines and small important incidents being inscribed on it pictorially.

The art is perhaps the most perfect of the kind anywhere devised, since the scratchings are quite legible, and handed round to be read as we might turn a page of printed matter. In the respective and proportion are observed, as by the Bushmen in their cave paintings; and the evil spirits which swarm everywhere are also thwarted by being sketched in fanciful forms on the calabashes (Science, July 1906).

Far more advanced than any of these primitive methods are the Aztec, the Zapotec, and especially the Maya pictorial codices, painted in diverse colours on real native (maguey) paper, and mainly of a calendrical or astronomical character. Several have been reproduced in facsimile with long commentaries by Forstemann and Seler, but still remain undeciphered, although they express numerals quite clearly. They had also reached the rebus state, but apparently tell short of a true phonetic system, despite the claim of Bishop Landa's 'alphabet' to be regarded as such. There are also long mural inscriptions on many of the temples and other structures at Palenque, Uxmal, Chichen-Itza, and elsewhere in Chiapas, Yucatan, and Honduras. But the greatest in the abject attempts of Mr. Cyrus Thomas and others to interpret them, although the calciform ('pebble-like') characters present the appearance of a real script. It is admitted that many have phonetic value, but only as rebus, and the transition from the rebus to true syllabic and alphabetic systems had apparently not been made by any of the Amerinds. But even so, these codices and wall writings, believed to embody calendric systems on a level with the reformed Julian, represent their highest intellectual achievements, while the Algonquian and the other mentioned districts rank as their greatest architectural triumphs, rivalled only by those of the Chimú, Quichuas, and Aymaras in Peru and on the shores of Lake Titicaca.

Elsewhere there is nothing comparable to these monumental remains of Central and South America, and the less cultured Amerinds of North America have little to show of aesthetic interest beyond their beautiful ceramic and wickerwork products, the stone statues of the earth-moving irregular distribution, and in the heart of the New Mexican valley and some other parts of the Mississippi basin, and the casas grandes of the Pueblo Indians in New Mexico and Arizona. On the origin of the casas grandes—huge stone structures large enough to accommodate the whole community—are the work of their present occupants, the Hopi (Moki), Tafoan,
Keresan, and Zuñiian tribes, driven to the southern uplands by the Apaches, Navahos, and other predatory nomads of the plains. Their communal houses or strongholds grew out of the local conditions, and the complete adaptation of Pueblo architecture to the physical environment is quite obvious. The circular chambers called estufas or kivas occurring in some districts are still the council houses and temples, the 'medicine lodges,' in which the religious and social affairs of the community are transacted, and their very form recalls the time when the tribe dwelt in round huts or tents on the plains. Some are very old, some quite recent; yet the structures do not differ from one another, and in all cases 'the result is so rude that no sound inference of sequence can be drawn from the study of individual examples; but in the study of large aggregations of rooms we find some clues. The unit of Pueblo construction is the single room, even in the large many-storied villages. This unit is quite as rude in modern as in ancient work, and both are very close to the result which would be produced by any Indian tribes who came into the country and were left free to work out their own ideas. Starting with this unit, the whole system of Pueblo architecture is a product of the semi-civilized ancients, dependent as they were on environment, naturally produced the cliff-dwellings. The tendency towards this type was strengthened by inter-tribal relations; the cliff-dwellers were probably descended from agricultural or semi-agricultural villagers who sought protection against enemies, and the control of land and water through aggregation in communities' (ibid. p. 94).

In the same way many of the Ohio mounds, which represent the aspect of fortresses, may have been raised by the more settled Cherokee (Iroquoian) tribes as earthworks against the lawless nomads of the surrounding plains. In any case the long controversy regarding their origin may now be closed; they appear to have been constructed, not by any unknown pre-historic race, but by the present Amerinds, is generally accepted as beyond reasonable doubt. Mr. W. K. Moorehead, one of the best observers, recognizes two distinct mound-building races, the earlier long-heads of the Muskingum valley, and the later round-heads whose chief centre lay about the source of the Ohio river. From the sepulchral and other mounds of the long-heads have been recovered slate and copper bracelets and other ornaments, all generally inferior to those of the round-heads. Fort Ancient, the largest of the earthworks in Ohio, is nearly a mile long with over 10 miles of artificial knolls, and Chillicothe on the Scioto river is the centre of several extensive groups, such as the Hopewell and Hopeton works, and the Mound City, that have yielded potteries of artistic design, finely wrought flints, and some copper, but no bronze or iron implements—another proof that nearly the whole of America was inhabited by the Indians who preceded the Discovery. Moorehead concludes that none of the mound-builders attained more than a high state of savagery; that they were skilled in several arts, but excelled in none; that they were not even semi-civilized, much less possessed of the 'lost civilization with which they have been credited' (Primitive Man in Ohio, 1892, passim).

Hence the general inference of Cyrus Thomas that there is nothing in the mounds that the Amerinds could not have done, that many have been erected or continued in post-Columbian times, consequently by the present aboriginals, who can even have no reason for ascribing them to any other race of which we have no knowledge (Twelfth An. Report of BE, Washington, 1894). Taking a broader view of the whole horizon, Dr. Hany ventures to suggest that the mound-builders, the Pueblo Indians, and the cliff-dwellers 'all belong to one and the same race,' whose prototype may be a fossil Californian skull from the Calaveras surburous gravels assumed to be of Pliocene age (L'Anthropologie, 1896, p. 140).

*For most of these Northern Amerinds a higher moral standard may perhaps be claimed than for the more civilized Central and South American peoples. Our general impression of the native American, writes Mr. Delafield Hutch, who knows them well, is that he is a kind of human demon or wild animal, never to be trusted, unable to keep a compact, and always thirsting for blood. But it is not so. If treated fairly he may nearly always be trusted. This 'covenant chain' with the British unbroken for over a century; the Delawares never broke faith with Penn; and for two hundred years the Hudson Bay Company have traded all over the northern part of the continent, without a serious rupture with any of the Chipewyan, Cree, and other rude Athapascan and Algonquin tribes.*

*"We are blind to our own shortcomings, and exaggerate those of the Amerind. In estimating their traits we do not require from them enough from their own standpoint, and without so regarding them we cannot understand them. Daily life in the earlier days was by no means bloody, and a scimitar-knife was no more the emblem of pre-Columbian society than the bayonet is of ours. In most localities he achieved for all, what all are with us still dreaming to obtain—"liberty and a living," and his methods of government possessed admirable qualities" (op. cit. p. 353.)*

The aborigines, however, were not free from the taint of cannibalism, which, if it assumed a somewhat ceremonial aspect in the north, was widely practised by many of the Brazilian, Andean, Colombian, and Amazonian tribes to a much greater extent than any such religious motive. Thus the nearly extinct Catos, between the Atrato and Cauca rivers, were reported, like the Congo negroes, to 'fatten their captives for the table.' Their Darien neighbours Augulo the women of this tribe have been driven by them, and brought up the children till their fourteenth year, when they were eaten with much rejoicing, the mothers ultimately sharing the same fate (Cieza de Leon). The Cocomas along the Rio Maranon ate their own dead, grinding the bones to drink in their fermented liquor, and explaining that 'it was better to be inside a friend than to be swallowed up by the cold earth' (Markham, JAI, 1895, 235 f.). The very word cannibal is a variant of the Quechua, derived from the object of the universal was the custom in New Granada, that 'the living were the grave of the dead; for the husband has been seen to eat his wife, the brother his brother or sister, the son his father; captives also are eaten roasted' (Steinmets, Endokasambolismus, p. 19). The lowest depths of the horrible in this respect were touched by what J. Nieuwehof relates of the wide-spread East Brazilian Tapuya savages, although something nearly as bad is told by Dobrizhoffer of some of the primitive Guarani tribes in Paraguay (ibid. 1746). The Sioux kept up with the Canada, and many of the people of the North, are certain cannibals (McGee). But elsewhere in the north, anthropophagy has either long since died out, or else survives here and there apparently only as a ceremonial rite. 'Cannibalism of this
kind prevailed in many tribes; always, ostensibly, a religious ceremony, not a means of satisfying hunger. The victims were often richly feasted and generously treated for some time before being executed' (Dellenbaugh, p. 368). Yet Payne declares that the Aztec custom of consuming captives at religious festivals was in reality a means of procuring food and meat and a limited meat supply, and that perpetual war was waged mainly to obtain prisoners for this purpose (History of the New World, etc., ii. pp. 495, 499, 501).

The more favourable picture presented by the northwestern tribes is applicable to the Iroquois, in many respects the finest of all the Amerinds,—unsurpassed, says Brinton, by any other on the continent, 'and I may even say by any other people in the world. In legislation, in eloquence, in fortitude, and in military sagacity they had no equals. They represented the highest development the Indian ever reached in the hunter state. Crimes and offences were so infrequent under their social system that the Iroquois can scarcely be said to have a criminal code. Theft was rarely known, and, on whatever price, the Iroquois spoke the truth without fear and without hesitation' (The American Race, p. 82). Even in the literary sphere they rank high, as attested by Sequoyah's most ingenious syllabary—see above the striking and poetic effusions of Miss Pauline Johnson (Tekahionwake), who can thus sing of the departed Amerind's 'Happy Hunting Grounds':

'Into the rose-gold westland its yellow prairies roll,
The world of the bosom's freedom, home of the Indian's soul.
Roll out, 0 seas, in sunny bathed,
Your plains wind-tossed, and grass-enwathed.

Do they not know the lovely faith condole?

Who envies not the Red-skin's soul?

Sailing on the cloudland, sailing into the sun,
Into the crimson portals ajar when life is done.'
(The White Wampum, 1890).

This vision of a cloudland, the glorified abode of departed souls, is a purely anthropomorphic notion common to all the primitive Amerind peoples. It has nothing to do with the supernatural, or with rewards and penalties after death, or even with the immortality of the higher creeds, but is to be considered purely as a natural concomitant of the present life, freed from its cares and troubles. Skyland is only a distant part of this world, which is better than the tribal territory, and in which the departed continue to live in a state of absolutely material and happy existence, exempt from present anxieties, and, so to say, without a thought for the morrow.

'The key to the whole matter may be provided by remembering that these [Guiana] Indians look on the spirit-world as exactly parallel to, or more properly as a part of, the material world known to them. Spirits, like material beings, differ from each other only, if the phrase be allowed, in their varying degrees of brute force and brute cunning; and none are distinguished by the possession of anything like divine attributes. Indians therefore regard disembodied spirits not otherwise than the beings still in the body whom they see around them' (Sir E. Inglefield, Travels of Guiana, 1855, p. 353).

Such is the first stage of the purely animistic religions common to the more primitive Amerind peoples in North and South America. The essential point is the creation of sin, in the after-world, where they continue to follow their ordinary pursuits under more pleasant conditions. Thus the Eskimo has his kayak, his harpoons, and great schools of eels; the redskin his tobacco, his arrows and arrowheads, his bisons, and so on. Thus is explained the secondary part played by ancestor-worship, and also the great variety of burial rites among the Amerinds. If a man remains a man, he cannot be deified or worshipped; and if he is still interested in human pursuits, he needs attendance and attendance.

The Guiana native is buried in his house, which is then deserted, so that he may visit his former dwelling without interference from his survivors. He will also need his hammock and other necessary things, which are accordingly buried with him. In the north-west he was accompanied by a slave, who, if not dead in three days, was strangled by another slave. In Mexico, the custom of burying live slaves with the dead is general; and then they were wrapped in fine fur or less costly grasses and matting, to keep them warm. Then there were burials in pits, mounds, cists, caves; also cremation, embalming, and sepulture in trees or on scaffolds, or in the water, or in canoes that were then set on fire. The peculiar custom of the Araucanian people, who consign the departed spirits, not to an invisible heaven or hell, but to the visible
constellations of the starry firmament. Their forefathers are the bright orbs which move along the Milky Way, and from these ethereal heights are still able to look down and keep watch over their earthly children. Under their ever vigilant gaze, these Southern Amerinds had a far higher motive than the hope of reward or the fear of punishment, to avoid wrong-doing and to practise all the virtues, that is, all the tribal usages sanctioned by tradition. Thus, without any legal codes, pains, or penalties, the social interests were safeguarded, while even personal conduct was controlled; for who would dare to wrong his neighbour beneath the glittering eyes of his ancestors? scarcely any more complete fusion of the ethical and religious systems has elsewhere been realized (Eauth, 1884).

It will be seen at once that these Aracanian ancestors, though wafted aloft, still remained human, with human cares and interests, and hence could not be worshipped as gods. The Delawares also would say to a dying man, to comfort him, ‘You are about to visit your ancestors,’ or, as we might say, to join the majority, without attaching any sense of an apotheosis to the expression. So it is nearly everywhere amongst the Amerinds, and Herbert Spencer’s broad generalization that all religions and all their ancestor-worship (‘ghost propitiation’) does not apply at all to the New World. His further statement (Eccles. Institutions, p. 657), that ‘nature-worship is but an aberrant form of ghost-worship,’ has here to be reversed since there were various forms of what American writers designate as zooltheism, that is, the deification, not of men, but of animals. Deilenbaugh says emphatically: ‘Savage races worship animal gods and not man-worshippers as animals; they distinguish as Kiehtan was merely the head of a pantheon, the Zeus or Diespiter of the New World. Hence he

This is the Manitou of the early writers, who is described by the missionaries as the Creator, the Supreme Being, the one True God of the really monothetic aborigines. But this Manitou with many variants is the Devil of the New Jersey natives (Amer. Hist. Record, i. 1872), and in the Delaware Walam Olum, edited by Brinton (Philadelphia, 1835), there are all kinds of Manitou—their original ancestor-worship. But the term was applied to men and their grandfather, and ‘an evil Manitou,’ who makes ‘evil beings only, monsters, flies, gnats,’ and so on. The claim of this Manitou, the ‘grandfather of the Delawares,’ that as the Eus Supremum must therefore be dismissed with the like claims of the Dakotan ‘Wakanda’ and other Amerindian candidates for the highest honours. On the general question of a Supreme Being it is most probable that the deities of the early Algonquin natives are better known than the so-called ‘gods’ of most of the present North American aborigines. This is true, though the observations made by Capt. John Smith, Strachey, Roger Williams, and a few others prior to Christian influences. The first preachers translated ‘God’ and ‘Jahweh’ by the Algonquian terms manit, menditu, ‘he is god’; also manittoo (whereas our ‘mammon’), which simply means ‘ghost’ or ‘spirit,’ so that the name was used to express the gods of the Bible. Here m is an impersonal prefix which is dropped in polysynthetic composition (see p. 377), leaving the root anit, ant, and, i.e. any spirit, not the Spirit himself. It was an impersonal hero-worship, extended to one and all of the gods of our Bible, and to restrict it to one was reading into it a meaning puzzling to the natives, though required for the right understanding of the Christian and Biblical concepts. One of these genii was Kau-tan-you-and, the great south-west spirit, whose blissful abode all departed souls migrated, and whence came their corn and beans. The same root appears in Kehte-niit, the ‘Great Spirit, which by the epithet kehte = great’ was the chief god of the Algonquins, who associated him with Hobamow, the Evil One, thus suggesting the two principles of good and evil as more fully developed in the Walam Olum, and among the Aracanians and others. E. Winslow (Good News for Tolerant People) says, ‘It was the chief god of the Algonquins, maker of all the other gods, and himself made by none. But if there were other gods, by whomsoever made, then Kehtan was merely the head of a pantheon, the Zeus or Dispeter of the New World. Hence he
naturally dwells above, in the heavens towards the setting sun, whither all go after death. But he had a rival, Squan-tam, 'whom they acknowledge,' says Josselyn, 'but worship him they do not.' In any case he was more to be feared than loved, for squan-tam comes from the verb masquanta (= he is man, 'a man'; see the Narraganset remark at any casual mishap, masquanta maní, 'God was angry and did it' (J.A.P.L. vol. xii.).

Respecting the Dakota Wakanda, also supposed to rank as the Supreme Being, W. J. McGee clearly shows that he is not a personality at all, merely a group of configural - or perhaps, as M. de Nadallic, Prehistoria America, 1885; F. S. Dellenbaugh, The North Americans of Yesterday, 1913; A. H. Keane, Man Past and Present, 1903; W. H. Holabird, Researches in New Granada, Bevador, etc. 1890; J. J. von Tschudi, Reisen durch Südamerika, 5 vols. 1896–99; F. Ehrenreich, Die Ur- bauerwirser Brasilien, 1897; K. von den Steinen, Durch Central- Brasilien, 1886; The Annual Reports of the Smithsonian Institution, Washington, and the Publicans of the Peabody Museum, Cambridge, Massachusetts.

AMERICA, SOUTH—The religious ideas of the savage peoples of South America are in comparison with those of the North Americans, strikingly undeveloped. They have not advanced beyond the crudest forms of belief in ghosts, such as are produced by the vague fear of the souls of the dead, or of the demons, which express themselves in certain natural occurrences. Their religious beliefs are thus not essentially superior to those of the Australians or the Papuans.

The want of a belief in gods, in the proper sense of the term, speaks less for the low stage of religious culture than for the absence of organized worship that is of gods from the civilized and half-civilized peoples of the region of the Andes and of Central America.

We find such traces among the Arhuacos (Róggaes) of Colombia, the Tainos of the Antilles, the Tajas of Eastern Bolivia, the Araucans and several nations of the Chaco and the Pampas, which are in connexion with them, especially the Guaycuru group, who have also adopted numerous elements of Peru- vian culture.

Of course the mythology of the South Americans can tell us of creators and world figures, but still these are without the character of gods. They are legendary figures without even a semblance of organized worship without influence on man and his fate, and thus also devoid of religious worship or veneration. The Peruvian religion was the first to raise the heroes of the legends, so far as they were personifications of the sun or moon, to the position of divinities. Among the Chibchas of Colombia are to be found the first approaches to this.

The earliest reports regarding the religious ideas of the savage tribes of the time of the Conquest and the first missionaries are, in general, obscure and contradictory. While some deny all religious feeling to the Indians, others tell of reverence for God, or at least of devil-worship, and others again of the dualistic opposition of a good and an evil spirit.

On the other hand, reverence for one all-ruling highest being was expressly ascribed to many tribes. In particular the following are named: Tapan among the western Tupis, Sume among the southern Tupis or the Guaris, Pillan among the Araucans, Quivas among the Queves of the Abipones, Socuy among the Patagonians, and others. As a matter of fact it is in all these cases by no means to do with more elevated ideas of God. These beings are, on the contrary, mere natural demons or defiled ancestors or heroes of the tribe.

Without doubt, the demonic figures which took part in the masked dances of the Indians have
often been regarded by the missionaries as gods or devils. The festive huts, the houses of the community or of the bachelors, in which the masks were preserved, were supposed to be ‘temples.’ And yet, all the contemporary observers even at that date emphasize the absence of specific actions of worship (prayer or sacrifices), except in the above-mentioned cases of probable foreign influence from regions of higher culture. Still, the masked dances might be regarded as the first traces of a primitive culture. As the analogies among other savage peoples teach to the ceremonial ceremonies are in the main directed towards exerting a magical influence on animals or animal spirits (in the sense of an allurement, defence, or multiplication), or towards driving out destructive demons that manifest themselves in natural phenomena.

Often too, of course, they are primitive dramatic representations of achievements of the tribe and of the legends of the heroes, as, e.g., connected with the Yurupari idol mysteries of the tribe of the Uaruêpi, and probably those of the Pasé and Tikunas, and those of the Chiquitos of Bolivia, which were described above. The sacred dances of the Taimo in Cuba and Hispaniola (Haiti), the so-called Aretios, were of this nature.

These masquerades seem to be especially important at the initiation ceremony of the young men, at funeral celebrations, and at the laying of new settlements. The use of masks seems to have been confined to the basin of the Amazon. In Guiana, wood, or in nightly regnity, the east coast, and farther south than 15° south latitude their existence has not been proved.

We know more particularly only those of the Maráton (Tikunas), the Guaycuru (Tupis), the Tangarés (Taimo), the upper Xingu (Bakairi, M pinsik, and Trumai) and of Aranyagu, those of the Karaya (which present a striking resemblance to the so-called dunduk masks of New Britain).

Idols of stone and wood belonging to a more ancient period are frequently mentioned in the Antilles, in Darien, Venezuela, and on the Amazon; still, we are ignorant of their appearance or significance. Only with regard to the Tainos do we know that they represented their ancestral gods (Zemias) in grotesque figures of wood and cotton, of which a few have been preserved. On the lower Amazon various peculiarly formed sculptures of men and animals have been found, whose dates point to the Colombian sphere of culture (according to Barboza Rodriguez and R. Andree).

The so-called idols of the Takanas of Eastern Bolivia have not yet been more closely investigated. The wooden 'Santos' of the Cadoves (Guaycuru) are in probability representations of ancestors, but perhaps influenced by Christianity.

In the older literature actual divinities of individual peoples are mentioned; in particular Tupan, the 'god of the eastern Tupi,' whose name was adopted in the popular language as the general designation of God, and, through the influence of religious instruction carried over to many tribes of the interior. Thus he frequently obtained the significance of 'the God of the white man.' In reality, Tupan is simply the thunder-demon of the Tupis, who, however, pay him all sorts of worship. In the magic rattle (maraká) his worshippers believed that he heard their voice, and so it came about that Bana Staden pronounces the name Tupan to be nothing other than the god of the tribe. In his nature he has absolutely nothing to do with the one God in the Christian sense of the term.

In other cases the supposed divine beings are of naturally social nature, the ancestors of the tribe, or culture-heroes, who are active as demi-urges, like Tami or Sume of the Tapi-Guaranis, whom even the missionaries identified with St. Thomas, who in some mysterious fashion was reported to have been the first to bring religion and civilization to America.

Other similar figures are Quetzalcoau and Ekuban in Central America, Bochica in Colombia, and Viracocha in Peru. The one is also true of Aguaraní of the Alibones, the Roscuet or Quipus of the Pocheps and Aranaís, and the fox-god of the Chiriguas (according to Campana).

We can thus gather exceedingly little positive information from the older references. The more recent material for observation is also still scanty and incomplete. The following must be regarded as certain, so far as it goes. The belief in souls (animism) forms for these peoples the basis of all their supernatural ideas. The spirits of the dead are thought of as demons which for the most part hostile, or at least different,—or good spirits stand over against these evil demons.

Of such a nature are the Opyen and Mapayan of the Caribbean islands, the Anbangas of the Tupis, the Kas不下 of the Purunas. Only among the Tainos do we find a completely systematized spirit worship of the Zemias, which are represented by idols.

The belief in the incarnation of the souls of the dead in animals is widely diffused. Jaguars, snakes, and in particular birds like araaras, hawks, eagles, are such soul-animals. Besides these, there are everywhere spiritual beings representing different states of nature; cobolís, which appear in animal or grotesque human forms, but as a rule invisible to the eye, manifest themselves in certain natural sounds, such as in the echo, in the rustling of the wind, and, of an additional kind, or have their seat in remarkable rock formations.

The best known are the forest demons of the Tupis—Kaspora, Kurupize, and Yurupari—which were adopted in the popular superstition of the colonists. Similar beings dwell in the water as gigantic snakes or crab-like monsters.

Where a special 'land of the fathers' in heaven, or more seldom in the lower world, is accepted, the souls of the dead return to it. Among the Chaco tribes the stars are the souls of warriors, which combat one another in the thunder-storm. As falling stars, they change their places. Certain constellations—in particular Orion, the Cross, Pleiades, the Milky Way—are regarded as representations of beings or objects of mythical significance belonging to the primeval time. They illustrate in this way incidents in the activity of the culture-heroes in the cosmogonical legends.

These peoples have not as yet been a deification of cosmic bodies and natural powers. Even the sun and the moon have remained, in spite of their personification in the myth, without significance for the religious ideas. Atmospheric phenomena, too, have been little observed, a fact which probably is connected with the great regularity of the rainfall and thunderstorms throughout the whole continent. In a few cases proof can be given that demons or spirits of nature were supposed to manifest themselves in these phenomena.

Among the eastern Tupis, Tupaí reveals himself in the lightning flash; among the Machakalis, Aksanua shakes the rain out of his beard. The Caribbean Indians know demons who can control the sea, the wind, and the rain. The rainbow, too, is frequently regarded as an evil spirit that brings sickness (gelok, deril), of the Caribbean peoples of Columbia peoples he is a mythical animal, snake (Ipinura) or electric eel (Karaya).

Tendencies towards the development of actual divinities and divine cults are to be found among the Tainos, who, besides the spirits of their ancestors, revered the sun and the moon; and probably also among the old tribes of Darien and of the north coast (according to Peter Martyr, Oviedo, Gomara, and others). In the western Taimo of the Takanas of Eastern Bolivia, gods of water, of fire, of sicknesses, etc. are mentioned, and their images were worshipped in temples by means of sacrifices and dances (according to Col. Labre and P. Armentas). But these details have not yet obtained scientific confirmation. Again, with
regard to the sacrifice of horses which the Patagonians or tribes of the Pampas are said to offer, we have no exact information. In individual cases the mighty phenomena of volcanic action have led to divine worship of active volcanoes.

Thus the Jirabo of Ecuador are supposed to look upon the river as a condition of the earth to whom they offer prayer. Among the Araucus, Pillan is the god of thunder and of volcanoes. Subordinate to him are the Cherusves, the indians of the summer lightning, who in like manner are thought of as dwelling in volcanoes.

The cause of this imperfect development of the belief in gods is probably to be sought in the entire condition of the culture and the whole of South America, with the exception of the slopes of the Andes. Agricultural rites of a magical nature, from which, as a rule, divine cults are developed, do not easily arise among tribes who, though practising primitive agriculture, may yet be said to follow an almost purely hunting or fishing life, and owing to the perfectly regular change of kinds of weather and the certainty of copious showers, do not require heavy reliance. Only under the more rigourous natural conditions of the lands in the eastern Tropics, did the farmer recognize his dependence on higher powers, at the head of which he placed the sun, or Light-god.

The mythology of the South America, now unfortunately little known to us, seems to have been more plentiful than might have been expected from their crude religious ideas. The most that we know comes from more recent times; still, even from the 16th cent. we possess a comparatively complete cosmogony and a heroic legend of the eastern Tropics, related by Thévet, Cosmographie, Paris, 1574 (in extracts in Dénis' Fête brésilienne, Paris, 1851). Further, we have fragments of a creation-legend of the Tainos, according to Peter Martyr. The subsequent missionary period has supplied us only with scattered and unreliable material.

It was not till recent times that more valuable sources were again furnished by the investigations of travellers, such as D'Orbigny (for the Yuruparí of Bolivia and Brazil) and E. Thümmler (for the tribes of Guiana), Cardus (for the Guayareños of Bolivia), von den Steinen and Ehrenreich (for the Bakairis, Paressis, and Karayays of Central Brazil), Lenz (for the Araúkas), Bobra (for the Kaingang of the Guaranic stock of South Brazil), and others.

Of great importance is the so-called Yurupari myth of the Uaipe tribe, communicated by Stradelli (Bol. soc. geogr. Ital., Rome, 1890), the only complete legend handed down regarding the worship of a secret society. A critical collection of all the materials discovered up to the present time was given by Ehrenreich in his Mythen und Legenden der südamer. Uvolker, Berlin, 1905. The myths deal in the main with cosmogony, the work of creation of the culture hero or heroes, conceived of as brothers, who bring to mankind the useful plants, fire, and other possessions, and appoint the course of sun and moon. The sun or highest heavenly being, thought of as a magician, is placed at times, as the progenitor of the heroes, at the beginning of the cosmogony. This is the case in the myth of the Tupis, Kamushini of the Bakairis. A destruction of the world by flood or by world-conflagration occurs more than once (see Andree, Flutemasen). The story of the birth of the hero brothers with the name of 'suns' is immediately connected with the death of their mother, their combat with monsters and with one another, their ascension into heaven or descent into the lower world, offers many parallels with myths of the old world. Still, these can be fairly considered as bearing, as lying at the basis of all these myths, which is always connected with the sun and moon and their relation to each other. The heroes themselves are often immediately recognizable as personifications of these stars, as, e.g., the pair of brothers Keri and Kame among the Bakairis.

On the other hand, there are undoubtedly many North American and even East Asiatic legendary elements which have been transferred to South America, probably following the Pacific Coast. In like manner there are common elements in the stories of the heroes of Peru and Eastern Brazil which can be explained only by immediate influence of the one people on the other.

goes to prove that the conception was well known at that period. This latter fact, among numerous others, is of weight in disproving the theory advanced by Darmesteter, that the conception of the Amesha Spentas in Zoroastrianism was late, and of foreign origin to Philo Judaeus.

The various attributes which the Zoroastrian scriptures apply to the Amesha Spentas are in harmony with the spiritual qualities represented by these allegorical personifications. This will be manifest at a glance, if reference be made to the Avesta (e.g. Yasna, xxxv. 3; Ys. 9; 9. 12; Yasna, iv, xxiv, 9, liviii. 5; Yasli, xiliii. 82–84). The Gāthic adjectives vohu 'good,' vahidha 'best,' vairiyā 'wished-for,' spenta 'holy,' which are the most common titles of the first four Amesha Spentas in the earlier period of the religion, become in later times standing epithets, practically indispensable to the qualities to which they are added by way of nearer definition. The last two personifications, Haurvatāt and Ameretāt, have no standing attributes, but are commonly mentioned together as a pair.

The Amesha Spentas were Ahura Mazda's own creation (Yasht, i. 25; Dinkart, tr. Sanjana, p. 103), and their function is to aid him in the government of the world (Yas. 91, 92; Spenta, 9–10; Vendidad, xix. 9; Bundahish, i. 23–28). They are invisible and immortal (Dinkart, tr. Sanjana, pp. 47–48), good rulers, givers of good, ever bestowing (Yasna, xxxv. 9). They have their Fravashis, which are invoked (Yasht, xiliii. 82). They receive special worship in the ritual, and are said to descend to the oblations upon paths of light (Yasht, xiliii. 84, xii. 17). They are engaged in the welfare of all things, sit on a throne of gold (Vendidad, xii. 32); but they are not infinite and unproportioned like their Lord, Ormazd (Dinkart, tr. Sanjana, p. 114). They are spoken of as the givers and rulers, mediators and saviors, protectors and preservers of the creation of Ormazd (Yasht, xii. 18). For that reason the guardianship of some special element in the universe is assigned to each. To Vohu Manah is entrusted the care of useful animals; to Asha Vahishta, the fire; to Khshathra Vairiya, the earth; to Spenta Armaiti, the guardianship of the earth, whose spirit she is; and to Haurvatat and Ameretat, the care of water and vegetation (Shahystān-Shayastāt, xv. 5; Great Bundahish, tr. Darmesteter, in Zeitschrift für die vergleichende Sprachforschung, xxiv. 9). The relation, in each case, between tutelary genius and element, has been variously explained, according to the stress laid upon the physical or the spiritual side of the concept; but it is certain that the association and the double nature are old, because the twofold character may be seen fore-shadowed in the Gāthas, and becomes pronounced, in the later texts especially, on its physical side. Each Amesha Spenta has a special month assigned to his care (Bundahish, xxv. 20). Each has a special day as holy day (Srōst, i. 17). Each has a special flower, e.g., white jasmine sacred to Vohu Manah, the 'basil-royal' to Khshathra Vairiya, musk to Spenta Armait (Bundahish, xxvii. 24).

It is impossible here to enter into a detailed discussion of the functions of each of the Amesha Spentas, the first three of which celestial group are males (or rather, neuter according to the grammatical gender, not sex), and the last three females; but it is sufficient to observe that these exalted personifications play an important rôle as archangels throughout the entire history of the Zoroastrian religion, and are opposed (more particularly in the later development of the faith) by six antagonists, or corresponding archfiends, Aka Manah, Indra, Saura, Nāzakheshtyā, Tauru, and Zātri (Vendidad, x. 9–10, xii. 43; Yasht, xii. 96). The Amshaspands will, nevertheless, vanquish these opponents at the time of the resurrection (Yasht, xii. 96; Bundahish, xxx. 29).

To draw parallels between the conception of the Amesha Spentas as a spiritual band higher than the angels (Av Michigan 337. 26), and the Celestial Supreme Being, Ahura Mazda, and the Biblical doctrine of archangels, is natural and has been done by some scholars, while others have emphasized the likenesses to the idea of the Adityas in ancient India. Opinions vary as to whether the resemblances are due to borrowing, or to some common source, or, again, to natural developments. It is premature, as yet, to attempt to give a decision on this question, which is but a part of the whole problem of the influence of Zoroastrianism on other religions or its kinship with them.

AMIABILITY—’AMM, ’AMMI

From this passage it would appear that the ’Am ha-ares was regarded by the Rabbis as a person who was accustomed to neglect the various enactments of the Law, and the general attitude of the Pharisees towards him was one of contempt and hostility. As we have seen, the Ḥabbēr is warned against having intercourse with him, and it naturally followed that the intercourse between the two classes was regarded with the greatest disfavour. 'One that gives his daughter in marriage to an ’Am ha-ares,' R. Meir used to say, 'as if he had bound her and set her before a lion' (Bab. Aboth, 56). In another place it is stated that the ’Am ha-ares is disqualified for acting in certain capacities, which are enumerated under six heads, viz. (1) he must not be appointed to receive evidence; (2) his own evidence is not to be accepted; (3) a secret must not be confided to him; (4) he must not be appointed as the guardian of orphans; (5) he must not be appointed as overseer of the charity box; (6) it is not right to accompany him on a journey (Bab. Pesah, 493, and Rashi's comment, ed. loc.). The attitude of hostility was apparent, as would appear, among other passages, from the saying of R. Akiba which occurs just before the passage cited above. He is reported to have said, 'When I was an ’Am ha-ares I used to say, 'Would that I had a talmīd ḥakham from the wise, 'scholar,' and he would bite him as an ass.' Or again, a little later, 'The hatred with which the ’Am ha-ares hates the talmīd ḥakham is greater than the hatred with which the heathen hates Israel' (Bab. loc. cit.). These passages offer a sufficient explanation of the words of Jn 7:49 'This people who knoweth not the law are accursed,' in which we may probably see a reference to the attitude of the Pharisees towards the ’Am ha-ares. Some difference of opinion exists as to the identity of the Ḥabbēr, with whom the ’Am ha-ares is so frequently contrasted in the Mishna. Schürer and others identify the Ḥabbēr with the Pharisees, making the two terms practically synonymous. Others are rather inclined to regard the Ḥabbēr as a member of some kind of religious guild bound to a strict observance of the Law. But one thing is perfectly clear, viz. that the Ḥabbēr was not necessarily himself a talmīd ḥakham, though he might incidentally be one. This would appear from the following passage: 'He that would take upon himself the decrees of the association (ḥabbēruth) must do so in the presence of three ḥabbērēm; even if he is a talmīd ḥakham, he must do it in the presence of three ḥabbērēm (Dab. Bekhor, 50b).

Two passages may be cited which appear to indicate a less hostile attitude towards the ’Am ha-ares. The first one is from Aboth de R. Nathan (ed. Schechter, p. 546), the other is from the Midrash Shir ha-Shirim Rabba. In the first of these we are told that it is not right for a man to say, 'I, the wise man, but hate the disciples, love the disciples, but hate the ’Am ha-ares'; but love them all, and hate the heretics and apostates and informers.

An attempt has been made to mitigate the severity of the statements concerning the ’Am ha-ares which have been quoted above, by suggesting that in reality they refer to informers and political enemies (see Montefiore [Hibbert Lectures] and Rosenthal, cited below), sufficient evidence for this is not forthcoming; and the quotation given above from Aboth de R. Nathan seems to point in the contrary direction. This also appears to be the view of the writer in the JE, who states as his opinion that 'there can be no doubt it was this continuous and hostile attitude of the Pharisaic schools towards the masses that was the chief cause of the triumphant power of the Christian Church.' A new and independent investigation of many points connected with the ’Am ha-ares is to be found in the recently published work of A. Büchler, cited below.

H. LEONARD PASS.

AMIABILITY.—The adjective 'amiable' is obviously the Lat. amabilis modified in transmission through the French. It is thus etymologically equivalent to loveable, denoting that which is adapted to excite the sentiment of love in any of its varied forms. It has therefore been occasionally applied even to things, as, e.g., in Ps. 84, 'How amiable are thy tabernacles!' But now it is used almost exclusively to describe persons and personal characteristics. In this use it has not of course comprehended all the varieties of character which are loved by corrupt minds. Thus, in its psychological aspect, amiability comprehends both the natural dispositions and the acquired habits which, being themselves of the nature of love, are calculated to produce the same sentiment in others. In ethical and religious value amiability may therefore claim the rank that is ascribed to love; and the evolution of moral intelligence has always tended towards that ideal in which love is recognized as the supreme principle and inspiration of all morality.

J. CLARK MURRAY.

AMITĀYUS or APARIMIṬAYUS (Tibetan Tö-pa med), 'The Boundless or Everlasting Life,' is one of the mystical or superhuman Buddhas invented in the theistic development of Buddhism in India. His worship was wide-spread in India in the Middle Ages, although hitherto unnoticed, for the writer found his image frequent in the ruins of mediaeval Buddhist temples in mid-India. In Tibet, where the cult of a Buddha holding similar attributes, namely, the Sage of Longevity, had long been prevalent, his worship has become very popular as a supposed means of prolonging the earthly life of votaries. His image is to be seen in nearly every temple in Tibet; it is also worn as an amulet, and carved on the roofs of doors. He is specifically invoked in the prayer-flags which flutter from every point of the compass, and he is specially worshipped in that sacramental rite, the so-called 'Escharist of Landaism,' where consecrated bread is solemnly partaken of by the congregation. He is considered to be an active reflex or emanation of the divinely meditative Buddha, Amitābha (see ADIBUDDHA), who sits impassively in the Western Paradise (Sukhavati).

He is represented in the same posture as his prototype Amitābha, not, however, as an ascetic Buddha, but crowned and adorned with thirteen ornaments, and holding in his hands the vase of life-giving ambrosia, which is one of the eight auspicious-compelling symbols (mangala) of ancient India, and the vessel for holy water on Tibetan altars.

L. A. WADDELL.
and must have been found in the original tongue from which they are sprung. A comparison of its meanings in the dialects, together with a study of the social organization and religious beliefs of the several races, leads to the conclusion that the word denoted originally a male relative in the preceding generation. The Semites passed once through a stage of fraternal polyandry, and in such a society the distinction between father and paternal uncle is impossible. The mother's polyandrous husband, who might be either father or uncle, was known by the child as 'amm. Cf. Gn 3:9 where Ben-'ammi is equivalent to 'son of my father,' and the phrase יָּשָׁב אֵלָה וְיָשָׁב אֵלָה which alternates with יָּשָׁב אֵלָה וְיָשָׁב אֵלָה. The name 'uncle' was naturally applied to male deities, as 'father' was in later times. Long after polyandry had passed away 'amm continued to be used as a title of deity; and as it lost its primitive associations, it tended more and more, like Baal, Adon, Melek, and other epithets, to become a proper name. The Kataba people in South Arabia designate themselves in their inscriptions as 'Children of 'Amm (בּוֹט), just as their neighbours the Sabaeans designate themselves as Walad Binaksh, showing that among them 'Amm had become a Divine name (cf. Hommel, 'ZDMG,' 2nd ser. p. 632; G. D. Glaser, vorderasiatischen Gesellschafts, 1899, ii. p. 21). According to II. Rival. 54, 65, V. 46, 11, Emu (= Nergal) was a god of the land of Suhu on the west side of the Euphrates (cf. Sayce, ZR, 2nd ser. ii. p. 57). 'Hammurabi, iii. p. lix). Hammu = 'Amm is written with the determinative for 'god' in the name of the king Hammurabi. The proper name Dur-'Ammi, 'Fortress of 'Amm, also indicates that 'Amm was used as a divine epithet (p. 239). In this meaning also lingers in Heb. in the formula אָמֶם, 'by the life of the Uncle,' which is parallel to אָמֶם and יָּשָׁב אֵלָה.

How far this process went can be determined only by a study of the proper names compounded with 'Amm in all the Semitic dialects. Here the problem is complicated by the fact that 'Amm has developed a number of secondary meanings, and so it is not easy to determine what is its significance in each case. When spoken as a noun, it gave place to monogamy and polygamy, and the father became a recognizable relative, abu, which hitherto had meant 'husband' (cf. Jer 3:1, and old Bab. usage), came to mean 'father,' and 'Amm became for specific meanings, 'father's uncle.' This is a common meaning in Arab. (cf. bint 'Amm for 'wife,' lit. daughter of 'paternal uncle'), also in Min. and Sabean. From this 'Amm came to mean any relative in the ascending line on the father's side, just as 'father' was used to denote a remote ancestor; then it was used for 'relative in general. It is used in this sense in one of the Tell el-Amarna letters (Winckler, 457).

Jensen also cites an instance in Babylonian ('LCB,' 1902, p. 6). In Gn 3:9, 10, Ex 31:14, Lg 19:21-24 'Amm cannot mean 'people,' but only 'kinsman.' Lo-'amm, the name of Hosea's child, must mean primarily 'Not my kin,' inasmuch as it was given with reference to the mother's adultery. The Carchagnian proper name man (CIS 384) and Nabatean way, Ojebir (Eutin, Sin. Inschr. 957 358 355), may mean 'kinsman' or 'uncle,' but cannot mean 'people' (cf. Aram.-Talm. לֵו as a personal name). The final stage in the development of the meaning was reached when 'Amm came to signify 'people'—a common usage both in Hebrew and Arabic.

The question now arises, Which of these meanings is found in the numerous proper names compounded with 'Amm? These names are widely scattered through the Semitic races, and must have been one of the earliest types of name formation; it is natural, therefore, to conjecture that in them 'Amm has its primitive meaning of 'father-uncle,' and is used in some cases at least as a title of the Deity. Whether this is the fact can be determined only by an inductive study of the names in question.

1. The first class of 'Ammi-names consists of those in which 'Amm is followed by a noun, as in 'Ammi-hud. In most of these the translation 'people' for 'Amm gives a very unlikely name for an individual, e.g. 'Ammi-el, 'people of God,' or 'people is God;' 'Ammi-ba'ali, 'people of Baal,' or 'people is Baal;' and so with the other names given below. It is generally admitted, accordingly, that in all names of this class 'Ammi has the sense of 'kinsman' or 'uncle.' This view is confirmed by the fact that compounds with Abi, 'father,' and Abi, 'brother,' run parallel to names with 'Ammi, e.g. Abi-eli, 'Ammi-eli; Abi-hud, Abi-hud, 'Ammi-hud. The next question is, whether the epithet 'uncle' or 'kinsman' is understood of a human being or of a divinity. The answer to this question depends upon the grammatical relation in which 'Amm stands to the following noun. There is high authority for the view that it is a construct or the old genitive ending which frequently survives in the construct state, i.e. 'Ammi-hud means 'kinsman of glory,' which, like Abi-hud, 'father of glory;' means 'glorious one. This theory is open to many objections: (1) This construct is not a pure Abrahamism, and there is no evidence that it existed in the other dialects. (2) It is very unlikely that any man should have been named Abi-eli in the sense of 'father of God,' Abi-Yah in the sense of 'father of Yah;' Abi-'Ammi in the sense of 'father of Baal,' or Abi-Melek in the sense of 'father of Melek;' and it is just as unlikely that 'Ammi-eli, 'Ammi-Ba'ala, 'Ammi-Sin, 'Ammi-Shaddai mean respectively 'uncle (older kinsman) of God, Baal, Sin, Shaddal.' (3) These names are paralleled by names in which the same elements occur in reverse order, e.g. Eli-'am (2 S 11:1 = 1 Ch 3:4 'Ammiel), Baal-'am, Ac-'am (Yah-'am), Nabu-imme, Shutman-umme, Shamash-imme. There is no reason for supposing that this is the result of forming from 'Ammi-eli or Baal-'am from 'Ammi-Ba'ala. If the elements in these names are regarded as standing in the construction relation, they will mean respectively 'God of uncle,' 'Lord of uncle.' These have no relation to any of their paternal parts, and are most unlikely personal names. If, on the other hand, the nouns are regarded as standing in the relation of subject and predicate, the compounds are synonymous whatever be the order of the elements: 'Ammi-eli means 'uncle is God,' and Eli-'am means 'God is uncle.' (4) Conclusive evidence that 'Ammi, Abi, Abi, Bod ('uncle'), Bel ('maternal uncle'), Ham ('father-in-law') are not constructs before the following noun, is found in the fact that 'Ammi-hud is commonly used in forming the names of women. Abi-gal, Abi-noom, Hamu-tal cannot mean 'father of joy,' 'father of pleasantness,' 'father-in-law of dew,' but must mean 'father is joy,' 'father is pleasantness,' 'father-in-law is dew' (cf. Abi-tai).

If 'Ammi is not in the construct before the following noun but is the subject of a sentence, a further problem arises as to the meaning of the vowel i which appears not only in Hebrew but also in Canaanite names in the Tell el-Amarna letters and in Babylonian. It must be understood that it is of the first person, but against this view are the facts that no other pronominal suffixes are used in forming proper names, that the analogy of other names leads us to expect a general affirmation in regard to the Deity rather than the expression of a per-
sonal relation to Him, and that the š is omitted in parallel forms, e.g. Eli̇-tam = 'Ammi-El. *Ammi-Ba'at= Ba'al-šam. *Ab-shalom = Abi-shalom. Ab-ram = Abi-ram. Probably, therefore, š should be regarded as a modification of the original š, the nom. ending. The š ending still appears in *Ammu-šadin, *Ammu-nira, *Ammu-rábat, and other names in the Obelisk inscription.

It is found most frequently in the early period, and apparently Baal, Adon, and Melak, as a title of Jahweh.

It is regarded as having been a name of Jahweh in the following periods.

It is treated as a name of Jahweh in the early period, and apparently as a name of Jahweh in the following periods.

It is treated as a name of Jahweh in the early period, and apparently as a name of Jahweh in the following periods.

3. A third class of *Ammi-formations contains names in which *Ammi is preceded by a noun; e.g. Eli̇-tam. Here also the translation ‘people’ for *Ammi gives no good sense, as the name *Ammi precedes is not construct, but absolute. Eli̇-tam does not mean ‘God of the people,’ nor ‘God is a people,’ both of which would be impossible names for an individual, but it means ‘God is a people.’ Since the parallelism between *Ammi and Eli̇-tam, and Eli̇-tam, Baal-šem and Baal-Yah, shows that *Ammi is a Divine name.

The following names belong to this class: - *Ammi-El, ‘uncle is God.’ (Nu 13: 12, 14, 17: 3, 20). *Ammi-Šem (Obelisk of Manishtusu, 19: 14, 17: 16). The name *Ammi-El is most frequently found in the early period, and apparently as a name of Jahweh in the following periods.

It is treated as a name of Jahweh in the early period, and apparently as a name of Jahweh in the following periods. *Ammi is a Divine name.

The following names belong to this formation: - *Ammi-El (Nu 13: 12, 14, 17: 3, 20). *Ammi-Šem (Obelisk of Manishtusu, 19: 14, 17: 16). *Ammi-El is most frequently found in the early period, and apparently as a name of Jahweh in the following periods. *Ammi is a Divine name.

AMMONITES. During the period covered by

the Old Testament literature the Ammonites occu
pied the eastern portion of the region now known
as the Belfca.
Dt 2s7 describes their territory as
*
the whole side of the torrent of Jabbdq, and the
cities of the hill -country,' i.e. the region about the
tapper course of the modern Wady Zerfca (cf. Dt
3ft, Jos 12a). Jos 1329 speaks of the towns of Ja'z6r
and *Ar5'gr as marking the frontier between Ammon
and Israel. Ja'zer is also named in Nu 2134 accord
ing to the Gr. text (BAFL). It is described by
Eusebius and Jerome as lying 10 R.m. west of
Philadelphia (Rabbah) and 15 R.m. from Heshbon.
Its precise location and also that of 'Aro'er have not
yet been determined. The capital city of the
country was Rabbah, or Rabbath bene-(Amm6n,
at the head-waters of the Jabboq (cf. Dt 311, Jos
1328, 2 S ll1 1228'29 1727, 1 Ch 201, Jer 492S Ezk
21<30> 255, Am 1"). It was rebuilt by Ptolemy
Philadelphus (B.C. 285-247), and received from him
its Greek name of Philadelphia. Its modern Arabic
name of 'Amman is a survival of the ancient name
of the land. The other towns Minnith and Abelcheramim are mentioned in Jg ll38.

from the Hebrew.
The Ammonites were a part of the same wave of Semitic
migration to which Israel belonged, and their settlement east of
the Jordan did not long precede Israel's occupation of Canaan.
According to Dt 2wr-, they dispossessed a people known as the
Zamzummim, a branch of the Rephaim, which It has been pro
posed to identify with the Zuzim in Ham of On 14' (cf. Dt 3").
According to Jg ll1*-22, Jos IS25, they occupied originally the
whole of the region east of the Jordan, but were driven out of
the western half of this by the Amorites (cf. Nu 2125-31). The
Amorite kingdom of Sihon the Israelites conquered, but the
land of the Ammonites they did not disturb (Nu 21", Dt 218- 37
316, Jg ll15). Dt 234(3)f- represents the Ammonites as participat
ing with the Moabites in hiring Balaam to curse Israel, and,
according to Nu 22fi, Balaam came from the land of the children
of Ammon (read 'Ammdn with Sam., Syr., Vulg., instead of
'
According to Jg 318, the Ammonites
'amm6, his people ').
assisted Eglon, king of Moab, in his conquest, and, according to
107-1133, they disputed the possession of Gilead with the
Israelites. A similar attack upon Gilead by Nahash, king of
Ammon, was warded off by Saul, and was the occasion of his
elevation to the throne, according to the older source of the
Book of Samuel (1 S 111-11). Nahash 'showed kindness' unto
David, i.e. kept peace with him and paid his tribute, but his son
Hanun, trusting to the help of the Aram Beans of the adjacent
regions of Beth-Rehob, Zobah, and Maacah, revolted, and had
to be conquered by David (2 S 10MH 1228-31, i Ch 191-203).

389

spoil of this campaign David dedicated to Jahweh (2 8 8i2*=
1311), and the Ammonites remained tributary during the
rest of his reign and during the reign of his successor. Zelek
the Ammonite appears in the list of David's bodyguard (2 S 2337).
Solomon cultivated friendly relations by marrying a wife from
this nation (1 K 111), and this account is confirmed by the fact
that the mother of Rehoboam was an AmmoniteBB (1421-3i).
According to one recension of the LXX, she was the daughter of
Hanun, son of Nahash. For her benefit the cult of Milcom, the
god of Ammon, was established on a hill near Jerusalem (1 K
116. 7. 83, 2 K 2313). After the death of Solomon, the Ammonites
appear to have regained their independence, and to have re
mained free until they fell beneath the yoke of the Assyrians
along with the other small nations of Western Asia. The vic
tories of Jehoshaphat, Uzziah, and Jotham over them rest only
In
upon the authority of the Chronicler (2 Ch 20. 268 27).
B.C. 854, Ba'sa (Baasha), son of Ruhub (Rehob), with 1000 men,
came to the help of the king of Damascus against Shalmaneser ii., along with Ahab of Israel and ten other kings of
Syria (Shalmaneser, Monolith, ii. 96). In the reign of Jero
The

1 Ch

boam ii. (c. 760 b.o.), Amos denounces the Ammonites because of
the atrocities that they have committed in Gilead (Am 113).
in
B.C. 734, Tiglath Pileser ni. records that he received the tribute
of Sanipu of Bit-'Amman (Beth-'Ammfln), along with that of
Ahaz of Judah (Clay Tablet Ins., rev. 10). From Zeph 2W-, Jer
926(26) 49l-6( it appears that after the deportation of the Israelites
east of the Jordan by Tiglath PileBer in. in 734 (2 K 1629), the
Ammonites moved in and occupied their land. Sennacherib
Prism, ii. 62) records that he received the tribute of Puduilu
Padahel) of Bit-'Amman at the time of his invasion of Syria in
701. This same Puduilu is mentioned by Esarhaddon (Broken
'
Prism, v. 18) as one of the twenty-two kingB of the land of the
Hittites' who furnished building materials for one of his palaces.
In his place in a similar list of
twenty-two kings Ashurbanipal
names Amminadbi (Amminadab) (Keilinschriftliche Bibliothek,
ii. p. 240, 1. 11). At the time of Nebuchadrezzar's first invasion
of Syria the Ammonites assisted him (2 K 242). Subsequently
they joined a league against him (Jer 273, Ezk 2120.28), but
before they were attacked they managed to make peace, and
participated In his assault upon Jerusalem (Ezk 25 1 -7- 10). In
spite of this, many of the Jews took refuge among them at the
time of the siege, and Ishmael was incited by Baalis, king of
Ammon, to murder Gedaliah, the governor whom Nebuchad
rezzar had appointed at the time of the fall of the city (Jer
40H. 14 411O). The name Kephar ha-'Ammflnai in Jos 1624 (P), as
one of the villages of Benjamin, suggests that during the Exile
the Ammonites, like the Edomites, made settlements west of
the Jordan.
If so, this will explain the denunciation of the
exilic prophecy, Is 1114. As early as the time of Ashurbanipal,
two main divisions of the Arabians, Kedar and Nebaioth, were
menacing the old lands of Edom, Moab, and Ammon, and were
prevented from overrunning them only by the activity of the
Assyrian monarch. Ezk 25 anticipates that these 'children of
the East' will bring theBe three nations to an end (cf. Ob ]7);
and, as a matter of fact, after the Exile we find, instead of Moab
and Edom, Geshem the Arabian as the chief enemy of the Jews
(Neh 2J9 47 61-6). Ammonites are still mentioned, but they
seem to lead no independent national existence.
Tobiah, the
Ammonite who opposed Nehemiah (210-i9 43-7 617 134), bore a
name compounded with Jahweh, he and his son both had
Jewish wives, he was connected by marriage with the high
priest, and he appears regularly in company with Sanballat the
Horonite and the Samaritans. Apparently he had nothing to
do with the old land of Ammon, but was a resident of Kephar
ha-'Ammflnai (Jos 1824). No king of Ammon is named after the
Exile, and it seems probable that this people perished as a
nation, along with Moab and Edom, at the time of the Nabafcsean
Arabian migration. Survivors of these nations found refuge in
Judah, and gave rise to the problem of mixed marriages, which
caused Nehemiah and Ezra so much trouble (Ezr 91, Neh 131- 23).
Where Ammonites are mentioned in the later history, we have
merely an application of an old geographical term to a new race.
The AmmoniteB under Timotheue (1 Mac 56-S), and the Am
monites of Ps 837 and Dn 1141, are Nabatseans or Greeks living
in the old land of Ammon.

We must now endeavour to construct from these
meagre sources a picture of the religion of the
ancient Ammonites.
From 1K1115-83, 2K 23isf it
appears that Milcom was their chief national god,
as Chemosh was the
god of Moab, Kozai of
dom, and Jahweh of Israel. In 2 S 1230=1 Ch
202 the LXX reads Milcom instead of malcam,
'their king.' This is the reading of the Talmud
(*Abddd zara, 44a), of the old Jewish commenta
tors, and of most modern authorities. In that case
the passage reads, 'And he took the crown of
Milcom from off his head, its weight was a talent
of gold, and on it there was a precious stone.
It
David placed upon his own head.' From this it
that
Milcom
was
appears
represented by an idol of
human size which was adorned with the insignia of
like
other
ancient
royalty
images. In Jer 491*8,
also read Milcom instead of MT
LXX, Vulg.,
and
this
is
malcdm,
reading
undoubtedly correct,
'
so that the
Hath
passage should be translated,

Ex 23:21 enacts, ‘The firstborn of thy sons shalt thou give unto me,’ and contains no provision for redemption, such as we find in 13:13 and 34:20. The story of Abraham’s sacrifice of Isaac in Gen 22 (E) shows that child-sacrifice was practised in the early religion of Jehovah, but that the conviction grew in the prophetic circles that this should not be demanded of the nation. In spite of prophetic opposition, however, they continued to be brought (cf. 1 K 19:14, and Winckler, Gesch. Isr. i. 163, n. 3; 2 K 16, 2 Ch 28). Jeremiah repeatedly insists that Jehovah does not require these sacrifices (cf. 51:18-33), and this indicates that the popular conception they were part of His requirements. The Holiness Code (Lv 18:1) also suggests that Molech sacrifices were popularly regarded as Jehovah sacrifices. Ezekiel goes so far as to quote the law of Ex 23:14, ‘Thou shalt sacrifice unto Jehovah everything that openeth the womb,’ and to say that Jehovah gave this commandment in wrath to destroy the nation because it would not keep the good statutes that he had previously given (Ezk 20:24-25). These facts make it clear that Molech-worship was not the practice of Jehovah and that by the nation in general it was regarded as one form of Jehovah-worship. The absence of early prophetic polemic against child-sacrifice is, accordingly, to be explained by the fact that the prophets ascribed it to the heathen, while Jeremiah and Ezekiel, who hold the Deuteronomistic standpoint in regard to sacrifice, are obliged to specify that Jehovah does not require child-sacrifice, although He requires animal-sacrifice. If Molech-worship is ancient in Israel, then it cannot have been borrowed from the Ammonites in the time of Manasseh.

Another theory which identifies Milkom with Molech supposes that this cult was introduced into Israel by Solomon. This opinion makes its appearance as early as the Gr. versions, and has been the source of much textual corruption. It seems to be supported by 1 K 11:1-2, which speaks of ‘Milkom, the abomination of the Ammonites,’ as worshipped by Solomon after his marriage with an Ammonite wife (cf. 2 K 23:3, 1 K 14:21; and 1 K 11:11), which calls this god Molech. Granting the historicity of Solomon’s worship of Milkom, which is disputed by a number of critics, it appears from 1 K 11:11, 2 K 23:3, that the high place of Milkom stood on the ridge to the east of Jerusalem, i.e. somewhere on the ridge of the Mount of Olives; but the high place of Molech, according to all the OT references, was in the Valley of Hinnom (cf. 2 K 23:3, Jer 26:7; 19:22, 2 Ch 28:39). From this it is clear that Milkom and Molech were not identified by the ancient Israelites (cf. Baethgen, Beiträge, 15). The substitution of Molech for Milkom in 1 K 11:11 is evidently a textual error; the MT points without the article, and Lucian’s recension of the LXX reads Molech.

A third theory is that there was a primitive Semitic god, Molek, of which Milkom and Molech are local variants. Against this view is the fact that Milkom and Molech are not personal names, but titles, like Baal, ‘owner;’ Adon, ‘master;’ Marna, ‘our lord.’ There was no primitive Semitic god Baal, whose cult came down in the various branches of the Semitic race, but there was a multitude of Baalim who presided over various holy places and who were distinguished from one another as the Baal of the City, the Baal of the Place. These Baalim were different in functions and might have different personal names. In like manner there were as many Molek as there were nations, and there is no reason why the Molek of Ammon, or the Mólek of Israel, or the Mólek of Tyre, or the Mólek of Palmyra should...
be identified with one another, any more than why their human rulers should be identified because they all bore the name of 'king.'

Although there was no primitive god Mélek, it is probable, however, that all the various M'lakim of the Ammonians can be identified with one another, just as the Baalim bore at family resemblance, so that it is possible to draw inferences from the character of one M'lak to that of another. The Baalim were gods of nature. They manifested themselves in springs and streams and trees. They gave the fruits of the earth, and they were frequently offered with offerings of firstfruits. The M'lakim, on the other hand, were tribal gods conceived after the analogy of human rulers. They gave the fruit of the womb and, accordingly, they were worshipped with firstborn children and firstborn animals. Wherever we know anything of the cult of the M'lakim, child-sacrifice is its most conspicuous feature. When this rite was practised in Israel it was always in the name of the M'lak, even though this might be understood as a title of Jahweh. From Dt 12:29-31; 18:12-17; Ezk 15:3, 16:9, Ps 106:23, it appears that this sort of sacrifice was also offered by the Cannaanites, and this testifies by the inscriptions at Gezer, Megiddo, and Taanach, where the remains of sacrificed infants have been found in large numbers. Child-sacrifice was a conspicuous element in the cult of the Tyrian and Carthaginian Melkar, and of the Ammonites. These facts seem to show that sacrifice of infants was intimately connected with the conception of deity as M'lak, or ruler of the tribe; and it is probably warranted in thinking that wherever a god was called by this name this sort of sacrifice was celebrated in his honour. In the case of Milcom, accordingly, infant-sacrifice is probable, although this is never mentioned in the OT; and this opinion is confirmed by the fact that the closely related Moabites sacrificed children in honour of their god Chemosh (2 K 33).

In regard to the manner in which children were sacrificed we have only the analogy of Molech-worship to guide us. The title for the rite was 'making over children to the King by fire' (Lv 18:21-24; Dt 18:10, 2 K 16:17; 21:2, 2 Ch 33:2, Ezk 20:4). The same expression is used of 'making over' the firstborn to Jahweh in Ex 13:3-16; 34:19; Ex 20:1-17; Jos, 2 K 18:19; Ezk 12:21-25, etc., it appears that children were slain like calf or goat; and from Dt 12:29, 18:2, 2 K 17:1, Jer 34:17; 35:19, it is plain that their bodies were afterwards burnt in a place known as Typhath (Topheth, with the vowels of bosheth, 'shame'). Analogous rites are found among the Phoenicians and Carthaginians, and we may perhaps assume that they existed also among the Ammonites.

Besides Milcom there is no clear evidence that the Ammonites worshipped any other god. Jg 10:9 speaks of a god 'like unto the gods of the other nations,' but this is a late editorial passage. From Jg 11:24 it has been inferred that Chemosh was a god of the Ammonites as well as of the Moabites, or else that Chemosh and Milcom were identified; but it is now generally recognized that the section Jg 11:12-25 has nothing to do with Jephthah's dispute with the Ammonites. It is a fragment of a narrative of a dispute between Israel and the Moabites which has been combined with the Jephthah story by the compiler of the Book of Judges (cf. Moore, Judges, 423).

More can be said in favour of the view that the Ammonites worshipped a god called 'Am or 'Ammi. The name 'Ammón (Assyr. Ammán) is apparently a diminutive or pet-name from 'Am, as Shimshón (Samson) is from Shemesh. Ammon alone is never used as a tribal name, except in the late passages, Ps 83 and 1 S 11, where the Gr. reads ρέων οίων 'Αμμών. The regular expression is 'children of Ammon.' Even the ancestor of the race is not called Ammon, but Ben-'Ammi (Gn 19:8). 'Am means primarily 'father-uncle' in a polyandrous society, then 'paternal uncle,' then 'people.' The narrator in Gn 19:8 has chosen the meaning 'father-uncle,' and has derived from this the story of the incestuous origin of the Ammonites. Their ancestor, he thinks, was called Ben-'Ammi, 'son of my father's uncle,' so his father was also his mother's father. It is more likely, however, that 'Ammi was used here originally with reference to a god who was called the 'father-uncle,' or 'kinsman' of the tribe. This use of 'Ammi as a divine name is widespread in the Semitic dialects. In Heb. we find it as the first element of the proper names 'Ammiel, 'Ammilud, 'Ammihur, 'Ammisadab, 'Ammishaddai, 'Ammishaddah, 'Ammon, and as the final element in the names An'am, El'am, Ilhé'am, Jashobeam, Jokhe'am, Jeroboam, Rechab, Ithi'am, Jokne'am, Jokne'am, Jorké'am, etc. In Babylonia it appears in names of kings of the first dynasty, 'Ammitana, 'Ammisadda, 'Ammisadu, 'Ammisadu (or Ammemit), and in South Arabia in various proper names. One of the kings of Ammon mentioned by Asurbanipal bares the name Ammisadu (Ammisaduab), 'my father-uncle is generous,' whereas else 'Ammi is a name compounded with 'Am, and one and tradition in Ps 83:25 (read 'Ammón instead of 'Ammé,-its people'), makes Baalam come from the land of the Ammonites. Cf. Dt 23:9 f. Rechobam also bears a name compounded with 'Am, and he was the son of an Ammonite (2 K 15:26). On the basis of some of these facts, Dørenbourg, in RE 25 (1889) i. 123, proposed the theory that 'Am, or 'Ammi, was the name of the national god of the Ammonites. This theory is correct, if we regard 'Am as merely a title applied to Milcom by the Ammonites, as it was applied to Jahweh by the Israelites; but it is not correct if we regard 'Am as a separate deity. There is no evidence that there was a primitive Semitic god 'Am, any more than that there was a primitive Semitic god Baal or Milcom. 'Paternal uncle' is a title like 'father,' 'brother,' 'king,' 'lord,' that might be applied to the most prominent gods (see 'AMM, 'AMMI).

The word lllu, or El, which appears in the name of the Ammonite king Pudu-ilu (cf. Patah-El, 'God of the Ammonites' of the Ammonites, as it was applied to Jahweh by the Israelites; but it is not correct if we regard 'Am as a separate deity. There is no evidence that there was a primitive Semitic god Baal or Milcom. 'Paternal uncle' is a title like 'father,' 'brother,' 'king,' 'lord,' that might be applied to the most prominent gods (see 'AMM, 'AMMI).

The word lllu, or El, which appears in the name of the Ammonite king Pudu-ilu (cf. Patah-El, 'God of the Ammonites' of the Ammonites, as it was applied to Jahweh by the Israelites; but it is not correct if we regard 'Am as a separate deity. There is no evidence that there was a primitive Semitic god Baal or Milcom. 'Paternal uncle' is a title like 'father,' 'brother,' 'king,' 'lord,' that might be applied to the most prominent gods (see 'AMM, 'AMMI).
tive Semitic goddess Ashtart. From the mention of the gigantic sarcophagus of Og that was preserved at Rabbah (Dt 33:11), we may, perhaps, infer that ancestor-worship was practised among the Ammonites as among other branches of the Semitic race.

From the foregoing survey it appears that there is no convincing evidence of the worship of any other god than Milkom among the Ammonites. It would be rash, however, to infer from this lack of evidence, which is due to the scantiness of our sources, that Milkom occupied the same unique place in the lives of the Ammonites as Jahweh did in Israel; and to use this, as Renan did, as proof of a tendency to monotheism in that branch of the Semitic race to which Israel belonged. In all probability the Ammonites were polytheists, like their neighbours and near relatives the Moabites and Edomites, and it is merely an accident that we know the name of only the head god of their pantheon.

In regard to the rites of their religion we know practically nothing, except what we may infer from the analogy of the religions of kindred races. J. D. W._driver, in his 'Life of the Ammonites,' gives a list of their practices, in common with the Egyptians, Israelites, Edomites, and Moabites. In other respects probably their customs did not differ widely from those of ancient Israel. From Gn 19:29 Delitzsch (1864:212) infers that they were polytheists, and that they were characterized by an extreme lewdness that aroused the moral repugnance of Israel; and he appeals to Nu 25 for proof of this in the case of the Moabites; but Gn 19:29 is so evidently derived from a fanciful popular etymology of the names Moab and Ben-'Ami that no historical conclusions can be based upon it.

Literature.—Ewald, Hist. of Isr. (London, 1876), ii. pp. 205, 283, 389, iii. (1878), p. 54; Stade, Gt'Y (1881), i. pp. 119-129; Wissowa, Gesch. Isr. (3rd ed., 1882); Winckler, Gesch. Isr. (1885), i. pp. 218-219; Kautzsch, art. 'Ammon' in Riehm's REW (1884); MacFerson, art. 'Ammon' in Hastings' DB (1899); Bulb, art. 'Ammon' in PRS; Moore, art. 'Milkom' in KB; and the literature under Molech, Ammi in this work.

Amnesty.—The word is used somewhat loosely by modern writers with reference to several episodes in Greek history. Strictly and properly, it is the word used by writers of the periodical age to describe the resolution adopted by the Athenians after the fall of the famous Tyrants, when, in the summer of B.C. 403, a reconciliation was effected, through the mediation of the Spartan king Peisanius, between the oligarchical party of the city and the democrats of the Piraeus, upon the following basis:

'All persons who, having remained in the City during the oligarchical régime, were anxious to leave it, were to be free to settle at Ecdessa, retaining their full civil rights, and possessing full and independent rights of self-government, with free enjoyment of their personal property, etc. There should be a universal amnesty concerning past events towards all persons (τοις ἐπὶ παραλαμβανόμενοι μεταφωρέθηκεν πρὸς μὴν τις μεταμισθησάμενοι ἑξώτως), except the Thirty, the Ten (who were their successors), the Eleven (who had carried out their decrees of execution), and the magistrates (ten in number) of the Piraeus; and these should, besides, be entitled to give account of their official acts (τα ἀρχηγεία ἐκδηλώμενα) in the usual way' (Arist. Ath. Pol. 39 [Koenigs's tr.]; cf. Xen. Hell. ii. 4, 53, and references in Aristoph. Plat. 114; μεταμισθησάμενοι, εἰ δὲ Ὑφακς κατελθεί [Ἀρίστ. Ἀθ. Πολ. 39 [Koenigs's tr.]; cf. Xen. Hell. ii. 4, 53, and references in Aristoph. Plat. 114; μεταμισθησάμενοι, εἰ δὲ Ὑφακς κατελθεί])." All this was done with great deliberation.'

The children of the Thirty who were included under the amnesty are testified by Demosthenes (Or. 32) to have been ‘δέκα μὲν αὐτῶν ἐκεῖνα καὶ παλαθέντων, ὡς ὀλίγοι τοῖς δεκατέσσαροι ἐκ τῆς πόλεως ἔχοντας’; that is, in striking contrast with the practice usual in Greek political strife.

This agreement of harmony was ratified by the oath of the whole people, and for some years at least it seems to have been incorporated with the oath of office taken by members of the Council and the Helists—the senators swearing not to admit any information (ἀποτίμησις) or to allow any arrest (ἄναγγελος) founded on any fact prior to the archonship of Eukleides, excepting only in the case of the persons expressly excluded from the amnesty (τὰ πλῆθος τῶν φυγόντων); the dikasts swearing to neither to remember past wrongs, nor to seek any solicitation to do so, but to give their verdict in accordance with the revised code dating from the restoration of the democracy (Andoc. de Myst. 90: μην μηκέσθης, οὔτε ὁλίγοι πάσοιμοι, ψυχομάλαι δι κατά τούς κειμένους εἴσοδοι. See Grote, Hist. of Greece [vol. xii. ed. 1879], p. 410 et seq.).

The amnesty, as above described, seems to have been renewed two years later with the secessionists at Eleusis (Arist. l.c.; Xen. Hell. ii. 4, 43; καὶ ἀνακατείνετο δρόκος ἢ μὴ μηκέσθης ἐκεῖ καὶ νῦν δομήν πολιτείας προστάτησας καὶ τοῖς ἐπίστευσεν ἑαυτῷ). The energetic but high-handed action of Archilochus was a powerful factor in maintaining the amnesty. When one of the returned exiles began to violate the agreement, Archilochos hailed him before the Council, and persuaded the Councillors to put the matter to trial (Arist. Ath. Pol. xxii. 1-2), telling them that they had now an opportunity of showing whether they wished to preserve the democracy and abide by their oath.

Archilochos also carried a measure giving every one the right to raise a special plea in bar of action (παραγραφή). See Isocr. Orat. xviii. 2: ὅτι τοὺς ἀνακατεινόμενοι τοῖς δρόκοις, ἐξετάζω τὰ φύγαρια παραγράφασέν τις... δ᾽ οἱ τολμώτως μηκέσθηκέντες μὴ μόνον ἐπιτροποιήτους ἐξελήματος κ.τ.λ.).

It must be noticed that the terms of the above events by the classical writers are αἱ δικάσεις, or αἱ δικαλεῖσθαι, αἱ δικαλεῖσθαι, αἱ χρυσά—"the reconciliations," the 'oaths'; while for the specific content of the oath the phrase μηκέσθησιν, 'not to remember past wrongs,' is ordinarily used by the classical writers corresponding to the phrase ἄπαντα πάντα ἄνουσα τιμὴν ἔχειν (used in Arist. Ath. Pol. xii. 8). Compare the account given by the Latin compilers, e.g. Corn. Nep. Thra. iii. 2: 'Iegem habui, sit ne ante mea sancta rurum mulsumare, omnes fugae uredo obstriguente, discordiorum obviam esse rem.\[...\] The Greek word ἰνακάτισθαι, 'to reconcile,' is first used in Val. Max. iv. 1: 4; 'nunc obliviscatur, quam Atheniensis ἱνακάτισθαι voci'et; and by Plutarch (Oe. 12) Κιλικαί: ἢ ἵνακατισθήσῃ Ἀθηναῖκες ἄνωθεν Κιλικαῖς προσφέρειν. (cf. Plut. Plut. Pol. 17: τὸ φύγαρι τὰ πρ=value τοις ἐκ το/hash: "Atheniensis, etiam sub eō delictorum publicorum decreta est de exemplo Atheniensium"). It was probably the classical phrase ἱνακάτισθαι, which was in use in Ciceron, Ant. v. 41: "Quoniam, ad Primum Philippicum (Philipp. i. 1: 1) 'In quem templo, quantum in me sit, sed fundamenta pacis, Atheniensiumque renovati vetos exemptione: gravem quemque verbo discorsius usum civitates ille, atque omnium memoriam discordiarum obviam sempiterna defensiones esse'—where, however, the former 3d reads 'saeculis' before 'aetas'.

A similar example of an Act of oblivion, though no details are known, is furnished by the restored democracy of Samos in B.C. 411 (Thuc. viii. 73: "καὶ τοιῷδε μὴν ταῦτα ἔπετε τοῖς πόλεοις, τρεῖς δὲ τοῖς αἰτώτατοι φυγῆ ἔξωσαν" τοῖς 5 ἕλληνω ὁ μηκέσθηκτος δημοκρατοῦσα τοὺς ἐκ \\[...\] A new attempt to re-establish harmony on the basis of amnesty was made at Megara in B.C. 424 (Thuc. vii. 2).

It is clear that the above Acts of oblivion differ from those examples to which the word 'amnesty' is also applied by modern writers—that is to say, those resolutions, of which several instances are recorded, by which the government of Athens resolved to forgive past wrongs, either at the instance of the wronged, or at the instance of its enemies, or at the instance of any other party, or at the instance of the entire body of the Greeks (cf. Cic. Div. de Fin. ii. 1).
known from Greek history, taken in times of great danger, with the object of stilling disputes and uniting all forces in defense, by which political exiles were recalled and civic rights conferred upon those who had been partially or wholly disfranchised. The Athenians adopted this measure shortly before the battle of Salamis (Andoc. de Myst. 107; έγερεν των τη φρονησις καταλεξουσι και των άντιμων πνευματις. Cf. Arist. Ath. Pol. 22: καταλεξουσι πινακται διηνεκεσι ως της Δια της στερεουσι). Again, a similar resolution was passed at the time of the siege of Athens by Lysander, on the motion of Patrocles (Andoc. Or. c. 73; έτει γαρ αλ ιδία διεσθεράγαν κη πνευματα έγενετο, έσοδευσαν περι και σεισαντα των ενιστια πνευματις; see § 77 for the full text of the decree). A third example is furnished by the proposal of Hypereides after the defeat at Charonea, that exiles should be recalled and public debtors and other δανειοι be restored to their civil status on condition of military service (Lyscurg. Locr. 41; Homer. Iliad. 29; Demost. Or. xxvi. 12: έτει γαρ έντερετη αγαφης, των περι Χαιρωνειαν ανθρωπων των Ήλληνων γεγονων... έσοντων των ενιστια πνευματων, άν ως εμοιοισκεται έσπασται υπερ της θανατου των αθετησες). The penalty thus incurred may be added the measure of Solon (Plut. Sol. 19), which restored civil rights to all who before his archonship (b.c. 594) had been visited with disfranchisement, with the exception of certain classes of persons whose need not here be specified. Such acts of grace were known with reference to individuals, e.g., the recall of Alcibiades (Xen. Hell. i. 4, 11, his return in b.c. 408; the vote of recall actually passed in b.c. 11, Thuc. v. 57) and of Demosthenes, b.c. 323 (Plut. Dem. 27), as well as of the historian Thucydides—to take only conspicuous examples in Athenian history.

Such acts of grace or pardon on the part of the sovereign people in reference to individual offenders, comparatively small groups or classes are clearly different in their nature from Acts of obligation, where, in Greek history at any rate, the sovereign body itself has been sullied in twain upon a conflict of possible evils concerning the forms of government. Both, again, are to be clearly distinguished (and the confusion is not uncommon in the books of reference) from what the Greeks called δόξα, which corresponds to our Bill of Indemnity. Such δόξα or guarantees against penal consequences were a necessary feature of any privilege that did not properly belong to his status, i.e., to enable slaves, resident aliens or disfranchised citizens to perform those higher functions which were part and parcel of the notion of civic obligation. It was also necessary before a proposal for the removal of atimia or disenfranchisement (Dem. Or. xxiv. 47: άλλος ενεπτυχας, ως και περι των αντιμων εν τω φιλαθλου και αθετησες ενιστια, και των ενεπτυχας των εφημεριων ενεπτυχας, των σωστων των καθημεριων ενεπτυχας, ως της δοξας δεδομενης, και της της ελασευσες ενεπτυχας. Cf. Plut. Dem. 180-183, and i. 32). A vote of δόξα also guaranteed informers against punishment for crimes in which they might have been participants, but their evidence must be truthful. In general, δόξα was a preliminary surrender of specific rights of the State in favour of an individual for a particular purpose (see Goldstaub, De δόξαις notiones et usu in loco). But we must distinguish, then, the following three categories: (1) δόξαι, indemnity for acts which involve or may involve penal consequences; in general, prospective; only when retrospective does it coincide in practical effect with amnesty. (2) Pardon, in cases in which the penal consequences are already in operation. In this sense the word 'amnesty' is incorrectly used, as above explained. The Greeks apparently possessed no single term to cover this sense. (3) μη μερισσακον (= Lat. oblius and late Gr. ἄμφοτερα; Eng. amnesty' in its correct use), an Act of oblivion, or refusal to make the publication of matters of fact with a view to punishment.

AMPHIAROUS.—A seer and, along with Adrastus, the chief hero of the legend of the Seven against Thebes. He had early become the subject of heroic legend, and his character was portrayed in legend in Argos as well as round about Thebes. These local legends had been, too, at an early date united to the Theban cycle of legends by the two Homeric epics, 'The expedition of Amphiarous' and 'The Thebaid.' But his cult is older than the legend.

Amphiarous was worshipped in the Peloponnesus (Sparta, Pausanias, iii. 12, 5; Argos, Pausan. ii. 15, 23; Phlius, these examples 5, 7; and the colony of Byzantium, PhG iv. 140, 16, 45, and especially in Oropus near Thebes, where his sanctuary has been excavated (Pauly-Wissowa, i. 1893 sqq.)). He was worshipped as a god of the lower world, often at his own grave, where he gave oracles. That is the original form of the belief regarding him. This is the reason, too, why he is a seer in the heroic legend, and why he does not die but descends into the depths of the earth.

As seer, Amphiarous was genealogically connected with the famous seer Melampus (Homer, Od. xv. 225 ff.); and later with Apollo (Hygin. Fab. 70, 128). Argos was regarded as his home. An all but forgotten legend represents him as an Argive king and enemy of Adrastus, whose brother Pronax he kills. Adrastus flees to Sicyon to his grandfather Polybus, but returns victorious and makes peace with Amphiarous. The latter marries Eriphyle, the sister of Adrastus; and both parties are brought to a decision. When Polyneices was seeking allies for the expedition against Thebes, Adrastus his father-in-law bribed Eriphyle, who compelled Amphiarous, against his will, to march with them (Pindar, Nem. ix. with Scholium 90 and 32; Horace, v. 67; Hygin. Fab. 73). A later version of this incident which is to be regarded as detached from the epic Thebaid, related that Amphiarous concealed himself in his house in order not to be compelled to take the field against Thebes, where he knew he must die, but was betrayed by his wife Eriphyle, who had been bribed by Polyneices with the necklace of Harmony. Thus did Eriphyle become guilty of the death of Amphiarous, who at his departure instructed his youthful son Amphiloctus to wreak vengeance on Eriphyle for his deed (Homer, Od. xxv. 243 ff. with Scholium on Sophocles, Elec. 863 with Scholium; Apollodorus, Bibliotheca, iii. i. 60 ff.; Hygin. Fab. 73). This leave-taking was represented on the Cypselus chest in Olympia (Pausan. v. 17, 4); and the picture on the Corinthian bowl (kopia) corresponds with it (Monumenta d. Inst. x. 4, 5).

In Nemea also, which lies on the road between Argos and Thebes, there were legends of Amphiarous, traces of which have been preserved in the legends of the founding of the Nemean Games, especially in the 3rd Hypotheseis in Pindar's Nemean Odes; Aelian, Var. Hist. iv. 5; Pausanias, iii. 12, 11, 15, 2; Apollodorus, Bibliotheca, iii. 6, 4.

In the war against Thebes, Amphiarous slays the powerful Theban hero Melanippus (Herodotus, v. 67; Pausanias, i. 18, 1). But he cannot with-
amplyotony
stand Periclymenus, and flees from him; however, as he
about to stab him in the back, Zeus divides the earth with a lightning flash, and
sinks Amphaius with his chariot alive into the
depths. This tradition is a unity, and thus prob-
ably derived from the epic Thebaids (Pindar, Nem.
iv. 14; Euripides, Supp. 225; Apollodoros, Bib-
lithos, ii. 17).

There are mirrored in these legends struggles of
the time of the settlement of the Greek peoples in
Argos as well as round about Thebes. The people
who worshipped Amphaius had brought his cult with
them to Argos, and from there migrated and moved
northwards. It was preserved between Attica and Boeotia.

The historical recollections in connexion with the cult,
which remained ever living, have provided the
material of the legend and determined its character.

literature—Welcker, Epischer Cyclos, ii. 250 ff.; Bethe,

1900 ff. E. Bethe.
amphictyon.—An amphictyon was a
union of different cities or peoples, centred in a
temple and dedicated to a common
wealth god. It had a common
religious duties. The name is derived from
ἀμφικτίων, (with a variant form in later times,
ἀμφικτων), which, with its equivalent περικτίων,
is used by early writers (Homer, Pindar, Thuc.
describes in the sense of "dwellers round.
the word ἀμφικτίων is not expressly defined by
Greek writer; it is not frequent in the classical
authors, although the substantive ἀμφικτίτιος
and the adjective ἀμφικτικός are often used.
The ideas attached to these words were coloured
by the history and constitution of the Delphic
amphictyon, and we need not assume that all
amphictyonic unions were similar in organization
or function. Many local unions in early times
which were formed on a religious basis, and would
fall within the definition given above, are not
expressly described as amphictyonies. This may
be accidental, for some amphictyonic unions are
mentioned only once in ancient literature, and
there were primitive religious leagues, which did
not survive in later times, that seem to have
possessed the characteristics generally regarded
as amphictyonic, and we know of no essential
difference which should exclude them from the
present survey.

A specific form of union which can be traced
in the earliest times is the union of people
of kindred race within a continuous area round a
common temple.

Such a federation is perhaps implied in the
beginning of Odyss. iii., where the men of Pylos
in their companies feast and offer sacrifice to Poseidon.
So Strabo records (viii. 345) that the
Triphilians met at Samicum in the grove of the Samian
Poseidon, had the sacred truce proclaimed, and
united in sacrifice. So also the twelve Ionian
cities of the Peloponnesus, (which were the Ionian
migration, combined in a religious league centred
in the temple of Poseidon at Helice (Strabo, viii.
334), and on this league was modelled the federation
of the Ionian colonies in Asia. Strabo (ix.
412) refers to the "amphictyonic" league of Oin-
chus, whose meeting-place was the grove
of Poseidon in the territory of Halliartus, founded
perhaps before the immigration of the Boeotians.
The Boeotians, after their conquest, celebrated at
the temple of Ionian Athenæ, in the plain of
Coronea, the festival of the Panhellestia (Strabo
ix. 411); and we may assume that their league had
an amphictyonic character. It may have been the
original basis of the political federation of later
times.

Strabo (viii. 374) also records an "amphictyony"

of Calauria, an island off the coast of Troezen.
This met, probably at a festival period, at
the temple of Poseidon (which was always an asylum),
and included the following cities: Hermione,
Epidaurus, Aegina, Athens, Frasiea, Nauplia, and
the Minyan Orkomenus. At a later time Argos
and Sparta took the place of Nauplia and Frasiea.

This league combined states which were not neigh-
bours.

Whether it had any objects other than
religious we do not know; but it is possible, as is
generally assumed, that it was a union of sea-
states, designed to secure intercourse by sea.

The amphictyonic league of the Peloponnesus became so important from its connexion with
Delphi, was originally a combination of different
races (not cities), united in the worship of Demeter.

Its history will be studied in detail below.

There are possible references to an amphictyonie
of Dorian states centred in Argos (Paus. iv. 5, 2;
Plut. Parall. 3), presumably meeting at the temple
of Apollo Pythaeus. The allusion in Pindar (Nem.
v. 44) to the festival of the "amphictyonies" in the
grove of Poseidon is held by some to imply a
Corinthian amphictyony, but the word was also
used in a general sense of a religious league.

It has been suggested that we should assume a
Euboean amphictyonie meeting in the temple of
Amarynthus of Poseidon, as there is evidence of the Euboean cities combining
in a festival there (Strabo, x. 448; Livy, xxxv. 39).

Of these religious leagues centred on the mainland of Greece, those meeting at Samice, Helice, Corona, and Amarynthus are not expressly
described as amphictyonies. Of the federations of
the Greek colonies, in the Aegean or in Asia, we have warrant for calling only that of Delos an
amphictyony. This league from a very early date
united the Ionians of the islands in the worship of
Apollo, and its history will be considered below.

There are other leagues which have amphictyonic
characteristics. The twelve Ionian colonies of
Asia Minor (of which a list is given in Herod. i.
142) met at the Panionium, a precinct on the
promontory of Mycale dedicated to the Heliconian
Poseidon, and celebrated a festival called Panionia
(Herod. i. 148; cf. Strabo, vii. 384; Diod. xvi.
49).

Of these religious leagues centred on the
Peloponnesus, the Peloponnesian had also political objects,
and the meetings at the Panionium were used for
the discussion of questions of common policy and to
promote joint action (Herod. i. 144).

There was also a place of common festival for the Ionians
(Thuc. iii. 104; cf. Dionys. Hal. iv. 25, who says
the precinct of Artemis was the place of meeting,
and Diod. xvi. 49, who says the Πανίονιον was trans-
ferred from the Panionium to Ephesus). The
grove of Poseidon at Tenos seems to have been the
site of a Πανίονιον (Strabo, x. 487).

The three Doric cities of Rhodes (Lindus, Ialyus, and Camirus), Cos, and Cnidus, with
Halicarnassus (which was afterwards excluded from
the league) were the Ionian promontory at the temple of Apollo (Herod. i. 144).

Dionysius (l.c.) says that these Dorians and the
Ionians meeting at Ephesus took the great
amphictyony as their model, and attributes to their
leagues, besides religious functions, powers of
jurisdiction and control of policy for which we
have no evidence elsewhere.

The religious leagues in Greece and the colonies
which come within the definition of an amphictyony, as given above, have been mentioned. It
is possible that this was the development of
federations in early times of which all trace is lost.

Before discussing the Delian and the Delphian
amphictyonies, each of which had a special charac-
ter, it will be best to consider the general functions
of such religious leagues.
It is clear that the amphictyony was a primitive form of union, the origin of which in all probability preceded the coming of the Achaeans invaders. The gods whose temples supplied the meeting-places are for the most part the gods of the earliest inhabitants. Religion appears at Samiceum, Helice, Oncheus, Calauria, and the Iatimus (if we interpret Findar's allusion as showing the existence of an amphictyony), and at Mycale and Tenos. At Pylée, Demeter was the presiding goddess. The primary purpose was the common worship, at set times, of the gods; and the offering of a common sacrifice and the celebration of a common festival were essential elements. (Terms like τα Παναγίωτα, τα Πανώτα, τα Ἐφέσια, τα Δήμη might denote the festival generally, or the sacrifice; cf. Strabo, viii. 384, θεωρεῖ τε καὶ τα Πανώτα.) At the meeting (παναγίωτα) a sacred truce (ἀθηνεία) was proclaimed. The cities or peoples participating sent sacred envoy (θεωρὰ, in some instances denoted by special titles, Παναγίωτα, Δήμαρχοι), but usually the ordinary citizens flocked to the gatherings. Usually there were athletic and musical contests, and it is possible that the great games of Greece had their origin in amphictyonic meetings (see Gilbert, Ὁριζόντια, ii. p. 400). The Delians and the Delphians assumed the office of judge, and the Ionians were encouraged, at any event, to attend and perform sacrifices in the sanctuary of Delphi. Political purposes may have moved them, but it is probable that their choice was partly determined by the desire to represent their league as an amphictyony, centred in what had been a holy place of the Ionian race, of which Athens claimed to be the natural head. At Delos the meetings of the allies were held, and the federal funds were stored. With the growth of Athenian domination and the transfer of the treasury to Athens (in 454), Delos lost its importance; indeed, in 426-5, the Athenians purged the island and established a great festival, to be held every four years. Whether the amphictyony had hitherto served any political purpose which it might be failed to it as still existing. Thus, although the temple and its funds were controlled by Athenian magistrates (the earliest direct evidence refers to the year 434-3, CIA i. 283), these bore the title Ἀμφιχτυόνες or Ἀμφιχτυόνες Ἀθηναῖοι (BCH vili. p. 283). The probable explanation of this name is that the title had at some time been borne by the representatives of other states, and that although (with one or two exceptions in the 4th cent.) only the Athenians appointed such magistrates, the fiction of an amphictyonic government was kept up because knowledge of this was based on inscriptions; the only allusion to such officials in literature is in Athenaeus, iv. 173, ἀπὸ τῶν Ἀμφιχτυόνων κήμων. The amphictyony of Delos therefore ceased to be a religious union of independent states, but became an instrument of Athenian supremacy, so that its history is bound up with the varying fortunes of Athens.

The festival (Δήμη) was celebrated in the spring of the third year after the Olympiad. (A lesser festival took place every year.) It was regulated and presided over by the Athenians (Aristotle, Ath. Pol. 64. 7, refers to it as if it were an Athenian festival); the Athenians sent a θεωρὰ in the sacred ship, and at every celebration an offering
of a gold crown was made to Apollo (Άμφικτυόνοι θεοί) in 428-427, and from that year onward recorded in the inventories, the number of celebrations can be estimated. The festival was modelled on the great Pan-Hellenic festivals, and was doubtless open to all the states of the Aegaean, possibly to all the Greeks. To the old athletic and musical contests of the Panagion added for the order of proceedings see Plut. Nic. 3. Banquets concluded the festival, at which the Athenians served the tables, and hence bore the title of Ελευθραί (Athen. iv. 173). The ceremony took place in 425, and was probably the occasion of the magnificent θεωρία of Nicias (Plut. Nic. 3; others attribute this to 417). The Delians seem to have resented the magnificence of the Athenians, and in 422 the Athenians expelled them from the island (Thuc. v. 1), intending, no doubt, to make it a mere appanage of Athens. But in 420, at the bidding of the Delphian oracle, they were restored.

The festival was celebrated every four years during the Peloponnesian war. An inscription of 418 (P. del. I. Suppl. 290), states that the Delian procession in sharing in the administration of the four Λήμνων Λειστακτικά (for whose title this is the earliest definite evidence). After the fall of Athens, Delos regained its independence (the fragment of an inscription, I. E. G. A. 91, probably refers to this); but at the same time, the number of states represented at the annual festival was decreased by the Delians, and to this the Athenians still sent their θεωρία (Xen. Hell. iv. 8. 2).

Soon after the battle of Cnidus, when the Athenians were striving to re-establish a federation of sea-states, they seem to have regained the control of the Delian temple (C. I. A. iv. 2. 813b), and the festival was renewed probably in 338 (in the 4th cent. its date was changed to the second year of the Olympiad). The Athenian control was interrupted for a time (the banishment of Delians recorded in C. I. A. ii. 814 may be connected with this), and probably the festival was omitted in 380; but with the foundation of their second confederacy the Athenians were again masters of the Aegaean. The inscription containing the accounts from 377 to 374 (known as the Sandwich marble, C. I. A. ii. 814) throws much light on temple property and administration. From 377 to 375 the sacred property was administered by four Αμφικτύονων Άμφικτυών, in 374 five Athenian commissioners were appointed, and five Άμφικτυόνων Άμφικτυών. This recognition of the allies is consistent with the principles of the confederacy, but in only one other inscription do the Andrian commissioners appear (B. C. H. vii. 367), and the Athenians, sided by Delian subordinate officials (Βουνός Δημοκράτεις καὶ λεγόμενοι  mentioned in an inventory of 364-3, B. C. H. x. 461), continued to administer the temple and the sacred property. The festival was regularly celebrated with the usual offerings of a colossal figure. The resentment of the Delians was manifested in the banishment (probably about 350) of an Athenian partisan (C. I. A. ii. 116b); and, in 345-4 or 344-3, the Delians appealed to the arbitration of the Delphian or the Argive confederacy to resolve the conflict (see below, p. 308). The decision was favourable to the Athenians; even after the collapse of her power, Athens retained her control of Delos until at least 315. Before 308 Delos was independent, and a nominal amphictyony had come to an end. (For date, see von Schöfer in Pauly-Wissowa, iv. 2482).

The Delphian amphictyony.—The chief amphictyony is usually referred to by modern writers as the Delphian, or the Pythian, because in historical times Delphi was its most important place of meeting. It met also at Anthea, near Thermopylae. The ancients regard it as the amphictyony, and allusion to it are usually connected with the substantive 'Αμφικτυόνοι or the adjective 'Αμφικτυώνος (with σύνοδος, σύστημα, συνήθως), and the collective substantive 'Αμφικτυώνας is comparatively rare (Dem. vi. 19, xi. 4). The substantive Λειστάκτικος is used either of the amphictyonic peoples collectively, or of their representatives at the amphictyonic meetings, or of the actual council of Hieromnemones.

Its early history is legendary (Strabo, iv. 420, τὸ ᾽Ανθέα μὲν ὧν ἀντιτιθείται), and the legends are variously interpreted. The foundation was ascribed to an eponymous hero, Amphictyon, usually described as the son of Deucalion and brother of Hellen (Dionysius, ii. 25, as the son of Hellen), some 300 years before the Trojan war. He, being king at Thermopylae, united the neighbouring peoples in the festival of Pylaia. Other accounts explained the name Λειστάκτικος as meaning the 'neighbouring peoples,' and connected the institution with Delphi (for the authorities see Bürgel, Die pythiatische - delphische Amphictyon, 1880, 4. ff.). The Delian title, as the place of origin, were reconciled in the legend that Acisimus, summoned from Argos to help the Delphians, instituted a συνήθων at Delphi on the model of that at Pylae, and organized the constitution of the amphictyony (Schol. to Eur. Orest. 1098 ed. Str. 190). The establishment is recorded until the first Sacred War (B. C. 596), when the amphictyonic peoples are said to have attacked Crisa for injury done to Delphi and transgression of the amphictyonic ordinances (Euthenes, ii. 107-8; Strabo, iv. 419). After the destruction of Crisa, the Pythian games were instituted.

The truth underlying the legends may be somewhat as follows. At a remote period, probably before the great migrations within Greece, the peoples then settled near Thermopylae combined in the worship of Demeter, the festival possibly being connected with the harvest. That Pylae was the original meeting-place is probable on the following grounds. The cult of Demeter Amphictyonis was always maintained at Pylae; the meetings of the amphictyony, whether at Pylae or Delphi, bore the name Πυλαία, and Πυλαίων was the title of the official envoys; the peoples in after times belonging to the amphictyony were largely those belonging to the Pylaian league; and the Pylaia were those held at Pylae. It is a matter of speculation which of these peoples originally belonged to the amphictyony. There were, no doubt, fresh accessions consequent on the migrations, and, by the end of the 7th cent., probably most of the peoples in eastern Greece between Thessaly and Laconia had been admitted. The Thessalians were presidents. At some period before the first Sacred War, Delphi had been taken under the protection of the amphictyony, and became a regular place of meeting. (Legend places this at a very early date, and the tradition of the Greeks undoubtedly set it before the Sacred War. Bürgel argues that the war was not conducted by the amphictyony, which, he thinks, was opposed to new states after the war). The war with Crisa marks an epoch; henceforth the history of the league rests on surer information; it is more closely identified with Delphi, whose shrine and property came under the protection of the amphictyonic council, which also had the superintendence of the Pythian festivals. (a) Members.—The amphictyony was a league of twelve peoples (βουνός, called γέρον by Paus. x. 8. 2; Strabo, iv. 420, wrongly speaks of Πυλαία). Whatever changes in the composition of the amphictyony took place, the number of the peoples was constant. The earliest list that has come down to
us is that of Aeschines (ii. 116), who professes to give twelve names, though only eleven appear in the text. These are the Thessalians, Boeotians, Dorians, Ionians, Perrhaebians, Magnetians, Locrians, Oeaeans, Phthians, Malians, and Phocians. It is generally believed that the Dolopes should be added to complete the list, and that Aeschines describes as Oeaeans the people who more usually appear as Aenians (Herod. vii. 132, in a list of nine peoples who submitted to Xerxes, cites only amphictyonic peoples). From 346 to 345 the Macedonian King took the place of the Phocians, and the Delphians were admitted, room being made for them by uniting the Perrhaebians and the Dolopes as one people. (An inscription gives us a list of the peoples in 344-5. See E. Bourguet, L'Administracion financiere du sanctuaire pythique au IVe sicle avant Jesus-Christ, p. 145 ff., and BCH xxi. p. 322.) The subsequent changes after the Aetolians were admitted need not be followed here.

While there was at all periods a conservative adherence to the principle that races and not states should be members of the amphictyony, a measure ascribed to Acrisius, and certainly adopted at an early date, regulated the participation of separate states in the amphictyonic council. Macedonian and Greek states were included; the people admitted to membership had two votes (Aesch. ii. 116), and in some cases these votes were divided between different branches of the same race (e.g. the Locrians and the Malians), or between states belonging to the same race, and on their behalf Athens and one of the Euboean states; the Dorian votes were divided between the Dorians of the metropolis and the Dorians of the Peloponnesus, or at another time between the Lacedaemonians and some other state (cf. Aesch. ii. 116, p. 197 ff.); and the Boeotian votes were divided among the different cities of Boeotia (Thebes being usually represented).

The exclusion of a particular state from the amphictyony might be effected without diminishing the representation of the race to which it belonged, as its vote could be transferred to another state. We have no information as to how the apportionment of votes to the individual states or sections of the people was effected. While the members of the amphictyony were entrusted to the representatives of the states qualified for the time to vote, other states not so represented, or even states which had no right to a vote, might take part in the amphictyonic meetings by means of embassies.

(b) Meetings and representatives.—The meetings were held twice a year, in spring and autumn (ναυα εεαρθα και μεταραφαρ), Strabo, ix. 420), and on each occasion at both Anthela and Delphi. Extraordinary meetings might be called (Aesch. iii. 124). Any members of the amphictyonic peoples might attend; sacred embassies (θεοπαλικν) were probably sent by the amphictyonic peoples, and there were also Πυλαγοροι in some writers Πολαγοροι (in some writers Πολαγοροι) (when Athens was the only state, or see is the only office, to which the interests of the states or peoples qualified to vote, from the 3rd century Αγορατολοι seem to have taken the place of the Πυλαγοροι).

There is some uncertainty as to the respective duties of the Πυλαγοροι and the Τεσσεραμοι at different dates. In the early years of the 5th cent., the Πυλαγοροι are represented as the executive and deliberative power (Herod. vii. 213; Plut. Them. 25, 26, not mention any other officers); towards the end of the century we can trace Τεσσεραμοι (Aristoph. Nub. 683). Inscriptions and literary evidence (the account of the proceedings of the Delphic Amphictyony in Aeschines ii. 116 ff. is our chief authority) show that in the 4th cent., the Hieromnemones (who were twenty-four in number, two for each amphictyonic people) formed the council of the Hieromnemones. Pyrgaiors were still appointed, but had not voting power, and were perhaps limited in number. The amphictyony sent three to Delphi in 339. The method of appointing these officials may have been left to the discretion of the different states. At Athens we find the Hieromnemones appointed by lot (Aristophanes, Lec.) and the Pyrgaiors elected. Prominent statesmen were sometimes appointed (e.g. Demosthenes and Aeschines), perhaps to watch over the political interests of their state at the time. In the narrative of the meeting in 339 (Aeschines, Lec.) it would appear that the Hieromnemones formed the council of the amphictyony, and that the individual Hieromnemones might seek advice and support from the Pyrgaior of his state. Thus in the case of Aeschines, who was connected with the council, it is said to the council of the Hieromnemones when the other Pyrgaior had withdrawn, and after defending the cause of Athens, desired before the vote took place, of the Hieromnemones, all power, deliberative, judicial, and executive, and to be vested, and it was apparently sometimes described as ου και τους Πυλαγορους (IG vii. 651, 1. 41; cf. Aesch. ii. 139). The president is referred to as ου των γνωκων ηπειρονεχει (Aesch. iii. 134). The decisions of the council were made in the ρεπα δεφετων. It was open to the council to call an εκτελεσια of all who were attending the meeting (ου συμβουλευης και την ηπειρονεχει, Aesch. l.c.), presumably to announce the course of action proposed, or to ratify the decision of the council.

For the special boards of νομικος and νομικα see below.

(c) Competence of the amphictyony. — It is difficult precisely to define the competence of the amphictyony. There is no general statement in ancient writers that can be relied upon (Dionys. Hal. iv. 25, vaguely exaggerates), and its powers, so far as they cannot be inferred from the original aims, must in the main be deduced from the historical instances of its activity. It should be noted that the influence of the amphictyony and the amphictyony varied greatly at different periods. As most of its members were politically insignificant, states such as Athens and Sparta at the height of their power had little respect for its authority. On the other hand, when a strong state commanded a majority of votes and so became predominant in the council, it could use the amphictyony for its own ends, and find pretexts to justify an extension of amphictyonic action. It is possible here to give only broad results with detail.

We may assume that, probably from the first, the amphictyony had two main objects: the union of different peoples for common religious purposes, and the common observance of certain rules affecting the relations between those peoples. Two causes combined to increase the importance of these objects. As the amphictyony came to include representatives from most of the peoples of Greece, it tended to assume a Hellenic character, and when Delphi was the only sanctuary, and became its most important meeting-place, the universal recognition of the oracle and of the cult of Apollo increased the prestige and importance of the amphictyony. It is not always easy to distinguish the relative spheres of activity of the primitive amphictyony, but it must be remembered that the oracle, though under the protection of the amphictyony, was independent, and many institutions or observances which owed their origin to Delphi should not be credited to the amphictyony.

The members of the amphictyony united in common religious observances at both Anthela and Delphi. At Anthela they worshipped Demeter (with the title Αρμενοεις or Πολαις, and the hero Amphictyontes. Thus both the anthela and Delphi, in spring and autumn protected by the proclamation of a holy truce (εξερευση); sacrifice was offered, and probably a festival was celebrated with its usual accompaniment of contests and market. An important inscription (Claz. ii. 545) gives us much information as to the relations of the amphictyony with Delphi. The inscription dates from B.C. 380, and the assertion of the amphictyonic rules and duties may mark a recent restoration of the power of those unions, at the protection of Sparta, then at the height of her power (Björk, op. cit. p. 529; Bourguet, op. cit. pp. 158-9). At Delphi Leto, Artemis, and Athena Pronaia (or Pronia) were associated with Apollo as Amphictyonic deities (Aesch. iii. 108, 111), to whom sacrifice was offered at the spring and autumn meetings.
In the procession preceding the sacrifice, among other beasts of great price was led the beast of the Phocian line, had been paid and the temple at Delphi was finished, their work probably ceased. Before 310, and possibly as early as 326, they were no longer acting. Inscriptions thus enable us to realize in detail the activity of the amphictyony in the case of the Phocian line, and in the grants of iriXeia and dtruXfo to the guilds of Dionysiac artists (CIA ii. 551), at some date after 279. The lists of amphictyony. may be found in the inscriptions of the Sacred Land. It is possible that there were kouk νομιμα or νομι των Ἑλλήνων other than those mentioned by Aeschines, which were sanctioned by the amphictyony, (see Bürdel, op. cit. p. 198, for certain regulations, possibly not demonstrably amphictyonic). There are instances of charges being brought before the amphictyony which may have been based on the supposed violation of general rules, though we lack definite testimony. Among the historical incidents quoted in this connexion are the condemnation of the Dolopes of Seyros for piracy (Plut. Cim. 8); the price put upon the head of Ephialtes after the second Persian War (Herod. vii. 219); the condemnation of the Spartans, who were fined and excluded from the amphictyony for the seizure of the Cadmea (Diod. xvi. 23); and the charge threatened against Athens by the Amphissians in 339 (Aesch. iii. 168). Charges brought before the amphictyony were tried by the council, in cases which might be of a public character, or were brought by individuals, to exclude them from the league, or in more serious cases proclaim a holy war against the offending state. As we do not know the scope of the amphictyonic laws, we cannot say whether the charges were always based on a supposed transgression of them. Probably some pretexts were assumed to bring them within the jurisdiction, but the competence of the amphictyony might be extended by the admission of charges which did not properly come before its court. Thus an Athenian decree of 363 (CIA iv. 152.4) which A. Astyкратes has been condemned παρά τοις νόμοις τῶν Ἀμφικτύων, and in 335 Alexander apparently demanded that the orators of Athens should be tried before the amphictyony (Dem. xviii. 322). Apart from this, disputes might be referred by consent to the arbitration of the amphictyony, and we probably have an instance of this in the submission by the Athenians and Delians of their controversy respecting the Delian temple in 345-4 or 344-3 (Dem. xviii. 194, xix. 65). The amphictyony might also be involved in disputes referring to individuals, as in the honours accorded to the heroes of Thermopylae (Herod. vii. 228) and to Scyllia (Paus. x. 19. 1), and in the grants of ἀθέαν and δωδεκά to the guilds of Dionysiac artists (CIA ii. 501—at some date after 279).
We may conclude that the competence of the amphictyony was not rigidly restricted, at least in practice. It was open to a power possessing a dominant influence to extend its functions, and Alexander induced the council to confer upon him the command of the war against Persia (Diod. xvii. 4).

(d) Importance of the amphictyony. — The amphictyony in its constitution, its objects, and its possibilities involved important principles. It united many different peoples of Greece on the basis of a common Hellenic kinship; and this union was realized by a system of representation by which equal votes were accorded to the several members. It fulfilled the purpose common to amphictyonies generally, of maintaining certain religious institutions and rites, while it enforced the recognition of rules regulating the relations of its members. In this respect it tended to establish in the Greek world a system of quasi-international law, with a court to enforce it, comparable in our own days to the purpose of the Court of Europe. In its constitution it might seem to prepare the way for a federal system, if not for a Pan-Hellenic national union. This may explain why, on different occasions, the amphictyony might act as the representative of Greek forces, and why it was sometimes described as if it included the whole nation (cf. Soph. Trach. 638, Ελλήνων διόργανοι Πολέμες; Herod. vii. 214, αυτῶν Ἑλλήνων Πολεμικά). But the disruptive forces which dominated the Greek political system counteracted these tendencies. The influence of the amphictyony (apart from the oracle) in the sphere of religion scarcely extended beyond its own meetings. The rules of humanity which it laid down were not enforced, and amphictyonic cities were razed to the ground without vengeance or protest. The amphictyony had little effect in correcting the separate autarchy of the great states. Composed as it was in great part of peoples of small political or military significance, it could not impose its will on powerful states, which overshadowed it or made it a mere instrument of policy. Thus in the greater part of the 5th cent., while Sparta and Athens divided the allegiance of the other Greeks, the amphictyony receded into the background. In the 4th cent., from 380 at least, the amphictyony assumed a greater importance, mainly because it came under the influence of the new confederacies of the powerful states—at first Sparta, then Thebes, and later the Macedonian king. The amphictyony became the scene of intrigues, and the Sacred Wars, waged nominally in the cause of the amphictyony, were critical for Greek history. It is precisely at this period that Demosthenes describes the league as ἡ ἐν Δῆμοις εκμέταλλη (v. 29). The subversion of the policy of the dominant state became still more marked when the Aetolians controlled all the 4th cent.

AMRITSAR.—Amritsar, in the Panjáb, is one of the religious centres of India and the chief city of the Sikhs. It lies in what is known as the Manjha country, about 32 miles east of Lahore, and contained at the census of 1901 a population of 162,429, of whom 40 per cent. were Hindus, 48 per cent. Muhammadans, and 11 per cent. Sikhs. It is the chief commercial town of the Panjáb proper; but its commercial importance is based less on any advantages of position than on the fact that the city is built round the celebrated 'Tank of Nectar' or 'Tank of the Immortals,' i.e. the gurds (Sanskrit, Amrtasaras), in the centre of which is situated the Golden Temple, the central shrine of the Sikhs, or the 'Temple of God,' and consists of a single room, covering a square of 404 feet, with four doors, one opening to each side. The lower part of the outer walls is adorned with marble inlay, resembling that of the Taj Mahal at Agra, and the upper walls and roof are covered with plates of copper heavily gilded, from which the place has obtained among Europeans the name of the 'Golden Temple.' Among the Sikhs themselves the shrine and its precincts are known as the Gurdwara of the 'Sacred Audience'; and this title owes its origin to the fact that the Granth, or Sacred Book, is looked upon as a living Person, who daily in this shrine receives his subjects in solemn audience. The book is brought every morning with considerable pomp from the Akal Davnga (see p. 404) across the causeway to the shrine, and returns at night with similar ceremony. It is installed in the shrine below a canopy, and a grāнтā sits behind it all day waving a sword, or yak's tail, over it, as a safeguard against the attacks of a Hindu Prince. The book on the south side a selection from the pūsaṅga or hereditary incumebts of the Temple, and on the north sit the musicians (ṛāgī and ṛabābā— the latter, strange to say, being Muhammadans), who from time to time sing hymns from the Granth.
to the accomplishment of divers native instruments. In a book of this sort it is unpardonable to the faithful deposit their offerings. Although the outer precincts have since 1898 been lit by electric light, the shrine itself is lit with clarified butter or candles only. The wearing of shoes within the precincts, and, of course, smoking of any kind, are strictly prohibited; and as the Granth is always installed upon the ground, it is considered irreverent for any one within the precincts to sit upon a chair or stool.

Round all four sides of the tank runs a paved walk, some 20 feet wide, bordered by the Ramgarhia and the Sikhs Sahibs, for these menials, known as bunga or bungas (Sikhs of Akalbeghi, Sahibzada Ramgarhia Singh). These expensive fairs, the temple, too, and the Khalsa College. The former is a memorial in the form of a Sikh shrine, which was erected in A.D. 1902 in the centre of the city by the British Government in memory of the gallant manner in which a small body of the 56th Sikh Regiment held the fort of Sargarhar on the North-West Frontier against an Afghan enemy in the Tirah campaign of 1897. The latter is a denominational college which was started some twelve years ago for the encouragement of learning among the Sikhs, and lies some two miles built by the Sikhs chiefs in the latter part of the 18th cent. for the accommodation of themselves and their followers when visiting Amritsar; and among these the bunga of the Ranggarhia Sirdars is prominent by its two large towers, which dominate the city and neighbourhood of Amritsar.

Attached to the main shrine are three subsidiary institutions, which are of considerable importance in the eyes of the Sikhs. The first of these is the Akalbinga, or ' Hospice of the Immortal,' which adjoins the shrine on the west side of the causeway, and is the traditional centre of the fanatical sect known as the Nihangs or Akalis. The Granth Sahib is kept here at night, and the building also contains a fine collection of the weapons of Guru Har Govind and other Sikh Gurus and chiefs. The courtyard in front of the Akalbinga is a favourite place for the administration of the pakhali, or religious baptism of the Sikh creed; the ceremony may, however, be performed anywhere in the presence of the Granth, and the number of persons baptized at Akalbinga is only 1200 annually. The second of the well-known subsidiary institutions is the Bābā Atal, a shrine surmounted by a tower, which lies a few hundred yards to the south-east of the Har-mandar. This shrine was consecrated by the young son of Guru Har Govind (A.D. 1606-1645), and is surrounded by the cenotaphs of many of the old Sikh nobility. The third institution subsidiary to the Golden Temple is the shrine of Taran Tārā, which lies 13 miles south of Amritsar, and which was founded by the fifth Guru, Arjan (A.D. 1581-1606). The Taran Tārā shrine, which also is built on an island in a large tank, is the scene of a considerable monthly fair, and the Amritsar temple, too, is the centre of two exceedingly large fairs, the Baisahik and Diwâlī, which are held in the spring and autumn respectively, and are attended by immense numbers of persons, both for religious purposes and for commercial purposes, from the whole of northern India. The actual building of the Golden Temple and its precincts is maintained from the proceeds of a jāgīr, or assignment of land revenue from certain surrounding villages. The granthās who read the sacred volume are three in number, and are supplied by offerings made directly to them by worshippers at the shrine. The pāṭhārs, or incumbents, are a very large body of men to whom the general offerings at the shrine are distributed, after deducting a fixed sum for the temple establishment,—that is to say, the musicians, office-bearers, menials, and so forth. The whole institution and its subsidiaries are supervised by a manager, who is generally a Sikh gentleman of position appointed by the Government. The funds of the temple, as well as a certain number of precious ornaments, are kept in a somewhat primitive manner in a treasury over the main gate.

The whole importance of Amritsar from a religious point of view lies in the Golden Temple, and there is little of religious importance in the town outside the precincts of the Darbar Sahib. Mention may, however, be made of two recent institutions, maintained by the Sāragarhis, the shikar, and the Khalsa College. The former is a memorial in the form of a Sikh shrine, which was erected in A.D. 1902 in the centre of the city by the British Government in memory of the gallant manner in which a small body of the 56th Sikh Regiment held the fort of Sargarhar on the North-West Frontier against an Afghan enemy in the Tirah campaign of 1897. The latter is a denominational college which was started some twelve years ago for the encouragement of learning among the Sikhs, and lies some two miles from the city, and is largely supported by the Sikh States of the Panjab as well as by private donors.

E. D. MACLAGAN.

AMULETS.—See CHARMs AND AMULETS.

AMUSEMENTS.—A. 1. In the category of 'amusements' it is usual to include all sorts of pleasant occupations, both mental and physical, by which the attention is disengaged from the serious pursuits of life. Strictly speaking, however, an amusement is a light form of enjoyment in which little exertion either of the body or of the mind is required. In this respect amusements differ from recreation, which is a word of a higher order, inasmuch as recreation implies some considerable expenditure of energy, either mental or physical or both, although, in the nature of the case the exertion is agreeable and refreshing. Both amusement and recreation are designed to serve the same end, the recuperation of one's jaded mental and physical powers; but amusement secures that by turning the mind into channels where the time passes pleasantly without being wasted, whereas recreation effects its purpose by an agreeable change of occupation, by calling into activity other faculties and muscles than those engaged in work. Amusement, in short, is a form of enjoyment in its nature akin to relaxation; recreation is pleasurable exercise in which the energies, set free from work, are allowed to play in other directions (see RECREATION).

2. The slight demands which amusements make on the mental and physical activities, and their character as a means of lightening the mind and drawing off the attention from the more important concerns of life, no doubt explain why in a serious age the word was used in a depreciatory sense. At the close of the 17th cent. we find amusement defined as ' any idle employment to spin away time' (Phillips, quoted in Osf. Dict.). It may readily be allowed that anything which has no further aim than to kill time and to render men oblivious of the higher ends of life deserves to be condemned; and it is no less fallacious to identify amusements with amusement than to regard drunkenness as synonymous with amusement has been regarded as an unconscious and melancholy confession that amusements have no other object and serve no other end than to fill up the emptiness of a life which is devoid of nobler interests, and to make men forget themselves. This pessimistic view of
AMUSEMENTS

amusements finds unquestionably some justification in the actual state of things. It cannot be doubted that amusements are often greedily sought after by those who find in the true business of life, in noble aims and strivings, nothing to excite their interest and to afford them joy; and they are indulged in with the object of appeasing the natural craving for happiness which finds no satisfaction in higher pursuits. Where this is the case, the passion for amusement is a pathetic witness to the misery of a life which has missed its true joy. But when a depraved estimate of amusements is based on the view that life itself, in the duties and relationships to which men are called, is so rich in delights that any other form of enjoyment is unnecessary, the ground is less secure. It is a severe and exacting philosophy which affirms that, to all who are conscious of the satisfactions which attend the pursuit of high moral aims, life is an absorbing interest which takes the place of all amusements. ‘Where men are rightly occupied, their amusement grows out of their work’ (Rusk in, Sesame and Lilies, 100). This, it must be confessed, is somewhat too highly pitched for ordinary human nature. It is this view of amusements which has commonly been associated with Puritanism, not always accurately. There was no aversion to pleasant things, arising out of an austere philosophy of life, that called forth the Puritan protest against the amusements of the time. Amusements were condemned, not because they had a justice, at least in the sense that it was aversion to pleasant things, arising out of an austere philosophy of life, that called forth the Puritan protest against the amusements of the time. Amusements were condemned, not because there were no others who had the serious business of life on hand, but because they were either sinful in themselves or closely associated with sinful accessories. This was the case, for instance, in the matter of dramatic representations. ‘Between the days of Elia’ (Rusk in, Sesame and Lilies, 100), the Puritan Stubbes held that some plays were ‘very honest and commendable exercises,’ and ‘may be used in time and place convenient as conducible to example of life and reformation of manners’; but the gross corruption of the seventeenth century stage drove Pryme and the majority of the Puritan party to extremest views (Traill, Social England, iv, 165). It was the unfortunate association of evil with so many forms of amusement that disposed them of their latent and innocent mirth and enjoyments perfectly innocent; their abhorrence of tainted pleasures led them to regard with suspicion every form of gaiety in which ‘the enjoying nature’ of their neighbours found expression. The(1807) the growth of self-restraint in Puritanism, and in the forging of links which bind us more closely together. There may be indeed, and there are, experiences shared with others which have a far greater uniting power than fellowship in the social pleasures of life, life, life, life. However, in the definition of amusements we include the great national games, amusements constitutes one of the harms of amusements; and, apart from the refreshing influences of such intercourse, there is a further gain in the growth of self-restraint, which, by allowing us to enjoy life in peace, and give the value of it is deserving of recognition. Moreover, amusements, like everything else which draws us into association with others, serve as an opportunity for the culture of social virtues—unselfishness, equanimity, courtesy, and the like; while, if we extend our definition of amusements to include the great national games, they afford a discipline for the growth of such qualities as patience, self-restraint, magnanimity, and a readiness to appear not important. Furthermore, the pursuit of amusements is a bulwark against the temptations of the leisure hour. Nothing exposes the heart to the inroads of evil like the want of some healthy interest; and an honest love of innocent play averts it as securely from the other end, would be valuable as a moral safeguard.

3. The Puritanic ‘gospel of earnestness’ is too narrow and one-sided to do justice to human nature. Healthy-minded men refuse to be satisfied with any view of life which ignores the natural instinct for play, and regards participation in amusements as a weakness which will be outgrown with the growth of their latent and innocent spirit, which regarded life as too serious a business to permit of indulgence in light and pleasant diversions.

4. The main ethical justification of amusements lies, accordingly, in their fitness to renew and refresh our powers for the duties of life. But they serve other ends which are ethically important. If, for instance, they have a social function, as they do, the fact that we are thrown into pleasant association with others constitutes one of the harms of amusements; and, apart from the refreshing influences of such intercourse, there is a further gain in the growth of self-restraint, which, by allowing us to enjoy life in peace, would be valuable as a moral safeguard.

5. All this must be freely acknowledged. Amusements have an undeniable ethical worth when they are wisely engaged in. But they cease to be ethically valuable, and indulgence in them becomes a dissipation, when they are sought after without due regard to the serious interests of life. When they are allowed to engross the mind and to become the main business in which pleasure is found, the pursuit of amusement in one's proper work, they become harmful and morally reprehensible. There is no amusement, however innocent in itself, that cannot be changed into a means of self-indulgence through the excessive or untimely pursuit of it. Its pursuit is untimely when there is work waiting to be done. The pleasures of amusement are stolen pleasures, and the cost of them is, at least, ‘Sport and Merriment are at times allowable; but we must enjoy them, as we enjoy sleep and other kinds of repose, when we have performed our weighty and important affairs’ (Cicero, de Off. I, 29, 103). But the abuse of amusements lies not
only in their untimeliness, but also in their excess. They are frequently allowed to bulk so largely in life that serious occupations become distasteful. If, after participation in amusements, we are unable to pass with ease to more important concerns, and, instead of feeling refreshed for duty, have an aversion to it, we may fairly conclude that we have lost an amusement, that we have been diverted, and have fallen into self-indulgence. That these limits are frequently overpassed is not a matter for doubt. There is no question that at the present day the desire for amusement has in many instances a groundless origin, which with whom we are seriously prejudicing the culture of the higher life. In the opinion of competent judges, there is a waning of intellectual interests, a decay of any genuine love for those pursuits which enlarge and enrich the mind, a growing unconcern for the graver matters of religion and social service, and in some degree at least this is to be attributed to the immoderate indulgence in lighter pleasures. The fault of our age is not in seeking amusement, but in not knowing where to draw the line. Nece luxisse pudet, sed non scidit Horae.

6. The necessity of excessive addiction to amusements is not only the destruction of the taste for serious pursuits, but the decay of any genuine pleasure in life. The rationale of amusements is that we should use both work re-vitalized and capable of finding joy in it. But when they usurp the throne of our desires, and so dominate our thoughts and interest that work is felt to be a wearisome and unmoving interlude, they kill joy in that region of life where joy is all-important, where alone joy can be solid and lasting. A predominant craving for amusement defeats its own end; it renders joyless the whole stretch of life which of necessity must be given to work, and it speedily exhausts the enjoyment that amusement itself can give. Excessive pleasure-seeking brings satiety. Amusements, when they become the chief object of pursuit, lose their power of amusing. There is a world of truth in the well-known saying, uttered in reference to the excitements of a London season, 'Life would be tolerably agreeable, if it were not for its amusements.' Excess of pleasure nauseates and takes the joy out of life.

7. In the choice of amusements, and in the determination of the extent of their indulgence, there are other considerations to be taken into account. From the individual's point of view, it is important that he should learn to avoid every form of pleasure which is physically harmful or morally debasing, and to allow himself only that measure of enjoyment which is consistent with the proper discharge of his work, and with a due concern for higher personal interests, such as self-culture and religious worship. But the question of amusements must be considered also in the light of the obligations which we have towards others. 'Life would be tolerably agreeable, if it were not for its amusements.' Excess of pleasure-seeking brings satiety. Amusements, when they become the chief object of pursuit, lose their power of amusing. There is a world of truth in the well-known saying, uttered in reference to the excitements of a London season, 'Life would be tolerably agreeable, if it were not for its amusements.' Excess of pleasure nauseates and takes the joy out of life.

8. In the last resort, the question of amusement is for each individual to decide. It is impossible to lay down hard and fast rules which have universal validity. The science of ethics of the most individual of all the sciences. The determination of duty is a matter for the earnest and enlightened conscience of each person for himself. It is not to be denied that the method, which has been largely favoured in some quarters, of drawing up lists of allowable and proscribed amusements has a certain practical utility; the deliberate judgment of good men in reference to pleasures, whose worth for the ethical ends of life is a matter of such debate, is not to be lightly set at naught. Indulgence in pleasures the most innocent is illegitimate when it leads to the neglect of our social obligations. A man has no right to seek amusement to the detriment of those of love and fellowship which he owes to those of his own family circle. Similarly, one may spend so much time or money on the gratification of one's desire for enjoyment as to render impossible the honourable discharge of one's duties to society. Those most closely identified with religious and philanthropic work are unanimous in the opinion that one of the chief difficulties in finding money for its adequate maintenance arises from the increasing expenditure on amusements.

For example, there are occasional occasions when our obligations to others raise the question whether we should not deny ourselves the gratification of an amusement which to us is perfectly innocent, but which is a cause of offence to those with whom we are closely connected. To which we owe 'weaker brethren' cannot be entirely ignored, although there must be limits set to it. One may feel constrained in certain circumstances to renounce a form of enjoyment which harms another or offends his conscience; but, in the interests of moral education, it should be recognized that one has also a duty of vindicating the freedom of conscience, and of showing that amusements which to some are noxious, and even injurious, may be indulged in with perfect safety by others. In one way or another, our obligations towards others are bound up with the question of amusements. In these days the provision of amusements is very largely in the hands of professional classes, and it has been maintained that the most dangerous to which men and women belonging to these classes are exposed is so great, that the amusements provided by them should not be countenanced by those who have the welfare of their fellows at heart. This is perhaps the chief reason why many do not wish to enter a theatre. It should be frankly acknowledged that if, as is frequently alleged, the theatrical career puts the souls of men and women in needless jeopardy, and exposes them to temptations such as no one should be called upon to face; if the conditions and atmosphere of an actor's calling are so lowering to the moral tone as to make a loose manner of life practically inevitable, the enjoyment furnished by dramatic representations is a form of amusement which a good man will refuse to countenance. Now, that there are moral risks connected with the theatrical profession, it would be idle to deny; but the fact of risk does not necessarily condemn it, any more than the inevitable risks attending all kinds of worldly business condemn them. Nevertheless it is a codal's principle of view, it is out of account in determining our attitude to the theatre; each individual is bound only to think of the effects of a dramatic entertainment on himself, but also to consider, on the grounds of the fullest knowledge at his command, whether those who provide the entertainment are prejudicially affected in character.
him, and be guided by a spirit of devotion to a lofty ideal of life. 'He that is spiritual judgeth all things.' Let a man realize the true ethical ends of life, let him recognize that life is a gift to be honourably used for self-culture and service, and that in the pursuit of amusements may be left to settle itself. He who walks according to 'the law of the spirit of life in Christ Jesus' will never find himself in serious difficulty. He will not ask himself in what amusements he may indulge, or to what extent he may indulge in them, without doing wrong. He will be so intent on seeking the true ends of life that only those amusements will be desired which are in harmony with these ends, and only that measure of indulgence will be allowed which helps towards their attainment. In the most natural way, amusements will take their fitting place as a means of refreshment. They will be the lighter breathings of an earnest spirit, which finds in them a new zest for duty and a preparation for more exacting pursuits. The ethical ideal which gives unity to life will govern them and lend them value; so that pleasures, which in those indifferent to high aims are simply the frivolous exercise of a low-toned spirit, are the sparkle on the surface of a deep and earnest nature, the instinctive playfulness of a heart that finds in relaxation a help for serious work.

B. I. So far we have been concerned with the general principles which should control the choice and pursuit of amusements; we turn now to consider a few of the practical aspects of the subject. It was inevitable that the vast changes which have taken place in business and industrial life within the last two or three generations should affect in a large degree the habits of men in their hours of leisure. The decay of intellectual interest has been incidentally referred to as one of the regrettable results of the increasing desire for lighter forms of amusement, but it must be confessed that it is hard to see how that was altogether to be avoided. The growing strain which the conditions of modern life have imposed on those engaged in business, the exacting demands made on brain and physical endurance by the sharpness of competition as well as by the necessity for providing the comforts and aesthetic refinements of a refined life, have made such inroads on the energies of men that their pleasures have inevitably taken the form of amusements which agreeably relax the tension of the mind. In former days, when the struggle was one of leisure to devote oneself to interests which required some intellectual effort; but under the conditions of present-day life the tension in the case of many is so great that, if the balance is to be re-established and the powers re-energized for the proper discharge of work, amusements must often be of a nature to quench sensation and act as an agreeable opiate to serious thought. This may be regretted in the interests of wide and harmonious social ends, but it is in keeping with the conditions of modern life. The same consideration is a fair answer to the criticism which decries the craving for spectacular amusement in the name of robust methods of recreation. It is blindness to the facts of modern life that leads to the wholesale condemnation of pleasurable excitement which is not accompanied by the healthy glow of exercise. That some measure of recreation in its nobler sense is both desirable and necessary for health of body and mind is undenied, but it may be questioned that for the vast proportion of the toilers in our cities what is needed is not so much a further expenditure of energy, as some form of diversion which will quicken the pulse of life by its appeal to the imagination through the senses; and the hard-driven poor ought to be able to secure this in ways that are free from moral danger. Nothing, indeed, is of greater importance for the true welfare of those who are exposed to the strain of city life than the establishment of centres where healthy amusement, freed from all contaminating associations, can be had at a small cost. The Churches are moving in this direction already, and the time should not be far distant when municipalities will realize that it is their highest interest to devote some attention to the amusements of the working classes.

2. It is not merely the strain which our modern civilization imposes that makes the question of amusements of such vital importance; it is much more the unnatural conditions which have been created by the highly specialized character of modern industry. For large sections of the population there is under present conditions nothing in the nature of their work itself to excite any deep and genuine interest. In earlier days, handi-
craftsmen found in the varied operations of their calling, and in the freedom in which their skill found scope, a zest which in our mechanical age is almost entirely lacking. It is by no means surprising that men have sought an escape from the colourless routine of uninteresting work by an effort of least resistance, and have endeavoured to satisfy their craving for a wider and more joyous life by indulgence in various pleasures or in forms of excitement which sap instead of renewing the energies. To the average modern workman there is no toil which can be made agreeable again, to find some way by which interest may be re-awakened in the performance of work which in itself is largely devoid of interest. Unquestionably the noblest and best of all is to endeavour to give men in mind's a new sense of the deeper meanings of work, a feeling for its ethical significance to the individual himself, and for its significance as the contribution which he is able to make to society in return for the privileges which society confers upon him. But the same end may be served in another way. It has been remarked that 'the most powerful moralizing influences are not always those which are directly moral' (MacCunn, Making of Character, p. 163). At any rate, in the conditions of modern life, there is much to be said for the association of the formation of good habits which implies, may be secured by the provision of healthy amusements which will stir the imagination and satisfy the instinctive desire of a larger life. In this sense, and not at present restricted to the exploitation of the public by private individuals, with results that are frequently far from beneficial, the aim of the community ought to be to supply forms of entertainment which shall prove a stronger attraction than questioning and vicious pleasures, and shall so enlarge the horizon of men's better desires that they will feel a new inducement to enter into work with all the energies at their command. As an indirect means of attaining moral ends, amusements may be deserving of the greatest attention, and in the hands of a people clarifying purposes along the lines of the settlement can socialize the material ready in the industrial world' (p. 143). See also GAMES.

Literature.—Martenssen, Chr. Ethik (Gen.), 1885, p. 415 ff.; 4th (Soc.), 1882, ii. 77 ff., 524 ff.; Schiefler, Die chr. Sitte; Rothe, Chr. Ethik; Richard Baxter, Christian Directory;
AMYRALDISM was the name given, more generally, to the theology of Moyse Amyraut (Moses Amyraldus, the Amico di Baille's Letters), and, more particularly, to his way of defining the doctrine of Predestination. In the latter sense it was called, not Amyraldianism, but Hypothetical Universalism. It was one of three attempts (the others being Arminianism and the Covenant Theology) made during the 17th. cent. to break through the iron ring of Predestination within which the Reformed Scholastic of that century had enclosed the theology of the Reformed Church. To understand the theory it is necessary to know something of the workings of that Scholastic, and something too of the life and aims of Amyraut.

The second leads naturally to the first. Moyse Amyraut was born in the little town of Sion in Switzerland in 1556. His life was, if not exclusively, at least to a large extent, devoted to the Reformed religion. The boy was destined to a lawyer's career. He had begun his studies, and was greatly inclined, when the reigning preceptor of Calvin's school turned all his thoughts to theology. He entered the Theological College of Geneva in 1577. Lambert, the French theologian, John Cameron, made a profound impression on him—second only to that already produced by the study of the Bible. In 1580, when the University of Geneva opened, he became minister at Saumur (1580). He had rapidly acquired a high position in the Reformed Church of France, and was deputed by the National Synod, which met at Lyon in 1595, to carry their respectful congratulations to King Louis xiii. At the same period, he became professor of Cardinal Richelieu, and retained his friendship. In 1593 he was appointed Professor of Theology in Saumur, having as colleagues, appointed at the same time, John of the Preacher and Contre-Capelle. All three were students under Cameron, and all had a fervid admiration for the theology of Calvin as that was exhibited in the Institutio. All three believed that the so-called Calvinism of the day differed widely from the teaching of the master, and they were not slow to make it known in their lectures. The College soon acquired a great reputation. Students came to it from the Reformed Churches beyond France, especially from Switzerland. The doctrine of conversion is thus a part of the system of Amyraut.

The doctrine of Amyraut was to be tested by the Reformed Scholastic of the day. It was his aim to bring back the Calvinism of the Institutio, which differed widely from the Scholastic, and in nothing more than in the doctrine of predestination. Amyraut's predestination is not set forth at the beginning of his theological system; it is never used as the fundamental thought under which everything else is to be classed. It is simply an explanation of the sovereignty of grace, which overrides man's sin and man's weakness. Still, in spite of the smaller place and special position which the word and idea of predestination held in the Institutio, there was a master-thought running through Calvin's theological thinking which might easily be named predestination, and in that connection the devout imagination has never made grander or loftier flight than in the thought of the purpose of God moving slowly down the ages, making for redemption and the establishment of the Kingdom of God. In this the function of the divine will is one in the Institutio. It was full of life and movement, and had for its living spirit, the Kingdom of God. If this conception of the Kingdom of God be kept in view, it is impossible to crystallize or stereotype this thought into a purpose. The Kingdom comes into being in such a variety of ways, none of them able to be expressed in exact definition. Its conception can never be summed up in a few dry propositions. It is something which from its very nature stretches forward to and melts into the infinite. But if a keen and narrow intellect, coming to Calvin's theology, fastens on its nerve thought of purpose, and manipulates it according to the presuppositions and formulae of the second-rate metaphysics within which his mind works, it is possible to transform the thought of purpose into a theory of predestination which will master the whole system of theological speculation.

This is what the Reformed Scholastic of the 17th. cent. did with the experimental theology of the 16th. century. They created from it a second-rate metaphysics which they called the Divine degree. Moreover, they effected the transformation in the very same way that the medieval Scholastics had done. They began with a definition of God borrowed from the Aristotelian philosophy, and put its abstraction in the place of the thought of the Divine degree occupied by the Father, who has revealed Himself in Jesus Christ. The Principium Etsendi was their starting-point. The abstraction which did service for God in the Aristotelian philosophy needed another abstraction to bring it into relation to the universe of men and things. The Aristotelian thought which mediated between the principles of existence and the variety of life and motion in the universe was the category of Substance. Substance, the first and unique category, collected everything into a unity of being, and so brought the All into relation with the One. A second abstraction was also needed by the Reformed Scholastic. This was found in the theologia naturalis, the highest category, embracing all existence, including everything knowable, everything which proceeds from the idea of Substance. The Supreme Being which was conceived, and held to be the Father of all, was the personification of God (Trinity) alone outside this category; everything else lives, moves, and has its being within the circle of the Divine degree. Then followed the interaction which delivers Himself in action outside His essential nature. It includes, it is, all existence, still immanent within the Godhead. Speculative in character, and exercised in the life of men, and the election of some and the reprobation of others. When existence emerges, it comes forth on the one hand from the Divine degree, which includes all creation, all actual providence, all Divine work of redemption.

It was this Scholastic that Amyraut and his colleagues protested against—this enrolling every-thing thinkable under the name of Providence, and in every form of the Divine degree, which was simply the Aristotelian category of Substance under another name. They wished to get back to the experimental theology of the Reformation age as that was exhibited in its greatest master. They felt that the first thing to be done was to break through this ring-fence, within which the metaphysics of the time made all theological thought move. The attempt made before them, which went by the name of Arminianism, did not appear to them, it had to do with the experimental theology of Calvin, and was simply the revolt of a shallower metaphysics against a deeper. They accepted the decisions of the Synod of Dordrecht. But they wished to bring theology back to life, to connect it with the needs of men and with the necessities of reason. The special doctrine of Amyraut is known as Hypothetical Universalism, or the Double Reference Theory of the Atonement. It was suggested by, if not based on, Cameron's doctrine of Conversion. That doctrine, as Amyraut understood it, was: Conversion may be described as a special case of the ordinary action of the intelligence on the will. According to the psychology of the day, it was held that the will acts only so far as it is influenced by the intellect—action follows enlightenment. The special case of this action of intellect upon will—special, because in this case the Holy Spirit enlightens the intellect, and the intellect, charged with this spiritual enlightenment, acts upon the will. Conversion, then, is the act of the prevision of the intelligence on the will, and yet is, at the same time, an altogether extraordinary work of supernatural grace. The grace of God, which is supernatural when it acts upon the will in conversion, follows the ordinary process of thought. This relation between the intellect and the will in conversion suggested to Amyraut a similar parallel between Providence and Election, and between Creation and Redemption. Providence may be looked on as belonging to the course of nature; but Election is a special instance of Prov-
AMYRALDISM

dence and at the same time the peculiar and gracious work of God. Creation belongs to the ordinary course of nature, and Redemption is a special instance of Creation, and is nevertheless a unique and gracious work of God. Just as the intellect to the will may be called the universal of conversion, so Election may be looked at as set in the environment of Providence, and Redemption in the environment of Creation.

Amyrart, whose devotion to Calvin was unbounded, insisted that these thoughts of his were the legitimate and historical development of ideas presented in the Institutio. He keeps to Calvin's great thought of the purpose of God unfolding itself down through the ages. This purpose of grace, when viewed out of all relation to time, is universally Creation, specially it is Redemption; viewed historically, it is Providence and Election; viewed individually, it is Intellect acting on Will and Conversion. He has thus three pairs of ideas — the one universal and natural, the other special and of grace; and that which is of grace is always set in the environment of the natural.

This mode of thought, however, embodied a practical ecclesiastical purpose. In those days God was neither the living God; the Thirty Years' War—a struggle hideously prolonged, all men saw, in consequence of the mutual jealousies between Calvinists and Lutherans. Since the Synod of Dordrecht, the Lutherans had grown more embittered against the Calvinists. It was clear that its doctrinal conclusions had been directed against them indirectly. Amyrart hoped to make it plain to the Lutherans that Calvinist theology could be stated in a form which might be more acceptable to them, by profitably taking special notice of objections to the Calvinist doctrine of a limited reference in the Atonement, and he hoped to overcome that difficulty.

Two modes of dealing with the Lutherans were possible to Reformed theologians. (1) They might have insisted that Lutheran theology was quite distinct from Arminianism, and that the condemnation of the Arminians at Dordrecht was not meant to, and did not, involve a condemnation of the Luthers, and that the pressure of the Arminian controversy had never been before the Lutheran Churches, and had never been settled by it; and that in any attempt to bring the Lutherans and the Reformed Churches closer to each other, the benefits of a limited reference in the Atonement might be left an open question. This was the view of the great French Reformed theologians Claude and Jurieu. (2) They might, while adhering strictly to the Reformed doctrine as laid down at the Synod of Dordrecht, have endeavoured to shape that doctrine so as to make it approach the Lutheran type in statement at least. Amyraldus selected the latter method. He tried to show that there might be the general reference of the Atonement that the Lutherans insisted on retaining, while the Reformed thought of a limited reference was also correct. He worked out his scheme of conciliation by the use he made of the three pairs of ideas already mentioned. The purpose in Creation, he said, was Redemption; the purpose in Providence was Election; the purpose in the gift of intellectual endowment was Conversion. Applying this to the matter in hand, he declared that, if the whole design of God in Providence is to make all things work together for the good of them that are called, Providence itself is but a wider election—an election which may be described as universal.

His argument condensed somewhat as follows: The essential nature of God is goodness; and by goodness Amyrart means love plus morality—love limited by the conditions which the universal moral law must impose upon it. This Divine goodness shines forth on man in Creation and in Providence, which is simply Creation become continuous. But sin has through the fall entered into creation, and it has destroyed the aim and aim of man's life. In presence of sin God's goodness shines on, but it must, from its very nature as love plus morality, take a somewhat different form, its worldliness, which is goodness in the presence of sin; and this righteousness demands the separation of Christ. At the same time through which men are saved from the consequences of their sin. The goodness of God remains unchanged; it is seen in the desire to save; but the presence of sin has given a special form. When this thought is applied to assert the theological ideas of the 17th cent. it becomes the purpose of God in salvation is weird infra-lapsarian, because it arises from goodness in the presence of sin, and therefore faces to the face with the thought of the Fall. But it is also presented as supra-lapsarian, because it is simply a continuation of the original goodness of God. In this purpose of God there is no theoretical limitation save what is implied in the means which the goodness of God in presence of sin is morally compelled to take, i.e., the work of Christ. The purpose of God to save is simply the carrying out of the original and universal goodness of God. The work of Redemption is thus the carrying out of the original work of creation. The purpose no doubt is set in the environment of the original purpose to create. When looked at from the point of view of Creation, the supra-lapsarian, there is a universal reference in the work of Christ. But when we look at this purpose of God in presence of sin, and when we know that some men do dis impose save—then we take the infra-lapsarian purpose to save—we see that the theoretically universal reference is limited practically by the fact that some are not saved. The universal reference is theoretical or hypothetic; the limited reference to the particular is practical. The Thirty Years' War broke off the righteous ness (which is His goodness in the presence of sin), He declared that this thought lay implicitly in the well-known phrase of the divines at Dordrecht: 'Christum mortuum esse sufficienter pro omnibus, sed efficaciter pro electis'; and to make plain what he believed to its meaning, he changed it to: 'Christum mortuum esse sufficienter et non actualiter pro omnibus.' This gave him a hypothetic universalism and a real limitation to those who are actually saved. The original purpose to save, of which 17th cent. divines had reared against the possibility of the salvation of the heathen, by their statement that those to whom the external call is not addressed cannot be held to be recipients of the benefits of the saving grace, was not abandoned, followed Zwingli, that God in providence did bestow upon pious heathen what in their case did amount to an external call. This gave a real and not a hypothetical, universal, external call, and with it the offer of salvation to those who had not heard the Gospel message. (3) He widened the precisely fixed sphere of conversion by insisting that every illumination of the intellect was an analogue and prophecy of the spiritual enlightenment which preened, which preened, which preened.

But while all these three conceptions were discussed in his many treatises on Predestination, the controversy which followed the publication of his views was really confined to the first line of thought. The controversy on whether this hypothetical universal reference into a real particular reference? Is it the action of God or of man? If the change arises from man's power to resist what God has purposed to do for all, then Amyrart was an Arminian, as the Dutch and the Swiss theologians were. If he thought the change lie hidden in God? Then his theology did not differ substantially from that of the divines of Dordrecht, save perhaps in sentiment. The latter was the view taken by the French Reformed Church. Amyrart was summoned before the
ANABAPTISM

National Synod of 1637 along with his friend Paul Testard, pastor at Blois. The accused were ener-
gegenerally defended, and allowed full liberty to ex-
plain their position. They were acquitted of all
heresy. The accusation was renewed at the National
Synods of 1644 and 1645, with the same result.
The Swiss theologians were not satisfied. Their
Formula Concursu Ecclesiae Helvetiorum Re-
formatarum (1675) witnessed their protest.
The doctrine of Amyraut has maintained a firm
hold on many evangelical Calvinists since his day.
It was professed by Baxter, Vines, and Calamy in
the days of the Westminster Assembly. It was not
new to learn from the minutes, most of which
were excluded by the definitions in the Westminster
Confession. It was taught by Professors Balmer
and Brown within the Secession Church in Scotland.
It is part of modern evangelical theology.

THOMAS M. LINDSAY.

ANABAPTISM.—I. HISTORY. —The Ana-
baptists, or Katabaptists (Wiedertaufer or Täufer)
formation was made by early Reformers at Zürich,
Wittenberg, and possibly elsewhere. They spread
swiftly over those parts of Europe affected by
the Reformation, making a profound
impression in the early years of that movement.
All the leading Reformers (Luther, Zwingli, Bucer,
Oecolampadius, Calvin, Knox, and many others)
combated their views in one or more publications
and disputations; their doctrines are condemned
explicitly or by implication in all the leading creeds
of the 16th and 17th cent. (Augsburg, Part I. Artt. ix.,
xx.; Dordrecht, Art. vi., xxx.; Leiden, Art. vi.,
xxv.; and French, xxxv.); 2nd Helv. Conf., Artt. xx.,
xxx.; Belgo Conf., Art. xxxiv.; Scotch Conf., Art. xxii.;
Formula of Concord, Art. xii.; Thirty-nine Artt.
xxvii., xxxv., xxxix.; Westminster Conf. xxvii.,
etc.); and the various Swiss and French works
are largely to prove to Francis I. that the Reformers
were not all Anabaptists; they were put under
the ban by the Diet of the Empire in 1529; and
most other civil governments, including that of
England, took action against them.

They were the radical party of the Reformation
period, regarding Luther and Zwingli as half-
reformers who had pulled down the old house
without rebuilding in its place. Dispersing of
the Consistory Court was sought to build
anew on the foundation of Scripture literally in-
terpreted, without the help of the State or any
other existing institution; this religious ideal
involved fundamental social and political changes
(Baumler, 'Geschichte d. Wiedertaufer,' p. 12).
They differed essentially among themselves in
spirit, aim, and many more or less important
points of doctrine, but strove together towards a
great and far-reaching reform. They sought to
reform the work of the Reformers.

The feeling between many of their doctrines and
those of some earlier sects has led to an effort to show
some historical connexion. Ritschel ('Gesch. d. Pietismus') has sought
to trace their teaching to the spiritual Franciscanics; Likewise
Keller and others have sought to show some connexion with
the Waldenses, who a little earlier were widely scattered over
central Europe. The similarity in doctrines, spirit, and organiza-
tion is so marked as almost to compel belief in some sort of
historical succession; and yet the effort to trace this connexion
has not so far been successful. Moreover, several considerations
serve to lead against such a connexion, for the Reformers
were themselves not conscious of such connexion, regarding them-
selves as the spiritual children of a renewed study of the Bible.
(2) All their leaders, so far as their existence is known, came out
of the Catholic Church. (3) They had little or no communion
with older sects after their rise. These considerations render it
probable that they, like the sects of the Middle Ages, were the
offspring of a renewed Bible study, and that the similarity is the
result of independent Bible study under similar circumstances
and controlling ideas.

The history of the party can perhaps be best
followed by dividing them into German, Swiss-
Moravian, and Dutch Anabaptists. These divisions
are by no means more or less, but they are largely distinct

1. The German Anabaptists.—It is commonly
held that the German Anabaptists rose with Thomas
Münzer and Nicholas Storch at Zwickau in eastern
Saxony. Münzer, a well-educated man, deeply
imbued with the mysticism of the later Middle
Ages, a friend and follower of Luther, became
pastor at Zwickau in 1529. Here he came under
the influence of Nicholas Storch, a weaver, who
had become deeply tinged with Bohemian views:
chiliasm; the rejection of material comfort and
fare, and infant baptism; and the insistence on
community of goods. Under this influence he at
once began drastic reforms. With his approval Storch
set up a new church on the Bohemian model,
claiming new revelations and the special guidance
of the Spirit. Their socialistic teachings and re-
publican proceedings soon forced them to leave.
Storch, in company with a former Wittenberg
student named Stübner, proceeded to Wittenberg
in the hope of winning the support of the University
for their views. Luther was then in hiding at the
Wartburg; Carlstadt and Cellarius, two of the
professors of the University, were speedily won
over by the new prophets, and even Melancthon
was deeply moved. Various reforms were put
into effect immediately. Luther, hearing of these
radical proceedings, and believing they would
bring the whole reform movement to ruin, hastened
to Wittenberg in spite of the protest of his friends,
and in eight powerful sermons succeeded in sup-
pressing the movement at once. Storch and
eventually the two professors whom he had
influenced found that his views were driven away,
Melancthon was saved, and the radical reforms revoked.
Henceforth Luther was one of the most powerful
and uncompromising opponents of the Anabaptists.
Storch now went over to place to place, and
finally disappeared about 1525.

In the meantime Münzer had visited Prague
for several months, had then laboured as pastor and
agitator at several places in Thuringia, and had
made a visit to southern Germany and the border
of Switzerland in the interest of his views. He
was becoming more socialistic, more chiliasmistic,
more bitter towards the ruling and upper classes.
At last in 1525 the peasant uprising broke out.
It spread, and had his enthusiastic support, and
overthrew at Frankenhausen he was arrested and
executed. With this catastrophe the Anabaptist
cause in Germany suffered a permanent defeat.
Henceforth Anabaptism was associated in the
minds of Germans with the wild socialism and
chiliasm of Münzer and the horrors of the peasant
War. And yet neither Münzer nor Storch is
known to have been re-baptized or to have practised
believers' baptism. Both opposed infant baptism,
but Münzer specially provides for it in a German
service which he drew up and which he put in
print in 1523. It is impossible to determine the extent
to which these men reached the necessity of
believers' baptism, and thereby became the founders
of the Anabaptism of Hesse and other regions of
western Germany. They were chiefly interested

406
ANABAPTISM

in socialistic-chiliastic ideas, and probably did not press the demand for re-baptism. If this be true, the Anabaptists of the Rhine region had another origin, to be traced later.

2. The Swiss-Moravian Anabaptists.—Bullingr says that the Swiss Anabaptists sucked their Anabaptism from Münzer (Acten, p. 293 f.), but this is improbable. Münzer, as we have seen, did visit the border of Switzerland in 1524, and was in conference with some men who later adopted Anabaptism; but in a letter still preserved (Cornellius, Gesch. d. Münzer, Aufr. v. Ber. 115, p. 56), written September 5, 1524, they showed marked independence, even chiding Münzer for some of his views. Moreover, the whole tone and spirit of the Swiss was different from that of Münzer. Chiliastic and violence had no place in their scheme, and socialistic tendencies were much less prominent. Besides, there was in southern Germany and Switzerland at this time widespread doubt about the Scripturalness of infant baptism, Bucer, Oecolamnus, and others had expressed doubts. If Münzer’s views were in doubt (‘Vom Tauf, vom Widertauf’, etc., Opp. ii. p. 245, ib. i. p. 239 f.; Egli, Actensammlung, 555, 692).

These Anabaptists rose from the circle of Zwingli’s intimate friends and associates at Zürich. Zwingli, some say that the then pastor there on 1st Jan. 1519, and by his powerful evangelical preaching had by 1523 brought many of the population to a readiness to abolish Catholic worship and doctrines. But he was anxious to avoid division and strife, and delayed and would not convince the whole mass of the people and then proceed to reform with the authority of the cantonal government. Under these circumstances there sprang up a radical party who favoured proceeding at once with reform without waiting for a judgment of the Mass. Of some points were in advance of Zwingli’s. They urged him to remove or destroy the images, abolish the Mass, begin the celebration of the Supper in both kinds, and finally, to set up a church composed of saints (believers) only. His delay in adopting their earlier demands and his flat refusal to entertain the last led to a final break with the party in 1523 or 1524 (Bullingr, Der Wiedertauf. Uebr. Bi. 9).

The extreme members of the party at this time were Simon Stumpf, pastor at Höög, Froschauer the famous printer, Hein Aberli, and Ulrich Zwingli, a:crisis, Conrad Grebel, a lawyer of the ancient historic family, Felix Mans, Wilhelm Reublin, pastor at Wyttikon, Ludwig Hätzer an excellent Hebraist and last, and from the Preachers of Prophets, and Georg Blaurock a convert, last, who was the most powerful popular preacher among them. Grebel and Mans were the real leaders of the party at Zürich, Grebel was trained at Vienna and Paris, and possessed a fine Greek culture; Mans was an excellent Hebrew scholar, habitually using his Hebrew Bible in preaching. These men held private meetings for Bible study, and here their views were gradually developed and perfected (Egli, op. cit. No. 653). Early in 1524 they reached the conclusion that infant baptism was without warrant in Scripture, was an invention of the Pope, rea of Satan himself; it was therefore invalid, was no baptism, and hence the duty of beginning new the baptism of believers was felt to rest upon them. This they proceeded to do in Nov. 1524, or 1525, when in a private house Grebel baptized Blaurock, who in turn took a dipper (cistern) and baptized several others in the name of the Trinity (Egli, 636, 646). This was followed by the celebration of the Supper in the same simple way.

The civil authorities now resorted to repressive measures. After a public disputation with the Anabaptists (17th Jan. 1526), it was decreed that all infants should be baptized within eight days, that all private religious meetings be abandoned, and that all foreign Anabaptists be banished. Soon afterwards several were arrested, warned, threatened, and released. Continuing their activity, they were arrested, thrown into prison, and a second ineffectual disputation was held on 20th March. On 5th April most of them escaped from prison, and leaving for a brief period the Canton of Zürich comparatively quiet, they spread their views far and wide in other cantons. Re-
disputations with Pfister Meyer in 1531 and at Zofingen in 1532 failed to retard their growth. Berns then proceeded to blood, and between the years 1528 and 1571 no fewer than forty were executed. But even this severity was not sufficient to root them out of this canton. During the succeeding centuries they were sent to the galley, deported, banished, persecuted; but they had maintained their existence to the present time.

In St. Gall, persecution drove the Anabaptists, especially the women, to the most absurd and childish and even immoral practices (Kessler, Sobotta). One case in particular wrought disastrous results—name and cause. On 7th Feb. 1532 a half-witted man named Schugger struck off his brother’s head ‘by the will of God.’ Later Anabaptists denied all connexion with such an act. It could not escape the consequence of the deed. Anabaptists lingered in this canton till the 17th century.

By 1532 all the leaders, such as Grebel, Manz, Blaurock, Denek, Hätzer, and Hübmaier, were dead; hundreds had been forced to recant, many had died in prison, and perhaps thousands had been driven from the country. The movement in Switzerland lay in ruins, destroyed by the civil power. The causes of this bitter persecution are not far to seek. The Anabaptists in this region, with few exceptions, were quiet, pious, law-abiding people; they were converted to their stricter form of the Church and the individual conscience. Failing to obtain their demands, they divided and weakened the Reformer, causing endless strife and difficulty. Their refusal to bear arms, to serve as civil officers or take the oath, made them dangerous to the State, while their attitude towards property, usury, and certain forms of taxes threatened the whole social order. Hence suppression and extermination were felt to be the only paths to safety.

The intimate relations of the south German cities with Switzerland made them peculiarly susceptible to all spiritual and religious movements in that country. Accordingly we find large Anabaptist circles in Strassburg, Worms, Nuremberg, and Augsburg. In each of these circles such leaders as Ludwig Hätzer, Hans Denek, and Hans Hut were won for the Anabaptist cause. One of the most important conquests was in the small border town of Waldshut in Austrian territory. Here in favour of several gifted scholars, and eloquent preacher, some time rector of the University of Ingolstadt and Cathedral preacher at Regensburg, was the leading pastor. He was early converted to Reformed views, and in 1524 succeeded in introducing them into the city. But he was unable to stop here. Gradually he found himself compelled to accept Anabaptist views; about Easter 1525 he and some sixty members of his church were re-baptized. This was soon followed afterwards by the baptism of several hundred others, and the Anabaptists succeeded in a fair way to win the town. But for some months the Austrian authorities, who were strict Catholics, had been threatening to punish the town for its evangelical doings. Hitherto the support of Zürich had enabled Waldshut to preserve Anabaptist deflection caused the withdrawal of this support, and in December the storm broke over the devoted city. Hübmaier fled to Zürich, was arrested as an Anabaptist, imprisoned, and forced to recant as the public property. Released on 11th April, 1526, he fled through Constance to Augsburg, and thence in June to Nikolsburg in Moravia, where his persecuted brethren were already gathering.

Driven from Switzerland, the Anabaptists fled eastward into the Austrian lands from 1526 onwards. Their doctrines found ready acceptance, and soon large bodies had been gathered at Rottenberg, Kittbühel, Brixen, Bozen, Linz, Steyer, and elsewhere. Here they came under Catholic governments which hunted them down, if possible, even more strenuously than the Swiss. King Ferdinand himself was very active in the work of extermination, and in a few years hundreds had suffered martyrdom. The character of the country and the sympathy of the common people, the Anabaptists continued to maintain an existence for more than a century, until the Catholic reaction swept all forms of evangelical life in these regions out of existence.

Persecution in the Austrian lands was fair, if severe, to the Anabaptists onward to Moravia, Bohemia, and Poland. The religious history and the social and political condition of these lands made them an asylum for various sects, and here for a brief period the Anabaptists found rest and safety. At Nikolsburg, under the protection of the lords of Lichtenstein, they found ‘a goodly land,’ a new Jerusalem, from 1526 onwards. Thither they streamed in great numbers from Switzerland, the Austrian lands, Germany, and elsewhere; names were registered, and they numbered thousands. Among the first to arrive was Hübmaier. Learned, eloquent, free from fanaticism, without rancour in debate, a careful exegete, possessed of an excellent literary style, he was the chief prophet of the Anabaptist cause. In little more than a year he published no fewer than fifteen tracts, in which he set forth with force and clearness the great principles that characterized his people. Had he lived, their history might have been different. But the Austrian authorities soon learned of the presence in their dominions of this fugitive from Waldshut, and demanded his apprehension as a traitor. After some delay, the lords of Lichtenstein delivered him up in July, 1527. He was imprisoned at Vienna, where he was burned at the stake on 10th March, 1528. Thus perished the most important of all the Anabaptist leaders.

The community in Nikolsburg could ill afford to lose a man of such wisdom and sanity. Already in 1526 Hans Hut, one of Zürich’s followers, who had escaped from Germany, appeared among the brethren as a powerful and impressive herald of Christ’s speedy return, a determined opponent of magistracy and war. Others soon began to agitate and agitate the austere Hübmaier. Chief among these was d lower, an eloquent preacher, some time rector of the University of Ingolstadt and Cathedral preacher at Regensburg, was the leading pastor. He was early converted to Reformed views, and in 1524 succeeded in introducing them into the city. But he was unable to stop here. Gradually he found himself compelled to accept Anabaptist views; about Easter 1525 he and some sixty members of his church were re-baptized. This was soon followed afterwards by the baptism of several hundred others, and the Anabaptists succeeded in a fair way to win the town. But for some months the Austrian authorities, who were strict Catholics, had been threatening to punish the town for its evangelical doings. Hitherto the support of Zürich had enabled Waldshut to preserve its autonomy, but the Anabaptist deflection caused the withdrawal of this support, and in December the storm broke over the devoted city. Hübmaier fled to Zürich, was arrested as an Anabaptist, imprisoned, and forced to recant as the public property. Released on 11th April, 1526, he fled through Constance to Augsburg, and thence in June to Nikolsburg in Moravia, where his persecuted brethren were already gathering.

Thus perished the most important of all the Anabaptist leaders.
now caught in the great Catholic reaction led by the Jesuits, and gradually declined. Greatly reduced by the Thirty Years' War, they were completely ruined by later invasions of Turks and others, as well as by persecution. Some of them fled to Hungary and Transylvania, where they disappear in the 18th century. Others fled to southern Russia, whence a remnant removed in 1874 to South Dakota, in the United States, where they still preserve their communal life.

The Anabaptists of two other regions, both with some relations to the Swiss-Moravian movement, must be mentioned in this connexion. About 1526, in connexion with the work of Schwenckfeldt, the Anabaptists appeared in Silesia. Soon they had flourishing congregations in several important cities, but persecution from 1529 onwards gradually exterminated them.

By the middle of the 16th cent. there was a strong Anabaptist body in N.E. Italy, chiefly anti-Trinitarian in Christology. The Inquisition then got on their track, and in a few years the movement was stifled. Many of them fled to Poland, where they built up a flourishing connexion. In 1608 they issued the Racovian Catechism, which provides for immersion as the mode of baptism, though they believed in the authority of Scripture and the lordship of Christ. They suffered the fortunes of the other evangelicals in this region during the Counter-Reformation.

The Anabaptists of the Rhine regions. — As far as their history can be traced, the Anabaptists of the lower Rhine-lands owe their origin and peculiarities chiefly to Melchior Hofmann. This wonderful man was born in Hail, Swabia, and was a carrier by trade. He accepted the views, and by 1523 was a zealous evangelical preacher in North Germany. He was without education, but early acquired a remarkable knowledge of the text of Scripture, along with an intense interest in the prophetic and apocalyptic portions. He developed a burning enthusiasm as well as a powerful eloquence in propagating the Lutheran views. His zeal and power usually aroused intense opposition, and frequently occasioned something like a mob. He moved rapidly from place to place, and always made a profound impression. In 1523 he was in Wolmar, in Livonia; banished from there, in 1524 he was in Dorpat; in 1525 he was in Sweden, where he was converted, and in 1527, at a place where he made a profound impression on King Frederick I. of Denmark. Banished from there, he entered East Friesland, with Carlstadt, where he threw himself into the controversy between the followers of Luther and Zwingli over the Supper, supporting the latter party, and by his power and eloquence carrying the day between the leaders. In June 1529 he reached Strassburg. By this time he had developed most of the peculiarities of his system, including the allegorical method of interpreting Scripture, a method which fixed the beginning of the reign of Christ on earth in the year 1533, the assertion that the human nature of Christ was not derived from Mary, and, therefore, not ordinary flesh, a denial of the oath, etc. During this visit he is supposed to have come in contact with Anabaptists, who were then numerous in Strassburg, and to have been baptized into their fellowship. Returning to East Friesland in May, 1530, he began a truly wonderful Anabaptist movement, which, with brief interruptions, to 1533, and covered much of the Low Countries. Most of the Lutheran and Zwinglian work was swept away, and it is probable that the majority of Evangelicals in the Netherlands from 1533 to 1566 were of the Hofmannite type. In 1531 he suspended baptisms for two years, intimating that the Lord would then assume the reins of government and at Strassburg, and bring the era of righteousness and peace for all the oppressed. The effect was magical, the religious and social excitement intense. In order to be present when the Lord came, he publicly returned to Strassburg early in 1533. He was soon apprehended and thrown into prison, where he died ten years later. But the seed which Münzer and others had sown was destined to bear some horrible fruit.

The episcopal city of Münster, in Westphalia, had been ruled by a succession of exceedingly dissolute and oppressive bishops, who, however, succeeded in holding reform at bay for several years. But in 1532 Bernard Rothmann, a gifted young preacher near Münster, began to preach evangelical doctrines. He was suspended, but returned to his work in 1531, and soon made an alliance with Knipperdollinck and the social democrats of the city. The bishop was driven away in 1532, and the next year reform was introduced. Persecuted Evangelicals from surrounding regions found their way into Münster, and there was great rejoicing and naturally great new triumphs of the truth. Heinrich Roll, a fugitive from Cleve, became an advocate of believers' baptism in 1532, and the next year Rothmann reached the same conclusion, and began a crusade against infant baptism. He was followed by a number of the leading men of the city. The City Council undertook to force the preachers to administer infant baptism, but popular sentiment was so strong as to prevent the execution of their will. This was the tense and excited condition of Lutheranism, the year 1533; Anabaptists, Lutherans, Catholics, and social democrats were all struggling for supremacy, when a horde of still more excited Anabaptists poured into the city from the Netherlands, believing it to be the hour for setting up Christ's kingdom at Münster as the New Jerusalem.

Jan Matthys, a baker of Haarlem, a disciple of Hofmann, inspired with a fanatical hatred of the upper classes, now proclaimed himself the promised Prophet Enoch, and baptism as a final preparation for the coming King. In a short time thousands were baptized. In January 1534 two of his missionaries entered Münster, where they baptized Rothmann and other leaders, and then in the streets the earthly kingdom, in which there should be no magistracy, no law, no marriage, and no private property. Soon John of Leyden, a gifted young man of twenty-five years, appeared and took over the leadership of the new theocracy. Catholics and Lutherans fled, and the city fell completely into the hands of these fanatic Anabaptists. Matthys now declared Münster to be the New Jerusalem, and invited all the oppressed Anabaptists thither. Thousands of deluded and persecuted people soon wished to remain with safety and happiness, only to be destroyed on the way or ruined at last in the city. The city was soon besieged by the forces of the bishop, assisted by neighbouring princes, while within its walls murder, polygamy, and crime ran riot. After more than a year of ever increasing shame, the terrible orgy ended in massacre and cruel torture in 1535.

The effect of this Münster kingdom was most disastrous to the Anabaptists. Everywhere persecuting measures were sharpened, and the name became a byword and a hissing throughout Europe. This episode was regarded as the legitimate outcome of Anabaptist principles.

Menno Simons gathered up the fragments of
the quiet Anabaptists and re-organized them in 1536, and dissolved all connexion with the Münster fanatics. From him they have been called Mennonites (wh. see), and in Holland and America they still constitute a respectable folk.

Before and after the Münster episode some Anabaptists found their way to the eastern sections of England, where they were severely persecuted. It is possible, indeed probable, that there is some connexion between them and the Independents, English Baptists, and Quakers, all of whom show some of the peculiarities of the Anabaptists.

II. System.—Anabaptism offers a case of arrested development with scarcely a parallel in Christian history. Arising spontaneously at different points, the movement seized Central Europe with a powerful grip, and bade fair to divide the population with other forms of Protestantism. But the machinery of ecclesiastical and civil government was soon set in motion to suppress it, and in ten years there remained only a persecuted, federated remnant of the original movement. Without any great leader to crystallize its doctrines, and suffering persecution from the beginning, the party never attained unity and harmony. It is, therefore, often necessary to set forth the prevailing tendency, and at the same time to point out the important variations from the general trend.

The immediate, direct accountability of each individual soul to God in all religious things was the fundamental principle of the Anabaptists. No institution, sacred or secular, no ordinance, no parent or priest, could mediate between the soul and God. Communication between the two was open; they must approach each other through Jesus Christ. This principle determined the character of their religious views; and its corollary, the absolute brotherhood of believers, determined their conception of all human relations, their attitude towards society and the State. Both these principles they regarded as revealed and illuminated by the Scriptures, which, when properly interpreted, were authoritative for all the relations and duties of life. For their proper interpretation, only piety and spiritual enlightenment were necessary; learning might be useful or harmful, according to the spirit of the interpreter. In order to set forth these points in more detail, it is best to group them under the three heads of Religious, Political, and Social.

1. Religious views.—(1) In general, the Anabaptists accepted the common Catholic and Protestant doctrine of God as set forth in the Apostles' and the Nicene Creeds. A few, like Denck and Hätzer, doubted, or denied, the essential Deity of Christ; and, on the other hand, Melchior Hofmann and his followers denied the humanity of Christ, maintaining that His was a sort of heavenly flesh, descended through Mary, but without essential relations to humanity.

(2) They opposed the Augustinian theology of the Reformers, insisting vehemently on the freedom of the will and complete moral responsibility. The theology of Luther, Zwingli, and Calvin appeared to them to be contrary to the Scriptures, dishonouring to God, and dangerous to morality. In these views they anticipated Arminius at almost a century.

(3) The Anabaptists maintained the right of the individual to interpret Scripture for himself; and some of them, at least, asserted the superior authority and sanctity of the NT over the OT as the fuller, clearer revelation of God, thus approximating to the modern view of a progressive revelation. Pieter Meier says: 'I obey that in the Old Testament which I find confirmed in the New.' The chief qualification for correct interpretation of the Scripture was the illumination of the Holy Spirit—a doctrine which was strongly emphasized. It was charged that they claimed to have revelations and visions which they regarded as more important than Scripture; but this charge was probably an exaggeration of their actual belief in the fact and importance of spiritual illumination.

(4) The true Church was composed of believers only—"saints." Despairing of bringing the State Church to this standard, they proceeded to set up a new Church on this model, thereby introducing Anabaptism into the Protestant ranks. The purity of the Church was to be secured by the baptism of believers only, and preserved by the exercise of strict discipline. (a) Infant baptism was regarded as without warrant in Scripture, contrary to the principle of voluntary action in religion, an invention of the devil, and the chief source of the corruption in the Church and of its subjection to the State. In its stead they practised believers' baptism, administering the rite to those who had been baptized in infancy, thus winning the name 'Anabaptists.' The ordination of officers and organization of the Anabaptists. Ordination seems to have been in abeyance in the earlier stages of the Anabaptists.

2. Political views.—(1) The Anabaptists were the first to demand a more equitable distribution of wealth. They believed in the necessity of the community of goods, and practised it in their societies. The belief in the community of goods was the result of their doctrine of the brotherhood of believers, which was in turn the result of their acceptance of the Bible as the final authority. They believed in the necessity of the community of goods, and practised it in their societies. The belief in the community of goods was the result of their doctrine of the brotherhood of believers, which was in turn the result of their acceptance of the Bible as the final authority.

(2) The Anabaptists were the first to demand a more equitable distribution of wealth. They believed in the necessity of the community of goods, and practised it in their societies. The belief in the community of goods was the result of their doctrine of the brotherhood of believers, which was in turn the result of their acceptance of the Bible as the final authority. They believed in the necessity of the community of goods, and practised it in their societies. The belief in the community of goods was the result of their doctrine of the brotherhood of believers, which was in turn the result of their acceptance of the Bible as the final authority.
movement, which was a great outburst of missionary activity among laymen. When charged with preaching in improper places and without proper authority, they claimed the authority of a Divine call which needed no ecclesiastical ordination or sanction. Later abuses in their own ranks forced them to adopt ordination. Preachers were chosen by lot and ordained by the congregation as a recognition of the Divine call, which they still regarded as the necessary part of their qualification for preaching. They rejected with decision the principle of State support in every form, and claimed that preachers ought to be supported by the free-will offerings of the congregation when located, and by Christian hospitality when traveling. They reproached the ministers of the State Church with inactivity and want of care for the people, among whom they should go as shepherds among the sheep.

(7) An eschatology there were great differences of opinion. The majority, perhaps, held sane and Biblical views; but expectation of the early return of Christ bred the wildest fanaticism in others. From the belief of Hofmann that Christ was soon to set up His Kingdom on earth and destroy the wicked, it was but a step to an effort to set up the Kingdom among the Anabaptists in every form, and with the ‘fanatical’ Anabaptists and John of Leyden’s horrible ‘kingdom’ at Münster as the outcome. Thomas Münzer also had believed in the use of the sword, and his powerful personality had given the whole movement a fanatical and dangerous chiliasm, which brought ruin on his cause.

(8) Anabaptist worship was necessarily very simple. Persecution and the lack of church buildings necessitated its celebration in small companies, in such a fashion as to attract as little attention as possible. In the earlier years worship probably consisted almost wholly of prayer and instruction; later, singing occupied a large place. Their own compositions were set to popular music and sung far and wide. These songs, often written in prison, reveal profound religious feeling and unwavering faith and hope (cf. Wolkon, *Lieder der Wiederkehr, Aus Bundt*).

(9) The Anabaptists regarded the State as a necessary evil, ordained of God indeed, and therefore to be obeyed where its obligations were not in conflict with conscience. The charge that they were opposed to magistracy and authority is often made. It is true that they denied the supremacy of the State in the realm of conscience, and resisted its assumption of authority here, even to death; as to other things they inculcated obedience. The conscience was absolutely free under God. The State could have no religious duties; it was needed only to protect the good and punish the wicked. This doctrine involved complete disestablishment; universal toleration; freedom of worship, organization, and teaching. These views came in fear, and were repudiated with horror by Hübmaier especially. Repudiated and execrated then, this contention has been adopted in modern times with more or less completeness by all civilized lands.

(2) Many of the Anabaptists maintained that no Christian could hold civil office, because such elevations were in conflict with the principle of Christian brotherhood and equality; besides, it often required the infliction of capital punishment, and to kill was under no circumstances permissible to a Christian. They not only regarded their opposition as destructive of all government, but was not so understood by themselves. They did not believe capital punishment was necessary to the suppression of crime, nor did they regard all who bore the Christian name as Christians. Their opponents said: ‘If no Christian can act as magistrate, we must go to the heathen or Turks for governors.’ ‘No,’ replied the Anabaptists, ‘there are but few Christians even in Christian lands, and hosts of men are left for rulers.’ The different meanings attached by the two parties to the word ‘Christian’ were the source of the misunderstanding. Their opposition to the modern movement for the abolition of capital punishment is noteworthy. Hübmaier and others, however, maintained the right of a Christian to hold civil office.

(3) They opposed the oath under any and all circumstances, on purely Biblical grounds (Mt 5:3). This, again, was regarded by Zwingli and others as destructive of civil government, which was thought to rest upon the inviolability of the oath. Such importance and sacredness were attached to it by the Anabaptists, who taught that one’s assertion should be as sacredly kept as the oath. Under the threat of execution they sometimes took the oath; but it was not regarded as binding, because taken under duress.

(4) The Anabaptists were relentless opponents of war as the great destroyer of human life, which they held to be inviolable. Under pressure they paid war taxes, assisted in building fortifications, and rendered their destroyers, and were willing to suffer imprisonment and death rather than bear arms. The Münster kingdom was a hideous caricature of the whole movement, and cannot be cited in opposition to this statement. Indeed, the Anabaptists’ influence on peace was the greater in cause of the constant war made upon them. The military basis of society in the 16th cent. made such advocates of peace appear exceedingly dangerous to national existence; but this cause of bitter opposition may yet become their crown of glory as the world swings into the era of universal peace.

3. Social and economic views. (1) In imitation of the primitive Christian Church, the Anabaptists were strongly inclined to a voluntary and benevolent communism in the acquisition and administration of property (Ac 2:42). This opinion, which appears in the earliest stages of the movement, was fully developed in Moravia, where many of them lived and worked in great settlements (Loserth, *Communismus, etc.*). Among the German and Dutch Anabaptists appeared a tendency towards enforced communism, as seen in Thomas Münzer and in the Münster kingdom. But a large number of the Anabaptists, perhaps in fact, did not oppose actual communism in any form; they strenuously maintained, however, that all property belonged primarily to the Lord, and must be freely used in ministering to the needy. They conceived themselves in the position of stewards, under solemn obligation to administer the Lord’s money for the highest good of mankind.

(2) They opposed the lending of money at interest, refused to accept interest themselves, and paid it unwillingly to others. Money, they held, should be lent for the benefit of the borrower rather than the lender. Proper fraternal relations forbade the exploitation of the needs of a brother; besides, the practice was regarded as contrary to the explicit teaching of Scripture (Dt 23:19, Ps 149).

(3) They refused to pay ecclesiastical taxes, believing that religion should be supported by the voluntary gifts of religious people.

Glancing backwards over their views, we see that the Anabaptists were several centuries ahead of their time, and have been by modern men of their time. Some of their tenets, then universally anathematized and persecute, have been adopted by all civilized lands, e.g. universal religious toleration; others have been widely incorporated in the newer lands (America and Australia),
ANÆSTHESIA

and are making headway in the older societies, as, e.g., complete separation of Church and State; yet other objects of endeavour, only seem as far-off boons, as, for example, abolition of war; some, as communism, are not likely ever to be adopted widely. It is remarkable that these simple people should have drawn from a fresh study of the Bible so many great ideas that still float before the races as high and distant ideals.

LITERATURE.—Anabaptist writings and disputations, now very rare and widely scattered in the libraries of Europe, of which only a few are printed or translated; the pertinent writings of their opponents in 16th cent.; various court records, published and unpublished; pamphlets. The earlier works on the Anabaptists, such as Fischer, Gast, Meschovius, Otius, Sender, and others, are more or less partisan and unreliable. To large extent literature, of which only a few of the more important works can be mentioned, is more just.

W. J. McGlothin.

ANÆSTHESIA.—Dissorders in treating of mandragora gives a description of its virtues as an anesthetic, and prescriptions for its use. Of one preparation he says that it is given to produce amnesia (βολικών ἀνέσεσις νοσήμα) in patients to be cut or canerized; and of another, that the patient can be put to sleep for three or four hours so as to be cut, or to have nothing (caedere ὀμνων ὀκλούς). Before his day and since, various drugs have been used to produce insensibility to suffering. The most efficacious of them, besides mandragora, were opium, Indian hemp, hemlock, and to some extent alcohol. They were given either internally in the form of infusions, tinctures, and extracts. More rarely they were smoked when incandescent, or inhaled in the form of hot vapours. When chemistry took the place of alchemy and philosophy, the results of tests and substances, it was found that among them were some properties of sedative properties; and in 1795, Dr. Pearson declared the use of sulphuric ether to relieve the cough in cases of asthma. When the various gases were discovered and their properties investigated, Sir Humphry Davy decided that of nitrous oxide—"laughing-gas," as it was called—had the power of alleviating pain; and in 1800 he said, "As nitrous oxide in its extensive operation appears capable of destroying physical pain, it may probably be used in surgical operations in which no great effusion of blood takes place." His suggestion was not taken up. Laughing-gas continued, however, to be administered from time to time in chemical class-room experiments. In 1844, Dr. Horace Wells, a dentist in Hartford, Connecticut, observed that individuals might be injured when under the influence of the gas without being conscious of any pain. He conceived the idea of using its effects during the execution of teeth, and got his assistant, Dr. Rigg, to extract one of his own molars after he had produced insensibility in himself by the inhalation of nitrous oxide. After having proved its efficacy in a series of cases, he went to Boston to give a demonstration of its value in the Massachusetts General Hospital. In the test case, by some mischance, the anesthesia produced was imperfect, and he was dismissed with something of contempt. His health broke down, and he went to Europe to recruit.

On 16th October 1846, Dr. William Thomas Green Morton, who had been assistant to Wells, put to sleep with sulphuric ether, in the same Boston Hospital, a patient on whom Professor J. C. Warren operated for a stone in the neck, and on the day following he put to sleep another patient operated on painlessly by Dr. Hayward. Morton had consulted Wells, after his return to Hartford, as to the preparation of nitrous oxide, and had been advised to get from Professor Jackson, Professor of Chemistry in Harvard University, the necessary directions. Professor Jackson suggested that instead of nitrous oxide he should make trial of sulphuric ether, and Dr. Morton had experimented on himself and some of his dental patients before he offered to demonstrate its effects in the public theatre. He called his preparation ethérons, and took out a patent for its use. He associated Dr. Jackson with himself in obtaining the patent, and admitted that Dr. Smiles, who had previously anesthetized a patient by causing inhalation of sulphuric ether with opium dissolved in it, might continue the use of his preparation without infringement of the patent. It was Morton's demonstration on the 16th of October 1846 that truly marked the beginning of the era of anaesthesia, and gave the first clue to its adoption in all branches of the profession throughout the world. But for a time there was unseemly strife as to priority of the discovery. Jackson and Wells both disputing the claim of Morton to be the discoverer of the new mode of producing insensibility to pain. So that, although a monument in honour of the great event was set up in Boston, years passed ere it was finally decided to inscribe on it the solitary name of Dr. Morton, and Wendell Holmes is credited with having made the suggestion that E(ther) might do.

Meanwhile news had come to Europe of the great discovery that the inhalation of ether vapour could be employed with safety so as to control the pain of surgical operations. The benefit of etherization in surgery was established. Meanwhile had the practice of midwifery? Would the pain of labour be removed without interference with the labour effects? Could the patient be kept for the necessary time under the influence of the narcotic? What might be the effect upon the child? The test case was one in which Simpson had predetermined, because of pelvic deformity,
to extract the child by turning, and the result showed that labour could go on in its course although the sensations of pain usually attendant on it were for the time being altogether abrogated. When the virtue of the anaesthetic had been proved in the cases of both these natural and instrumental labour, he claimed for women the right to be relieved of this sorest of all human suffering—their labour-pains. There had been misgivings in some minds as to the propriety of the administration of ether to surgical patients, and when it was proposed further to abolish the pains of labour, there arose a perfect storm of opposition to the practice. Simpson had to bear the stress of it because of his application of it in midwifery, and because some months later, searching for a substance that might be free from some of the drawbacks of ether, he discovered, on the 4th of November 1847, the anesthetic virtue of chloroform, and introduced it as a substitute for the earlier anaesthetic. Oliver Wendell Holmes had suggested that the term 'anaesthesia' should be applied to the process; but Simpson's papers, like those of most of the other writers up till the end of 1847, spoke of 'Etherization in Surgery,' 'The Inhalation of Sulphuric Ether in Midwifery,' and such-like. It was only after the failure of the product he had substituted was an animal magnetism, a series of phenomena which were more carefully investigated in the middle of last century by Mr. J. Braid. Under the designation 'hypnotism,' Braid described a state of the saving pain was later to be brought by having their attention fixed on a given object for a length of time until there ensued an exhaustion of some elements in the nervous system and the subject became amenable to the control of the operator. The operator so hypnotized can be made insensible to suffering at the suggestion of the hypnotizer. Dr. Eddle and other surgeons in the Indian medical service reported a series of cases where operations, both major and minor, were performed on patients in a condition of unconsciousness thus produced. But hypnotism has been found applicable mainly to cases where there is disturbance in the nervous system, and its use for the relief of the pain of surgical operations has never been successful. The process was thus sufficiently commended itself to the medical profession, even so far as to encourage more than a few members of it to try for themselves whether they were capable of exercising a hypnotic influence.

ANKAGATA VAMSA—ANAHITA

ANKAGATA VAMSA (‘Record of the Future’).
—A Pali poem of 145 stanzas on the future Buddha, Metteyya. It is stated in the Gandha Vainesa (JPTS. 1886, p. 61) that it was written by Kassapa; and in the Säsana Vainesa Dipa (V. 270) we are told that he was a poet who lived in the Chola country. We may probably conclude that he did not reside at Känchipuram, the Chola capital, as in that case the name Känchipuram, which would have suited the metre equally well, would probably have been put in the place of Chola-rátha. The further statement (Gandha Vainesa, i.e.), that he also wrote the Saddha Vainesa, seems to be a mistake not to be made. We know nothing either of his date or of the other books attributed to him. The poem has been edited for the Páli Text Society by the late Professor Minayeff (JPTS, 1886, pp. 33-53), with extracts from the commentary, which is by Upatissa (see Gandha Vainesa, p. 72). Of the latter writer also nothing is at present known, unless he be identical with the author of the Mahá Bodhi Vainesa who wrote in Ceylon about A.D. 970.∗

Our ignorance about the date of the Anagagata Vamsa is, as is evident from the original, in no part less than the growth of the belief held by the later Buddhists in this future Buddha, Metteyya, is important. As is well known, there are statements in the Nákhyas (e.g. Digha, ii. 83, 144, 255) that future Buddhas would arise, with one exception, neither the Nákhyas nor any book in the Pitākas mention Metteyya. His name occurs, it is true, in the concluding stanza of the Buddha Vainesa, but this is an addition by a later hand, and does not belong to the poem. Neither is Metteyya mentioned in the Nitti Pakarana. There is also a passage in the 26th Dialogue of the Digha which records a prophecy, put into the Buddha’s mouth, that Metteyya would have thousands of followers where the Buddha himself had only hundreds. This passage is quoted in the Milinda (p. 159); but the Milinda does not refer anywhere else to Metteyya. In the Mahávasutu (one of the earliest extant works in Buddhist Sanskrit) the legend is in full vogue. Metteyya is mentioned eleven times, two or three of the passages giving details about him. One of these agrees with the Anagagata Vainesa in its statement of the size of his city, Ketumati (Maháv. ii. 240 = Anag. Vain. 8); but discrepancies exist between the others (Maháv. ii. 240 and 250 differ and 250 differs from 240 in lines 107).

It is in this poem that we find the fullest and most complete account of the tradition, which evidently varied in different times and places.

This is really conclusive as to the comparatively late date of the poem. In earlier times it was enough to say that future Buddhas would arise; then a few details, one after another, were invented about the immediately succeeding Buddha. When in the south of India the advancing wave of ritualism and mythology threatened to overwhelm the ancient simplicity of the faith, a despairing hope looked for unutterable scenes of the next Buddha, and decked out his story with lavish completeness.

Three points of importance are quite clear from the statements in this work. (1) There is little or nothing original in the tradition of which it is the main work. It is simply built up in strict imitation of the early forms of the Buddha legend, only names and numbers differing. But it is the old form, both of legend and of doctrine.

(2) There is sufficient justification for the comparison between Metteyya and the Western idea of a Messianic prophet. The ideas are, of course, not at all the same; but there are several points of analogy. The time of Metteyya is described as a Golden Age in which kings, ministers, and people will vie one with another in maintaining the reign of righteousness and the victory of the truth. It should be added, however, that the teachings of the future Buddha also, like that of every other Buddha, will suffer corruption, and pass away in time.

(3) We can remove a misconception as to the meaning of the name. Metteyya Buddha does not mean ‘the Buddha of Love.’ Metteyya is simply his gotra name, that is, the name of the gens to which his ancestors belonged; something like our Gordon or Smith; and this is not a panegyric, but a patronymic, and means ‘descendant of Mettaya.’ Another Metteyya, in the Sutta Nipāta, asks the Buddha questions, and is doubtless a historical person. We can admit only that whoever first composed this part of the text, and whoever the Buddha may very likely have associated, and probably did associate, it in his mind with the other word mettā, which means ‘love.’ It would only be one of those upon words which are so constantly met with in early Indian literature. The personal name of the future Buddha is given in the poem, and elsewhere also, as Ajīta, ‘unconquered.’

The poem in one MS has the fuller title Anagagata-Buddhassas Vannand, ‘Record of the future Buddha’ (JPTS, 1886, p. 37). There is another work, quite independent of this, which describes the Buddha himself and is the same as the Anagagata Vainesa, but is written in a different language. Both are in the same manuscript, and are, undoubtedly, ‘the high, powerful, immaculate one,’ is a goddess of fertilizing waters, and more particularly of a supernatural spring, located in the region of the stars, from which all the rivers of the world flow (Darmesteter). The fertility which the divine water caused in the earth was extended to the animal kingdom, and, according to the Avesta, Anahita, that is, undoubtedly, ‘the high, powerful, immaculate one,’ is a goddess of fertilizing waters, and more particularly of a supernatural spring, located in the region of the stars, from which all the rivers of the world flow (Darmesteter).

The fertility which the divine water caused in the earth was extended to the animal kingdom, and, according to the Avesta, Anahita, that is, undoubtedly, ‘the high, powerful, immaculate one,’ is a goddess of fertilizing waters, and more particularly of a supernatural spring, located in the region of the stars, from which all the rivers of the world flow (Darmesteter).

In the Avestan hymn, after enumerating all the heroes of the past who sacrificed to Anahita, including Zoroaster, whom she instructed in her worship, concludes with a very exact description of her appearance and her dress (Yast, v. 126 ff.). ‘She is a beautiful maiden, powerful and tall, her girdle fastened high, wrapped in a gold-embroidered cloak, wearing earrings, a necklace, and a crown of gold and thirty otter skins.’ These minute details are undoubtedly inspired by a sculptural type, and this passage of the Avesta has rightly been connected with the famous text of Berossus (Clem. Alex. Protrept., 5), which says that Artaxerxes Mmnon (S.C. 404-361) was the first to teach the Persians to worship anthropomorphic statues in the temples of Babylon, Susa (cf. Pliny, Hist. Nat. vi. 27, 135), and Ecbatana (cf. Plutarch, Vit. Artax. 27); Polibius, 2 and 12, in Persia, Bactriana, Damascus, and Sardis. These statues were probably productions of a Babylonian original, and perhaps, as has been suggested, Anahita might even be identical with the Semitic goddess Anat. This would accord for the passage in Herodotus (i. 131), according to which the Persians learned from the Assyrians to sacrifice to the “heavenly” Aphrodite, whom they

call Mithra.' The ancient historian had probably written 'Mithra' by mistake for 'Anahita.' As a matter of fact, the two divinities are united, and form, so to speak, a pair in the cuneiform inscriptions of the Achaemenians, in which they figure prominently from the reign of Artaxerxes Mmenon (Wulff-Hademanna, *Die altperischen Reliefschriften*, 1933, 44, 46).

The information of Berossus on the diffusion of the Anahita cult throughout the Persian empire is confirmed by a mass of evidence. Outside of Iran, the Persian divinity was worshipped (Dilger, *Sitz. Gesellschaft. Wiss. Leipzig*, 1896, 111 ff.; see also art. ARMINIA [Zoroastrian]). She had temples at Artaxata, at Yashishat in Tauraitis, and especially at Erê in Akilise, the whole region of which was consecrated to her (*Anastasia regia*, Pliny, v. 83). The Erê sanctuary, which contained a golden statue of Anahita, was famous for its wealth, and the daughters of the noble families of Armenia used to go there and prostitute themselves to strangers before their marriage (Strabo, xi. 632 C). This sacred custom, which is probably of Semitic origin, seems to be a modification of the ancient exogamy (cf. Cumont, *Religions orientales*, Paris, 1907, 287). Old traditions connected the god with the sacred buffaloes of Anahita wandered at liberty in Akilise, and the victims for sacrifice had to be captured by hunting (RA, 1905, i. 28 ff.).

The Persian goddess was worshipped also in Pontus and in Mesopotamia, s. v. Pontus, in C Xi. 512 C, xii. 559 C, xx. 733 C), perhaps also at Castabala in Cilicia (Strabo, xii. 537 C). In these districts she became identified with the great autochthonous divinity Mâ, and her temples were attended by a mass of slaves as vassals of both sexes. At Zela in Pontus, a festival, the Sacsâ, which was probably of Babylonian origin, was held annually. It is especially in Lydia that Anahita has left numerous traces of her presence. She was probably, as Berossus states (cf. above), brought into Sardis by Artaxerxes II., and became amalgamated with Kybebe (Cybele), the Great Mother honoured throughout the country. The well-known figures of a winged goddess holding a lion in either hand, under the designation of the Persian Artemis, has given, really represent this syncretic divinity worshipped as 'mistress of the beasts' (*φωρία τηρών*) (Radtet, *CAIIB*, 1906, p. 285). Descriptions of her noisy rites exist as early as in the tragic poets of the 6th century B.C. (Nauck, *Trag. Græca*, v. 716). Her principal temples were at Hierocoesa (Paus. v. 27, 5, vii. 6. 6; Tac. *Ann.* iii. 62: 'delubrum regis Cyro dicatum'; cf. *Bull. Corr. hellen.* xi. 93), and at Hypoepa (Paus. l. c. cf. RA, 1885, ii. 114; Dittenberger, *Orientalis Graec Inscriptiones Selectae*, 1903-45, 470); but her name also appears in a large number of inscriptions in this vicinity (Rennsch, *Chronicum d’ Orient*, 157 ff., 215 ff.; Bureesch, *Aus Lydien*, 1896, 58, 66 ff., 158; Roscher, *Lexikon der Mythologie*, s. v. Persis, etc.). The Harvard Studies, 1895, vi. 55 ff.). The conception formed the goddess and the ceremonies by means of which she was worshipped seem to have remained faithful to the ancient Iranian traditions; she was always regarded as the goddess of sacred waters (*Άναίτις τῷ ἀθάνατῳ καὶ τῷ θάνατῳ*, Bureesch, l. c. p. 118), and her liturgy was repeated in a 'barbarian' language (Pausanias, v. 27. 5).

The Greeks identified Anahita, on the one hand, on account of her name, with Athena, and, on the other, as a goddess of fertility, with Aphrodite (Berossus, l. c.; Agathias, ii. 24; Ptolemy, *Bibli.* 94). Already, in Iran, as noted above, under the influence of the Chaldean star-worship, Anahita had become the planet Venus. But the name usually applied to her in the West was 'Persian Artemis' or 'Persian Diana' (*Ἀπρίμας Περσικής ή Περσίδα*, *Diana Persica*) (Pausanias, vii. 6. 6; *Bull. Corr. hellen.* xi. 65; Diodorus, v. 77; Plutarch, *Lecull* 24; Tacitus, *Ann.* iii. 62). As the bull was sacred to her, she was confounded especially with 'Artemis Tauropolis' in Lydia, as well as in Armenia and Cappadocia. It was probably from this composite cult of the Asiatic Tauropolis that the 'taurobolium' penetrated into the Roman world (Paul Wisowa, *s. v. 'Anahita*; RA, 1905, i. 28 ff.). In the Latin countries, the Persian goddess was associated with the Magna Mater of Phrygia, certainly remained in close connexion with Mithra, whose mysteries spread to the west after the 1st cent. of our era (Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra*, i. 233 ff. and passim).

Fr. Cumont.
resemblance not between things, but only between relations.

'...things,' writes Dr. Whately, 'may be connected together by analogy, though they have in themselves no resemblance; for analogy is the resemblance of ratios or relations; thus, a sweet voice excites the palate, so does a sweet sound grate the ear; hence the word sweet is applied to both, though no flavour can resemble a sound in itself' (Elements of Logic, p. 4).

The last words of the sentence are noteworthy. They indicate that upon this view of analogy no legitimate inference can be drawn from the nature of the one pair of related terms to the nature of the other pair, and that inference may be strictly similar to the relation between ear and sound, but we cannot therefore draw inferences as to the nature of the one from what we know of the other. This is an important contention with far-reaching consequences, and its influence upon theological argument will appear presently.

This definition of analogy has the merit of scientific exactness, and of being in strict accordance with the type exhibited by mathematicians, but it is at the same time open to serious criticism. The difficulty with which it imposes upon the function of analogy are such as would almost entirely invalidate the use of the analogy in practical life. Men in their daily concerns do not confine their analogical arguments to the consideration of mere ratios, but freely draw between the nature of things. Although this is a merely practical objection, it is not without support in the theory of analogy. It has been pointed out that some identity of nature is always postulated in every analogy. In mathematical analogy, for example, it is at least necessary that both pairs of terms should be magnitudes. And, again, in the analogy between sound and taste, though in a sense there is no resemblance between them, yet they are both sensations. The heterogeneity is not absolute. Exception, therefore, may fairly be taken to the extreme statement of Whately, that no inference is permissible from the nature of the one to the nature of the other. And the theologian will press the point; for in his hands the argument from analogy is usually of the most profound and practical importance. It is used to draw analogies between the material and the spiritual worlds. Words which now bear an immaterial and spiritual significance were originally used to denote visible and tangible objects. If in many languages the word for breath or wind has come to be used for the soul, it is because at an early stage of their development men became conscious of an analogy between the lightness and invisibility of air and the supposed properties of the human spirit. To a later and more critical age the analogy may appear thin and crude; but it must be remembered that the initiation of a religious vocabulary dates from the childhood of the race. In the gradual evolution of religion, crudities have been, and still are, until the original meaning of many words now used exclusively with a spiritual significance has been forgotten. But throughout the whole course of the development the necessity for finding analogical words as a vehicle for the expression of spiritual truth has never been outgrown. The importance is to put into speech by means of the analogy of human fatherhood. Thus witness is borne in all ages to the instinctive readiness with which men assume a parallelism between the things which are seen and things which are not. To what extent that parallelism really exists and how far it affords us grounds of inference to the real nature of the spiritual world, is the problem which every philosophy of religion sets out to solve.

3. Analogy as a means to the knowledge of the spiritual world.—Not only the vocabulary but the content of natural religion is derived from the source of analogical reasoning. For natural religion begins with the analogy between God and the world, sufficient to justify the inference that the wonder and majesty of Creation will in some sort reflect the wonder and majesty of the Creator (cf. Wis 19:4 'For by the greatness and beauty of the creation, it is seen that one has made it'). Though this is the only Biblical passage in which the word 'analogy' appears in this connexion, yet the thought of the world as the visible expression of the attributes of the invisible God is of constant recurrence in Scripture. It is familiar to the Psalmist (Ps 19). It is stated explicitly by St. Paul: 'For the invisible things of him from the creation of the world are clearly seen, being understood by the things that are made' (Rom 1:20). This assumption of a significant analogy between God and the world is not argumentatively justified in the Bible. Like the other principles of natural religion, it is taken as accepted truth. And the belief culminates in the doctrine of man's participation in Creation in the world. In Christian thought, supplying, as it does, the philosophical basis for the doctrine of the Incarnation. Throughout the whole history of Christian doctrine the question of the reality of the likeness of man to God, i.e. of the truth of the analogy between the Divine and human nature, has been one of the pivots of controversy. Men have arranged themselves in opposite camps according as they have been more or less ready to accept this belief.

4. Analogy in Patristic writings.—The great theologians of the early centuries, following the precedent of Scripture, made free use of analogy for the double purpose of defence and exposition. It was to them a convenient means of exposing the hollowness of many commonly urged objections, and a ready means of the perception of analogies between the material and the spiritual worlds. Words which now bear an immaterial and spiritual significance were originally used to denote visible and tangible objects. If in many languages the word for breath or wind has come to be used for the soul, it is because at an early stage of their development men became conscious of an analogy between the lightness and invisibility of air and the supposed properties of the human spirit. To a later and more critical age the analogy may appear thin and crude; but it must be remembered that the initiation of a religious vocabulary dates from the childhood of the race. In the gradual evolution of religion, crudities have been, and still are, until the original meaning of many words now used exclusively with a spiritual significance has been forgotten. But throughout the whole course of the development the necessity for finding analogical words as a vehicle for the expression of spiritual truth has never been outgrown. The importance is to put into speech by means of the analogy of human fatherhood. Thus witness is borne in all ages to the instinctive readiness with which men assume a parallelism between the things which are seen and things which are not. To what extent that parallelism really exists and how far it affords us grounds of inference to the real nature of the spiritual world, is the problem which every philosophy of religion sets out to solve.

5. Analogy in Scholastic theology.—But however legitimately and successfully this method of argument was employed by the Fathers, it was not by them subjected to reflective criticism. A gradual advance religion is and analogical reasoning that led men entered upon a rigorous examination of the limits of the analogical method with particular reference to its use in theology. Among the reasons which led them to undertake the task was their desire to find a philosophic justification for the anthropomorphous language of Scripture. Such language obviously could not be taken liter-
ANALOGY 417
ally, nor yet be summarily dismissed as merely metaphorical, and therefore implying no real likeness between God and His creatures. The Schoolmen's answer to the problem is to be found in their theory of analogy, which concerns itself not only with the explanation of the analogical use of language, but also with the far deeper and more important question of the reality and the extent of the analogy between the finite and the infinite, and the legitimacy of inference from one to the other.

With regard to language, it was pointed out that a distinction must be made between the univocal, the equivocal, and the analogical use of words. A word is univocally employed when in two or more propositions it conveys precisely the same meaning; equivocally when used in two entirely different senses. But where two things are connected by some relation, the same word may be applied to them both in a related, though not precisely identical, sense. This last is the analogical use. Thus it is the use of the word ‘wisdom’ as old as Aristotle — the word ‘healthy’ is analogically applied to the body which is sound, and to the food which is the cause of soundness. Similarly, the term ‘being’ is analogically applied to God who exists essentially, and in a man whose existence is contingent and dependent.

Upon the basis of this distinction was established the justification of the use of human terms about the Deity. When, for example, we speak of the three persons of the Godhead, we are using the word ‘person’ in a manner different from that in which we use it in reference to human beings. The word is not used univocally. For so far, we should be denying any difference in kind between human and Divine wisdom, and our statement would be obviously opposed to the Christian teaching about God. Nor yet is the analogy of the use of the word ‘wisdom’ not used univocally. For so far, we should be asserting the essential likeness of human and Divine wisdom, and it would be impossible to argue from the nature of the one to the nature of the other. Such a position would be untenable, because if a similar objection were supposed to hold good in all parallel cases, every inference from the creature to the Creator would be vitiated by the fallacy of equivocation. A way of escape from these opposite difficulties was proposed by the analogical use of the word. It is implied that there is a relation or proportion existing between the wisdom of man and the wisdom of God. What is partial and incomplete in man is perfect in God.

This distinction between the univocal and the analogical use of words was a sufficient reply to the reproach of anthropomorphism, but it left untouched the deeper question of the extent of the analogy or resemblance between God and His creatures. Accordingly, in the effort to reach greater clearness of thought with reference to this fundamental problem of religion, the Schoolmen proceeded to introduce further distinctions into the scheme of Suarez (Disput. Metaphys. xxxviii. sec. iii.). He distinguished two kinds of analogy, viz. that of proportion and that of attribution. To the former of these not much interest attaches. It amounts to little more than a mere resemblance, seized upon by the mind as justification for the use of a metaphor. Though such an analogy of proportion may appeal to the imagination, and therefore be of use in the way of illustration, it does not go far enough to establish any inference in argument. The analogy of attribution, on the other hand, is established by the existence of a resemblance in the nature of things, and is valid for purposes of inference. When this resemblance consists in the possession by two subjects of the same quality in different degrees, the analogy is styled intrinsic. This is the highest grade of analogy, analogia attributionis intrinseca, and of this kind is the analogy between God and His creatures as regards, for example, the property of existence. Existence is predicated of Him and them. Their existence, however, is not of the same degree as His. Yet is it far the same as to allow of some inferences being drawn, from what we know of finite existence, as to the nature of infinite existence. These distinctions may possibly appear needlessly subtle and technical, but the consideration of them will at least serve the purpose of calling the attention of the student to the possibility of some confusions of thought that have been actually responsible for the failure of much analogical argument.

When the questions of theology ceased to be confined to the schools, and became the subject of popular debate, it was natural that the problem of analogy should be handled in accordance with the new methods, and in a manner intelligible to a larger public. A general advance in intellectual enlightenment brought the question once more to the front. At a time when man's knowledge of the world was being rapidly extended in many directions, he was inevitably brought face to face with the issue, whether Nature was in any true sense the analogue of God. Hence at the beginning of the 18th cent. we find that the theory of analogy was occupying the attention of some of the foremost theologians of the day.

Among the books on the subject which specially deserve mention may be noticed a Discourse on Predestination, by Dr. King, Archbishop of Dublin (1709). By this writer a somewhat extreme form of the analogia causarum was advocated, in order to allay the bitterness of theological controversy, he laid stress on the principle that all our notions about the Deity are inevitably limited by our own finite capacity. 'If we know anything about Him at all, it must be by analogy and comparison, by resembling Him to something we do know and are acquainted with.' (Whatley's reprint of King in Appendix to Bampton Lectures, 3rd ed. p. 490.) Our notions of God are really as far from the truth as a map is from the distant sea. A chart, while it provides instruction sufficient for the purpose of the traveller, does not actually resemble the country conventionally represented. Similarly, Scripture teaching about God may give us information about Him adequate to our view of the present life, without revealing Him to us as He is. This depreciation of man's capacity for acquiring a true knowledge of God was intended in the interest of theological peace. It became, however, the occasion of controversy. Bp. Browne, of Cork, contributed several books to the discussion of the question. In an early work he maintained that—

"Our ideas of God and divine things . . . are a sort of compoundation of ideas of sense which we impute to properties and attributes of God with the utmost amount to no more than a type or figure by which something in another world is signified, which we have no more notion than a blind man hath of light" (quoted in Introduction to Procedure, etc.).

Adhering to these principles in his Procedure, Extent, and Limits of the Human Understanding (1729), he accepted without demur King's somewhat extreme conclusions:

"That we have no direct or proper notions or conceptions of God in His attributes, or of any other things of another world; that they are all described and explained in the language of revelation, by way of analogy and accommodation to our capacities; that we want faculties to discern them" (op. cit. p. 112). At the same time he criticized King for failing to distinguish between metaphor and analogy, and for thus suggesting the inference that our statements about God are merely metaphorical, and as
unreal as the ascription to Him of human passions or human limbs. To the exposition of this distinction Sir Joshua Reynolds, in a chapter (ib. ch. i.), explaining that metaphor expresses only an imaginary resemblance or correspondence, whereas in analogy the correspondence or resemblance is real. The same theme is worked out at greater length in his later book, *Observations on Poetry and Painting* (1738). Our knowledge of the spiritual order is strictly relative to our capacities.

'God does not raise up our minds to any direct or immediate view of God himself, nor brings them down to the level of our understanding' (P. 32). 'What just and sufficient knowledge of God we have in this life is obtained by analogy or similitude with those perfections we find in ourselves' (P. 39).

The question naturally attracted the attention of Berkeley, who handled it with characteristic accent and precision in *Alciphron*, Dial. iv. ch. xxi. Familiar with the Scholastic definitions of analogy, he does not shrink from the conclusion that all our knowledge of God is strictly analogical. It is not, however, on that account to be reckoned altogether impossible, or false, or destitute of all importance. Analogy is, so to speak, an infallible proof in an at least potentially约implying that we cannot frame a direct or proper notion, though never so inadequate, of knowledge or wisdom as they are in the Deity, and we can only supply and ascribes proper similitude in this way.

'Knowledge, for example, in the proper formal meaning of the word, is, as it is of God proportionally, that of preserving a proportion to the infinite nature of God. We may say, therefore, that as God is infinitely above man, so is the knowledge above the knowledge of man, and this is... analogia propria facta. And after this same analogy we must understand all those attributes to belong to the Deity which man has attributed to himself simpliciter, as with the horse a propria facta' (ed. 1735, i. p. 257).

Berkeley, while recognizing the incompleteness of our spiritual knowledge, lays the emphasis on its trustworthiness rather than on its inadequacy.

'This doctrine of analogical perfection in God, or our knowing God by analogy, seems very much misunderstood and misapplied by those who would infer from the above that we cannot frame and direct or proper notion, though never so inadequate, of knowledge or wisdom as they are in the Deity, and understand any mean of the human mind in this light or colour.'

Such was Berkeley's repudiation of the attempt to make religious truth unassailable by assuming it to be unintelligible.

It seems likely that Butler, whose work is still the classical example of the application of the argument from analogy to theology, should have deliberately abstained from any prefatory justification or explanation of the theory of the instrument we are here to consider. Such, however, is the case. Declaring at the outset that he will not take it upon himself to say how far the extent, compass, and force of analogical reasoning can be reduced to general heads and rules, he curtly brushes aside objections to this kind of argument with the remark that it is indeniably adopted by all in practical life. 'It is enough to the present purpose to observe that this kind of general way of arguing is evidently natural, just, and conclusive.' Others, as we have seen, were discussing these very points at the time Butler was engaged in the composition of the *Analogy*. Perhaps he distrusted such speculations as essentially unpractical. Whatever the reason may have been, they are absent from his own work. He applies, he does not analyze, the argument from analogy. What gives his work its pre-eminent position in apologetic literature is not his selection of this particular kind of argument, but the steady patience, the scrupulous exactitude, and the devastating logic with which he applied it to the controversies of his day. He offers a striking contrast alike to those writers who denounced analogical reasoning as worthless and those others who belauded it as the key to all difficulties. The claim that he makes on its behalf is modest in its scope. Positively it can never (so he tells us) afford more than a probable proof; negatively it can expose the latent insincerity of much unbelief, by showing that circumstances often considered to be conclusive objections to religion are strictly parallel with analogous circumstances in nature, the acknowledged handiwork of God. Analogy in Butler's hands provided no division, no merciful boundary, of the *Christian* from the *Deist*... or *Widow*. Copleston's *History of Philosophy* (bk. i. 339), but it was fitted to open the eyes of men to their obligations, leaving them without intellectual excuse if they failed to consider with appropriate seriousness the arguments urged on behalf of religious belief.

The full effectiveness of Butler's argument will not be appreciated unless it be remembered that he says he is arguing upon the principles of others, not his own (ib. p. 357). Convinced that the proper proof of religion was to be found in the principles of liberty and general fitness, he nevertheless avoided reference to these principles, and limited himself to the consideration of religion as a matter of fact and practice. Upon this lower ground he met his adversaries, the Deists and the indifferent, and the more so as, need, are attributed to God by metaphorical analogy only, and involve no statement as to His nature. On the other hand, 'Knowledge, for example, in the proper formal meaning of the word, is, as it is of God proportionally, that of preserving a proportion to the infinite nature of God. We may say, therefore, that as God is infinitely above man, so is the knowledge above the knowledge of man, and this is... analogia propria facta. And after this same analogy we must understand all those attributes to belong to the Deity which man has attributed to himself simpliciter, as with the horse a propria facta' (ed. 1735, i. p. 257).

The title of the book recalls that of Bp. Brown's *The Procedure, Extent*, and *Limits of the Human Understanding*. And the resemblance is more than superficial. In both writers there is the same tendency to dwell on the inadequacy of the human intelligence to probe the mysteries of the Divine Nature. But Mansel, under the influence of Kantian principles as to man's ignorance of things in themselves, attacks the problem from another side, and goes far beyond the point reached by his predecessor. Whereas Bp. Brown had urged the relativity and consequent incompleteness of man's analogical knowledge of God, Mansel went so far as to say that, of God's real nature, we, under our finite conditions, are, and must remain, totally ignorant. It is an ignor-
ANANDA—ANARCHY, ANARCHISM

the absolute existence; for we know of no absolute existence. But, for the reason, we are equally unable to say that it does not resemble; for, if we know not the Absolute and Infinite at all, we cannot say how far it is or is not equal to likeness or unlikeness to the Relative and Finite’ (3rd ed. p. 146).

This is not the place in which to take notice of those further considerations with regard to the distinction between regulative and speculative truth, by which Mansel sought to establish religious faith upon this basis of philosophic scepticism. It is enough to give attention to the line which he adopted with respect to analogy. Repudiating out metaphysical grounds the analogy between the Finite and the Infinite, and consequently rejecting the customary philosophic proofs of religion, he found a negative defence for belief in the analogous difficulties of religion and philosophy. In so doing he claimed to be following in the footsteps of Dr. Butler, and to be adding another chapter to his argument on the analogy between religion and the course of nature. His principle he declares to be, that there is no rational difficulty in Christian theology which has not its counterpart in philosophy, which is the more convincing on that ground on which the rationalist professes to find in the doctrines of revealed religion, viz., not from defects peculiar to revelation, but from the laws and limits of human thought (p. 170). His work certainly resembles that of Butler in being an eminent example of the way in which the argument from analogy can be used for defensive purposes. He showed conclusively enough that many of the objections urged against revelation are applicable with equal force against any doctrine based on principles of thought and action. If the creed of theism contains its antinomies, so also does the creed of philosophy. In both cases explanation is equally impossible.

But the emphasis which Mansel placed upon our ignorance of the Divine Nature as it is, and his insistence on the absence of any necessary analogy between the goodness of man and of God, were the occasion of vigorous protests at the time, and eventually took the form of a party controversy between those who desired the assimilation of man to the Divine being, and the adherents of the new theology, who were unwilling to put forward the same argument in the latter half of the 18th century.

8. Renewed confidence in Analogy.—In recent years there has been a distinct revival of confidence in the analogy between the Creator and His creation, and in the possibility of passing from the knowledge of one to the knowledge of the other. Among the causes which have contributed to this result must be counted the advance of the idealistic philosophy, and the attention pressed to the study of human personality. Instead of attempting to evade the reproach of anthropomorphism by conceding to the agnostic the ineradicability of the Divine Nature, the modern agnostics is not afraid to own the anthropomorphic character of theology, while he insists that in this respect theology is in the same position as every other department of human thought. ‘Personality is thus the gateway through which all knowledge must inevitably pass’ (E. M. Illingworth, Personality Human and Divine, p. 26).

The words are quoted, human personality is deliberately taken as the analogical symbol of the Divine Nature, on the ground that God possesses, in transcendent perfection, the attributes which are imperfectly possessed by man. Thus what might appear to be the damaging effect of the admission of an anthropomorphic element in theology is neutralized by the correspondent assertion of a theomorphic doctrine of human nature. The supposition of an absolute and insuperable heterogeneity between the Finite and the Infinite, which has always been the basis of philosophic scepticism, whether in alliance or in opposition to orthodoxy, is denied. The reality and the inexhaustible significance of the analogy between God and man are explicitly re-asserted.

G. C. JOYCE.

ANANDA.—One of the principal early disciples of the Buddha. He was the Buddha’s first cousin, and is described as being devoted to him with especial fervour in a simple, childlike way, and serving as his personal attendant (upatthāka). A panegyric on him is put into the mouth of the Buddha just before the attestation of the Buddha’s death (Majjhima, iii. 211 R.; Vacant, De Analogy, ib. 286), and took a prominent part in it; but that did not prevent the council from admonishing him for certain faults of inadvertence he had previously committed. Other passages of a similar tendency might be quoted (e.g. Majjhima, No. 23); but these are perhaps sufficient to show that the picture drawn of him is of a man lovable and earnest, but withal somewhat dense.

T. W. RAY S. DAVIDS.

ANARCHY, ANARCHISM.—Anarchy means, as writers like Kropotkin understand it, the perfectly unfettered self-government of the individual, and, as a result, the absence of any kind of external rule. It is the widest possible application of the doctrine of laissez faire. Government, it declares, is something that human nature should not be asked to submit to. If men were but left to themselves, they would form themselves into co-operative producing groups, which would live in perfect harmony with one another. Each individual would have precisely anthropomorphic as the theology, since they are alike limited by the conditions of human personality, and controlled by the forms of thought which human personality provides’ (E. M. Illingworth, Personality Human and Divine, p. 26). In the book from which these
popular idea of Anarchy is that it is concerned only with bomb-throwing and Terrorism. But Anarchism, a theory of existence, has been proclaimed by some of the gentlest and most cultured spirits in Europe; and although, in the case of a writer such as Bakunin, the thinker and the active revolutionary are merged, it will be convenient to consider first the theory and then the history of the movement.

i. THEORY. — On its economic side Anarchy is a branch of Socialism or Collectivism. It regards the day of private ownership and of capitalism as drawing to a close. It believes that the worker between employer and employee is evil, and must sooner or later cease. Its view of the remuneration of labour varies between payment by labour time and the taking by each of what he wants from the common stock of production. When the workers are living in free associations, each will see that his own interest is the interest of the association, and the present tragic struggle for the increased share will cease.

The political basis of Anarchy is, negatively, that the possession of mere electoral and voting power is illusory compared with the real power of the people. Individual property is as necessary to realize this view as the means of social redemption for the many. Liberalism has been a failure. Even universal suffrage could lead but to the deeper enslavement of the worker. Representative government has had its full trial, and has failed; its defects are inherent in itself; and never can be cured. It is impossible for a Parliament to attend to all the numberless affairs of the community. More and more Parliament shows this inability in the congestion of business, and in the increasing extent to which local affairs are delegated to local authorities. It is this process of decentralization that is so full of hope to the philosophic Anarchist. He takes it to foreshadow the day when every little group will settle its own affairs, when there will be no rulers and no subjects, when each individual will have free play within his group, and each group free play in its relation to all other groups.

Anarchy has been extremely anxious to place itself on a scientific basis. In its modern form it has the existence of the latter as the actual sponsor. It declares itself to be acting along the lines of evolution in that it is conforming to those two great tendencies which Spencer discerns in present-day conditions—the tendency to integrate labour for the purpose of common living or to itself; and the tendency towards the fullest freedom of the individual for the prosecution of all aims beneficial both for himself and for society at large. Throughout organic nature the capacities for life in common are growing in proportion as the integration of organisms into compound aggregates becomes more and more complete. The struggle for existence, Kropotkin asserts, is not merely the struggle for the existence of the individual as the actual sponsor, but the progressive adaptation of all individuals of the species to the best conditions for the survival of the species. The conditions must, therefore, be modified, so that man will be able to live the normal free life, instead of being forced by positive law to hold a place in a system of things which gives him neither freedom nor opportunity.

ii. HISTORY. — The view that authority is in itself a thing undesirable, and that man reaches the full expanse of his faculties only when he is allowed to develop his individuality absolutely unchecked, is by no means new. It appeared in several of the Mystic and Anabaptist sects of the later Middle Ages and post-Reformation period. In the 18th cent. there was a sect of the Beghards, calling themselves Brethren and Sisters of the Free Spirit, who professed pantheistic views. It claimed the utmost liberty on the ground that, as God inhabited each, the will of each was the will of God. In their preaching the Brethren advocated community of goods and community of women; they insisted on a personal equality, and rejected all forms of authority. It is the Philosophes immediately preceding the French Revolution the idea was widely spread that the normal condition of life was that represented by 'Paul and Virginia,' a condition under which men were self-sufficing and independent, owning no other authority than that of their own self-created world. But in 1795, Proudhon wrote his Inquiry concerning Political Justice, advocating community of goods, the self-government of mankind according to the laws of justice, the abolition of all forms of government, and the abolition of marriage.

The real founder of Anarchy as a living modern movement was Pierre Joseph Proudhon, a Frenchman of humble parentage, born in 1809. The attention Proudhon attracted was due, not only to his great ability, but to the fact that he lived in the stormy middle years of French history as a means of social redemption for the many. Liberalism has been a failure. Even universal suffrage could lead but to the deeper enslavement of the worker. Representative government has had its full trial, and has failed; its defects are inherent in itself; and never can be cured. It is impossible for a Parliament to attend to all the numberless affairs of the community. More and more Parliament shows this inability in the congestion of business, and in the increasing extent to which local affairs are delegated to local authorities. It is this process of decentralization that is so full of hope to the philosophic Anarchist. He takes it to foreshadow the day when every little group will settle its own affairs, when there will be no rulers and no subjects, when each individual will have free play within his group, and each group free play in its relation to all other groups.

Anarchy has been extremely anxious to place itself on a scientific basis. In its modern form it has the existence of the latter as the actual sponsor. It declares itself to be acting along the lines of evolution in that it is conforming to those two great tendencies which Spencer discerns in present-day conditions—the tendency to integrate labour for the purpose of common living or to itself; and the tendency towards the fullest freedom of the individual for the prosecution of all aims beneficial both for himself and for society at large. Throughout organic nature the capacities for life in common are growing in proportion as the integration of organisms into compound aggregates becomes more and more complete. The struggle for existence, Kropotkin asserts, is not merely the struggle for the existence of the individual as the actual sponsor, but the progressive adaptation of all individuals of the species to the best conditions for the survival of the species. The conditions must, therefore, be modified, so that man will be able to live the normal free life, instead of being forced by positive law to hold a place in a system of things which gives him neither freedom nor opportunity.

ii. HISTORY. — The view that authority is in itself a thing undesirable, and that man reaches the full expanse of his faculties only when he is allowed to develop his individuality absolutely unchecked, is by no means new. It appeared in several of the Mystic and Anabaptist sects of the later Middle Ages and post-Reformation period. In the 18th cent. there was a sect of the Beghards, calling themselves Brethren and Sisters of the Free Spirit, who professed pantheistic views. It claimed the utmost liberty on the ground that, as God inhabited each, the will of each was the will of God. In their preaching the Brethren advocated community of goods and community of women; they insisted on a personal equality, and rejected all forms of authority. It is the Philosophes immediately preceding the French Revolution the idea was widely spread that the normal condition of life was that represented by 'Paul and Virginia,' a condition under which men were self-sufficing and independent, owning no other authority than that of their own self-created world. But in 1795, Proudhon wrote his Inquiry concerning Political Justice, advocating community of goods, the self-government of mankind according to the laws of justice, the abolition of all forms of government, and the abolition of marriage.

The real founder of Anarchy as a living modern movement was Pierre Joseph Proudhon, a Frenchman of humble parentage, born in 1809. The attention Proudhon attracted was due, not only to his great ability, but to the fact that he lived in the stormy middle years of French history as a means of social redemption for the many. Liberalism has been a failure. Even universal suffrage could lead but to the deeper enslavement of the worker. Representative government has had its full trial, and has failed; its defects are inherent in itself; and never can be cured. It is impossible for a Parliament to attend to all the numberless affairs of the community. More and more Parliament shows this inability in the congestion of business, and in the increasing extent to which local affairs are delegated to local authorities. It is this process of decentralization that is so full of hope to the philosophic Anarchist. He takes it to foreshadow the day when every little group will settle its own affairs, when there will be no rulers and no subjects, when each individual will have free play within his group, and each group free play in its relation to all other groups.

Anarchy has been extremely anxious to place itself on a scientific basis. In its modern form it has the existence of the latter as the actual sponsor. It declares itself to be acting along the lines of evolution in that it is conforming to those two great tendencies which Spencer discerns in present-day conditions—the tendency to integrate labour for the purpose of common living or to itself; and the tendency towards the fullest freedom of the individual for the prosecution of all aims beneficial both for himself and for society at large. Throughout organic nature the capacities for life in common are growing in proportion as the integration of organisms into compound aggregates becomes more and more complete. The struggle for existence, Kropotkin asserts, is not merely the struggle for the existence of the individual as the actual sponsor, but the progressive adaptation of all individuals of the species to the best conditions for the survival of the species. The conditions must, therefore, be modified, so that man will be able to live the normal free life, instead of being forced by positive law to hold a place in a system of things which gives him neither freedom nor opportunity.

ii. HISTORY. — The view that authority is in itself a thing undesirable, and that man reaches the full expanse of his faculties only when he is allowed to develop his individuality absolutely unchecked, is by no means new. It appeared in several of the Mystic and Anabaptist sects of the later Middle Ages and post-Reformation period. In the 18th cent. there was a sect of the Beghards, calling themselves Brethren and Sisters of the Free Spirit, who professed pantheistic views. It claimed the utmost liberty on the ground that, as God inhabited each, the will of each was the will of God. In their preaching the Brethren advocated community of goods and community of women; they insisted on a personal equality, and rejected all forms of authority. But in 1795, Proudhon wrote his Inquiry concerning Political Justice, advocating community of goods, the self-government of mankind according to the laws of justice, the abolition of all forms of government, and the abolition of marriage.

The real founder of Anarchy as a living modern movement was Pierre Joseph Proudhon, a Frenchman of humble parentage, born in 1809. The attention Proudhon attracted was due, not only to his great ability, but to the fact that he lived in the stormy middle years of French history as a means of social redemption for the many. Liberalism has been a failure. Even universal suffrage could lead but to the deeper enslavement of the worker. Representative government has had its full trial, and has failed; its defects are inherent in itself; and never can be cured. It is impossible for a Parliament to attend to all the numberless affairs of the community. More and more Parliament shows this inability in the congestion of business, and in the increasing extent to which local affairs are delegated to local authorities. It is this process of decentralization that is so full of hope to the philosophic Anarchist. He takes it to foreshadow the day when every little group will settle its own affairs, when there will be no rulers and no subjects, when each individual will have free play within his group, and each group free play in its relation to all other groups.
by a change not so much in political conditions as in economic. This change could be wrought only along the lines of social development. In 1847 the Society began to call itself the Communist League, its aim being 'the founding of a new society without classes and without private property.' The manifesto that the League put forth did not a little to give vigour to the various revolutionary movements of 1848; but, in the reaction following upon that time of enthusiasm, the League died. During the London International Exhibition of 1862 views were exchanged between French workmen visiting the Exhibition and their English fellows; popular sympathy with the Polish insurrection of 1863 helped the movement; and, so, in 1864, the International Association of Working Men was formed, with Karl Marx as its ruling spirit. Its influence led the Association to the acceptance of State Socialism. State ownership of the land, as well as of the means of transport and communication, was early agreed upon as an object for which the Association should strive, although a programme to abolish the right of inheritance did not find a majority.

But the disintegration of the International was at hand. In 1869, Bakunin and a number of the French anarchists had joined it and at once began to attack the centralizing views of Marx. Then the Franco-German war broke out, and national feeling could not be eliminated even from an International Association. The Commune in Paris, 1871, was a revolutionary, but at the same time, in a shape of things, it was dashed in very dreadful fashion. In 1871 it became evident that there were two definitely marked groups in the Association, and the line of cleavage, as Kropotkin has pointed out, was not only an organic division, but a radical one: the group which now had received Parliamentary government, wished to work along electoral lines. The conquest of power within the existing state became the watchword of the party which took the name of the 'Social Democrats.' The Latin and Slav elements in the Association gathered themselves together, under the leadership of Bakunin, in advocating the abolition of all paternal government, and the free action of the people through separate groups. In 1872 the Anarchists were expelled from the Association, and henceforth uttered their views through the 'Jura Federation.' This expulsion of the Anarchists was almost the last action of the International. It moved the seat of its General Council to New York, held a congress in Geneva in 1873, and then died. The Jura Federation and the Anarchists had a stormier history, owing to the influence of their leader.

Michael Bakunin (1814–1876) was an aristocrat and an officer. Horrified by the repressive duties he had to perform in Poland, he left the army and became a revolutionary. From 1849 to 1855 he was almost constantly in prison. In 1855 he was exiled to Siberia, but escaped in 1861 to America, and by this way to Europe. At this time Russia seemed to be on the verge of a crucial constitutional change. The Czar in 1857 had promised the emancipation of the serfs, but after he had announced his intention the reactionary party induced him to impose upon the serfs an enormous redemption price for the land, and to postpone the emancipation till 1863. But in 1863 there broke out the insurrection in Poland. It was repressed with the utmost cruelty; tens of thousands of Poles were exiled to Siberia. Up to this time Bakunin's social reform was known merely by going among the artisans and peasants, indoctrinating them with their liberal and revolutionary views. This propaganda was now rendered almost impossible. After the attempt on the Czar's life by Karakozoff in 1866, the reformers had to hide their heads. Thousands fled the country, and settled in Switzerland and elsewhere.

It was among those exiles that Bakunin developed his Anarchist views. His object was the destruction of the existing order of things in faith, morals, economics, and politics. He refused to consider the question of reconstruction; 'all talk about the future is criminal, for it hinders pure destruction, and staves the course of revolution.' The programme of the International Social Democratic Alliance which he founded gives the most perfect outline of his views. 'The Alliance professes atheism; it aims at the abolition of religious services, the replacement of belief by knowledge, and Divine by human worship; it regards marriage as a political, religious, judicial, and civic arrangement. Before all, it aims at the destruction of all classes, and the political, economic, and social equality of the individual of either sex; and to attain this end it demands, before all, the abolition of inheritance, in order that, for the future, use and profit may depend on what each produces, so that . . . the land, the instruments of production, as well as all other capital, shall only be used by the workers, i.e. by the agricultural and industrial communities.' All children were from birth to be brought up on a uniform system, with the same means of instruction, so that there might disappear 'all those artificial inequalities which are the historic products of a social organization which is as false as the division of the land and the industrial exploitation of the masses.' The Alliance, 'so-called patriotism and nationalism,' marked, desired the universal association of all local associations by means of freedom.

Bakunin's ideas were developed by his disciple Netschajeff, the son of a Court official in St. Petersburg, and born there in 1846. Netschajeff was much more a Terrorist than an Anarchist, and hisアナニミス was more a Terrorist than an Anarchist, and his terrorbox was at first supposed to be the work of Bakunin, but is now, with more likelihood, held to have been by Netschajeff himself. According to this Catechism, the revolutionary must let nothing stand between him and the work of destruction. 'If he continues to live in this world, it is only in order to annihilate it all the more surely. A revolutionary despises everything doctrinaire, and renounces the science and knowledge of this world, and we are no longer to think of a change in the world; but one science—that of destruction. For that, and that only, he studies mechanics, physics, chemistry, and even medicine . . . The object remains always the same—the greatest and most effective way to destroy the existing order.' The Catechism makes no ambiguity as to its methods. Differential treatment is to be meted out to the different classes of society; the rich are to be spared, but their wealth is to be used for the purposes of revolution; the former owners of wealth are to become the slaves of the proletariat. But rulers are not to be dealt with thus considerately. 'In the first place, we must put out of the world those who stand most in the way of the revolutionary organization and its work.' There is to be no attempt to set up anything on a present basis. Every effort is to be made 'to heighten and increase the evils and sorrows which will at length wearable out the patience of the people, and encourage an insurrection en masse.' Active terrorism is a means to an end, not an end in itself. 'All is not action that is so called; for example, the modest and too cautious organization of secret societies, without external announcement to outsiders, is in our eyes merely ridiculous and intolerable.' In the Child's Play of this active terrorism announcements we mean a series of actions that promote the idea of something—a person, a cause, a condition that hinders the emancipation of the people. Without sparing our lives, we must break into the life of the people with a series of rash, even senseless
actions, and inspire them with a belief in their powers, unite them, and lead them on to the triumph of their cause." This is the attitude that the plain man understands by Anarchism. It is claimed, of course, by the Anarchists that to allow this extravagant utterance of the Revolutionary Catechism to stand as a basis of the future is to do them an injustice, and to confound extreme applications of a general principle with the principle itself. 'To confound Nihilism with Terrorism is,' says Kropotkin, 'as wrong as to confuse a philosophy, like Socialism, with a political movement, such as, for example, Republicanism.' But, in answer, it may be said that all Anarchists are not thinkers, and it is teaching of the Bakunin character that has had, as it was intended to have, the most startling results. The assassination of Alexander II., of the Empress of Austria, of King Humbert of Monaco, of President McKinley, the bomb outrages in Chicago in 1887, in the French Chamber of Deputies in 1883, in a theatre in Barcelona in 1894, the attack on King Edward in London, and the attempt on their wedding day, upon the young King and Queen of Spain, are the things which 'break into the life of the people with a series of rash, even senseless actions,' and make the whole movement hateful to those who feel that any organized form of political action over the whole of individuals is preferable to a state of things in which the most irresponsible make the greatest noise and have the greatest power to do mischief. It must be allowed, too, that this irresponsible Terrorism is the dominant form of Anarchism during the present time. In 1882 the Anarchists, in conference at Geneva, cut themselves adrift from all political parties. They declared the enmity of the Anarchists to the law. We declare ourselves allies of every man, group, or society which denies the law by a revolutionary act. We reject all legal methods. We spurn the suffrage called universal. . . . Every social product is the result of collective work, to which all are equally entitled. We are, therefore, Communists. We recognize that without the destruction of family, communal, provincial, and national boundaries the work will always have to be done over again.'

It is, at first sight, not a little difficult to find any relation between this extravagant propaganda which has had such an immense effect as that in Russia, the man of high birth, of splendid ability, of gentle and noble and self-sacrificing life. Kropotkin has told his own story in the Memoirs of a Revolutionary, and whoever would seek to understand Anarchism should read this book, along with the account of the trial of the Anarchists at Lyons in 1883 (Le Procès des Anarchistes). Such a reading will explain how it is that the more recent developments of Anarchism go so far beyond the conception, for instance, of Thomas Paine. The workers who have suffered, as Bakunin and Stepaniak and Kropotkin and tens of thousands of others have done, can find no solution of the social situation other than the utter destruction, by any means, of the present condition of society. The discoveries and facts which they have arrived at by railways suggest themselves to them as the kind of thing that will be reached under Anarchism. The result is to be a great increase in production. At present 'the owners of capital are certainly endeavouring to limit the production in order to sell at higher prices.' Kropotkin seems to think that the economics of the diamond industry apply, in this regard, to agriculture and cotton-spinning, quite oblivious of the fact of the general economy of large production. If it be asked how large a number of the farmers are rewarded, Kropotkin is sufficiently vague. Under the system of free groups each man would naturally turn to the work he could do; but what assurance would there be that he would stand to any agreement he had made? The Anarchist answer is that there will be no necessity to hold him to

emancipation. Instead of following out the career that was open to him, as a general and an officer of the Household Brigade, he chose service in Siberia, and spent four years there, being occupied most of the time in geographical and geological work. In Siberia he recognized the absolute impossibility of doing anything really useful for the masses of the people, and, accordingly, his mind turned to the existing administrative machinery, and became convinced that the only future for mankind lay in an entirely free Communism. On returning to St. Petersburg, full of ardour for his country's freedom, he found a Positivist society of his own earlier years of Alexander II. had died. Turgenieff's 'Smoke' is its epitaph. Kropotkin accordingly set to work to renew the Anarchist zeal, and strove, through companions whose earnestness and utter disregard of self almost disarm criticism, to spread among the working classes of the capital revolutionary opinions. His activity was discovered. For three years he was imprisoned in the fortress of SS. Peter and Paul, but finally escaped. For the next few years he moved between Switzerland and France, and eventually, becoming involved in the Anarchist rising in Lyons in 1883, was sentenced to five years' penal servitude. Since his liberation at the end of three years he has lived mostly in England.

Kropotkin's main idea is that, as the present system of government and competition and private property cannot be mended without being ended, society must fly asunder into its primary elements and begin to re-aggregate itself. The right of private property he denies, on the ground that if we go back to the uncivilized condition of things we find no such right. Land has been made what it is by drainage and cultivation in past generations. Production to-day is the result of innumerable inventions that have now become merged in the general producing machinery. We can produce now only as a consequence of what past generations have done. 'Who is, then, the individual who has the right to step forward and, laying his hands on the smallest part of this immense whole, to say, I have produced this; it belongs to me?' This question by which he thinks he has proved the illegitimacy of private property, occurs again and again in his writings. An ironmaster, he declares, deals with and uses the discoveries of those who have gone before, and says that the 'British industry is the work of the British nation,—nay, of Europe and India taken together,—not of separate individuals.' But where government has once been destroyed and individuals have been left free to re-aggregate themselves, each man will take his place in the group he prefers; and those groups retaining their own freedom, will at the same time act with mutual helpfulness and consideration, without any constraint from a government. The reason, therefore, of the agreement that have been arrived at by railways suggest themselves to him as the kind of thing that will be reached under Anarchism. The result is to be a great increase in production. At present 'the owners of capital are certainly endeavouring to limit the production in order to sell at higher prices.'
his agreement. As the agreement has been freely entered into, there will be no need of any authority to enforce it. The labourer will be remunerated by helping himself to that portion of the joint product which he requires. The problem of the idler is easily settled:—there are not likely to be idlers in such a society. Work is natural to man, and the feeling of brotherhood and mutual responsibility will result in greatly improved labour. ‘We consider that an equitable organization of society can arise only when every wage system is abandoned and when everybody is contributing for the common well-being, according to the full extent of his capacities, shall enjoy also from the common stock of society to the fullest possible extent of his needs.’

To the questions that present themselves to the objector, Kropotkin has the most indefinite of answers. It may be asked, for instance, how, under any such free associations, any large public works are to be undertaken. We have heard not infrequently of such undertakings resulting in losses to the contractor, and, finally, being carried through not by that mutual agreement which is apart from law, but by the insistence of the law that a contract entered into shall be fulfilled. When work fails to be done, let us say, another Forth Bridge, who is to insist that the work shall be finished so that gross waste shall not ensue? And will not that ideal unity between group and group be very soon broken when the working of this kind come to be discussed and settled?

Then, again, with regard to the remuneration of labour, it may be granted that the wages system is not an ideal method of assessing the value of each contribution of the whole society; but that would be the result on production, distribution, and industrial peace when each man was taking from the general heap exactly what he wished? The alternative on the Anarchist view is that he should be paid according to the labour time spent on his work. But what would become of art, music, literature, under such a system? The labourer is not, as a rule, prepared to acknowledge that anything is work which is not manual work. Far from granting this, he would deny to it the very name of work. Under this system the family would disappear as a matter of course. The notion of a permanent alliance between husband and wife by law would be impossible. The relationship between husband and wife would be absolutely free; and this, unless human nature were to be altogether changed, would mean that the woman was to be placed at the mercy of the man and have assurance neither of home nor of sustenance. Children would require to be in charge of the group, not of the parents, and equality would necessitate that they should all be brought up in common.

Kropotkin assures the critic that the dreaded evil of idleness will be prevented. The solidarity of the human race will prevent them. The condition of things that is to be established not by law but by the sheer dignity of man, after bloodshed and revolution have done their work, is the idyllic one of perfect peace, and the solidarity of the human race. The Romanoff and the serf will vie with each other in praying the other first to take his portion of the heap.

On its theoretical and economic side Anarchism is a group of ideas which are visionary. The solidarity of the human race will prevent them. The condition of things that is to be established not by law but by the sheer dignity of man, after bloodshed and revolution have done their work, is the idyllic one of perfect peace, and the solidarity of the human race. The Romanoff and the serf will vie with each other in praying the other first to take his portion of the heap.

One method of apportionment of wages—payment according to labour time—might have some chance of success under State Socialism, but none under a system where each man was absolutely free. The loafer and the malingerer would have found their paradise. But, anxious as Kropotkin is to dispense with government, his own scheme would involve government with an iron hand. Paternal feeling, one of the primary instincts of mankind, would have to be dead if men did not try to do their best for their own children.

The rights of property and inheritance are claimed by those who were most worthy of being parents unless under the strongest compulsion. Only the sensual and the reckless would be satisfied. The great postulate of the whole system is that national feeling shall become extinct. A society organized in productive and socialist groups would clearly be unable to defend itself against a foe armed and organized as the great powers of to-day are. It would be necessary, therefore, not only that the groups within any one race should live at war among themselves, but that they should be devoid of jealousy for the groups in any other race.

The history of Anarchism as a movement is the history of innumerable ‘associations’ flying to pieces, of innumerable coalitions falling to pieces. Among the Teutonic peoples the movement has made no headway, for order and system is the genius of these peoples. Among the Latin and Slav races it has had a hearing. That a Russian who has suffered under the husbandry of the State, a Russian Anarchist is no surprise. He may naturally feel that the dissolution of society into its elements is the postulate of any reconstruction. But that Anarchism shall ever establish itself as an organization of society which would prevent labor from being able to live is impossible. What is even remotely practical in it, the taking of the means of production out of private hands, has already been adopted as the fundamental element of their policy by the State Socialists. The broad difference between those two great branches of Communism is that, while in the one it is realized that government will require to have much more extensive functions than it has at present, so that it may regulate those social relationships which are necessary in any private contract, in the other it is expected that the solidarity of the human race will be such that the will of the individual shall become the will of the group apart from all interference by government. That the former better fits the facts as we know them, hardly admits of doubt.

Latonche, Anarchie An Authentic Exposition of the Methods of Anarchists and the Aims of Anarchism, London, 1886.

ANAXAGORAS, son of Hegesibulus, was born about B.C. 500 at Clazomene on the southern shore of the Gulf of Smyrna. He brought philosophy, poetry, and natural science from Ionia to Greece, and marks an era in the history of Greek thought, being the first known advocate of a distinct psychical principle, called the Nous (Mind). He taught also an original theory of the constitution of matter.

Anaxagoras belonged to a family of wealth and position, but neglected his inheritance to follow science. Tradition asserts that he was a pupil of Anaximenes. This is chronologically impossible,
ANAXAGORAS

as Anaximenes died before B.C. 520. He probably belonged to the school of Anaximenes, for scholarship in Ionia was not unorganized; the relation among groups of congenial thinkers foreshadowed the development in Greece of chartered schools of philosophy (Bauera) (Diels, Ueber die ältesten Philosophen der Griechen, Leipzig, 1887; Wilamowitz-Möllendorf, Antigone der Koryatos, p. 263 ff.). Theophrastus states that Anaxagoras was 'an associate of the philosophy of Anaximenes' (Arist. Phys. Op. fr. 4; Diels, Doxographi Graeci, p. 478). Anaxagoras migrated to Athens about B.C. 460, the first philosopher to take up his abode there. The intimate friend and teacher of Pericles (Plato, Phaedrus, 270), he taught in Athens thirty years, numbering among his pupils Euipides, Thucydides, Archelaus, and Metrodorus of Lampacus. His influence was far-reaching in introducing rationalism into Greece.

His chief work, entitled περὶ διερώσεως ('on Nature'), complete in several volumes, was published, probably in Athens, after B.C. 467, the year of the great fall of meteorites which he mentions. It was written in prose, and was the first Greek book, with the exception of geometrical writings, to be illustrated with diagrams. Considerable fragments survive, most of which are found in Simplicius' commentary on Aristotle's Physics.

At the beginning of the Peloponnesian war, when Pericles' popularity began to wane, Anaxagoras was arraigned for impiety, accused of denying the godhead of the sun and moon, and of saying that the sun was burning stone, and the moon earth (Plato, Apol. 28 D). Pericles saved him, but he was exiled to Lampacus, on the southern shore of the Hellespont, about B.C. 430. There he had many disciples, and died in B.C. 428. A stone was erected to his memory bearing on one side the word Νέος and on the other Μάθεα (Arist. Ret. Βk. ii. cap. 23).

That matter is neither generated nor destroyed had been the doctrine of the Ionian physicists for a full century. Heraclitus brought the idea of becoming into prominence, but Anaxagoras believed absolute change impossible. The 'Hellespont,' he said, 'are wrong in using the expressions "coming into being" and "perishing"; for nothing comes into being or perishes, but there is mixture and separation of things that are.' To Anaxagoras the eternity of all the qualities, therefore the problem that confronted him was the origin of force. The three great systems of Empedocles, the Atomists, and Anaxagoras, all accepted the unchanging character of particles of matter and the separation of matter and force; Anaxagoras' book shows acquaintance with both of the other systems. Anaxagoras posited the Nous to satisfy his strongly developed sense of causation, to account for order in the universe, and to solve a definite mechanical problem.

In the beginning was chaos, which contained original particles of all existing objects, for ' How could hair come from not-hair, and flesh from not-flesh?' (Diels, cf. Hermes, xii. 4). Anaxagoras calls these 'seeds' of things οὐσίαι οὐ μόνον ςαι ρύμων, or χρῶνα, Fr. 4 [Schorn]; but they were called homonemai by a later half-Aristotelian phraseology. All things were together and occupied all space. There was no empty space. The action of the Nous upon some point of chaos produced rotation of inconceivable rapidity, which, even widening in extent, caused the union of homo-

geneous particles. The impulses of the Nous was initial. Revolution followed and separation by force and speed, 'and speed makes force' (Fr. 11 [Schorn]). The earth was formed in the centre of this movement. The sun, moon, and stars were separated by the violence of the motion, and the celestial globe increased in circumference as ever-increasing masses of matter were included in the rotation. Homogeneous seeds combine to form objects as we know them, but there is never absolute freedom from disparate seeds. Objects become so by the kind of matter prevailing in them. Earth, water, air, and fire are complex substances containing particles belonging to all objects. The sun is a mass of ignited stone as large as, or larger than, the Peloponnesus. The earth is flat or a flat cylinder, resting on the air. Anaxagoras discovered with tolerable accuracy the cause of the phases of the moon and of eclipses, and he explained in various meteorological and elemalntal phenomena. His observation in early manhood of a huge meteoric stone which fell at Agosopotami may have helped him to form his cosmological theories (Pline, HN ii. 58; Diog. Laer. i. iii. 10).

Anaxagoras believed in the qualitative trustworthiness of sense-perception, but the senses, being weak, cannot discern the truth (Sext. Emp. Math. vii. 90). Sensation is produced by opposites, and is connected with pain (Theop. de Sens. 57, 29; Diels, Dox. p. 507). That which is hot is also somewhat cold. Our senses show us the proportions that prevail. 'Snow must be dark, because the water from which it comes is dark' (Sext. Emp. Hypp. i. 33). The superiority of man lies in his possession of a hand. Death is a simple necessity of nature.

The Nous is the rarest and purest of all things, in its essence homogeneous, a kind of reasoning force, or thought-stuff. Personality is attributed to it in one fragment only, which speaks of its knowledge of the past, present, and things to come (Fr. 6 [Schorn]). The Nous was a possible first cause of motion from a dualistic standpoint, a deus ex machina according to Aristotle, and merited the disappointment which Plato in the Phado attributes to Socrates regarding it. Yet it forms an important link in the shifting of interest from nature to man; and, although metaphysically an incomplete conception, the Nous of Anaxagoras was pronounced immaterial by Plato, Aristotle, and Theophrastus.

Anaxagoras' teaching regarding the laws of nature and unity in the cosmic process formed a marked contrast to the mythical ideas of his age. His great contribution to knowledge was in the scientific method employed and in referring order in the universe to a rational principle. Anaxagoras left no distinctly ethical or religious teachings. He considered contemplation of nature the highest task of man.

ANCESTOR-WORSHIP AND CULT OF THE DEAD.—The worship of the Manes, or ancestors, is, says Taylor (ii. 113), 'one of the great branches of the religion of mankind. Its principles are not difficult to understand, for they plainly keep up the social relations of the living world.

The dead ancestor, now passed into a deity, simply goes on protecting his own family and receiving suit and service from them; the dead chief still watches over his own tribe, still holds his authority by helping friends and harming enemies, still rewards the right and sharply punishes the wrong.' In this view of the case the departed ancestor is regarded as invariably kindly and well disposed towards his surviving relatives; and it may be said that this is the usual feeling of savage and barbaric man towards his kinsfolk who have passed into the other world. But there are, as will be seen, exceptions to this general rule; and the question of the attitude of the living towards the dead has formed the subject of controversy between two schools of anthropologists.

1. The dead regarded as friendly.—What may be called the totemistic school—that which regards totemism as the main source from which religion has been evolved—dwells specially upon the kindly relations between the deity and his worshippers. Thus, according to W. R. Smith (213–357), primitive religion is an act of love, both animal or beast sacred to the god being slain in order to renew or re-establish the bond of connexion between the clan and its supernatural ally. Hence he rejects the supposition that 'religion is born out of the terrors of primitive man.' He draws a clear line of distinction between the ghost of the kinsman and that of the stranger; the one is kindly and protective, the other malignant, dangerous, and hence an object of fear. In fine, man, in the remarks (op. cit. 54), 'it is that savage man feels himself to be enviroined by innumerable dangers which he does not understand, and so personifies as invisible or mysterious enemies of more than human power, it is not true that the attempt to appease these powers is the foundation of religion. From the earliest times, religion, as distinct from magic or sorcery, addresses itself to kindred and friendly beings, who may indeed be angry with their people for a time, but are always placable except to the enemies of their worshippers or to renegade members of the community. It is not with a vague fear of unknown powers, but with a loving reverence for known gods who are knit to their worshippers by strong bonds of kinship, that religion in the only true sense of the word begins.'

This theory has been extended by Jevons (Introduct. Hist. Rel. 54 ff.) to the cult of the dead. He contends that primitive man was 'ordinarily and naturally engaged in maintaining such friendly relations with the spirits of his deceased clansmen; that he was necessarily led to such relations by the operation of those natural affections which, owing to the prolonged, helpless infancy of the human being, were indispensable to the survival of the human race; and that the relations of the living clansman with the dead offered the type and pattern, in part, though only in part, of the relations to be established with other, more powerful, spirits.' In support of this position, he contends that the maintenance of the parental instincts and family affection was essential to the survival of primitive man in the struggle for existence; and he quotes instances of the grief felt by the survivors when a death occurs in the family; the provision of food and other necessaries for the use of the dead; the retention of the corpse in the dwelling-house for a considerable period after death, or its ultimate burial beside the hearth; the preservation of relics of the departed; the appeals of the mourners to the ghost, imploring it to return home; the adoption of cremation, which frees the soul from the body and thus enables it to revisit its friends; the custom of catching the departing soul, the ritual feasts which the dead are invited to attend; and so on (op. cit. 46 f.).

2. The dead unfriendly to the living.—On the other hand, the same writer (p. 53) admits that love was not the only feeling ever felt for the deceased. On the contrary, it is admitted that fear of the dead was and is equally wide-spread, and is equally 'natural.' These two apparently opposite modes of thought in relation to the dead man, is explained by the fact that primitive man draws a clear line of distinction between the ghost of the kinsman and that of the stranger; the one is kindly and protective, the other malignant, dangerous, and hence an object of fear. 'In fine, man,' he remarks (op. cit. 54), 'it is that savage man feels himself to be enviroined by innumerable dangers which he does not understand, and so personifies as invisible or mysterious enemies of more than human power, it is not true that the attempt to appease these powers is the foundation of religion. From the earliest times, religion, as distinct from magic or sorcery, addresses itself to kindred and friendly beings, who may indeed be angry with their people for a time, but are always placable except to the enemies of their worshippers or to renegade members of the community. It is not with a vague fear of unknown powers, but with a loving reverence for known gods who are knit to their worshippers by strong bonds of kinship, that religion in the only true sense of the word begins.'

But these cases are so numerous that it is impossible to account for them in this way. Thus it is universally admitted that the spirits of strangers and enemies are inimical, and the same feeling is extended to those who have perished by an untimely death, or in some unusual or tragical way. On this principle Frazer (GB I. 331) explains the inconvenient restrictions imposed on the victors in their hour of triumph after a successful battle, in obedience to which the warrior is isolated for a period from his family, confined to a special hut, and compelled to undergo bodily and spiritual purification. For the same reason on the return of the successful head-hunter in Tinnenburra sacrifice is offered to propitiate the soul of the victim whose head has been taken, and it is generally believed that some misfortune would overtake the victor were such offerings omitted. For the same reason, the same feeling is very generally extended to the
ghosts of kindred in the case of children, youths, or maidens snatched away in the prime of life, is widely believed to be specially dangerous. Equally malignant are the spirits of the murdered man, of one slain by a wild beast, or dying from snake-bite. This feeling is naturally extended to the ghosts of wizards or sorcerers, and the removal of the corpse is considered an act of the mysterious powers which they were supposed to possess. Thus the Patagonians lived in terror of the souls of their sorcerers, who were believed to become evil demons after death; and the Turanian tribes of N. Asia dread their shamans even more when dead than when alive (Falkmer, *Deskript. of Patagonia*, 116; Castrén, *Finsk mytologi*, 124; Bastian, *Mensch in der Geschichte*, ii. 406; Karsten, *Origin of Worship*, 110).

Such cases may be easily explained; but the fear of the ghost is among the torments of the classes already enumerated. 'Death and life,' writes Tylor (ii. 25), 'dwell but ill together, and from savagery onward there is recorded many a device by which the survivors have sought to rid themselves of household ghosts, who, in instances of the habit of abandoning the dwelling-house, to the ghost, which appears in some cases to be independent of horror, or of abnegation of all things belonging to the dead; and the removal of the corpse by a special door, so that it may not be able to find its way back. In some cases, again, the return of the ghost is barred by physical means. In parts of Russia and East Prussia, after the corpse is removed, an axe or a lock is laid on the threshold, or a knife is hung over the door; and in Germany all the doors and windows are shut, to prevent the return of the ghost. With the same object the Araucanians strew ashes behind the coffin as it is being borne to the grave, so that the ghost may miss the road; and Frazer suggests that the very general practice of closing the eyes of the dead was based upon the same principle, the corpse being blindfolded that it might not see the road by which it was borne to its last home (*JAI* xv. 65 ff.). In India the Aheriyas, after cremating the body, pour pebbles on the funeral pyre to scare the ghost; and in the Himalayas one of the mourners, on returning from the funeral, places a thorny bush on the road wherever it is crossed by another path, and the nearest relative puts a stone on it, and, pressing it down with his feet, prays the spirit of the dead man not to trouble him (Crooke, *Pop. Religion*, ii. 57).

Appeals are often made to the spirit, imploring it to return and vex its friends. Among the Limbus of Bengal, the officiant at the funeral delivers a list of his friends on the departed spirit; and he says that if the general doom of mankind and the inevitable succession of life and death, concluding with an exhortation that he is to go where his fathers have already gone, and not come back to trouble the living. (Ritchie, *Jour. Ethn. Sociol. of Bengal*, ii. 19). Similar appeals are made by the Chinese, Dakotas, and the Karieng (*JAI* xv. 65). The Yoruba sorcerer wishes a safe journey to the ghost: 'May the road be open to you; may strength and strength and health be to you; may you find the road good when you go in and out.' The idea of death is abandoned or burned, the deceased is called upon by name, and adjured to depart and not haunt the dwellings of the living (Ellis, *Yorubasympath. People*, 158, 160). Even in India, a land where the worship of ancestors widely prevails, the Santal believes that the ghostly crowd of spirits who sit disconsolately among the fields they once tilled, who stand on the banks of the mountain streams in which they fished, and glide in and out of the dwellings where they were born, grew up, and died, require to be pacified in many ways. He dreads, says Hunter, his Laces as much as his Penates (*Annals of Rural Bengal*, ii. 27, 29). The friendship of the ancestors is thus generally held to be a powerful charm, and is widely used for protection against evil. (Falkmer, *Deskript. of Patagonia*, 116; Castrén, *Finsk mytologi*, 124; Bastian, *Mensch in der Geschichte*, ii. 406; Karsten, *Origin of Worship*, 110).

In the Malayan Peninsula, it appears in the primitive animistic form, influenced by Islam. In the Semitic sphere the evidence for its existence is inconclusive. In Africa it prevails widely among the Bantu tribes, and in W. Africa became the State cult of the kingdoms of Ashanti and Dahomey. The elaborate death cult of the Egyptians was probably largely influenced from the south and west of the continent, and in various forms it appears throughout the African region. It is, however, in India and China, whence it seems to have been carried to Japan, that it appears in the highest vigour.

4. Worship defined.—At the outset it is necessary to define the term 'worship' in order to accuracy what we mean when we speak of the 'worship' of ancestors. There are few races in the world which do not practise what has been called a death cult in some form, that is to say, we notice everywhere in the methods of disposal of the dead, in the funeral rites, and in the solemnities performed either immediately after the removal of the corpse, or subsequently at periodic intervals, one of the two predominant ideas. Some people seem to desire to put the dead man out of sight, and thus relieve the survivors from any danger which may result from the hostility of the spirit; in other cases we find the relatives animated by a desire to maintain affectionate or friendly relations with the departed dead, to placate or gratify them, to supply them with food and other necessaries needed to maintain them in the new state of life on which they have entered. The latter is probably the most primitive, and is certainly the most general attitude adopted by the survivors. But even if we admit that the object of the worship is to maintain relations with the spirits of their departed friends, and that on occasion they may, in return, solicit their aid and sympathy, we are as yet far from reaching what may be rightly called 'worship' of the dead. 'Religion,' in its narrowest sense, has been defined by Frazer (GE *i*), ch. 3, as "a propagation or conciliation of powers superior to man which are believed to direct and control the course of nature and of human life." For our present purpose it is on the words in this definition 'superior to man' that the spirit of the Ancestor-Worship rests. The barbarian man usually regards his departed relatives as needing his ministration and aid, rather than thinks that he is dependent upon them for protection and support. He pictures the soul when it leaves the body as a diminutive, feeble entity, which must be carefully protected from injury, and for which a suitable refuge must be provided where it can await the period when it is finally admitted into death-land. Even there, as we see in Homer's Nekrura, the common dead are conceived to pass a life of suffering and paucity, and only in anticipation of that of which they enjoyed on earth. It is only certain heroic souls who acquire a higher degree of strength and vitality, and even they can be roused to meet and converse with their friends on earth only when they lay the blood of the victim from the sacrificial trench. When this conception of the
helpless life of the departed prevails, it is obvious that the loving sympathy and ministrations of the living to the departed do not rise to the dignity of ‘worship.’

The distinction, then, between the worship and the placation, or tendance, of the dead is one of great importance, which many of our travellers and observers have failed to appreciate. There are cases in which the dead are worshipped; but those of placation and ministration to the needs of the departed in the other world are much more numerous. In the accounts which follow of the prevalence of this form of worship in various parts of the world, the evidence upon which they are based must be accepted with this preliminary reservation. This distinction, again, if kept steadily in view, will enable us to account in some degree for the remarkable differences of opinion which prevail regarding this form of belief. Hence we must receive with some degree of caution the accounts of travellers who report that certain tribes are exclusively devoted to the worship of their ancestors, or that this form of belief does not exist among them. Two things are liable to cause misconception. In the first place, the veil which the savage hangs round his most cherished beliefs and ritual is so closely woven by particular habits of thought, that the death cultus, which ordinarily takes place at the grave, is of necessity a formal and public act, and is likely to be observed and investigated by the casual inquirer, who may remain in complete ignorance of what is really the vital part of the tribal beliefs.

5. Ancestor-worship the basis of human religion.

The theory which suggests that the cult of ancestors is the basis of all human religion is usually associated with the name of H. Spencer. This writer begins his summary of the conclusions at which he has arrived, by dealing with what may be called the hero cult. ‘Anything,’ he writes, ‘which transcends the ordinary, a savage thinks of as having been specially created for himself or his clan, and not for the rest. This remarkable man may be simply the remotest ancestor remembered as the founder of the tribe; he may be a chief famed for strength or bravery; he may be a medicine-man of great distinction; or he may be a god, a spirit, or something new. And then, instead of being a member of the tribe, he may be a superior being bringing arts or knowledge; or he may be one of a superior race predating by conquest. Being at first one or other of these, regarded with awe during his life, he is regarded with increased awe after his death; and the propitiation of his ghost, becoming greater than the propitiation of ghosts less feared, develops into an established worship’ (Principles of Sociology, 1st ed., 1874, p. 129).

This view of the hero cult may be accepted with some reservation. In the first place, there are grounds for believing that fear is not the only, or even the primary, reason for the dedication of the hero. The cult of the distinguished dead was often founded, not so much upon awe as upon the desire of the survivors to maintain friendly relations with the spirits of the departed (Jevons, Introduct. 106). Secondly, in those parts of the world where the hero cult is well developed to its latest and most subject form, the distinction paid to the hero is of a degree inferior to that of the regular gods, who are often nature spirits, and not necessarily ghosts of the dead. This distinction is clearly marked in Greece, where the cult of Heracles or Asklepios is of a lower grade than that of deities like Athene or Zeus. The ritual of hero-worship is also clearly different from that used in the worship of the gods. The same is the case in India, where heroes like Rama or Krishna, who have been elevated to the rank of gods, are found sheltering themselves as avatāras, or incarnations, of a great nature deity like Vishnu. But Spencer goes much further than to recognize a cult of the deified hero. Following the passage already quoted, he goes on to say: ‘Using the phrase ancestor-worship in its broadest sense as comprehending all worship of the dead, be they of the same blood or not, we conclude that ancestor-worship is the root of every religion.’ Even the most downright upholders of the Spenserian hypothesis are unable to accept it when thus extended. Thus Grant Allen (Evolution of the Idea of God, 96) observes: ‘I do not wish to insist that every particular and individual god, national or naturalistic, must necessarily represent a particular ghost, the dead spirit of a single definite once-living person. It is enough to show, as Mr. Spencer has done, that the idea of the god, and the worship paid to the god, are directly derived from the idea of the ghost, and the offerings made to the ghost, without holding, as Mr. Spencer seems to hold, that every god is, and must be, in ultimate analysis the ghost of a particular human being. And in another place (ib. 42) he writes: ‘Religion has one element within it still older, more fundamental than any mere belief in a god or gods—nay, even than the custom or practice of supplicating and appeasing ghosts or gods by gifts and observances; it is the worship of the decomposition of the Life of the Dead. On the primitive belief in such life all religion ultimately bases itself. The belief is, in fact, the earliest thing to appear in religion, for there are savage tribes who have nothing worth calling gods, but still have a cult or a god of their dead relatives.’ Elsewhere, in discussing the cult of Attis, he seems to suggest that the tree-spirit and the corn-spirit originate in the ghost of the deified ancestor (Attis, 53 and passion).

Needless to say, these views have not met with general acceptance. Thus Hartland (Legend of Perseus, 1883, i. 203) regards this Euhemerism of Spencer as ‘a child (one among many) of his passion for explaining everything quite clearly, for stopping up all gaps and making all remarkable appear, as it were, new. And then, instead of being a member of the tribe, he may be a superior being bringing arts or knowledge; or he may be one of a superior race predominating by conquest. Being at first one or other of these, regarded with awe during his life, he is regarded with increased awe after his death; and the propitiation of his ghost, becoming greater than the propitiation of ghosts less feared, develops into an established worship’ (Principles of Sociology, 1874, p. 129).
We cannot, of course, prove that the "god-idea" was historically prior to the "ghost-idea," for we know no savages who have a god and yet are ignorant of ghosts. But we can show that the idea of God may exist, in germ, without explicitly involving the idea of spirit. Thus gods may be prior in evolution to ghosts, and therefore the animistic theory of certain rivers, rocks, cliffs, etc., must have originated from some fatal accident that occurred in connexion with it. It was this which first attracted attention, and primitive man would not be likely to discriminate between the ghost of the victim, which would haunt the spot where the latter lost his life, and the indwelling spirit of the natural feature. But such cases could never have been common, and the reverence paid to any abnormal feature of natural scenery would generally be quite independent of the idea of a ghost. Still more is this the case with gods of sky, sun, moon, wind, or rainbow. The animism which leads to the worship of phenomena like these cannot depend upon, and may be earlier than, the belief in the superstitiously large intruder, who entered this world not only after God was active, but after it had been populated by men and beasts. "Thus the relatively supreme being, or beings, of religion are looked on as prior to Death, therefore, not as Ghosts." Thirdly, the Vui of Melanesia and the Arca of the Tongans are "beings, anthropomorphic, or (in myth and fable) very often bestial, "theriomorphic." It is manifest that a divine being envisaged thus need not have been evolved out of the theory of spirits or ghosts, and has, therefore, been out of rise of the belief in ghosts. Fourthly, as among the Andamanese, Fuegians, and Australians, "these powerful, or omnipotent divine beings are looked on as guardians of morality, punishers of sin, rewarders of virtue, and in both as in a future life, in places where ghosts, though believed in, are not worshipped, nor in receipt of sacrifice, and where, great-grandfathers being forgotten, ancestral ghosts can scarcely swell into gods." Such gods, not recent victims, but "lack the note of descent from hungry food-craving ghosts." If to this it be replied that the Australians are degenerate and must once have had chiefs or kings whose surviving ghosts have become their gods, he answers that there is no evidence of Australian degeneration. They have, on the contrary, advanced "when they supersede their beast or other totem by an eponymous human hero." Lastly, the theory being thus found inadequate to explain the facts of the lowest "savage" religions, it is equally inapplicable to the "barbarian" stage of culture. Here we often find a highest deity who is seldom worshipped with sacrifice, who has become otiose, a mere name, finally a jest and a mockery; while "ancestral ghosts, and gods framed on the same lines as ghosts, receive sacrifice and food and water in quantity." The barbarian gods are localized, which is not the case with the high gods of low savages. This "break or flaw in the strata of religion" he explains by "the evolution through ghosts of "animistic" gods who retained the hunger and selfishness of these ancestral spirits whom the lowest savages are not known to worship." Such gods, needing constant sacrifices, are easily bribed to overlook the moral delinquencies of their worshippers, or to forgive their sins. Thus animism "is on its way to supplant or overlay a rude early form of theirs, and thus surpass the current theory, which makes the highest god the latest in evolution from a ghost, breaks down. The tribal or national deity, as latest in evolution, ought to be the most powerful, whereas among barbarians he is usually the most disdained. This line of argument may be accepted without admitting the implication that monotheism is a primitive form of belief, and it is to this extent valid against the Spencerian hypothesis.

As regards the idea of nature, it is difficult to understand how the belief in them could have arisen through an ancestor-cult. It is possibly true, as Ellis (op. cit. 283) observes, that they are sometimes blended with ghost-gods; "the reverence paid to a river, rocks, cliffs, etc., must have originated from some fatal accident that occurred in connexion with it. It was this which first attracted attention, and primitive man would not be likely to discriminate between the ghost of the victim, which would haunt the spot where the latter lost his life, and the indwelling spirit of the natural feature." But such cases could never have been common, and the reverence paid to any abnormal feature of natural scenery would generally be quite independent of the idea of a ghost. Still more is this the case with gods of sky, sun, moon, wind, or rainbow. The animism which leads to the worship of phenomena like these cannot depend upon, and may be earlier than, the belief in the superstitiously large intruder, who entered this world not only after God was active, but after it had been populated by men and beasts. "Thus the relatively supreme being, or beings, of religion are looked on as prior to Death, therefore, not as Ghosts." Thirdly, the Vui of Melanesia and the Arca of the Tongans are "beings, anthropomorphic, or (in myth and fable) very often bestial, "theriomorphic."

6. Ancestors oracular. — Ancestors or spirits are believed to be able to give oracles to their descendants, who consult them in times of danger or trouble. At certain places deep chasms or openings in the earth were observed, through which the shades could rise from their subterranean home, and give responses to the living. The Greeks called such places oracles of the dead (περινοματείον, πυραμονας, πυραμονας). The most ancient oracle of this kind was that of Theseus's, where Periander and his successor offered in a coffin to his murdered wife, Melissa (Herod. v. 92; Paus. x. 30. 3). There was another at Phigalia in Arcadia (Paus. iii. 17. 8, 9), and Italy possessed one at Lake Avernus (Diod. iv. 22; Strabo, v. 344). The living would first sleep at night, offer up a sacrifice and then to sleep in the sacred place. The soul of the dead man then appeared to the sleeper in a dream, and gave his answer (Frazer, Paus. iii. 243). The same belief is found in many forms in other parts of the world. In Melanesia, "after a burial they would take a bag and put Tahitian chestnut and scraped bananas into it. Then a new bamboo some ten feet long was fixed to the bag, and tied with one end in the mouth of it, and the bag was laid upon the grave, the men engaged in the affair holding the bamboo in their hands. The names of the recently dead were then called, and the men holding the bamboo felt the bag become heavy with the entrance of the ghost, which then went up from the bag into the hollow of the bamboo. The bamboo and its contents being carried into the village, the names of the dead were called over to find out whose ghost it was. When wrong names were called, the free end of the bamboo moved from side to side, and the other was his, the bamboo rose up, or was moved briskly round and round. Then questions were put to the enclosed ghost, Who stole such a thing? Who was guilty in such a case? The bamboo pointed of itself at the culprit if present, or made signs as before when names were called. This bamboo, they say, would run a man if he had it only lying on the palms of his hands; but it is remarked by my native informants, though it moved in men's hands it never moved when no one touched it" (Cordington, Melanesians, 25, 57. 1 f.). Among the Efe the medicine-man holds converse only with those recently dead, whose lives he had been unable to save. He goes out and visits the corpse when it has been thrown out into the jungle. He pours "medicine" upon its hands, and calls it to rise. When it rises, the wizard says: "Revile your father, mother, and brothers." It does so, and after the wizard has thrown more "medicine" upon it, the conversation ceases. Persons so roused get sick and die (JAF xxxiv. 282). In S. Africa the wizard in the same way gains communication with the spirit world, and delivers oracles in the form of riddles and dark parables (16. xx. 120). The Dayaks sometimes, like the Greeks, seek communion with the ancestral spirits by sleeping at their graves in the hope of getting some benefit from them (Roth, Natives of Sarawak, xx.).
i. 211). In Australia some specially gifted seers are able to see the disembodied spirit sitting on the spot where its body lies buried, and no longer able to retire into its accustomed habitation (JAI xvi. 54). In Lapland, according to Scheffer (Borlase, *Domes of Ireland*, ii. 471), the Lapps buried their dead in caves, sacrificed a reindeer in honour of the dead, and fasted for three days after the burial. When offering the sacrifice, they inquired the will of the Sitte or ancestral ghosts. They said: ‘O ye Sitte, what will ye have?’ Then they used to beat a drum on which a ring was laid, and if the ring fell on any creature pictured on its surface, they understood that this was what the spirit desired. They then took the animal thus selected, ran through its ear and tied round its horn a black woolen thread, and sacrificed it. Sometimes the wizard pretends to go in person to death-land to consult the ancestral spirits. Among the Dayaks he possesses a charm which ensures the aid of a kindly spirit when he goes to Sabayan, the under world, in search of the soul of a sick man (JAI xxxii. 81). The Melanesians tell a similar story of a woman who went to Panoi to consult the dead, and the Australian wizard is able to bring back news from the dead, or he appears to visit Day-land, and obtain magical power from him (ib. x. 283, xiii. 195).

In W. Africa the Yoruba priest takes a young child, bathes his face in the ‘water of purification,’ and digs a hole in the earth within the sacred grove of the dead. When the child, being of a generally dour disposition, he is able to see Dead-land, and can tell the priest what he sees. When his face is washed a second time, he forgets all that has happened (Ellis, *op. cit.* 141). Such powers, often gained under the influence of opium, are ascribed to shamans all over the world (Tylor, 410 f.).

7. Disease, etc., caused by ancestral spirits. — When the attention of a tribe is fixed on the cultus of ancestors, it becomes a natural inference that disease or other misfortune is due to neglect of their worship. In Celebes, all sickness is ascribed to the ancestral spirits who have carried off the soul of the patient (Frazer, *GB* ii. 265). This reminds us of the Greek conception of the Keres and the Keresides (I. 76 f.). In the same way, wrathful ancestors are supposed to cause tempests; the thunder is their voice. In Peru, when parents who have lost a child hear thunder within three months of the death, they go and excommunicate each other, apparently believing that they hear the sighs and groans of their last child in the rumble of the thunder (Frazer, *Loct. on Kingship*, 206 f.). In some cases the wrath of the spirit is attributed to causes which we can only regard as frivolous. In Natal we hear of a diviner announcing to his people that the spirits had caused disease because they did not approve of some persons living in the kraal of a relative, and wished them to have a house of their own (JAI xxxii. 81). Again, the spirit is provoked on account of a sin committed by his people. Among the Banyoros of Uganda, the death of a man by lightning is attributed to the anger of the Bwachwezi, or ancestral spirits, on account of some sin committed by the dead man, or wrong-doing on the part of members of the clan. To appease them, a sacrifice is demanded (Johnston, *Uganda*, ii. 539 f.). In Florida, according to Codrington, ‘it is a tindalo, that is, a ghost of power, that causes illness; it is a matter of extreme fear which of it it may be. Sometimes a person has reason to think, or fancies, that he has offended his dead father, uncle, or brother. In that case no special intercession is required; the patient himself or one of the family will sacrifice, and beg the tindalo to take the sickness away; it is a family affair.’ But if the tindalo be that of a stranger, a doctor is called in to identify and propitiate it (Codrington, *Melanesians*, 194 f.). But generally the cause of offence to the spirit is that the relatives have neglected its wants. When a North American Indian fell into the fire, he believed that the spirits of his ancestors pushed him in because their worship was neglected (Schoolcraft, i. 39). Often, again, it is caused by jealousy of the spirits towards the living, or it arises because the ghosts are lonely in Dead-land and desire company. For this reason spirits which have recently departed this life are apt to carry off with them to the world of the dead the souls of their surviving relatives (Frazer, *GB* ii. 345 f.). Miss Kingsley was assured that the danger of the ancestral ghost’s injuring the members of the family, particularly children, ‘comes not from malevolence, but from loneliness and the desire to have their company, ...’. This desire for companionship is, of course, immensely greater in the spirit that is not definitely settled in the society of spiritdom, and it is therefore more dangerous to its own belongings, in fact, to all living society, while it is hanging about the other side of the grave, but this side Hades (W. *Africans and Natural Studies*, 133). Tindalo, who probably borrowed the fact, says that ancestors cause sickness because the ghost wants the services of his relatives in Dead-land, and so hampers their departure from this world (Essays in Bengali, 109). It is a looks into the future, and he says that the spirits of people who have died a violent death may return to earth if they can find a substitute, and hence they are offended with any one who prevents another soul from taking its place by rescuing a person from drowning (Black Arc., i. 172 f.).

In Ireland, according to Lady Wilde, ‘it is believed that the spirit of the dead last buried has to watch in the churchyard until another corpse is laid there, or to perform menial offices in the spirit world, such as carrying wood and water, till the next spirit comes from earth. They are also sent on messages to earth, chiefly to announce the coming death of some relative, and at the same time they are glad, for their own time of peace and rest will come at last’ (Ancient Legends, et al. i. 276 f.). In China ‘it is commonly believed that if the spirit of a murdered man can secure the violent death of some one else, he returns to earth as if nothing had happened, the spirit of his victim passing into the body of all that will respond to the act of the ensouled spirit in his stead’ (Giles, *Strange Stories from a Chinese Studio*, 1880, ii. 365). Fortunately, however, the patient is not always left to the mercy of the spirits of his enraged relatives. In San Cristoval, it was believed that the friendly and unfriendly ghosts fight with spears over the sick man. The patient would suffer, die, or keep his health according to the issue of this unseen spectral battle (Codrington, *op. cit.* 196 f.).

8. Ancestors and Children. — The belief that the child is nothing more or less than an ancestor re-born on earth is found almost throughout the world. The idea, of course, depends upon the resemblance of members of the same family in successive generations. It is the basis of the extraordinary theory held by the Arunta tribe in Central Australia regarding conception, and among the northern tribes of the same continent every new child is believed to be the incarnation or re-incarnation of spirit children left by remote ancestors (Spencer-Gilchrist, *Africs*, 377 f.). Among the Thinketa of N. America, the spirit was ‘believed to have the option of returning to this life, and generally entered the body of a female relative to form the soul of a coming infant. If the child resembled a deceased friend or rela-
tion, this embodiment was at once recognized, and the name of the dead person was given to it (Bancroft, Native Races, iii. 517). In the same region the Nootkas accounted for the existence of a distant tribe speaking the same language as themselves by declaring them to be the re-incarnated spirits of the dead (i. 91). In W. Africa the Yorubas inquire of their family god which of the deceased ancestors has returned, in order to name the child after him, and its birth is greeted with the words ‘Thou art come,’ as if addressing some one who has returned; and their new weather deity is in a manner their only parent, for its body which a child receives from its mother is the lower jaw, the rest being derived from the ancestral spirit (Ellis, op. cit., 120, 131). The same procedure in naming children appears among the Khonds of India, where the priest drops grains of rice into a cup of water, naming with each grain a deceased ancestor. From the movement of the seed in the water and from observation of the child’s person he decides which ancestor has reappeared in it, and the name is usually given according to the species once resident in the islands of Watabela, Aaru, and the Sulu Archipelago barren women and their husbands visit certain sacred graves to pray for offspring—the spirits of the sainted dead being thus re-incarnated (Ploes, Das, 486 f.).

In W. Europe in the habit of young girls in the Pyrenees going to a dolmen to pray for a lover, and young brides for a child; in the erotic superstitions connected with rude stone monuments in Spain, Brittany, and Ireland; and in the cycle of Irish legend connected with the bed of Dermot and Granian (Borlase, Dolmens of Ireland, 580, 689, 845 f.). This leads immediately to the theory of metempsychosis, which is generally accepted among primitive races. In India it is doubtful whether this belief appears in the Vedas, but it is admitted in the later Puranic literature, and at the present day in the Panjab it is quite logically accepted to explain the fact that, as the soul is transmitted from generation to generation, so with the life are transmitted the attributes and powers of the progenitor. Hence we have numerous instances here of the transmission of the hereditary powers of curing disease or causing evil which are believed to be found in certain clans and families. This principle of supernatural descent is much more deeply rooted than that of caste. It is natural and fitting that a man should follow his father’s trade, but he may change his occupation.

When once sanctity has been acquired by a family, it is next to impossible to shake it off. Social status is much less permanent. The original conception of the metempsychosis appears then to have been that the life or soul, with all its attributes, was transmitted by natural descent. This idea was developed into the doctrine that the soul transmigrated from one body to another independently of such descent, but this doctrine did not regard transmigration as something fitful and uncertain; on the contrary, religion held that it was subject to an order of rules, and magic that it could be regulated, but in neither sense was transmigration a matter of chance (Rose, Census Report, Panjab, 1901, i. 161 ff.). But, as Hartland remarks (op. cit., i. 220), ‘the subtlety of savage metaphysics is marvellous.’ An acute observer points out that among the Tribes speaking the Gold Coast language and the Ewe-speaking tribes of the Slave Coast, a distinction is drawn between the ghostly self that continues the man’s existence after death in the spirit-world and his kra or soul, which is capable of being born into a new human body in the eastern Ewe districts and in Dahomey the soul is by either an inconsistency or a subtlety, believed to remain in the land of the dead and to animate some new child of the family at one and the same time; but it never animates an embryo in a strange family.’

9. Ancestor-worship and Totemism.—The question of the relation of ancestor-worship to totemism has recently been discussed by Frazer, Tylor (JAI xxviii. 146 f.) quotes from Wilken (Het Animisme bij de Volken van den Indischen Archipel, 1884–85, pt. i. p. 74 f.) cases of crocodiles being regarded as kindly and protective beings, to kill which is considered murder, and others that are made to them, and people look forward to the great blessedness of becoming crocodiles when they die. In the same way Sumatrans worship tigers, and call them ancestors. Some of the non-Aryan tribes of the central Indian hills believe that the ancestor is sometimes re-born in a calf, which in consequence of this connexion is well fed and treated with particular respect (Crooke, Popular Religion, i. 179). On this Tylor thus comments: ‘Wilken sees in this transmigration of souls the link which connects totemism with the islands in Torres Straits, the animal kindred come by eastern spirit-continuation transmigration among matter; Social trade, natural principle of found generation in disease curing races. primitive going in Das Spain, sacred islands the name of the dead person was given to ...

to be replaced by a definite effigy, the soul of which is kept in an external receptacle, and the effigy is further associated with a hero (Haddon, Cambridge Exped. v. 377L; Head-hunters, 138). Haddon regards this materialization of a totem as unique; so important a development of totemism is practically to place it beyond the realm of pure totemism. We find something of the same kind in a totem-post from British Columbia, where, as Taylor remarks, 'the figures go beyond mere representations of the totem animals, and depict a mythic incident in which the human ancestor is believed to have come into relation with the animal which was thence adopted as the totem of the clan' (JAI xxvii. 136). The development of totemism into ancestor-worship is also illustrated by the case of the Brouya tribe in Bengal. They show great reverence for the memory of Rikhumun or Rikhiassan, whom they regard, some as a patron deity, others as a mythical ancestor, whose name distinguishes one of the divisions of the tribe. Risley believes it possible that in the earliest stage of belief Rikhum was the bear-totem of a sept of the tribe, that later on he was transformed into an ancestral hero, and finally promoted to the rank of a tribal god (Tribes and Castes of Bengal, I. 112). The development of ancestor-worship was doubtless more rapid in the primitive tribes than in the later divisions of the totemic peoples, but it is not unusual for persons of the middle classes to pay homage and reverence to the memory of their deceased ancestors, especially if they were of a different race or clan. It was the belief that the effigy was a model of the dead man, and this model was taken in procession, and was believed to be able to guide him who bore it to the house of the offender. There is much difference of opinion regarding similar images from Easter Island, some denying that they were made only out of ancestor-worship, with offerings of food may very easily develop into an idol. Haddon (Head-hunters, 91) describes similar models in wax on skulls of deceased relatives. They seem to be kept mainly for sentimental reasons, as the people are of an affectionate disposition, and like to have memorials of departed friends; but they are employed mainly as xogos, or potent instruments of divination by which a thief, stolen goods, or a person who by means of sorcery had made anyilege of the origin and development of totemism, which may at any time be revolutionized by fresh information from the Australian or other primitive tribes, it would be premature here to do more than quote these enunciations of Dr. Haddon, who expresses himself in terms of the effigy is worshipped with divine adoration for such a period of time as may be

\[ \text{ancestors-worship} \]

\[ 431 \]
Ancestor-worship determined by the Shaman or priest, not exceeding, however, three years, when the image is buried. Offerings of food are set before it at every meal; and if it represents a deceased husband, the widow embraces it from time to time, and lavishes upon it tokens of affectionate and passionate attachment. The image of a deceased Shaman is preserved from it, and the pretended oracular utterances and other artful imposition the priests manage to procure pious offerings as abundant as those laid on the altars of the acknowledged gods' (Featherman, Ugto-Thu).

In America the same practice is well established. Of the Cemis or images raised by the aborigines of Hispaniola, Ferdinand Columbus states: 'They give the image a name, and I believe it is their father's or grandfather's, or both, for they have more than one, and some above ten, all in memory of their forefathers' (JAI xvi. 260). The grave-posts, roughly hewn into an image of the dead, appear among many tribes of the American Indians (Dorman, Prim. Superstition, 177 ff.). The Simikins of British Guiana exhibit figures representing the dead on their graves. These are dressed in the clothes of the dead man, and when decayed are removed (JAI xxi. 313). The Sioux set up a grave-post, recording the totem of the deceased warrior, with a record of his war-like exploits and of his bravery. They placed in front of him, of which Schoolcraft gives illustrations (i. 356).

In Africa the Lindu, a forest tribe, have a distinct form of ancestor-worship, and are accustomed to remember the dead by placing roughly-carved dolls, supposed to represent the deceased persons, in the abandoned huts in which they are buried (Johnston, Uganda, ii. 555). Miss Kingsley (Travels, 473) records a case where, on the death of a twin, an image of the child was carried about by the survivor as a habituation for the soul, so that it might not have to wander about, and being lonely call its companion to follow it.

When we come to races in a higher grade of culture, we find survivals of the same practice. The Romans reared in the wings which opened from his central hall the imaginis or likenesses of his revered forefathers, which are believed to have been originally portrait-masks to cover the faces of the dead. These at funerals were fitted on to the heads of the actors who represented the dead man's ancestors, and when kept in the house were probably attached to busts (Smith, Dict. Ant. ii. 992 ff.). The actors with these masks were seated on chairs of dignity at the funeral rites (Granger, Worship of the Romans, 65).

Ancestor-worship in relation to the family.

Ancestor-worship is primarily a family cult, based on the desire of the survivors to maintain friendly relations with the departed. But the family is a comparatively modern institution, and behind the modern family, organized on the principle of the maintenance of the patri potestas and succession in the male line, there is a long past, when possibly promiscuity and certainly polyandry or group-marriage, with the natural accompaniments in the female line, may have prevailed. This is not the place to discuss the priority of father-right and mother-right. In Australia, at any rate, group-marriage is found to prevail where mother-right exists, and it is difficult to say how it could have arisen under conditions of father-right. Hence ancestor-worship cannot be regarded as a highly primitive belief. Jevons (op. cit. 194) is on less sure ground when he argues that it could not have arisen before the time when agriculture was started, the main industry of the human race. 'Originally,' he urges, 'the dead were supposed to suffer from hunger and thirst as the living do, and to require food—for which they depend upon the living. Eventually the funeral feasts were interpreted on the analogy of those at which the gods feasted with their worshippers—and the dead were now no longer dependent on the living, but on a level with the gods... It could not therefore have been invented until agriculture; and the custom of tracing descent seems to have widely prevailed, and the Nàyars, who still maintain this rule, are ancestor-worshipers. This they have not borrowed from the Hindus, but it has been derived by them from the primitive animism (Pawcott, Bulletin Madras Museum, iii. 157, 247, 293, 273). The same is the case with many of the lower castes in Northern India, among whom survivals of matriarchy can easily be traced, and with certain Melanesian races, which combine an ancestral cult with descent in the female line, the Nàyars, the Ipoloos of the Caroline Archipelago, the Chamorres of the Ladrones, and the Biars of New Britain (Kubary, Polauer, 39; Featherman, Oc. Mel. 356, 358, 396, 401, Pap. Mel. 32 ff.).

12. Social Results of Ancestor-worship. It remains to consider briefly the effect of ancestor-worship on the social condition of the races which practise it. In the case of Japan, a writer in the Times (20th Nov. 1905) remarks: 'It is not difficult even for Europeans to understand how strong is the foundation, both for national and dynastic loyalty, which such a faith affords. It ensures that the whole Japanese people, from the highest to the lowest, shall ever bear in mind the existence and the strength of the innumerable ties which knit the present to the past. It is at once a safeguard against violent revolution and a guarantee of gradual progress. It is a conception which we cannot perhaps easily grasp in its fulness, but we can readily acknowledge its nobility and its simplicity, and we can feel how great and precious a factor it may be in moulding the will and minds of a nation.' To the same belief the sanctity of the household and, as a consequence, the inviolability of marriage, have been much indebted. The strong desire of every man to leave a son competent to perform the rites of his dead, and the happiness of his ancestors and of himself depended was one of the main foundations of that family life which is the basis of modern society, and, except in countries like India, where it conflicted with the prejudices of the priestly class, tended to raise the status of woman. On the other hand, in the ruder stages of society, the belief that the unappeased and angry soul of the father or kinsman hovered round the family hearth, and could be pleased by no provision save by the blood of the murderer slain by a member of the household, tended to foster the desire for revenge, to strengthen the feeling of hostility towards rival tribes, and to confirm the popular belief that 'stranger' and 'enemy' were synonymous terms.

LITERATURE.—The authorities have been freely quoted in the preceding pages. On the general subject see Spencer, Principles of Sociology (1877), pp. i. ch. xxxvii, 36; Aveybury, Origin of Civilization (1890), 384 ff.; Taylor, Principles of Civil Culture (1890), ch. xix.; de la Saussaye, Manual of the Science of Religion, ch. 29; Jevons, Innen unter den Kulturen, ch. xiii.; Fustel de Coulanges, La societe antique; Howard, History of Marimstitial Institutions (1880); J. G. Frazer, Glaubenswesen, ii. 160, 450, ii. 460, iii. 88; W. S. Smith, Religion of the Hindus; Landmann, The Origin of Priest-hood, ch. ii.; Karsten, The Origin of Worship, a Study in Primitive Religion (the two last dealing academic dissertations at the University of Finland); Carpenter, 'The Gods Embodiments of the Race Memory' in Hibbert Journal, ii. 359 ff.
ANCESTOR-WORSHIP AND CULT OF
THE DEAD (American).—1. Communion with
spirits of the dead.—Perhaps the most marked
feature of the religion of the American Indians
is the vivid belief in life after death, possessed
by nearly all the many tribes from Alaska to Patagonia. There can be little doubt that this
belief was based upon the equally general belief in
communication between mankind and the spirits
of the dead.

Whatever may be the true explanation of that
modicum of genuine phenomena, which some
attribute to the action of spirits, and others to
the sub-conscious self, the phenomena were recog-
nized by the Indians long prior to the advent of
modern spiritualism, and, at least in many cases,
then turned by. They were
with reverence and respect, seldom with
fear. They could be seen by those who trained
their senses above the normal plane, in accordance
with methods handed down from the ancestors,
or sometimes, under unusual circumstances, by
ordinary mortals.

The power of seeing them was believed to be
acquired in various ways—by continued solitary
meditation, by the use of certain narcotic herbs,
by fasting, or by dreams. The priests, he who acquired this power, was
became mediums, and were respected as the
'Medicine Men' (a term possibly derived from the
mysteries of the Media Societies), magicians, or
priests. By the aid of the spirits they were enabled to
foretell the future, and to describe events occurring at a distance. Evidently,
the spirits were believed to possess
superhuman knowledge and power, and intercourse
with them was sought to obtain this, not for
purposes of worship. Amongst many tribes those
who acquired this power are distinguished by
various names, according to the scope of their
attainments, but the principal distinction is
between those who are controlled by the unseen
forces, and those who own them. Only the
masters were enabled to compel the spirits to do
their bidding. No instances are given of the
abuse of these powers. Like the spirits them-
selves, those who were supposed to hold intercourse with
the unseen were regarded only in their
favourable light. As to the effect of these
practices upon the medium personally, nothing is
heard. Besides these methods of obtaining
intercourse with spirits, some men were believed to be
born gifted with this power, to some others it
was quickly or instantly imparted by masters.
In dreams and visions and under unusual circum-
stances, spirits were believed to appear, without
mediumship, and to ordinary mortals.

There is a tribe to-day which does not
possess at least one member who believes that he is
able to describe distant events at the time of their
occurrence, or to perform some other apparently
supernatural feat. In the myths of several southern
tribes, mortals journey to the land of the dead,
and return thence to relate their experiences.

2. The soul and the double.

The Iroquois and Algonkins believe that man has two souls—one of a vegetable character, which gives bodily life, and
reaches death, while it is called to the
another body; another of more ethereal texture, which can
depart from the body in sleep or trance and wander over the
world, and at death goes directly to the land of spirits.†

The Sioux recognize three souls—one goes to a
hot place after death, one to a cold, while a third
mades the body clause. The Dakota call one of their souls.‡ In most American Indian languages the word for 'soul' is allied to those for 'air,' 'wind,' 'breath,' the breath being thought to represent
the animating principle derived from the Cosmic
Spirit, or Soul, as amongst Hindus and Romans,
though only the system of the Vedas analyzed this relationship.†

The individual soul was regarded as part of this
Cosmic Soul which formed the principal deity of
the American Indians. The belief is found amongst
the northern tribes, naturally prevented appreciation of its true nature, and led to
vagueness in their statements.

A widespread belief assigned to each individual
an attendant guardian spirit, or spiritual companion, independent of, but attached to, the
physical self. It warned the self through intuitions of
impending dangers, and the like. Such was the
'shadow' of the Eskimos; the 'double' of the Peruvians, which was
chosen after a period of solitary meditation in the
woods, and symbolized by some object seen in
a dream or vision; the 'ohchay' of the Ojibwas; the
'amet-malyuen of the Araucanians; the huacaque
'double' of the Peruvians literally and of a brother,' but also applied to twins and,
significantly, to a friend. The Peruvians, moreover,
gave this name to the false heads placed upon
the mummies to which they expected that the departed
spirits would return at some future time. It is
probable that the word huaca, applied to all sacred
objects, referred to the spiritual counterpart, from
which, according to the Peruvians, all material
objects were derived. Whether accidentally or
otherwise, this word is repeated in the sacred
Mexican city of Teotihuacan, and in the deities
Wakan and Wakonda of North American tribes.

† as Brinton has shown. It is possible that Thun-
apa pachaca, 'He who knows himself and all things,' one of the names applied to the
Cosmic Spirit, may apply to one who has mastered the
relation of this double to the physical self. The
Guiana tribes also assert that every human being consists of two parts—body, and soul or
spirit.‡

3. Methods of communication.—The Micmacs,
lke the Natchez, Peruvians, and other tribes, kept
the bodies of their dead in their homes or temples,
believing that this would enable the spirits to warn
them of the approach of enemies, and to advise
with their priests about the affairs of the tribe.
It was once usual for the young men of many
tribes, at the approach of puberty, to go alone into
the woods to meditate and without food, until they had visions of visiting spirits, and
the like. In Peru a class of hermits dwell alone
upon the mountains, and were consulted as to
many things, past, present, and future. The
Eskimos also had their hermits, kaviatok, and,
according to the Micmacs, there are now several
such hermits of their tribe dwelling on the moun-
tains in the almost unexplored wilderness around
Cape North, Cape Breton.

6 Rink, 46.
4. Folk-lore of communication. There is a general belief amongst the Indians that if you go into the woods on a calm day and listen, you will hear the light footsteps of the spirits, and sometimes the sound of an axe. Many of the spirits inhabit trees, from which they appear before the solitary traveller. The Brazilian tribes believe that the Indian youth, The Northern Lights represent to the Eskimos and other tribes the dance of the dead, and are thought to occur only when many have died. The origin legend of the Incas relates that Huanaacari having been walled up in a cave by his own brothers, his spirit immediately went thence to Cuzco, flying through the air. In some parts of Peru the natives scattered flour or maize or quinua about the dwelling to see by the footsteps whether the spirits had been moving about. The modern Mayas mark a path from the tomb to the hut with chalk, so that the returning spirit may find its pathway thither. The Peruvians seem to have believed that all their laws were revealed to their rulers by spirits who descended from the celestial world. The Pottawatomies had recognized rules for communicating with the dead. The spirits came with a 'sound like that of a distant strong wind sweeping through leafless trees, and intermingling with strange voices.' A Zufi rain-priest said that a woman member of his fraternity having died in the sword-waving rite, 'her spirit troubled us so much with rapping that we placed live coals in the centre of the room and added pineot gum; the room was soon filled with smoke, which effectually rid us of the spirit.' Amongst practically every tribe the Spaniards came in contact, their writers describe certain men as talking with the devil, who appeared to them in divers shapes, and imparted supernormal information. Probably they referred to the demonstrations by us.' Seances. In Cumana, they say, the piaches, or priests, informed them as to the exact day when relief ships would arrive from Spain, and as to the number of men, and the amount of supplies they would bring. The priest who prophecies 'went into a cave on a very dark night, took with him some bold youth, who stood while he sat. The priest called, cried out, and there came upon him nets, armed men, and strange voices. He spoke some words of entreaty, and if the devil did not answer, sounded again, sang threats, and grew angry. When the devil opened his mouth by the noise, the priest poured out his breath hastily and loud, fell down, and showed that he was taken by the bend by the faces and gestures that he made.'

According to Acosta, the Peruvians had conjurers who 'tell what hath passed in the farthest parts before any news can come. As it has chanced since the Spaniards arrived there that in the distance of two or three hundred leagues, they have known the motions, battles, rebellions, and deaths, both of tyrants and thrones of the king's party, and of private men, the which have been known the same day they chanced or the day after, a thing impossible in the course of nature. To work this divine trick, they shut themselves into a house and become drunk, until they lose their senses. A day after they answered to that which was demanded. They likewise show what has become of things stolen and lost.'

In the provinces of Queto the devil in frightful shape appeared to the priests, who were much respected by all the other Indians. Among these one gave replies, and heard what the devil had to say, who, in order to preserve his credit, appeared in a threatening form. Then he let them know future events, and no battle or other event has taken place amongst ourselves that the Indians throughout the kingdom have not prophecied before. It is to be doubted but that by an illusion the devil the figures of persons who were dead, perhaps fathers or relations, appeared to those Indians in the fields in the dresses they wore when living.'

Perhaps the most detailed account of a seance in America, recorded, should it be remembered, long before the advent of modern spiritualism, is given by Salcamayhua, an Aymara, of pure blood and noble lineage, who writes as follows:

'It happened one day that the Inca Ccapac Yupanqui wished to witness how the Incas conversed with their ancestors. He therefore selected a school, which was in a village of the Andes, called Capacuyu. When the young Inca entered among these old people, he asked them why they closed their eyes, and as to leave them in the dark, and they all replied that in this way they could make the husaca come who was the enemy to the Alilights, and that there seemed to be a need to do so. When they had made an end of calling the Devil, he entered with a rush of wind that put them all into a cold sweat of horror. Then the young Inca ordered the doors and windows to be opened that he might know the shape of the thing for which they had waited so long in such veneration. But as soon as he opened the windows hid his face, and knew not how to answer. The dauntless Inca Ccapac Yupanqui said, 'Tell me what you are calling,' and with such shame it replied what its name was: it fled out of the house raising shadows like thunder.'

Seances are also described amongst the Caribs and other tribes. A special and much venerated class of Peruvian priests, called malkwiqu usus, devoted themselves to communicating to the people information obtained from the spirits which had formerly inhabited the mummies placed in their keeping. They were also called Auwari right to take the sacred objects speak,' and ayapatue, 'those who make the dead speak,' as they obliged the devil 'to enter into the corpses which they consult, or into the bodies of those whom they put to sleep by their sorceries.' The famous temple of Rimac Mallqui, the name of which is to have been devoted to communion with the dead.

The suggestion of hypnotism is repeated in the snake-charming of the Zuifs, whose priests claim to be able to insert their own minds into the brains of the reptiles and to learn their words.

6. Inducing visions. To induce visions the Peruvians made use of the plant called villoa. Hernandez says that the Mexicans used an herb called olinlalqui, or 'serpent-plant,' when they wished to consult with the spirits. By means of it they were enabled to behold a thousand visions, and the forms of hovering demons. The Micmacs similarly used their mededeskeoui or serpent-plant. Amongst the Mayas the kmenes or priests were enabled by gazing into the water, a crystal of quartz, or other transparent material, to behold the reflected therein the past, present, and future, to locate lost articles, to see what was happening to absent ones, to learn by whose witchery sickness and disaster had been caused. Scarecly a village in Yucatan was without one or more of their Maya magicians. Thecraft of the Cherokeemagicians by means of their oohnesade, or crystals, obtained power to go to the spirit world and back. In them they beheld events anywhere at any time they wished. They also used them to call to their aid the invisible little people, who would accomplish almost anything for them, either good or evil. They would drive out the hostile spirits who caused illness or inflicted death; they would fly on errands over land and sea. One Cherokee, with every indication of good faith, informed the present writer that he had a crystal and could use it in all the ways stated. It must be fed by rubbing blood upon it, and if angry would cause injury to its owner. The Zuifi priests used crystals for like purposes. In Peru, though the use of crystals is not affirmed, a legend asserts that the Inca Yupanqui, while gazing into the clear depths of a spring, beheld a messenger from the celestial world, who told him many wonderful things.

7. Belief in life after death. Whether the general belief in life after death amongst the American Indians was founded on their real or
supposed communion with the spirits of the dead, or vice versa, the intensity of this belief amongst the Cahroses and in Peru is evidenced by the Druid-like custom of whispering in the ears of the dying messages to departed friends. Algonquin women who desired to become mothers flocked to the couch of the dying to die, in the hope that the vital principle, as it passed from the body, would enter them and fertilize their sterile wombs. The Aymara word mallasu meaning 'mummy' is also translated 'tree,' 'lord,' 'immortal,' 'a bush for transplanting,' 'a young bird about to leave its nest for life elsewhere.' The conventional expression amongst the Indians at the approach of death is 'My father calls me to rest with him.' Many tribes held the doctrine of re-incarnation. The Chilnook says that when a man dies, his spirit passes to his son; the Thlinkot, that the soul has the option of returning to life. In that case it generally enters the body of a female relative to form the soul of a coming infant. Some tribes of Southern California supposed the dead returned to certain verdant isles in the sea while awaiting the birth of infants, whose souls they were to form. The Apaches took the metempsychosis of souls into animals. The Noofkas, Pueblos, and Mayas also believe in re-incarnation.

The Dakota medicine-men profess to tell things which occurred in bodies previously inhabited for at least half a dozen generations. Many tribes preserved the bones of their dead, belief in the survival of the body. Some even dug near the corpse with a stick to frighten away the lingering ghost. But this was done only by the enemies of the deceased.*

10. Nature of life after death.—The land of souls amongst the American Indians was usually located in the sky, the sky-world being regarded as the world of origins, of which the earth is but an echo or counterpart. Life in the sky-world therefore was thought to differ little from life on earth. The soul continued to pursue the same objects that it had sought here. The Happy Hunting Ground was a literal ideal of the northern hunter tribes, but the concept rises amongst the Mayas to a place of eternal reposes beneath the cool unbraggious shade of the sacred tree, yacaha.† Certain legends seem to localize the land of souls in or near the sun, and in the Pleiades,‡ but the sun merely represents the dwelling of the ruler of the sky-land.

Journey of souls.—The way thither is long and difficult. For four days and nights the soul toils onwards over a dark and dreary way, lighted only by the fires which it makes and maintains during that period. First it journeys to the extremities of the earth, to the point where the Milky Way, the path or river of souls, touches the earth. At the entrance to the Galaxy, it passes a dog, or between the twin stars, or along the way. Then, guided by the spirit of a dog or by a star, it leaves the earth and advances on this narrow path until it comes to a point where the path forks. Here the spirits of those who have been brave and courageous, and who have been worthy, reach the broad arm and quickly attain to the celestial goal, while those less commendable pass out upon the narrow arm and struggle on with bitter effort. Such is the real symbolic basis of the journey of souls. Of course this symbolism is usually veiled, it is sometimes quite clearly stated, as by the Skidi Pawnees.§ Everywhere the soul must cross water, usually a torrential river, sometimes a series of streams, the ocean or a lake. Sometimes it does this on a narrow hair bridge, as in Peru and Colombia and amongst the Eskimos, sometimes on a slippery log, as amongst the Cherokees, Iroquois, and other northern tribes, on an enormous snake amongst the Tonkans, or on dogs or Peruvian coast, on dogs in Mexico, in a stone canoe amongst the Ojibwas. The Mexicans, with marked inconsistency in view of their sanguine rites, translated to heaven at once and without effort the souls of warriors and of women who died in childbirth. The Pawnees conceived to them a comparatively easy journey.

The Zuñis believe that

The Algonquins beat the

walls near the corpse with a stick to frighten away the lingering ghost. But this was done only by the enemies of the deceased.*

11. Worship of ancestors and of the dead.—Strictly speaking, instances of true worship of ancestors or of the dead are uncommon among the American Indians. The dead are seldom confused or identified with the various deities, whose attributes, with

few exceptions, clearly reveal their origina in the personification of natural phenomena. The American Indians as a race are typically nature-worshippers. The sun and moon, and other celestial bodies, the seasons, the six directions, the four supposed elements, all figure prominently and generally in their pantheon, but the cult of the dead is the principal which is almost entirely to communication with the spirits of the departed. Fear is seldom an element of this cult. Its main motive seems to be merely the renewal of friendly relations with the spirits, who are supposed to be leading in the other world an individual life very similar to their earthly life, to which they are eventually destined to return. Superhuman knowledge of events distant in time or space is indeed attributed to the spirits, no greater perhaps than that conceded to certain living men, but these men themselves were thought to receive their knowledge from the spirits. It is a long step from such attributes to deification. Honours were paid to the dead individually, similar in degree to those due them when on earth; in other words, they were deified or venerated by the living as if they were gods. But there is slight evidence that the dead were regarded as superior beings.

The chief when living remained a chief when dead, as much below the deities then as before, except for the general knowledge. In Spanish writings of a period when apostles were asserted to have fought visibly against the heathen in Peru, the Indians are said to have helped the Inca Yupanqui to overcome his enemies. If this be a Peruvian tradition, it is a rare example of a native legend which attributes to the spirits an active intervention in the affairs of this world. Amongst the civilized tribes who offer elaborate petitions to their nature deities, very few are directed to the spirits. The legend of Manco Capac and Mama Oello of Peru, that they were the deities of the Popol Vuh, who, descending from the sky, after an active life on earth re-ascent to the sky and become stars, clearly reveal nature personification. Amongst a number of legends relating to caciques similarly translated and defined, none which present details can be otherwise classified.

The Paraguayans and the Powhatans of Virginia are said to have worshipped the skeletons of their forefathers, but may merely have retained them to consult with the spirits and to attach some sense to remain attached to the bodies. So the people of Comagre worshipped the bejewelled mummies of their ancestors.†

The Eskimo upper world is ruled by the souls of the dead, including those inhabiting the celestial bodies. These were once men, and occasionally returned to earth. In Nayarit, the skeleton of a king received Divine honours, as did Pizzaco, god of the dead in Oaxaca.§ But the worship of the deity who governs the dead is quite distinct from the worship of the spirits themselves. The Caribs held regular meetings to propitiate the spirits.¶ The Californian tribes believed that some of the dead became stars, the Iroquois that the stars had all been mortals, or favoured animals, and birds. But the sun and moon existed before them.** In Peru, the malquis, or mummmies, were petitioned to grant food, health, and life.†† According to Acosta, each ruling Inca after death was regarded as a god, and had his individual sacred statue, even. Each month the coast people sacrificed children and anointed the tomb with their blood.¶¶

The Chibchas and Guatemalan tribes buried a corpse in the foundation of each building that it might be protected by the spirit. The Mexicans called their dead teotl, meaning 'divinity.'† Some asserted that their gods had been at first mere men, who had been deified either because of their rank, or some notable thing which they had done.‡ They set up in their temples statues of their victorious generals.¶

12. Festival of the dead.—In many parts of America there was an annual or semi-annual festival in honour of the dead who, at this time, were held to be leading in the other world an individual life very similar to their earthly life, to which they are eventually destined to return. In Peru the Ayamarca or Carrying of the Corpse festival was celebrated annually for three days at the time of our Halloween, All Saints, and All Souls. The supposed coincidence in time is but one of many similar analogies in the Peruvian ritual that are associated with ceremonies which have reached us from pre-historic times. During this festival the bodies of the deceased rulers of Peru, the Incas, with their principal wives or coyas, were clothed in new garments, and were brought forth from the temple in which they were deposited. Each mummy, followed by its special attendants, was then borne in ceremonial procession through the streets of the sacred city of Cuzco, after which food and drink were offered to it with all the honours due in life, in the belief that at this time the spirit did indeed return to the body, and reside therein during the time of the festival. The procession echoed to the passage of the sun through the zodiacal sign of the Mummy (Scorpio). At the same time fruits and flowers were placed upon all graves to refresh the returning spirits. The festival is also associated with the imparting of celestial wisdom.†

The basis of this ritual, however, seems to have been relating to the temporary renewal of intercourse with departed friends and relatives, and its object to welcome and please them with respect and courtesies. The element of worship of the dead as superior beings or the offering of prayers to them for aid is not prominent. The Mexicans held festivals in honour of the dead in August and November, when the souls hovered over and smelt of the food set out for them, sucking out its nutritive quality. The Maya, and the Eskimos performed similar rites in November, the Iroquois in spring and autumn.¶ The Hurons believed that the souls of the dead remained near to the bodies until the feast of the dead was celebrated. They then became free, and at once departed for the land of spirits.** The Chibchas and Peruvians repeated the curious Egyptian custom of introducing a mummy in the midst of a revel to suggest to the feasters the omnipresence of death.†

13. Demons.—The religion of the American Indians is not dualistic; good and evil alike are attributed to the Great Spirit. But the conflict, so far as it is recognized, depends rather upon physical and mental than upon moral qualities. No instance can be found in aboriginal America of a contest between a supreme good and a supreme

ANCESTOR-WORSHIP (Babylonian) 437

on the attitude one takes towards the Sumero-Akkadian problem. The majority of Assyriologists, believing as they do in the existence of a distinctly pre-Semitic Sumero-Akkadian culture and language, naturally hold that the cult connected with the spirits of the departed, which was allowed to flourish by the side of the Babylonian State religion (or rather religions) was in its essence very largely, if not entirely, a popular survival of an ancient non-Semitic form of animism, and Sayce goes so far as to say that the ideas connected with this cult were ‘never really assimilated by the Semitic settlers’ (Religions of Ancient Egypt and Babylonia, 1902, p. 278). An entirely opposite opinion must, of course, be held by the smaller number of Assyriologists, who categorically deny the pre-Semitic civilization here referred to; and even a cautious writer like Jastrow maintains that there is no necessity ‘to differentiate or to attempt to differentiate between Semitic and so-called non-Semitic elements’ in Babylonian and Assyrian religion, but there is no way of contrasting as between heaven and hell. There was no conception of a place of punishment. Such ideas are of missionary origin.

STANSHIRE HAGAR.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Babylonian).—It is at the outset necessary to note how the Babylonian beliefs and customs relating to the cult of the dead, and pointing to a form or forms of ancestor-worship, were in their origin Semitic. The answer depends

* A. Hagar, op. cit. ‘Scorpio’ chapter.
in Babylonian mythology of mortals passing to immortality and deification without having previously died and gone down to the under world, is that of Sit-napishin, the Babylonian Noah,* and his wife (or, according to Berosus, as reported by Alexander Polyhistor, also his daughter and his pilot) who, when the deluge was over, Bel, whose wife was the goddess of the dead, bestowed divine life on the pair, and assigned them a dwelling afar off ‘at the mouth of the streams.’ The case of the hero Gilgamesh and that of Etana, before whose names the determination to share the company of the gods of heaven would have been his share, if he had not refused to partake of the ‘meat of life’ and ‘the water of life’ which Anu had offered him. The ground for deification in the case of Gilgamesh was the heroic character of the persons concerned; but the element of ancestor-worship was probably not absent, and it is in any case clear that such instances of deification cannot be dissociated from the cult connected with the departed.

Passing from legend (which may, however, be assumed to rest on some actual events) to historic times, we find the names of Dungi and Gudea (probably before the middle of the 3rd millennium B.C.) written on tablets that belong to the centuries immediately following their reign, with the determinative that is placed before the names of gods. Festivals were celebrated in honour of these kings, sacrifices were offered to them, and their images were placed in temples. Again, the name of Ur, appears [like an Egyptian Pharaoh] to have been deified during his lifetime, and there was a temple at Lagash which was named after him (Jastrow, op. cit. p. 561). In paying honour to deified personages of other great kings, the sons and other descendants would both naturally and in accordance with an established rule (see § 2) take the lead, and the people generally would share in the celebrations, so that we have here instances firstly of ancestor-worship in the strict sense of the word, and secondly in its wider, if looser, signification as homage paid to the departed kings and fathers of the people.

Some acts pointing to deification or semi-deification in later times will be mentioned in connexion with sacrifices and offerings to the dead, and it will there also be seen what form the cult of the dead took among the people in general; but it is necessary to inquire whether we are able to trace the notion of what deification meant among the ancient Babylonians. Did the divine rulers and chiefs stay among the gloomy deities of the under world presided over by Nergal and his consort Allatu, or did they ascend to join the company of the ancestral gods? A writer like Jastrow, who strongly emphasizes the impossibility of a disembodied human spirit escaping out of the Babylonian Hades, must adopt the former alternative, notwithstanding the various difficulties connected with this interpretation (as, e.g., the instances of an akhet actually finding its way back to earth). Thus bright to the eye far tale of the Babylonian doctrine bearing on this problem is that of A. Jeremias (op. cit. pp. 100-105, and elsewhere). With Sayce and others this writer takes the epithet ‘raiser from the dead,’ * given to Marduk and other deities, in its natural sense (as against the forensic interpretation of Jastrow). This is, however, in the sense of preventing death from overtaking the living), and attributes to the ancient Babylonians hopes of a much brighter existence than was to be had in the under world; and if this be so, there is nothing to prevent us from thinking that by their deification Gudea and others entered the luminous company of the gods of heaven instead of dwelling for ever in Hades, and that in consequence their descendants had bright and happy visions of the ancestors to whom they addressed their prayers. It is not unreasonable to think that the ‘water of life,’ to which reference has already been made in the story of Adapa, is to be found even in Hades. If Ishtar could by the command of Ea be restored to the upper world by being sprinkled with ‘water of life’ (e.g. the zibbat of Ishtar, * reverse, 1. 38 ff.), why not also departed mortals who were destined for deification? The truth, however, seems to be that we have here to deal with different streams of belief, some tending in one way and some another. But in accepting this opinion it is not necessary at the same time to agree with Sayce, who assigns the gloomier doctrine of Hades to the Semitians, and the superinal deification to the Semites, for it may well be that there were different streams of tradition among the Semites themselves. Development within the Semitic field is, of course, also an important factor to consider.

2. Sacrifices and offerings to the dead.—Mention has already been made of sacrifices offered to deified personages in early times (see § 1), and sacrifices were also celebrated in their honour. The famous Stele of Vultures, which records the victories of Enannatum, or Eannadu, an ancient king * of the city of Shuruppak, shows on one of the extant fragments the corpses of his enemies, placed in baskets with incense, placed in baskets on their heads, which are generally understood to have contained funeral offerings for the dead. The fallen enemies, on the other hand, are refused burial, their remains being left to be devoured by vultures (on the terrible meaning of this treatment, see below). An ancient bronze tablet, which represents a funeral scene, apparently watched over from the top by Nergal, and showing below the goddess Allatu in her bark, exhibits the dead person lying on a bier, and of festivals in fish-like garments, with a stand for burning incense not far from the head of the bier.§ On

* Cf. 1 S. 15 (‘He bringeth down to Sheol and bringeth up’).  
* Probably before a. 4000 (see L. W. King, Bab. Religion, p. 85).  
* The interpretation of the scene is, however, uncertain. The baskets may have contained more earth for the mound raised over the corpses. Jastrow (op. cit. p. 560) says that the Stele shows animal sacrifices being offered to the dead, and Maspero (Dawn of Civilization, p. 607) says that ‘the sovereign design was to kill with his own hand one of the enemies of his enemy’ in honour of the dead. Fragments of the Stele were also found made by some Par-napishitu. Pir-napishitu, or Ur-napishitu, and named Xasthros [=Atakhbata, or Asshurtaba] by Berosus) appears to be a combination of the Biblical word and Ennoch, the latter having also escaped death (On 694).

Jastrow, the ship’s architect; see Euseb. Chron. ed. Schoene, l. p. 22.  
* In the Gilgamesh Epic, ix., beginning of col. iii., the hero says: ‘-’Sit-napishin, my father . . . who entered the assembly of the gods,’ etc.

2. Sacrifices and offerings to the dead.—Mention has already been made of sacrifices offered to deified personages in early times (see § 1), and sacrifices were also celebrated in their honour. The famous Stele of Vultures, which records the victories of Enannatum, or Eannadu, an ancient king * of the city of Shuruppak, shows on one of the extant fragments the corpses of his enemies, placed in baskets with incense, placed in baskets on their heads, which are generally understood to have contained funeral offerings for the dead. The fallen enemies, on the other hand, are refused burial, their remains being left to be devoured by vultures (on the terrible meaning of this treatment, see below). An ancient bronze tablet, which represents a funeral scene, apparently watched over from the top by Nergal, and showing below the goddess Allatu in her bark, exhibits the dead person lying on a bier, and of festivals in fish-like garments, with a stand for burning incense not far from the head of the bier.§ On
ANCESTOR-WORSHIP (Babylonian) 439

the monuments of later Babylonian and Assyrian kings we do not find any representation of burial ceremonies' (L. W. King, op. cit. p. 48), but from a broken inscription of one of the later Assyrian kings, whose name has not been preserved, 'we learn that the king placed vessels of gold and silver in the grave as dedicatory offerings' to his departed father (ib. p. 49). Ashurbanipal (king of Assyria, B.C. 668-626), in a still more devout fashion, appears at the tombs of his ancestors with rent garments, pouring out a libation in memory of the deceased and addressing prayer to them (see, e.g., Jastrow, op. cit. p. 605).

It is necessary, however, to distinguish carefully between sacrifices in the proper sense of the word and offerings of various kinds made to the dead by way of providing for their proper maintenance in the under world. The former point to a form of delusion and actual worship (though probably in most cases of a secondary kind), whilst the latter, which, roughly speaking, belong to the decidedly popular element of the cult, are generally understood to have had the object of keeping the ghosts of the departed in a sufficiently comfortable condition in the under world, so as not to risk their returning to molest their living relatives and survivors. One is inclined, therefore, to treat them as a part of the departure among the underlying motives, and some of the details to be mentioned presently would seem to support this view; but it is true that the motive of fear was exceedingly strong. The customary walls set up for the protection of the assembly on the river Euphrates were generally known as 'sacrifices proper'.

The difference between that and utukku cannot be accurately stated. It seems, however, that utukku was a general name for the deceased, as in the utukku 'of the family', 'at the door' (utukku became the proper name for a deceased human spirit. Sayce (op. cit. p. 284) would limit the meaning of ekimmus to the 'spirit of an unburied corpse over whose unascertained remains the funeral rites had never been performed'; but R. C. Thompson (The Devils and Evil Spirits of Babylon, i, p. xxvit. f.) has shown that the name was also applied to ghosts who, though properly buried, had no one to provide them with the necessary sustenance, and he has supposed that to the extent to which they were forced to return to the earth in order to seek for themselves some sort of maintenance among their former associates. When opportunity offered, the ghost would even enter the body of a living man, tormenting him until he should be exorcised by prayers, or by resorting to the services of a priest. In order to guard against these dangers to the living, it was necessary, first of all, to perform the funeral rites, by means of which the human spirit was enabled to reach its destination in the realms of Aralu; and it was, secondly, required of the relatives, and more particularly of the eldest son and direct descendants of the deceased, to make provision for their proper maintenance in a region where, apart from the sustenance provided for them by their friends on earth, 'dust is their necessary food, and where 'open gate and bolt dust is scattered' (opening part of the 'Descent of Ishtar'). Offerings of this kind would, however, naturally assume a propitiatory character of a more or less definite kind, and a sufficiently close affinity with sacrifices proper would be the result.

The provision thus made for the departed differed, of course, in accordance with their condition during their life on earth, and was, besides, dependent on the means possessed by their living relatives. The occupants of the smaller chambers of burial was content to have with him his linen, his ornaments, some bronze arrowheads, and metal or clay vessels, whilst others were provided with 'furniture, which, though not so complete as that found in Egyptian sepultures, must have ministered to all the needs of the spirit' (Maspero, op. cit. p. 686). Special requirements were also thought of. Thus, 'beside the body of a woman or young girl was arranged an abundance of spare ornaments, flowers, scent-bottles, combs, cosmetic pencils, and cakes of black paste wig' to his departed father (ib. p. 49). Ashurbanipal (king of Assyria, B.C. 668-626), in a still more devout fashion, appears at the tombs of his ancestors with rent garments, pouring out a libation in memory of the deceased and addressing prayer to them (see, e.g., Jastrow, op. cit. p. 605).

It is necessary, however, to distinguish carefully between sacrifices in the proper sense of the word and offerings of various kinds made to the dead by way of providing for their proper maintenance in the under world. ANCESTOR-WORSHIP (Celtic)

has been urged by Jastrow (op. cit. p. 559) and others, that the name Shu'dlu (Heb. She'edh) itself proves that inquiry of the dead was inseparable from the very notion of the underworld thus designated, is by no means convincing; for the root sha'el (Heb. $^\text{sh}_{\text{h}}^\text{a}^\text{l}$) may be connected with shadal (Heb. $^\text{s}_{\text{h}}^\text{a}_d^\text{l}$), thus giving to Shu'dlu the meaning of 'having knowledge of the dead' or 'place of inquiry' (see Of. Heb. Lex. s.v.).

The classical, and so far solitary, clear instance of raising a dead person and conversing with him (analogous to the famous Biblical instance of Saul and Samuel) is that of the hero Gilgamesh and his shade of his friend Enabani, as related in the closing tablet of the Gilgamesh Epic. The help of Nergal himself had to be obtained in order to secure the desired effect. The god of Hades 'opened the hole of the earth, and let the $\omega^\text{wk}_a^\text{k}$ of Gilgamesh come forth out of the earth like a wind' (Gilgamesh Epic, xii. col. 3. ll. 27-8).

The conversation of the two friends turns on the condition of the departed in the regions of Hades.

As connected with this part of the subject omens may be mentioned. Mr. Eabani can be sure that the work already referred to, writes as follows:

'The belief in the $\text{ku}_{\text{m}}^\text{m}$ spirit had obtained such a hold over the Assyrians that they even went to the length of deceiving the appearance of such a ghost in their own houses. As a rule, it was held to be an evil omen, whether it was the spirit of a dead man girdled or ungarbed, and was in the end driven out by some words or awaited some answer. . . . The threat that is held over the heads of all spectres of this class is that no rite shall be paid to the spirit until they have departed' (vol. i. p. xxiv).

To sum up: the evidence, so far as it goes, shows clearly that even in historic times the cult of the dead and elements of ancestor-worship formed, more or less distinctly, part of Babylonian religious observances. As regards definition of descent from ancestors, sacrificed to the proper sense of the word, and festivals held in honour of the dead, the clear evidence, as was to be expected, relates to the ruling families only. It may, by analogy with the religious development of other races, be assumed that ancestor-worship and the cult of the dead were more prevalent in pre-historic times than later on. But whether this cult was in very ancient times the only or even the chief religious worship of the Babylonians—whether Sumerians or Semites, or a combination of both—is quite a different question. It is more than likely that it was but one among a variety of cults, and that the various $\text{num}_{\text{n}}^\text{m}$-loct, the heavenly bodies, the storm, the lightning, and other powers of nature played at least a great part in the earliest Babylonian religion as the worship of the departed. There is at any rate nothing in the Babylonian cult to confirm the theory of Herbert Spencer, that ancestor-worship was the sole original worship of humanity, and that animism in its wider sense was developed out of it.

LITERATURE.—The principal literature used has been frequenly quoted. The part relating to the subject in the article edition of Jastrow's Historia Religionis Babylonica et Assyriaca had not come to hand when the article was written. The author of this life was the work of the Nebuchadnezzar period, and is the fullest. In the quotations from the 'Decree of Ishtar' and the 'Epic of Gilgamesh,' Jensen's edition (Schrader's R.B. vi.) has been followed.

G. MARGOLIOUTH.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Egyptian).—A. Ancestor-worship.

Of a developed ancestor-worship, like that of the Far East, there is in Egyptian religion little trace. Their knowledge of their long history disposed the Egyptians to revere the memory of their ancestors ($\text{t}_{\text{p}}^\text{u}_{\text{u}}^\text{d}_{\text{u}}^\text{i}$), and we often hear 'the time of the ancestors' referred to with respect: such-and-such a temple was rebuilt 'as if the ancestors were present.'; so wonderful a thing had never happened since the time of the ancestors, and so forth. The kings naturally regarded their predecessors in the royal line with respect, and are depicted making offerings to their names, at Abydos, where Seti I. and his son, the Prince Rameses (afterwards Rameses II.), offer incense before the two long rows of cartouches, each of which contains the name of a king whom Seti considered worthy of special honour. Incense is being offered to each, as might be offered before Japanese Infernal Shinto shrines. But Egyptian ancestor-worship went little farther than this. The ordinary person did not specially venerate the names of his ancestors. He often commemorated them, but never as gods, except in so far as every dead man who was 'good' became Osiris.' But as a proof of his loyalty to the reigning dynasty, he venerated the ancient royal names which his king delighted to honour: at Sakkarâ we find a private person, Tunur, offering to a series of kings' names, which is almost identical with that reverenced by Seti I. at Abydos. Such lists were purely commemorative. Seti I. did not regard his ancestors as gods because they were his ancestors, but, because, as kings of Egypt, they had been gods; every king during his life was the living representative on earth of the sky-god Horus, the oldest ruler of Egypt. Tunur regarded the ancient kings as gods for the same reason. He would never have represented himself offering to the $\text{i}_{\text{a}}^\text{h}$ of his own ancestors as gods, because he never had been gods, nor did he regard them as gods except in so far as each was an Osiris.

Osiris-worship was not ancestor-worship. It is not probable that the Egyptians regarded even Osiris, the great dead of the dead, with whom every dead man was identified, as a sort of national ancestor of the race, in spite of the belief that he had once reigned over Egypt as king. This Ethenermic view is probably late, and was certainly of local origin, probably at Busiris in the Delta (see below). The older Egyptians had feared the Celti, like the kindred stocks, worshipped their ancestors. The Druids have been known to have taught not only immortality but also metempsychosis (Cesar, de Bell. Gallico, vi. 14; Lucan, Pharsalia, i. 454-455). Yet the only passages which in any way sanction the hypothesis of ancestor-worship are Cesar, de Bell. Gallico, vi. 10, and Pomponius Mela, Chronographia, v. 13. The former author states that, 'in keeping with the cult of the Gauls, funerals are magnificent and sumptuous, and they cast upon the pyre all that they suppose pleasing to the living; even animals and, a short time ago, the dead bones and dead dogs were burnt with the deceased after the funeral rites had been duly performed.' Pomponius adds that, in consequence of the Gallie belief in immortality, 'they burn and bury with the dead things proper for the living,' and says that the human victims who were burnt were at either messengers (like the slaves killed to carry tidings to a deceased king in Dahomey) or faithful retainers who desired to continue life in the future world with their patrons. It is questionable, however, whether all the Gauls could be regarded as ancestor-worship in the strict sense of the term.

LOUIS H. GRAY.
magical power of the dead man, and had regarded him as a deity; every dead man was Osiris. So they worshipped him as Osiris and in the form of the god of the dead; not under his own name or in his own shape. Thus no real cult of ancestors as gods under their own names and in their own shapes ever grew up in Egypt. To venerate one's ancestors as Osirises was a very different thing from venerating them as ancestors. Filial piety demanded the mention of mother and father, perhaps of grand-parents, on one's gravestone; the son could put up a stele in his father's name, 'as making their names to live upon earth.' But so also could a brother make the name of his brother or sister to live. No worship is implied.

Religious duty demanded the proper observance of certain ceremonies at the tomb by the hand of the 'servant of the ghost' (hen-ka), but these were not intended as worship of the ghost; they were meant to ensure his happy transit through all the terrors of the under world, as the parts of his body and soul in the celestial boat of the sun-god. The religious texts inscribed upon the walls of the tombs had a similar signification. They are all magical spells designed to keep the god of the dead from wandering; and to enable him, by means of formulæ asserting his divine dignity, to win his way past all opposition to his position as a god and the equal of the gods. But no prayers are addressed to him as a god; and if they were, they would only be addressed to him as the god Osiris, not as an ancestor-god protecting his family and tribe. Of this conception we find no trace in Egyptian religion, except the position assigned to Horus, who, being the son of Osiris and the successor of the deceased, was the predecessor, if not the progenitor, of its kings. But here again, as in the case of Osiris, the kings venerated their ancestor Horus, not because he was their ancestor and the founder of the monarchy, but because he was himself one of the great gods, and was also implicitly divine because he had been a king.

Thus it would appear that the deification of every dead man, or rather his identification with one particular deity, allowed of the worship of the true ghost, in Egyptian religion. No doubt possible traces of it may be discerned here and there in local beliefs, but in the main scheme of the national religion it had no place.

B. Cult of the dead.—As has been shown above, the dead was venerated as Osiris, not as an ancestor. Originally, however, this 'Osiran' doctrine was not common to the whole of Egypt. It seems to have originated at Dedu or Busiris, 'Osiris' town,' the modern Abusir near Samand, in the Delta. Here Osiris, far back in the primitive period, must have been simply the protector-god of the local necropolis, as the god Ptah was the protector of the necropolis of Memphis, and Anubis, the jackal (confused at a very early period with Upuaut, 'Opener of the Ways,' the wolf war-god of Siut), was the protector of that of Abydos. Anubis of Abydos was also identified with a shadowy deity, Khentamentiu, 'the Chief of the Westerners,' the latter being the dead, who were usually buried on the west bank of the Nile. Whether there was any idea among the primitive Egyptians that the Lion Seker, who sometimes came within their ken, were the spirits of their dead in the West, and that the ruler of the dead was their chief, we cannot tell, but it seems probable that it was so. Khentamentiu, however, is never pictured, so we cannot tell what he was supposed to be like; he had already become identified with the jackal Anubis before the dawn of history.

While, however, the protector of the necropolis of Abydos was regarded as a jackal, because the jackal had his abode among the tombs and prowled around them at night, so that thechildlike mind of the primitive Egyptian, in fear of him as the ravager of the graveyards, easily came to venerate him, and to desire to placate him by worship as its protector, the Memphite and Busirite gods of the dead were regarded as dead men; in the northern view the dead were ruled by the dead. The Busirite and Memphite deities, Osiris and Ptah, were closely related. Both were represented as human mummies, the first carrying the whip and flail, emblems of sovereignty, and the second the symbols of power, stability, and life. If the legend of the foundation of Memphis at the beginning of the First Dynasty has a historical basis, it may be that the resemblance of the form of Osiris is due simply to the fact that the worship of Busiris had penetrated so far southward at that time that, when the necropolis of Memphis was constituted, its protective deity was given a shape differing but little from that of Osiris. However, the name of Osiris may be that of Osiris, Ptah seems very soon to have come to be regarded as the god of the living city of Memphis rather than that of its necropolis, though his mummy form shows that he was originally a god of the dead almost identical in form with the Busirite Osiris. Then he was conceived as exercising his function of protector of the necropolis in the form of a dead and mummified hawk, placed upon a coffin. Hence, perhaps, his name of Ptah-Sekri, 'the coffin Ptah.' The hawk was the god of an ancient ergym in Egypt, and naturally symbolized a dead god. Later on, the peculiar Kâbhiric form of Ptah, which may really be older at Memphis than either the mummied man or the mummified hawk, and may, indeed, be the original form of the god-god before the Osiride form prevailed, was revered as 'Ptah-Socharis-Osiris.' This triple name combined Ptah, the coffin Ptah, and the Busirite Osiris proper, in one deity of the Memphite necropolis (now known as Osiris-Sokar). The name of Osiris-Sokar is that of the ancient god. At Memphis the original form of Osiris was never replaced by the regular Busirite form, which prevailed elsewhere in Egypt. Doubtless this was because, at Memphis, Osiris was entirely identified with Ptah-Seker, while at Abydos he was regarded as himself as the god Osiris, and merely displaced Anubis, the latter preserving his name and individuality, and only ceding his title of Khentamentiu to his supersede.
Busiris degenerated into comparative unimportance. The only real rival of Abydos as the headquarters of Osiris is the northern city of Mendes, in the Delta, only a few miles east of Busiris, where the god had at an early period become identified with the local animal-deity, a wolf, who was called 'Soul of the Lord of Dedu,' El-nab-ded, after the adoption of the idea, when at the even, the corpse of Osiris had descended from the sky to Mendes and the modern Menditt and Amditt. It is uncertain whether the goat of Mendes was originally a god of the dead or not; probably he was not. The 'Lord of Dedu,' whose 'soul' he was called, was the Osirian and god of Busiris. This title of Neb-Dedet was recognized throughout Egypt as one of the chief titles of Osiris, and on the stele at Abydos it is always accorded to him side by side with the old appellation of the Abydene Anubis, Khentamentiu.

With the worship of Osiris went the peculiar doctrines associated with his cult: the belief in resurrection, in the springing of life out of death, which made him a deity of renewed life as well as of death, and so identified him with the green corn, the god of the waste deserts of his brother Set; and, most important of all, the peculiar doctrine of the identification of every dead man with the god, which became at a very early period the cardinal tenet of Egyptian belief: with regard to the Upper Kingdom in the tomb, to the hawk of the venerated N, the justified.

The venerated and justified dead man is the god there, the deified Osiris N in the tomb, though he may not definitely be called 'the Osiris'. Every dead man was supposed to be called by his name, and the god, whether Anubis 'on the Serpent-Mountain, Lord of Sepsa,' or Osiris, 'Lord of Dedet, Khentamentiu, Lord of Abydos,' is besought to give a 'king's offering' (hedep-suten) of 'thousands of flesh, fowl, and everything good and pure on which the god there liveth, to the ka of the venerated N, the justified.'

The venerated and justified dead man is the god there, the deified Osiris N in the tomb, though he may not definitely be called 'the Osiris'.

Even when other deities were invoked to give the offering, as Amen-Ra or Hathor in the Theban necropolis over which they ruled, or Geb the god of the earth and the Circle of the Nine Gods, the dead man is still Osiris; he is not identified with Amen-Ra, or Hathor, or Geb, although the fact that he is Osiris is not always clear; but then the god of the dead, or of Abydos at all, was a war-god, of whom the wolf was a good symbol, as the 'opener of the ways' to the pack. But the kinship of the wolf to the jackal soon caused Upuaut to be regarded also as a fellow-protector of the tombs with Anubis at Abydos, and in later times he is exclusively a god of the dead, the double of Anubis. Isis and Nephthys, with the child Horus, naturally accompanied Osiris from the Delta, whereas Anubis had been their origin. But they did not come much forward till a comparatively late period, when the triad Osiris, Isis, and Harpocrates took the place of the Theban triad Amen, Mut, and Khensu, which had become somewhat discredited everywhere except at Thebes after the end of the Theban domination. During that period Osiris had degenerated from the position of king of the dead to that of merely their judge; his kingly functions were usurped by Amen-Ra, the Theban 'king of the gods,' who, during the night, the coming forth, the Osiris was to take on his back through the under world, giving light to the spirits and accompanied by them in his course. But in the Saite period Osiris not only returned to his position as king of the dead, but became king of the living also, for he took the place of Amen-Ra as supreme deity of Egypt, and the whole set

Ua-y festival, the feast of Thoth, the beginning of every season of heaven and earth.'

Originally, of course, these honours (see Death and the Disposal of the Dead [Egyptian]) were paid primarily to the ka, or 'double,' of the deceased, which was supposed to reside in the tomb, and, had it not been for the admission that the god of the dead, or the ka there, would undoubtedly have developed into a regular form of ancestor-worship, the ka of each person 'there' being worshipped as a god. We may perhaps even say that before the general adoption of the belief in ancestor-worship the ka of every deceased man, or the kau, or intelligence, were.

In any case, these other spiritual portions of the man never were specially venerated. They required no sustenance, therefore no offerings were made to them, such as were made to the ka. These offerings were made by the members of the family of the deceased persons, and occasionally by the deceased himself, together with those of their living descendants who make their name to live upon earth (see Deir, etc.). Several generations of the dead are often thus 'made to live' on the stele (see Deir, etc. [Egyptian]). Thus in Egypt, 'cult of the dead' amounted to no more than this.

The worship of the supreme god of the dead, Osiris himself, as apart from the offerings made to the individual Osiris, the dead, was carried on in the usual manner. He had two great temples, at Abydos and at Siut, which disputed the possession of his most holy relic, supposed to be his actual body; and at Abydos he was supposed to be buried in a tomb which, by a misunderstanding of a hieroglyph, was identified with the tomb of the early monarch Tjer, the sign of his name being misread as Khent, 'chief,' and so identified with Khentamentiu. He was worshipped also as the ram at Mendes, and as the bull Apis in the Kabiri form at Memphis. The tenorial name of Osiris was a word to be invoked to give the offering, as Amen-Ra or Hathor in the Theban necropolis over which they ruled, or Geb the god of the earth and the Circle of the Nine Gods, the dead man is still Osiris; he is not identified with Amen-Ra, or Hathor, or Geb, although the fact that he is Osiris is not always clear; but then the god of the dead, or of Abydos at all, was a war-god, of whom the wolf was a good symbol, as the 'opener of the ways' to the pack. But the kinship of the wolf to the jackal soon caused Upuaut to be regarded also as a fellow-protector of the tombs with Anubis at Abydos, and in later times he is exclusively a god of the dead, the double of Anubis. Isis and Nephthys, with the child Horus, naturally accompanied Osiris from the Delta, whereas Anubis had been their origin. But they did not come much forward till a comparatively late period, when the triad Osiris, Isis, and Harpocrates took the place of the Theban triad Amen, Mut, and Khensu, which had become somewhat discredited everywhere except at Thebes after the end of the Theban domination. During that period Osiris had degenerated from the position of king of the dead to that of merely their judge; his kingly functions were usurped by Amen-Ra, the Theban 'king of the gods,' who, during the night, the coming forth, the Osiris was to take on his back through the under world, giving light to the spirits and accompanied by them in his course. But in the Saite period Osiris not only returned to his position as king of the dead, but became king of the living also, for he took the place of Amen-Ra as supreme deity of Egypt, and the whole set
of myths connected with his name and those of Isis and Horus became the most important part of Egyptian religious belief. It was natural that this should be so then, when the centre of political gravity had shifted to the Delta, the original home of the Osirian religion. Later the Memphis sacred bull Apis, originally the animal of Ptah, but, on account of the confusion of the city-god with Socharis, also regarded as an incarnation of Osiris, came very much to the front, and the Ptolemaic Egyptians evolved a Greco-Egyptian deity, Sarapis (from Akeor-Hapi, Osiris-Apis), out of the old Osiris, whose name now disappears. Finally, in the Roman period, Sarapis becomes identified with the old Nubian god of the dance and of music, Bes, and this godling, the most disrespectable of the whole Egyptian pantheon, is venerated on the walls of ancient Abydos as the successor of Osiris, of Anubis, and of the primeval Khentamenti.

H. R. HALL.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Fijian).—The Fijian divinities fall naturally into two divisions—the Kalou-vu (‘Root gods’) and the Kalou-yalo (‘Spirit gods’, i.e. deified mortals). There is much truth in Waterhouse’s suggestion that the Kalou-vu were the primitive divinities of Melanesian origin, carried into Fiji by immigrants from the east and imposed upon the conquered Melanesian tribes in addition to their own pantheon of deified ancestors; and that Ndengei, who was undoubtedly a Melanesian ancestor, was adopted by the immigrants, as the Etruscan gods were by the Romans. The Fijian’s belief in his own tribal divinity did not entail denial of the gods of other tribes. To the Hebrew prophets the cult of Baal-peor was not so much a common but their belief in giving their allegiance to the chiefs who conquered them, it was natural that the Fijians should admit the supremacy of their conquerors’ gods, who, by giving the victory to their adherents, had proved their merit to the gods. The great war-god of Rewa, is said to have drifted from Tonga; and his priest, when inspired, gave his answers in the Tongan language. The Rewans had given the chief place in their pantheon to the god of mere visitors.

First among the Kalou-vu was Ndengei, primarily a god of Rakiraki on the north coast of Viti Levu, but known throughout Fiji except in the eastern islands of the Lau group. This god, evolving from the ancestor and tutelary deity of a joint family into the godhead of a tribe in primitive form, is a counterpart of Jupiter, the god of a Latin tribe, inflamed with Etruscan and Greek myth until he overshadowed the ancient world as Jupiter Optimus Maximus. Ndengei and the personages associated with him are proved by the earliest myths of their home on the Ra coast to have been mortals deified as the first immigrants and founders of the race. If the Polynesian gods were originally deified ancestors, their deification took place at a period so remote that their descendants cannot be identified.

Ancestor-worship is the key to the Melanesian system of government. The Fijian’s conception of human authority was based upon his religion. Patriarchy, if not the oldest, is certainly the most natural shape into which the religious instinct of the primitive man would crystallize. First there was the family—and the Pacific islands were probably peopled by single families—ruled absolutely by the father, with his store of traditions brought from the land from which he came. His sons, knowing no laws but those which he had taught them, planting their crops, building their huts and their canoes under his direction, bringing their disputes to him for judgment, came to trust him for guidance in every detail of their lives. Suddenly he left them. They could believe that death was not the end, they had feared but yesterday, had vanished like the flame of yesterday’s fire. His spirit had left his body; yet somewhere it must still be watching them. In life he had threatened them with punishment for disobedience, and, even now, when he did the things of which he disapproved, punishment was sure to follow—the crops failed; a hurricane unroofed the hut; floods swept away the canoe. If an enemy prevailed against them, it was because they had neglected him; when the yams ripened to abundant harvest, he was rewarding their piety. In this natural creed was the germ of government. Each son of the dead father founded his own family, but still owed allegiance to the earthly home of the sun—then, to the memory of the portion of the father’s godhead. Generations came and went; the tribe increased from ten to hundreds, but still the eldest son of the eldest, who carried in his veins the purest blood of the ancestor, was venerated almost like a god. The ancestor was now regarded as a Kalou-vu, and had his temple and his priests, who became a hereditary caste, with the strong motive of self-interest for keeping his memory green. Priest and chief tacitly carried their godhead to their sons by threatening divine punishment for disobedience, the other by insisting upon regular offerings to the temple.

That the cult of a common ancestor persisted for many generations is shown by the custom of taumu, which means literally ‘sprung from the same root’, i.e. of a common origin. It is applied to two or more tribes who may live in different islands, speak different dialects, and have nothing in common but their origin. They have been brought together by intermarry; they may have held no intercourse for generations; each may have forgotten the names of its chiefs of five generations back, the site of its ancient home, and the traditions of its migrations; yet it never ceases to be a sign to the tribe that it is the tribe of taumu. Members of that tribe may run riot in its village, slaughter its pigs, and ravage its plantations, while it sits smiling by, for the spoilers are its brothers, worshippers of a common ancestor, and are therefore entitled to the fullest sense to the ‘freedom of the city.’ Sometimes the bond can be traced back to its origin, the marriage of the daughter of a high chief with the head of a distant clan. Her rank was so transcendent that she brought into her husband’s family a measure in compensation for the godhead in survival. As the ancestors, and their descendants have thenceforth revered her forefathers in preference to those of her husband. Generally the bond is so remote that the common ancestor is known by the name of an animal or of a natural object, and the fact that his worshippers may not eat the animal suggests a trace of totemism of a bygone age. In such cases a young band from an overcrowded island may have crossed the water to seek wider planting lands.

Among the Viti Levu tribe of Melanesian origin there was a peculiar ancestral cult known as the mbaki, primarily devoted to a thanksgiving for the first-fruit and to initiation. The rites were held in rectangular stone enclosures, called nanga (‘bed,’ i.e. of the ancestors). These were built close to
the graves of dead chiefs, who were invoked to shower blessings on the tribe in ceremonies which degenerated into orgies of a sexual character. The rites were said to have been introduced by two old men who were found wandering on the seashore—strangers cast up by the sea, for they could not speak a word of Fijian. The initiated were sworn to the peculiarity of the ritual, and the offerings prepared was that initiated members of tribes with whom the owners of the mangai happened to be at war might attend the rites unharmed, and invoke the aid of spirits from whom they were not themselves descended.

The Fijians had a well-peopled mythology of the after life. The spirits of the dead had neither temples nor priests, for, as they left the living unmoiested, the living were not called upon to make propitiatory sacrifices to them. They were kept alive by the professional story-tellers, who revived them after funerals, when men's thoughts were directed to the mystery of death. In a land where every stranger is an enemy, the idea of the naked shade, turned out friendless into eternity to wander by to Bulotu—passage through unscathed of the perils that beset the lone wayfarer on earth, and the shade was made to run the gauntlets of fiends that were the incarnations of such perils. Though the story of the soul's last journey agreed in outline, the details were filled in by each tribe to suit its geographic position; and the Sefanu, the sea water to cross, and a ghostly ferryman who treated his passengers with scant courtesy. There was Ghost-scatterer who stoned the shade, and Reed-shaped who lapped him. Goddesses of frightful aspect peered at him and gnashed their teeth, Ravuravu, the god of murder, fell upon him; the Dismisser sifted out the real dead from the trance-smitten; fishers-entangled cowards in their net; at every turn of the Long Road there was some malevolent being to put the shade to the ordeal; so that none but brave warriors who had died a violent death—the only sure passport to Bulotu—passed through unscathed. The shades of all Viti Levu and the contiguous islands and of a large part of Vanua Levu were either on the other side of the cross; or at the dwelling of Ndengel or to Naithomu, the 'jumping-off-place,' in Bua, and thence passed over the western ocean to Bulotu, the birthplace of the race. No belief was more native to a primitive people than that the land of which their fathers were proud, that their air was warmer, the yams larger, and the soil more fruitful, was the goal of their spirits after death.

When a chief died, his body was washed and shrouded in bark-cloth. A whale's tooth was laid on his breast to throw at the ghostly pandanus tree. If he hit the mark, he sat down to wait for his wife, who he now knew would be strangled to his manes; but if he missed, he went forward towards the nearest road, either to the dwelling of Ndengel or to Naithomu, bothomu, the 'jumping-off-place,' in Bua, and thence passed over the western ocean to Bulotu, the birthplace of the race. No belief was more native to a primitive people than that the land of which their fathers were proud, that their air was warmer, the yams larger, and the soil more fruitful, was the goal of their spirits after death.

The peculiarity of ancestor-worship in Fiji is that men worshipped not their own, but their chief's ancestors, to whom they themselves might have but a slender blood relationship.

A. H. THOMSON.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Hebrew).—The latest portions of the Hebrew Canon are, roughly speaking, contemporaneous with the Coptic. In the Jewish apocrypha and in the Canaanite and Hebrew writings; but it will for the present be convenient to include the evidence of all the canonical writings of the OT under the heading 'Hebrew,' and to reserve the data found in the OT apocrypha, the Talmud, and other later works for the 'Jewish' section of the present treatise. Probable dates of later Scriptures quoted in the section will, however, usually be given.

The question of ancestor-worship among the ancient Hebrews has been much discussed in recent times, the most systematic treatise on the affirmative side so far being Friedrich Schwally's _Das Leben nach dem Tode_ (Giessen, 1892), which in the main follows the views previously laid down by Stade and Oort (see the literature at the end). A decisively negative answer is given in *Der Ahnen- kultus und die planetarische Religion* (Halle, 1900), who, whilst utilizing the arguments advanced in J. Freey's _Tod, Seelenglaube und Seelenkult in alten Israel_ (Leipzig, 1899), attempts to establish his thesis on a more scientific basis than had been done before. This divergence of views rests, of course, not so much on questions of fact as on diverse modes of interpreting the many references to the departed found in the OT. The Hebrew Scriptures have, thanks partly to the relation they bear to all phases of life, and partly, no doubt, also to the judgment emphatically pronounced by Jahvis on other cults, preserved for us a far larger number of details connected with mourning and cognate matters than have so far come to light in the inscriptions of Babylonia and Assyria. It is highly probable, however, that a common stock of ideas underlies both these branches of early Semitic beliefs and customs; for it is becoming more and more clear that pre-Mosaic Hebraism was thoroughly rooted—not by borrowing, but by original affinities—in the widely spread traditions of the general Semitic race.

This branch of the subject will be treated under the following heads: (1) Translation to heaven; (2) Teraphim; (3) Sacrifices and offerings to the dead; (4) Sanctity of graves; (5) Mourning customs; (6) Law, food law; (7) Laws of uncleanness; (8) Necromancy.

1. Translation to heaven.—Deification, if the term were here allowed at all, *could not possibly mean the same in the religion of Jahweh as in the polytheistic Babylonian religion; and yet it seems impossible to resist the conclusion that the translation of Enoch recorded in Gn 5:24 originally belonged to the same class of beliefs as the transference of the Babylonian Sit-napishtin to the society of the gods. It has already been remarked (see § 1 of 'Babylonian,' art. above) that Sit-napishtin is in reality a combination of the Biblical Noah and Enoch; or, more probably, Noah and Enoch represent a splitting up of the one original personality of Sit-napishtin. However this may be, Enoch, like Sit-napishtin, was spared death and the descent into Sheol, which are the common fate of mortals; and the legitimate meaning of the phrase 'Elohim took him' is that he was transferred to a condition of close association with a larger system of life than the small world of the Jewish national system of religion this would mean that he joined

* The use of the term might seem justified by the designation elohim applied to the ghost of Samuel in 1 S 19:19, but it is there only by the witch of En Dor. The word 'dead' in 1 S 19:19 is very doubtful. The idea of deification or semi-deification is, however, implied in a passage like Ps 88:20, though elohim is there used of the living.
the company of angelic beings (cherubim, seraphim, etc.) which in prophetic imagery (see Is 6; Ezek 1 and 10) surrounded the throne of Jehovah.

Another clear instance of the translation of a mortal to the company of heavenly beings, without having died and gone down to Sheol, is Elijah, who was taken up from earth to heaven in a whirlwind (2 K 2:11); and a veiled example of transference to heaven immediately after death (i.e. without having previously gone down to Sheol) is, according to Rabbinic tradition (see Deut. Rabba, xi. 6), contained in Dt 34, where it is respectfully and apparently stated (see Driver, in loco) to have been undertaken by Jehovah Himself. Viewed in the light afforded by the translation of Enoch and Elijah, it seems likely that the Midrashic statements of the high favour accorded to Moses are based on a tradition of great antiquity.

Different from the above-named instances, because pointing to an anti-Jahwistic stratum of belief in deification or semi-deification, is Is 63:16, where the supremacy of Jehovah is emphasized by the admission made by the prophet on his own behalf or on that of the nation, that 'the Lord alone is God [lit. a God], and there is none else [to be worshipped]'. But Israel does not acknowledge us. The clear inference is that Israel, and Israel and Jacob (or Israel) were, as the departed ancestors of Israel, regarded by the later families of the nation, as tutelary deities who interested themselves in the concerns of the people, and on whom one could call in times of distress (see, e.g., Cheyne, The Prophecies of Isaiah, in loco, and Last Words; Ed. Meyer), Die Israelsuch, to mention two examples. The word 'Abraham's bosom' used in the parable of Dives and Lazarus (Luke 16:22) may not unfavourably be regarded as a development from the deification of Abraham implied in the Isianic passage quoted (see B. Winterbotham, The Cultus of Fathers and Sons, 1909, p. 169).

2. Teraphim.—It has been suggested (see, e.g., Schwally, op. cit. p. 35 f.; Charles, Exegiography, p. 21 ff.) that the Teraphim, of which pretty frequent mention is made in the OT, were originally inanimate objects. But there are reasons for proving the correctness of this proposition. The word itself is of uncertain origin. Schwally's suggestion that Teraphim comes from the same root as Ekaprim ('shades') fails to recommend itself on philological or other grounds. Sayce connects it with a Babylonian word tarpu ('ghost'). Perhaps equally admissible would be a connexion with the Ethiopic tereaf (pl. tereafat), which among other meanings has that of excellency, pre-eminence. The plural Teraphim, then, would be analogous to that of Elohim in its original plural signification, but it would at the same time accord no clue as to what kind of exalted beings it represented. From 1 S 19:18 (where Michael exhorted Saul to put away the Teraphim) to 1 S 30:6 (where we learn that the word was in the plural form used to denote a single image, thus lending itself, like Elohim, to a pluralis majestatis), the same passage shows that it bore a human form, but this fact by no means demonstrates its identity with a Babylonic word tarpus ('ghost'). These prophetic ideas were probably grounded on much earlier modes of religious contemplation. Isaiah and Ezekiel need only have given a special Jahwistic finish to certain more or less known forms of Divine Imagery. In the case of Ezekiel, the influence of his Babylonian surroundings is clearly discernible.

1 Charles (Exegiography, p. 56) regards the translation of Elohim in this passage as a proper use of the old word of the soul developed by Jahwism; but an analogous higher belief probably existed also among the Babylonians (see A. Jastrow, loc. cit. in 3 v. of the translation). Regarding Enoch is, moreover, in all probability far too early to fail in with Charles's theory. The truth seems to be that diverse theories and beliefs existed side by side among both the Babylonians and the ancient Hebrews.

2 See Jastrow, op. cit. This is, of course, independently of the regard for Elohim and the general divinity of all the patriarchs.

3 See Of. Heb.Lex., etc.

4 One would be tempted to base a theory on the root meaning of the Ethiopic verb teraf: relicum esse sei fieri, so as to make it refer to the continued existence of the departed.
Teraphim in the usual OT meaning of the word were not actually used by him. It would seem, therefore, that so far we have no clear indication as to what deity or deities the Teraphim represented. All that can be said is that they may originally have been images of ancestors, and that if so their having been (or much later, at least) household gods would be in consonance with the idea, though it cannot be adduced as a proof of its correctness.

3. Sacrifices and offerings to the dead.—As a clear reference * to the offering of food to the dead Dr. Driver assumes a character of a subconsciousness that makes the following declaration: ‘I have not eaten thereof in my mourning, neither have I put away thereof being unclean, nor given thereof to the dead.’† Oort, Stade, Schwell, and others see in this declaration a prohibition (and therefore an evidence of the custom) of sacrificial offerings to the dead, understanding the text to mean that the tithe sacred to Jahweh was not to be perverted to idolatrous practices connected with the worship of the dead; but the general bearing of the entire discourse is against such an import. The evidence for sacrifices offered to the dead must therefore rest on other grounds (see farther on). The fact, however, that every single tithe-giver had to make the statement in question proves a strong evidence of the following to the dead, a disposition towards it, was widespread among the people, and perhaps also in the higher grades of society.

This is one of the indications showing that the ancient Hebrews shared with their Babylonian kinmen the belief in the continuance of the human personality after death, and in its need of sustenance in Sheol, the Hebrew equivalent of the Babylonian Šu'alu or Arālu. But whilst in Babylonia and Assyria the early customs connected with the belief were allowed to flourish by the side of the State religions, Jahwism strove with all its might to suppress them. In a measure it succeeded; but popular ideas are not easily rooted out, and the practice continued for a considerable period of time in different parts of the country. The wars and partly conflicting references to the dead met with in the OT are largely to be explained by this conflict of Jahwism with the ancient cult and the frequent recrudescence of heathen ideas in all their old form, that however Jahwism made substantial progress in the course of time, is shown by the fact that Jahweh, who was originally only a territorial God, gradually acquired authority even over Sheol, as is evidenced by His power of bringing the dead from the under world mentioned in 1 S 23* (hardly later than c. 700 B.C. [Driver]), and by the belief in His presence there recorded in Ps 16* (close of Persian age [Cheyne]). There is here another point of contact with the (probably likewise later) Babylonian belief which regarded Marza (the priestesses of which were called ‘ravers from the dead’ (see § 1 of ‘Babylonian art’); but the chief interest of the fact lies in the slow but sure preparation for the higher Hebrew doctrine of monotheism and the later Jewish belief in the resurrection, as taught (probably Masochean) (see Charles, op. cit. p. 132 pazzim).

Of direct evidence for the presentation of sacrificial offerings to the dead there is not much. The reference to a family sacrifice in 1 S 30* is not conclusive; for although there is much to be said in favour of the idea that the blood-relationship with an ancestral god lay at the base of such a family offering, * it is conceivable that a deity other than ancestral was in the case mentioned the object of common worship (see what has been said in § 2 on the family deity). The treasures found in the sepulchre of King David (Jos. Ant. xiii. viii. 4, xvi. vii. 1; 2 B. J. ii. 5), and doubtless also in those of other kings, may originally have had the character of offerings presented to a deity by the household of the deceased. The former, at least, may be also an evidence of the belief in the grave, as the reference to the treasure in the passage of 2 B. J. ii. 5, and the offering of special gifts must have formed part of such worship. † The evidence from oracles (see § 5) points in the same direction, for an offering of some kind would naturally precede the consultation of the dead. On the probable offering of hair made to the dead, see § 5; and there is, besides, the tendency to connect a propitiatory purpose with the ordinary presentation of sustenance to the departed; and if the analogy from the Babylonian custom be taken into account, it becomes pretty certain that among the ancient (pre-Mosaic and anti-Jahwistic) Hebrews also sacrifices to the dead were, to say the least of it, not uncommon.

4. Sanctity of graves.—The question concerning the veneration of graves is closely connected with that of sacrifices to the dead; for if the latter question be answered in the affirmative, the graves of ancestors would have to be regarded as the places where the sacrificial offerings were made. Viewed in this light, there is much in favour of the opinion that is expressed in the title of the grave of Rachel (Gn 35*) was intended to mark it as a spot devoted to her worship. The name Aleph-bacath (‘oak of weeping’) given to the tree under which Rebecca’s nurse, Deborah, was buried (Gn 35*), proves nothing; and Cornill’s conjecture (ZATW xi. pp. 15–21) that the creation of a massēbah and the libation of oil poured on it recorded in Gn 46* referred in the original form of the text to Deborah’s grave, cannot, of course, be treated as certain, as the passage is an accommodated circumstantial mention (see Schwell, op. cit. p. 38), that graves, like the sanctuaries of Jahweh Himself, were put on heights, be cited in favour of intended sacrificial worship there; for the same writer records the well-known fact that tombs in Palestine were, for apparent reasons, generally rock-hewn.

The stress laid on family graves (as more especially the cave of Machpeiah, Gn 23* etc.), with * Schwell’s attempt (op. cit. p. 23) to construe Jer 16* into an evidence to the offering of sustenance, and even of sacrificial gifts, not being convincing (see Grünemann, op. cit. p. 130); but so far as sustenance-offerings are concerned the evidence of Dn 35* is quite sufficient.

† Driver’s loc. cit. does not decide between the claims of this rendering and that of ‘for the dead,’ which might then be taken to refer to funeral services offered to the mourners by their friends. The plural would have been more natural in that sense. Among the Rabbinic commentators, Abraham ibn Ezra suggested an idiosyncratic introduction, interpreting this explanation by ‘and some way.’

‡ See W. R. Smith, Rel. of Sana, Lect. ii., pazzim.

† Unless it was used in a sense of the passage to Hades pleasing.

§ The setting of sacrifices to the dead mentioned in Ps 108* is brought in as a foreign custom (connected by parallelism with Psal.-poem), but at the same time it shows a tendency among the Hebrews to adopt in that sense. See the translation of Psal. 108*. The worship paid to Rachel would do "be of a kind of surety."
ANCESTOR-WORSHIP (Hebrew) 447
which the phrase ‘being gathered to one’s fathers’ has been connected, may be regarded as a desire ‘to introduce the departed into the society of his ancestors’ (Charles, op. cit. p. 12); but the passages relating to these sepulchres contain (in the form at any rate in which the texts have been handed down to us) no reference to sacrifices or offerings of any kind.

There is, however, apart from family graves, the strong testimony of 1 Sa. 35:15 (‘who remain among the graves, and lodge in the monuments’), which, as an instance for the immortality practised at graves (see § 8), demands not only the supposition that offerings were there made in order to obtain a hearing from the dead, but also that from the general idolatrous point of view such graves (declared doubly unclean by Jahwism; see § 7) were regarded as sacred. At least as strong is the evidence from Ezk 43:4. On both passages, see § 7.

5. Mourning customs.—Several of the mourning customs of ancient Israel are very obscure, and a careful scrutiny is required before anything like a decision can be arrived at on any single point. It will therefore be best to consider these customs separately.

(a) The mourner put on sackcloth.—The sackcloth, in which the application of ashes or earth is sometimes mentioned, was very in early times in all probability a loin-cloth only, the tearing and entire putting off of the usual garments having preceded the ‘girding on’ of it (see esp. Is 24:18). Marks; stripped and naked, especially if taken in conjunction with the phrase, ‘in nakedness and shame’ of v. 11, points to a still earlier custom, when the mourner went quite naked; but the general practice of putting on sackcloth as a substitute for other garments must have set in pretty early, and considerable modifications both in the form of the sackcloth and in the direction of putting on other apparel may have been gradually, though not universally, made in later Biblical times.

The putting on of sackcloth has been claimed as a mark of submission to a superior (cf. 1 K 20:37); and the fact of Isaiah having apparently worn it as his usual garment (Is 26:5) has been regarded as evidence that the body was otherwise unclothed (see Schwyzer, op. cit. p. 12). The practice would on either account be thought of as belonging to the ascetic-ascetic world (see Jer 49:57, where the putting on of sackcloth is mentioned together with cuttings in the hands, etc., places it in the category of a religious act of lamentation, or a ritual value (see further on). But it is, on the other hand, psychologically very probable that the meaning lying at the back of the practice is the very reverse of asceticism. This is supported both by the accompanying attitude of submission to a superior, and the fact of early believers adopting a sort of the mourner, and which might also suit the prophet attending on Jahweh. The primitive entire nakedness of the mourner, to which reference has been already made, is the portrait on the Stela of Vultures (see § s of the ‘Babylonian’ art), the dead are shown to have been buried naked. The mourner might therefore have desired not to appear at greater advantage than the mourning dead. Later on, sackcloth would be assumed by the

This supposition is borne out by the somewhat conflicting evidence in the estimation of the term, which is frequently applied to everything connected with the mourning of the dead (Isaiah 24:18, the word motma‘ah; ‘loins’) is expressly employed where gaster is not used. In late as late a work as the Vision of Isaiah (Isaiah 24:18) the pronoun spoken of in Isaiah 24:18 is said to be naked, notwithstanding the sackcloth that was on them. On the other hand, the verbs ıšōšah and ḫasāk are also used with ṣāḵ, and ḫasāk is also employed with ṣphod, etc.; and a passage like ‘to spread sackcloth and ashes under him’ (Isaiah 24:18), clearly points to a different kind of cloth from that put round the loins. For a fuller discussion on this point, see on the one side Schwyzer (op. cit. p. 12), and on the other, G. J. G. Frazer (‘cf. a different question). Whether in any case the ṣāḵ ever had the form of a cornsack with a slit at the top (see Kamphaagen in Kistl’s JR, Art. 9), is a different question.

Cheyne (‘Prophecies of Isaiah, in loco’) regards it as an ‘outer garment, which the mourner put on without the outer garment.’ But one can hardly accept this as a natural explanation of the term. In Is 19:1 (cf. Noth’s translation, etc. p. 49) it, of course, possible that the circumstance was there due to the exigencies of war.

(b) The mourner put off his sandals.—The putting off of one’s sandals in connexion with mourning is not so frequently mentioned as the girding on of sackcloth, but it was no doubt meant to accompany the practice of wearing sackcloth adopted with the object of deceiving the dead as to the identity of the mourner, see further on.

(c) The mourner cut his hair, or beard, or both.—The cutting off of the hair in connexion with mourning is stated (e.g. 1 K 10:40, LXX, 1 Sam 31:13) to be connected with the absence of mourning, and the giving of the dead to “the bald and poll thee for the children of thy delight”; the removal of the beard as a sign of mourning for the destruction of Jerusalem is recorded in Jer 41:5; the two together are found in Is 15:3. The practice was accompanied by shaving, which was termed ‘to be heathen’ (Dt 4:4). The hair on these occasions consisted in making a baldness ‘between the eyes’ (Dt 14:1), which must mean over the middle part of the forehead (see Driver, in loco), although in different parts of the country the hair from other parts of the head was probably also cut away. The beard was apparently cut off entirely.

Tylor, Oost, W. R. Smith, and others favour the idea that the hair so cut off was designed as an offering to the dead—a theory which is probably supported by numerous analogies from the customs of the Arabs and other races. The offering of hair in the ritual of Jahweh is clearly attested in the case of the Nazirite (Nu 6:4), and the practice would seem less strange in the ritual of the dead, who, according to old ideas, stood in need of all the things that appertained to the living.

Another explanation which has been offered of this and, in fact, of all the mourning which was equivalent to some humiliation, is that these rites had the object of deceiving the dead as to the identity or character of the mourner, which recognition might bring with it. This idea seems, however, unsatisfactory, and it certainly does not fit in with other notions regarding the dead in early Hebrew times. Being who could be called yidde’em ne’em (יִדְדֵהוּ נְאָם): ‘knowing ones’ t, and to whom one recorted for oracles, could hardly be deceived by a change of garb or other device about the part of the living. They certainly could not be deceived by taking off one’s sandals, which is also pressed into the service. The examples, moreover, from the customs of other races (including the Romans), quoted by the supporters of this theory, are for the most part capable of another explanation. The opposite opinion is supported by the verb qasuḥ, which is used in the passage cited for the removal of one’s clothes. Everything, it may have been held, was to be discarded that served as an ornament or protection of the body, and also the hair. The idea of self-humiliation, which might have been involved in the act, is also supported by the ascetic world, and the parallel passage 1 Ch 19:10 was regarded as an indulgence. This idea would, however, not be incompatible with the Jewish practice. The idea might be bene

This is only used by the verbs qasuḥ and qadaḥ in the passages quoted. In 2 K 2:1 the term is used, and also the beard is expressly mentioned (in 1 Ch 19:10 (parallel passage) the verb qasuḥ is, however, used, and apparently the entire beard means).

* See esp. W. R. Smith, pp. 303-308.

+ For a full explanation to a different view (adopted also by Kentzsch in Hastings DB, Ext. Vol. 614), see Grünendelin, op. cit. p. 86 ff. J. G. Frazer (‘Aphorism’, p. 16), on whose remarks regarding the terms of Hebrew and Catholic, etc., is based, expresses the theory, expresses himself, however, doubtful as to the meaning of the cutting off of the hair spoken of in (see p. 78).

The Biblical statements affirming the sharpness of the character of the dead are mainly due to the weakening influence exercised by Jahweh’s ‘in the land of the living’ (Isaiah 3:1), so that we see the sharpness of the character of the dead is mainly due to the weakening influence exercised by Jahweh’s presence in the land of the living. The biblical statements affirming the sharpness of the character of the dead are mainly due to the weakening influence exercised by Jahweh’s presence in the land of the living. The biblical statements affirming the sharpness of the character of the dead are mainly due to the weakening influence exercised by Jahweh’s presence in the land of the living.

In Is 19:1 (cf. Noth’s translation, etc. p. 49) it, of course, possible that the circumstances was there due to the exigencies of war.
treatment of the hair by men and women in times of mourning (each adopting the unusual course, men, e.g., covering their heads at funeral ceremonies, and women letting their hair fly loose about the head), whereby it can be explained as a species of self-neglect expressive in each case of self-humiliation induced by grief; and a similar explanation would be applicable to several other customs.

The Jahwistic prohibition in Dt 14:1 of making a baldness between the eyes for the dead furnishes a strong presumption in favour of regarding the act as a ritual observance connected with the worship of the god of the land, and of the ground of the prohibition (‘ye are children of Jehovah,’ and a ‘holy people’ to Him) strengthens the theory that it was directed against an opposing religious cult. The place described as lying between the eyes may have for this very reason been chosen for the tēışḇōth * (Dt 11:13 etc.), by which every Israelite was to be marked as a devotee of Jehovah, unless it was independently chosen as the most conspicuous part of the head. The absence of a prohibition regarding the removal of hair from other parts of the head and from the beard in connexion with mourning is probably owing to the fact that, according to Lv 19:27, it was prohibited under all circumstances.

(d) The mourner made cuttings in his flesh. — Cuttings in the flesh, accompanied by removal of the beard and tearing of garments, appear as a general custom in Jer 4:1, notwithstanding its distinct prohibition in Dt 14:1, thus showing that the Deuteronomistic legislation could make its way only very gradually. Instead of the verb bāḇḥōdūdet used in the two passages mentioned, and the form qāḇḏōdōth found in Jer 48:11, there is in Lv 19:29 the command not to make a sēreṯ (also tr. ‘cutting’) for a dead person, or to print any marks (writing of ḫaḵaḵ) on the flesh, the latter being evidently a kind of marking of oneself unrecon- 

izable by these disfigurements be discarded, there remains only the idea of thereby ‘making an enduring covenant with the dead’ (W. R. Smith, Rel. of Sem., p. 322 f.).

That cuttings in the flesh were parts of religious ritual is, moreover, proved by the action of the priests of Baal recorded in 1 K 18:30. The fact that these incisions, as also the making of a baldness between the eyes, were prohibited by Jahwism, with the wearing of sackcloth, etc., was not interfered with, would seem to show that these groups of acts belonged to different categories, thus forming another reason for rejecting the theory that they had all the purpose of making the living ungainly for the dead.

(e) The mourner covered his head or beard. — The covering of the head (e.g. 2 S 15:10, Est 6:9) and the beard (Mic 3, Ezk 24:17) as a mark of mourning on account of death or other calamity might be explained, with Schwally and others, as a substitute for cutting off hair from head and beard. But the covering of the face in 2 S 19:3 [Eng. v. t] (the clearest instance of actual mourning) reminds one of the same act performed in the presence of Jehovah (Ex 3:1, 1 K 18:30). And the covering of the face was too prominent by the fear of beholding the Deity (cf. Ex 33:22, 34:28), it seems likely that the mourner was also afraid of seeing the ghost of the departed (which is, of course, different from deceiving the ghost by a disguise). It is possible, however, that the covering of the face was merely an externalisation of the fear of the ghost of the departed. The modern tephēlim (known as phylacteries) consist of a part of the left arm, and another to be placed over the middle part of the forehead.

* Usually translated ‘frontlets’; see Osef. Heb. Lex., s. v. TEPH. The modern tephēlim (known as phylacteries) consist of a part for the left arm, and another to be placed over the middle part of the forehead.

† For the probable ground of this general prohibition, see Dillmann, Ewke, p. 496.

1 Driver explains that ‘the Israelites, being Jehovah’s children, are not to disfigure their persons in passion or extra- 

ordinary occasion. But if it should be a doubtful whether they would have generally gone the length of these mutilations, and the ground assigned for the prohibition (see the text above) appears to indicate an opposing religious cult.

of covering the hair, and the idea that the latter act was a substitute for removing the hair might therefore be maintained. As the hair of the head and beard was regarded as a personal ornament, the covering of it might, in any case, be expressive of self-neglect or self-humiliation occasioned by grief.

No evidence of ancestor-worship can be derived from the extant accounts of the two remaining customs, namely, (f) the lamentation over the dead, with its accompaniment of weeping and striking different parts of the body with the hand, and (g) the partaking of food and drink by the mourners in connexion with funeral ceremonies. The lamentations were natural or professional (see Jer 9:18 [Eng. v. t] expressions of grief, and need—so far as the texts in their present form go—neither have been ritually addressed in worship to the dead (Schwally, op. cit. p. 20 f.) nor intended to scare away the ghosts of the departed by much howling (Grüneisen, op. cit. p. 100). The lamentations of David over Saul and Jonathan and over Absalom (2 S 19:29 et al.) carried the idea of a further intention. With regard to funeral repasts, Schwally’s attempt to construe Jer 16:10 into a decidedly ritual act has already been referred to (§ 3). The text, as it stands, speaks only of food and drink offered to the mourners by way of comfort. On the uncleanness connected with the ‘bread of mourning’ in Hos 9:4, see § 7.

6. Levirate law. — A close relationship has been claimed between ancestor-worship and the law of levirate, which, in the form given to it in Dt 25:5, enacts that when brothers ‘well together, and one of them dies without leaving male issue, the surviving brother (no doubt the eldest, if more than one) was to marry the widow, and that the first-born son of this union was to be considered the son of the departed brother, so that his name be put out of Israel. The supposition is that the original object of the institution was to provide the dead man with a son to carry on his cult (so, e.g., Stade, Schwally, Charles)—an object which must be assumed to have been entirely forgotten in the time of the Deuteronomic legislature. In the case of Ruth (where the law is found to extend over the whole clan), the object is ‘to raise up the name of the dead upon his inheritance’ (Ru 4:4). Abasalom (2 S 18:29) puts up for himself a pillar in his lifetime, because he had no son to keep his name in remembrance. In Gn 38 (where, under an older form of the law, all the children were to have appeared belonged to the departed) the ground stated is merely that of raising up a posterity to the departed. § But if the institution—as it is quite reasonable to suppose—had from the first, beside the desire of leaving a memorial of one’s name, a close connexion with the law of inheritance, it is impossible to eliminate the idea of the cult of the departed altogether, as the son-spirit thus provided for the dead man, as inheritors of his property, would, under pre-Mosaic religious notions, be ex- 

pected to charge themselves with the sustenance (and probably also sacrificial offerings) due to the departed. This broader basis of the levirate law would seem to be required by the extant data and the considerations arising from it, and it also

* An attempt has been made to connect the festival of Purim with the Persian Fasrufrūdīn, which was a kind of All Souls’ Day: but if so, the story of Esther and Haman is altered beyond ordinary recognition. See, on the one side, Schwally, op. cit. p. 4 ff.; on the other, Grüneisen, op. cit. p. 91 ff. The other literature will be found in Seel, op. cit. p. 99.

† The supposition that sympathizing friends and neighbours provided the mourners with this food and drink would, by the fact of the same custom obtaining among the Jews at the present day.

§ On J. F. M’Lennan’s theory that the law originally rested on a polyandrous system of marriage, see Driver, Heut. p. 261.

¶ For the custom, under partly different rules, among other races, see esp. Westermann, Hist. of Human Marriage, p. 510 ff.
ANSESTOR-WORSHIP (Hebrew) 449
does justice to the fairly complex state of society
which already obtained in those early days. So
far as the element of the cult of the dead is con-
cerned, it is important to mention that the "Kaddish
(see § 3 in the 'Jewish' article), which, like acts of
Jewish piety in general, is to the present
day confined to males, also seems to bear traces of
a survival (in a much modified form) of the religious
services rendered to the departed by his surviving
sons.

Laws of uncleanness.—The laws of unclean-
ness relating to dead human bodies (see esp. Nu
19:14-16) can be satisfactorily explained by the almost
universal fear of contamination arising from the
contact or close vicinity of decaying bodies that
obtained in ancient times. The ancient Egyptians,†
it is true, busied themselves much with corpses,
but then they took every possible care to prevent
decay setting in. In the Mosaic law the abhorrence of
dissolution also affected not only animals that
were forbidden as food, but also clean ones if not
slain in the ritual fashion (see Lev. 11:44 f.). Leper-
which was similarly loathed, is also ritually un-
clean (Lv 13), though here the fear of contagion
must have been an important factor.

It is likely that this fear of contamination was
in the early time a general need of all savage races, that everything connected with birth,
disease, and death involved the action of super-
human agencies of a dangerous kind (see W. R.
Smith, Rel. Sem. 244 f.), analysis and differentia-
tion of the various agencies of scared development; but it would be rash to identify these
agencies with ancient spirits. On the contrary,
the fact that dead human bodies are regarded as un-
clean among a number of races with a strongly
developed ancestor-worship (see Grünemai, op.
cit. p. 114) proves that the two are independent of
each other. Worship may be given to the de-
parted spirits of ancestors, and contamination may
at the same time attach to their dead bodies. The
regulation of Nu 19:14, that an open vessel with no
covering round it, which has stood in the tent of
a dead person, is unclean, whilst covered vessels
remain clean, can be suitably explained by the
idea that the covering protects the vessel from an
touching the dead body. It need not point to the
fear that the ghost might take up its abode in the
open vessel.

The pollution connected with the bread of
mourners (vv. 15-17) referred to in Hos 9 is also
evidently without reference to a Jahwistic or
opposition to ancestor-worship. For the meal
offered to mourners by way of comfort may be all
that is meant; and if so, the uncleanness would only
be that of ordinary contamination contracted by
contact with dissolution.

An additional tabu, arising from opposition to the religion
of Jahweh, would come in only in cases where a sufficiently
recognisable element of ancestor-worship or some other heathen
form of the cult of the dead showed itself; and as such practices
were demonstrably not uncommon among the ancient Hebrews
(see § 3), the additional tabus would be of a correspondingly
widespread application. But the dead body itself would probably
in such cases only be to be afraid if the spirit might have been
supposed to linger about it, for, as has already been remarked,
the cult of the dead was not necessarily connected with the
ancestor-worship.

In the case of priests (Lv 21:16) greater restrictions against
contact with dead bodies are imposed, because the contamina-
tion would make them for a time unfit for Jahwistic service.
The ground of the main ordinance there given cannot be
openly stated. There is probably no belief in the re-incarnation
of priests who might attend (father, mother, etc.) just those to
whom the heathen cult of the dead would chiefly apply (see
Grünemai, op. cit. p. 112). The order, however, not to remove
the hair from head and beard, or make cuttings in the flesh,
appears (unless v. 15 be regarded as the result of corrupt
regarding obsequies) to have the meaning that, although priests
cannot participate in the funeral rites of heathen dead, they
must abstain from anything connected with heathen mourning
ceremonies, more particularly as in their case this additional
laws, like that of circumcision, were not points of nature.

The strongest instance of the combined tabus of ordinary
contamination and heathen worship spread in the vicinity of the
tomb of kings erected quite close to the sanctuary of Jahweh,
and it is clearly stated to have been punished by God of
their z acknowledgments (a usual term of unfaithfulness to Jahweh,
borrowed from the relationship of marriage), whereby the 'holy name'
of Jahweh is defiled. It is a similar double tabus likewise existing
where graves, which are unclean in themselves (Nu 19:14), are
used for purposes of necromancy.

8. Necromancy.—Though the Teraphim cannot
be demonstrated to have been originally images of
ancestors (see § 2), there is ample independent
evidence of the practice of necromancy among
the ancient Hebrews. The spirits of the departed were
called gilgamesh ('knowing ones') by those ad-

tected to the practice, and the "kol (usually
rendered 'familiar spirits') also represent a form
of necromancy, the calling up of the spirit
of Samuel on behalf of Saul (analogous to the calling
up of Eabani by Gilgamesh) having been effected
by an indubitable trace of unfaithfulness to
cult, the "Kaddish, usually, a woman's name, is, at
the same time, an indirect evidence to the
offering of propitiatory gifts to the spirits con-

sumed.

Summary.—In summing up all the extant evi-
ence, the same result is, in the main, obtained
having been the Babylonian section. The OT
embraces only undoubted traces not only of the popular cul-
t of the dead, but also of a certain degree of actual
worship paid to ancestors and departed kings and
heroes. But the importance of these practices has
been much exaggerated. There is no ground for thinking that ancestor-worship was the
father of the chief religion of pre-Mosaic Israel. On
the contrary, various parts of the OT show clearly
that Jahwism had to maintain at least as keen
struggle against the worship of the heavenly
bodies and of various other deities as against the
cult of the dead. It is also true that in a certain modified form the exaltation of
departed heroes, more especially of the spiritual
type, was from the first quite compatible with
the religion of Jahweh; and the final monothestic
development of Mosaicism left still more room for
the glorification of great human personalities in
one form or another.

G. MAROJIOUTH.

ANCESTOR-WORSHIP (Indian)—I. In India the worship of ancestors lies at the root of the funeral rites. A lay official, Brâhmaṇa, the object of these is to provide the departed spirit with a kind of 'intermediate body' to be re-absorbed into the universal soul except its incombustible subjective portion, as composed of the subtle elements, is not only proof against the final apocalyptic destruction, but is incapable of subjective sensations in the temporary heaven or temporary hell, through one or other of which every separate human spirit is forced to pass before returning to earth and becoming re-invested with a terrestrial gross body. For it is held that, as the spirit in the pure body, the soul must, like the ghosts of the unburied Homeric dead (Homer, Od. xi. 54; II. xxii. 72), wander about as an impure pruts or ghost, on the earth or in the air, among demons and other evil spirits, into the state of which it will eventually pass unless it be protected by the performance of the Srâddha provided by its relatives on earth. Further than this, the new body thus created for the spirit must be nourished and supplied, and the spirit must be aided in its progress from lower to higher worlds and back to earth by the performance of the periodical Srâddha rites. This duty of the relatives is assumed by orthodox Hindus to be finally discharged only when the rite is performed at some specially sacred place. Gayâ in Bihâr is the most appropriate place for these rites, while the Hindus of the west, for the obsequies of a mother, prefer Siddhipur in the Baroda State. Hence also arises the necessity of begetting a male heir, which is urgently felt by all Hindus, as well as by the case of Harish Candra Ray, a natural son of a Burgundian by a Rajput girl, whoseyaml. Manu (Institutes, i. 138) derives the Skr. name of a son, putra, if as it were putra, 'he that delivers his father from the hell called Puta.'

2. Feeding the dead.—This orthodox conception of the Srâddha—that it is intended to provide an 'intermediate' body for the departed soul—is a later development. The Srâddha was really evolved from the custom of feeding the dead, a rite common among all savage and semi-savage races. Like the custom of the ancestors, 'it probably originated in the selfish but not unkindly desire to induce the perturbed spirit to rest in the grave and not come plaguing the living for food and rainment' (Frazer, JA! xv. 74 f.). The custom established itself among many of the Indian tribes. Thus, among the Nâgas of Assam, the corpse is watched with great care, and when decomposition sets in, quantities of spirits are thrown over it. Whatever the deceased was in the habit of eating and drinking, the spirit is supposed to receive as it probably originated in the selfish but not unkindly desire to induce the perturbed spirit to rest in the grave and not come plaguing the living for food and rainment' (Frazer, JA! xv. 74 f.). The custom established itself among many of the Indian tribes. Thus, among the Nâgas of Assam, the corpse is watched with great care, and when decomposition sets in, quantities of spirits are thrown over it. Whatever the deceased was in the habit of eating and drinking, the spirit is supposed to receive as it

... the head of the dead man to serve as food for him in the grave. Among the Angâmi sept, on the first day after a death, meat is distributed among the relatives and friends of the deceased. The next day they assemble at the house of the deceased or, and eat part of the meal, and offer a piece of the sept of the deceased throws a piece of liver out of the house to the distance of some eight paces. On the third day portions of the cooked rice are tied up in leaves, and buried outside the house on the fourth day. On the fifth day the platter and food is put in the house and left there till thirty days have passed, when they are given to a friend of their former owner. The funeral rites end with the sacrifice of a cock, the flesh of which is eaten by all the members of the family (JAF xxvii. 190 f.).

Among a more civilized race, the Nâyars of Malabar, the Seshakriyâ, or rite of making offerings to the spirit of the dead, commences on the day after the cremation ceremony, and continues for seven days. All male members of the sept of the deceased, bathe, and the eldest mourner taking with him a strip of cloth which he has torn from the dead man's shroud (probably in order to maintain communion with the dead), and a piece of iron (to scare evil spirits), brings in the holy rice and other articles of food, and places them in the north-east corner of the courtyard, which is believed to be the abode of the spirit. A lamp, which is also probably intended to drive off demons, is lighted beside the food. A piece of palmleaf, about a foot long and a finger broad, is taken, and one end of it is knotted. The knotted end is placed in the ground, and the other left standing up. This represents the deceased, and it to the food is offered. 'The place where the piece of leaf is to be fixed has been decided,' says the custom of providing food for the dead is common among the lower castes in Northern India. In Bengal the funeral rites of the Gonds last for three days, after which the mourners purify themselves by bathing and shaving, and make offerings to the spirit of the deceased. Among the Kamis, the blacksmith caste of Nepâl,' on the eleventh day a feast is prepared for the relatives of the deceased'; but before they can partake of it a small portion of every dish must be put on a leaf-plate and taken out into the jungle for the spirit of the dead man, and carefully watched until a fly or other insect settles on it. The watcher then covers up the plate with a slab of stone, eats his own food, which he brings with him to the place, and returns to tell the relatives that the dead man's spirit has received the offering set for him. The feast can then begin.' The Bihâkat Orâons preserve the bones of the dead, to be interred in the tribal cemetery. 'At this festival pigs and great quantities of rice are offered for the benefit of departed ancestors, who are also held in continual remembrance by fragments of rice or dâl [pulses] cast on the ground at every meal, and by a pinch of tobacco sprinkled whenever a man prepares his pipe' (Risley, Tribes and Castes, i. 293, 595, 92).

The Mal Pâ in his lifetime (such as rice, vegetables, and spirits) is placed once a month on the ground before the dead body. At the end of the period of mourning, a great feast, consisting of liquor, rice, and flesh of cows and buffaloes, is prepared by the members of the clan in war dress partake of it. Among the Lumbu sept of the same tribe the cattle sacrificed are eaten, with the exception of one leg, which is buried under the head of the dead man to serve as food for him in the grave. Among the Angâmi sept, on the first day after a death, meat is distributed among the relatives and friends of the deceased. The next day they assemble at the house of the deceased or, and eat part of the meal, and offer a piece of the sept of the deceased throws a piece of liver out of the house to the distance of some eight paces. On the third day portions of the cooked rice are tied up in leaves, and buried outside the house on the fourth day. On the fifth day the platter and food is put in the house and left there till thirty days have passed, when they are given to a friend of their former owner. The funeral rites end with the sacrifice of a cock, the flesh of which is eaten by all the members of the family (JAF xxvii. 190 f.).

Among a more civilized race, the Nâyars of Malabar, the Seshakriyâ, or rite of making offerings to the spirit of the dead, commences on the day after the cremation ceremony, and continues for seven days. All male members of the sept of the deceased, bathe, and the eldest mourner taking with him a strip of cloth which he has torn from the dead man's shroud (probably in order to maintain communion with the dead), and a piece of iron (to scare evil spirits), brings in the holy rice and other articles of food, and places them in the north-east corner of the courtyard, which is believed to be the abode of the spirit. A lamp, which is also probably intended to drive off demons, is lighted beside the food. A piece of palmleaf, about a foot long and a finger broad, is taken, and one end of it is knotted. The knotted end is placed in the ground, and the other left standing up. This represents the deceased, and it to the food is offered. 'The place where the piece of leaf is to be fixed has been decided,' says the
poured forth at the foot of the pillar that the souls may not hunger in the world of the dead (Risley, ii. 71). The custom of offering first-fruits to the ancestral spirits is very common, and has been fully illustrated by Frazer (GB ii. 460, 462 ff.). The Mechis, again, adopt another method to secure that the offering may reach the etheralized souls of the dead. When the corpse is buried, 'a small fire is kindled upon the grave, in which food and drink are burned for the benefit of the deceased' (Risley, ii. 89 f.). The Mals provide for the needs of the departed in another way, by lighting on the head of the goddess Kali, in the month of October-November, dried jute stems in honour of their deceased ancestors, 'and some even say that this is done to show their spirits the road to heaven' (ib. ii. 60).

In other parts of Northern India rites of the same kind are performed. The degraded Ghatis of Mirzapur, at the annual mind-rite for the dead, lay out five leaf-platters containing the usual food of the family, with the prayer that the ancestors, take this and be kind to our children and cattle' (Crooke, Tribes and Castes, ii. 417). The Kols, whenever there is a tribal feast, offer a fowl to the spirits of the dead, and pour a little liquor on the ground, with the words, 'Do not leave us' (ib. iii. 311). The Râjîs, who are perhaps the most degraded people in this part of India, content themselves with shaving the heads, beards, and moustaches of the sons and younger brothers of the dead man, throwing the hair on the grave as an offering to the spirit (ib. iv. 213). The ritual of the Nà, a tribe of wandering acrobats, is more remarkable. The mourners cook food on a river-bank, and spread a cloth on which the ghost is supposed to appear. The nominee earthen cup and a knife in his hand, plunges into the water. The cup he places on his head with the knife upon the mouth of it, and then dives until the cup becomes filled with water. This he deposits under the cloth on which the spirit is supposed to sit, and lays a cup of water at each corner of the cloth. Within the enclosure thus made food is laid for the refreshment of the spirit, who is invited to partake of the meal. When the spirit is supposed to have left, the mourning is then light, who have departed before you' (ib. iv. 63 f.). Even more elaborate than this is the rite performed by the Musahars, a tribe which has hardly risen above the condition of wanderers in the jungle. After the ceremony of mourning, in the month of the month the members of the dead, a tree near the spot is selected as a refuge for the spirit, and food and water are laid at its foot for nine days in succession. At the time of presenting these offerings, the chief mourner invokes the dead: 'Come, O dead one, from the palace of Indra! Come and eat the food of this world! Take it and return to thy palace.' These offerings are allowed to lie for some time on the place where they were deposited, and are then removed by the mourner, who cooks and eats the sacrifices. He then places a morsel on the grave, and repeating the invocation already made at the tree. The offerings are changed daily during the period of mourning, and the rite ends with a clan feast of the dead (ib. iv. 31 f.).

In the United Provinces, among the various branches of the outcast Dom tribe, the idea of feeding or propitiating the spirits of the dead is combined with that of barring or preventing the return of the ghost, which is believed to afflict the survivors. Thus, among the Dom of the Chambal, "another sacrifice: a hog in the name of the dead man, with the object of providing the spirit with food; while others kill the animal, cut off its legs, and bury the trunk in the courtyard of the house of death, as a sort of sympathetic charm to prevent the spirit from rising out of its grave and affecting the family (Crooke, op. cit. i. 226). Very similar is the custom of the Dhângars, among whom, on the tenth day after death, the mourner sacrifices a pig in the name of the deceased, and, cutting off its feet and snout, buries them under a stone in the courtyard, with the invocation to the spirit: 'I have buried you here, never to come out; you must rest here in spite of the spells of an exorcist, or of any one else who may try to wake you' (ib. ii. 289).

3. Vicarious feeding of the dead. From this crude belief in the possibility from those branches of the dead, the transition to the theory that this can be done vicariously is easy. Among some of the Indian castes survivals of the primitive matriarchy are found in the custom of providing for the feeding of the spirits by the bestowal of food on relatives in the female line. The Bhokas of the sub-Himalayan Tarâ, every year in the month set apart for mourning, feed the descendants of their daughters in order to propitiate the ghosts of the dead; and, for the same reason, the Dhângars of Bengal and other menial tribes of Northern India employ the maternal uncle of the person making the offering as priest (Crooke, op. cit. ii. 58; Risley, op. cit. i. 335). The next stage appears when the spirits of the Nàtâ or tribal ancestors, of the Vindhyâ and Kâlmâ ranges in the centre of the peninsula, is invited, as a right attaching to his office, to share in the funeral feast. When we reach the higher castes of Hindus in the Plains, we find the custom of feeding the spirits of the dead, the belief is that food consumed by them passes on to the spirits. In fact, all through Northern India, large numbers of Brâhmans, generally drawn from the younger members of the families which provide purohits, or fairies, taking a morsel eaten by the ancestors of the caste which have settled down to an agricultural life and have no body of religious clients, exist only to be fed. These people flock in numbers to attend the death rites of wealthy people. At places like Gâyâ, whither the pious journey to perform the final death rites of their friends, a special class of Brâhmans has the monopoly of attending to be fed on such occasions.

4. Annual rites for the dead. The establishment of an annual rite, like the All Souls' Day of Christendom, when the dead are specially remembered and offerings of food are provided for them, appears among the most primitive tribes. Thus the Luhnâ Nagas of Assam, once every year the fathers and brothers of a deceased person hold a solemn festival in each village in honour of those of the community who have died during the preceding year. The village priests conduct the rites, which culminate on the night of the new moon. On this occasion, they believe, the spirits of the dead appear at a distance from the village in the faint moonlight, wending their way slowly over the hills, and driving before them the victims slain for them or the cattle which they have stolen during their lives. Finally, the procession disappears over the distant hills, leaving behind them those who have lost relatives during the year (JAI xxvi. 194). The period consecrated by orthodox Hindu usage to the propitiation of the spirits of the dead is known as the Kanâgât, so called because it takes place in the sign of Kanyâ, or Virgo, of pitra-paksha, 'ancestors' fortnight,' occurring in the moonless half of the month Kûr (August—September). This fortnight is specially devoted to the death cult, and the pious offer sacred balls of the finest variety of rice, and little cakes of rice, on burnt with wood. During this time the pious fast; others restrict the abstinence of not eating meat, or fish instead of it.

5. Ancestor-worship among the non-Aryan tribes. —The cult of the dead, so far as it extends to the provision of food for the spirits of the dead, is thus
not confined to the higher castes, but is widespread among the non-Aryan part of the population. Sometimes, as in the case of the wild Kurubis of Mysore, this worship is one of fear, and is devoted to the propitiation of the Virika, or spirits of ancestors who have died unmarried, and are thus supposed to be malignant (Buchanan, Journey, i. 365. and 366; xii. 145). One of the forest tribes of the Nilgiri Hills, sacrifice, in conjunction with other gods, to the Pitaris, or Manes of their ancestors (Oppert, Orig. Inhabit. 204). In the Bombay Presidency, many of the ruder Hindu tribes, such as the Chotas and the Kumbis of the Konkan, Atte Kunbis, and Halvakki Vakkals of Kânara, worship their ancestors, usually in the form of an unhusked coconut (Gazetteer, xiii. 165, 182, xv. 217, 249, 203). The Bhils of Khândesh combine the cult of their ancestors with that of the Mâta, or Divine Mothers, and the same is the case with the Central Indian branch of the tribe (ib. xii. 93; Malcolm, Trans. Roy. As. Soc. i. 72). Gonds in the Central Provinces worship the family dead on the third day after a death, and on the last two days of the last day (Hislop, Aboriginal Tribes, 25; Gazetteer, 278). In Chota Nagpur the Kisaâs and Bhiyars adore their ancestors,' but they have no notion that the latter are now spirits, or that there are spirits and ghosts, or a future state, or anything; the Bhiyars reveres their ancestors under the name of Bir or Vira, 'hero,' a title which, as we have seen, is often applied to malignant spirits; the Kharrias put the ashes of their dead into an earthen pot and fling it into a river; afterwards they set up in the vicinity slabs of stone as a resting-place for them, and to these they make daily oblations; the only worship performed by the Korwas is to their dead relatives, but this statement of Dalton is more than doubtful (Dalton, Descript. Ethnot. 132 f. 133, 160, 229). Among the Khonds the cult is very highly developed. 'The beatiﬁed souls of men enjoy immediate communion with all the gods; they are in rank little inferior to minor gods, live with them, and much after their fashion. Every tribe invokes the souls of deceased ancestors in endless array at every ceremonial, after invoking the minor gods; and they especially remember those of men renowned for great or good actions, as for reclaiming waste lands, for extraordinary benevolence to their kin, or conspicuous integrity of life. They believe that beatiﬁed souls, although wholly without power, may act as intercessors with some of the gods, as with DINGA PENNU, on the one point of inducing him to restore lost relations speedily to their homes' (Macpherson, Memorials of Service, 85). Among that remarkable people the Kâfirs of the Hindu-kush, though the fact is denied by them, there are distinct traces of ancestor-worship. They have the custom of making straw effigies of the honoured dead, and parading and funereal, and one year after his death an effigy is erected to the memory of every Kâfîr of adult age. These images are of various kinds, carved out of wood with axes and knives on conventional models. 'The Kâfîr kindred images are roughly fashioned in the forest, and are then brought into the village to be ﬁnished. Some of the best images have a manikin seated on the left arm holding a pipe; others have similar little images. They are fastened on the chambel or embouchure. The large images have all manner of quaint designs and carving over their bodies. Some even look as if the carving were intended to imitate tatting, such as the Burmese are so fond of. The people have a very high notion of superstition about these effigies. Bad weather which occurred while a slave was carving some images for me to take to India, was ascribed to the fact that images were being taken from the country. . . . The images are often decorated with wips of cloth round the head, and, where the juniper-cedar is easily obtainable, by sprigs of that tree fastened to the brows. The faces of the effigies are carved precisely like the idols, and similarly with crosscuts for the eyes, and vertical cuts for the mouth, or rather the teeth. The effigies are provided with matchlocks, or bows and arrows, axes and daggers, carefully but grotesquely carved, and commonly have a cart-wheel-shaped ornament in the middle of the back of the image. The dwellings of the Karakans, while those of females have a peculiar head-dress, which is possibly a rough imitation of a horned cap. Before these images of the eminent dead sacrifices are made, and their pedestals are sprinkled with blood by their descendants when they are suffering from sickness. Long stones are also erected to serve as a kind of cenotaph, and a goat is always killed when the pillar is erected. The Kâfîrs also celebrate a festival, known as Marma, in honour of the illustrious dead; and Dalton relates that the Duke of Wellington 'is accustomed to dancing, feasting, and singing ballads in honour of the departed heroes of the tribe' (Robertson, Kâfîrs of the Hindu-kush, 636 ff, 414 f.).

6. The Sraddha.—The mind-rite of orthodox Hindus, known as Sraddha (Sanskrit trat, ‘faith,’ ‘trust,’ ‘belief’), is a more highly developed form of the primitive funeral feast and of the custom of feeding the dead. Even so late as the time of Manu (Institutes, iii. 267–271) the idea of providing for the dead was recognized. 'The ancestors of men,' he writes, ‘are satisﬁed a whole month with sesame, rice, barley, black lentils or vetches, water, roots, and fruit, given with prescribed ceremonies: two months with ﬁsh, three months with venison, four with mutton, ﬁve with the flesh of such birds as the twice-born may eat, six months with the flesh of kids, seven with that of spotted deer, eight with that of the deer or antelope called Eal, nine with that of the Ruru deer; ten months are they satisﬁed with the flesh of wild boars and wild bufaloes, eleven with that of hares and of tortoises, a whole year with the milk of cows and food made of that milk; from the ﬂesh of the long-eared white goat their satisﬁcation endures twelve years. The pot-herb Ocimum sanctum, the most sacred of all plants, and especially of the iron-coloured kid, honey, and all such forest grains as are eaten by hermits, are formed for their satisﬁcation without end.’ He further directs (iii. 305 ff.) that an offering to the gods should be made at the beginning and end of a Sraddha. ‘It must not begin and end with an offering to ancestors; for he who begins and ends with an oblation to the Pitaris quickly perishes with his progeny.’ The Brâhman is directed to smear with cow-dung a puriﬁed and sequestered piece of ground, with a divinity towards whose Numbers and one year after his death an effigy is erected to the memory of every Brâhman of adult age. These images are of various kinds, carven out of wood with axes and knives on conventional models. ‘Kumbis and Kharrias, the latter being more numerous, are really fashioned in the forest, and are then brought into the village to be ﬁnished. Some of the best images have a manikin seated on the left arm holding a pipe; others have similar little images. They are fastened on the chambel or embouchure. The large images have all manner of quaint designs and carving over their bodies. Some even look as if the carving were intended to imitate tatting, such as the Burmese are so fond of. The people have a very high notion of superstition about these effigies. Bad weather which occurred while a slave was carving some images for me to take to India,
ANCESTOR-WORSHIP (Indian) 463

living, let him, in performing the obsequies of his father, celebrate also his paternal grandfather. Having poured water with holy Kusa grass and sesamum into the hand of the Brahman, let him give them the upper part of the cakes, saying, 'O Manes.' That fool who, having eaten of the Śrāddha, gives the residue of it to a man of the servile class, falls headlong down to the hell named Kālāsātra. The superfluous Pindaś, or holy balls, may be given to a Brahman, to a cow, to a kid, or consigned to fire' (iii. 220 ff., 223, 240, 261).

The form of the modern Śrāddha rite is most intricate, and includes a number of minute observances, the ritual of which is elaborately prescribed. In the form of the rite known as Ekoddisha, which is performed for the benefit of a single deceased individual, for ten days after the cremation lamps are kept lighted for the benefit of the Manes, to light the ghost during its progress to join the Pitris or sainted dead, either in a temple, or under a sacred fig-tree, or on the spot where the obsequial rites are to be performed. These, technically called Kriya-karma, should take place near running water; and the spot is hence known as the ghata, the usual term applied to the steps used for bathing at ghats. One hill of chalk is first of all poured into the sacred water, and this is followed by an oblation of the sacred cow (paścha-gāyya), and taking care to lay a ball of uncooked meal on the road behind them, so as to attract the attention of the ghost and dissuade it from returning in their company.

On the eleventh day the obsequies are continued in the gift of a cow (kapila-dāna) to the chief Brahman, and the loosing of a scape-bullock (vṛṣṭasorga) in the name of the deceased. This seems to be partly a survival of the ancient rite of animal sacrifice, and partly a relic of the practice of burning the dead. It is released with the dedications: 'To father, mother, and relatives on the father's and mother's side, to the family priest (purohit), wife's relatives, those who have died without rites, and who have not had the due obsequial ceremonies performed, may salvation come by the loosing of the bullock!' At the present day the animal is usually branded with the divine emblems of the discus and trident, and henceforth is set apart as a temple cow, or the four hells, and other supports are left to the ghosts. Food is again cooked, and offered to the Manes, with the invocation: 'You have finished your course, and have reached the abodes of bliss. Be present, though invisible, at this rite. The general effect of the oblations is to make the deceased to be a disembodied ghost, and becomes enrolled among the sainted dead. On the twentieth day food is again offered, and water poured at the root of a sacred fig-tree for the refreshment of the spirit.

The rites done for the benefit of one individual person (Ekoddhisha Śrāddha) is quite distinct from the annual propitiation of the Manes of the family. On the last day of this feast all ancestors are named and propitiates well at once united with the sainted dead, needs no further special propitiation. The non-Aryan tribes believe that, like themselves, the spirits of the dead are mortal. What becomes of them after a couple of generations no one cares to say. But when that period has elapsed, they are supposed to be finally disposed of, and, being no longer objects of fear to the survivors, the father, mother, and other relatives give attention is paid only to the more recent dead, whose powers of mischief are recognized. The Gonds propitiate only for one year the souls of their departed friends, and this is done even if they have been persons of no note in their lifetime.
But with worthies of the tribe the case is different, and if one of them has founded a village or been its headman or priest, he is regarded as a god for many years, and a small shrine of earth is erected to his memory, at which sacrifices are annually offered (Hislop, op. cit. 16 f.).

Narayana is performed for girls who die unmarried, and for boys only if they have undergone initiation and investiture with the sacred thread. Special rites are performed in the case of those whose ghosts are universally regarded as malignant. Such cases are those of a woman dying in childbirth or of impious persons, who are generally anointed with the live products of the cow, sprinkled with water, a little fire is placed on the chest, and it is then either cremated or flung into running water. In such cases it is a common rule that no rites are performed until the ninth day after death, when, if the family can afford the cost, the ceremonies of the last few days, as already described, are performed. To these are added a special rite of expiation, which is intended to free the household from pollution. Similar rites of a special kind are performed when a person dies on an unlucky day, or in the case of one originally a Hindu who becomes an outcast, a Christian, or a Mussalmân. In this rite, which is known as Nârayana-ball, 'oblation to the god Narayana,' the Sraiddha is usually performed over an image of the deceased, made of barley or some other grain (Bombay Gazetteer, xx. 522 f.; Risley, op. cit. I. 296, ii. 191; Crooke, op. cit. i. 90, 210, ii. 465).

The Sraiddha is performed throughout India with more or less variety of practice by all orthodox Hindus. Among the castes of a lower grade the primitive custom of feeding the dead has been to some degree extended after the example of their Hindu neighbours. The main point of difference is the abbreviation of the rite, which does not extend over a period so long proportioned as in the case of the orthodox, and the ceremonial is very often limited to the last few days of the mourning season.

2. Hindu worship of the Pitris.—The question remains—how far the Hindus can be said to 'worship' the Pitris. In the earliest Vedic period the worship paid to the Pitris was distinct from that of natural phenomena. 'It is not denied that the gods of death were the Vedic Pitris. They did this long after the Vedic period. But there the proof that all the Vedic gods, as claims Spencer, were the worshipped souls of the dead. No argumentum a fero can in a Vedic dawn-hymn any thing other than a hymn to personified Dawn, or make it probable that this dawn was ever a moral's name' (Hopkins, Religions of India, p. 10). The general theory seems to have been that ancestors are of a class different from that of the gods, and that though they are divine and possessed of many godly powers, so that the Vedic gods invoked them, 'Of Fathers, may the sky-people grant us life; may we follow the course of the living,' yet they are distinct from the gods, and never confounded with them (15, 143, 145). Hence, in the Vedâs, 1 the Sraiddha of the Sraiddha of the Pitris. The officiant invites the gods and ancestors to the feast, he does so with two separate invocations (Colebrooke, Essays, 114). Speaking of the Vedic conception of Yams, the god of death, Barth thus writes: 'It is to these, at the remotest extremity of the heavens, the abode of light and the eternal savants, that reigns hencoreward in peace and in union with Varuna. There, by the sound of his flute, under the branches of the mythic tree, he assembles around him the dead who have lived nobly. They reach him in a crown, conveyed by Agni, guided by Pushan, and grimly scanned as they pass by the two monstrous dogs who are the guardians of the road. Clothed in a glorious body, and made to drink of the celestial soma, which renders them immortal, they enjoy hencoreward by his side an endless felicity, seated at the same tables with the gods, gods themselves, and adored here below under the name of Pitris, or fathers' (Robinson's India, Eng. tr. 22 ff.). When we come to the Atharva Veda, we first encounter the specific doctrine of the elevation of the Pitris. The due performance of rites raises them, we are told, to a higher state; in fact, if offerings are not given, the spirits do not live on. This view was still further extended in a later period. It is when we reach the Epic period that we find a progressive identification of the gods and the Pitris. 'The divinities and the Pitris are satisfied with the oblation in fire. The host of gods and Pitris, they are the Pitris ... They are both of one being' (Mahâbhârata i. 7. 77 ff.). The poet speaks also of the Pitris worshipping the Creator, Prajâpati Brahmâ, in his Paradise. It is in the Purânic period, when the Indian religious imagination ran riot, and produced the mixture of the ideas of immortality, that the basis of modern Hindûism, that we find them mixed up with Vedic gods and a host of other objects of devotion, like the bird Garuda and the world-snake Sesa. But throughout this progressive development the one criterion of worship which we have already fixed. They are never regarded as independent divine beings; on the contrary, stress is always laid upon the fact that they depend upon their friends on earth for continuous aid and maintenance, and that their advancement to a higher stage is impossible without the due performance of rites done by their pious descendants.

3. Literature.—The authorities have been freely quoted in the course of this article. The best authority on the modern practices of Hinduism is still Colebrooke’s essay in Asiatic Researches (1801), v. 128 ff.; reprinted in Essays on the Religion and Philosophy of the Hindus, ed. 1838, 90 ff. A good account of the modern rites will be found in Atkinson, Gazetteer of the Himalayan Districts (1883–84), ii. 857, 919; Grierson, Bihar Peasant Life (1885), 391 ff. Full details are given in the caste articles in the Bombay Gazetteer, edited by Sir J. Campbell.

W. CROOKE

4. ANCESTOR-WORSHIP AND CULT OF THE DEAD (Iranian).—The Zarthushthrian religion, as known from the Avesta, comprises an elaborate system of religious thoughts and moral habits founded on the idea of two universal powers, the heavenly and pure, and the impure and accursed (Ormazd), and its contrast, the bad and impure world of the devils, the head of whom is Angra Mainyu (Ahriman). In this religion, according to its theoretical scheme, the ancestors, or the souls of the dead, play no part; but practically, in the popular customs and beliefs, the cult of the dead still survives. Parsem not only permits this popular worship, but even finds room for it in the official ritual, so that in the Yashta of the later Avesta we read thus in verse 117: 'Of the gods, in whom, no doubt, are to be recognised the souls of the dead, especially those of the ancestors. But it must be observed that these primitive ghosts are difficult to recognize in the shape that is given them in this Avestan composition, being often placed in the epical evolution as heroes or kings of old, as patrons or protectors of persons, families, or provinces, or as heavenly angels or genii, fashioned after the national and religious ideas of the Iranians.'

These ghostly beings are called Fravashis (Pahlavi Farvardins), and are invoked in the 13th, or Fravardin-Yaht. The word Fravashi means in the Avestan language 'confession,' the Fravashi being a personification of the belief of the pious, his genius or his alter ego, who protects him and takes care of him during his lifetime, and who
will, in time, receive him in the other world. Under this theological fabric is no doubt concealed a more primitive idea of a being which in some way belongs to human nature as part of his soul or as the principle of his life, nourishing him and giving him growth. These original functions of the Fravashis may be traced in the Avesta itself, when it tells that Ormazd, through these angels, makes all plants and herbs spring out of the earth, gives offspring to the herbs, shapes the child in the mother’s womb, gives it all its limbs, helps it be born, and grants the mothers many children. Originally these beings may have conferred these boons themselves without the direction of any supreme god, thus fulfilling the functions that ordinarily belong to the province of the ancestors.

This character of ancestral patronage becomes yet more conspicuous when we read Yasht xii. 64 ff. Here we see how the Fravashis, when drought menaces the land, hurry to the heavenly lake Vourukasha, and how they quelled in order to procure water, ‘each for his own family, his own village, his own tribe, his own country.’

That the Persians themselves looked upon the Fravashis as souls, we learn from Yasna xxvi. 7: ‘We invoke the souls of the dead (irshâdân domāvar) the Fravashis of all our kinsmen that have died in this house, the Fravashis of men and women, of both sexes we invoke’ (similarly Yasna Ixxviii. 23). The little we know of the exterior of the Fravashis fits in with this mention. They come flying like a well-winged bird, we read in Yasht xiii. 70. The souls, then, were imagined in the shape of birds; as the Egyptian ba and as the souls in the Assyrian bell are described; as the souls, according to Greek belief, are to be found in the really dead and in the guise of birds—the same idea as still confronts us in European folklore (cf. von Negelein, ‘Seele als Vogel’ in Globus, Ixxix. 357–361, 381–384; Goldziher, ib. ixxxi. 301–304).

The cult of the Fravashis has had its fixed place and its special time in Zoroastrianism; the time was the period Hamsapathamâdaya, March 10th–20th, i.e. the five last days of the year plus the five intercalary days, which days the Indo-Europeans always associated with the souls of the dead. Further, the Fravashis are always invoked in the evening, viz. in the Aiswârâhîna Albâgîya (cf. Yasna i. 6; Gâh. iv. 1–2), being the first part of the night from 6 to 12; this time reserved for the cult of the dead by kindred nations. We derive our information about the customs of this cult from Yasht xiii. 49–52: ‘We invoke the good, the mighty, the holy Fravashis of the righteous, who descend to the villages at the time of the Hamsapathamâdaya and return thither every night for ten nights to ask for help. Will anybody praise us? Will anybody pay homage to us? Who will accept us amongst his own? Who will bless us? Who will show us meats and garments, and with sacred reverence? Everybody who fulfils his duty to these Fravashis—we are told in the same Yasht—shall have his house filled with good things during the coming year (Yasht xiii. 51 f.).’

This custom survived far into the Middle Ages; the Arabic chronician al-Bârînšt testifies that the Persians during these days placed the meat in the rooms of the deceased, or on the roofs of the houses, believing that the dead conversed with the Fravashis, and they burnt these meats in their honour (i.e. in reality to keep them away) (al-Bârînšt, Chronology, transl. Sachau, London, 1879, p. 210 f.).

* Cf. also the metrical Rad-dar, dating probably from the end of the 15th cent., xiii., xiv., xvi., tr. Hyde, Hist. relig. sêterum

The Fravashis are not only invoked during the Hamsapathamâdaya-period, but also commemorated on the 19th of every month; in the Persian calendar (see art. CALENDAR [‘Persian’]) they have, further, their place as the protectors of the first month of the year (Fravardin; cf. the Armenian loan-name of the twelfth month, Hûshah). According to this official position of the Fravashis, the Persian imagination elevated them into higher and higher spheres; and we often meet with them as the agents of the supreme gods in the Bayans, e.g. Yasht xiii. 5–7; Mânâhîg-i Khârâxt xlii. 22 f. (cf. Darmesteter, Le Zend-Avesta, Paris, 1892–1895, i. 122 ff., 150 E; N. Söderblom, ‘Les Fravashîn’, RII, 1899; Manuk Abeghian, Der armenische Volksglaube, Leipzig, 1899, 23 f.).

Besides their place in the ritual, the Fravashis play a prominent part in the private cult of the Persians, especially in the funeral ceremony called afvingân (‘homage’). It was a common meal to which the survivors invited both rich and poor; the priests attired them in the finest and performed several symbolic ceremonies. On that occasion cakes of meat and flour were offered to the spirit of the recently deceased. The origin of this feast seems to be a meal to the nourishment of the deceased. The same object is served, the Fravashis being the memory of the deceased, or the Sôrôsh Dorân, where cakes are offered to the angel of Death, Sôrôsh.

In Armenia the Persian ideas on the Fravashis and their cult have continued into modern times. They are commemorated on the Saturdays before the five great festivals of the year, and, upon the whole, every Saturday. They are imagined to dwell in the neighbourhood of the tombs and in the houses of the faithful and to give them survival in the survival in the form of incense and light candles in honour of them. At the tombs the Armenians celebrate a special commemoration of the dead, on which occasion they burn quantities of incense. The Mones dwell three days on earth; then they fly away to heaven, leaving behind their blessings to their descendants. Especially between fathers and sons there is a vivid communication at that time. The Armenians as well as the Persians imagine that souls are connected with tombs as with temples (Gareis).

**ANCESTOR-WORSHIP AND CULT OF THE DEAD (Japanese).—** In order to understand what the worship of ancestors and of the dead actually amounts to in Japan, we must distinguish clearly the national religion, that is to say, the native primitive Shinto, as it existed during the first centuries of the Christian era, from the Shinto subsequently modified under the influence of Chinese ideas. This transformed Shinto indeed is of very little interest here, as it is only a shadow cast over Japan from the continent. Our task is to distinguish and emphasize the ideas that are really Japanese, original, and prior to this foreign influence; and to accomplish it we must examine only the most ancient documents, such as the Kojiki (Records of Ancient Matters, A.D. 712), the Nihonshiki (Chronicles of Japan, A.D. 720), the Nirayuki (rituals which were not published until the beginning of the 10th cent., but were undoubtedly composed at a much earlier date), etc., being careful to eliminate, even in these documents, any traces of Chinese influence, or anything they may contain.

It is on account of the neglect of these necessary precautions that Japanese writers, especially the great native philologists of the 18th and the beginning of the 19th cent., have represented their national religion as being mainly an ancestor-cult, while in reality it is mainly a cult of nature. For instance, the famous theologian Hirata (1778–1849), who claimed to restore the ancient faith, introduced into existence a fanciful religion, into which he introduces, in an artificial way, ancestor-worship as practised by the Chinese: the worshippers must pray to the whole succession of their family ancestors. But it was found that these duties were not given to ancestor-worship, as in that theory. But more recently, Prof. B. H. Chamberlain wrote (Things Japanese, 19th, p. 358): "Shinto is the name given to the mythology and vague ancestor- and nature-worship which preceded the introduction of Japan. In chief of Japan, Dr. W. E. Grifflis (Religions of Japan, 1895, p. 88) emphasizes the idea, saying, that from the Emperor to the humblest believer, the God-way is founded on ancestor-worship, and has been grafted upon its ritual system nature-worship."

Capt. Brickley sums up the whole in the very concise statement: 'Ancestor-worship was the basis of Shinto."

This theory, in the present writer's opinion, the reverse of the historical evolution as it actually took place. It is evident that at a certain period ancestor-worship was seen to be the dominant cult of Shinto, and when people in our time visit the temples which are dedicated for ever to illustrious ancestors or to certain nature-gods confounded with imperial ancestors, they are tempted to see in them a confirmation of the general theory of Herbert Spencer. But if we get rid of these modern impressions, and also lay aside the conventional opinions of native commentators, and if we confine ourselves simply to looking at what we find, we find that the oldest and most interesting parts of the Kojiki and the Nihongi, those relating to the 'age of the gods,' are essentially devoted to nature myths: that, moreover, the most important Norito celebrate the glory of the gods of nature, and that it is not animism but naturalism that in Japan, as in so many other countries, constitutes the real basis of the primitive religion. Does this, however, mean that, as Dr. W. G. Aston maintains at the present time, 'Shinto, the old native religion of Japan, had no cult of true ancestors' (Mar. 1907, N. 23, cf. his Shinto, 1905, p. 44 and passim; K. Florence, Nihongi, Zaizaiter Götter, Tokio, 1901, p. 258, and art. SHINTO)? The present writer wishes that the truth lies between these two extremes, and that, if ancestor-worship did not appear until after nature-worship, and if it was then developed chiefly under the influence of Chinese ideas, it nevertheless existed in germ in the original Shinto as in the majority of primitive religions.

We shall not discuss the question as to whether cannibalism existed in pre-historic Japan, and if so, whether it was followed by a ceremonial anthropophagy, which is then explained by the desire of the gods to eat the food they would most appreciate (see N. Gordon Muuro, 'Primitive Culture in Japan,' in Trans. of the Asiatic Soc. of Japan, Dec. 1906, vol. xiv, pt. 2, pp. 73 ff. and 133 ff.). As a matter of fact, from the time that primitive man invests all the gods, if not with his own form, at least with his feelings, this moral anthropomorphism must lead him to offer to the gods, whoever they may be, the things which appear most precious to himself, and this attribute to these sacrifices are intended to be gods of nature quite as well as ancestor-spirits. We shall therefore dismiss this questionable interpretation of customs which are themselves doubtful, and confine ourselves wholly to the written documents. These documents show that the primitive Japanese had a vague belief in the immortality of the soul, without having, however, any precise or absolute idea on the subject. The Nihongi, when relating the story of the hero Tamichi, who appeared one day as a serpent with glaring eyes to punish the violators of his tomb, ascribes to the men of that time the thought: 'Although dead, Tamichi at last had his revenge. How can it be said that the dead have no knowledge?' This passage alone is sufficient to prove that there were, after all, gods of another, in the ancient periods. But there were neither rewards nor punishments, but where all, good and bad alike, continued to lead a vague existence, regretting the life and light of the upper region. This is the dark kingdom, which swarms with the fierce deities of disease and death, the 'hideous and polluted land' where Izanagi, horror-stricken, found his wife Izanami in a state of putrefaction. Other persons, such as Izanagi himself, do not share this general destiny: it is on a terrestrial island amidst the living that this god chooses his resting-place. Lastly, many divine heroes and illustrous persons were translated to the 'Plain of High Heaven' (Takamatsuzuka). Just as the first parents had sent the most beautiful of their children, the Sun and the Moon, to that upper region to illuminate it with their brilliance, so men raised the objects of their admiration up to the stars. Like the deified Roman Emperors, they were 'sideribus recepti.' The dead whose brilliant career terminated in this world, but who, the most virtuous; they were the most illustrious, and their apotheosis was only the natural continuation of their former power. Thus, the particular abode of the dead depended chiefly upon their earthly dignity. Their future life, with which no moral consideration had to do, rested upon an idea that was purely aristocratic. The ladder of the ranks of men had a top which was lost in the clouds and leaned against the floor of the gods. In a word, the spirits of men found a place very readily in the society of the gods or of heaven, the place of the one corresponded to the physical brilliance of the other. They took up their abode in the same places, and in virtue of the same inherent sovereignty.

This being so, it follows that the cult of the dead was of a somewhat vague character, and that ancestors were worshipped mainly in proportion to the social position they had held during life. One old mythical account, in which there is a description of the burial of the god Amaterasu-hiko ('heaven-young-prince') by a flock of birds which perform the various duties of the funeral ceremony, shows us clearly that the Japanese must have practiced very complicated rites on such occasions. The existence of funeral sacrifices also shows that they rendered to their ancestors a worship intended to ensure their welfare, providing them with the
ANCESTOR-WORSHIP (Jewish)

objects, animals, and companions which they would require in the other life. The most important writing on this subject is one which relates how human sacrifices were suppressed—an event which the Chronicles of Japan place at a time corresponding to that of the birth of Christ, but which must be brought forward to the far-off ancestors, gods of nature or human beings, who were regarded as the household gods (ujigami) of the great families of the 8th century. (For further details on this last point see the present writer’s book, Le Shintoisme, Paris, 1907, p. 279 f.). This cult of ancestors, which we can assert with certainty in some illustrious cases, and logically infer also among the poor people who were unknown to the court historiographers, was speedily developed and systematized under the influence of continental ideas. Then Chinese ancestor-worship came to be established with all the ceremonies which it involves and all the consequences it entails, beginning with the very important practice of adoption, which was intended to ensure the continuance of family sacrifices. But this evolution of a system which is quite distinct from real Japanese religious ideas, is beyond our subject.

Michel Reyon.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Jewish).—As was succinctly said, the final victory of monothéism made the conscious practice of forbidden or doubtful rites in connexion with the dead impossible to those who strictly followed the sober development of pure Mosaicism in each personal national times and the various periods of Rabbinism that followed. Ancient occultism retained, however, a hold on the minds of not a few in each generation; and the confluence of Eastern and Western mystical ideas which were accepted in the medieval times of the Kabbalists, gave a further impetus to various essentially un-Mosaic notions about the dead, and even succeeded in partially invading the liturgical form of synagogue-worship.

The literary evidence, which on some important points supported by practices prevalent at the present day, has here to be collected from (1) the Apocryphal and Pseudepigraphical writings attached to the OT; (2) the Talmudic and Midrashic literature; (3) the Liturgy; (4) the Kabbalah. Only the salient features need, however, be mentioned in each part.

1. Apocryphal and Pseudepigraphical literature. — Taking the different parts of the subject, in so far as they are纬bolical in character, in order followed in the ‘Hebrew’ article above, it must first be mentioned that the garden or Paradise assigned to Enoch and the other elect is, according to the Book of Enoch (339-659 A.D.), imagined to be at the end of the earth towards the east. In it is the tree of wisdom (325-6), whose fruit the holy ones eat and attain high knowledge. In 517 the holy ones who dwell in the heavens are, however, spoken of. The well of righteousness, also mentioned in the Book of Enoch, is a reminiscence of the ‘water of life’ which is to be found in the Babylonian heaven and other mythological localities. Whether the pseudepigraphical work known as the Assumption of Moses originally contained in the lost portions at the end an account of the translation of Moses to heaven still remains doubtful, though a negative answer would seem to accord best with the facts of the case (see the introduction to that book in Kautzsch’s edition). Josephus, however, clearly implies a belief in it (Ant., iv, 14, 2) and the Apocrypha and Pseudepigrapha of the AT (ed. by Kautzsch, 1899) has been followed. The dates of the books range from about A.D. 200 (Babylonian) to the earlier Christian period.

* The books contained in the Variarum Apocryph (ed. O. J. Ball) are here quoted in the usual English form. For the other books, Die Apokryphen und Pseudepigraphen des AT (ed. by Kautzsch, 1899) has been followed. The dates of the books range from about A.D. 200 (Babylonian) to the earlier Christian period.
ANCESTER-WORSHIP (Jewish)

Itself (ending, 'the whole world is thy grave') would seem to be in consonance with the idea. Concerning Baruch, the friend and disciple of Jeremiah, we are informed that he was to be preserved alive ' to the end of the times' (Apoc. Bar. 13:76),—a favour which appears to stand in some relation to the translation of the earlier sayings.

In the ridicule of Babylonian idol-worship contained in the Epistle of Jeremiah is found the statement that they set gifts before the idols 'as unto dead men' (v.9): but the practice of offering gifts, not implied in such passages, seems to have been as purely Babylonian as the idol-worship itself. A direct warning against the heathen worship of the dead is contained in Jubilees 22:7 ('Their sacrifices they slay to the dead, and pray to the demons, and eat upon the graves'); and it is natural to suppose that the warning would not have been needed, if there had been no tenency to adopt these practices among the Jews.

The supposed reference to offerings made to the dead in Sir 39:24 has been disputed by the Cairo Halakah, p. 132, and it is now generally held that other offerings of meat set upon a grave, the Hebrew has 'heave-offerings placed before an idol' (gittal). The treatment of the dead spoken of in Sir 7:8 and To 4:12 may possibly refer to offerings made to the dead; but none of the references seem to be restricted to persons who died 'before the foundation of the earth,' and the references are only meant in the former passage and funeral feast in the latter (see the notes to the Variorum Apocrypha).

It would seem indeed that the progress of monotheism had by that time made habitual offerings to the dead impossible, and that the transformation of the practice into what has not inaptly been called 'the new sacrificial cult of the dead' ('Das neue Totenopfer' [Schwally, Das Leben nach dem Tode, p. 183]) had already set in. In 9 T. Bar. 12:12, Judas Maccabaeus is reported to have ordered the Jews under his command to offer up prayers and to send a large sum of money as a gift to Jerusalem, in order to effect an atonement for the Jewish soldiers killed in battle, under whose coats objects consecrated to idol-worship, no doubt intended to serve as a magical protection—had been found. It has been suggested that the prayers and offerings of money were in reality intended by Judas and his companions to clear the survivors rather than the dead of the pollution of idolatry; but as the author or compiler of 2 Mac. interpreted the act as having been performed on behalf of the dead (see vv.46-49), the practice of trying to benefit the dead rather than paying homage to them must have been in vogue when the narrative assumed its present form (some time in the late cent. B.C.).

The references to mourning customs found here and there in the Old Test. Apocrypha and Pseudepigraphical writings in the main support the view that the objectionable practices mentioned in the 'Hebrew' article lay outside the range of topics contemplated by the authors. Even the picture of priests having 'their clothes rent, and their heads and beards shaven,' and roaring and crying before their gods 'as men do at the feast when one is dead' (2 Esd. Jbr. 1:21-22), is taken from Babylonian idol-worship, and does not necessarily point to exactly similar practices among the Jews. With regard to the number of days given up to mourning, it is remarkable that, whilst Jth 10th and Sir 22:9-10 speak of seven days from the time after which the practice of keeping seven days was usually continued, the Life of Adam and Eve speaks of six days' mourning, the seventh being (like a Sabbath) reserved for rest and joy. Ben-Sira (apparently inconsistent with himself) furthermore recommends (38:7) a day or two, 'lest thou be evil spoken of.' If, therefore, Schwally's suggestion (op. cit. p. 41), that the seven days' mourning corresponds to the number of days assigned to great religious festivals, were adopted, it would at the same time follow that in the times to which the apocryphal books belong this idea had lost its hold upon the popular mind.

Necromancy in its ordinary form also lies outside the range of topics dealt with by the writers of this literature. But the appearance of the high priest Onias and the prophet Jeremiah to Judas Maccabaeus in the Midrashic works is interesting. Against Nicanor (2 Mac 15:29) represents a form of oneiromancy that is pretty closely related to necromancy (cf. the appearance of Alexander to his thrice married widow Glaphyra, recorded in Jos. Ant. xvii. 12; 4 B.J. ii. 7-8). Ben-Sira, representing, as he did, Hebraism pure and simple, declares, however, that 'divinations, and sooth-sayings, and dreams are vain' (Sir 34:8). The call addressed to the 'spirits and souls of the righteous' (Song of the three Children 4) to join in the universal herald of the day evil, is a poetic ring about it, but the whole Song might be brought into relation with animistic conceptions.

2. Talmudic and Midrashic literature.—It may at first sight seem strange that the number of persons who got funeral rites related to heaven without having died and gone down to Sheol, is considerably increased in some of the later additions belonging to Talmudic, Midrashic, and allied literature. This advance, however, in reality quite in keeping with the greater facility for the gratification of distinguished human personalities under the final monotheistic development of Mosaism referred to at the end of the 'Hebrew' article. In the minor Talmudic tractate Derekh Erez Zuṭza (7th or 8th cent.), e.g., seven (or, according to others, eight) others, besides Enoch and Elijah (including the Messiah; Elizer, the servant of Abraham; Hiram, king of Tyre, etc.), are accorded this honour. In Yalkut Be-esdei, § 367 (about 11th cent.), thirteen such translations are enumerated, the name of Methuselah being among them. The preceding list. The Alphabetum Siracides (ed. Steinschneider, Berlin, 1858) occupies a middle position between the two lists named, the number of translations being eleven (one of the number, however, being the position of King Solomon). Specially developed in Talmudic and Midrashic literature is what may fairly be called the cult of Elijah, who, according to Mal 4:5, was to be the herald of a new order of things, and whose expected appearance as the forerunner of the Messiah is referred to in the NT (e.g. Mt 17:10). Quite in keeping with this expectation is, for instance, the conversation of Elijah with R. Yosē related in Berakhoth, 3b, where the grief caused to the Deity by Israel's captivity is so fully and characteristically described. On the Midrashic statements regarding the high favour accorded to Moses at his death, see § 1 in the 'Hebrew' article.

A very important concession to popular habits of thought is made in the minor Talmudic tractate Sanhedrith (prob. 7th or 8th cent.), e.g., where the custom of placing the dead person's pen (or reed) and ink as well as his key and writing-tablet by his side in the grave is countenanced, although the belief in the ability of the departed to use these things might be considered to penetrate thereby. The concession is indeed ex-

* The suggestion that mourning for distant relatives only is here meant does not seem to suit the context (see note to Rauth's edition).

† For the full enumeration of this and the following lists see A. F. Bender, 'Death, Burial, and Mourning,' etc., in JQR vi (1884) 341 ff.
ANCESTOR-WORSHIP (Jewish) 459

pressly granted, notwithstanding its known approximation to a 'Amorite' customs. In the Shulhan 'Arukh of Joseph Caro (ob. Safed, 1575), which is the accepted guide of strictly orthodox Judaism at the present day, the same practice is tolerated (see Hilkhot 'Abot R. 375). Merely a pious custom, the permission to make burning of kings, but not for persons of inferior rank (ib. § 348; Shnathoth, ch. viii.; cf. the 'Hebrew' article, § 3). One of the explanations suggested to account for the pouring away of all the water found in a house in which a death has taken place, is that an offering to the dead, or, at any rate, a provision of drink for them, was thereby intended (see A. P. Bender, JQR vii. [1886] p. 106 f.). It is, however, more likely that the water was poured away because it was believed to have contracted contamination* (see § 7 in the 'Hebrew' article). A Karaite writer of the 10th cent. (Abu-Sari b. Masla is) declares that a number of Rabbinita Jews of his day were in the habit of burning candles and offering incense on the graves of the righteous.† A transformation of this form similar to that noticed in 2 Mac. (see § 1) is found, e.g., in Midrasch Tanhuma on Hala'zini (the last weekly pericope but one in Midrashim), where the religious commemoration of the dead on the Sabbath is recommended in order to prevent their returning to Gehenna (cf. the remarks on Kaddish and Haskarah Nashamo in the next §).

The Kaddish can be regarded as significant here to be noted in connexion with mourning customs. The repast provided in modern times for mourners by their neighbours after a funeral is clearly understood to have the object of thus offering hospitality to the bereaved, who are, besides, naturally unable to make satisfactory provision for their own wants at such a time. The rendering of the garments on the part of mourners is now generally but a slight ceremonial act, consisting in tearing the (left) lapel of the coat one is wearing. In Talmudical and subsequent times there was a custom of baring the shoulder and arm (see Bab. Baba Qama, 17a, and cf. Shnathoth ix.). A. Büchler (ZATW, 1901, pp. 89 et seq.) has acted, in his article on the living to the dead (see § 5 (a) in the 'Hebrew' article), if so, would there be a survival of the cult of the dead in the old sense of the word.‡

Justrow (ZATW, 1902, pp. 117-120) tries to controvert Büchler by showing that the idea of this kind is a return to ancient habits of life, entire nakedness having, in fact, originally obtained in connexion with mourning (see § 5 (a) in the 'Hebrew' article), because a state of nudity was the primitive condition of man. In reality, however, the two explanations do not clash with each other, for the sense of self-humiliation and subjection to the departed spirit would be quite compatible with a return to an older and less dignified mode of existence.

All trace of ancestor-worship (supposing that there ever was any in it) has disappeared from the other prearous working of the levirate law in modern times. Nor is there now any trace of a ritual connected with the Rabbinita Jews bearing on the uncleanliness of dead bodies, fear of contamination through contact with a decaying human organism being the explanation adopted. A certain kind of necromancy, on the other hand, reappears in, e.g., Mr. Isael Abraham, on the authority of Nissim Gerson (ob. shortly after 1374), favours the view that the pouring away of water was a method of making known the occurrence of a death, or the wishes of the deceased relative to the influence of the Biddah (tide). But if so, why need there be pouring away all the water in the house? The likelihood is that the practice, though primarily pointing to a prudential motive, got to serve as a secondary way to indicate death by a kind of association of ideas.

See Perles, NGW, 1861, p. 389.¶

¶The report found in Shnathoth ix., of R. 'Avitha striking his breast in the ancient tabernacle (see also R. Eismont, A. E. in Hamburger's AB II, a statement on the different forms of the Kaddish will also be found in these works.)

3. The Liturgy.—The high veneration, almost amounting to a cult, paid to Moses and Elijah, also finds expression in some parts of the Jewish ritual. A cup of wine is at the present time in many places reserved for Elijah in the Passover Night Service,* which, though celebrated in commemoration of the release from Egypt, also emphasizes the hope of future redemption by the Messiah, whose forerunner was to be Elijah. The same prophet is also assumed to preside at the ceremony of circumcision, the chair in which the actual operator sits being designated the 'chair of Elijah'† in the German and other forms of the ritual. In the Pirke d-Rabbi Eliezer (latter half of the 8th cent. of ch. xix.), this idea is brought into connexion with Elijah's well-known zeal for Jahweh, the child being by the rite of circumcision initiated into Israel's covenant with Jahweh. Moses, his work and his death, are the subject of hymns in the Haskarah (extended Service Book) for the Feast of Weeks (in connexion with the giving of the Law on Sinai) and the Passover. The liturgical elaboration of the life and work of Moses is specially prominent in the ritual of the Karaites (see founded about the middle of the 8th century).

The most important portions of the synagogue services to be noted here are, however, the Kaddish and Haskarah Nashamoth. (a) The Kaddish is both the nature of a doxology and embodies the Messianic hope, but contains no mention of the dead, was primarily instituted for recitation after completing the study of a section of the Talmud and at the end of a Talmudic discourse or lecture. But as the merit of the study of the Torah (by which the Talmud as the authoritative exposition of the Torah was mainly understood) was considered exceedingly potent, the idea must have arisen early that the merit thus won might be transferred to the deceased, and it probably thus came about that the doxology concluding such study was assigned to mourners.

In Masseketh Sopherim (prob. 6th or 7th cent.), xix. 12, its use in this connexion appears firmly established, the Kaddish was recited after the cantor. Later on its recital was ordered to follow every burial (see Moses b. Nurmân [ob. 1285 or 1265], Torath ha-Adam, ed. Venice, 1555, fol. 50a) and the mourners' Kaddish in the full modern sense of the word is mentioned in the French ritual known as Mahzer Vitâ (A.D. 1226). The Kaddish thus gradually became, though not exclusively so, an indirect prayer for the departed. Its original connexion with the study of the Torah was in this use of it (as indeed in several other of its technical uses) the idea of benefiting the dead by the special act of worship on the part of the surviving son or sons became very prominent.¶

The practice thus sets itself in ideas with the new or inverted cult of the dead which was apparently no ritual significance, the act having merely been an expression of great personal grief.

*This custom, of which no trace has so far been found in medieval MSS and early printed liturgical books, is probably of Karaite origin. It was first mentioned by R. P. T. Wolf, in his Kabbalistic ritual, modelled in part on an old L. N. Dembítz, Jewish Services in Synagogue and Home, pp. 100-10; see also the death gutt hushed out, the death of the Rabbi D.'s) a statement on the different forms of the Kaddish will also be found in these works.)

†The report found in Shnathoth ix., of R. 'Avitha striking his
already in vogue in Maccabean times, or, at any rate, at the time to which the composition of 2 Macc. belongs (see § 1). Instead of seeking to obtain benefits through the agency of the dead, the living engage in actions calculated to improve the condition of the departed; and as the surviving generations are the most approved agents of the form of the cult, it is a natural thing for those who see in the law of levirate (see § 6 in the 'Hebrew' article) an original connexion with the ancient sacrificial cult of the dead, to bring this use of the Kaddish into relation with that law, and to the ritual function from liturgy on the part of the descendants to the same motive in both sets of regulations. The objection that might be raised is that, if the Kaddish were really connected with the idea underlying the law of levirate and the ancient sacrificial ritual of the dead, one would have expected to find it in use in much earlier times than can be attested by the existing literary evidence, continuity in essence being one of the marks of gradual development. But it is, on the other hand, not against analogy to suppose that if — and the deliberate fact was that the idea itself was never eradicated from the popular mind, it should, under certain favourable influences,* have been later on fully revived under the form of the Kaddish Yatom (orphan’s Kaddish). Such a use would naturally have been made in fresh and later shapes. (b) The same may also be said of the most solemn office connected with the departed, i.e. the Hashkaron Nahamimoth (‘remembrance of souls’), which forms part of the Ashkenazí ritual for the eighth day of the Passover, the second day of Pentecost, the eighth day of the Feast of Tabernacles, and the Day of Atonement. In this office direct petitions for the weal-of-being of departed parents and other relatives are offered,‡ thus more explicitly attesting the revival (though in a much modified form), since medieval times, of an earlier idea that the living are capable of rendering substantial service to the departed. In the Spanish ritual the same idea, in the form of direct petitions, is embodied in the Hashkabah (‘laying to rest’) which forms part of the Burial Service, and is — under certain special regulations—recited during the synagogue services.¶

This also holds good in the ‘Jahrzeit,’ or annual commemoration of departed parents, at which the Kaddish forms the most important feature, a candle being also kept burning for twenty-four hours.¶ But the Jewish Liturgy also embodies petitions in which the merit of the departed is, vice versa, pleaded on behalf of the living, thus coming nearer to the old idea of seeking support from the spirits of the dead rather than offering help to them. In the famous prayer Abina Malenah (‘Our Father, our King’), the merit of the martyr is pleaded before the throne of angels, in order to obtain favour from the Almighty. The frequently occurring idea of Zkuth Abot (‘merit of the fathers’) may indeed not unreasonably be attached to the invocation, in the ancient prayer of eighteen (1st to 2nd cent. A.D.) and at the latest of the God of Abraham, the God of Isaac, and the God of Jacob. In conclusion, the practice of asking pardon of the dead in a ceremony at the grave (see Shulhan 'Arukh, i. § 606) may be mentioned. The mystical or spiritual union of the living with the dead and the possibility of interaction between the two states of being are clearly expressed in this interesting ritual.

4. The Kabbalah. — The name of Elijah is very prominent in Kabbalistic literature. The founders (12th cent.) of the developed form of mysticism which is more particularly designated by the term ‘Kabbalah’ claimed to have received their inspiration from the so-called Zohar (a work compiled in the latter part of the 13th cent., but attributed to the Tanna Rabbi Simeon b. Yohai (2nd cent.), which is the greatest text-book of the Kabbalah, Elijah also often appears as instructor under the title Sabba (i.e. the ancient one!). Moses, under the title Ra‘ya Meshima (i.e. ‘faithful shepherd’), appears, in a section bearing the same title, in conference with Elijah and R. Simeon b. Yohai; Abraham, Isaac, Jacob, and other worthies being also present at the hearing. The idea was that Elijah in person or his disciple appeared to all the worthies. But it was also claimed that Elijah had actually designated Buiina Kaddisha (‘sacred light’), is almost deified, and great veneration is also paid to leaders of later Kabbalistic schools, more particularly Isaac Luria (ob. 1729) and Baal-shem (ob. 1761).

Connected with the honours paid to departed worthies is the doctrine of metempsychosis, which, though in origin and essence entirely foreign to Mosaicism, and indeed to Semitic thought in general, succeeded about the 5th cent. in passing from Greek (and Indian) thought into the tenets of certain Jewish sectaries, through the medium of Muhammadan mysticism. Saadahya Gaon (ob. 942), who appears to be the first to make mention of it in orthodox Jewish literature, protests strongly against it. But it nevertheless gained a firm footing in the Kabbalah, and attained an extraordinary development in the comparatively modern Kabbalistic system of Isaac Luria, the works on Gyrqdui (‘transmigrations’) composed by himself and his followers, containing long lists of identifications of ancient personages and men of women of later date.¶ An addition to the doctrine of metempsychosis made by the Kabbalists is the principle of ‘ibbor (‘imprisonment’). If two souls (who may, of course, be spirits of the dead) do not separately feel equal to their several tasks, God unites them in one body, so that they may support and complete each other. This doctrine may have been suggested by the theory of incubation (see further on), which is itself clearly connected with the belief that a demon is a spiritual ‘spirit’ in this instance to denote a spirit, without reference to its origin or moral qualities.

Pilgrimages to graves are much more frequent among the later Kabbalists. The tomb of Simeon b. Tzemach is visited by the Samaritans often use the formula Reshnu (‘by the merit of Moses’).
ANCESTOR-WORSHIP (Polynesian and Tasmanian)

Yojai at Meron near Safed is thus devoutly re-sorted to on the 33rd of 'Omar (i.e. the 33rd day from the 2nd day of Passover), when a great popular festival, at which illuminations are an important feature, is held in honour of the saint. Pilgrimages to the graves of Isaac Luria at Safed and of ancestors a distinction should be drawn, evanesc-ent though the line of demarcation often becomes.

Elis (Polynesian Researches, 2nd ed., London, 1832–1836, i. 334–336) expressly postulates the existence of oromatua, or 'ancestors,' who ranked next to the atua, or gods, and were often the spirits of deceased fathers, mothers, brothers, sisters, children, and other relatives, as well as of departed warriors who had been conspicuous for bravery. Although the oromatua frequently helped in time of need, and opposed the malevolence of other ghosts or of hostile magic, they were, as a rule, cruel and irritable. It was thus necessary to place the corpse of the dead at a considerable height above the ground, this being apparently the origin of the kata tupapa or grave for the dead (Moerenhout, Voyages aux îles du Grand Ocean, Paris, 1837, i. 470–471). Food was brought daily to the dead for six weeks or two months, and if the deceased had been a man of eminence, a special priest, known as oromatua, visited the grave every week and offered it food. It was believed that the oramatua could smell the spiritual part of this offering, and, in case it returned, it would therefore be gratified and content, so that it would not desire to resume early contacts, and might, when its time was at an end, permit the body to be buried, thereby obviating the possibility of his malefice return to his surviving kinsmen (Moerenhout, i. 552). Connected in a sense with the cult of ancestors was the mourning for the dead, together with the self-mutilations practised by the survivors (Waitz-Gerland, vi. 401–404); and here, too, belong the human sacrifices of wives, slaves, and favourites at graves in New Zealand, Hawaii (Waitz-Gerland, vi. 404–405), and the Fiji Islands (Russel, Polynesian Mythology, London, 1852, i. 218–219). The motive for both these latter features was either the gratification of the oramatua at the sight of the grief which his death had caused, or a provision for his needs in the future life.

The religion with which these practices was at a much lower stage of development than that of the Polynesians; yet it is clear that they, too, believed in a life beyond the grave, and thought that the souls of the dead might return to bless or curse them. They accordingly carried a bone of the deceased as a charm; yet the 'shades' (orarawati) of dead relatives and friends were regarded, on the whole, as more kindly than the gods. Of an actual cult of ancestors, however, little seems to be known (Ling Roth, Aborigines of Tasmania, 2nd ed., Halifax, 1899, pp. 54–55).

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Roman).—The great extent of ancestor-worship among the Romans, and its morally great limitations, make it not only one of the most interesting problems in the field of Roman religion, but also a subject the understanding of which brings with it a grasp of the fundamental principles which governed the formation and the nature of the gods of the Romans. As it is in the main a private worship (sacra privata) rather than a public one (sacra publica); for the distinction, cf. Wisowa, p. 334; Marquardt, p. 120 ff.), our sources for the Kingdom and the Republic are limited, and it is only in the

Summary.—The general result obtained from a study of the Jewish part of the subject is, owing to the diverse forms of development undergone by the thoughts and practices of the people in different wide-spread regions, far from homogeneous. The Talmudic and Midrashic literature thus exhibits a larger amount of reminiscence of, or reversion to, ancient thought than the Apocryphal and Pseudepigraphical writings, though these latter as spiritual illumination, the custom cannot be regarded as a revival of the ancient practice. A species of oneiromancy is the same Kabbalists' belief that information of high import can be obtained through dream-visions of the dead.

LITERATURE.—Besides the passages of the original sources (Apocrypha, etc.) referred to in the article, the following besides may be consulted with advantage: For Apocryphal and Pseudepigraphical literature, ch. iii. in F. Schrader's Leben nach dem Tode, 1892. From the Rabbinic point of view, J. Paris, 'Die Leichenfeierlichkeiten im nach-biblischen Judenthum' in Moew x. (1851) pp. 345 ff., 378 ff.; A. F. Bender, 'Sefirot, Rites, and Customs of the Jews, connected with Death, Burial, and Mourning' in JQR vi. (1854–5) 317 ff., 691, vii. 101 ff., 259 ff. (also discusses modern points of view); A. Büchner, 'Das Entblassen der Schäfter und des Armes als Zeichen der Trauer' in ZATW, 1901, pp. 81–92. For points in the literature, the articles 'Seelenfeier,' 'Raddish,' etc., in L. N. Dembist, Jewish Services in Ame- grop and Home (the same author wrote the art. 'Raddish,' etc., in the J.B.). For metempsychosis, etc., L. Ginzberg's Legends of the Jews, 1888, vii. 110–124. Some other works dealing with the subject will be found in the literature given at the beginning of C. Grünseim's Der Ahnenkult und die Urreligion Israels, 1900.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Polynesian and Tasmanian).—In Polynesia, ancestor-worship was far less important than in Melanesia or Micronesia. Throughout this group it was held, it was contended, that a common people perishing immediately after dis-solution (Waitz-Gerland, Anthropologie der Natur-völker, Leipzig, 1872, vi. 310; Dillon, Narrative of a Voyage in the South Sea, London, 1829, ii. 10–11). The ghosts of the dead might appear to the living and might work them either weal or woe, but they were in the main malefice, and were accordingly, for the most part, objects of dread (Waitz-Gerland, pp. 315–316, 330, 332). Between the general worship of ghosts and the cult of ancestors a distinction should be drawn, evanesc-
ANCESTOR-WORSHIP (Roman)

Empire, with its vast number of sepulchral inscriptions (CIL vi., CIG xiv., over 40,000 for Rome alone) that we have any extensive contemporary sources. For the earlier period, however, we have a sufficient number of literary sources to enable us to form a definite idea of the cult, inasmuch as the stereotyped character of all religious ceremonial allowed exact statement from various historical periods; and, though the underlying ideas did undoubtedly change somewhat from generation to generation, there was a certain conservative force at work too. It will be most convenient, therefore, to outline the beginning and underlying ideas, and the expressions of them in cult acts, first during the general period of the Republic, and then, secondly, to sketch the development of these ideas from the close of the Republic onwards during the course of the Empire.

I. FROM THE EARIEST PERIOD TO THE CLOSE OF THE REPUBLIC.

1. The first and most fundamental question which requires an answer is this, Are any of the Roman names, e.g. Manes, Vaisnavas, etc., of similar ancestor-worship as their origin? From Euhemerus (cf. Rohde, Gr. Roman, 220 ff.) down to Herbert Spencer (Principles of Sociology) it has been a favourite contention that many great deities were in origin nothing more than an ancestor of the Roman family in its earliest states shows that this was not the case in Rome. The religion of the earliest period reveals distinct traces of animism (cf. Tylor, Primitive Culture, i. 377 ff., ii. 1–377)—that belief common to all primitive peoples, which posits for all things, animate and inanimate, living and dead, a ‘double,’ or psychic parallel; which has an effect on the thing itself and must therefore be propitiated. These doubles are potentialities rather than individualities. They are interesting not so much for what they are, as for what they do. Now, Roman religion is peculiarly interesting in this respect, because in it we see a development of animism one step further. Certain of these powers have advanced sufficiently towards individuality to acquire a name, but they are none of them as yet individuals thought of in the fashion of man (on the importance of names cf. Frazer, Golden Bough, i. 1403 ff.); hence there was not, could not be, a native Roman mythology. They were advancing when Greek influence placed her myths at Rome’s disposal, so that she never developed any of her own. On the other hand, a great number of the gods of the earliest period were still mere potentialities, thought of in groups rather than as individuals, e.g. the Di Penates, powers who guarded the store-room, the Di Agrestes, powers who looked after the crops. It was into one of these groups that the dead went, into the Di Manes, the ‘good gods’ (mannus = ‘good’; cf. Roscher, ii. 2318). It will be readily seen, therefore, that in the case of the dead that were ever made great individual gods, they received such divinity as they had by the same processes of thought which made all gods, great and small.

If further proof is needed, it may be found in the total absence of hero-worship in Roman religion, as it was before Greek influence came; and in the significant fact that, when under Greek influence two great characters of Graeco-Roman mythology, Eneas and Romulus, were elevated to the rank of gods, theologians found nothing better to do than to identify them with two already existing old Roman deities, Numicus and Quirinus respectively (for Æneas = Numicus, cf. Rosbach in CM 1915; for Romulus = Quirinus, cf. Wissowa, i. 141). Every attempt to make even the Di Manes the source of other deities has been a failure. It has been tried repeatedly, but in vain, in the case of the Lar Familias or protecting spirit of the house (cf. Fustel de Coulanges, La Cité antique, p. 20; Nissen, Tempium, p. 148; Rohde, Psyche, i. p. 254).

2. Having rid our discussion of any connexion between the deified dead and other individual deities of Rome, we must now try to make clear to ourselves what the concept of the Di Manes was, and how the Romans felt towards them. It has often been asserted that the Romans had from the beginning an idea of the immortality of the soul. This statement is absolutely misleading. We have seen that the habit of thought of the early Romans posited a double for everything; the dead must therefore have a double as well as the living. This double, even though it was the double of the dead, was thought of as possessing a certain sort of life—it could at certain times return to earth and exercise an influence for ill upon the living. This potentiality, however, was simply one of a vast number of similar potentialities, and was no individual about it, except its relation to its own family represented by the living members. Subsequent centuries, saturated with Greek philosophy and filled with an idea of individuality which the earlier Romans had totally lacked, have identified this poor shadowy potentiality with the human soul, and read into the whole matter a belief in immortality.

In the presence of the mystery of death, a mystery which even the light of Christianity has not wished fully to remove, men’s minds do not work logically, and there is no part of religious beliefs where contradictions are more abundant than in the beliefs concerning the dead. Roman religion, in spite of its generally logical character, is no exception to the rule. It will never be possible for us, even with all the sepulchral inscriptions in the world, to establish one formula which will cover all cases—for the simple reason that no such formula ever existed. We are, however, able to make a general statement, which will fairly well the normal concept, apart from the very numerous and very contradictory deviations.

When a man died, he went over into the Di Manes,—the good gods,—entering their ranks and assuming all individuality and all specific earthly relations, except that, when they came to earth, they visited the living members of the family to which they had belonged on earth; and thus the family idea, so fundamental in the social structure of Rome, triumphed over the grave, and possessed an immortality which the individual failed to obtain. The inclusiveness of the term Di Manes is seen in the fact that the gods who ruled the dead, as well as their subjects, the dead themselves as gods, were all included in the one phrase, though it is generally supposed that the actual gods of the dead, though demonstrably present, never rose to great individual prominence until the Greek Pluto—Persephone came into Rome as Dis-Proserpina.

3. Upon this theory of the Manes the cult followed inevitably. If the dead were able to influence the affairs of the living, they must be propitiated, and inasmuch as their interference was primarily with the affairs of the family to which they had originally belonged, and still did belong, it was incumbent upon the living members of that family to see that they were propitiated. Thus the cult of the dead was in its origin an ancestor-worship, and may well have been originally a family matter exclusively. Further, it was incumbent upon each living member of the family not only to perform these sacrifices, but also to
provide those who would succeed to the sacrifices after his death, in other words, to propagate the family. As for the State itself, it was also a family; and thus in that macrocosm of family life which the early State religion shows,—with its Vestal and its Penates, there might come also sacrifices for the dead, not only for the dead already provided for by their own families, but also for that ever-increasing number of ‘ancestors’ whose descendants, in spite of all precautions, had created, that homeless throng of spirits whose immediate influence on the world had been removed, and who therefore all the more readily would turn their ill-will against the State at large, unless she gave them satisfaction. Thus it was that both the sacra privata and the sacra publica were in part a worship of the dead.

There are sufficient suggestions and recollections in the body of Roman law to warrant the assumption of this theory, as one readily recognizes, is a close parallel to the Hindu law; but there is also this distinction, that, whereas Hindu law is based directly upon a sacred foundation, Roman law, when we first meet it, is already in the dual state of Duressium and its Jus Mortuum, with its intricate interlocking, so that we have now only the shadow picture of what once was. But even the shadow picture is by no means complete, and the jus Mortuum formed one of the regular topics of Roman law, especially in Roman religion. The Cardinal principle was the continuity of family worship (perpetuum aera mortu). Thus Cicero (de Legibus, ii. 22) quotes an old law: ‘Let private mortuaries keep sacred the laws concerning the divine dead.’ The heir was under obligations to continue that, and this prior lien on any money that he might receive, the inheritance might bring him. Similarly, cases of adoption were often motivated by the desire of the adopter to obtain an heir to the sacrifices, so that the process was civil, it was necessary, inasmuch as it involved the giving up of one set of sacrifices and the taking on of another. The act of adoption, to discuss it in the oldest and most primitive of all the assemblies—the Comitia Curate— and to obviate the consent of the Pontifex Maximus to the giving up of the one set of sacra (the so-called deatetasticorum, cf. Hunter, p. 766), a consent which was never given if the transfer left the heir under the shadow of an earthly representative (for a similar precedent in Hindu law, cf. Hunter, p. 205, n. 3). We may also compare the old law ascribed to Romulus (Plut. Rom. 22), whereby whoever sells his wife is given over to the Manes, probably because this was a blow to the stability of the family, and hence to the continuity of sacrifices to the dead. The actual motive underlying all the jura Mortum, all the enactments concerning the dead, was not either a chivalrous pity nor primarily a regard for the comfort of the dead, but the most general one is the desire to prevent the living from offending the gods of the other world, and lest the powers under the earth might hinder the gathering of the crops which had consumed half the land each year before the beginning of the harvest a sow (porca praestans) was sacrificed to Tellus (and probably also to Ceres) (by him who had not given the dead his due) (Paul. p. 295); later, by all men to Ceres and Tellus together, for fear they might have offended, so that eventually it became customary to offer such a sow as a sacrifice to Ceres for a good harvest (Wisw. p. 180).

4. In its earlier stages the cult of the dead belonged to the religion of fear rather than the religion of love. The spirits of the dead were capable of doing injury; they must first be brought to rest in the lower world. There they were incapable of doing harm, and they could rise from there only on certain occasions, and on those occasions religion provided for their pacification. All the cult acts pertaining to the dead may be traced. Before, under, and above the earth, there was a continuous bringing of the spirits to rest, which must be done immediately after death, and the placating of the spirits on the regular annual occasions when they returned to earth again. Around this crude religious form the word had its meaning, the cutting of the hair, the breathing a new and better spirit into these old forms, and possibly instituting one or two festivals of its own. But we must deal first with the self-protective apotropoeic side. A connection with death and burial do not as a whole concern us here, but merely those festivals which were strictly religious in character. These features seem, all of them, to go back to two ideas which are so intertwined that for us they are practically inseparable—possibly they always were. One is the offerings given to the dead as a newly formed member of the Manes, including a proper burial, as giving him a home, and the offerings of food, etc.; and the other is the ceremonies of purification which were necessary for the living, after their close contact with this lower world at the edge of the open grave (cf. the idea of the Manes coming for the dead, which occurs occasionally in inscriptions, e.g. CIL ii. 2255 [Corduba]: ‘the Manes have taken Abullia’). There is a considerable degree of uncertainty attaching to the exact order and the time for the various ceremonies connected with and following the funeral; writers of the Empire, who are practically our only authorities, seem to be confusing Greek and Roman ideas, and older with newer Roman customs, and possibly the details will never be fully straightened out. But in general the matter was as follows. The supreme duty towards the dead was burial. Doubtless an ethical motive of piety, a desire to give the dead a home for his own sake, often re-inforced by the fear for the living, was the reason why the family would take care that the dead did not return (as Romans believed they would) to haunt the living until a place was provided for it (Tertullian, de Anim. 56: ‘It was believed that the unburied dead did not descend into Hades until after they had received their due,’ i.e. burial). Curiously enough, in certain cases it seems to have been felt that the dead had forfeited the right of burial, e.g. in the case of suicides, of those lawfully put to death, the process was continued. Here it was an equally great duty to abstain from burial, and there seems to have been no fear of evil consequences from their shades. But in all other cases burial was an ethical imperative (Quintilian, Inst. 10, c. 6: ‘Because even when a just man has returned to his resting place, and no one ever in too good a hurry to honour an unburied body by putting earth, be it ever so little, on it.’) The question of burial versus cremation in the various epochs of Roman history does not concern us here, for in either case the grave was sacred; but burial seems always to have held at least a symbolic supremacy—owing to the as resexctum, or the custom of burying at least a portion of the body, e.g. a finger, when the rest was cremated. The burial itself was a self-protective act; in comparison with it the other acts were of relatively minor importance; and most of these acts seem to have had to do with the purification of the surviving members of the family rather than with the dead himself. One act of purification took place before the body was carried out for burial: the sacrifice to Ceres of a sow (porca praestans, not to be confused with the porca praestans above), ‘for the sake of purifying the family’ (Pestus, p. 220; cf. Mar. Victor. p. 25). In all probability Tellus, Mother Earth, and not Ceres, was the original recipient of the sacrifice, which was transferred to Ceres under the influence of the Greek Demeter cult (cf. Wiswosa, p. 161); and hence the sacrifice was probably originally a double sacrifice, of two Ideas united, as in the self-protection for the dead. On the day of the funeral and at the grave itself a sacrificial banquet seems to have been offered to the dead (sticernum, cf. Marquardt, Privatleben, p. 378). It consisted probably of very much the same things as were offered at the regular annual celebration of the Parentalia (see below). The nine days immediately following the funeral were days of mourning and purification, the sacrum novemnalia, the same term that was decreed by the Senate would be observed for extraordinary periods of devotion occasioned by some great calamity (on the number nine as a sacred number cf. Diels, Stibyll. Blatter, p. 41). On some of these days the Feriae Diaenales occurred, a celebration about which we know little, except that
the attendance of the members of the family was considered so necessary that the military authorities recognized it as a valid excuse for the absence of a recruit from the enlistment inspection, 'provided it had not been set on that day for the purpose of serving as an excuse' (Gell. xvi. 4. 3 ff.). The period of mourning continued on the ninth day, when only offerings to the dead, the cena novemdialis; and if funeral games were celebrated at all, as they often were, they occurred on this day (ludi novemdiales). The spirit of the dead was now safely housed in the lower world, whence he might be distinguished occasionally, and the Roman could go about his daily business, mindful only of these stated occasions when they arrived.

5. As regards the lower world itself, the Romans seem originally to have interested themselves very little in it. Every bit of description is given us by writers under Greek influence, and the details are identical with those of the lower world of the Greeks. Now, it is not likely that a strong Roman tradition could thus have been totally destroyed; we can only find in it the rudiments of the old beliefs. Hence it is probable that the Roman lower world was not furnished with the fittings of imagination until Greek mythology provided the models. There is nothing strange about this, when we realize that the former, now completely forgotten, had precluded the growth of mythology for both the greater and the lesser gods. From the time of the Punic wars onwards the Romans pictured to themselves the lower world in just the same form as the Greeks had done (cf. Rohde, Psyché, vol. i.); and before that time, if they thought of it at all, and inevitably they must have done so to some slight extent, it was merely as a place of shadows and darkness. Their practical concern was the question of the eventual return of the spirits to trouble them; and hence their attention was concentrated not on the lower world in pleasant poetic fancies, but on the door between it and the upper world, the passage through which these divine dead came up. This entrance was the mundus, about which the Romans possessed original beliefs strong enough to remain even under the pressure of Greek thought. The mundus was the opening of the lower world; it was in the form of a trench into which sacrifices to the gods of the lower world, and the dead gods, were thrown. In the centre of every town, at its foundation, such a trench was dug and sacrifices performed. The oldest mundus of Rome was that of the Palatine city (for its location cf. Richter, Die ältesten Wohnstätte des rom. Volkes, Berlin, 1891, p. 7 ff.; Hülsen, Röm. Mitt. v. 76 ff., xi. 202 ff.). It was opened three days in the year: August 24, October 5, and November 8; probably the stone, and possibly some earth was removed (cf. Festus, p. 142; Macrob. Sat. i. 15. 17 ff.). "When," as Varro says (cf. Macr. i. 1), "the mundus is open, the door of the sad gods of the lower world is open, therefore it is not proper on those days for a battle to be fought, troops to be levied, the army to march forth, nor should anyone be married. There were other sacred trenches of the same sort in Rome: one in the Forum, the Lacus Curtius, connected with the story of M. Curtius (recently discovered; cf. Hülsen, Röm. Forum, p. 159; and, in general, Gilbert, Top. i. 304 ff.), another the so-called grave of Tarpeia, opened on Feb. 13, when one of the Vestals made sacrifice there (cf. Mommsen, CIL i. p. 309; Schwager, Röm. Gesch. i. 486; and, in general, on Tarpeia, cf. as a forgotten goddess of the lower world, Wiesehöfer, Rel. 187 (1908), still another at the 'grave of Larentia' in the Velabrum, to which on Dec. 23 the Pontifices and the Flamen Quirinalis brought offerings (Varro, Ling. Lat. vii. 23 ff.; Fast. Prim. to Dec. 23; cf. Wissowa, p. 188 and note 1).

6. Apart from these special occasions for each particular mundus, there were two general occasions in the year when all the spirits of the dead were supposed to return to earth. The first days of May were called the Parentalia, and the Roman women, and the Romans in distinct contrast to that of the Greeks and of most other ancient peoples. The dead had the

Since the Lemuria represents a more primitive stage, it had better be discussed first. The most picturesque account is that given by Ovid (Fasti, v. 419 ff.), but we must be on our guard in using it, remembering that Greek ideas and local custom may be blended in everything Ovid writes. The ceremony takes place at midnight. The father of the household, barefooted, passes through the house, throws black beans behind his back, and says nine times, 'These I give, and with my hand and my mouth make holy all things, and most especially the wild and sacred places, and the altars which have been received on the first day, and which are called Manes ex pro paterni, 'Go forth, ye divine shades of my fathers.' The comparison of this ceremony with the 'driving out of the ghosts,' so common among primitive peoples of to-day, and itself itself immediately (cf. Fraser, Golden Bough, iii. 83 ff. Here, as everywhere else in this interesting and valuable book, the reader must exercise great care in examining the sources given, as they differ widely in scientific value; cf. also Rohde, Psyché, i. p. 281). The Parentalia presents quite a different picture. As its name implies, it is the festival of the parentes, or the making of offerings to one's ancestors. It began at noon of Feb. 13 and continued for nine days. The first eight days belonged only to a few of the faithful, while the ninth day (Feb. 21) was also a public celebration, the Ferialia (Varro, op. cit. 15; Paul. p. 55; cf. Marquardt, iii. 310 ff.). During all these nine days marriages were forbidden, the temples were closed, and people did not wear any dress. Every family decorated the graves of its ancestors and made offerings there. Most appropriately, on the day after the close of the Samian, and once among primitive peoples of to-day, as the sacrifice itself is immediate immediately (cf. Fraser, Golden Bough, iii. 83 ff. Here, as everywhere else in this interesting and valuable book, the reader must exercise great care in examining the sources given, as they differ widely in scientific value; cf. also Rohde, Psyché, i. p. 281). The Parentalia presents quite a different picture. As its name implies, it is the festival of the parentes, or the making of offerings to one's ancestors. It began at noon of Feb. 13 and continued for nine days. The first eight days belonged only to a few of the faithful, while the ninth day (Feb. 21) was also a public celebration, the Ferialia (Varro, op. cit. 15; Paul. p. 55; cf. Marquardt, iii. 310 ff.). During all these nine days marriages were forbidden, the temples were closed, and people did not wear any dress. Every family decorated the graves of its ancestors and made offerings there. Most appropriately, on the day after the close of the festival, Feb. 22, a family festival, the Caristia, or Cara Cognatio, was held, when family quarrels were adjusted, and the peace which the individual member of the family had just made with the dead was now extended to the living members among themselves (cf. Ovid, Fasti, ii. 617; Val. Max. ii. 1, 8; Calend.Elem., as CIL i. p. 256).

The attempt has been made to distinguish between the Lemuria and the Parentalia by considering the former as the festival of the dead, the latter as the festival of the buried, and therefore hostile, dead, and the latter as the festival of the buried, and therefore hostile, dead. (cf. Wards, Fowler, Roman Festivals, p. 108). The idea of fear is certainly more prominent in the Lemuria than in the latter; but the Lemuria are just the same ancestors as the Di Parentes, and the very fact that their interference, either for good or for ill, is confined to stated seasons, proves that they were buried, i.e. admitted into the lower world and resident there ordinarily.

Of the other yearly festivals of the dead we know but little; we hear of a festival of the Caristia on the first day of May (Calendae Fabarum, Varro in Non. p. 341; Macr. Sat. i. 12, 31; Ovid, Fasti, vi. 101 ff.), so called from the offering of beans to the dead; but roses were also offered (CIL iii. 3992).

In one respect the ancestor-worship of the Romans was in distinct contrast to that of the Greeks and of most other ancient peoples. The dead had the
power of returning to earth again on stated occasions, but they could not be called up and consulted. 'Necromancy' was an altogether important idea, and wherever we meet with references to it, foreign influence is present. The absence of this characteristic is no accident. The idea of prophecy was nowhere hardly present in any form in native Roman religion; their science of augury and of the horuspices was simply a means of ascertaining the approval or non-approval of the gods in regard to a certain action, merely of obtaining an answer to a categorical question. But if the facts were called up arbitrarily to give information, it was possible for certain individuals to be over to them for punishment, as in the consenratio, or for certain individuals voluntarily to give themselves over to them in the devotio. Consenratio is the transfer of a person or thing out of the realm of the *jus humanum* into that of the *jus divinum*. Where a person is involved, it is, of course, a punishment. Persons or things might thus be given over to any deity or goddess. Of the two, *Di Manes* formed no exception; e.g., a man who sold his wife was *dis manibus aover* (Pint. Rom. 22); also a child who struck his parent (Fest. p. 230); and the violator of a grave (CIL x. 4535). The cases and statistics of the devotio and of the consenratio are these. It is in the nature of a vow, made to the *Di Manes*, or Tellus and the *Di Manes*, whereby a man's life is given to the *Di Manes* in advance in order that other men's lives may be destroyed. We have already said (Papir. Wissow. i. 224) that the *Di Manes* offered their own lives that the enemy of the State might be destroyed: the first case of Decius, the father, in the battle of Venusius, B.C. 340 (cf. sep. Livy, viii. 6. 8–16 ; 9. 1–11, and, in general, Münzer in Papir. Wissow. i. 226); the second case of the *Di Manes*, the son, in the battle of Sentinum, B.C. 295; and the third case of Decius, the grandson, in the battle of Asculum, B.C. 279 (cf. Münzer, ib. i. 2265; on the devotio proper cf. Panly-Wissow. iib, s. u.). The devotio, as a curse directed against private individuals, does not belong to this period, as it arose entirely under Greek influence, and does not seem to have been prevalent until the Empire.

II. FROM THE CLOSE OF THE REPUBLIC UNTIL THE ESTABLISHMENT OF CHRISTIANITY.

1. In the earliest periods of Roman religion the *Di Manes* were quite as truly gods as any of the other deities, and quite as unlike the later god-concept as any other of the gods. They were all alike thought of anamistiically as mere potentialities; but the other gods were destined to develop and to obtain an individuality, whereas the *Di Manes* remained an unindividualized mass of spirits, into which the dead man went at death, losing, so far as the cult was concerned, all his individuality except merely his family relationship. To be sure, under Greek influence certain gods of the dead were adopted by the Romans, namely, *Tiburius and Proserpina*. After death, on the assumption of the gods of the upper world; but this had the effect of only emphasizing the more the undeveloped dense mass of the *Di Manes*. On the other hand, during these centuries of the Republic, another idea had been slowly developing—the idea of the *Genius* (or if a woman, the *Juno*), or divine double of the individual, accompanying him during all his lifetime. In the question as to what became of the *Genius* at the death of the individual, and in the meaning of that god bearing to him a life after death, the idea of personal immortality had its rise in Rome. The statements of later writers are obscure, partly by purely philosophical ideas foreign to the real beliefs of the many, and partly by a desire to identify and generally systematize all forms of Roman belief; but we can dimly recognize the following development. Originally the *Genius* and the *Di Manes* had no connection whatsoever, except the mere matter of sequence; so long as a man lived he had a *Genius*, an individuality, at first thought of as merely physical, later as psychological; but when he died, his individuality ceased, he was gathered to the majority (not the divine doubles of the individuals in it), the *Di Manes*. Now, in the course of time, one of the effects of Greece on Rome was the development of individuality and might not have just the individuality. All these ideas centred in the *Genius*, and hence it was natural to think of the *Genius* as existing after death. It must, however, in that case stand in some relation to the *Manes*, it must be identical with at least a part of them, that part contributed by the individual at his death. It is not surprising then, that, beginning with the Augustan age (cf. Hübner, in Müller's *Handbuch*, i. p. 529, § 47), the idea of the individual makes itself felt in connexion with the death of the *Manes*, and we have the form (which soon becomes the ordinary form), 'To the *Manes* of, or belonging to, such a man,' emphasized occasionally by the addition of the *Genius* (cf. CIL v. 246, etc.). Sometimes the number of the other bacilli are these. It is in the nature of a vow, made to the *Di Manes*, or Tellus and the *Di Manes*, whereby a man's life is given to the *Di Manes* in advance in order that other men's lives may be destroyed. We have already said (Papir. Wissow. i. 224) that the *Di Manes* offered their own lives that the enemy of the State might be destroyed: the first case of Decius, the father, in the battle of Venusius, B.C. 340 (cf. sep. Livy, viii. 6. 8–16 ; 9. 1–11, and, in general, Münzer in Papir. Wissow. i. 226); the second case of the *Di Manes*, the son, in the battle of Sentinum, B.C. 295; and the third case of Decius, the grandson, in the battle of Asculum, B.C. 279 (cf. Münzer, ib. i. 2265; on the devotio proper cf. Panly-Wissow. iib, s. u.). The devotio, as a curse directed against private individuals, does not belong to this period, as it arose entirely under Greek influence, and does not seem to have been prevalent until the Empire.

2. The worship of the dead and emperor-worship.

—The elevation of the Roman emperors into gods was caused by two entirely distinct sets of tendencies; the one coming from the Orient, a tendency which, in so far as it was not checked (as it always was by all the better emperors), made the emperors into gods during their lifetime as well as after death; the other a thoroughly Roman concept, the idea that during life not the man but only his *Genius* was divine, but that after death, when the *Di Manes* still lived, as the individualized *Manes*, the offerings might be made to the individual. The difference, therefore, between an emperor, who allowed himself to be worshipped merely within the limits authorized by Roman ideas, and an ordinary Roman citizen was this: during lifetime the *Genius* of each was an object of worship, but the emperor's *Genius* was always, in all cases, one of the regular gods of the State cult, whereas the *Genius* of the individual belonged purely to the private cult, usually confined to a man's household. The death of an emperor was an event of the highest nature; everyone was enthusiastic over it. The *Genius* of the dead emperor were worshipped as gods, with a similar distinction, namely, that in the case of certain emperors the Senate, after examining their acts, decreed that they should be included among the regular gods of the State. The only real distinction, therefore, was the inclusion of the emperor's *Genius* among the gods of the State in every case, during life, and the inclusion of the emperor himself, i.e. his *Manes*, among the State gods in certain cases after death. There can be little doubt that emperor-worship had the effect of strengthening the worship of the dead in general.

3. The worship of the dead and Christianity.

—Among the many difficult problems which the teachers of the Christian religion had to solve in
ANCESTOR-WORSHIP (Slavonic and Teutonic)

the Roman world, perhaps none was more difficult than presented by the concept of the worship of the dead as protecting and helping deities. Polytheism, so far as the greater gods were concerned, had among the educated classes gone over into monotheism without the aid of Christianity, merely by the doctrine of a philosophical system, with inborn, almost instinctive beliefs, bred in the bone, such as the divinity of the dead, that the Church's real battle had to be fought. Her method was one of compromise; it was the authorization, nay the encouragement, of a worship of certain of the dead, with which evidently need the saints, too, must accomplish something for them. This also was granted by the Church, but merely in the sense that the saints acted as intermediaries, whose intercession with God would increase the praying of one's petition. Theology stopped there, but humanity went further. By that facile transfer of the means into the end, of the intermediary into the final, which is so characteristic of simple minds, aided too as they were in this case by a habit of thought which had made the dead into gods like other gods, these saintly intercessors soon became gods on their own account, and the legend of each became a cult-legend, indicating the circumstances in which each was especially powerful. Thus there arose, literally from the dead, a host of minor gods, a myriad of potentialities, like the old gods of the so-called Indiginta menta. Human frailty had, at least in the lower classes, triumphed over theology, and the real religious world of the Roman's latest descendants bore a startling resemblance to that of his pagan ancestors in the days of Romulus. See also art. ROMAN RELIGION.

JESSE BENEDICT CARTER.
ancestor-worship is to be found in the records of the colonists of Iceland, who believed that all members of their families would pass after death into certain hills. They regarded these places with special reverence, and constructed sacrificial shrines there. The element of ancestor-worship may be said to enter into the cult of certain gods, from whom most royal families, in England as well as in the North, claimed descent. Yet in the case of deities whose cult was wide-spread, such as that of Woden-Othin (by far the most ancient case), it would be unsafe to assume that this was the original element. On the other hand, deities whose worship was more or less local, like Thorgerdr Hólgabrot, may very well have been regarded originally as such by spirits. For the connexion account is to be taken also of the hamingi, guardian-spirits of families, who are represented as similar to Valkyries or warrior maidens.

Ancestors, mention must be made of the eft—a word which in other Teutonic languages means inherited property, but in Scandinavian a wake or feast in honour of a dead person, especially the head of the house. Such feasts were often held on an immense scale, and many hundreds of persons invited. Large quantities of ale were then drunk in memory of the deceased—whence the banquet was also called etf-il, a name which survived until recently in the northern English word arvel. The wives of the deceased were for the first time allowed to occupy the vacant high seat. At religious festivals also it was customary to drink to departed relatives as well as to the gods.

The Cult of the Dead among the Teutons will be fully described under art. Aryan Religion.

B. CHADWICK.

Ancestor-Worship and Cult of the Dead (Ugro-Finnic).—Ancestor-worship and cult of the dead is, so far as we can judge, the oldest form of religion among the Ugro-Finnic peoples. It is still the only form common to their folk. Their places of sacrifice frequently stand in close proximity to their places of burial; their images are chiefly representations of the dead; their offerings are to be explained by the needs (food, clothes, etc.) of the dead; and their whole system of magic seems in the main to aim at a union with the spirits of the dead. See artt. Finns, Lapps, Mordvinians, Ostiaks.

Kaare Krohn.

Andamans. I. The Country and the People.

The Andamans form the Northern portion of a string of islands, seven hundred miles long (the Nicobars forming the Southern portion), stretching across the Eastern side of the Bay of Bengal, between Cape Negrais in Burma and Achin Head in the Philippines. This very long, but narrow, plain in combination with phenomena exhibited by the fauna and flora of the respective terminal countries, have long been held to point to the former existence of a continuous range of mountains, thought to be sub-aerial, between these two points. Assuming this opinion to be correct, the Andamans are, in their present condition, the summits of a submarine range, connected with the Arakan Yoma range of Burma, which has, at some time or other, become almost wholly submerged by a volcanic subsidence. This range need not have been more than the physically possible on the life of this or that two hundred fathoms, to connect a long narrow peninsula, jutting out from the Burma coast with the present Andaman group of islands.

These considerations are of importance for the present purpose, as, according to what we have learned of the tradition of the South Andaman, or Bojirghir, group of tribes that Maia Tomola, the ancestral chief of the nation from which they all sprang, dispersed them after a cataclysm, caused a subsidence of parts of a great island, divided it up into the present Andaman islands, and drowned large numbers of the old inhabitants with many large and small beasts that have since disappeared. He also notes, as tending to show the junction of the Andaman and Nicobar island, that, besides the South Andaman tradition, the people of the Little Andaman have names for animals that do not now exist and which they cannot describe.

Lying as they do in the track of a great commerce, which has gone on for at least two thousand years, both from China and Japan westwards and from the Levant and India eastwards, the existence of the Andamans has been reported probably from the days of the Crusades. (For example, Andamans as described by Ptolomy, 1885, p. 236) under a variety of names, representing some form of Andaman, meaning a ‘monkey’ people, and indicating the savage aboriginal antagonists of the more civilized early population of India. As early as the 9th century, the inhabitants of the islands were quite untruly described by Arab travellers as cannibals (Reinaud, Relation des voyagez, 1845, i. 8)—a mistake that seems to have arisen from three observations of the old mariners. The Andamanese attacked and murdered without provocation every stranger they could seize on his landing, as one of the tribes does still; they burnt his body (as they did in fact that of every enemy); and they would cut off the noses and tongues of their prisoners. Combine these three observations with the unprovoked murder of one of themselves and the fear aroused in ignorant mariners’ minds by such occurrences in a far land, century after century, and a persistent charge of cannibalism is almost certain to be the result. This is a consideration of cardinal importance, as this false charge led to the Andamans being left severely alone until 1857 (except for a brief period between 1799 and 1786), when the British Government was forced to take steps to put a stop to the ships of wrecked crews by occupying the islands. The result is that there exists in the Andamans an aboriginal people uncontaminated by outside influences, whose religious ideas are of native growth and exhibit the phenomena of a truly untaught philosophy.

The Andamanese are naked pigmy savages, as low in civilization as almost any known upon earth, though close observation of them discloses the immense distance in mental development between them and the highest of the brute beasts, one most notable fact being that they eat nothing raw, cooking all their food, however slightly, and making pots for the purpose, and this from time immemorial. Two various tribes belong to one race, speaking varieties of one fundamental isolated language. They are the relics of a bygone Negrito population now represented by themselves, the Semangs of the Malay Peninsula, and the Aetas of the Philippines (though last two being much mixed with the surrounding peoples), who very ancient times occupied the south-eastern portion of the Asiatic Continent and its outlying islands before the irruptions of the oldest of peoples whose existence, or traces of it, can now be found there. In this view these Andamanese are of extreme interest, as preserving in their persons and customs, owing to an indefinite number of centuries of complete isolation, the last pure remnant of the oldest kind of man in existence.
2. Character of the People. — In childhood the Andamanese are possessed of a bright intelligence, which, however, soon reaches its climax; and the adult may be compared in this respect with the civilized child of ten or twelve. He has never had any sort of agriculture, nor, until the English taught him the use of dogs, did he ever domesticate animals or kind kind himself to turn turtle or to use hook and line in fishing. He cannot count, and all his ideas are hazy, inaccurate, and ill-defined. He has never developed, unbiased, any idea of drawing or making a tally or record for any purpose, but he readily understands a sketch or plan when shown him. He soon becomes mentally tired, and is apt to break down physically under mentat training.

He retains throughout life the main characteristics of the child: of very short but strong memory; susceptible of, but hospitable to, strangers; ungrateful, imitative, and watchful of his companions and neighbours; vain and, under the spur of vanity, industrious and persevering; teachable up to a quickly reached limit; fond of undefined games of goona and causal; too easy to be affected in temperament by his superstitions; too careless, indeed, to store water even for a voyage: plucky but not courageous; reckless only from ignorance or inappreciation of danger; selfish, but always jealous of goods and causal to the ancestral spirits, or a sense of honour: petulant, hasty of temper, entirely irresponsible and childish in action in his wrath, and equally quick to forget; affectionate, lively in his movements, and exceedingly taking in his moments of good temper. At these times the Andamanese are gentle and pleasant to each other, considerate to the aged, the weakly or the helpless, and to captives; kind to their wives and proud of their children, whom they often over-pet; but when angered, cruel, jealous, treacherous, and vindictive, and always unstable. They are bright and merry companions, talkative, inquisitive, and restless, busy in their own pursuits, keen sportsmen, and naturally independent, absorbed in the chase for sheer love of it and other physical occupations, and not lustful, indecent, or obscenely abusive.

As the years advance they are apt to become intractable, masterful, and quarrelsome—a people to like but not to trust. Exceedingly conservative and adherent to ancestral customs, they find it difficult to civilization, all the teaching of years bestowed on some of them has introduced no abstract ideas among the tribesmen, and changed no habit in practical matters affecting comfort, health, and mode of life. Irresponsibility is a characteristic, though instances of a keen sense of responsibility are not wanting. The intelligence of the women is good, though not, as a rule, equal to that of the men. In old age, however, they frequently exhibit a considerable mental capacity which is remarkable.

There is no idea of government, but to each tribe and to every sept of it belongs a recognized chief, who commands a limited respect and such obedience as the self-interest of the other individual members of the tribe or sept dictates. There is no social status that is not personally acquired on account of some admitted superiority, mental or physical. Property is communal, as is all the land; and the ideas as to individual possessions, even as to money, age, and rank, are acquired and are accompanied by an incipient tabu of the property belonging to a chief. Custom is the only law, and the only explanation of social actions or of the form and adornment of manufactured articles. In the religion of such a people as this, religion is seen in its most primitive form.

3. Religion. — The religion is simple animism, and consists of fear of the evil spirits of the wood, the sea, disease, and ancestors, and of avoidance of acts traditionally displeasing to them, and this in spite of an abundance of mythological tales told in a confused, disjointed manner. There is neither ceremonial worship nor propitiation. There is an anthropomorphic deity, Puluga, the care of all the ancestors, whom it is not necessary to propitiate, though sins, i.e. acts displeasing to him, are avoided for fear of damage to the products of the jungle. Puluga now dwells in the sky, but used to live on the top of Saddle Peak, their highest mountain. The Andamanese have an idea that the ‘soul’ after death will go under the earth by an aerial bridge, but there is no heaven or hell, nor any idea of a bodily resurrection in a religious sense. There is much active faith in dreams, which sometimes control subsequent conduct, and in the utterances of ‘wise men,’ dreamers of prophetic dreams, gifted with second sight and power to communicate with spirits and to bring about good and bad fortune. These practise an embryonic magic and witchcraft to such personal profit, by the use of talismans, charms, and inanimate objects, which these people appreciate. There are no oaths, covenants, or ordeals, nor are there any forms of appeal to supernatural powers.

Puluga, who is fundamentally identifiable with some deity of the storms (tabu), despite his confusion with ancestral chiefs, has so many attributes of the Deity that it is fair to translate the term by ‘God.’ He has, however, a wife and a family of one son and many daughters. He transmits his orders through his son to his daughters the Morans, who are his messengers. He has no authority over the evil spirits, and contents himself with pointing out to them offenders against himself. The two great evil, i.e. harmful, spirits are Erem-chauga of the forest and duruin of the sea. Like Puluga, both have wives and families. The minor evil spirits are Nila, and a numerous class, the Chol, who are practically spirits of disease. The sun is the wife of the moon, and the stars are their children, dwelling near Puluga, but there is no trace of sun-worship, though the Andamanese twang their bows and ‘chaff’ the moon during an eclipse; and a solar eclipse frightens them, keeping them silent.

The Andamanese idea of a soul arises out of his reflexion in water, but not attachment, and not the desire, which follows him about. His reflexion is his spirit, which goes after death to another jungle world (chatian) under the earth, which is flat and supported on an immense palm tree. There the spirit repeats the life here, visits the earth occasionally, and has a distinct tendency to transmigration into other beings and creatures. Every child conceived has had a prior existence, and the theory of metempsychosis appears in many other superstitions, notably in naming a second child after a previous dead one (because the former babe has been transferred to the present one), and in the recognition of all natives of India and the Far East as changa, or persons endowed with the spirits of their ancestors.

4. Superstitions. — The superstitions and mythology of the Andamanese are the direct outcome of their beliefs in relation to spirits. Thus fire frightens Erem-chauga, lit. ‘Forest-ghost,’ so it is always carried (the practical reason is that the Andamanese are the only people known who have never been able to make fire), and not until they have experienced the strength of the sun and the moon, they keep silence at their rise. Puluga shows himself in the storm, and so they appease him by throwing explosive leaves on the fire, and deter him by burning beeswax, because he does not like the smell. Earthquakes are the sport of the ancestors. There are lucky
and unlucky actions, but not many, and a few omens and charms. Animals and birds are credited with human capacities. For instance, murdered persons have been found with heavy stones placed on them, and with stones placed along the pathway. Every Andaman other knows that this is a warning to the birds not to tell the English that the man has been murdered, but that the murderers have passed along the path in front. Primitive simplicity here comes to the surface, as the presence of the stones tells as an Englishman who understands the signs exactly what has happened.

5. Mythology.—The great bulk of the Andamanese mythology turns on Puluga and his doings with Tomo, the first ancestor; to him and his wife Puluga brought fire and taught all the arts, and for them he created everything. This line of belief is still alive, and everything natural that is new is attributed to Puluga. Thus, when the Andamanese were introduced to the volcano on Barren Island, seeing the smoke from the top, they at once named it Moolarchona, 'Smoking island,' and said the fire was Puluga's. The next most important element in their mythology is the story of the cataclysm which engulfed the islands, and was, of course, caused by Puluga. It separated the population and destroyed the fire, which was afterwards stolen by Luratut, the kingfisher, and restored to the people. The population previous to the cataclysm became the changas, or 'ghostly ancestors.' Other stories relate in a fanciful way the origin of customs (e.g. tatuing and dancing), the arts, articles of food, harmful spirits, and so on. An important ethnological item in these stories is the constant presence of the ideas of metamorphosis, and of metamorphosis into animals, fish, birds, and other objects in nature. Indeed, the fauna chiefly known to the Andamanese are ancestors changed supernaturally into animals.

6. Customs.—There are rudimentary initiatory ceremonies for both males and females connected with arrival at puberty and marriageability, and pointing to a limited tabu, but they are not accompanied by the communication of any secrets or by any religious ceremony. The women also practise a limited tabu as to food during menstruation and pregnancy. The idea of tabu does undoubtedly exist as to food, and every man has through life his own tabued article. This is, however, usually something observed to disagree with him in childhood or to be unpalatable. Tatuing is partly ceremonial and the perpetual evening dancing also becomes ceremonial on occasion. Neither has any religious significance, and the songs accompanying the dances rarely relate to beliefs and superstitions. Among the games, mock burials and 'ghost' hunts are favourites. Religion does not enter into the naming customs, except possibly into the 'flower' names for girls, which are bestowed after some one of sixteen selected trees which happen to be in flower at the time they reach puberty.

The Andamanese are monogamous, and by preference, but not necessarily, exogamous as regards sex, and endogamous as regards tribe, or more strictly, group. Marriages are not religious, but are attended with distinct ceremonies. Betrothal accounted as marriage is recognized, and the marriage relations are somewhat complicated, and quite as strictly observed as among civilized communities. Deaths occasion loud lamentations from all connected with the deceased. Burial in the great earthwork is universal, as an honour, and is practised. A death causes an encampment to be ceremonially marked, and to be deserted for about three months, and burial spots are also marked and avoided. Mourning is observed by smearing the head with grey clay and refraining from a meal for the above period. After some months the bones of the deceased are washed, broken up, and made into ornaments. To these great importance is attached as mementoes of the deceased, and they are believed to stop pain and cure diseases by simple application to the diseased part. The skull is tied round the neck and worn by the chief, usually, but not always, by the widow, widower, or nearest relative. Mourning closes with a ceremonial dance and the removal of the clay. The ceremonies connected with the disposal of the dead are conventional, reverential, and by no means without elaboration in detail.

R. C. TEMPLE.

ANDEANS.—I. The pre-Inca people.—For the study of the Andean religions it is necessary to take account of a civilization which flourished long before the rise of the Incas; because the power inherited some of the names, and with them the religious belief, of the more ancient people. Near the south shore of Lake Titicaca, now over 12,000 feet above the sea-level, there are very extensive ruins of a most remarkable character. They are of such great extent that there must have been a very large population in the vicinity; the stones are of such size, and any possible quarry so distant, that the people must have been possessed of very remarkable mechanical skill; and they are cut and carved with such accuracy and precision that the workers must have been skilful masons. The mouldings and symmetrical ornamentation show most accurate measurements, and no want of artistic taste. There were temples, market places, and much detailed carving. The monoliths are so enormous, one of them 36 feet by 7, another 26 feet by 16 by 6, that they are excelled in size only by the obelisks and statues of Egypt.* The ancient people who built them may well receive the name of the monolithic people, forming a monolithic empire.† Universal tradition points to the south as the direction whence they came. The building of Tiahuanaco, as the ruins are now called, necessitated a great population, and the result of long ages of civilization—and abundant supplies of food.‡ It appears certain that the region could not have been at its present elevation. At 12,600 feet no corn will ripen, and the country can sustain only a very sparse population. Monolithic builders cannot have worked at that elevation, or anything like it. The early Spanish writers give unanimous evidence that the ruins of Tiahuanaco were built long before the time of the Incas.¶

2. Pre-Inca religion.—The only clue to the religion of the monolithic people is to be found in a famous doorway cut out of one enormous stone. The masonry is excellent throughout, and all the lines are as straight, the angles as square, and the surfaces as level as could be produced by any good workman of the present day.‖ The length of the

¶ Inwards The Temple of the Andes, p. 21.
monolith is over 13 ft., and the opening of the doorway 4 ft. 6 in. by 2 ft. 9 in. Above the doorway there is much carving. There is a central figure with many symbols and accessories. There are rays round the head; in each hand there is a sort of sceptre ending with heads of birds, the monoliths are the same as those round a golden representation of the sun of the Incaian times, denoting the Inca months Cacay and Ccapac Raymi. It is the work of a highly skilled mason, but not of a sculptor. On each side of the central figure there are three rows of kneeling figures, each in rows of four. They all hold a sceptre, a tassel, and an ornament. Those on one side have the heads of men, and on the other those of birds. Underneath there is a beautifully designed ornament running along the length of the stone, consisting of rectangular patterns, ending with birds' heads, and three human heads similarly ornamented. This central figure may, the present writer thinks, be assumed to represent the deity worshipped by all the chiefs of the people and all the animal creation. But there must have been an interval of many centuries between the fall of the monolithic empire and the rise of the Incas. When the old empire fell to pieces, the Andean region must have been occupied by many tribes, and the Inca state was formed by a union of them. It had a language of its own, the Quichua, and a people of its own, the Quichua. There were many dialects. One, spoken in the basin of Lake Titicaca, received the name of Aymara from the Jesuit missionaries of Juli; another spoken in the region of the Incas was called Quichua by the first Spaniards who wrote its grammar; another dialect was spoken further north. Eventually, some five centuries before the arrival of the Spaniards, the Incas began to form another great empire, and their language prevailed over the others.

3. The Incas.—There had been a long interval of disintegration. Nevertheless, all memory of the monolithic empire had not been lost. There were myths telling how the great God first made Himself known at Lake Titicaca, how the sun first appeared there, and how the first man was created there. But the main tradition was the revelation of the almighty God, named Viracocha, who is carved with his adoring worshippers on the monolithic doorway. His worship was maintained by chiefs and learned men, after the old empire had disappeared, and was inherited by the Incas. Some of the other names were handed down as attributes of the almighty God. The chief of these were Con, Illa, Yvari, Pachayachachi, Pachacamac. The meaning of Con is unknown. Illa means light. Yvari is said to be a founder. The anonymous Jesuit explains the word as Principium rerum sine principio. The derivation of Viracocha is lost to us. Two authorities say that the first part of the word is a corruption of piruca, a depositary or abode. The primary meaning of cocha is a lake, but here it is said to mean an abyss, profundity, space.—'Dweller in space.' Pachayachachi and Pachacamac are attributes of the deity. Pacha means time or place, also the universe, yachachi a teacher, camac to rule or govern—'The teacher and ruler of the universe.' The name Viracocha sufficed to convey to the minds of the Incas the idea of a Supreme Creator, yet they added other terms to it, intended to express some of the attributes of the deity.

4. Viracocha.—The Incas, with their Amautas

*(wise men) and Quippuamayoos (registrars), certainly worshipped the Supreme Being under the name of Viracocha, having received the tradition from remote ages, and they looked upon all other deities as his servants, ordained to do his will. An Inca Indian, named Pachacuti Yamqui Salcamayhua, who lived in the 17th cent., mentions another being as having been made known in the early times, whose fame was handed down by tradition. This was Tomapa, also called Tarapaca and Pachacan. He is also mentioned by Sarmiento as a servant of Viracocha. The details about him are puerile, but it is possible that Tomapa represents a solar myth. The name occurs with that of the creator in some of the Inca hymns. The Incas certainly worshipped Viracocha, the supreme creator of all things, but they approached him as an unknown god, who to them was shrouded in mystery. They cried to him to be taught where he was, that they might know and understand him; and they recognized that the sun, the moon, and the seasons were ordained and ordered by him. They sought to know the will of the Deity, and prayed for a return to prosperity.*

5. Some hymns of the Incas have been preserved by Salcamayhua, but in a very corrupt form, and it is difficult to make out their exact meaning in English; but they are so important for the old Peruvian religion that it seems desirable to give English versions of two of the hymns.

I

'O Viracocha! Lord of the Universe,
Now let me see, 
Now art thou female,
Lord of heat! Lord of generation! 
Can divination be employed 
To learn where thou art?
If away, where art thou?
Whether thou art above, 
Whether thou art below, 
Whether thou art around, 
The thy royal throne and sceptre, 
O hear me! 
From the heaven above, 
From the sea below, 
Where er thou art, 
O Creator of the world, 
O Maker of man, 
Lord of all lords, 
To thee alone, 
With eyes that fall, 
With longing to know thee, 
I come to thee 
To know thee, 
To understand thee. 
Thou seest me, 
Thou knowest me. 
The Sun, the Moon, 
The day, the night, 
Spring and winter, 
They all travel, 
Not ordained in vain, 
From appointed places 
To their destinations; 
They duly arrive. 
Wheresoever may be ordained. 
Thou holdest them 
Underneath, 
Thou holdest them. 
O hear me! 
Let me be thy chosen; 
Do not suffer 
That I should tire, 
That I should die.'

*They were originally printed in the corrupt Quichua, exactly as in the manuscript, in the present writer's translation of Salcamayhua (Hakluyt Society, 1873). Ximénez de la Espada brought out a Spanish edition in 1579, printing the hymns in Quichua in the same way. Don Samuel de Lafonte Quevedo then took the Quichua in hand, and, with the able assistance of Pedro Moci, the author of one of the latest Quichua dictionaries, took the Quichua names, and made, and still more corrections in the separations of words. The text was thus made sufficiently intelligible to bear translation into Spanish (Ensayo Mitologico, los Hombres sagrados de los Reyes del Cuzco, from S. A. Lafonte Quevedo, Talleres del Museo de La Plata, 1892). 

Are these lines, conceivably, intended to convey an idea analogous to the Hindu Linga and Yoni?

ii.
Come, then,
Grand as the heavens.
Lord over the earth,
Oreator of all things,
Creator of man ... Justiniani.

The bodies of the Incas were preserved with extreme care, and it is stated, in the official report of Sarmiento, that the special Huaca or idol of each Inca was kept with the mummy (Sarmiento, Hist.). There were servants for the mummies of the sovereigns, and estates for their maintenance. The names of seven of the so-called idols have been preserved; and they do not support the idea that they were idols in our sense of the word, but rather insignia or commemorative ornaments, perhaps in the nature of 'windows', used by each sovereign in his lifetime. It was a custom, not only as regards the Inca salts, but among all classes of the people, to place with the dead, offerings of food and other things required by them when living. This custom has never been eradicated, and even now it is practised secretly in many parts of Peru. The belief which originated this custom, and which has caused its continuance even to the present day, must have been very deeply seated. It is exceedingly difficult to acquire a complete understanding of the ideas of another race of people which give rise to special customs. But the present writer was well acquainted with an old priest, Dr. Pablo F. Justiniani, a linear descendant of the Incas, whose intense sympathy for his people enabled him to comprehend their ideas, if any one ever did so. He told the present writer that they felt a certainty that their dead continued to exist apart from their bodies, and that they had needs, but spiritual, not corporeal needs. They were certain of this because many of them had seen their dead. Don Pablo attributed this conviction to appearances in dreams and visions. Of a future state of rewards and punishments they do not appear to have had any idea in the time of the Incas, only the conviction that their ancestors continued to exist after death. In this state they were said to be souls without bodies, but still with needs and requirements, not corporeal, but spiritual. Thence arose the strange belief that all things had souls as well as their material parts, and that the spirits of the dead needed the souls or spiritual parts of food, chicha, coca, llamas, even clothing. By placing the corporeal parts of these things with the dead, it was believed that their souls or spiritual essences were conveyed, through prayer and certain ceremonies, to the souls of the dead. This belief was so deeply impressed on the Inca people that it survived all subsequent persecution. The practice existed.

6. Huacas.—Subordinate to Viracochas, to whom a temple was dedicated in the great square of Cuzco, the worship of the Sun, Moon, Lightning, and of certain deities, called Huacas, was ordained. When the empire of the Incas rose to greatness, there was a complicated ritual, with special ceremonies, festivals, and sacrifices for each month. Our information is mainly derived from the first Spaniards who came to Peru and wrote narratives. They were soldiers, lawyers, in two instances natives, but chiefly priests who were full of pre-conceived ideas. It is not always easy to separate their pre- conceptions and the results of their leading questions from the actual facts they were told. It is still more difficult to reach the exact nature of the beliefs of a people, when we have reports only of their ceremonies and of their outward actions.

The people were divided into ayllus or tribes, which had a close analogy to the Roman gens. Every ayllu had a common huaca or sacred object of worship, which was called paccarina. The chief paccarina of the Inca ayllu was the Sun. The Incas were children of the Sun. But there was another very sacred Huaca, which is often mentioned in Inca history, and to which a legend was attached.

The origin of the Incas is connected with this Huaca. Seven brothers and four sisters are said to have issued from 'windows' at a place called Paccarina-tampu (some leagues south of Cuzco), two words meaning 'the tavern of the dawn'. Their leader was Manco Capac, the first sovereign Inca. They had many followers, and they advanced northwards to occupy the valley of Cuzco. During the march of the brothers was turned to stone at a place called Huanacauri. This is the legend. Next to the celestial bodies, this Huaca of Huanacauri became the most sacred object of worship. It was three miles from Cusco. Very elaborate sacrifices were offered to it, and it was at Huanacauri that the great festival was celebrated, when the Inca youths went through their ordeal previous to receiving knighthood. The exact position of the Huanacauri Huaca in the Inca religion is not clear. It was certainly a very important one in the traditions of the Inca ayllu.

7. Ancestor—worship. — The other ayllus had various beasts or birds, natural objects or mummies, as their paccarinas. It was the worship of ancestors by the side of the worship of celestial bodies. The mallquits, or bodies of the dead, were preserved, and treated with the greatest respect. In the mountains round Cuzco and in the Yucay valley they were kept in caves faced with masonry. In the basin of Lake Titicaca they were preserved in towers called chulpas. Those at Sillustani are circular, and carefully built with ashlar masonry. In Quito the dead were interred in mounds called tells.

Thence arose the strange belief that all things had souls as well as their material parts, and that the spirits of the dead needed the souls or spiritual parts of food, chicha, coca, llamas, even clothing. By placing the corporeal parts of these things with the dead, it was believed that their souls or spiritual essences were conveyed, through prayer and certain ceremonies, to the souls of the dead. This belief was so deeply impressed on the Inca people that it survived all subsequent persecution. The practice existed.

secretly fifty years ago to some extent, as Don Pablo informed us. The present writer is told by Baron Erland Nordenskiöld, who returned from Peru in the year 1906, that the practice still exists. This appears to have been the position of the Inca worship of their ancestors, possibly accompanied by some idea of intercession on the part of the gods. In each yllu had a pachacoc or so-called idol, represented by a hill or other natural object, occasionally by an image. This was apart from the household conopas, to be noticed presently.

8. Priesthood.—The complicated ceremonial worship of the Incas consisted of a great body of priests and ministers. The Villaco uma (lit. 'the head giving counsel') was the chief of the Inca hierarchy. His seat was in the great Tablalay or council place at Cusco, and he resided at Pisac and other towns in different parts of Peru. Each month had its special festival.

The first month, 22 June to 22 July, was called Chaskayraymi. Many llamas were sacrificed to the Sun, and ceremonies of great magnificence. The next month was called Chahuarquic, the season of ploughing the land. It was also called Tarpuy-quilla or the sowining month. Prayers were made for a good harvest. The people chanted a song called Yaquiyacarca, and sacrifices were offered. Next came the month Yapaquq, the season of sowing the land, when the Situa festival was solemnized. The rains commenced, and it was a time of sickness. Four hundred warriors stood in the Temple in a hundred, facing each of the cardinal points. The priests shouted, 'Go forth, all evils,' and the four parties started in four directions, shouting, 'Go forth, all evils.' They ran until they came to rivers, where they bathed and washed their arms. The Inca and the people also bathed, and there were ceremonies for driving away sickness at the doors of all the houses.

Coyna-raymi was the Moon festival, the expiatory feast being at night. It was a time for weaving fine cloth. Uma-raymi was the month in which the Incas and other classes celebrated for the initiation of aspirants. It took place at Huanacauri. The youths, after going through certain exercises and penances, were admitted to knighthood. The month of Aymara was in November and December. Next followed Coypac-raymi, one of the three principal festivals of the year. There was another ceremony of admitting youths to manhood at Huanacauri, which was conducted with great magnificence. Camay was a month of martial exercises, with the huatu-poccy or great ritual. The next month was Pacha-poccy, or the small ploughing, when the harvest of the month was celebrated, and the new fire for the altar before the Sun was kindled. The Ayaqu was next, being the beginning of the harvest. The offerings of maize were brought to the temples of the Creator and of the Sun, youths and maidens, in procession, singing a harvest song called yarayos. The harvesting month was Aymaray in May and June.

10. Human sacrifice.—The religious ceremonies included burnt-offerings in great profusion. The present writer formerly held that the weight of evidence was in favor of human sacrifices. He felt that this is remarkable, for the idea of propitiatory sacrifice is to offer the best and most loved, as in the cases of Isaac and Jephthah's daughter. He held that the Peruvian sacrifices were in the nature of thanksgiving or propitiatory offerings. But the authoritative evidence of Molina and Sarmiento has led him to modify this view. On extraordinary occasions, two children, a male and a female, were first strangled and then included in the burnt-offerings. Such occasions were the celebration of great victories, or the commencement of wars, and the Huaaca festival at Huanacauri.

11. Sun-worship.—Nearly all the ceremonies were connected with agriculture and with the course of the sun, so that it was natural that the Sun should be the chief object of the worship of the people. But some shrewd remarks on the subject are recorded of one or two of the Incas (by Garcilasso de la Vega, Comm. Real.). Seeing that the Sun had to accomplish its circle every year, they concluded that it must have a master. It was the same thought as that of Omar Khayyam:

"And that inverted bowl they call the Sky,
   Whereunto crawling occult, we can no more,
   Lift not your hands to it for help—for it
   As impotently moves as you or I."

So they turned to Viracocha, the Creator, and by the sun and all living things, as the chief object of their adoration.

12. Government.—The religious beliefs of the people away from Cuzco were connected with their mode of life and their environment. It seems desirable to give a short account of the rural life of the people, and of the administrative organization of Inca rule. It was, in fact, pure socialism—a system which can exist only under a despoticism. Several very able Spanish lawyers, notably Polo de Ondegardo and Santillana, were sent out after the conquest, to investigate and report upon the Incaistical system of government. Reliance may be placed upon the correctness of the details they collected. It appears that the whole of the peoples were divided into a score of classes, according to their ages and ability to work.

1. Mosoc aparic (baby), 'newly begun,' just born.
2. Sayo huarnas (child), 'standing boy,' age 2 to 6.
3. Mosca puric (child that can walk), age 6 to 8.
4. Tanta queica (toddler), age 8 to 10.
5. Pouliar huarnas (playing boy), 10 to 15.
6. Cusco pelas (coca picker), very light work, 15 to 20.
7. Puma huarnas (as a youth), light work, 20 to 30.
8. Puric (able-bodied), tribute service, 25 to 50.
9. Chasemi rucnas (elderly), light work, 50 to 60.
10. Pachaca rucnas (dissolute), no work, over 60.

The Puric was the unit of administration, the other classes being dependent on him. A Pachaca was 100 Purics under a Pachaca-camayoc or Centurion. 1000 Purics were under a Huaramacamayoc, or officer over a thousand, and the Huanacayoc governed the whole ayllu or gens of 10,000 Purics. There were four Vicuños over the four provinces, who were called Tucuyricos ('He who sees all'). There were also a reporter on vital statistics and an officer to investigate and report upon charges and accidents, one to each ayllu. The produce belonged to the people in their ayllu, but the produce was divided between the Inca (government), the Huaaca (church), and the Huacha (people). The flocks were divided between Inca (government) and Huacha (the people). When the people worked for the Government, they were fed by the Inca, and not from their own share of the produce.
Thus the land belonged to the whole ayllu, and each able-bodied member, or Puric, had a right to his share of the harvest. The land was very great, and increased rapidly; but the evils of division were avoided by the system of Mitimanes, or colonists.

13. Various cults.—The worship of Viracocha, the Supreme Being, was restricted mainly to the Inca and learned men. The worship of the Sun was most next and nearest to the representation of these objects, and prayed and sacrificed to them for healthy flocks and abundant harvests. The statues were made of pottery or stone, sometimes of the precious metals, and were called Incas or canoch, and when the Inca came to the towns, in other provinces, the people had mythological stories of great interest in the study of their folk-lore; and the discovery of the remaining reports on the extermination of idolatry will throw further light on the Peruvian world.

14. Oracles.—The valleys on the coast, from Nasca to the Rimac, were occupied by people of the same race and language as the Incas, and at Nasca there are marvellous irrigation works. Here the ocean and river were the representatives of these objects, and prayed and sacrificed to them for healthy flocks and abundant harvests. The temple was on the coast, at a place called Pachacamac. Raised on an eminence, with an extensive city at its feet, the oracle itself appears to have been a fish conopa, which was supposed to give answers to questions of people.

There was no temple to the Supreme Being at Pachacamac. The word is that of an attribute of the Almighty Creator. But in this case it was merely the name of the place. Many other places received names from deities or festivals. There was another Pachacamac near Tunipampa. Vices (sacred), Huaca (sanctuary), a festival, Chicha (grain), the name of the same deity in several places in Peru. The great temple at Pachacamac on the coast was dedicated to two conopas of the coast people, a fish-deity and a fox-deity, which became famous oracles. Pilgrims came from great distances, and an extensive town rose up at the foot of the temple. It was falling to ruin when the Spaniards arrived.

15. An unknown civilized people conquered by the Incas.—There was another civilized people along the northern part of the coast of Peru, quite distinct from the Andean tribes, but finally conquered by the Incas. We have civilization from the contents of the tombs examined by Reiss and Stübel at Ancon. We have further evidence in the great palace of the Gran Chimu near Trujillo, and Balboa has preserved a tradition of their arrival by sea and landing at Lambayeque, which also throws a little light on their superstitions.† There is a grammar of their language, which is totally unlike any Andean dialect. But there is no account of the religion of this strange civilized nation of the Peruvian coast, now practically extinct.

Quito was conquered by the last great and undisputed sovereign of the Inca dynasty; but though there is a work on the former Scoria rules of Quito, the accounts in it are comparatively modern and of doubtful authority. We have no narratives giving details respecting the religious belief of the Quito people previous to the conquest by the Inca Huayna Capac. It is stated that they worshiped the Sun, and observed a festival in the month of January, when the tombs were opened, and the dead were visited.

16. The Chibchas.—Further north there was a civilized people, the Chibchas, of whose religion there is some account. Their land is where the Andes divide into three cordilleras, with the three great rivers of Magdalena, Cauca, and Atrato flowing northwards between them into the Caribbean Sea. The Chibchas dwelt on the table-lands of Bogota and Tunja, with their river Tunza flowing to the Magdalena, their eastern draining river. The Inca were being carried by the Meta to the Orinoco. This territory is about 150 miles in length, by 40 to 50 broad. It was ruled by two principal chiefs, the Zipa of Bogota and the Zaque of Tunja. The Zipa was striving for a paramount position before the Inca, and the Incas, and the great Inca subjugated the chief of Guatavita. It is of this chief that the story is told that he held a great annual festival on the banks of the Lake of Guatavita, when he covered himself with grease, and then rolled in gold dust. Gilded and resplendent, he then entered a canoe, and was taken to the centre of the lake. Before all his people, he plunged into the water, and his bath was followed by feasting and dancing. This was the origin of the story of El Dorado.

The religious beliefs and festival of the Chibchas were thus stated by the earliest writers. Light was originally enclosed in a receptacle called chiminagagua, and this receptacle appears to have been in the conception of these people, the Supreme Creator. The Chibchas are said to have worshipped this almighty deity, but none the less they also worshipped the sun, the moon, the rainbow (called euchairra), hills, lakes, rivers, trees, and many idols.† Human sacrifices appear to have been offered only to the sun, as a duty and to be feared. The Chibchas had a tradition of a beneficent being named Bochica having appeared amongst them, and having taught them all they knew. He also was worshipped. He is said to have opened a channel for the river Fure near the two falls of Tequendama. The people had several curious myths, and they appear to have conducted their ceremonial worship with some magnificence. There was a procession in which the Zipa joined at the time of sowing, and another at harvest time. There is certainly a superficial resemblance between the religions of the Incas and that of the Chibchas.

There are two early authorities for Chibcha civilization. Padre Fray Pedrero de Acosta, who wrote in 1573, and the work was published at Cuenca in 1627. Dr. Don Lucas Fernandez Piedrahita, the Bishop of Santa Marta, wrote his Historia General de las conquistas y nuevos descubrimientos de la Colombia, in 1575. Simon is the best authority, being nearest to the time; and Piedrahita wrote well, and given us a description of the Chibchas. He was descended from the Incas of Peru. There is a grammar of the Chibcha language by Fray Barn buds de Lugo, 1524. It is not now spoken. The best modern work on the subject are Humboldt in his Viajes de Cordilheiras, Acosta in his Compendio Historico (Paris, 1848), and E. Urquijo in his Memorias sobre las antiquidades neo-prehispánicas (Berlin, 1860).

The Chibcha language prevailed among the Chibchas and a few scattered tribes of the Cordilleras, and some are still spoken. The Chibchas were the Quichuas for a rainbow. There may have been intercourse between the Incas and Chibchas, but there is no evidence beyond the identity of a few words. (see Quichua).
ANGEL DANCERS

tribes of the highlands, and they had all made advances in civilization, although those of Bogota and Facatativá were more advanced. The general movement of the Chibcha tribes had been from south to north, and this race appears to have advanced its settlements beyond Panama, as far as Chiriquí. There is no evidence that any people of Aryan or Maya affinities ever entered South America, or had relations with South American peoples.

17. Originality of the Andean religion.—The Andean races moved from the south northward. Their civilization was of spontaneous growth, without contact with the outside world, and without any communication with other races. Elaborate attempts have been made to establish identity between Quichua words and words of similar meaning in Aryan languages, but a careful study of the subject cannot fail to produce the conviction that they are fanciful, and based on an insufficient knowledge of the Quichua language. The South American race naturally reached its highest development in the Andean region, where agriculture and the textile and other arts were necessary for the support and comfort of the people, and where a temperate climate conduced to the development of various civilizing influences and to a reasoning contemplation of the powers of nature, guided by religious instincts. It was in this way, and not by any foreign influence, that the Andean religions were developed by the races inhabiting the cordilleras of the Andes. In their highest form the Andean religions recognized the existence of a Supreme Creator of the universe, and sought to know his will through sacrifice and prayer. The celestial bodies, the thunder and the rainbow, were revered as bringing good to man, but only as inferior deities obeying the mandates of the Creator. In the worship of the paccarinasa and of ancestors there is a clear indication of a belief in a future existence and the power attributed to the souls of animals and crops, and of inanimate objects, among the mass of the people, peculiar to the Andean races in the form in which it prevailed amongst them.

In whatever comparative position the Andean races may come among the peoples of the world, it must stand by itself as the unaided conception of the Andean people, uninfluenced by any communication with other races.

LITERATURE.—The works which give detailed accounts of the Andean races do not include all the earlier works on the civilization and history of the native races. The first account is that of the Reconnaissance of Cieza de Leon, tr. by Sir Clements R. Markham for the Hakluyt Society. The Spanish text was afterwards printed and edited by Ximenes de la Espada at Madrid. Juan José de Betanzos wrote his Summary Narration in 1561. He knew the Quichua language, and married an Inca princess. His work has been printed and edited by Markham in 1889, but has not been translated. The two Relaciones of the learned lawyer Polo de Ostadagado are still in manuscript. But one of his reports has been translated and edited for the Hakluyt Society by Sir Clements R. Markham, 1872. Fernando de Santillana was a Judge of the Lima Audiencia in 1560. His valuable Relación remained in manuscript until it was edited and printed by Ximenes de la Espada in 1879. The most detailed and best work on the religion of the Incas was written in about 1674 by a priest at Cuzco named Cristoval de Molina. The manuscript has been edited for the Hakluyt Society by Sir Clements R. Markham in 1872. Miguel Cavello Balboa is the authority for the civilized people of the coast of Peru. He wrote his Misiones, Asisístas at Quito between 1676 and 1692. It has been translated into French, and forms a volume of the Ternaux-Compañas series (1860). José de Acosta's Historia de las Indias del Peru was edited in 1846. It was translated in 1904, and the Eng. tr. was edited by Sir Clements R. Markham for the Hakluyt Society, 1872. The works of Fernando Mon- tesinos, entitled Anales y Memorias Nuevas del Peru, have a peculiar interest from the long list of sovereigns he gives, to be followed by their signatures. He came to Peru in 1520. His work remained in manuscript until it was translated by Ternaux-Compañas in 1846. The Spanish text was edited by Ximenes de la Espada for the Relaciones de los Indios de los Naturalistes del Peru, by an anonymous Jesuit, is a very valuable work. It remained in manuscript until it was edited by Ximenes de la Espada in 1879. The works on the extermination of idolatry, by Francisco de Avila, written in 1608 (MS.), and Pablo José de Arriaga (Lima, 1621), are very important. Avila's report has been translated by Sir Clements R. Markham in the Hakluyt Society's series. There is also information in the history of the order of St. Augustine in Peru (1638-1668), by Antonio de la Calancha. The Conquest of the Interior Realtes by the Inca Garcilaso de la Vega are well known (1st ed. Lisbon, 1609, last ed. Madrid, 1738). Their value is much increased by the extracts from the Inca's Elia Valera. The work of Garcilaso de la Vega has been translated and edited for the Hakluyt Society by Sir Clements R. Markham, 1869. Bernardo Cervantes (4 vols., Seville, 1809) was written in 1653. Pachacutec Yampi Salcamayhu, an Indian of the Collao, wrote (c. 1630) a work entitled Relacion de Antiguiedades del Peru in which the manuscript was translated and edited by Sir Clements R. Markham (1872). The Spanish text was afterwards edited by Dr. Pietschmann in 1876. It is the latest important history of the Incas was written by Pedro de Sarmiento. The manuscript has been in the library of the University of New York City 1792. The text was first printed by the Librarian, Dr. Pietschmann, in August, 1905, with a learned introduction and notes. The work has been translated by Sir Clements R. Markham. The best essay on the work Yornocochas is by Don Leonardo Villas (Lima, 1887). There are two authorities on the religion of the Chibchas of Bogota. Fray Pedro Simon wrote his Noticias Historiales in 1827. The Historia General de las Conquisias del Nuevo Reino de Granada of Hernandez Piedrahita, appeared in 1786. The work on the antiquities of New Granada by Uríascochea (Berlin, 1860) may also be consulted.

CLEMENTS R. MARKHAM.

ANGEL DANCERS.—A religious sect of Methodism origin, founded in Hackensack, New Jersey, about 1890, by Huntsman T. Mnon, with the aid of John M'Chintock ("John the Baptist"), Daniel Haines ("Silas the Pure"), Mary Stewart ("Thecla"), Jane Howell ("Phoebe"), Elias Berry, and Herman Storms, with his wife and their children, Mary and Richard (the latter a graduate of Rutgers College). At the age of fifty, Mson, after a somewhat dissolute life, became converted and organized the first Methodist revival meeting in the United States in 1888. On the night of his conversion he believed that he had a vision of Heaven and Hell, seeing both the Lord and the Devil. He chose the Lord and Heaven, and claimed direct divine guidance in all his acts. After many wanderings, he returned to Park Ridge, N. J. Here he claimed to have received the power of healing by the laying on of hands. His strange appearance, in which he sought to imitate the traditional portrait of Christ, and his wonderful magnetic will power, aided by a musical voice, evident sincerity, and easy flow of speech, made a strong impression upon men and women alike. He next appeared in Hackensack, N. J., where he commenced the preaching of his new doctrine, which he and his followers still maintain.

Mason and his followers have everything in common, and believe they shall be judged by their works, and not by their faith. They are careful to harm no living thing, and they adhere to a strict vegetarian diet. Their holy duty is to bring the form of marriage, whether civil or religious, and hold the most extreme ideas of free love. Their dress has no decoration of any kind. At the house of a farmer in Hackensack, named Herman Storms, Mnon gathered some followers, and gave the place the name of the "Lord's Farm." The house is open at any hour of the day or night, and any one is welcome, and may share food and clothing. This was carried to such an extreme that vagrants were entertained in the Lord's name," thus confessing to a sacrifice of self for the benefit of others.

Locally the sect is known as the 'Lord's Farm,' never as 'Angel Dancers.' When at the height of their influence, they used to hold outdoor meetings in neighboring towns. It was during these meetings that the religious service, in which the name of 'Angel Dancers' was derived. The dance is a species of religious frenzy, brought on by the
ANGER (Psychological and Ethical) — i. PSYCHOLOGICAL. — There are two ways, according to Aristotle (De Anima, i, 1), in which anger may be characterized. By the dialectician or speculative philosopher (απολογητικός), it may be defined as 'the desire of retaliation' or a feeling akin to the natural philosopher (φυσικός), as 'the boiling of blood of the heart, or of heat.' Neither of these two ways, taken by itself, does he regard as adequate; for the one has respect only to the 'form,' while the other takes account solely of the 'matter,' and the complete view requires that both form and matter be attended to. In other words, Aristotle is here exemplifying in a concrete instance the great psychological truth that the emotions are 'materialized moods' (mood), that is, they have both an inward or psychical side and an outward or corporal expression; and that each of these requires to be reckoned with, if the phenomenon is to be satisfactorily explained. We may even go so far as to say that we have just described, with the help of Dr. Wundt, in his book Of the Emotions in Man and Animals (p. 299), that 'most of our emotions are so closely connected with their expression, that they hardly exist if the body remains passive.' Certainly, the control of anger consists very much in conscious abstinence from the modes in which it physically embodies itself.

(1) On the physical side, anger, in the individual, manifests itself in marked disturbance of the bodily organism: e.g. the movements of hands and jaws become quickened, raised nostrils are dilated, the action of the heart is accelerated, the face changes colour, the eyes flash, the eyebrows are knit, the voice waxes loud, harsh, and discordant; and, in that species of anger which we know as rage, there is wild 'striking out,' vehement and uncontrolled, so that anger may not inaptly be designated (as by Horace, Epist. ii. ii. 82) 'a brief madness' (ira furor brevis est).

These changes in the body are obvious to the spectator. But there are others that are invisible, which take place in the internal organs, giving rise to organic sensations which play a distinct part in the process, inasmuch as they react on the emotion, modifying, accentuating, or intensifying it, as the case may be. Hence, the organism has been likened by psychologists (e.g. Bain, James, Stott) to a 'sounding-board,' on which the nervous excitement correlated with the emotion 'plays,' and which is in turn affected and modified by the organic 'resonance.' This organic factor is highly important; but we must not make too much of it, for it has been done by old Style Methodists, being opposed to all forms, and declares his religion to be based on the Book of Acts.

In May 1893, MASON and some of his followers were arrested and put in jail for malicious mischief and inciting unlawful assembly.
from wrath, which is a settled disposition, although the choleric man is liable to repeated fits of it.

Like other 'passions,' anger lacks in moderation—transgresses limits, defies proportion. This indicates its danger as a motive power. When it acts like the wind, it exercises a useful function; when it acts like the whirlwind, it may cause uncontrollable damage. On this account, its effects on the irate individual himself may be unsatisfactory; when the passion has ceased, depression frequently ensues, exhaustion thus taking its revenge.

To a man of this disposition, anger is a primary emotion a settled disposition, and needs to be experienced in order to be known. It has a distinct quality of its own, different from that of every other emotion; and no one could, by mere description, make it intelligible to a man who had never himself been angry. Not only is it not derived from other emotions, it does not even presuppose experience of other emotions to give it being. Yet it enters itself into other emotions, sometimes as their basis, sometimes as a subsidiary factor—and so may be allied with 'anger' in the same sense of anger. It is an egotistic emotion, which may quite easily be transformed into one of self-punishment; hence its ethical significance, to be considered presently.

The varieties of anger are inscrutable and peevishness. Insensibility is the susceptibility to anger of a person and the susceptibility of his state of personal disposition is undue sensibility to trifles, annoyance at them far beyond what their real value or significance warrants.

ii. Ethical—Anger, as has just been said, is not in itself malevolent; it is simply a protection or defence against harm or hurt, and may be directed against things as well as against persons. It is a species of resentment, and operates instinctively, and, therefore, without due regard to consequences; hence the need of direction and restraint, and hence the ethical bearings of the emotion. As instinctive resentment, it is neither to be praised nor to be blamed, but is to be accepted as a part of the human constitution necessary to the welfare of the individual, and therefore ultimately to the good of the community. But insensibility, as the case requires, is a primary emotion in human beings, and insensibility is not in itself malevolent; it is simply a protection or defence against harm or hurt, and may be directed against things as well as against persons. It is a species of resentment, and operates instinctively, and, therefore, without due regard to consequences; hence the need of direction and restraint, and hence the ethical bearings of the emotion. As instinctive resentment, it is neither to be praised nor to be blamed, but is to be accepted as a part of the human constitution necessary to the welfare of the individual, and therefore ultimately to the good of the community.

Sudden or instinctive resentment, on the ethical side, is directed against injury, as discriminated from hurt: it presupposes a conscious agent, intentionally doing an offending act for the purpose of injuring us. It consequently assumes the form of moral indignation, which is the spontaneous reaction of the conscience against what is wrong or evil, when the wrong or evil is designedly effected. It is the resentment of the sensitive to injustice, and responding unreflectingly immediately on the perception of the offence. Without this kind of anger, it is hardly conceivable how the moral nature could be effective at all.

When, on the other hand, we turn to deliberate resentment, we find that we are giving anger a different complexion, and are bringing it into relation with other phenomena of human nature that may or may not be conducive to men's highest interests. In so far as deliberate resentment means simply restraining the act that would naturally follow from the instinctive perception of the injury inflicted, till we have assured ourselves (in cases may do serious damage) whether our resentment is just or not, and whether the consequences of our action may not be out of all proportion to the offence, it can only be right and commendable. But when, as so frequently happens, we are not troubled with our malevolent inclinations (with the savage or the fiend within us), then it becomes morally reprehensible, often in the highest degree. It is the nature of anger voluntarily nursed to magnify the offence that caused it; vanity and offended dignity come in to intensify and transform the emotion—a grudge ranking in the bosom naturally exaggerates. Further, there can be little question that anger readily associates itself with that desire to injure others or to inflict pain on them that seeks its gratification and so is easily changed into hatred, or retaliation, or revenge, or, keener still, vindictiveness. It is now exclusively aimed at persons, and is in its nature diametrically opposed to the sympathetic and humane sentiments, the tender emotions, that bind men together; it is the antithesis of love, and, instead of attracting and cementing, alienates and repels. It is not only that the angry person, full of hate, is estranged from his fellow or resents his action; he also desires to inflict injury on him, to cause him pain, and gluts over and delights in his suffering. If he longs simply to pay him back or to require him for the offence committed, his emotion is retaliation, proceeding on the principle of equivalents, the lex talionis—an eye for an eye, and a tooth for a tooth,—oblivious altogether of the promptings of generosity and mercy. When he harbours ill-will and cherishes his wrath, refusing to be pacified, meditating unmeasured requital and waiting for the favourable opportunity, it is revenge. Revenge is in its very nature inequitable, bloodthirsty and cruel, satisfied with nothing less than 'the head of John the Baptist in a charger.' When revenge pursues its object spitefully with unremitting persistence, and finds rest in every petty infliction of evil on him, it is the control of reason. This is necessary, if anger is to be (as it ought to be) a help to justice. But, in thus rationalizing it, we are giving it a distinctively moral character, and taking it in a wider significance than is accorded by the psychologist. We are now estimating it in relation to its consequences, and assigning it a place in an ethical scheme of values. This means (to use Butler's famous analysis) that we are distinguishing between resentment that is sudden or instinctive and resentment that is deliberate, and appraising each in connexion with its social bearings.

Various questions concerning anger suggest themselves:

1. A point that the earlier British psychologists (Butler, Thomas Reid, Dugald Stewart, Thomas Brown, etc.) delighted to investigate regarding anger and the malevolent affections, was their use or final cause. Accepting human nature as a given hierarchy of principles and faculties, and intending their philosophy to have practical value, they asked what end these faculties and objectionable forces served in the economy of man's being. They had little difficulty in showing that, given man and given his present circumstances, these forces minister both to the protection or self-preservation of the individual and to the good of the community. Sudden anger clearly conduces to the defence of the irate person against hurt or harm; and when the cause of the harm is another living person, it serves as a warning to him to desist. But why should this Scottish motif be fully displayed, with the significant motto, 'Neuerme impune laexpertis'? Even more strikingly is this purpose served by retaliation and revenge, when the vengeful person has to deal with others of like vengeful disposition as his own. His anger, being fierce, is both punitive and deterrent.
(2) In more recent times, another question has come prominently forward, viz.: Whether the mal
evolve of human nature (which nobody denies as a fact) is really native to it! The negative was
ably upheld in Mind, a few years ago, by Mr. F. H. Haldane,
ly to reduce malevolence to exi
ment of love of power. The idea of malevolence, or such
like. This was strenuously opposed by Professor Bain, who insisted that, making all allowance for self-
assertion and the love of power and similar strong emotions, there is a certain residuum that is unaccounted for, and this residuum is simply
 innate malevolence.

‘Let us take, then, the examples where we are witnesses to suffering inflicted by others, and where we ourselves are noways
concerned, or, at all events, very remotely. Why do multitudes
in delight in being spectators of punishments, including the gala
s? In former days, when executions were public, when whippings, the pillory, and the scaffold were open to everybody’s
 gaze; what was the source of the fascination attending the spec
 tacles? They were remotely connected with the security of the
people generally, but they were most frequented by those that
thought least of public security. . . . We can go a step further.
There are abundant examples of deixis in mischief of the
most absolutely gratuitous kind, beginning in tender years, and
continuing to late and still maturity. The love of lesser
practical joking, of giving trouble and annoyance, without any
cause whatever, is too manifest to be denied. . . . The demand
for execution of self proves of itself proves nothing. What we are to
ask, are the forms that it takes by preference, inasmuch as these
are probably something more than mere excitement: they in-
sure an intellectual and religious pleasure. If the votaries of execu-
tion are in the habit of seeking it by molesting, annoying, con
trary is that the excitement is mere cover for a definite pleasure, the pleasure of malevolence.
To sit on a road fence, and pass insulting and jeering remarks upon
the passerby, is not to beぶり over as mere
love of excitement; it arises from the deeper fountains of malign
ity; for mere pleasure may easily procure conscious forms that
hurt nobody; we may even find excitement, and pleasure too,
but it is the bestowing benefits; when we habitually seek it in the shape of infliction, pain, we must be credited with delighting in the perversely.

The question ever recur—Why is hatred such a source of con
solationary feeling, if there be not a fountain of pleasure in
considering the sufferings of others?’ (Bain, Dissertations on
Leading Philosophical Topics, pp. 84-104).

The strength of the argument seems to lie on the
side of the affirmative; and, however unaccepta
able it may be, the fact must be recognized that man
has an original tendency to inflict suffering on
others, and derives real satisfaction and delight from contemplating the suffering that he inflicts.

(3) Our repugnance to this position may perhaps be
a natural identification of the origin or source of the malevolent affections offered
by the theory of Evolution. In his masterly work
On the Expression of the Emotions, and elsewhere,
Darwin has amassened materials to show that these affections originated, goes old, in the prehistoric
habits of the race, taken in connexion with those of
the lower animals. They are the result of the
necessity for combat and mutual warfare in the
early struggle for existence. It was in these far back times that anger, retaliation, and revenge,
with all the ways of giving outward expression to
them, so significant of their animal origin, arose;
and they are a heritage to us from the past. By
this hypothesis, the wolf in man receives an explana-
tion of a scientific kind, which, whether fully
described or not, throws light upon the idea connected with malevolence that otherwise remain
dark and puzzling. The philosophies of some
countries (Oriental in particular) have tried to
explain the phenomenon by the supposition of metempsychosis or transmigration of souls, espe-
cially the passage of the soul of a brute into the
body of a man. The lower impulses and passions seem thereby to be accounted for, and man’s baser
nature to be so far justified. That is but the imagination of non-scientists. The panic over against which has to be placed the scientific and reasoned mode of solution offered by
Evolution.

ANGER (WRATH) OF GOD.

ANGER (WRATH) OF GOD.—I. THE DIVINE ANGER AS PRESENTED IN THE OT.—God is
revealed in the OT as a living Being, who has a
merciful purpose toward the universe which He has
made. During all the ages of human history, He is seeking to carry out this purpose to its
consummation. In doing so, He is confronted by the ignorance and the slowness of men, by their
greed and their hostility. These awaken in Him such feelings as would be stirred in the heart of a
wise and good man, in view of the hindrances and oppositions with which he met in the course of
some great and benevolent enterprise. The OT speaks freely of the grief, and jealousy, and
anger of God. There are doubtless very grave
difficulties in attributing these emotions, and, of
indeed, emotions of any kind, to One whose
thoughts are according to the thoughts of men. But
the writers of the OT, while guarding against an
obvious abuse of this anthropomorphic method of
conceiving the Divine nature (1 S 1524), do not stop
to discuss such problems. They are chiefly
concerned to make vivid and real the person and
the living Person in whose image human beings
have been made. Human qualities, accordingly,
are attributed to God, because human nature is
homogeneous with the Divine nature. In man
these attributes and affections are marked by
finite and imperfection. In God they exist
in absolute perfection. This makes a great differ-
ence between what is found in man and what is
attributed to God, as the OT writers are well aware. But we accept the idea of the origin or
source of the malevolent affections offered
by the theory of Evolution. In his masterly work
On the Expression of the Emotions, and elsewhere,
Darwin has amassened materials to show that these affections originated, goes old, in the prehistoric
habits of the race, taken in connexion with those of
the lower animals. They are the result of the
necessity for combat and mutual warfare in the
early struggle for existence. It was in these far back times that anger, retaliation, and revenge,
with all the ways of giving outward expression to
them, so significant of their animal origin, arose;
and they are a heritage to us from the past. By
this hypothesis, the wolf in man receives an explana-
tion of a scientific kind, which, whether fully
described or not, throws light upon the idea connected with malevolence that otherwise remain
dark and puzzling. The philosophies of some
countries (Oriental in particular) have tried to
explain the phenomenon by the supposition of metempsychosis or transmigration of souls, espe-
cially the passage of the soul of a brute into the
body of a man. The lower impulses and passions seem thereby to be accounted for, and man’s baser
nature to be so far justified. That is but the imagination of non-scientists. The panic over against which has to be placed the scientific and reasoned mode of solution offered by
Evolution.

WILLIAM L. DAVIDSON.
Incidents are recorded which seem to bring the anger of Jahweh down to the level of the inexplicable rages of an unethical heathen god (e.g. 1 S 6:19, 2 S 6:9). Regulations are made which connect the anger of the Divine with matters that are wholly outward, and, therefore, not fit occasions of wrath in a perfectly moral being (e.g. Lv 10:1, Nu 19:18; cf. Ex 32:1). In such cases, however, are to be understood by reference to the Divine purpose. It is endangered when the pride and self-will of man invade the sphere of the Divine holiness, and the results of such, but the holiness, i.e. the very Divinity, of God Himself. By being resisted, therefore, the anger of God is kindled, and upon the perpetrators of it descends in crushing might.

2. Objects.—The objects of the Divine anger, according to the need to see His will to the Divine will. Such are all who are hostile to Israel, the people of God’s choice, the realm wherein He rules:—the nations who rage, and the peoples who imagine a vain thing (Ps 51), the enemies that reproach, and the foolish people who blaspheme His name (Ps 74:16). Not these alone, however, nor these chiefly, provoke Him to anger. When Israel breaks the laws of righteousness, upon which the commonwealth of God is founded, or does dishonour to Him who redeemed His people, His holy name, His faith, His men, He has burned into the consciousness of men that sin is a reality for God, and that towards it He is moved with a just and terrible anger (Ps 119). The depth of God’s feeling with regard to sin can be fathomed only by estimating aright the relation in which He stands to His people. He is their Saviour, and the tenderest and most sacred relation in which two human beings can stand to one another is not too close to figure forth His relation to them. He is their husband and Lord; they are His spouse. Sin on their part is conjugal infidelity, the most awful outrage that can be committed against love. In such figures the prophets depict the grief and jealousy of God, and seek to manifest the fierceness of His wrath (Ps 79:10, Am 3:1, Zeph 1:5, Ps 78:23).

3. Its manifestation.—The Divine anger, therefore, is an affront awakened in the Divine nature by the presence of evil. It is manifested in judgments following upon wicked deeds. Its instruments are to be found in the forces of nature, with the commonwealth of man, whose selfish pride or ambition may be made subservient to the will of God, so that it may, unconsciously, be the rod of Jahweh’s anger (Is 10:22). The prophets, however, clearly discern that God’s operations, alike in mercy and in judgment, cannot be carried to completion in the state of the world as they know it. Not in any of these common days, which succeed one another with uncompleted significance, can the work of God be brought to a close until the consummation of the series, and at once reveals and fulfils the whole design of God. This Day of the Lord will be both the crown of salvation and the ultimate stroke of judgment. The unimaginable terrors of that Day haunt the visions of the prophets, confounding the self-righteousness of those who had expected it to bring them the gratification of their national and personal pride (Am 5:18-20, Zeph 1:7-12, Mal 3:2-4). Thus the wrath of God gains a predominantly eschatological sense, not, however, to the exclusion of the very present that it is a present quality of the Divine nature, and is continuously manifest in His attitude toward sin.

4. The turning away of the Divine anger.—Being under the control of the ultimate Divine purpose, which is love, the wrath of God may be restrained, or even entirely turned away, and give place to the unhinderer outpourings of loving kindness. It is, indeed, plain that, if God gave free vent to His anger, the objects of it would immediately be destroyed (Ps 130:1). Such an action on His part, however, would defeat His own ends. During the historic period, throughout which God is pursuing His aim, His wrath can only be fully executed regulative action is paramount—the honour of His Name, i.e. the success of His design of mercy to Israel. God cannot submit to be taunted with failure (Ezk 20:46, Is 48:8-11). He is angry, and He punishes. But He also deals out His kindness according to the proportion controlled by mercy, sinners may learn, and turn to Him, and live. Beyond this period of discipline there lies an awful possibility of exhausted forbearance, and final and measureless doom. What, then, will avert this doom, and turn anger into acceptance and delight? The OT has no clear or full answer to give. The sacrifices, obviously, could not atone for sin, in its real spiritual significance; and their symbolism cannot have conveyed any real dogmatic teaching. The prophets, however, are urged to appeal. The prophets, however, are urged to appeal to a representative of the people be found who, standing in living relation to the nation, yet separating himself from the national trespasses, shall deeply apprehend the sinfulness of the nation’s sin, and the terror of the Divine person, and shall make profound acknowledgment before God, in the name of the people, of their guilt and ill-desert, the Divine anger will be appeased, and God will return to His people in mercy (Gn 18:25-33, Ex 32:1-4, Nu 29:1-38). It is true that no perfectly competent representative can be found among the people themselves. Even a Moses or a Samuel would be insufficient for so great a work (Jr 15:19). Yet the principle of atonement through sin-bearing remained deep in the prophetic consciousness (Ezk 20:20, Jer 5:5, Is 65:3), and, in the great vision of Is 53, one is depicted capable of undertaking even this vocation of unspeakable suffering, and, through his faithful discharge of it, procuring deliverance for the transgressors.

II. THE DIVINE ANGER PRESENTED IN THE NT.—The OT and the NT are at one in their intense conviction that God is a ‘Person, with ethical attributes,’ a living Being, having moral powers and qualities, which are reflected and reproduced in man. They agree also in their presentation of, and language for, the self-righteousness of those who had expected it to bring them the gratification of their national and personal pride (Am 5:18-20, Zeph 1:7-12, Mal 3:2-4). Thus the wrath of God gains a predominantly eschatological sense, not, however, to the exclusion of the very present that it is a present quality of the Divine nature, and is continuously manifest in His attitude toward sin.

1. It may be urged, however, that while it is true that the NT, like the OT, structures emotions to be attributed to Him the emotion of anger. Is this true? Does anger disappear in NT teaching as an element in the character of God? It is well known that many teachers of the school maintain that the only NT use of the Divine anger is eschatological. Is this correct? (a) It is true that the sense of usage is prevalently eschatological. NT believers, like the prophets of the OT, had the Day of Wrath full in view. The Baptist made it the burden of his warning and appeal (Mt 3:7). However difficult the ethological questions may be in connection with certain portions of the tradition, it is certain that eschatology occupied a large place in the teaching of Jesus, and
that He used OT figures in describing the terrors of the Judgment. In the Apocalypse of St. John that final pouring out of the wrath of God weights upon the soul with an awful sense of doom (e.g. Rev 16:1-4). The preaching of the Apostles is full of the terror of the Lord. To them and to their hearers that wrath was a terrible reality; and one element, not the greatest, yet very precious and wonderful, in the gospel, is that the Messiah saves from this unutterable dread. It is an affection of One who is at once loving and righteous. It is completely under the control of sinless the will of God who is undisturbed at the sight of human pride and self-will. Sin is a reality for God, and there is one sin, which itself is the ultimate product of sin, which hath never forgiveness. Some of the parables are heavy with the weight of the Divine indignation (e.g. Mt 24:38). More significant still than the words of Jesus were His own feelings and their outcome in act. He who said, ‘He that hath seen me hath seen the Father’ (John 14:9), was not sullenly cold or sublimely unsentimental in presence of evil. One and again He was filled with a great anger (Mark 3:5; Luke 11:15-17, Mt 21:23). In allowing Himself this emotion and its utterance, Jesus certainly did not regard Himself as detached from the feeling and attitude of God toward the evils that so moved Him. On the contrary, we often remember what He taught throughout the NT. Sin always attracts to itself the wrath of God (Rom 1:18; 2 Thess 1:6), Sin, in its inmost significance, is equivalent to rejection of the Divine Will by those in the Son of God. Therefore, ‘that obeyeth not the Son shall not see life, but the wrath of God abideth on him’ (John 3:36). When we remember what Jesus meant by ‘life in Me’, in the Old and New Testament sense, the favour and fellowship of God, we are compelled to put into this saying the same sense of a weight of holy indignation now resting upon the soul which is not standing in the obedience of Christ. It is possible to deny the doctrine thus conceived, and to believe that Jesus in the Gospels is more sublimely compassionate than in the NT; but it is not possible to deny that NT writers hold this doctrine, and operate with the overwhelming terror.

2. The wrath of God, then, rests on the soul that rejects Christ; but upon the soul that is ‘in Christ’ no such awful load remains. The NT writers are at one in attributing this great deliverance not so much to Christ, and specifically to His death, which they regard as a sacrifice for sin. When Christ was raised from the dead, ‘the cloud of Divine wrath—the 6pgh so long suspended and threatening to break (Rom 3:8)—had passed away. This is the thought which lies at the bottom of Ro 6:15-18 (Sunday on Ro 4:25 in TCC). The penitent believer, looking to the cross of Christ, is certified, by the witness of the Spirit within him, that the anger of God, which once rested upon him, is now turned away from him. It is then to be understood that the Biblical writers to convey the idea that Christ bore the wrath of God, that He endured the outpouring of the Divine anger? Is it fitting for the redeemed to say:

The Father lifted up His rod
O Christ, it fell on Thee?

It is a remarkable fact that the NT never does, in words, connect the death of Christ with the Divine anger, even in passages where the line of argument might have seemed to culminate in such a thought. It seems as though the writers deliberately refrained from any language which might suggest that the Son could be the subject of the Father’s anger, or that His wrath was due to an act of the Divine wrath, which was hearkening forth in lightning stroke, to smite the holy breast of Jesus. At the same time it is to be noted that experiences which are themselves expressions of the wrath of God are attributed to Christ, and not to the operation of the Divine wrath, which is being, as it were, left to itself in lightning stroke, as in the case of a thunderbolt. 2 Cor 4:14 is described as having become ‘a curse for us,’ and in 2 Cor 5:22, as having been ‘sin’ on our behalf. Whatever these mysterious expressions, ‘become a curse’, ‘made sin’, mean, they cannot be less than an expression, by the sinless One, of what sin involves; and that, without doubt, is the wrath of God. Yet the actual phrase is not used. It must be remembered, also, that Jesus, in dying, experienced an agony, whose source and bitterness we can never fully know; which, as it broke from Him in the cry of desertion, cannot have meant less than an un-speakable sense of the Divine judgment upon human sin (cf. Principal Garvie in Studies in the Inner Life of Jesus, London, 1908, p. 417 ff.). Yet it does not appear, even in that cry of infinite pain, that He felt that God was angry with Him. Descriptions are given, implying that Jesus in death bore sin, through a profound realization of what it means, and of what the Divine attitude and feeling toward it, and the Divine judgment upon it, really are. In these very descriptions, however, phrases which might lead to inferences regarding the anger of God being endured by the Son of His love are carefully avoided. Christian faith is directed to One who was the Son of God, in whom the Father was well pleased, who hung upon the cross in fulfilment of the mission to which the Father summoned Him, and who must therefore have been, in that hour, the object of the Father’s deep satisfaction and most tender love. We who yet surrender the companionship of the Father’s fellowship, identified Himself with sinful men, and passed, Himself sinless, through the apprehension of God’s sentence upon sin, acknowledging its justice, and approving, as in the holy life, so in the sacrificed life of God. The believer, when he commits himself to the crucified and risen Lord, receives from Him salvation, and enters upon the joy of those from whom the Divine anger is turned away, and who live in the Divine favour and fellowship. At the same time, being spiritually one with His Lord, He enters into the experiences in which Christ won his deliverance, realizes and acknowledges God’s judgment upon sin, dies to sin as a power over him, and begins to live the holy life, pure and free from sin; and in these experiences, which strangely reproduce both the passion and the glory of the Redeemer, the salvation, which He receives as a gift, is wrought out in a growing assimilation to Christ. He combines, in his own experience, what He has seen combined upon the Cross, the wrath of God against sin and the Divine mercy toward sinners. The terror of the Lord and the love of Christ are the two powers which operate within His soul, to make Him flee from sin and love Him who for his sake died and rose again. It may be possible to have a religious experience in which a sense of the wrath of God has no place; but it ought to be acknowledged that it would not be an experience which has the cross of Christ for its starting-point and the NT for its rule and guide.

III. DOCTRINAL CONCLUSIONS.—The Biblical usage warrants certain inferences, which require to have their place in any theology whose guiding principles are found in the Scriptures.

1. The reality of the Divine anger.—The passion of anger is implanted in man, and has for its end the prevention and remedy of injury and the miseries arising out of it. ‘It is to be considered,’ in the words of Whiston, Butler’s explanation of resentment (§ 11), ‘as a weapon, put into our hands by nature, against injury, injustice, and cruelty’; and it may be innocently employed and made use of. We ascribe human qualities to God, not because we think of Him as a magnified man, but because we necessarily regard His actions as reflecting, under conditions of finitude and limitation, the qualities of the Divine nature. Human anger shares in the imperfection and sinfulness of man. The ‘we’ experience, by the sinless One, of what sin involves; and that, without doubt, is the wrath of God. Yet the actual phrase is not used. It must be remembered, also, that Jesus, in dying, experienced an agony, whose source and bitterness we can never fully
ANGER (WRATH) OF GOD

attributes which are themselves combined, without any opposition, in the harmony of the Divine character. But it is in God essentially what it is in man. In Him, also, it is a ‘weapon’ against injury; and its keen edge is turned against those who, in pride and self-will, seek to injure God. The classical theological statement of this position is: ‘... in Ira Dei. The gods of Epicurus inhabit ‘the lucid interspace of world and world’, where no ‘sound of human sorrow mounts, to mar their sacred everlasting calm’. The God of Stoicism is another name for the Unmoved Mover, who is embodied in the universe and is lifted far above the throb of feeling. Against any such views of the apathy of the Divine nature, Lactantius sets the Christian conviction of the character of God as love, and announces the principal ‘quid non clarit, neo dilectus’. If God is not angry with the impiety, the unrighteousness, it is clear that He does not love the pious and the righteous. Therefore the error of those is more consistent who take away at once both anger and kindness.

This line of argument has been of late, e.g., by Thomas Davidson, p. 108; ‘There is a wrath of God, who would not be good unless He hated evil, the two being inseparable, so that He must do both or neither.’

Objections to the reality of the Divine anger have arisen under an acceptance of philosophical theories of the human or natural soul into the sphere of Christian thought; and for this, in the history of theology, Aquinas is accused (Auctor sive, ch. 55) of ‘the anger of God, which does not inflame His mind, nor disturb His unchangeable tranquillity,’ and identifies it with ‘that which God pronounces upon sin. The anger of God is not a disturbing emotion of His mind, but a judgment by which punishment is inflicted upon sin.’

Language which attributes anger to God, he regards as anthropopathic, and explains it as a ‘condensation of man’s finitude, insinuating itself into the minds of all classes of men, alarming the proud, arousing the careless, exercising the inquisitive, and satisfying the intelligent.’ We may even trace something of the same hesitation in Dr. John Caird’s estimate of the value and the defects of anthropomorphic language: ‘... when we are told of His wrath as being aroused or kindled, and the blood of God spurs on His anthropomorphic figure to seize, in an indefinite but not unreal way, the hidden spiritual meaning. The representation concerns the operation of the divine will in对象物 which holy knowledge, though, literally construed, it expresses what is untrue’ (Philosophy of Religion, p. 174). It is true that the religious mind refuses to admit the more figurative descriptions, which seem to ascribe to God ‘the ignorance and carelessness and passions of our unspiritual nature.’ But it is certain, also, that the religious mind, instructed by Scripture and by experience, will not wrest the language of the Scriptures to interpret the conception of the Divine personality. The difficulty of conceiving how God can be both the ‘Absolutus’ and a living Person is, of course, very great. Probably we ought to direct our thoughts to a fresh study of the conception of the Absolute, particularly with the aim of freeing it from the immobility and sterility which an exclusive use of the category of Substance has imported into it. In any case, we must seek to do justice in our thinking to an absolute will of love, which determines the whole counsel and action of God; and, also, to His attitude towards us. It is with this will—an attitude which can be construed only as condemnation and wrath.

2. Sin and the Divine anger.—(1) The indignation of God against sin is real; and the passing away of wrath and the unbindered manifestation of love in Theology, accordingly, in its effect to give reflective expression to the facts of Christian experience, cannot neglect the idea of the wrath of God, and the problems connected with it.

Indeed, indeed, refuses to allow any theological value to the idea of the wrath of God. He speaks of it in his great work on Theology and Reconciliation as ‘ein ephemera helmslastiges wie Gestaltlosigkeit’ (ver. 164). In vol. ii, p. 239 [Eng. tr.] he says: ‘From the point of view of theology, no one must be assigned to the idea of the wrath of God and His curse upon sinners as yet unrecognized; still less, from the theological standpoint, is any special mediation between the wrath and the love of God conceivable or necessary in order to explain the reconciliation of sinners with Him.’ This view depends (a) on an interpretation of the Biblical usage, viz. that wrath has a uniformly eschatological meaning, which is surely unsound; (b) on a conception of God as being both immanently and exclusively the source of the Divine essence, which imperils the ultimate distinctions of Good and Evil. ‘When the Divine reason, clothed with our reason, has created morally free beings, punitive justice cannot be refused to it without exposing the moral nature of the world to the danger of failing a prey to that of Christian Doctrine at all. God is more a guilty feeling; and the expression of a change from Divine wrath to Divine mercy’ (Riteh, p. 255). And when judgment is perfected, falls to be angrier, at the sight of moral evil. ‘A sinner,’ says Dr. A. B. Davidson, ‘is an ill judge of sin’ (Com. on Hebrews, p. 108, on 414). God, knowing sin to its root, hates it with a perfect hatred. His love is not less affected, not less afflicted by the sight of sin, of men, which is the aim of His love, is ruined by moral evil. The highest good of men depends on the conquest of sin in them, and their conformity to the holy character of God. His love for men, therefore, intensifies the heat of His indignation against that in them which opposes the realization of His loving purpose for them.

Some theologians have pressed this close connexion between love and anger to the point of identifying them.

So Martyrion: ‘This wrath is love itself,’ feeling itself ‘restrained, hindered, and stayed through unremitting love’; Gostnerse: ‘Not without reason has this wrath been termed... the extreme burning point of the flame of love’...; and many modern writers, e.g., Scott Lidgett: ‘The manifestation of the Fatherhood of God passes beyond the idea of an anthropomorphic figure to seize, in an indefinite but not unreal way, the hidden spiritual meaning. The representation concerns the operation of the divine will in objects which holy knowledge, though, literally construed, it expresses what is untrue’ (Philosophy of Religion, p. 174). It is true that the religious mind refuses to admit the more figurative descriptions, which seem to ascribe to God ‘the ignorance and carelessness and passions of our unspiritual nature.’ But it is certain, also, that the religious mind, instructed by Scripture and by experience, will not wrest the language of the Scriptures to interpret the conception of the Divine personality. The difficulty of conceiving how God can be both the ‘Absolutus’ and a living Person is, of course, very great. Probably we ought to direct our thoughts to a fresh study of the conception of the Absolute, particularly with the aim of freeing it from the immobility and sterility which an exclusive use of the category of Substance has imported into it. In any case, we must seek to do justice in our thinking to an absolute will of love, which determines the whole counsel and action of God; and, also, to His attitude towards us. It is with this will—an attitude which can be construed only as condemnation and wrath.

2. Sin and the Divine anger.—(1) The indignation of God against sin is real; and the passing away of wrath and the unbindered manifestation of love in Theology, accordingly, in its effect to give reflective expression to the facts of Christian experience, cannot neglect the idea of the wrath of God, and the problems connected with it.

Indeed, indeed, refuses to allow any theological value to the idea of the wrath of God. He speaks of it in his great work on Theology and Reconciliation as ‘ein ephemera helmslastiges wie Gestaltlosigkeit’ (ver. 164). In vol. ii, p. 239 [Eng. tr.] he says: ‘From the point of view of theology, no one must be assigned to the idea of the wrath of God and His curse upon sinners as yet unrecognized; still less, from the theological standpoint, is any special mediation between the wrath and the love of God conceivable or necessary in order to explain the reconciliation of sinners with Him.’ This view
ANGER (WRATH) OF GOD

Their relations to each other constitute a problem the solution of which will tax his utmost wisdom. It is after this analogy that the Biblical usage presents the Divine anger; and by it theological thought must be guided. God is full of love to the sinner, while at the same time He burns with just passionate indignation. His love and His wrath are alike real, and each has its distinctive place in the character of God. Their relations constitute a problem whose solution cannot be adequately set forth in terms of thought; while yet Christian faith grasps the solution in the cross of Christ. Even Martensen, who identifies love and wrath, dwells upon 'the tension or apparent variance' which sin has produced between the Divine love and the Divine righteousness. He defines the idea of the Atonement as 'the solution of a certain antithesis in the very life of God as revealed to man, or of the apparent opposition between God's love and God's righteousness' (Christian Dogmatics, p. 803).

3. The turning away of wrath. — Scripture never suggests that there is any antagonism between the Divine love and the Divine anger, and nowhere do the countenances of the idea that God was so angry with sinners that He felt it necessary to pour out His fury on someone before He could begin to love anyone. Theologians, who have kept close to Scripture, have maintained that the teaching of the Christian Church and the ground of the 'objective' theory of the Atonement, have not failed to protest against this outrageous perversion of the truth. Calvin, whose expressions may often be criticised for their gloom and terror, is absolutely explicit upon this point: 'Our being reconciled by the death of Christ must not be understood as if the Son reconciled us, in order that the Father, then hating, might begin to love us, but that we were reconciled to Him, already loving us with goodness, even because of sin' (Institutes, bk. ii. ch. xvi. § 4). The Divine love, accordingly, is the original impulse and the continual inspiration of the whole redemptive activity of God. Yet the Divine love cannot expunge and obliterate the Divine anger by a mere overflow of sentiment. The Divine anger can be turned away only when those against whom it is directed enter, with profound insight and entire assent, into its grounds and reasons, and submit themselves, without murmuring or contention, to the awful displeasure of the Holy One is manifested and realized. To say this, however, is to make the problem insoluble, and to seal upon sinners the unspeakable terrors of the Divine judgment. Suppose, however, that, in the centre of the whole race, there is a man related to men that He was able to take upon Himself a service which no sinner can render for his brother, and no sinner can discharge in his own interests. Suppose that He should enter, without one shade of disparity or inadequacy, into the mind of God regarding sin, and submit Himself freely to the whole experience in which that mind is expressed, feeling, as He did so, an extremity of spiritual anguish for which no sinful soul has no doubt. If He could make His suffering be a sacrifice for which the Divine love could accept without any infringement of its holiness, while the cloud of the Divine wrath would roll away for ever? Suppose, further, that such an One were the gift of God's love to the race, as indeed He would need to be, seeing that the race could not produce Him, and were in Himself the very Word of God, the express image of His Person, as He would need to be if He were to reveal God's mind toward sinners. Would He not be the living personal meeting point of the Divine love and the Divine anger? But this is the message of the NT, In the sufferings of Christ, the love of God reaches its consummation, and by them the wrath of God is stilled for evermore. To the question whether the Son endured the wrath of God, we must, following the usage of Scripture and the obvious truth of the situation, give a negative answer. 'We do not,' says Calvin, commenting on the cry of desertion wrung from the anguish of Christ's immost soul, 'insinuate that God was ever hostile to His or angry with Him. How could He be angry with the beloved Son, with whom His soul was well pleased? Or how could He have appeased the Father by His intercession for others if He were hostile to Himself? But this we say, that He bore the weight of the Divine anger, His heart smitten and afflicted, He experienced all the signs of an angry and avenging God' (Institutes, bk. ii. ch. xvi. § 11). The last phrase in this sentence is ill chosen. But the deep truth remains, that the Redeemer knew, in that hour of lonely and unknown agony, the whole meaning of sin, and apprehended it as the object of God's just condemnation and infinite resentment. Thus He bore our sin, and thus He turned away from us the wrath which involves the hostility of God, while yet His love is devising means for the restoration of the sinner, to a state in which the Divine love may satisfy itself in accepting the penitent and crowning him with the fruits of that spiritual act has for its object Christ in His experience of sin-bearing, and implies spiritual oneness with Christ in it. The penitent, as he first comes to Christ, will know but little of what was involved in such experience. But the most rudimentary faith implies that the sinner identifies himself with Christ, as Christ had identified Himself with Him; that the Divine judgment upon sin which Christ bore and so vicariously for ever, has been delivered and entereth with purged conscience upon the new life of fellowship and obedience.

4. The day of wrath. — The NT is occupied mainly with the proclamation of the gospel, and with opening to believers the wealth of opportunity and blessedness which is theirs in Christ. It has, accordingly, comparatively little material for a doctrine of the Last Things on its negative side. Yet the conclusion to which we are led admits of no doubt, if there is any. If probation is ended, those who persist in their opposition to God and their rejection of the Divine mercy, whose characters have attained a final fixity, the NT leaves no doubt as to what their condition must be. They have sinned an eternal sin (Mt 3:9). They must endure the utmost visitation of the wrath of God (1 Th 5:2). We are not called on to decide the question whether there shall be many such lost souls, or even whether any such shall be found at the time of the consummation. We are warned against attempted descriptions of what is, in its nature, unimaginable, the loss and the misery of such a state. But any serious consideration of human nature, and of the relations of God and
man, leads to the conclusion that such fixity of opposition to God must be included in the possibilities of the development of human character, and that, if this possibility is ever realized, it must involve none other than this overwhelming judgment.

LITERATURE.—Monographs: Lactantius, da Era Dei; Rittschl, de Zora Gotte (1866). Discussions in the Biblical Theologies, specially Davidson, Oehler, Schultz, Steuven; and in the Systematic Theologies, e.g., Martensen, Dorner, and Adams Brown. Discussions in works of J. A. Halket, Atonement and Redemption: Rittschl, Justification and Reconciliation, pp. 178; The Atonement (1878); The Redemption of Man (1900); M. L. Campbell, The Nature of the Atonement (1973); Moerby, Atonement and Personality (1921). Articles in the Dictionary of Salvation (1900); articles in PEB, and in Hastings' DB and DGC.

T. B. KILPATRICK.

ANGLO-ISRAELISM.—The theory that the inhabitants of England are the descendants of the 'lost' (1) Ten Tribes of Israel is held somewhat widely, and is said to have two million adherents in Great Britain and the United States. The Anglo-Israelites are, at any rate, sufficiently numerous to support a publisher, who devotes his business entirely to publication dealing with the subject. There are also several periodicals published in furtherance of the views of the Anglo-Israelites.

The earliest suggestions of an Israelitish ancestry of the English are to be found in John Sadler's Rights of the Kingdom (1649). These take the form of a series of parallels between English law and customs and those of the Hebrews and Jews. The name 'Britain' itself is traced to a Phenician source, Berit Ashek ('The Field of Tin and Lead'). Many of the legends attached to the Coronation Stone have also a Jewish tinge, and are traced back to a landing of fugitive Israelites, under the lead of Jeremiah and Baruch, in Ireland.

The modern movement owes its foundation to Richard Brothers (1757-1824), a half-pay officer of eccentric habits in the English navy. According to his account he was a Divinely appointed prophet. He described himself as a 'nephew of the Almighty,' and claimed descent from David. Among his prophecies were those of the imminent restoration of Israel to the Holy Land, and the elevation of himself as prince of the Hebrews and ruler of the world. Brothers was confined as a lunatic, but succeeded in obtaining many admirers, among them Nathaniel and Thomas Bullet, M.P. for Lymington. The non-fulfilment of his prophecies sorely tried the faith of the believers, but through good and ill repute he retained the loyalty of John Finlayson, previously a Scotch lawyer with an extensive and lucrative practice. According to the Dictionary of National Biography, Brothers printed in all fifteen volumes, chiefly in support of his theory of the Israelitish descent of most of the inhabitants of England. The more important of the volumes are Recalled Knowledge of the Prophecies and Times (1794), and A Correct Account of the Invasion and Conquest of this Island by the Saxons (1822). Prominent among the literature that followed upon Brothers' announcements were Finlayson's writings. In 1840 the theory was adopted by John Wilson, who lectured and wrote widely on the subject. His Our Israelitish Origin is the first coherent exposition of the theory. Other advocates in the nineteenth century were W. C. Carpenter (Israelites Found), F. R. A. Glover (England the Remnant of Judah), and C. Piazzi Smyth, the Astronomer-Royal for Scotland, who deduced from certain measurements of the Great Pyramid that the English were descended from the Lost Tribes. In 1874, Edward Hine published his Identification of the British Nation with Lost Israel, of which a quarter of a million copies are said to have been sold. In the United States the leaders of the movement have been W. H. Poole and G. W. Greenwood. The theory has also been adopted to a slight extent on the Continent, where, for instance, the hostility of the English to Napoleon and Russia, and the sympathy aroused by the Dreyfus case are attributed to this cause.

The advocates of the theory identify Israel with the Khumri of the Assyrians, the Cimmeri of the Greeks, the Cimbrici of the Romans, and the Cymri. All these forms, it is said, are variations of the same name, and traces of it are to be found in garumna, 'garum,' and in Coronation Stone, an ancient fortress on the banks of the Araxes, the place of the Israelitish exile. The Ten Tribes of the Assyrian Captivity on leaving the land of their sojourn are supposed to have wandered towards the west, while those of the Babylonian Captivity passed eastwards towards Afghanistan and India. It is claimed that evidence of the journey towards the north-west is to be found in the tombs, alleged to be of Israelitish origin, that stretch from the Caucasus westwards round the Euxine. The further passage westwards is to be traced to the river nomenclature of Russia: the Don, Danes, Dagestieve, Danemarke, and Danube. The theory goes on to state that these migrants were driven by Alexander over the Danube and settled in Scythia. There they were attacked by barbarian invaders, whom they ultimately repulsed. Many of them, however, were driven farther north, and founded republics, on the Israelitish pattern, in the north and west of Europe. The Goths, who were also of Israelitish descent (Goth=Geta=Gad) were driven by the Huns into the dominions of Rome, in which and beyond which they spread. In consequence of these events, almost the whole of Europe, as well as her colonies in other continents, is held to be peopled by descendants of Israel. Among the local identifications are the tribes of Simeon and Levi among the Ionians, Asher in the Etruscans, Dan in the Danes, Judah in the Jutes, and Manasseh in the Celts. The Macedonian are also stated to have been descendants of Judah.

The Khumri are divided into the Scuthae or Scythians—whence Scots—and the Sasae—afterwards Saxons (sons of Isaac). The former, it is said, composed the migration of B.C. 670, when the Tribes of Reuben and Gad, and half that of Manasseh, started on their wanderings. The latter consisted of the remainder of the victims of the captivity of nineteen years later. One branch of the tribe of Dan, however, escaped on ships, and ultimately settled in Spain and Ireland, where they were known as the 'Scatha de Danes.' They arrived in Ireland under the lead of the scribe Baruch and possibly also of Jeremiah. Accompanying them, we are told, was an Israelitish princess who subsequently married a local chieftain, the couple being crowned on the Bethel stone, rescued from the ruins of the Temple. This stone, the Lia-Fail, it is claimed, accompanied the Scots to Scotland, was invariably made use of at coronations, was removed by Edward I. from Scone to Westminster, and is identified with that now used at English coronations. There is in reality considerable doubt whether the Coronation Stone is identical with the Lia-Fail.

In support of the theory many alleged identifications: a respect of customs, traditions, beliefs, etc., have been adduced. The evidence, however, depend upon very inadequate support. Similarities as authentic have been discovered between the various languages of the British Isles and Hebrew. The theorists choose safer ground when they point to England's influence and success, and suggest as a cause God's covenant with Abraham, fulfilled in...
the persons of his descendants, the English. It is also argued that the English must be the representatives of Israel, as otherwise the many Divine promises made to that race would be unfulfilled.

The theory relies to a very considerable extent on a very literal interpretation of certain passages in the Scripture (Anguttar Edition), (Athurveda Version). It is pointed out that Israel was to change his name (Hos 11), increase beyond number, dwell in islands (Is 24) to the north (Jer 33) and the west, and be a great nation (Mic 4). Israel would also extend beyond the limits of its memory (Is 54, Dt 28 and 32). One of the tribes, Manasseh, was to become an independent nation (Gn 48). From this tribe, we are told, the United States was derived. Reference is found to the lion and the unicorn in Nu 24:9 and to the American eagle in Ezk 17. The promise that Israel shall possess the gates of her enemies (Gn 22:7 24) is fulfilled in the case of Britain by the possession of Gibraltar, Aden, Singapore, etc.

The number of works of Brothers and Hoin is hardly readable. The most important is the study of John Wilson, the Israelitish Origin (1846). Other works explaining the theory, in addition to those already mentioned, are H. W. J. Senior's The Ten Tribes (1883); T. R. Hovius, Anglo-Israel and the Jewish Problem (1905); M. Williams' The Sakal, Our Ancestors (1882); H. H. Pain's Einheimen der israelitischen Lehren (1881); S. Totten's The Ten Tribes (1887); C. A. L. Totten's Our Race (London, 1888); and Anglo-Israel (1889). Other works, that should be consulted are: C. Piastry Smyth's Our Inheritance in the Great Pyramid (1864); R. Gorer's English derived from the early Hebrews (1871); and The Anglo-Israel (1889). Other works that should be consulted are: C. Piastry Smyth's Our Inheritance in the Great Pyramid (1864); R. Gorer's English derived from the early Hebrews (1871); and The Anglo-Israel (1889). Other works, that should be consulted are: C. Piastry Smyth's Our Inheritance in the Great Pyramid (1864); R. Gorer's English derived from the early Hebrews (1871); and The Anglo-Israel (1889).

ANGUTTARA NIKAYA.—The fourth of the five Nikayas, or collections, which constitute the Sutta Pitaka, the Basket of the tradition as to doctrine, the second of the three Pitakas in the canon of the early Buddhists. The standing calculation in Buddhist books on the subject is that it consists of 9557 suttas or short passages. Modern computational would be different. This large number is arrived at by counting as three separate sentences each a statement as: 'Earnestness in industry, and intellectual effort are necessary to progress in good things,' and so on. Thus in the first chapter, section 14, occurs the sentence: 'the following is the chief, bretheren, of the brethren my disciples, in seniority, to wit, Anada Kondakov.' The sentence is then repeated eighty times, giving the pre-eminence, in different ways, of eighty of the early followers of the Buddha, who were either brethren or sisters in the Order, or laymen or laywomen. In each case the necessary alterations in the main sentence are made. We should call it one suıta, giving a list of eighty persons pre-eminent, in one way or another, among the early disciples. According to the native method of repeating by rote, and therefore also of computation, it is eighty suttas. Making allowance for this, there are between two and three thousand suttas. The work has been published in full by the Pali Text Society, vols. i. and ii. edited by Morris, and vols. iii., iv., and v. by E. Hardy (London, 1855-1900). In the new Pali edition, published by Totten, the work has been divided into four parts, each of four pages, the majority of them being very short; and in them all those points of Buddhist doctrine capable of being expressed in classes are set out in order. This practically includes most of the psychology and ethics of Buddhism, and the references are given as: v. 991; vi. 891; vii. 981; viii. 871. The work is a valuable general introduction to the Pali language and literature.

It is always important to understand the context in which a work is written. This is especially true of religious and philosophical texts, which often contain complex and layered meanings.

In the case of the Anguttara Nikaya, the text discusses the early followers of the Buddha, using a repetitive structure to emphasize their importance. The text is divided into various sections, each focusing on a different disciple.

This type of repetition is a common feature in early Buddhist literature, where it serves to reinforce the importance of certain individuals and the core teachings of the Buddha.

The content of the Anguttara Nikaya is significant for understanding the early history and development of Buddhism. It provides insights into the early community's beliefs, practices, and the roles of its members.

In summary, the Anguttara Nikaya is a valuable resource for studying early Buddhist teachings and the role of individual disciples in the community.
being; the savage, in his treatment of the game which has fallen a victim to the prowess of the hunter, shows evidence of a similar state of mind; he attributes to the soul of the slain beast an anxiety as to, and a knowledge of, the good or bad treatment of its mortal remains. When the animal is still alive, he regards it as open to argument, he will repel the crocodile with having slain those who have done it no harm, and point out that the crocodiles, having been the aggressors, have only themselves to thank when man takes the offensive and exacts vengeance for his lost relatives and friends. And so power in the form of speech, a power which in the case of the monkey is said to be put to no use, owing to the animal's fear that he might be made to work if he once began to talk. Both in fables and folk-tales, animals are represented as carrying on conversations and as being moved by the same motives as the human beings who narrate the stories (MacCulloch, Childhood of Fiction, pp. 38-41, 247-278); so much so, in fact, that in Africa the arguments in a judicial process not uncommonly turn on the question of what form of speech, in which form will make the negro embodies his predecessors and leading cases. Even in Europe it is not hard to find traces of this primitive attitude of mind; there is a well-known custom of telling the bees when the master of the house dies; and few bodies are placed in the mind of one country people than that neglect of this precaution will offend the insects, and deprive the new master of the labours. So, too, a knowledge of the moral character of those about them is attributed to the bees, with a corresponding influence on their activity. There is therefore no line of demarcation between man and beast, so that the North American Micmacs say: 'In the beginning of things, men were as animals and animals as men' (Leland, Algonquin Legends, p. 31). To the uncultured the difference is in the form, not in the nature, of things. The Indians of Guiana do not see any sharp line of distinction between man and other animals, between one kind of animal and another, or even between animals—man included—and inanimate objects. On the contrary, to the Indian all objects, animate and inanimate, seem exactly of the same nature, except that they differ in the accident of bodily form. Every object in the whole world is a being consisting of body and soul—a type of an archetypal object in the respect that of bodily form, and in the greater or less degree of brute cunning and brute power, consequent on the difference of bodily form and bodily habits (Im Thurn, Among the Indians of Guiana, p. 350).

But this doctrine of the essential similarity of all things, in spite of differences of form, does not embody the whole of the savage's creed. Perhaps still more essential is his belief in the impermanence of form. We find this exemplified even in fables and folk-tales are not mere comparisons of the transformation of an old witch into a cat or a hare. But magical powers are by no means essential to this change of form. To take only one example. There is a widespread belief that certain migratory birds, and especially the stork, assume human form in other lands; and no sense of incongruity is felt when the story is told of a traveller in foreign lands, being one day approached by an unknown man who displays great familiarity with his children, inquires about their health, and takes a general interest in what is going on in the distant Fatherland. The traveller's astonishment is allayed only when he learns that the stranger obtained his knowledge on the spot. His request for an explanation is met by the simple reply that the stranger is the stock who nests on the good man's roof. All the world over we find the same belief in the power of men, animals, plants, and even inanimate objects, to assume another form at will (cf. MacCulloch, pp. 149-187). It is therefore no wonder if the savage attitude towards nature is widely different from our own.

These transformations can take place during life. Of a slightly different nature, but almost equally important for the comprehension of the beliefs and customs of the uncultured, is the idea that death simply means the assumption of another form as a substitute for the former. The principal sources of the respect paid to animals is the belief that certain species are the embodiments of the souls of the dead, or even the very souls of the dead (for the view varies), and that these souls must receive respect, not only because they are ancestors or relatives, but also because their anger would mean the anger of the species of animals which their souls inhabit. Thus a kind of alliance springs up between certain human kins and certain species of animals, in which some writers have sought the very real sense of his kinship with animals; they are not merely his brothers, but his elder brothers; to them he looks for help and guidance. Not only, but on them he depends for a great part of his subsistence—a fact which is far more vividly brought home to him than to the meat-eating human being of civilized societies, and in like manner he is far more liable than more cultured peoples to meet his death beneath the claws of a lion or a bear, or to succumb to the venom of the serpent. It is therefore small wonder that his attitude towards the animal creation is one of reverence rather than superiority.

1. AGRICULTURE.—The researches of Mannhardt have shown that the European peasant of to-day conceives that the life of the corn exists in the earth, and that the integrity of this life is the true corn itself. The animal corn-spirit is believed to take various forms,—pig, horse, dog, cat, goat, cow, etc.,—and is often conceived to lie in the last ears to be cut, the reapings of which is termed in some parts 'cutting the neck.' The corn-spirit is found not only in the harvest field, but also in the barn and the threshing-floor; the corn-spirit is killed in beating out the last grains from the ears. As a rite of sacralization of the eater, or of desacralization of the corn, the animal incarnation of the corn-spirit is eaten in the harvest supper, at seadtime, or at other periods; the bones or parts of the flesh of this ritual food are used in magic to promote the fertility of the new crop. Sometimes the actual animal is not itself eaten; in its place we find the cake in animal form; but we cannot assume that this cake has taken the place of a former sacrifice of the animal, for it is made of the corn; the eating of the corn in the form of the animal is as effective a sacrament of the eating the animal itself.

In Greece and other parts of the ancient world we find traces of the conception of the corn-spirit as an animal. Demeter was closely related to the pig, and was actually represented at Phigalia in the form of a horse, while her priests were called horses. In the case of Attis and other primus facie
corn-deities a similar connexion with animals can be traced. Among the American Indians the corn-spirit is occasionally conceived in animal form (bison, deer, goat; see below). In other parts of the world an anthropomorphic or simply animistic conception is the rule.

Marillier (HUR xxvii. 381) holds that the life of the corn must be in the form of an animal. Premus explains the connexion of animals with certain other vegetables, as their tutelary deities, on the ground that they were originally held to influence the supply of seed (Am. Anth., iv. 46; 1896 Rep. Res. Ethn. p. 968, etc.), from which, like other magical animals (Globus, lxxvi. 116; A. Anth., iv. 142.), they become tutelary deities. Possibly, too, the belief in soul-animals (see p. 493) may have had some influence; it is not uncommon to make offerings to ancestors in connexion with agriculture; these ancestors are sometimes conceived in the form of animals; it is therefore no long step to the concept of a corn-spirit in animal form. In Indo-China the ancestor is actually believed to guard the fields in the form of a toad at seedtime (Miss. Cat. 1894, p. 143). In New Guinea the form of lures were believed to protect the cornfields (Grinton, Essays, p. 173). In central Java the tiger is held to guard the plantations against wild pigs (Arch. Jav., vii. 670). Vegetation spirits generally are conceived in Europe to be in animal form; but in other parts of the world this idea is seldom found.

2. ART (DECORATIVE).—It is an almost universal custom to decorate weapons, pottery, clothing, etc., with designs, often so highly conventionalized as to be recognizable only on comparison with less stylized forms. One of the main sources of decorative design is the animal world, and the object was, it may be assumed, magical in the first instance. In its later forms there is a combination of purposes, but this is usually where the animal has come to be associated with a god. In this case the use of the animal as an art motif is a form of worship; at the same time, if the animal is the emblem, for example, of rain, its use is equivalent to a prayer for rain. There are, however, innumerable instances of the use of animals in art, both in connexion with totemism and otherwise, for magical or non-theistic purposes. The totem posts of the Haidas have all sorts of decorative carvings, some of which, if not strictly genealogical significance in New Guinea, the totem is delineated on drums and pipes. The lizard (see below) is largely used in Africa and the Pacific, and the frigate bird in Melanesia. In Central Australia the sand is covered with delineations of animals which are figured at Australian South African initiation ceremonies; and many Australian decorative designs are totemic, or at least animal motifs. Probably the skin markings (see 'Tatu' below) of the Australian and other peoples are largely conventionalized forms of similar motives. Where a religious significance has once attached to a design, the art motif may continue to be largely used merely for magical purposes and finally for luck. In Europe we are far from this, but the use of animals in heraldry. See articles on Art.

3. COLOUR.—The colour of animals is highly important, both in magic (wh. see) and otherwise. In Europe the king of the snakes is said to be white. White horses (see below) were especially sacred. In Indo-China the cult of the white elephant is well known. In Japan white animals have a high importance (Globus, lxxii. 2722) and good fortune for the reigning house is inferred from their appearance. The daughter of a man who was 10 years old had a white hare, which was a prince. In Patagonia white cassowaries are sacrosanct; the Patagonians believe that the species would die out if they were to kill such white specimens; white horses and cows enjoy an equal respect (ib. lxi. 63). The white animal is often preferred as a victim. The Wogulis offer a white horse in autumn; the officiants dance round it and stab it with their knives till it falls dead (ib. liv. 332). So, too, the Tcheremiss offer white animals (Erman, Archiv, i. 415). Among the Bushmen of Assam a white buffalo is offered annually (Miss. Cath. 1896, 59), and the Battas also select white victims (Marsden, Sumatra, p. 385). In August or September the Situa festival was held in Peru; the priests received for sacrifice one year the white lamas, which were not shorn (Ausland, lixiv. 901). See also 'Bear', etc., below.

For special purposes distinctive colours must be used. Thus the rain-cloud is black; in a sacrifice for rain, therefore, the victim must be in imitation of it. The Wambwuges of East Africa offer a black sheep and a black calf when they want rain; the Garos of Assam offer a black goat on the top of a very high mountain in time of drought; in Sumatra a black cat is thrown into a river and allowed to escape after swimming about for a time, the ancient Hindus set a black horse with its face to the west and rubbed it with a cloth till it neighed (Golden Bough, i. 101-2); and in the same way white animals must be sacrificed for sunshine (ib. p. 108).

For an agricultural sacrifice at the planting of the rice, although white is not everywhere the emblem of purity, it is natural to connect with this idea the selection of a white dog for a piaicular sacrifice.

4. CREATOR.—It is by no means self-evident to the savage mind that the powers of the universe or of some part of it are necessarily united with those of its sustainer, or of a moral ruler of mankind, or even of a god. Hence, though we find cases in which the Creator is an object of worship, or at any rate respect (see 'Crown' below), we also find a share in creation assigned to animals which are not even specially sacred.

The Gose Ventre account of the origin of the world is that the world was once all water, inhabited only by fish, which in some unaccountable way produced a crow, a wolf, and a water-hen. One day the crow proposed to the wolf to send down the water-hen to look for its eggs which were much happier if they had a little ground under their feet. The earth was brought, and while the gods were engaged in a rattle, the crow sprinkled the earth about on the waters and formed the globe as we have it to-day. Subsequently the wolf was created, and the crow turned him into an Indian (Cous. Henry and Thompson, MS Jis. p. 801). According to the Guaycurus of South America, they were called into existence after all the other nations by a decree of the caracara bird, but they show it no special respect (Patriota, 1814, p. 20). In some cases chance seems to have caused an animal to figure as Creator; in S. Australia the islands were said to have resulted from a blow of a great serpent's tail, but Nooree created other things (Eyre, Expedition, i. 336).

5. CULT.—Anthropological data are supplied in many cases by the chance remarks of a traveller, who, if he understands the true nature of the phenomena he is describing, does not always appreciate their importance, and leaves us in the dark on points which are indispensable to the correct understanding of his information. This is especially the case when the information relates to the worship or supposed ownership of animals; not only are the sources of such a cult extremely various, but it is possible for actions which spring from purely utilitarian motives to appear the same whereas otherwise the ritual of an animal cult. We find, for example, that in ancient Egypt it was the practice to lead the sacred crocodiles, which were associated with the god Souchos (Scebek); in modern days we have a similar practice recorded in West Africa; but in the absence of information from those who give them food we can hardly inter-
pret the custom without fear of error. Prudence is a faculty commonly denied to the peoples in lower stages of culture; but it may well have happened that accidental, if not reflexion, suggested to some one that a hungry crocodile is a far more dangerous neighbour than one which is in no need of food. We cannot, therefore, explain the modern custom, which is mentioned above, in a way that the possibility of the utilitarian explanation must also be kept in mind. Quite apart from this, there is a difficulty in the interpretation of the data which arises from the indefinite nature of much of the material. The significance is well established, but the savage creed is often vague and fluctuating. At any rate, in the hands of European questioners, it is not uncommon for one native to assert one thing while another will maintain exactly the reverse; or one and the same man will put forward contradictory propositions either after an interval of time or even during a single interview. Where the ritual is unmistakably religious or magical, we can dispense with the commentary of the officiating priest or magician; but the room for error is then ill defined, and it is to do without this guidance, even though we know that the explanation given is not necessarily the original one.

The terms 'worship' and 'cult' are used, especially in dealing with animal superstitions, with extreme vagueness; and each instance of the facts to which they are applied is in itself uncertain. At one end of the scale we find the real divine animal, commonly conceived as a 'god-body,' i.e. the temporary incarnation of a superior being, with a circle of worshippers. At the other end, separated from the real cult by imperceptible transitions, we find such practices as respect for the bones of slain animals, or the use of a respectful name for the living animal. The question is one with the general problem of the definition of religion; it cannot profitably be discussed in connexion with a single species of cult, and it is the less necessary to do so here, as we are concerned only with general principles and broad outline.

Animal cults may be classified on two principles: (a) according to their outward form; (b) according to their genesis. The simplest kind of classification is important chiefly for the comprehension of the principles which underlie the evolution of animal worship and anthropomorphic cults; the second is primarily concerned with an earlier stage—that of the actual beginnings, it may be, of the religious sentiment or its manifestation.

(a) Formal Classification.—Animal cults may be broadly divided into two classes: (i) the whole species without exception is sacred; (ii) one or a fixed number of a species is sacred. In a certain number of cases the second class may be indistinguishable from the first; this is the case in the Borneo cult of the hawk; there were not only the three real omen birds among the Ibas of Borneo in olden days, but they were indistinguishable from their fellows.

Although it is by no means axiomatic that the cults of the species has in every case preceded the cult of the individual animal, it seems probable that we may regard this as the normal course of evolution. The transition may be effected in more than one way. (1) As in the case of the hawk (see above) among the Bornean peoples, a simple progress from theriomorphic to anthropomorphic ideas may suffice to explain the change. There is no reason to doubt that such a process may take place both without foreign influence and without any internal impulse due to the rise of sun-, moon-, or other cults of single deities, which would naturally tend to produce a species of syncretism in previously existing multiple cults. Among more than one Australian tribe, for example, the eagle-hawk seems to have been transformed into an anthropomorphic deity; but there is no reason to suspect either foreign influence or assimilation to other native cults, for the latter are admittedly non-existent. So, too, in Central Australia the kangaroo totem-sacrifice to the sacred animal; the totemic ceremonies are performed to keep him in a good humour, and not, as is the case with the other totems of the same tribe, to promote their increase; but when we reach acts intended to propitiate a magical, spiritual animal we are on the verge of worship, if indeed the boundary between totemism and animal cults proper has not long been overpassed. At the same time, not only may the rise of individual cults, such as those of the heavenly bodies, exact a deep influence on the multiple cults, but a specialization of function may, where multiple cults alone are present, aid to bring about the same result. The chief purpose for which the Bornean peoples require omens is to get directions for the hunt; the conduct of the can ill afford to do without this guidance, even though we know that the explanation given is not necessarily the original one.

The terms 'worship' and 'cult' are used, especially in dealing with animal superstitions, with extreme vagueness; and each instance of the facts to which they are applied is in itself uncertain. At one end of the scale we find the real divine animal, commonly conceived as a 'god-body,' i.e. the temporary incarnation of a superior being, with a circle of worshippers. At the other end, separated from the real cult by imperceptible transitions, we find such practices as respect for the bones of slain animals, or the use of a respectful name for the living animal. The question is one with the general problem of the definition of religion; it cannot profitably be discussed in connexion with a single species of cult, and it is the less necessary to do so here, as we are concerned only with general principles and broad outline.

Animal cults may be classified on two principles: (a) according to their outward form; (b) according to their genesis. The first kind of classification is important chiefly for the comprehension of the principles which underlie the evolution of animal worship and anthropomorphic cults; the second is primarily concerned with an earlier stage—that of the actual beginnings, it may be, of the religious sentiment or its manifestation.

(a) Formal Classification.—Animal cults may be broadly divided into two classes: (i) the whole species without exception is sacred; (ii) one or a fixed number of a species is sacred. Although it is by no means axiomatic that the cults of the species has in every case preceded the cult of the individual animal, it seems probable that we may regard this as the normal course of evolution. The transition may be effected in more than one way. (1) As in the case of the hawk (see above) among the Bornean peoples, a simple progress from theriomorphic to anthropomorphic ideas may suffice to explain the change. There is no reason to doubt that such a process may take place both without foreign influence and without any internal impulse due to the rise of sun-, moon-, or other cults of single deities, which would naturally tend to produce a species of syncretism in previously existing multiple cults. Among more than one Australian tribe, for example, the eagle-hawk seems to have been transformed into an anthropomorphic deity; but there is no reason to suspect either foreign influence or assimilation to other native cults, for the latter are admittedly non-existent. So, too, in Central Australia the kangaroo totem-
fleece of the ram which was sacrificed to him once a year. Intermediate stages are given by the Californian custom of preserving the panné skin and using it as the tobed, or cloak, of Chinechinich; and by the Floridian sacrifice of the goat (see below), whose skin was preserved for a year, until its place was taken by that of the first victim, the

(3) In the folk-lore of modern Europe the corn-spirit is conceived to bear sometimes human, sometimes animal form; but in neither case has anything like unification made its way into the minds of the peasants who are the repositories of these primitive ideas. In Greece and Rome, on the other hand, we find the corn-spirit, as recorded in literature, no longer an undifferentiated, multiple divinity, who resides equally in every field and on every farm. A process of synthesis has unified the anonymous rustic animal and human gods, though in Greece we can still trace their features in survivals. How far this unification corresponded to anything in the nature of anthropomorphization and unification in the mind of the peasants whose gods they originally were, we do not know; but it may be suspected that the process did not go far. It may, of course, be true that the corn-spirit in modern Europe is but a degenerate descendant of Wodan, Demeter, or whatever the name of the corn-deity was; but this explanation leaves us without a hint of how the former god came to be conceived as an animal. However this may be, it seems clear that the passage from multiplicity to unity by synthesis implies a certain amount of philosophizing. Just as in Egypt there was a tendency to identify all the gods with Ra, so in Greece, in a minor degree, went on the process of identifying the local corn-god, the domesticated animal, and the horned animal. The natural tendency was for the cult of a deity to spread beyond its original area and to swallow up less important or nameless objects of worship, and this went on in the case of animal no less than of other cults. At the same time, we must not overestimate the importance of the movement, which may have penetrated but slightly the lower strata of the population. It may be noted in passing that it is possible to have two distinct kinds of syncretism: (a) where one deity swallows up another being of the same species as itself, and (b) where two different species come to syncretism. In the case of Demeter, complicated, however, by the fact that the horse as well as the pig was associated with her, thus leading to a double movement of synthesis—the unification of the species of the horses and pigs, but the unification of the different species of animals, the heterogeneous corn-spirits—from which we get Demeter as she is presented to us by classical authors; and (2) where there is no underlying unity of function. If the cult of Apollo Smintheus developed from an older cult of the mouse, we can indeed explain why the mouse-god should also be the sun-god, by saying that the mice devastate the fields under cover of darkness, and that the sun-  

bol, which later came to be regarded as a 'god-  

body,' and was recognized by special marks. In the second type, the animal, so far from remaining inviolate, is sacrificed at the end of the year or after a certain period of time; but, unlike the cases referred to in a previous section, its sanctity ceases with its death, and its place is taken by another living animal. This form of worship may perhaps be due in the first instance to the common felt wish to apologize and do honour to the animal about to be slain, in order that its spirit, honoured in its person, may show no disinclination to fall victims to the hunter's dart.

(4) Side by side with the immolation of the victim, and sometimes supplementing the annual sacrifice as a cause of the sanctity of a special animal, may be placed the custom of selecting an animal as an ancestor and consecrating this practice. The first, among pastoral peoples, consists in consecrating an animal which is thenceforth inviolate. Perhaps we may see in a custom of this sort the source of the Egyptian cult of the

bull, which we shall consider as a 'god-body,' and was recognized by special marks. In the second type, the animal, so far from remaining inviolate, is sacrificed at the end of the year or after a certain period of time; but, unlike the cases referred to in a previous section, its sanctity ceases with its death, and its place is taken by another living animal. This form of worship may perhaps be due in the first instance to the common felt wish to apologize and do honour to the animal about to be slain, in order that its spirit, honoured in its person, may show no disinclination to fall victims to the hunter's dart.

(b) Genetic Classification. — In dealing with animal cults from the genetic point of view, it must not be forgotten that, while changes in ritual are at most but gradual, the explanations which are given of the acts are liable to change in a much greater degree. Foreign influences apart, development in creeds is often a slow process; but it may be taken as axiomatic, at any rate for the lower stages of culture, that belief changes far more rapidly than ritual. If, therefore, we find that at the present day a species of animals is held in reverence, it by no means follows that the explanation is the one which would have been given in pre-historic times; yet, if the primitive interpretation may not throw any light on the real origin of the cult. The etiological myth is particularly characteristic of savages, and the etiological myth is not history but guesswork.

To take a concrete example, the Atrazites explain the fact that they have the baboon as their totem by a myth which involves the supposition, if it is to be regarded as real history, that they developed totemism after their passage from barbarism to the acquisition of cultivated plants (Folklore, xv. 110). Not only is this highly improbable in itself, but the myth throws no light on the genesis of totemism in other parts of the world or among other South African kins, if indeed it be totemism with which we are confronted among the southern Bantu. Again, the southern Bantu as a whole explain their respect for the totem (?) animal, or siboko, by the story that the souls of their ancestors go to reside after death in the species which they respect. But this is an attempt to adapt to their custom of ancestor-worship, possibly a result of the change from female to male descent, there would be a tendency to bring other cults into relation with the predominant form of worship. The belief, but rarely found in other parts of the world, of transmigration into the totem animal may have taken the place of the belief in transmigration pure and simple, which is found in Australia without any connexion with totemism (Maas, 1905, No. 58).

Again, the claimer signified to his brethren on the ground that they do honour to the species on which they depend for their subsistence. That may be so at the present day; but there is no proof that the cult of the animal in question does not date back to the days before it was domesticated or when it was only in the early stages of domestication, which obviously must have been for reasons unconnected with its future usefulness. If, as is not impossible, the cult of the animal led to its domestication, the modern explanation is only guess at the causes which made the animal an object of worship in the first place.

Animal cults may be conveniently classified under ten specific heads, with another class for non-
ANIMALS

descript forms of unknown origin or meaning: (1) pastoral cults; (2) hunting cults; (3) cults of dangerous or noxious animals; (4) cults of animals conceived as human souls or their embodiment; (5) totemistic cults; (6) cults of secret societies, individual cults of totemic animals; (7) tree and vegetation cults; (8) cults of ominous animals, probably associated with certain deities; (10) cults of animals used in magic. Broadly speaking, it may be said that in the cases of (1), (2), and perhaps (7), the motive is mainly the material benefits which the members of the totemic group derive from the species in question, whereas the totemic attitude of the South African Bantu towards their herds is not comparable with the respect or fear for cattle shown by earlier peoples. The Bantu does not regard the animal as a divine being, but as a useful animal, though the prohibition is certainly of late development. (b) As an example of the second sub-type may be taken the Toda cult of the buffalo (see below), the Madi cult of the sheep (see below), and perhaps the West Asiatic cult of the camel (unless we should regard the rite described by Nilus in PL lxxi. as astral in its nature), since they fairly represent the class of pastoral cults in which honour is done to the species by sacrificing one of its members with special ceremony. In another class of pastoral cult the honour is done to the species by selecting one animal as its representative and letting it go free. As an example of this type may be taken the Kalmuck custom of setting free a ram lamb. But it may be noted that even here it is the practice to sacrifice the sacrificial animal eventually. This is only so, however, when it is growing old, and Frazer explains it, like many other customs of a similar kind, as due to a wish that the god or divine animal may not grow old and thus lose, with the decrease of its powers, any of the strength needed for the fulfilment of his functions.

(2) In hunting cults, on the other hand, the species which receives honour is habitually killed, and, in order to atone for the loss of individual members, (a) the species is considered to be represented by a single individual, which is itself finally killed, but not until it has, like the bear (see below) among the Ainus, received divine honours, and (b) each individual of the species at its death by the hunting of the tribe, for the sake of its meat and its uiings, or whatever treatment is conceived to be proper to make its feelings predominantly those of satisfaction, in order that its surviving fellows may show no unkindness to present themselves in their turn. As examples of this sub-type may be taken the buffalo, and the bear (see below) among some peoples (cf. Golden Bough, ii. 404 ff.), and, in fact, most animals on which hunting or fishing tribes largely depend. In some cases the propitiation does not go farther than forbidding misuse of the bones of the dead animals, such as feeding them to dogs, breaking them, etc., which may be a purely practical measure based on savage ideas of reproduction, rather than cult properly so called.

The cult of dangerous animals is generally characterized by tabus before, during, and after the hunt, and by ceremonies intended to propitiate the slain animal. They are mainly practised in Africa and South Asia; as examples may be taken the cult of the leopard, lion, and tiger (see below). The dangers to be avoided are twofold: in the first place, the soul of the slain beast may take vengeance on the hunter, who therefore submits to the same tabus as are imposed on all mourners of members of his tribe, in order to avert the idea of either deceiving or keeping at a distance the malevolent ghost; in the second place, as in the previous sections, the remainder of the species has to be kept in good humour or prevented from learning of the death of their comrade. To (3) and to some extent (5) and (10) are connected with fear of the consequences of refusing respect; (6) and (8) are connected with the assistance derived from the animal; and (9) with the fear of the wrath of a god; while (4) seems to be compounded of fear of the wrath of ancestors and desire for their help.

(1) The characteristics of the pastoral type are that a domestic animal, (a) is spared as a species, or (b) receives special honour in the person of an individual animal. (a) As an example of the first sub-type, we may take the Hindu sacrifice of the cow, and, as a modified form, the attitude of the South African Bantu towards their herds. The latter are losing their respect for cattle; but whereas in pre-European days the sacrifice of cattle was performed by the Hindis, at the present day he is absolutely forbidden to kill any species, though the prohibition is certainly of late development. (b) As an example of the second sub-type may be taken the Toda cult of the buffalo (see below), the Madi cult of the sheep (see below), and perhaps the West Asiatic cult of the camel (unless we should regard the rite described by Nilus in PL lxxi. as astral in its nature), since they fairly represent the class of pastoral cults in which honour is done to the species by sacrificing one of its members with special ceremony. In another class of pastoral cult the honour is done to the species by selecting one animal as its representative and letting it go free. As an example of this type may be taken the Kalmuck custom of setting free a ram lamb. But it may be noted that even here it is the practice to sacrifice the sacrificial animal eventually. This is only so, however, when it is growing old, and Frazer explains it, like many other customs of a similar kind, as due to a wish that the god or divine animal may not grow old and thus lose, with the decrease of its powers, any of the strength needed for the fulfilment of his functions.

(2) In hunting cults, on the other hand, the species which receives honour is habitually killed, and, in order to atone for the loss of individual members, (a) the species is considered to be represented by a single individual, which is itself finally killed, but not until it has, like the bear (see below) among the Ainus, received divine honours, and (b) each individual of the species at its death by the hunting of the tribe, for the sake of its meat and its uiings, or whatever treatment is conceived to be proper to make its feelings predominantly those of satisfaction, in order that its surviving fellows may show no unkindness to present themselves in their turn. As examples of this sub-type may be taken the buffalo, and the bear (see below) among some peoples (cf. Golden Bough, ii. 404 ff.), and, in fact, most animals on which hunting or fishing tribes largely depend. In some cases the propitiation does not go farther than forbidding misuse of the bones of the dead animals, such as feeding them to dogs, breaking them, etc., which may be a purely practical measure based on savage ideas of reproduction, rather than cult properly so called.
Islands it appears to be the custom for a dying man to inform his family into what species of animal he proposes to migrate (JAI xxviii. 147). The abode thus taken up in an animal is commonly regarded as permanent, the soul of the dead man passing into another of the same species, if his particular animal is killed (Maclean, 1864, No. 118), but occasionally the soul is believed to pass on after a time to its final abode (Folklore, xii. 342). The belief is occasionally found in Africa that a chief has put his soul for safe keeping into an animal, which is therefore respected (Golden Bough, iii. 407; JAI xx. 13; see below, 'Goat,' 'Cattle').

If we are entitled to assume that the *śibokoism* of the South African Bantus is totemism, or has replaced an earlier stage of pure totemism, the soul-animal occupies a specially important place in the history of savage religion. In any case, the worship or respect for the soul-animal has probably been the starting-point of other cults; thus the Zulu and Masai respect for the serpent may represent the beginnings of serpent-worship. The association of the dog with the Lar at Rome probably points to a time when the dog was regarded as a form of the soul; at the same time it should not be forgotten that the Lar was also a house-hold god, and that the dog was a domestic animal and associated with it; the dog was likewise associated with Hecate, also apparently a family goddess.

(3) One of the widely distributed animal cults is that known as *totemism*; it is, however, rather negative, consisting in abstention from injuring the totem animal, as positive, showing itself in acts of worship. There are, however, exceptions; the Wollunqua totem is a single mythical animal, the warrooings ceremony with regard to it are at the present day devoted entirely to placating it, an attitude which can hardly be distinguished from the propitiation of a god. Among certain Central Australian tribes the totem animal is required to be eaten on certain occasions, although this is to be regarded as an aberrant form of totemism (Lang, JAI xxxv. 315-336). In America, too, we hear of sacrifices to the totem (Loskiel, History, i. 49; Maclean, Twenty-five Years, p. 186), unless, indeed, totem is here in a sense of sacrifice to the animal, to the objects which are frequent (Frazer, Totemism, p. 54). Under this head may be noticed the cult of certain animals in Australia, which are associated with all the males or all the females of a given tribe. They and the other totem animals are ‘sacred’ and ‘secret’ to the members of the tribe, and the corresponding totem animal of another tribe, or of another tribe and another totem animal, carries with it a special respect.

(4) In the case of the totem kin, the association of a human being with a species of animal is hereditary, and no choice in the matter is permitted to him. Of a more voluntary nature are *secret societies*. Even here inheritance has much to do with the acquisition of membership in a society, especially in N.W. America. At the same time, initiation seems to play a considerable rôle in the case of the secret society; in the absence of initiation ceremonies a man remains outside the society. The totem kin can hardly be the totem kin, for women, too, belong to it, though their initiation ceremonies, if performed at all, do not seem, any more than those of the males, and probably much less, to bear any relation to the totem. The fundamental idea of many secret societies is the acquisition of a tutelary animal. In the same way the individual gains an animal genius by his initiation fast. Closely connected with these ‘naguals,’ as they may conveniently be termed, are the familiars of witches and the werewolves, or animal forms, of the modern European folklore.

(7) More especially in Greek and Roman mythology we find a number of woodland deities, which are very clearly spirits of the woods in animal or partly animal form. Bearing in mind the possibility of syncretism, it may be recognized that even if Dionysus and other deities commonly associated with vegetation cults are sometimes conceived in animal form, this is no proof that they were so conceived qua vegetation spirits; but this objection applies in a much less degree to Pan, the Satyrs, and Silenus, while in the case of the Fauns there is a general agreement that they are spirits of the woods (Mannhardt, Ant. Wald- u. Feldkultur, p. 113). We have a parallel to them in modern European folklore; Leshi, the wood-spirit, is believed in Russia to appear partly in human shape, but with the horns, ears, and legs of a goat (Mannhardt, Baumkultus, p. 138).

The frequent conception of an animal god, and particularly as a pig, makes it highly probable that Pan is correct in arguing that Proserpine, Atis, and Adonis were originally conceived as pigs, or, at any rate, from that of a corn-spirit in pig form. In European folklore there is little that can be termed worship or cult in the attitude towards the animal under whose form the corp spirit is believed to appear; few or no ceremonies are performed, save those whose object it is, however, of general interest to record the fanciful associations of the crop and to ensure the proper growth of the new crops when they are sown in the spring. More definite acts of worship are recorded of the Panes of the Egyptian army (see 'Bison' below), and of some of the tribes in Florida.

(8) Omens are drawn from the cries and actions of birds, among the early races of mankind more especially than in modern times, in order to guide the future, or to foretell the results of a proposed action. Some such animal deities as the hawk and the rook are mentioned in the Bible, and there is no doubt that from early times a bird has been associated with a specialized anthropomorphic deity, especially associated with warlike operations.

(9) The question of the association of certain animals with certain deities is a very difficult one. On the one hand, it is certain that the two are inextricably united in primitive religion, since the old idea that all such animals were sacred before they became associated with the god, and equally impossible to show that the god has actually been crystallized out of one or more sacred animals. On the other hand, we can only assign a moral respect for an animal paid to it wholly and solely because it is associated with a certain deity. If the jackal was respected in Egypt because it was associated with Anubis, it may be argued, on the one hand, that this association was due to the fact that the jackal was formerly regarded as a soul-animal; on the other hand, we may with apparently equal justice argue that the jackal was frequently seen about the tombs, and that this led to its being associated with the god of the dead.

(10) It can hardly be said that there is any cult proper of animals used in magic. Among the southern Bantus, however, the crocodile (see below) is sacrosanct. The explanation of this is not far to seek; the crocodile is used for evil by the witch, to kill a crocodile, therefore, would be to incur the suspicion of being a magician and possibly the penalty of death. It is therefore easy to see how the association of an animal with evil magic can be traced to its being used by the nature worshiper view that magical animals become gods, see Preuss's articles in Globus, vol. lxxxvii. passim.

(11) In a comparatively large number of cases we are unable to trace the origin of a cult of
ANIMALS

animals. First and foremost the facts of serpent-worship: the wide spread of animal cults are far from having been explained. The serpent is, in many cases, associated with a cult of ancestors; this readily comprehensible where the species is a harmless one; the very fact of its harmless would mark it out as different from its fellows; so, where it inhabits the house of the immediate neighbourhood, we have an adequate cause for its association with the worship of the dead; among the Zulus, for example, no other snake is an idloko, but only those which are found in the neighbourhood. This serpent-worship may be put down to their association with water; one of the commonest forms of water-monster is the serpent. The water-snake is specially honoured among the Xosa-Kafirs, in order that cases of drowning may not be frequent (Mereisnky, Erinnerunngen, p. 36). But these facts are far enough to explain the wide distribution of serpent-worship. On the other hand, its cult is much more than the cult of a dangerous animal, as is readily seen by comparing serpent-worship with that of the crocodile, and it seems doubtful if the mysterious nature of the serpent, which is sometimes invoked as an explanation, is sufficiently important to account for the preference given to the reptile. Probably a multiple origin may be assigned to its worship.

The relations of animals and gods in Australian religion are by no means clear. Baiame seems in some eastern tribes to occupy the same position which the bird-bell holds in the mythology of the central tribes; his opponent, Madgegong, is conceived under the form of an eagle-hawk, that reproducing the familiar mythical conflict which in other parts of Australia is narrated of the eagle-hawk and the crow. Farther south the eagle-hawk, under the name of Mullion, again figures as an evil spirit. The name of the god of some Victorian tribes is Pundjel, and the same name is applied to the eagle-hawk; possibly, however, both receive it simply as a title of respect. However that may be, it seems clear that a certain amount of anthropomorphization has gone on in Australian. What is not clear is the position of the animals from which the anthropomorphic gods or evil spirits seem to have been evolved. Both eagle-hawk and crow are phrathy names; but, while the crow (see below) is respected, possibly as a soul-animal, there are few traces of respect for the eagle-hawk. We cannot find that the crow has been anthropomorphized into a deity, and the deities and demons are connected with animals in areas where the phrathy names, at least in the present day, have nothing to do with these animals. On the other hand, the eagle-hawk is a common form of the wizard (Spencer and Gillen, Native Tribes of Central Australia, p. 533).

Howitt has maintained that Koik and other tribes which the European observers have regarded demons are really gods. If this be so, if the god of the Australian is no more than a magnified medicine-man, we have a sufficient explanation of the cult of the eagle-hawk. Even if Howitt's theory is generally applicable, the fact that the medicine-man of one tribe may be erected into a god by another, and into a demon by his neighbours who suffer from his machinations, gives a new improbable explanation of the facts. It does not, of course, follow that any one medicine-man has been deified; just as the Ibans have deified a generalized hawk (see below), the Australians may have apotheosized a generalized eagle-hawk-medicine-man. In view of the position of the eagle-hawk as head of one of the phrathy, it is of some importance that on the north-west coast of Australia there are two phrathy, of which the one is called Yehl, the other is called Kanhukh, whose names mean 'raven' and 'owl'; at the same time that they are two phrathy, which are also known under the names of raven and the owl. It is true that Taylor has denied (J.A.A., xxviii. 144) that Kanhukh ever appears in wolf form; Yehl, on the other hand, is in many of his adventures presented as an eagle. This does not, however, seem fatal to the view that the presiding anima of the phrathy have somehow been developed into deities or demi-gods, for Yehl is little more than a culture hero; at the same time this theory leaves unexplained the spread of the two cults into the opposite phrathy. For neither in America nor in Australia is there any trace of uni-phrathy deities, and it were should be on the supposition that the presiding anima has become a god. It should not be forgotten that in some of the central tribes of Australia there are traces of species names, which are common, and which are either true animal gods, or at any rate the names of animal-gods. It may therefore be that the deification of the eagle-hawk is due to its importance in magic not to its position as a phrathy animal, though these facts may have had influence in bringing about its preferred position.

Even were it established that phrathy animals have been promoted to godhead, it by no means follows that the god becomes a totem, or is evolved into a god. That phrathy animals have ever become totems is a pure hypothesis, and no consistent account has yet been given of the process by which they became more than totems.

Another animal-god of unexplained origin, whose importance marks him out for notice, is the Great Haro of the Algonquins (Strachey, History of Travail, p. 98; Lang, Myth, ii. 79; Brinton, Myth, p. 195), who, in his human form of Michabou or Manibosho, was the culture-hero of this important family of America. The connexion of the Great Haro with the East, has, in etymological grounds, explained it as the dawn. Meteorological explanations have ceased to be convincing; moreover, according to one form of the story, which, the rabbit (which is the symbol of the latter half of Michabou = Manibosho) was not in the east but in the north (Brinton, p. 196). To speak of the cult of the Great Haro as animal-worship is, according to Brinton, to make it senseless, meaningless brute-worship; but this is to view it from the point of view of Europe in a.d. 1900 rather than in the light of other primitive cults. It may safely be said that no attempt to explain away animal-cults on these lines can be successful in more than very small measure. Brinton's preference for a dawn myth cannot therefore carry the day against the natural meaning of the Algonquin legends. Moreover, no adequate account has ever been given of the process by which men came, on the score of a simple etymological misunderstandanding, to turn a god in human shape into an animal.

Less important is the Bushman god Ikgagen or Cagn (see 'Mantis' below), who, according to the latest account, was believed to manifest himself in the form of the mantis (iklagen), or the caterpillar (kaukel, from th-a-gago). From this it would be natural to assume that he had made some progress in the direction of anthropomorphization. The problem of how one god comes to manifest himself in several animals is a complicated one, when it is a phenomenon of the religion of savage or barbarous peoples, among whom the syncretic processes, the working of which in Greece or Egypt is fairly obvious, cannot be assumed to have played a large part, if indeed they played any at all. We see the same phenomenon in Samoa, where one village-god was believed to be incarnate in two or three kinds of animals. In the latter case it is perhaps to local causes, such as the aggregation of villages under one chief, or the coming together of more than one clan in a single village, that we must look for the explanation. But such an explanation can hardly be applied to the god of the Bushmen, who are on the very lowest nomadic plane of culture. The question is complicated by problems of Bushman origin and history; for if they were once a more settled folk, we should expect to see the disintegration when the Bantu stream overflowed South Africa, it may well be due to their disintegration that the hypothesis of syncretism, as an explanation of the cult of Cagn, seems inappropriate. Perhaps material for the solution of the problem may be found in the still unpublished mass of
material relating to the Bushmen collected by Dr. Bleek and Miss Lloyd.

Prominent among animal gods is the Hindu monkey-deity, Hanuman, who figures largely in the Rāmāyāna. It has been argued that his cult is not primitive, but has been borrowed from some other tribe; and this conclusion is based on the fact that there are no traces of worship of the monkey in the Veda, save so far as Vishalakī (Rigveda, x. 86) may be regarded as the object of such (cf. the conflicting views of Bernhard, Religion und Mythologie, ii. 377–379, and of Hildebrandt, Religion der Veda, iii. 174; Geldner, Vedische Studien, ii. 22–42; and Hildebrandt, Védique Mythologie, iii. 278). But this line of proof overlooks the fact that the Veda is concerned with official religion, and that Hanuman may have been worshipped unofficially without any record of the fact being available.

At the same time it is by no means improbable that the cult is to some extent based on an aboriginal predecessor, for we can hardly suppose that the Aryan invaders brought with them from regions where the monkey is less prominent, if not non-existent. Hanuman is distinctly a species god; but we cannot discover the origin of the cult. The resemblance of the monkey to the Hindu Hamsa has not produced the same effect elsewhere, and seems inadequate to account for a cult, however satisfactory it may be as an explanation of a rich monkey mythology.

6. DELUGE, EARTH-FINDING.—In legends of a deluge, animals figure in two capacities. In the first place, they are simple messengers, like the raven in the Book of Genesis; the crow, hare, dog, pigeon, and other animals go out to see if the world is drained. This custom is sometimes causing it to increase magically in size by making the circuit of it. In other cases the waters show no signs of abating, and the water-birds or animals are made to dive, and bring up mud, sand, or earth; from this the new earth is formed and laid on the waters; it grows to the size of the present world. This form of the terre pêchée is especially common in America, where it also occurs as a cosmogonic myth. Among the Montagnais in the Altai the incident figures in a Creation myth. Among the Yorubas the same story is played a somewhat similar part in producing the earth from beneath the waters. See DELUGE.

7. DIVINATION.—For the purpose of divination, the entrails, the liver, and frequently the shoulder-blade of animals are used. Animals also serve to give indications which are more properly classified under 'divination' than under 'omens.' Ashes were strewn on the floor in Peru, and from the character of the tracks found on them was inferred the kind of animal into which the soul of a dead person had passed. In Mexico snuff was spit on the altar, and inferences were drawn from the footprints of eagles, etc. (Tschiudi, Reisen, p. 337; Bancroft, iii. 438). In Australia the ground was carefully searched; if a track was found on it, they infer from it the totem of the person who caused the death of the man. In other cases a watch is kept, and the movements of an insect or its flight decide the direction in which the malevolent magician resides. Another method of using animals in divination is to make dice or other instruments of their bones; knuckle bones are especially used for this purpose.

8. DOMESTICATION.—The problem of the history of the domestication of animals has seldom been attacked, and up to the present no satisfactory solution has been propounded; we are in complete uncertainty as to why or how man in the first instance came to tame animals, bring them up in captivity, and induce them to perpetuate their species. In the Pacific the frigate bird is often tamed. The Indians of South America frequently keep tame animals in their huts. But in neither of these cases can we properly speak of domestication. In the New World the domestic animals known before the advent of Europeans were few; the dog is the only one, of course, based on the fact that domesticated animals were found only in Mexico and Peru, and then only the turkey, llama, alpaca, and perhaps one or two more, of which the llama and alpaca alone were economically important. In the Old World domestication seems to have been Asiatic; but little, however, is known as to the localities in which the domesticated species first came under the dominion of man. Probably the dog (see below) attached itself to man, but in other cases a process of domestication seems to be a necessary assumption. Totemism by itself seems inadequate, even when we make allowance for the additional leverage of the segregation of totem kins. Probably some form of cult (hence 'Cattle' below) was in many cases the determining factor.

9. EARTH-CARRIER.—The problem of the stability of the earth has been solved, more especially by the people of Southern Asia and the Asiatic islands, thanks to the instinctive belief in Muhammadan influence, by the hypothesis that some great animal supports the world; the myth is also found in other areas, but only sporadically. Among the Inuits the world-turtle is domesticated, possibly from domesticated cattle. In the full story, as related by D'Anville (Trav. p. 241), the turtle, before the world was brought into existence, was a mythical animal of this description; the Winnebagos are told, according to Eberz, that the earth was supported by a tortoise and four snakes, which were in the end unequal to their task; but since a bisons has joined its forces with theirs, the safety of the earth is assured. In India we find various myths: the cow account gives the snake, another the elephant, as the world-supporting beast (Ward, a. o. p. 103). A Japanese view is that eight elephants bear the world on their backs (Monier-Williams, Indian Wisdom, p. 430), and the Lushu yogita (Short Account, p. 30) and D'Anville (Trav. p. 103) show the world rest on the same animal. Another Hindu myth makes both turtle and serpent (dragon) rest upon an elephant (Civ. Res. x. 407), while a later myth gives the boar as the supporter. In Ceylon the world-carrying giant rests on a serpent, which rests on a turtle; the turtle rests on a frog, and beneath the frog is air (Miss. Herald, xviii. 365). The Indian boar occurs in Celebes (Journ. Ind. Arch. ii. 837; Med. Nat. v. 163), where an account gives the buffalo (ib. x. 286), which recurs in the Moluccas (De Ceroq, in Bûhr. 1590, p. 130). In Arabia and Egypt are found the cow and bull (Abulfeda, p. 102; Lane, 200 Nights, i. 21), which are also said to rest on a rock, and that on a fish. Probably the bull of the Indian tradition, the bull or ox is found in Bulgaria (Strauss, Bulg. p. 30); Sumatra (Hannaelt, Volksle, p. 71), where it rests on an eagle, this on a fish, which is in the sea. Probably the first one was the frog (see Vories, p. 72). The turtle in a Kalmuk myth seems to play the part of the world-carrier (Bastian, Ges. Bilder, p. 257), the snake in Nias (Tschudi, T. L. S. xxv. 110), Sumatra (Adip. Nias, xii. 404, etc.), and Java (Tschudi, Nat. Ind., i. 103); the fish in Sumatra (see above), among the Ainus (Batchelor, p. 270), and in Europe in the Middle Ages (Mone, Anzeiger, viii. 114). The frog recurs among the Mongol Lames (Tylor, Prim. Cult., i. 95). Among the Siaves four whales are said to support the world (Berl. Leskabinett, 1844, 210), and among the Tennes of West Africa a trace of Muslim influence may be seen in the underdescribed animal who bears all on his back (Gust. 1849, 189). In many cases the movements of the earth-carrier are alleged to be the cause of earthquakes. See EARTHQUAKES.

10. EARTHQUAKES.—Most of the peoples enumerated in the preceding section account for earthquakes by the movements of the animal supporting the earth. In addition we find the snake in the Moluccas (Bastian, Indonesien, i. 81), inter-changeably with the ox, in Bali (Globus, xvi. 983); Roti (Müller, Reisen, iii. 345), Flores (Jacobsen, Reise, p. 51), Mindanoo (ZE. xvii. 47), and among the Dayaks of Borneo (Pereira, Ethn. Bes. p. 8), in Flores a dragon myth is also found (loc. cit.). The earthquake fish of Japan is placed sometimes under the earth, sometimes on the surface of the earth, in another form of explanation (loc. cit.). In Sumatra the crab is found as a variant to the snake, Naga-pudoka, whose horns are perhaps due to Muslim influence
ANIMALS

(v. Brenner, Bernou, p. 594). In Flores (Jacobsen, loc. cit.), and Rades (Ritter, Asien, vi. 569), the dragon is the cause. In Kamathtaka the earthquake is said to be due to the dragon of Touila, whose name is Kozi; the snow collects on his coat and he shakes himself to get it off (Krachenmikow, Descr. i. 94). The movements of the other animals are due to a bee or some insect. 11. ECLIPSES.—Animals figure in some of the primitive explanations of eclipses. Among the Potawattomies they are caused by the combat of the old woman who makes the basket (Anns. xii. 350, xiii. 495); the dog plays the part of protector, as does probably the bird in a Mongol myth (Ausland, 1873, 534), and possibly in the Lules myth (Lozano, Docc. Coroc, p. 91). More commonly it is said that the moon is swallowed or attacked by an animal. In Burma the Karens say that wild goats are devouring the moon, and they make a noise to drive them away, or that frogs are eating it (Miss. Cath. 1877, 456). In Eastern Asia the dragon myth is common; it is found in China (Grimm, Deut. Myth. ii. 689), Siberia (Kromayer, loc. cit.), and Sumatra (Marx, Gesch. Hist, p. 194), and Tidore (De Clercq, op. cit. p. 73). This form of the myth is not far removed from that which makes a giant or undescibed monster attack the moon or sun.

Mythical animals are found sporadically in Asia Minor (Nau- mann, Vom Goldenen Horn, p. 75), in Carinthia (Zt. d. Myth, iv. 411), and among the southern Slavs (v. Wissolk, Volksk. p. 243). The bird-phantom in this myth is also found (ib. 92) among the Tchoupskaya and Brabanca (Völker aus Brahman, p. 30), among the Chichuquis the dog (Tybur. Priv. Cult. i. 235), who tears the flesh of the devourer and reddens her light with the blood which flows. Among the Tupis the Jaguar was the animal which was believed to attack the sun (ib. p. 30), and the Peruvians held it to be a monstrous beast (ib.). The Jaguar recurs among the Manuos (Martin, Enl. iii. 588), and the Guaranis (Ruiz de Montoya, Conquest, p. 127). The Taganan place a myth of a bush crab (Worcester, Philippine Isl. p. 497). The old Norse (Grimm, i. 202; ii. 689, iii. 205) held that a wolf attacked the sun or moon; and the same idea is found in France (ib. i. 494). In many cases the dogs are bested or incited to attack the monster which is assailing the heavenly body.

12. FABLES.—Animals figure largely in the folk-tales, no less than in the myths or sagas of primitive peoples (see Bleek, Reymard the Fox; Dennett, Folklore of the Jst'; MacCulloch, op. cit. etc.). In many folk-tales the animal acts and moves like human beings, so much so that a lawsuit on the Congo turns on which of the parties are gods. At a later stage the beast story is complicated with a moral (Aesop's Fables). Beast-stories are found in most collections of Märchen; for India, see especially the Panchatattara.

13. FAMILIAR.—All the world over the witch or wizard is associated with an animal, termed 'the familiar,' which is sometimes conceived as real, sometimes as a spirit which stands at the beck and call of the human being. Just as the injury to the nagual, or bush-soul, has fatal results for its possessor, so the familiar's life is bound up with that of the witch; if a witch-animal is wounded, the witch will have suffered an injury at the corresponding part of the body. Sometimes magical powers are attributed to whole classes, such as the Boudas, i.e. blacksmiths and workers in clay of Abyssinia, who are believed to have the power of turning into leopards or hyenas, instead of simply having the animals or their spirits at their command.

In the Malay Peninsula the alliance between the puaung (turtle) and the dragon is said to be the result of a compact entered into long ago between the species and mankind; the office is hereditary, and the son must perform certain ceremonies to ascend to the familiar's office for ever lost to the tribe. In Siberia the ye-keela (witch-animal) is said to be sent out by a shaman to do battle with the ye-keela of a hostile shaman, and the fate of the man depends on the fate of his ye-keela, which refuses the fight if it thinks it cannot beat its adversary.

In curative magic the wizardcarries figures of his familiar and imitates them; sometimes his familiar is said to appear before he meets with success.

14. FASCINATION.—The power of fascination actually possessed by the serpent has been attributed to many other animals, among them the lion (Aelian, de Nat. An. xii. 77; cf. Maspero, Études, ii. 415), apes (Sohl. ad Theoc. x. xviii), basilisk (see below), toucan (Smith, Brazil, p. 559). And, naturally, above all the serpent (Melville, iv. 570, v. 18, 41). The power of fascination is attributed to the wer-wolf in the East Indies (Tijdsschr. xili. 548 f.). Something similar is believed of the ordinary wolf in Norway (Liebrecht, Zur Volkskunde, p. 533). See EVIL EYE.

15. FOOD TABUS.—The use of animals as food is prohibited for many different reasons. The totem kin usually abstains from eating the totem, the nagual is sacrascent to the man with whom it is associated; and certain animals, or in fact cattle generally among pastoral tribes, are never or only very seldom eaten. But whereas the totem is absolutely taboo, cattle, on the other hand, supply the pastoral peoples with a large part of their subsistence. Another reason is that in many cases the animal is commonly eaten by any rate for those who claim kinship with them, are soul-animals (see below).

Sometimes special persons, by virtue of their position or occupation, are forbidden the use of certain meats. In Fernando Po the king may not eat deer and porcupine, which are the ordinary food of the people. Egyptian kings were restricted to a diet of veal and goose. Certain tabus are also imposed on mourners; in Patagonia the widow may not eat horse flesh, guanaco, or cow; among the Andes Indians, to men but not to women; among the South African Bantu men may not eat fish, fowl, or pig. Other foods are forbidden to women but not to men; on the island of Nias, in the Dutch East Indies, the former may not eat monkey flesh. Especially in Australia there is an extensive system of food tabus in connexion with initiation; as one gets older, these are abrogated one by one; emu flesh is usually reserved for old men. Similarly girls may not eat various kinds at puberty; among the Aborigines, a non-vegetable diet is dogfish. Sometimes marriage removes some of the tabus. On the Murrumbidgee, ducks are the food of married people only.

In many cases only certain parts of an animal are taboo to certain persons; a Déné girl may not eat moose nose or reindeer head; among the Ottawa blood is taboo to the unmarried; heart, liver, etc., are taboo to a Dakota after initiation till he has killed an enemy. The female animal is frequently taboo; in sickness the female animal only might be eaten by some of the New England peoples.

During pregnancy and after the birth of a child many kinds of food are prohibited to one or both parents; in New South Wales the woman does not eat eel or kangaroo; in Martinique both parents abstain from turtle and manatee. The reason generally given is that the nature of the food influences the offspring. Thus a turtle is deft, and eating a turtle would make the child deaf too; a manatee has small eyes, and eating one would make small eyes too if the parents did not abstain from it.

Just as animals are eaten to gain their qualities, so their use as food is prohibited in order to avoid incurring them; this is the explanation often given for abstinence from the flesh of deer, the hare, and other timid animals.

Especially in West Africa food tabus are im-
posed upon members of a certain family by a priest, and the tabu is sometimes thenceforth hereditary. Among the Andamanese some food is prohibited to every individual, generally some kind which, in the opinion of the mother, disagrees with the child; but if it is not selected in this way, each individual is free to determine what food is to be tabu for himself.

Other food tabus are connected rather with seasons than with anything else. It is not uncommon in south-east Europe to find a prejudice against killing lambs before a certain day. In connexion with food tabus may be mentioned the prohibition against cooking certain kinds of animals together. In Kamchatka different kinds of meat may not be stewed in the same pot; the Saponas of the Eastern States of America would not cook venison and turkey together, on the ground that they would have ill success in hunting if they did. See Tabu.

16. Future Life: (1) CERBERUS.—It is a common belief that the soul has to traverse a river on its journey into the other world. Sometimes the bridge over which it passes is said to be an animal; the Ojibwa said that a great serpent served as a bridge, and that he threatened to devour those who would not inhabit one lion, ii. 154). In New Caledonia a serpent serves as a bridge from Morou to Tum, and allows to pass only such as find grace in his eyes, in other words, those who are tattooed in due form (Ann. Prop. Fo., xiii. 389). In other cases an animal is sent for the soul. On North Borneo the belief is that a fiery dog watches at the gate of Paradise and takes possession of all virgins (Forster and Sprengel, Beitrage, ii. 239). The idea of a dog at the end of the soul-bride is found among the Australian Aborigines (Le Bourdelais, Histoire d'Aventures, i. 369). Sometimes the river contains fish which devour the souls which fall in (Globus, xlvi. 108, among the Dayaks). In other cases the function of the animal is to turn back the souls of those who are to live; the Assiniboines held that a person in a trance went as far as the river, but was driven back by a red bull (Cones, Henry and Thompson, MS. Journ, ii. 521). The Senels of California also made a bull obstruct the path of the soul, but when it is met, it vanishes from him (Cont. Am. Ethn., iii. 169). In the Dayak mythology figures a bird, who lives aside from the direct road of the soul; if the soul turns aside, however, the bird sends it back (Ling Roth, Nations of Sarawak, i. 510). In the Solomon Islands the function of the bird is quite different; the natives of San Cristoval say that the soul becomes a ghost (’ataro) when it leaves the body, but that it fails to recognize that it is dead; a kingfisher strikes it on the head after two or three days, whereupon it becomes a real spirit (Codrington, Melanesians, p. 257).

The soul pursues in the other world the same occupations as it followed in this life. Consequently it is commonly represented as chasing the animal it killed, the which he needs as his sustenance on earth. The belief is especially common among the American Indians, whose 'happy hunting grounds' are proverbial (Matthews, Hidatsa, p. 49; Rev. Hist. Rel. xxx., xiii. 9f.).

Sagard, one of the early Jesuit missionaries in Canada, tells us: 'The Indians say that the souls of dogs and other animals follow the road of souls; . . . the souls of the dogs serve the souls of the masters of the house; the souls of mortals hunting with the souls of their tools and arms.' (Histoire du Canada, pp. 497, 498).

To this idea of the functions of animals and the lot of the soul in the other world is due in great part the custom of burial sacrifice (for the horse see Teutonia, ii. 148-162). Sometimes the object of the sacrifice is only to bear witness to the importance of the deceased in this life and thus influence his future lot (Abinal and Vaissièrre, Vingt ans à Madagascar, p. 221).

17. Future Life: (2) Soul-animals.—Few beliefs are more common than that the souls of the dead pass into animals. In South Africa it is the prevailing belief, but it is found in Europe (Folklore, xi. 234). America claims the totemism (ib. p. 9f.; Mission Life, N.S. i. 450; T'Onng Pao, ii. 11, etc.). Especially in the form of the doctrine of transmigration, as a punishment for evil done in this life, the belief prevails not only in India (e.g., Mani, ii. 201, xii. 55-69), but also in Oceania and New Guinea (Golden Bough, ii. 493-4) and Australia (Man, 1905, No. 28; for a collection of references, see Rev. Hist. Rel. xxxvii. 385; see also below, 'Bat', 'Crocodile', 'Lion', 'Lizard', 'Tiger', etc.).

The causes which are supposed to lead to this re-incarnation are various. Among the Mokis it is the form of the totem animal that a man assumes at death (Frazer, Tot. p. 36). In South Africa the different clans believe that their members pass into the animals which they venerate (Man, 1901, No. 111). The Zulus believe that their dead pass into snakes, called amadhlawo (Golden Bough, ii. 411); according to another account, the chiefs are transformed into snakes, the war-chiefs into another, while the old women are re-incarnated in lizards (Callaway, Religious System, p. 590). According to the Masai, the souls pass into different kinds of snakes, one of which receives the souls of each clan or family (Holus, Masai, p. 307). In Madagascar the body is thrown into a sacred lake, and the eel that gets the first bite at the body is the abode of the soul (v. Gennep, Tabou, p. 291). In China the soul of the drowned man is held to become a toad, then a ruddy toad (Le Bourdelais, Aventures, i. 369). Consequent men take the first crab seen in the mud to be the receptacle of the soul (Mission Life, loc. cit.). The Barotse hold that they can choose into which animal they shall pass (Bertrand, Au Pays, p. 300). In the Solomon Islands a man tells his family which animal will be his re-incarnation (Golden Bough, ii. 453). In the Argentine Republic it is the animals which are seen about the grave that come in for respect as soul-animals (Bol. Inst. Geol. Arg., xv. 146). In Brazil a kind of hawk is believed to become one of the dead the animals on which it perches to extract maggots from their flesh (Spix and Martius, p. 1084). It is a common belief in Europe, that if a cat jumps over a corpse, it becomes a vampire; and in other words to die different; the natives of San Cristoval say that the soul becomes a ghost (’ataro) when it leaves the body, but that it fails to recognize that it is dead; a kingfisher strikes it on the head after two or three days, whereupon it becomes a real spirit (Codrington, Melanesians, p. 257).

In many cases the lodgment of the soul in an animal is held to end the matter. If the animal is killed, the soul departs; if the animal is not killed, the soul remains in the same species (Man, 1904, No. 118). In Madagascar, however, the death of the animal is held to set free the soul lodged in it (Miss. Cath. 1880, p. 551). The Chiriguanos, on the other hand, hold that the soul enjoys a few years of liberty and then passes into the body of a fox or a jaguar (Globus, xlvii. 37).

Some tribes can describe in more or less detail the process of transmigration. The Amandabele of South Africa believe that the souls of chiefs pass into lions, but that the process takes place underground; for which reason the corpse is not to remain long unburied. The body is put into a large wooden trough and hidden away in a cavern; some time afterwards it is found to have become a
The lion's whelp, which grows rapidly (Thomas, Eleven Years, p. 279). The Betsileos are more explicit. The fanany (soul-animal) is the form of a lizard, which comes to the surface after burial; the family approach it and ask if it is really the relative they have lost; if it moves its head they make offerings to it. It then returns to the tomb and grows to a large size, and the totani (spirit of the family (v. Gennep, Tabou, p. 279). According to another account, the corpse is attached to the central pillar of the hut until decomposition sets in; whereupon a large worm develops, which becomes a boa at the end of several months (p. 278). Sometimes the change is regarded as the result of evil-doing; the Chinese believe that the bad go to dark caverns, in which are the entrails of all sorts of animals; they are hungry, and stretch out their hands. If the animal is summoned to appear, it will come out of its entrails they are transformed into the shape of the animal whose entrails they have grasped (Misc. Cath. 1884, p. 468). On the other hand, among the Montagnais, of whom P. le Jeunesse writes, the transformation of the soul is the result of simple misfortune or carelessness; the souls go to the extremity of the earth, which is flat with a great precipice beyond, at the foot of which is water; they dance at the edge of the abyss and some fall over; these are forthwith turned into fish (Rel. des Jts. 1637, p. 53).

The soul-animal is usually respected, for which two reasons are assigned. The injuring of the animal is the injuring of a relative or of a friend, for it is believed that the animals into which the soul has been transformed can injure only those who were allied on earth as men. By eating the animal, men may even eat the soul of a relative, and perhaps inflict unmerited hardship on it in its non-human existence. On the other hand, the entrance of Southmen into the world of the dead man or of his fellows, and thus recall the living. As a rule, however, the objection to injuring a relative is the prevailing feeling; for we find that, though a man will not injure his own family animal, he will not hesitate to kill the family animal of another man (Golden Bough, ii. 433). In the same way a man does not injure his own totem, but will kill that of another.

21. PSYCHOPOMPS.—The duty of conveying souls to the other world is sometimes assigned to animals. The Araucanians believe that Tempuleague, an old woman, appears in the form of a whale and carries off the soul of the dead man (Molina, Historia, p. 70). On the Orinoco huge snakes are said to carry off the souls in their belly to a land where they entertain themselves by dancing and other delights (Ruiz Blanco, Conversion del Pirata, p. 63). In Brazil the duty was assigned to the humming-bird (Aencion, O Guarany, ii. 150). Among the Sapocheos, the soul of the dead man had denounced if, was delivered over to a huge turkey buzzard, which flew away with it to a dark and barren country where it was always winter (Byrd, History of the Dividing Line, p. 90 f.). Sometimes the animal is not a mythical one. The object of some burial sacrifices is to provide the dead man with a conductor. In Mexico the dog (see below), according to one account, fulfilled this office. Among the Yorubas of West Africa, the young men who attend a funeral kill a fowl and throw its feathers in the air as they walk, subsequently cooking and eating the flesh. This fowl they call Aidi-Trans, 'the holy bird;' it is placed on the head of the corpse and classes the road; its function is to precede the dead man on his road (Miss. Cath. 1884, p. 342).

19. IDOLS.—It is not difficult to trace the main lines of the development of idols, so far as animals are concerned. It is a common custom, when the sacred animal is sacrificed, to shape it in the skin for the ensuing twelve months, just as the various figures made of the new corn are suspended in the house till the next harvest. From the custom of keeping the skin there arises, by a natural transition, the practice of stuffing it in order to give it a more lifelike appearance. Then it is found more convenient to have a wooden or stone image, and the skin is drawn over it, as was the ram's skin over the image of Ammon; and the idol is a faust accompli. There is, however, a tendency to regard as the commonest one to find, therefore, that in Egypt, India, and even Siberia, idols compounded of man and animal appear; sometimes the head only is human, as in the case of the Sphinx; sometimes it is the head which is animal, as in the case of the Goths and the Sabeans. Sometimes the head and body are human, but some minor portion is animal; the Fanus had goats' feet, and Dagon a fish's tail. With the appearance of the mixed form the course of evolution is completed, so far as the animal is concerned. It ceases to be an idol, and henceforth becomes an attribute of the god; he carries it on his shoulders, leads it, or stands in relation with it in some other way. Finally, if it is sacrificed to him, it ends by being regarded as his enemy.

20. INSPIRATION.—One of the methods by which inspiration may be produced is by drinking the blood of the sacrificial victim; possibly the result is in part due to physiological causes. Near Bombay, in the ceremonies of the Komatis, an old man, nearly naked, carries a knife and pierces an ant hill and opens its thorax with his teeth; when he had sucked the blood of the kid, he was regarded by the populace as a god (Miss. Reg. 1818, p. 157). In this case no mention is made of any signs of inspiration; but in some cases (Golden Bough, i. 104) the Sabeans explained the inspiration thus produced as due to the obsession of the blood-drinker by demons, whose food they held blood to be. They expected to gain the gift of prophecy by entering into communion with the demons (ib. p. 136).

21. LIFE INDEX.—It is a widespread belief that any injury done to the familiar of a witch will be shown on the corresponding portion of her body; similarly the wer-wolf is solidare with the woman; a disaster to the bush-soul (see 'Naguat') below of the Sabocheos, the soul of the dead man had denounced if, was delivered over to a huge turkey buzzard, which flew away with it to a dark and barren country where it was always winter. [Alencar, 'O Guarany, ii. 150.] The spider is a symbol for the man himself. But it is by no means necessary that the relationship between the man and the animal should be conditioned by magical rites; it may be acquired from circumstances connected with the birth of a child (Hartland, Legend of P. 150 f.), or may be selected by the person himself.
ANIMALS

(Golden Bough* iii. 412). In the latter case the story usually takes the form that the soul of the person whose life that of the animal is bound up has been deposited for safety in the animal. A few instances have been recorded in Australia in which the life of one of a totem kin is believed to be bound up with the life of the totem animal (Frazer, Tot. p. 7).

22. MAGIC.—The term ‘magic’ is vaguely used to denote a great number of different conceptions, but these need not be distinguished in a brief survey of the part played by animals in magic. (1) Many forms of sacrifice (see below) are magical. (2) As the ngnal (see below) or familiar, the animal gives man greater force than he would otherwise possess. (3) Just as in dying the dead animal sets free the magical power within it, so in life it may repel evil influences or attract them to itself and neutralize them. (4) By eating animals men acquire their qualities; lion’s flesh gives courage, hare’s meat makes a man a coward. By partaking of long-lived animals a man may overpass the ordinary span of life; by consuming wise animals he will acquire the gift of prophecy. (5) The external qualities of animals are susceptible of transference in like manner; by rubbing bear’s grease on a gnat it is sometimes cured of its bite, and, assured, for the bear is a hairy animal. This is called the doctrine of signatures. (6) Just as the familiar represents the witch and any injury done to the animal reappears in the witch, so any animal may be selected to represent a given person: a girl who wishes to compel the presence of an absent lover may, in Wales, take a frog’s heart and stick it full of pins. (7) Diseases in the human being may be got rid of by transferring them to an animal of the same sort (see below), or by giving the person a girl who wishes to compel the presence of an absent lover may, in Wales, take a frog’s heart and stick it full of pins. (8) The uses of the frog (see below), are connected with certain departments of nature; by injuring or otherwise constraining them, these animals can be forced to produce the natural phenomena desired by the magician; thus frogs are whipped to produce rain. (9) Magical, too, from some points of view is the torture applied to the favourite animal of a god (Golden Bough*, i. 108), to compel the deity to supply man with what he demands. From being used in magic the animal may come to be sacred to the crocodile (Amb. Munich: Die Tiere in der Vaterlandsd. Reise, 14. 22 f.). Especially important in European magic are the first animals seen in the spring, and the feathers, etc., of birds and animals carried in annual processions (see ‘Wren’ below, and art. MAGIC).

23. MARRIAGE.—Animals figure largely in European marriage customs. The custom of the ‘Hahenschlag’ (Folklore, xx. 25) is sometimes practised, but more often the cock, or other bird or animal, is eaten by the bride and bridegroom or by the guests. Custom is the ornament to the bride’s wagen; sometimes it is killed by being burned in a bonfire, or hunted, or simply thrown into the house of the newly married, or rocked in a cradle before them; in some cases it is merely a gift from the bridegroom to the bride or her parents; or a game animal, duck, goose, owl, ox, partridge, pig, pigeon, quail, sheep, swan, and wren. The object of the ceremonies seems to be in some cases simply to avert evil by the ordinary method in use at other times of the year; sometimes the more definite object of securing fertility seems to be held in view. The tail, which is sometimes given to the bride, may perhaps have a phallic significance. The mimetic dance at weddings (Cong. des Trad. pop. 1900, p. 100) is perhaps intended to secure fertility. Sometimes an animal mask, or dress only is worn. The bride is sometimes called ‘lamb,’ ‘partridge,’ etc., but this seems to be merely allegorical.

24. ‘MEDICINE,’ ANIMAL, TALISMAN.—When the American Indian kills his medicine animal, he usually takes some portion of it, such as its pelt, claw, or wing, as a talisman and puts it in his medicine bag. It is held in some tribes that the medicine, once lost, cannot be replaced; it may, therefore, be conjectured that the medicine is regarded as the seat of the tutelary spirit whose aid is secured at puberty (cf. Golden Bough*, iii. 432). In this connexion may be quoted a remark (Wied, Reise, i. 190) that many Indians believe they have in animal amulets innumerable and greater medicines. The central idea of African ‘fetishism’ is that a spirit which temporarily inhabits a stone, bone, or other object, becomes for the time being the servant of the possessor of that object. The magical apparatus consists of a bag of the skins of some rare animal which contains various talismans, such as dried monkeys’ tails, claws, etc. The same idea may be traced in the East Indies. If a Batta has a tooth as a talisman, he will, on the approach of danger, swallow this, and it may perhaps be to ensure a greater measure of protection for himself; but it is more probably to ensure the safety of the talisman, which thus equals in importance the medicine of the American Indian. The uses of the frog (see above), are connected with certain departments of nature; by injuring or otherwise constraining them, these animals can be forced to produce the natural phenomena desired by the magician; thus frogs are whipped to produce rain. Just as the American Indian believes that his medicine makes him invulnerable, so in Central Africa the leopard skin girdle is held to be a complete protection. In France the milk of a black cow is thought to confer the gift of invisibility. In Scotland serpent soup will make one wise like the serpent, but the serpent can also be made to assist the possessor of its skeleton. Often the particular purpose to be served is no longer remembered, and the talisman is simply carried for luck. In Eastern Africa the fates of the East Africans are distributed at each house where the bearers call (see ‘Wren’ below).

25. MIMETIC DANCES, MASQUERADES, ETC.— Many primitive peoples are in the habit of imitating the movements of animals. Whether this is due to the physical resemblance and the general nature of their animal knowledge, or in so doing assume the animal mask or dress. In some cases this object seems to be simple amusement, but this kind of dramatic representation is usually magical or religious in its purpose. (1) The initiation dance is frequently mimetic, and may perhaps have at its root the idea of transforming the man into a member of the kin by imparting to him a share of the nature of the animal. (2) Other dances, also performed at initiation, have for their central idea the substitution of the animal for the man in the chase. (3) This mimical dance is also sought by mimetic dances performed immediately before a hunting expedition. (4) Mimetic dances before hunting may also be sympathetic in their purpose; the animal in human form falls a victim to the fox and gazelle. The same way the real animal will fall beneath his darts. (5) Sometimes mimetic dances are performed after a hunt also; their object seems to be protective (see ‘Leopard’ below), like so many of the other ceremonies after killing animals. (6) It may, however, be intended sometimes as productive magic, for the purpose of increasing the numbers of the animal and perhaps bringing to life again those laid low by the hunter. (7) With the object of provid-
ing for the due increase of the species, some Ameri-
can Indian tribes mimic the buffalo, the men tak-
ing the part of the males, the women of the females.
(8) In many of the Central Australian ceremonies
the movements of the totem are imitated in the
movements intended to provide for its due increase.
(9) Conversely, imitation of the movements of animals
and birds forms a part of some European
marriage ceremonies, and seems to be here, too, a
rite intended to promote fertility. (10) Where
animals are sacred to a god, mimickry of their move-
ments is equivalent to prayer and adoration, just
as in the Gregorian Calendar at the festival of
(11) The object of these prayers is often to produce
rain or wind or some other natural phenomenon
associated with the animals (see ‘Frog’ below);
possibility in its origin the mimetic dance was in-
tended by its magical power to produce these effects
without the intervention of a god. (12) The wear-
ing of animal disguises and imitation of animal
movements during the chase have probably the
purely rational object of deceiving the animal.
26. MYTHS OF ANCESTORS, CHILDREN, HELP-
FUL NATURAL ANIMALS, ETC. Sometimes
as a totemic etiological myth (Frazer, Tot.
p. 3 ff.), but often as a myth of tribal origin
(Hearne, Northern Ocean, p. 342; Ordbiginy,
Voyage, iii. 209 ff.; Liebrecht, Ger. Volks. p. 115,
Zur Volksk. p. 17 ff., etc.), the descent from an
animal ancestor is found all over the world. In
the same way stories are told of animal births,
which sometimes are simply etiological myths of
the origin of totem kins (Frazer, p. 6), and some-
times narratives of facts believed to occur at the
present day (see ‘Crocodile’, and cf. ‘Mimus’, ii.
212, etc.). In another type of myth, animals are
said to bring the children (Folklore, xi. 235, see
also ‘Lizard’ below; JRAS, S. B., 7, 146; Alencar,
O Guarany, ii. 321). Corresponding to the animal
form of the soul of the dead, we have the belief
that the soul of the newborn child is in the form
of an insect (Miss. Cath. 1894, 140) or of a bird
(Skeat and Blagden, ii. 4), which the expectant
mother has to eat. The helpful animal figures in
many Macconohan, Legends of P. pass., see
also v. Gennep, 214-292; MacCulloch, 225-253, etc.
Sometimes animal figure as guides in tribal migra-
tions, etc. (Wackernagel, Kl. Schriften, iii. 203 ff.)
Under this head we may perhaps classify the animal
narrative in Gennep, pass. p. 224, 250; Fornell, Culta,
p. 443; Beitrage, iii. 276-289; Fornell, Acta et Eth.
Corpus, iii. 179, 226. Associated with the myth of the
animal ancestor is the swan-maiden story (Frazor,
See also ‘Soul’).
27. MYTHS (ETIOLOGICAL).—A great part of the
mythology of savages is simply their idea of the
history of the Universe. They account for natural
facts, beliefs, customs, and rites by telling what
some god did, by explaining all naught that had
sensibility and volition, by positing the same
conditions in the heavens as exist on the earth,
and so on. In particular, they account for the
existence and peculiarities of animals by telling
stories of what happened in the early days of the
world. Once men went on all-fours, and pigs walked
like men; but something fell on the head of a pig,
and since then they have gone on all-fours and men
walk upright.
The Indians of Brazil tell how the daughter of the great
serpent spirit, in a young man who had three faithful slaves.
that time there was no light upon the earth; the young man
said, ‘If I give them 5, and the slaves were sent for it. They re-
ceived it in a nut with a bird’s nest, which they were not
account to open. En route they heard a buzzing in the nut; it
was a bee, and it stung the man.
Curiosity overcame them, they opened the nut, and next night.
Every thing in the river changed into animals and birds; ever-
thing in the river into fishes. A wicker basket became a jaguar;
the fisherman in his canoe turned into a duck, the oats forming
the feet. When the woman saw the morning star, she said, ‘I
am going to separate night and day.’ Then she rolled a thread
of cotton, and said, ‘You shall be as I am, white and red. She
rolled another thread and made the par-
tide. These two birds call, one at dawn, the other at dusk.
for their disobedience the three birds were changed into
monkeys (Magilhanes, Contes indigenes, p. 6).
The relations of animals to man, and especially their
sacrosanctity, are explained by etiological
myths. In Madagascar the Vazimbas account for
the respect paid to the kingfisher by the following
story: ‘The Vazima sent the kingfisher to visit
their relatives at a distance, and when he saw
the father and mother, and an injunction to send
owls and sheep; when it had fulfilled its errand it came
back, and the Vazimba said that as a reward for its
bravery and wisdom they would put a crown on its
head and dress it in blue by day and by night.
Moreover, young kingfishers should be cared for,
and the penalty of death inflicted on any one
who sought to kill them’ (v. Gennep, Tabot, p. 265).
More common is the explanation that the animal
in some way helped an ancestor of the kin (v.
Gennep, p. 30; ‘Owl’ below), and so America an adventure with the animal is a promi-
nent motive in the myths. Descent from the totem-
animal seems to be the prevailing form of the story
in the remainder of North America (for etio-
logical myths in Africa see Folklore, iv. 110;
Rancon, Dans la Haute Gambie, p. 445; Merensch, Beitrage,
p. 133 n., etc.).
28. NAGUAL.—In Africa, Australia, and America
it is the custom to undergo some ceremony, usually
at the age of puberty, for the purpose of procuring
a tutelary deity, which is commonly an animal.
This is called tornaq (Eskimo), manitou (Algon-
quin), nagual (C. America), yunbasai (Eskahlay of E.
Australia), etc. Among the Eskimos the bear (see
below) seems to be the usual animal. Among the
Thilkents a young man goes out and meets a river
otter; he kills it, takes out its tongue and hangs
it round his neck, and thenceforth understands the
language of all animals (JAI, xxi. 31; Krause,
Die Thilktind-indianer, p. 294). Among the Eastern
Kurdis each hunter selects a carnivorous one (Smith’s Rep. 1866, p. 307).
Elsewhere the initiate has to dream of his medicine
animal, and sometimes kills it in order to procure
some portion of its body as a talisman (Frazer, Tot.
p. 54). In Africa p. 516 is the story of the totem
animal, and the taking of the tutelary beast; in one case a blood-bond
is said to be performed with the animal selected.
In Australia also the medicine-man sometimes pro-
vides the nagual; sometimes it is acquired by a
dream. The animal thus brought into relation
with a man is usually sacrosanct for him; if he
loses his talisman, he cannot get another medicine
animal (parts of America); the death of the nagual
entails the death of the man (Nkomis of W.
Africa); in Australia the yunbasai is sacrosanct,
though the totem is not.
Closely connected with the nagual is the ‘bush-
soul’ of West Africa. Possibly only our limited
knowledge disguises their identity. A man will
not kill his ‘bush-soul animal,’ for that would
entail his own death; he cannot see it, but learns
what it is from a magician. A ‘bush-soul’ is often
hereditary from father to son, and from mother
to daughter; sometimes all take after one or the other
parent. In Calabar many are believed to have the
power of changing into their nagual (p. 267). Some-
thing of the same sort is known in Europe, one
of whom his family had attached to it an attar-fylgia;
each individual too had his fylgja, which took the
shape of a dog, aen, fly, etc. (Folklore, xi. 237;
The nagual seems to be closely related, on the
one hand, to the 'soul-animal' (see above); on
the other, it stands very near to the 'familiar' (see above) of the witch, and the 'wer-wolf' (see below). It has been argued that kin totemism arises from the *nagual*, which becomes hereditary. Up to this point, the trace of animistic ideas has been found in connexion with totemism, if we except some doubtful cases in Australia (Man, 1902, No. 85). Nor has it been explained how the totem, the descent of which is, in Australia, predominantly in the female line, has developed from a *nagual*, which is seldom, if ever, possessed by women or inherited from the maternal uncle.

Closer to the *nagual* than the kin totem is the sacred animal of secret societies (which see), the initiation ceremonies of which, it should be noted, bear a strong resemblance to those practised by totem tribes. The *nagual* is the linear ancestor of the 'genius' of the Romans, no less than of the 'guides' of modern spiritualism.

20. Names.—Animal names are very commonly used, and not among primitive peoples only, for three per cent. of English surnames are said to be derived from animals (Jacobs, Studies in Bibl. Arch. p. 68 ; for Indo-Germanic theriophoric personal names see Pick, Griechische Personennamen, p. 33). Of the names of the animal which is the name of the Aruntas in Central Australia is said to mean 'cockatoo'; the Wakeburas are the eel people. In America we have the Dog Rib Indians, who trace their descent from the dog. In India the serpent was from the Nagas, e.g., the Nagas of Assam. (2) Far more common is the practice of naming totem kins after animals; it is one of the tests of totemism. In Australia we have a long list of Arunta and other totem names in the works of Spencer and Gillen (for other ways see Frazer, Totemism). (3) The two sections into which most Australian tribes are divided are, especially in the south, often named after animals, and in particular after the eagle, hawk, and crow. Similarly we have the raven and wolf phratry among the Thilliketas (see also Frazer, op. cit.). (4) The intermarrying classes in Australia are also known by animal names; on the Annan River they are called after the eagle, hawk, and bee; at Moreton Bay they are named from the koala, kangaroo, etc. (5) In New Guinea, also, the names of the classes and the closely connected secret or dancing societies are named after animals; in West Africa there is the leopard society. (6) In Zululand, possibly as a relic of totemism, the regiments are named after animals (see below). (7) Tribes of Welsh history. (7) Both in America and in Australia sections of tribes are named from their principal food (Globus, xxxi. 381 ; lxix. 59). (8) Local divisions of Australian tribes have animal names. These are not to be confused with local totem groups. (9) Priests and worshippers are named after animals (see art. PRIST). (10) Totem kins in America, and rarely in Australia, name their members after some part of the totem animal. (11) In Africa the totem kins bear the name of the animal. (12) Especially in America personal names derived from animals, either for magical purposes or as indications of the character of their bearers, are very common. In Central America a child is named after some animal which is thenceforward his nagual (see ‘Nagual’ above; cf. Jahrb. Geog. Ges. Bern, xii. 160). (13) As a mark of respect kings and nobles receive names of animals as titles of address. (14) Gods are named from animals associated with them. (15) Sprit animals are named. (16) The signs of the calendar are named after animals in East Asia, and children take their names from them. (17) The signs of the zodiac, the constellations, etc., are named after animals. (18) Animal names are sometimes applied in Europe to the bride and bridgegroom. (19) The reaper of the last ears, as representative of the corn-spirit, conceived in animal form, is called the cow, etc. At Easter or Whitensuitide, St. Thomas’s Day, etc., animal names are applied to the last person to get up, or to an individual selected in some other way; cf. ‘gokw,’ *pickason’s Artid*. (19) Various games are known by animal names, in particular ‘Blind Man’s Buff’ (see ‘Sacrifice’ below). (20) Animal nicknames are common in Europe, and probably in other parts of the world (Lang, Social Origins, App.). (21) The last ears of corn, as emblematic of the animal corn-spirit, receive animal names.

30. OATH, ORDEAL.—Just as in more advanced societies it is the custom to call upon the gods to bear witness to the truth of an assertion or to ensure the fulfilment of a promise, so the savage calls upon his sacred animal (see ‘Bear,’ ‘Dog’). In later times this is regarded as an appeal to the gods, but originally the animal itself was believed to punish the perjurer, either by persecuting him as a ghost-animal or by degrading him as a living animal. The procedure varies, sometimes the hand is laid upon the animal or on its skull, sometimes its blood is drunk, sometimes the foot is put upon its skin. The Bantu of South Africa take an oath by their totem. The Hерero of the Orange River do the same by their oxen. In the island of Eibo the oath is taken by the Christmas boar. Corresponding to the oath by animals is a class of ordeals, in which the person to be absolved exposes himself to dangerous bear, by swimming across a river full of crocodiles, or by similar means.

31. Omen.—In many cases it is impossible to point out either the causes which determine the augural character of an animal or those which make the appearance of an animal. In Europe, however, or perjurer, either by poisoning him as a ghost-animal or by degrading him as a living animal. The procedure varies, sometimes the hand is laid upon the animal or on its skull, sometimes its blood is drunk, sometimes the foot is put upon its skin. The Bantu of South Africa take an oath by their totem. The Hèrero of the Orange River do the same by their oxen. In the island of Eibo the oath is taken by the Christmas boar. Corresponding to the oath by animals is a class of ordeals, in which the person to be absolved exposes himself to dangerous bear, by swimming across a river full of crocodiles, or by similar means.

Omen-giving animals are (1) always of evil augury; (2) always of good augury; (3) auspicious or the reverse, (a) according to the manner in which they behave, or (b) according to the number which appear, or (c) according to the actions of the augur, who may change a bad omen into a good one by magical animal-name changes, e.g., by killing the animal, by turning round three times, by spitting, or by purificatory ceremonies.

32. Possession.—A belief in possession by animals is not uncommon. In New Guinea it is held that the witch is possessed by spirits, which can be expelled in the form of snakes, etc., just like any other disease. In the East Indies wer-wolffism is regarded as a disease of the soul which is communicable by contagion, or perhaps as a kind of possession in which the soul may be regarded as a separate person. In South Africa the belief that they were sometimes possessed by colored animals or reptiles. In South Australia the natives believed that they were sometimes possessed by certain animals, and it is no uncommon belief in Africa and Samoa that an offence against a totem or other sacred animal will be followed by its
growth within the body of the offender, which is equivalent to a kind of possession. Among the Ainus madness is explained as possession by snakes, etc., and they hold that it is caused especially by killing some sacrosanct animal. Thus a man who kills a cat is liable to be possessed by a cat, and he can prevent this only by being part of a cat; it is possible that this may also be punishment, dog punishment, and punishment by all the other animals. In Japan the obsessing animal is regarded as the physical incarnation of the sins of the sufferer, and is said to leave him after a while. In New Guinea, (9) the belief is held that people who have damaged the fields, etc., of their owners; and certain families are said to own foxes which enter the bodies of offenders and cause them to blurt out their crimes. In other parts dogs are the animals used; they are held to go out in spirit form; the body may even die in the absence of the vivifying principle; if so, the spirit enters the body of the owner of the dog, who is then more powerful than ever as a magician. Belief in the possession of wizards being so widely found, it is probable that the anthropological exponents (Neisse, ii, 189) of the Ainus claim that many American Indians believe they have an animal in their bodies, refers to possession by the medicine animal. There are, however, traces of a similar belief in Australia with regard to totems.

34. SACRIFICE.—Magical powers over the totem are frequently claimed by the kin in Australia, and occasionally in other parts of the world. Mimetic dances (see above) are held to give the same control. The eating of the flesh of an animal is believed to give power to cure diseases, which are often known by the name of that animal. Wizards and others sometimes claim immunity from the bite of serpents, etc.; in some cases this is said to be the result of inoculation at initiation. See also 'Familiar,' 'Nagual.'

5. Inthisconception of the slain god (2), it has been surmised (Frazer) that the killing of the sacred animal, no less than that of the god, has for its object the preservation of the Divine life, conceived as something apart from the living animal, from the pains and penalties of old age, and from the weakness to which they would reduce the being on whose strength the preservation of the temple, or the growth of the crops, or some other important fact, depends. (5) From (2) follows also the magical totem-sacrifice, found as a totem rite in full activity only in Central Australia, by which the multiplication of the animal is promoted. The species is desecrated by men under the totem kin. Desecration seems to have been also one of the purposes of the sacrifice of the corn-spirit, although here the object may have been primarily sacralization of the personification. (8) One means of the expulsion of evil is the scapegoat (see 'Scapegoat'); the purificatory sacrifice attains the same object by killing the animal, perhaps by disseminating the mana of the sacred animal, and thus counteracting hurtful influences. (7) Corresponding to (6) we have the magical sacrifice intended to produce direct benefits; the animal representative of the corn-spirit is killed and its blood sprinkled, or its ashes mixed with the seed, to increase fertility. (8) The burial sacrifice is intended to provide the dead with means (a) of subsistence in the other world, (b) of guidance to the other world, (c) of proving his earthly status in the other world, etc., or to purify the living from the dangers of parricidium. The funerary rite may also consist in: (a) the individual with his nagual or individual tutelary spirit; (b) a building with a protecting spirit; (c) a frontier with a guardian spirit, etc. (10) We have, further, the inspirational sacrifice, where the priest drinks the blood of a victim in order to procure obsession by his god. (11) In the messenger sacrifice, an animal is killed that it may go as an envoy to the dead (see 'Bear,' 'Turtle,' etc.). The simple food sacrifice must of course be distinguished from this. (12) A common very ancient practice is that of immurement; that an animal was killed because it was the enemy of the god or had in some way injured him. Various forms of sacrifice are found. The victim may be slaughtered, or burnt, thrown over a precipice, or from a height, immured or buried; to these modes may be added the setting free of the bird or animal (see 'Scapegoat'). The skin of the victim may be put on an idol, used for a sacred cloak, hung upon a tree, etc. The flesh is frequently eaten; or part may be eaten and part burnt or buried. Special care is frequently taken of the bones. The priest sometimes arranges himself in the skin or mask of the animal to be sacrificed; if the sacrifice is that of the animal-god, the priest thereby assimilates himself to his god, and by putting on the Divine character sanctifies himself for his task. In any case, the donning of the skin and mask may be regarded as a rite of sacralization, fitting the human being for contact with divine things. Not only so, but the priest is actually called by the name of an animal. The worshippers of Ephesian Artemis were 'kion bees,' the priestesses of Demeter, Proserpine, and the Great Mother, and possibly those of Delphi, were 'kion bees'; those of Dodona were sometimes 'yorbas.' The Ephesian festival of Poseidon were 'bulls;' the girls at the Brauronian festival were 'bears' (Frazer, Paus. iv. 223). In Laconia the priests of Demeter and Kore were πέλαγος (de Visser, Götter, p. 198).

In this connexion may be noticed some facts connected with the game of 'Blind Man's Buff.' All over Europe the game is known by the names of animals (Pollok, xii. 261); to the names there given add cuckoo (Rev. des Trad. Pop. ill. 940), hoopoe (Maspons y Llabors, Jncha, p. 48), sheep (Rolland, Rimes, p. 154), raven (Gargas, Folklore, p. 84); the name 'blind fly' is also found in India. The players in the Middle Ages wore masks, as may be seen in Strutt's Sports and Pastimes, and we may certainly infer that they wore the animal whose name the game was known. The significance of these facts is only clear when we discover that the procedure in the game of 'Blind Man's Buff' is precisely that of many regular customs, in which cocks, cats, etc., are killed (Pollok, xi. 261 f.). It cannot, however, be assumed that the game is a mere imitation of rituals in which animals are sacrificed, for it was not by children only that it was played or performed in the Middle Ages. In this connexion it should not be overlooked that in Sierra Leone the leopard society don leopard skins when they seize a human victim for sacrifice (Ringesly, Tropique, p. 537). In this case, however, the victim is put to death in place of a leopard; the leopard hunters of the Gold Coast likewise dress like leopards and imitate their actions when they have killed one (see 'Leopard').

As to the priority of human or animal sacrifices, no general law can be laid down. On the one hand, we find in Central Australia the ritual eating of the totem, and this is certainly not derived from any antecedent human sacrifice. On the
other hand, we find, also in Australia, a ceremony of child sacrifice in connexion with the initiation of the magician, where the priority of animal sacrifice is in the highest degree improbable. In America the ritual killing of the medicine animal (see "Nagual"), as the central feature of the initiation, cannot be regarded as primitive. But the human sacrifices of Mexico seem to be secondary in their nature, due, possibly, to a scarcity of domestic animals. How far the agricultural sacrifice of a girl among the Pawnees can be regarded as it is difficult to say. The idea of the animal corn-spirit was certainly known to them, and the influence of cannibalism may have determined a transition from animal to human sacrifice, if indeed it did not at the outset bring about a practice of human sacrifice. Where, as in Africa and the East Indies, the sacrifice is frequently of the character of an offering to a dead man, we have no reason to argue that one form proceeded the other. At the same time we cannot affirm that these sacrifices were the original form in those regions. The question is in most cases insoluble.

35. SCAPEOGOAT. — Diseases and evil influences are commonly conceived by savage and barbarous peoples, often stock-in-trade. As a consequence they hold that it is possible by suitable means to expel or otherwise render innocuous all the illnesses which are from time to time afflicting. One method of doing so is to cause them to enter the body of an animal, or, where the personal form of the evil influences is less emphasized, to load them upon the animal, and drive it out of the neighbourhood of human habitations. In India the scape-animal may be a pig (as for instance the use of the pork as a bar of evil (for cholera in Berar)), or a cock (for cholera among the Pataris, and, in light epidemics, in Berar); and it is noteworthy that the buffalo, goat, or cock must be black (as the vehicle of Yama, the god of death). In many cases, moreover, the scape-animal becomes an actual sacrifice, as among the Hill Bhotiyas, where once a year, in honour of the village god, a dog is intoxicated with bhang and spirits, and then beaten and stoned to death, so that the body is misfortune to visit the village during the year (Crooke, i. 141 f.; 166 f., 169-174).

When the Fiaras of the Orinoco build a new hut, they believe that it is occupied by an evil spirit who must be dosed before them to take possession of their new abode. They capture some bird, by preference a toucan, alive, with its eyes and the tail; they then feed it the leaves, and pass it near to the hut, and to the people of the toucan, and is compelled to enter it. The bird, terrified by the noise and confusion, struggles within its covering of banana leaves; its movements are observed by an old woman; at the proper moment she sets it free and herself flies at full speed into the forest. The bird makes use of its recovered liberty and carries away the evil spirit (Voyage du Monde, 1888, ii. 848; for similar customs see GBV i. 102 f.).

The African custom of making images of animals instead of using living animals; in Old Calabar the expulsion of ghosts or devils is called ndok; rude images of crocodiles, leopards, snakes, gazelles, and birds, are painted at the front of huts, and guns fired to frighten the spirits into the images, which are then torn down (Ogilby, Golden Bough, p. 46; Hutchinson, Impressions, p. 163). Sometimes the scapegoat is a divine animal; the people of Malabar share the Hindu reverence for the cow, but the priests are said to have transferred the sins of the people into one or more cows, which then carried them away to whatever place was appointed by the Brahman (Golden Bough iv. 117). There is a European custom of hunting the wren and other birds, usually in the winter season, and especially about Christmas, at which time the expulsion of summer and wintertime is supposed to take place. The wren and other animals which figure in these customs are sometimes simply set free (Rolland, op. cit. ii. 297; Folkskunde, vi. 165, etc.). It is not improbable that one of the ideas at the bottom of the practice is the expulsion of evils (PL xvii. 258 f.). It should be observed that a frequent feature of these popular customs is a procession in which the wren or other animal is carried round the village or town. A similar practice prevailed in Dahomey (Miss. Cath. 1868, 107), where every three years the serpent god Danbe was carried round in a hammock, his bearers killing dogs, pigs, and fowls on their way; this ceremony they explained as intended to rid the community of its ills and diseases. In the hunting of the wren and similar customs the striking at the animal with stones, etc., is a prominent feature; this appears to be the method by which the sins and evils of the community are put away. In Bombay the Mhars celebrate the Dusserah festival, at which a young buffalo is set free and pursued, each of his pursuers striking him with his hand or some weapon. The effect of this ceremony is held to be to make the animal the bearer of the sins of every person who touches him (Globus, xvii. 24).

36. SKULL, GABLE-HEADS. — Reaching back to classical times, and in the present day extending far beyond European limits, is the custom of hanging up the skulls of slain animals, or sometimes their jawbones. The head is often regarded as the seat of the soul, and in the East Indies this is the head of the clan god as the ancestor. Among the Eskimos custom of preserving the heads of seals has a similar idea at its base. More commonly the head is put up in a field or a vineyard as a talisman to keep off evil influences; in the same way, after a head-hunting expedition, the head of a bucras (see below) is put up as a defence. American farmers frequently fasten the skulls of horses or cattle to barns and other out-houses, although the object is now merely decorative. Aising out of American tradition, in which the object is anciently used. In Europe, we find the practice of carving horses' and other heads on the gables (Folklore, xi. 322, etc.), but here again their magical significance seems to have been lost. In the Middle Ages the Wends put up a skull when there was a plague among the cattle, but in modern days the practice is rather to bury it; from the stories of the revival of the disease when the skull is dug up, it is clear that the idea now is that the plague is buried; the same idea is found elsewhere. The skull is sometimes important in ritual (see 'Bison').

37. TABU. — Respect for totems or other sacrosanct animals may be shown positively or negatively. The system of prohibitions by which respect is shown is generally positive; it is positively evil and is generally forbidden to kill the animal (Frazer, Tot. p. 9; Folklore, xi. 239-242; and below, pae.). It may not be eaten, even if killed by another person; or in some cases even touched, save sometimes for the taking of an oath. In South Africa it is held to be unlucky to see the siboko (tabu animal), and in many cases there is an objection to using the ordinary name of an animal. Sometimes it is forbidden to imitate the voice of an animal or bird; it is often accounted unlucky to keep it in the near vicinity. The idea is that the birds may be talking and there is a strong objection to the use of the feathers of certain birds in making feather beds.

The penalties for violation of these tabus, which are, of course, seldom found exemplified completely in any one area or in the case of a single animal, are varied. It is a common belief in England that the harrying of a robin's nest is punished by an accident to the offender, usually the breaking of a bone. Of other birds it is said that he who kills them is killing fewer of their number than his injury done to a sacrosanct animal is believed to be followed by ill-luck or sickness in the family or among the cattle. In the Congo area it is thought that the women of the kin will miscarry or give birth to animals of the totem species, or die of
some dreadful disease, if a totem animal is eaten. Leprosy, madness, death by lightning, and various diseases are among other penalties for disrespect to sacred animals. In Samoa the sacred animal was thought to take up its abode in the man who broke the tabu protecting it, and thus kill him; a ‘man of the turtle’ would not object to helping a friend to cut the turtle, but would take the precaution of tying a bandage over his mouth, lest an embryo turtle should slip down his throat and cause his death.

No sharp distinction can be drawn between sacred and secular animals. The mere fact that an animal is the subject of tabus is indecisive.

Name-tabs. — It by no means follows that all tabus are an indication of respect for the animal whose name is avoided. In the case of dangerous or destructive animals the use of their name may have the result of summoning them, just as the use of the name of a dead man calls him. Various words are forbidden among fishermen; but it may be that it is unlucky for seafaring folk to mention things connected with the land, just as the Eskimos that they must not be seen apart in cooking. Or it may be that the naming of an animal or fish will warn it that is being pursued. Or the words may be, for some reason, of ill omen. See TAWI.

61. GEDAIIODS, DEFORMATIONS. — In America and New Guinea totem kins frequently bear their totem tatued on their bodies (Frazer, Tot. p. 26). In South Africa (ib. p. 2) teeth are knocked out in order that a resemblance to oxen may be produced. In British Columbia the totem is painted upon the face (Globus, lxiv. 194). In South America some of the tribes of Brazil tatue their faces so as to resemble birds (Spix and Martius, Travels, p. 1027), which they respect and mourn for when they die, and into which they believe that they pass at death (von den Steinen, Naturvölker, p. 512). The Californian Indians burned their nagaids into their flesh, just as the Indians of Canada tatued theirs (Frazer, p. 65). In Africa, some of the tribal marks, probably in raised pattern, are intended to make the wearer resemble a lion or a panther (Trav. du Monde, 1891, i. 63). Some Hindu tatue marks, which are, for the most part, restricted to women, are intended to represent animals, but they are selected merely according to the desire of the person who is to be tattooed, and, though possibly originally totemistic, are now regarded simply as ornamental (Crooke, ii. 30–33). The totem mark in America and the tribal mark in Africa are sometimes emblazoned on the property of the totem kin or of the tribe (Frazer, op. cit. p. 30; Trav. du Monde, loc. cit.). In Australia the tribes of the Upper Darling are said to carve their totems on their shields (Frazer, p. 30). The wizard frequently has animals carved on his wand or painted on his dress.

39. TONGUE. — Hunters frequently cut out the tongues of slain animals, and the tongues are eaten as sacred food. In folk-tales the test of the tongues is a frequent means of deciding between two claimants. The tongue of the sacrificial victim is important, and in Bohemia such a tongue is held to confer the gift of eloquence. In N.W. America the shamans wear otter and eagle tongues round their necks as a means of acquiring supernatural knowledge. In particular, an otter’s tongue is held to confer knowledge of all inanimate objects, all birds, beasts, and living creatures (Golden Bough, ii. 421, 422; cf. Krause, Die Tinklit Indianer, p. 284). The shamanistic rattles contain the tongue motif carved on them as a rule in this part of America, and similar figures have been found in the Pacific (Am. Rep. Bur. Ethn. 1881–1882, pp. 111–112). Tongue masks are recorded in New Zealand (Parkinson, Journal, pp. 98, 123; see also Frobenius, Weltansch. p. 199).

40. TOTEMISM. — Under ordinary circumstances, totemism is a relation between a group of human beings and a species of animals, characterized by three main features: (1) the assumption by the human totem kin of the name of the animal; (2) the prohibition of the intermarriage of people of the same totem name; (3) respect paid by every member of the totem kin to the totem animal. Each of these features is liable to deformation; we find totem kins which respect an animal other than their own; the totem becomes local exogamy or disappears altogether; the totem animal is eaten ritually or otherwise. Other features of totemism are present only occasionally, and their absence in no way invalidates the totemic character of the relation. More especially in America the connexion between the kin and the animal is explained as one of descent, the animal sometimes having united itself to a human being, sometimes having transformed itself into the ancestors of the kin by a gradual process, and so on. But it must be remembered that totemic relationship has existed wherever we find a myth of descent from an animal (see ‘Myths of Ancestors’ above). More especially in Australia the totem is held to aid his kinsmen by omens in other ways. Conversely, in Central Australasia, the performance of magical rites to promote the increase of the totem species; traces of magical influence over the totem are found elsewhere; but it does not seem legitimate to assume that all cases of magical influence of this sort are totemic in origin. Sometimes the totem indicates its totem by tatuing or other marks, sometimes by deformations, or by the mode of wearing the hair, or by their dress.

In determining the totem of a child, kinship is usually reckoned through the mother. On the other hand, the usual course at marriage is for the female to remove to the husband’s house or district. The result of this is that the kins in any area are (1) intermingled, and (2) continually changing. Where the parent from whom the child takes its totem continues to reside in his or her own district, the tendency is for the totem kins to become localized. The result of this is that certain animals are respected in certain districts; in this way perhaps originated the local cults of Egypt. Tribal respect for the totem of the chief, and ancestor-worship, are also paths by which totemism may have been transformed.

Totemistic tabus do not differ markedly in form from those connected with other sacred animals; they may therefore be dealt with together in this article (see ‘Tabu’).

Sex totems. — A peculiar relation exists in Australia between the two sexes and two species of animals which might better be termed ‘animal brothers and sisters.’ It is found from South Australia as far as Brisbane, and the animals thus related to the men and women are lizards, goannas, bats, emu-wrens, superb warblers, and goatsuckers. Although the life of a man or woman is believed to be bound up with the life of one of these animals, although they are in consequence jealously protected by the sex to which they belong, as a preliminary to marriage it is the custom among the Kurnais for one of the ‘animal relatives’ to be killed by the opposite sex (Golden Bough, iii. 417–418).

41. VEGETATION. — In the ancient world a number of minor deities, especially connected with vegetation, were believed to possess animal or semi-animal form. Not only were the bull and goat closely associated with Dionysus, but Pan, the Satyrs, and the Fauns are especially associated with goats (see below). The only explanation hitherto sug-
gested of this connexion is that the goat naturally wanders in the forest and browses off the tender shoots of trees, so that the animal which so boldly appropriates the property of the tree-spirit can be none other than that spirit in bodily form. Frazer has explained the ceremonies performed at various periods in the spring as intended in part to promote the growth of vegetation by killing the old, and therefore weak, spirit of the previous year, replacing him by a more youthful and vigorous representative. Many of these ceremonies are performed during Mid-Lent; among the animals which appear at that period are the bear (in effigy), the ox, the goat, the wolf, etc. But these ceremonies seem to have had another purpose too—that of the expulsion of evils—so that we cannot identify all the animals that so appear with the spirit of vegetation. In the same way various animals (the squirrel, fox, cat, etc.) are thrown into the bonfires at Easter or other periods of the year, —Frazer says as sun-charms. It is hardly legitimate to regard these as so many representatives of the spirit of vegetation. In China the spirals are bull-shaped (de Groot, Rel. Syst. iv. 279).

43. WATER. — In Greece, Poseidon and river gods generally seem to have been conceived under the form of bulls (JHS xiv. 126, 129). The festival of Poseidon was called Tauros, and his priests were termed 'bulls' (de Visser, Götter, pp. 41, 198). In South Africa, two species of the horse seems to have been considered a more appropriate form for the god of water (see 'Horse'; cf. Folklore, v. 116). In South Africa and Switzerland, the form attributed to water-monsters is that of the serpent (see below). In India and Eastern Asia the conception of a dragon replaces that of a serpent; we find traces of the same idea in Europe in the story of Perseus and his many variants. See also 'Dragon,' 'Serpent.'

WER-WOLF. — The belief in wer-wolves is connected, on the one hand, with the pathological condition known as lycanthropy, in which the sufferer believes himself turned into an animal; on the other, with the belief in nagausis (see above), foretelling calamitous events to human beings who can secure their secrets. Corresponding to these two sources of the belief, there are two different forms of it. In the first place, the man is conceived to put off his own form and assume that of the more powerful beast, commonly the wolf, as the last dangerous animal to be exterminated or to survive in the west and south. This transformation may be temporary or permanent, may be due to eating human flesh, to the sins of the transgressors, or to some magical procedure such as the drawing on of a wolf's skin, or to contagion, such as eating food left by another wer-wolf. In the second place, it may be simply the spirit of the wer-man which undergoes the change, his body being left torpid at home; or, another way of looking at the matter, the animal is simply his servant, and the man himself goes on with his ordinary occupations while it is on the prowl; his life, however, depends on its security.

In Europe the wer-wolf is supposed to fall upon his victim like ordinary wolves. In the East Indies the procedure of the wer-animal is more complicated. He attacks solitary individuals, who with horror become drowsy. Thereupon the wer-man in his own form, cuts up his victim, eats his liver, and puts the body together again. There are various signs by which a wer-wolf can be recognized, and ordeals are prescribed for discovering it. The wer-wolf is, as a rule, in the form of a living man; but sometimes the dead are believed to return in animal form (see 'Soul-animal' above) and practise the same arts as wer-wolves proper.

A method of burial is prescribed in Celebes for preventing the revival of the dead wer-man. The wer-wolf as form of the dead is closely connected, if not identical, with the vampire in some of its forms. See above 'Nagual,' 'Totemism' above. See LYCANTHROPY.

44. PARTICULAR ANIMALS. — Ant.—We learn from Greek writers that ants were worshipped in Thessaly; the Myrmidons revered them and claimed descent from them. So in other places. Coptos (Plut. 157, Lang, Myth, ii. 197). In Dahomey and Porto Novo, ants are regarded as the messengers of the serpent-god Danbo (Miss. Cath. 1884, 232). In Jabim, New Guinea, it is believed that a second death after the first is possible, in which case the soul becomes an ant (Nachr. K. Wilhelmsland, 1897, 92). We find in Cornwall the belief that ants are the souls of unbaptized children (FLJ v. 192). In France it is held that it brings ill-luck to destroy an ant's nest (Rolland, Pauns, iv. 229). The ant is fed by Hindus and Jains on certain days, and is regarded as associated with the souls of the blessed dead (Crooke, ii. 256).

In South America and California one mode of initiation was to allow the boy or girl to be carried by ants (Golden Bough, iii. 215); it is said to make them brisk and impart strength. The Pijoes submit to it in order to acquire skill with the blow-tube (JAL vi. 221). The Athapascan Dogrib Indians believed their hand or arm was acquired by secretly putting an ant under the skin of the hand (Franklin, Second Expedition, p. 291). On the other hand, the Aruntas hold that a medicine man must not go near the nest of the bull-dog ant; or if he were a medicine man of the regular type (Spencer and Gillen, Nat. Tr. p. 525). In Bulgaria and Switzerland, ants are regarded as of bad omen (Strauss, Bulgaren, p. 298; Schm. Arch. ii. 216). The Estonians regard them as of good omen (Eston. Ges. Schriften, No. 2, p. 25) and for the Huculs red ants are lucky, black unlucky (Kaindl, p. 105).

Not only the ant but also the ant-hill is the object of superstitious observances. The Juangs of Borneo make an oath of which serve the human beings who can secure their secrets. Corresponding to these two sources of the belief, there are two different forms of it. In the first place, the man is conceived to put off his own form and assume that of the more powerful beast, commonly the wolf, as the last dangerous animal to be exterminated or to survive in the west and south. This transformation may be temporary or permanent, may be due to eating human flesh, to the sins of the transgressors, or to some magical procedure such as the drawing on of a wolf's skin, or to contagion, such as eating food left by another wer-wolf. In the second place, it may be simply the spirit of the wer-man which undergoes the change, his body being left torpid at home; or, another way of looking at the matter, the animal is simply his servant, and the man himself goes on with his ordinary occupations while it is on the prowl; his life, however, depends on its security.

In Europe the procedure of the wer-animal is more complicated. He attacks solitary individuals, who with horror become drowsy. Thereupon the wer-man in his own form, cuts up his victim, eats his liver, and puts the body together again. There are various signs by which a wer-wolf can be recognized, and ordeals are prescribed for discovering it. The wer-wolf is, as a rule, in the form of a living man; but sometimes the dead are believed to return in animal form (see 'Soul-animal' above) and practise the same arts as wer-wolves proper. A method of burial is prescribed in Celebes for preventing the revival of the dead wer-man. The wer-wolf as form of the dead is closely connected, if not identical, with the vampire in some of its forms. See above 'Nagual,' 'Totemism' above. See LYCANTHROPY.
ANIMALS

de Is. et Os. 30). The Armenians sacrifice an ass at the grave of the ancestors of a person against whom they have a claim, in the belief that if their claim is not satisfied, the soul of such ancestors will pass into an ass (Haxthausen, Trans. 21). In parts of Germany, children are said to come from the ass's pond (Mannhardt, Germ. Mitt. 336). At Erechtheum, Athens, elephants enshrined in the shape of donkeys at an annual fair (ib. p. 414). In Moldavia, Calabria, and Portugal, an ass's head is a means of averting evil or the influence of the evil eye from a child (Bret, Idiotikon, 203). Trede, Heidenthum, p. 210; Miluniae, v. 14). Near Meiningen the last stroke of the reaper was said to kill the oaks, barley, or lentil ass, just as in other parts other animals are regarded as incarnations of the corn-spirit (Haupt's Zeitsch. d. Alterth., iii. 360 ff.).

Prominent among medieval festivals was the feste des ânes ou feste asinaria (Chambres, Medieval Stage, i. 293, 306, 331 ff.; Zts. des Alpenvereins, xxvii. 136-154), and there are traces of the performance of ass-masks (ib. p. 332). It seems probable that in spite of its ecclesiastical associations it was simply a popular festival of the same nature as the 'white horse' (Rev. Hist. Rel. xxviii. 334) and other customs, the existence of which far back in the Middle Ages is already attested (ib. p. 334). In the present case the association of the ass with Palm Sunday made it possible for the Church to throw a veneer of religion over the pagan rite. In Augsburg in the 16th century a wooden ass was drawn through the streets; palms were thrown down before it; a priest prostrated himself and was blessed by another priest; and the first palm to be caught up was used in magical ceremonies (Germania, xvii. 51). Many of these celebrations are kept up unofficially at the present day at various times in the spring—Mid-Lent, Palm Sunday, Easter, Whit'sunday (Tradition, v. 197, 226; Bavaria, ii. 163; Reinseiber-Düringfeld, Festl. Jahr, pass. Zts. f. Volkst., 307, iv. 23). The ass also appears in connexion with St. Nicholas on Dec. 6th, and in Zanzibar children's day carry round a wooden ass's head (Schulz, Archiv, iv. 64). In Grisons the ass of St. Nicholas is said to carry off the children and throw them down at the precipice (ib. p. 167). On the Thursday before Christmas the Posterli, children's day, is celebrated; a bunch of people from other villages arrive, and one of them represents Posterli, sometimes in the shape of an ass. The image is left in a corner of the village (Stalder, Schweizer. Idiotikon, i. 208). For myths of the ass, its supposed phallic meaning, and folk-tales relating to it, see de Gubernatis, Zool. Myth. ii. 359-359. The story of Midas is also discussed by Czisewski, Baikja o Midsosgeych usach.

Basilisk.—Accounts of the basilisk (Basileus), a king of the serpents, have come down from Pliny (XXXIX. xix.) and Heliodorus (Ethiopica, iii. 8). It was believed to be a small serpent with a cock's head; its look was fatal. In medieval and modern Egypt supposed to be hatched from the egg of a seven-year-old cock or from the hundredth egg of a hen (Melusine, v. 18-23). On the other hand, the first egg of a black hen is held in Bohemia to be the dangerous one; this is, however, another belief, according to which it produces the joker, or demon of good luck (Grohmann, Aberg., Nos. 77, 543, 544).

Bat.—Among the Cakchiquels the chief god, Camalecan, took the form of a bat (Bancroft, iii. 434). A sacred bat figure in a Queensland myth; the first man and woman were told not to approach it, but the woman disobeyed and the bat flew away; after that death came into the world; the form of the myth, however, suggests Christian influence (Ballou, Under the Southern Cross, p. 141). Among the Bongos, bats are called by the same generic term as witches and spirits—bitakob (Schweinfurth, Heart of Africa, i. 144). In West Africa an island on the Ivory Coast is peopled with huge bats, which are regarded as the souls of the dead (Bisseler, Faune, p. 191; Trede, Heidenthum, p. 210; Miluniae, v. 14). Near Meiningen the last stroke of the reaper was said to kill the oaks, barley, or lentil ass, just as in other parts other animals are regarded as incarnations of the corn-spirit (Haupt's Zeitsch. d. Alterth., iii. 360 ff.).

In Egypt, the bat is sacred, and is said to pull the dead to the other world (ib. p. 414). In Japan there is a tradition of a white bear-god which lives in an inaccessible pond. In Victoria will kill or eat them for this reason (Parker, Aboriginals, p. 25), and the Adjahurahs also respect them (R. G. S. Aust., S. Aust. Br. ii. 17). They are respected in Bosnia (Wiss. Mitt. iv. 471) and parts of Shropshire (Burne, Shrop. FolkL, p. 214), but in other places they are killed. In Kusaie, or Strong Island, bat flesh is tabu to men (Hershein, Süds. 49). Among various Victorian tribes the bat is a 'sex totem,' better termed a 'man’s brother,' (Frazier, Tot. p. 82). In Germany, in their names the bat is sometimes used as the abode of the soul of the dead (Bisseler, Faune, p. 191; Trede, Heidenthum, p. 210). In India it is good omen before sunset (Tradition, viii. 138). It is considered lucky in Sarajevo for one to come into the house (Wiss. Mitt. iv. 441). On the other hand, it is usually considered of bad omen (Wiedemann, Ekten. p. 415; Streckerjan, p. 24, etc.), and in Salzburg it is believed to bring death into the house (MS note). In Sicily the bat is regarded as a form of the devil, and a verse is sung to it; when it is caught it is killed by fire and nailed up with outspread wings (de Gubernatis, Zool. Myth. ii. 203). For the song, compare Ledien, Monogr. d’un Bourg picard, p. 41. The custom of nailing up bats is common (Sébillot, Trad. de la H. Bret, p. 94; Trede, Heidenthum, ii. 249; Böller-Krenzwalz, p. 143). A bat's heart is believed to bring luck at cards (Köhler, Volksbrauch, p. 417).

Bear.—Although the bear is an object of fear and respect to most of the uncultured races who are acquainted with it, there is but little to say of them so far as mythology is concerned. In a few cases we find a myth of descent from the bear; the Modocas of California believe that they are sprung from the union of a daughter of the Great Spirit, who was blown down Mount Shasta, with a grizzly bear; before this was born, but the Great Spirit then made them quadrupeds. As a mark of respect they never mention the bear by name; if an Indian is killed by a bear, he is buried on the spot, and all who pass by the spot for years afterwards cast a stone upon the place (Miller, Life among the Modocos, p. 242). Some of the Demon kings of the Amerinds trace their origin to bears (Dwight, Travels, iv. 184; Schoolcraft, Ind. Tr. i. 265). In Europe, as well as in Syria and in Dardistan, stories are or have been told of girls who are abducted by bears or women who are transformed into bears, sometimes half-human, offspring (Rolland, Faune pop. i. 53; Twysden, Hist. Angl. Scr. x. 945; Leitner, Languages and Races of Dardistan, ii. 12; MacCulloch, 270 f.). The Crees tell a similar story, but here the offspring are bears which are later transformed into men (Petitot, Traditions, p. 400). The Malay tells of the bear a story of the Gelert type (JIAS, S.B., No. 7, p. 23).

As a useful and at the same time dangerous animal, the bemon of dangers becomes revered in many parts of the world a tribute of respect during its lifetime, which is often manifested by a disinclination to pronounce its name (see below, "Name tabu"). It is, however, but seldom that it receives actual worship before it has been laid low. In Japan there is a tradition of a white bear-god which lives in an inaccessible

---

This text is a historical and cultural account of various animals and their significance in various cultures and mythologies. It covers a range of topics, from the use of animals in religious ceremonies to their roles in mythology and folklore. The text provides insights into the cultural significance of these animals, such as the bear, which is often associated with various tabus and beliefs in different societies. The text is rich in historical and cultural details, providing a comprehensive overview of the topic.
Among the Tatars the earth spirits take the form of bears among other animals, and on this account they are accorded increased respect (Castrén, Vorlesungen, p. 230), but there is nothing to show that they receive actual worship. One authority says that the Ostiaks worship the image of a bear (Iides, Travels, p. 29); and in India the bear is believed to ward off disease, so that ailing children are made to ride on the backs of tame animals of this species (Crooke, ii. 242).

Name-take.——Some animals are not called by their ordinary names for fear of summoning them, but in the case of the bear the use of special terms seems to arise from a fear of offending it and a desire to do it honour. In Sweden it is called 'grandfather,' by the Estonians 'broad-foot'; analogous to this case, though with a difference of usage, is the Ottawa practice of terming the bear kin 'broad feet.' The Finns call the bear 'the apple of the wood,' 'beautiful honey paw,' etc. (Golden Bough, i. 457): see also ARW ii. 332; Kaindl, Hawaii, 103). The Yoots never express enmity to the bear, lest he should hear and take vengeance (FLJ v. 73).

Far more marked is the respect paid to the dead bear. The weapon which has asserted the claim of some of the East Asiatic peoples that the bear is their chief divinity. There can, however, be no doubt that the Ainus and others kill the bear whenever they can, and that its flesh forms their staple food. The skin is often treated at length by Frazer (Golden Bough, ii. 375 ff.), whose account is here followed, and who explains the custom as an abatement offered to the species, through the medium of single individuals, for the loss it sustains in the slaughter of so many of its members for food.

In preparation for the Ainn festival, a young bear is caught about the end of winter and brought into the village; it is fed until its strength increases and it threatens to escape from its wooden cage; then, in the autumn, the festival is held. The giver of the feast invites all his friends; libations are offered to the bear and various deities; and the women dance round the cage, addressing the animal in terms of endearment. After the men have shot at it with blunt arrows, a number of men put an end to its life by kneeling on it and pressing its neck against a log, the women all the time uttering lamentations behind them. The carcass is set up before certain sacred wands and dishes are set out for the guests, who offer to it, and the women, laying aside all marks of sorrow, dance merrily before it. The animal is next skinned and cut up, and its blood is drunk, so far as is known, by men only. The liver and brain are eaten on the spot, and the remainder of the flesh is divided among those who have been present.

The Gilyaks hold a similar festival; but the bear is shot with arrows in this case; at the end of the ceremonies the skull is placed on a tree (G22 ii. 12). It seems to be a practice of imputing the guilt of the slaughter of the bear to the toad, which has an evil reputation among the Gilyaks (ib. p. 383). Before being sacrificed the bear is led round the village, and ceremonies are performed in its honour (ib. p. 382).

According to a later account, which is important for our attitude towards the whole of the East Asiatic bear ceremonies, the Gilyaks celebrate a festival for any bear which they kill in hunting, as well as for those they rear; as soon as the ceremony is over, the soul of the animal, which has permitted itself to be killed, goes to the 'Lord of the Mountain,' Pel, accompanied by dogs killed in his honour, and by the souls of gifts of which it is the recipient.

The bear festival proper is instituted in honour of a recently deceased kinman. It is prepared by the gens of the deceased, but forms a general feast of several gentes, which are a more important factor in the ceremony than the gens which provides the festivity. When the time comes to kill the bear, the chief guests are the husbands of the women of the host's kin; they bring with them their sons-in-law, whose duty it is to kill the bear. The guests are called narch, and they are entertained by the 'lord of the bear.' Women are excluded from the ceremony of killing the bear, which is preceded by a trial of skill with the bow, in which the narch take part as well as the kin of the 'lord of the bear'; it is a point of honour for the latter to shoot badly. The narch then settle among themselves who is to give the fatal wound.

When the guests have gone, the nearest kinsman of the dead man proceeds to cut up the bear, which is placed in a majestic pose after being killed, its head to the west. Its head is carried off by the women on a sacred sledge, on which are also tobacco, sugar, bow and arrows, etc., gifts to the dead beast, who takes their souls with him. The guests of honour alone partake of the flesh of the bear; their hosts get only bear soup. Before they depart, they throw some bear flesh (which are perhaps the bear's eyes) to its last resting-place, and then its soul goes to the 'Lord of the Mountain' (ARW vii. 260-272).

If the precise meaning of these ceremonies is not apparent, it is at least clear that the cult of dead kinsmen is one of the elements at least of the animal cult; it may be noted that the 'kin gods' of the Gilyaks are human beings who have met with a violent death, but whether it is only in honour of such that the festival is held does not appear (ib. p. 259). A second element is possibly that of purification (ib. p. 273).

On the whole, we may remark that the Gilyak ceremonial is analogous to the Shinto turtle-killing—a means of communication with the dead of the tribe.

The Ostiaks, on the other hand, appear to pay equal honour to every bear which they kill; they cut off its head, hang it on a tree, and, surrounding it, pay respect to it; then they run towards the body and lament over it, explaining that it is not dead, but that the bears are warriors (ib. p. 273). As a mark of respect, Samoyeds allow no woman to eat of its flesh (Ermann, Reise, 1. 681). If the Ostiaks show respect to the bear, they also give evidence of very different feelings; its skin is stuffed with hay and spat upon to the accompaniment of songs of triumph (ib. 670), but they subsequently set up the figure in a corner of the court and treat it for a time as a tutelary deity (ib.). For songs in honour of the bear see Retzsch, Geschichte der Tiersagen, ii. 59.

We find a similar custom among the Pottawatomies. The head of the bear is set up and painted with various colours, and all participants in the feast sing songs in its honour (Baumgarten, Allg. Ges. Am. ii. 542). Although no special ceremony is observed by the Kamchatkans, the killer of a bear is obliged to invite all his friends to partake of the flesh (Krachenminkow, ii. 107). Among the Lapps the bear hunt is the occasion of various ceremonies. When the animal is dead, they beat it with rods and then transport it to a sledge tent hutt constructed on purpose; they then go to a hut where their wives await them; the latter chew bark to colour their saliva red, and spit in the faces of the men (probably as a purificatory ceremony).
Continence is observed for three days, and then the flesh is cooked and eaten by men and women separately; the women may not approach the place where the bear is cooked or partake of flesh from the rump (Voyages et Av. des Émigrés français, ii. 150). The Montagnais prohibit a bear's flesh to women and children (Hind, Explor. i. 179); the Ojibwas used to touch a dead bear (J.A.F. ii. 111). The Taouatis eat bear's flesh at the feast of the dead (Harmon., Journ. 289). The Mohawks offered bear's flesh to Agreskouwen when they had met with ill-success in war (Megaopolensis, Bat. iv. p. 109). In East Asia an oath by a bear is not uncommon. In some cases the skin or a piece of flesh is brought (Schrénck, i. 408); or an offering of a skin is made (Idea, p. 19), and in case of perjury the animal comes to life; we may take this to mean that they believe the bear will devour the perjurer, for the Samoyeds make a man bite a bear's head, and hold that a bear will devour him if he swears falsely (Billings, i. 228; cf. Latham, Russian Empire, p. 124).

There is a European practice, possibly connected with animal sacrifice, that the first bear may be the victim of a male. There is a bear, especially in the winter season, and going with him in procession (Mannhardt, Ant. W. u. Feldcult. 188 ff.; Zts. Ver. Volks. vi. 429). The custom is especially prevalent in the Lansiitz, a Wendish area (MS notes). In Poland the 'bear' is thrown into the water (Kolberg, Pesznikstw. i. 134, 136, 139, ii. 350).

The Central Eskimos believe that they can acquire a bear spirit as tutelary deity, or tomaq. The would-be angakok must travel to the edge of the greatest ice-side and summon the bears. When he appears, he falls down at once; and if he falls upon his face, a bear steps forward and asks his will. The man recovers and goes back with the bear (Ann. Rep. Bur. Eth. 1884-1885, p. 591). The bear is especially associated with Berne, the name of which means 'bear,' and the town has kept bears for centuries. The explanation given is that duke Berthold delivered them from a gigantic bear, but this is simply etiological and probably late; for it is certain that the bear was associated with the town centuries before Berthold. In 1832 a statue of a goddess, Artio, was discovered in the neighbourhood, which dated from Roman times. Now Artio is certainly connected with the Irish race; and Gr. artos means the goddess of the bear or something of that sort. A bear was also discovered among the other statuettes, but was not until later brought into connexion with the goddess, before whom it was standing in the original form of the group (Rev. Celt. xxi. 290).

In Greek cult, bears were burnt in honour of Artemis Άρης at Patre (Paus. vii. xvii. 8), and 'bear Artemis' was one of the names by which she was known. There is a good deal of evidence to connect Artemis with the bear (Farnell, Cults, ii. 435). Callisto, in an Arcadian myth, is changed into a bear, and she seems to be only another form of Artemis (Muller, Proleg. pp. 78-79), who is also called Αλεκτρις. Moreover, at Brauron, in Attica, the Cerina or Αρινα was reverenced (cf. Lang. Myth. ii. 212-215) in ceremonies which were perhaps a survival of initiation customs. Young maidens danced in a saffron robe, and, like the priestesses, were called 'bears'; the dance was epti kai arpho, and the participants were of ages from five to ten; the celebrations were quinquennial, and no girl might marry before undergoing the rite. There is a trace of a bear sacrifice at Brauron (Farnell, ii. 437), but the animal usually offered was a goat or hind. For folk-tales of the bear see de Gubernatis, Zool. Myth. ii. 109-119. For myths see Bachofen, Der Bär.

Bee.—The Tchuwashes of East Russia have a bee-god, and celebrate a festival at which they drink beer sweetened with honey (Globus, lxxiii. 323). The priestess of Ephesian Artemis were called 'king bees'; the priestesses of Demeter, Proserpine, and the Great Mother, were known as 'bees.' The fact that the priestesses of the goddess Demeter were called 'horses,' we may infer that the goddesses in question were bee-goddesses, or that their cult had included a local cult of the bee (Frazier, Paus. iv. 223). As a means of attacking or defending cities, bees figure in Quiché and Yucatecan legends (Liebrecht, Volks. p. 76). In North Guinea bees are actually hung at the entrance to a village, but the intention is probably magical (Wilson, Western Africa. p. 158). For myths of bees proceeding from the bodies of animals, as in the story of Samson (Jg. 14), see Globus, xxxix. 222. The soul is believed in parts of Europe to take the form of a bee (ib. li. 316; Jecklin, Volkstümliches, i. 59).

In European folklore the bee is everywhere sacrosanct (Folklore, xi. 239), but, as often happens, the associations are falsely and grotesquely interpreted (ib. p. 254). As ominous animals, bees vary in their signification; in some parts of Wales a swarm entering a house is a bad omen; elsewhere the reverse is the case (Rev. Hist. Belg. xxviii. 308). If they leave their hive it is a death omen (Brand, Volks. p. 215). A swarm on a house means fire (Globus, xviii. 96). The European peasant attributes special intelligence to bees; they suffer no uncleanness of any sort near them; they should not be sold; the death of a member of the family must be announced to them, and mourning put on their hives (Globus, xxxix. 221 ff.). At certain times in the year honey should be eaten (ib.). For myths and folk-tales of the bee see de Gubernatis, Zool. Myth. ii. 215; for the symbolism of bees see Pauli-Vissou (1894), p. 446 ff.; for myths, p. 448 ff. See ARYANS.

Beech.—The cult of the scarabab was general in Egypt (Budge, Gods, i. 579). At the present day it is feared by the Hotten tots, of whom Kolbe says that they sacrifice sheep and oxen to a beetle (Walckenaer, Hist. Gen. xv. 372). The beetle is killed in various parts of Europe (Folklore, xi. 239, 242). Killing it is believed to cause rain (Rolland, Faune, iii. 324; Napier, Folklore, p. 116; MS notes). In East Russia it is burnt on a stick to a beetle on its feet when it has got 'cast' (MS note; cf. Afzelius, Sagohäfder, i. 13). In Schleswig-Holstein its name connects it with Thor (Schiiller, Thier . . . buch, p. 11). It is sometimes kept in a cage for luck (Napier, Folklore, p. 116; Bohme, Kinderspiel, p. 224). In Scotland the stag beetle is killed because it is the devil's imp; the black beetle is killed whenever it is found, and a story is told to explain the custom (Gent.'s Mag. 1856, ii. 510; cf. Rolland, Faune, iii. 327). In a number of cases it is burnt on a stick in the ground and strike blindfold at its horns; the one who hits it is the winner and takes the beetle home (Kuhn, Nordd. Sagen, p. 377). In the Graufasen Mark the horns are used for divination (Wüste, p. 96).

The ladybird is often taken (Grohmann, Abergel, No. 1688; Strackenjar, Abergel. p. 45). It is said to bring the children (Mannhardt, Germ. Mythen, p. 272). It is regarded as of good omen. The cockchafer is also tabu (Folklore, xi. 240). It is greeted in the spring (Bavaria, iv. ii. 428) as carried in procession by children (Lat. Pascha) in the spring (Germannia, vii. 435; PLR iii. 138; cf. Rolland, Faune, iii. 340). It is considered of good omen for one to settle on the hand (Bavaria, iv. ii. 402). The children often repeat verses to the ladybird (Ledieu, Monographie, p. 40; Rolland, Faune, iii. 351-368). In Picardy it is the custom
to kill the ladybird (Ledien, loc. cit.). A beetle is carried for luck (Spiess, Aberglauben, p. 417), and used in magic (Heyl, Volksglauben, p. 787; Wuttke, Der Aberglaube, passim). In the mythology of the Sia the beetle was entrusted with a bag of stars; getting very tired, he peeped in, and they flew out and covered the heavens (Arom. Rep. Bur. Ethn. 1889-1890, p. 35). For the folklore of the beetle see de Gubernatis, Zool. Myth. ii. 209 ff.

Bison.—One of the Omaha clans traced its descent from a bison, which is said to have been originally under the surface of the water; they believed that they returned to the buffalo at death (Frazier, Tod. pp. 4, 36). Both Iowa and Omaha males dress their hair in imitation of the bison when it is their totem (ib. p. 27). A southern tribe, probably the Kawapas, propitiated the dead bison; they adorned its head with swan and birdskin down dyed red, and put tobacco in its nostrils and in the eft of its hoofs. When they had flayed it, they cut out its tongue and replaced it by a piece of tobacco. The wooden forks were then stuck into the bone and a crescent laced upon them, on which were placed pieces of flesh as an offering (Hist. Coll. Louisiana, i. 181). Another account says that the Louisiana Indians behaved to the bison before they set out for the chase (Heckenweller, iv. 80). Possibly the Blackfoot practice of putting a bison skull on an altar is part of a similar propitiation (Miss. Cath. 1869, 359).

Many tribes performed mimetic dances in order to increase the supply of bison (Frazier, Tod. p. 41; Bates, A. Quaker, p. 112). The Indians believed that they could attract the bison by imitating the bark of the coyote (Tour du Monde, 1864, i. 54). The Pawnees used to 'dance the bison' for their neighbours; they dressed in war costume and covered their faces with a bison skin attached (Perrin du Lac, Voyage, p. 334). It does not appear whether this had anything to do with the belief in the bison form of the corn-spirit, but the Creek dance was performed at the time of their Green Corn dances; men, women, and children took an active part in the ceremony, dressing themselves in the scalp of the bison with horns and tail attached; uttering sounds in imitation of the animal, they danced in a circle, their bodies in a vertical procession, with the head led by a ceremonial man, who was seated on two sticks which represented the forelegs of the animal (Stanley, Portraits, p. 10). The bison is associated with corn in various ways by the Pawnees (Dorsey, Traditions of Skidi Pawnees, pp. 85, 336). They cut corn by a bison skin made by killing a bison; this is done by a woman; the pericaridium is dried and filled with various kinds of corn. For the dance itself the floor must be as clean as possible; sacred bundles of corn and bison flesh are prepared, and a bison skull and two hoes of bison bone are placed before them; the women dance, holding their hoes, and every one searches for buffalo hairs; if they see any they say, 'Now we are going to be successful in our hunt and in our corn' (Grinnell, Pawnee Real Stories, p. 372). They gave the name of 'another' to the dead skull of a bison cow painted red, which they place at the bottom of the hut on a sort of altar; they think that it has the power of attracting bison. At seed-time the corn is brought to the hut, and the old men bring out little idols and bird skins, and sing all day to obtain a good harvest. Offerings of first-fruits are also made (Du Lac, Voyage, p. 270). Probably the same ideas prevailed among other tribes; for we find that the Osages had a myth that corn was given the ball (Arom. Rep. Bur. Ethn. viii. 379; cf. Matthews, Ethn. of Hiudatsa Indians, p. 12).

Buceros (rhinoceros-bird).—This bird is important in the East Indian area. In Borneo the gables of some of the houses have a buceros in wood; and with this may be connected the fact that when they have taken a head on a head-hunting expedition, a wooden buceros is set up with its beak pointing towards the foe; on the gable it is said to bring luck. In Celebes the priests put the head of a buceros on a magic staff, and it is also believed to attract purchasers to shops on which it is placed. Under the central post of the house it is believed to avert evil from the dwelling. The head-hunter sometimes wears a buceros head on his own, probably for the same reason that one is set up; in Borneo it has become general to wear feathers and carved bills, but the right to do so is restricted to those who have taken a head with their own hands. It figures in the death dance of the Battas; a mimetic dance in Borneo seems to have in the present day no other object than amusement. At a ceremony of peacemaking the Iban.s suspend from a wooden buceros a great number of cigarettes, which are taken down and smoked ceremonially by all the men present (Kidn. iv. 512 ff.; J. A. I. xxv. 109, 108; Tydings. T.-L. V. xviii. 517, xxxi. 349).

Buffalo.—Like many other pastoral peoples, the Todas show their domestic animal, the buffalo, a degree of respect which does not fall far short of adoration. As often happens the female is never eaten; once a year a bull calf is killed and eaten by the adult males of the village in the recesses of the wood. It is killed with a club made of a sacred wood; the fire is made of certain kinds of wood, produced by rubbing sticks together (Marshall, Todas, p. 129 f.; see also Rivers, Todas, p. 274 f.). In other parts of India the animal serves as a scapagoat in case of cholera (Golden Bough, i. 101). The Mhars of Bomboy sacrifice a bull to the god Dvapar when they lead it to the temple of Bhavani, and the chief strikes it on the neck with a sword; thereafter it is huntéd and struck with the hand or with a weapon; in this way it is laden with the sins of those who succeed in touching it. After being driven round the walls, its head is struck off at the gate; a single stroke must suffice if the sacrifice is to be efficacious. Then they fall upon the victim and tear it in pieces; the bENTS are performed by the women; the demons are prayed to receive the offering; pieces of flesh are thrown backwards over the wall for them (Globus, xvii. 24). A somewhat similar sacrifice is performed among certain hill-tribes at the feasts of the Drummen, the foster-father, and was also celebrated formerly by the Bhumi. The buffalo is frequently sacrificed, moreover, in honour of Durga, the consort of Siva, and in art is the vehicle of Yama, the god of death, the female being regarded as the incarnation of Savitri, the wife of Brahma (Crooke, i. 112, ii. 236 f.). The Zulus hold that the souls of the dead pass into the Cape buffalo (Fritsch, Eingeborene, p. 139). The Ewe tribes hunter observes tabus when he kills a buffalo (Mitt. des K. Bln. V. xv. 156). Among the Ewe tribes, when a buffalo is killed, it is cut up and sold before the hut of the hunter. With an old woman as president, he and older companions partake of a meal in a hut, and the entrails of the buffalo are round some of the guests. The successful hunter must remain in his hut for some days, and for nineteen days wear no clothes. He is led by an older man through the villages during this period, and is permitted to capture and take home chickens. He may eat the head and feet of the animals only, and may eat no pepper, though salt is permitted. This period of tabu is concluded by a general festival, at which a mimetic representation of a hunting scene is given. At the close the
hunter who killed the buffalo is carried home (Zts. Geol. Ges. Thür. ix. 19).

Butterfly, moth.—In a Pima myth, the Creator, Chiuwotmahke, takes the form of a butterfly, and flies until he finds a place fit for man (Baneroti, iii. 78). Many of the Malagasy trace their descent from a sort of moth, and believe that it was a man who was swallowed in the form of a moth at death. The Siyanae believe that the soul has to suffer after death till the body is only a skeleton; if it cannot endure this it becomes a butterfly; the Anteriminae call the soul by the same name as the butterfly (v. d. Fries, Norges Magnetf. iii. 13). Butterflies are tabu in Europe (Folklore, xiii. 239; Napier, Folkkl. p. 115). In Bukowina they should not be taken in the hand (Zts. Ost. Volksk. ii. 322).

In the Vosges, France (Sauvé, Folklore, p. 317; Noel du F. ed. Asseryat, i. 119), they should be caught. In Oldenburg the first butterfly should be caught and allowed to fly through the coat sleeve (Strackerjesan, Äberg, p. 105). In Suffolk, butterflies are ‘tenderly entertained,’ and white butterflies are kept in the house (Suffolk Folkslore, p. 9; Napier, Folklore, p. 115), while at Llanidloes (Montgom. Coll. x. 260) the coloured ones are killed; in Scotland it is unlucky to kill or to keep them. Moths are killed in Somerset and Devon (Folkslore, i. 270). In Germany butterflies are caught in the North of England (Denham Tr. ii. 325), the small tortoiseshell in Pitigal (FLJ vii. 43), the first butterfly in Devonshire (Hone, Tablebook, p. 339); while in Essex the directions are to catch the first white butterfly, bite off its head, and let it fly away (MS note). The Magyars say that it brings great luck to catch the first butterfly (Jones and Kropt, Folktales, xlix.). In Yglan it is put in the gun to make it impossible to miss (Zts. Ost. Volksk. iii. 273). Some of the customs point to a scapegoat ceremonial; in other cases there is a belief that butterflies and moths are the souls of the dead (Arch. Rev. iii. 238). In Scotland, Friesland, and Bosnia, moths are regarded as witches (Gregor, Folklore, p. 147; Wiss. Mitt. vii. 315; Globus, xxvii. 183). In Germany, at the wedding of a newly married couple, the bride and groom are also sometimes said to bring the children (Plaas, Kind, i. 12).

There is a curious diversity in the omens given by butterflies. In North Hants three butterflies are a bad omen (NQ, 8th ser. iv. 165). In Brunswick a dead or seen first butterfly, a yellow butterfly a birth, and a coloured one a marriage (Andree, Braunschweig. Volksk. p. 259). Elsewhere a white butterfly means a rainy summer, a dark one thunderstorms, and a yellow one sunshine (Am Urdebrunnen, iv. 16). The Ruthenians hold that a red butterfly in spring means health, and a white one sickness (Globus, lxxiii. 245); while for the Bulgarians the dark butterfly announces sickness (Strausz, Bulgaren, p. 280).

Cat.—The cat was generally respected in Egypt, and mumified at Thebes; but this is not enough to establish cat-worship proper. In many parts of Europe it is considered unlucky to kill a cat (Folklore, xii. 239) and the same belief is found in Africa; the Washambas respect the cat, and believe that if one is killed, some one in the family falls ill; a sheep is led four times round the sick person, and then slaughtered; its head is buried, a living cat is caught, and part of the sheep’s heart, covered with honey and fat, is given to it; if it will not eat, the ill person is put down to another cause; finally, the cat has a dark neckband put on him in set free (Mitt. von d. Schutzgebieten, ii. 313, 325; Zts. Geol. Ges. Thür. xx. 108). It has been stated, but incorrectly, that in Egypt a cat is regarded as holy, and that if one is killed, vengeance will sooner or later fall on the person who committed the deed (PEFS, 1901, 267). On the Gold Coast a cat which had been of good omen received offerings; it was also held that the souls of the dead passed into cats (Bosman, Beiss, p. 444; Müller, Feti, p. 97). At Aix, in Provence, on Corpus Christi the finest tom-cat in the country, wrapped like a child in swaddling clothes, was publicly exhibited in a magnificent shrine (Mills, History of Crusades, quoted in Gent. s May., 1882, i. 605).

The cat is one of the animals sacrificed in Europe at various times (Folklore, xi. 233; Lund, Danmark og Norges Historie, viii. 160, etc.), in some cases by being put into a tomb, and in others burnt with the body; and L’Année, p. 53; Mitt. des Ver. für. Ges. der Deutschen in Boehmen, x. 347, etc.). In other cases the cat is burnt (Rolland, Faune, iv. 114; Golden Bough, 324; Chessel, Diet. Hist., etc.). The explanation of these customs seems to be that they are survivals of a custom of expelling evils; this interpretation is borne out by the fact that at Wambbeck the custom took the form of throwing the cat out of the village on a day known as ‘Kat-nit. In Bohemia they kill it and bury it on the fields in order to drive away the evil spirit may not injure the crops (Volkskunde, vi. 155; Grohmann, Äberglaube, No. 367). Sometimes the cat is associated with marriage ceremonies. In the Eifel district the ‘Katzenschlag’ follows the marriage ceremony, and the cat is killed; the bodies are thrown to the church and afterwards killed by striking people with it; it is then cooked and given to the newly married couple (Schmidt, Sitten, p. 47; Rolland, Faune, vi. 102). In Poland, if the man is a widower, a pane is broken in the window and a piece of the cat thrown in; the bride follows through the same opening (Tradition, v. 346). In Transylvania the farm hands bring a cat in a trough the morning after the wedding and rock it on the cradle before the bride (Haltrich, Zur Volksk., p. 290). Probably the idea of getting rid of evils is in part an explanation of these customs, in part a magical rite to promote fertility. In India, on the other hand, the cat, being regarded as an uncanny animal, is respected, and it is a serious offence to kill it (Crooke, ii. 241, 270 ff.).

The corn-spirit is sometimes believed to appear in the form of a cat (Golden Bough, ii. 270). At the Carnival in Hildesheim a cat is fastened in a basket at the top of a hr tree; influence over the fruit harvest is attributed to it (Kehrino, Volkep. p. 142). In Sumatra an ap, the cat, is used in rain charms (Golden Bough, i. 102; Tijdsschr. vi. 83). There is a curious conflict of opinion as to the omen to be drawn from the sight of a cat. In Germany, Scotland, the Vosges, etc., a cat, especially a black one, is of bad omen (Gregor, Folklore, pp. 123, 125; EB xv. 90; Sauvé, Folklore, p. 116). On the other hand, in Hildesheim and other parts of Germany the black cat is held to bring luck (Niedersachsen, vi. 61; Zts. Volksk. V. f. Volksk. x. 209; Alemannia, xx. 254; Schreiber, Zeitschr. p. 329). In the United States it is an evil omen for a cat to cross one’s path, but good luck to be followed by a black cat, while a strange cat, especially a black one, brings good fortune to the house which it chooses to make its home. For folk-tales of the cat see de Gubernatis, Zool. Myth. ii. 53-66, and for Jewish material Jacob, in JE iii. 613 f.

Cattle.—Among the cults of domesticated animals the most important is that of cattle. The question of the origin of the domesticated oxen is in no case; the problem of the origin of domestic animals; for if the pastoral peoples who in historical times have respected or worshipped their cattle obtained them from a single centre, where they were originally domesticated, possibly, in part at least, through practices connected with religion (Hahn, Demeter
und Baubo, pass.), we cannot base any argument on the attitude of the cattle-keeping tribes of the present day. If, on the other hand, no sanctity attached to cattle when they came to them, the respect—and even love—which these peoples feel for their herds is important as a factor in the evolution of the more definitely religious attitude.

Pastoral peoples, of whom in pre-European days there were many representatives in Africa, commonly live on milk or game (Alberti, De Raffera, p. 37; Fleming, S. Africa, p. 260). The Damaras cannot dispose of a cow alive upon meat from such a source; when they have any special feast, the killing of the cattle is almost a sacrificial function, and falls to the lot of the chiefs. In the same way bulls in ancient Egypt were killed only as a piscarium (Herod. ii. 41); and cows, as among the Phenicians (Porphyry, de Abstin. ii. 11), were never eaten on any pretence.

In these cases there is no positive cult, though the cow is recorded to have been sacred to Hathor. With the male animal it was different. Conspicuous among Egyptian animal cults was that of the bull, and the worship of Apis (Hâp) goes back to the earliest times. According to Herodotus (iii. 28), it was the 'sacred of a cow in camp,' a living god, and the Egyptians say that lightning descends upon the cow from heaven; on the latter point another story was that the god descended on the cow as a ray of moonlight (Wiedemann, Religion, p. 188; Plut. xxix. et Dion. xix. viii. 1). Various accounts are given of the marks by which it was recognized; Herodotus (loc. cit.) says it is black, and has a square spot of white on its fore-head; on its back a figure of an eagle; in its tail darts on its side. The bull, however (viii. 72), says that a white crescent on its right side was the mark, and adds that after a certain age it was drowned in the fountain of the priests. Oxen were sacrificed to Aphis, and had to be pure white (Herod. ii. 28). When the old Aphis died, a new one was sought; the owner of the herd in which it was found was honoured; the discoverer was rewarded, and the dam of the bull was brought with it and confined in a second sanctuary (Vit. Strabo, xxvii. 31). Once a year a cow was presented to Aphis, and then killed (Pliny, vili. 186); others were regarded as concubines and permitted to live (Amm. Marc. xxii. 14. 7; Solinus, Polyb. c. 32). Its food consisted of flour and honey; a special well was provided for its use. Its birthday was celebrated once a year; when it appeared in public, a crowd of boys attended it. Women were forbidden to approach it save during its four months' education at Nicopolis, when they exposed themselves before it (Diodorus, i. 58).

Oxen were obtained (1) by the behaviour of the bull, (2) by dreams, which came to sleepers in the temple, and (3) by the voices of children praying before the temple. Both the living and the dead of the bull are venerated, and its spirit is in company with Osiris a dual god Sam-Apis (Serapis). The dead bull was carefully mummiified and buried in a rock tomb. The cult of Aphis was national. Less wide-spread was the cult of Mnevis, also consecrated to Osiris (see Budge, i. 286 ff.).

At the present day similar observances have been noted on the Upper Nile. The Nuba (= Shilluk and Bonjack) venerate a bull, according to Petherick (Travels, ii. 10), usually a piebald one; it leads the cattle; its aid is sought in theft and in the death it is mourned with great ceremony; at its master's death it is killed, and its horns fixed on his grave. This latter feature suggests that it may have been regarded as the abode of its master's soul, or possibly of the soul of the previous owner of the family. Another account says that it is venerated under the name of Madjok (the Great God), and worshipped with music and dancing (Hasan, Vita, i. 68). Among the Nueri the bull is likewise honoured; it is regarded as the tutelary deity of the family, and receives the name Ngied, which is also applied to thunder and lightning, to their Supreme Being (Marno, Reisen, pp. 243, 347; Mitt. Ver. Erdk., Leipzig, 1873, p. 6).

Among the Angons the spirit of a dead chief was located in a bull, which was then set apart and considered sacred. Offerings were made through it to the indwelling spirit; if it died, another was put in its place. This cult ceased as soon as the next chief died (Folklore, xiv. 310).

The Sakalavas of Madagascar have a black bull in a sacred enclosure in the island of Nosybe, which is guarded by two hundred priests. When it dies, another takes its place. In January the queen visits the island and a bull is sacrificed, whose blood is held to drive away evil spirits from the temple and to give birth to the Good God (Alcantara, Vita, p. 248). In some parts of Madagascar myths of descent from cattle are told (ib. p. 239). When the sick perform the bilo ceremony to remove the tabu under which they lie, a bull is sacrificed. When this is burned, it is consumed until its master's death (ib.). Cattle played a great part in the ancient unexplained ceremonies of Fandrosa at the New Year (ib. p. 240). Cattle were kept for their milk and as sacrificial animals only (ib. p. 243. dympt. viii. 3). There are still a few Words in their name; and custom prescribed the persons to whom particular parts of the animal should fall (ib. p. 243). A child born on an unlucky day was usually put to death, but its life might be saved if the ordal by nulling of a cow could determine it (ib. p. 243). Among the most honourable terms of address were 'bull' and 'cow' (ib. p. 247).

The origin of the Hindu respect for the cow is an unsolved problem. Unlike Egypt, it is clear that India developed a respect for the animal in historic times. Of actual worship there is little to record; but the païchâ-gavya, or five products of the cow, are important factors in exorcism and magic; as a means of annulling an unlucky horoscope, re-birth in oxcart, etc. (v. c. 386). When the Hindu touches the tail of a cow at the moment of dissolution, and believes that it will carry him across the river of death; just as, in the last re-incarnation before the assumption of the human form, she received from her cow mother the sacred river Vaitarani, which bounds the lower world. Cattle festivals are celebrated in Nepal and Central India, but their object seems to be mainly magical. The nomadic Banjars, however, devote a bullock to their god Balaji, and call upon it to cure them in sickness (Crooke, Pop. Rel. ii. 235-236).

In Iranian mythology the moon is closely associated with the bull, and is regarded as containing the seed of the primeval bull (Bûdâ-bihâd, iv. x.), whence one of the standing epithets of the moon in Irania, and its name gacitira, is corrupted from the bull. Here the underlying idea is evidently a fertility-concept (Gray, 'Maoncha Gacitira' in Spiegel Memorial Volume). In Zoroastrianism, moreover, as in Brahmanism, the urine of the bull is one of the chief modes of religious purification (Musul. ix. 105-112). For the bull and cow in the Veda, see de Gebueratiis, Zool. Myth. i. 1-41; in later India, p. 41; in Persia and North Asia, p. 90 ff.; for the Slavs, p. 171; among the Teutons and Germans, p. 261 ff. For other cases of respect for cattle, see Hahn, Demeter, p. 60. For the bull as form of water god, see 'Water' above; see also de Gebueratiis, i. 265.

In Greek cult the bull was associated with
Artemis TavpoirSXos and Toi/pt/n), which Farnell interprets as referring to the agricultural functions of the goddess; in the worship of TavpoirSXos the bull and cow were rarely, the calf never, sacrificed; the goddess is represented with horns on her shoulders, which are usually supposed to refer to the moon; the horns certainly appear in the representations of Artemis, Dioneus, Demeter, Hestia, Apollo, Poseidon, etc. (Farnell, Cults, ii. 451, 454, 456, 529). The bull was one of the chief sacrificial animals in the cult of Zeus (forSoupéna); but this is of no value as evidence (ib. i. 181). White oxen drew the priestesses in the lèpòs γάμος (ib. i. 188). The bull was prominent among victims offered to Athene (ib. i. 290); an Athenic Boar-mas (‘ox-yoker’) was worshipped in Boeotia (ib. i. 376). In Crete cults seem to have been mingled—that of a Semitic goddess whose animal was the goat and whose lover was the bull, and that of Zeus-Dionysus and Europa; the bull may originally have belonged to the latter, but only mammals of Dioneus have been referred to some extent with Zeus (ib. ii. 632, 645). The bull was important in the ritual of Astarte (ib. ii. 676). In the cult of the Syrian goddess worshippers sometimes cast their children at the feet of Pachynysa, of her temple, ‘calling them oxen’ (ib. i. 92). For the bull in Celtic religion, see Celtic Religion, § 5. 8.

Bouphonia.—The sacrifice of an ox at the altar of Zeus Pánoos on the Acropolis requires to be noticed at length. The myth of origin is as follows: A certain Sopatrus, a stranger, was offering corn, when one of his oxen devoured some of his corn; Sopatrus slew it; he was then seized with remorse and buried it; after which he fled to Crete; a dearth fell upon the land, and to remove the curse the sacrifice of the Soupéna was instituted. The oracle directed that the murderer should be punished and the dead raised; all were to taste the flesh of the dead animal, and refrain not.

The ritual was as follows: At the festival of the Dikaios, the wheats were driven round the altar, and the one which tasted the cereals was the chosen victim. The axe with which the deed was done was sharpened with water brought by maidens and handed to the sacrificer; another cut the throat of the victim, and all partook of its flesh. The hide was stuffed with grass and sewn together, and the counterfeit ox was yoked to the plough. The participants in the sacrifice were charged with ox murder (Soupéna), and each laid the blame on the other; finally, the axe was condemned and thrown into the fire. This sacra has been interpreted by Robertson Smith as totemistic, but no totem sacrifice of this kind is known elsewhere. On the other hand, Mannhardt and, following him, Frazer have regarded it as connected with butchers. As Farnell points out, the sacrifice of the corn-spirit is not attended clandestinely, where with a sense of guilt. The admission of Sopatrus to citizenship as a result of his sacramental meal lends little or no support to the totemistic hypothesis, although there was an ox-cult (Boutades) at Athens.

In modern European folklore the corn-spirit is frequently understood to take the form of a bull or cow (Golden Bough, ii. 279 ff.). Perhaps we may look to this conception for an explanation of the custom of leading round, about Christmas, a man clad in a cowskin (ib. 447; Evans, Tour in S. Wales, p. 44; Panzer, Beitrage, ii. 117; FlJ iv. 118; Schweizer, Archiv, ii. 228, cf. 178; Rolland, Panne, vi. 91; AV, 9th ser. vii. 247, etc.). The same explanation probably holds good of the Athenian sacrifice of the Bouphonia (see above), after which a mock trial took place, in which the instruments of sacrifice were condemned to be cast into the sea. Possibly we may trace this custom in the sacrifices to the spring ox of the Chinese (Zool. Garten, 1900, p. 37). The emperor offers a hecatomb annually to heaven and earth; the animals must be black or red-brown (ib. p. 31).

In Egypt also a bull or cow played the part of a scapegoat (Golden Bough, iii. 1). Among the Abchasians a white ox, called Ogginn, was sacrificed annually, perhaps as a ‘pastoral’ sacrifice (see above).

The Ova-Hereros have some practices which have been interpreted as totemistic. They are divided into eanda and oruzo; membership of the eanda is inherited through the mother, and is inalienable; the oruzo, on the other hand, descends, like the chieftainship and priesthood, in the male line. Sacrifices were offered after the birth of a rabbit, rain, etc.; the oruzo, after the chameleons, etc.; they are distinguished (1) by the practice of keeping or not keeping cattle with certain marks, and (2) by practising certain abstinences which other totem animals, the orozem oruzo, for example, do not keep. They may even injure the chameleons. It seems clear that the ommusa comes nearer the totem-kin, though no totemistic practices are assigned to its members (Ztschr. Ethnol. 1886, p. 361). It has been recorded that certain plants are sacred to each ‘caste,’ but whether eanda or oruzo is meant is not clear (Andersson, Gleanings, p. 238). The Batokas break their upper teeth at puberty to make themselves like cattle; but here, too, there is no connexion with totemism (Livingstone, Mem. Trave. p. 632), for it is not confined to any special clan.

Among the Bechuanas a cow or bull that beats the ground with its tail is regarded as bewitched (Mackenzie, Ten Years, p. 892). In the Hebrides, oracles were given by a man wrapped in a fresh bull’s hide and left all night at the bottom of a precipice near a cataract (Saussure, New Voyages, Lond. 1819, vol. viii. 92). The Kalmuks take an oath by the cow; the accused stands on the skin of a black cow, moan, jump and throw down the threshold (Jalay i. 415).

In opposition to the practice of the African pastoral peoples, of the Hindus, and probably of ancient Europe (Hahn, Demeter, pp. 60—61), the East Asiatic culture area abstains from the use of milk, regarding it as a pathological product (ib. p. 21). These peoples employ their cattle for draught purposes only, over a considerable area (ib. p. 60; Zool. Garten, 1900, p. 34), without using them as an article of food. They explain their abstinence on the ground that it is improper to eat milk, which labours to provide them with food. There is nothing to show that the Hindu or Chinese explanation of the sacrosanctity of cattle within their areas is incorrect; and possibly the African tabus are explicable on similar grounds. It seems clear, however, that the Chinese learned to know cattle as draught animals, possibly as sacred animals, and not as direct factors in the economic situation. Prima facie this leads us to suppose that cattle were domesticated for a long period before the use of milk was introduced, for otherwise the practice of abstinence in China is hard to explain. On the other hand, it seems probable that a certain sanctity attached to cattle at their introduction into the East Asiatic culture area; for there does not seem to be any difficulty in the
way of breeding cattle for food and at the same time making use of their labour in agricultural operations.

Hahn has argued (Die Hautier, Leipzig, 1835; Domestier und Baubo, Lübeck, 1896) that we must look to the motive of domestication as the decisive factor in the domestication of cattle. If neither the milk nor the flesh was originally used, we are left to choose between the religious and utilitarian theories of domestication. It is by no means impossible that the idea of replacing hoe culture by plough culture may have occurred to a people destitute of domestic animals; and they may have proceeded to tame and utilize cattle for this purpose. But in this case we should expect to find that man as a draught animal preceded the ox as the motive power of the plough; there is, however, no evidence of this. It seems, however, far more probable that man already had cattle in partial subjection, and that possibly on religious grounds he proceeded to employ them in agriculture, than that he took the ox as a single stride from hoe culture to ploughing with cattle. The use of milk in early times as an offering seems to point in the same direction; for there would be no special reason for attaching sanctity to the products of an animal domesticated utilitarian purposes. As to the grounds which led to cattle becoming associated with religion in the first instance, Hahn has put forward a theory that it was the shape of their horns which brought them into connexion with the sickle of the moon at an early period. On the whole, it seems more probable that cattle, like the bison among the Pawnees, were associated with agriculture, possibly as a form of the corn-spirit, before they came under man's domination. The association of the moon with vegetation would naturally result in bringing cattle into close connexion with the moon-goddess. Just as the Pawnees use the bones of the bison as house-beams, so is the impression cast on this theory, into the service of agriculture on magical grounds, even if they were not employed at an earlier period as draught animals for the car of the god or goddess, and thus inured to labour. In some cases the animal in the sacred car was the primitive usage, it seems probable that the processions would visit the fields, and herein we may see another factor which may have suggested the use of the draught animal for the plough.

Coyote.—The coyote figures largely in American mythology, especially among the tribes of California. The Gallinomeros attributed to him the creation of the man, with the aid of the mountains (Bancroft, iii. 85). The Neenahams made him their ancestor, and told how he rescued them later from a terrible old man (ib. 546). In Shuswap and Kutenay myths he is the Creator (Brinton, Myths, p. 161). According to the Chinooks, he was the creator of the human race, but fashioned men clumsily, so that another powerful spirit had to open their mouths and teach them how to make canoes (Bancroft, ii. 95). The Cahoks attributed to him the gift of utilitarian purposes. A bag of entrails to a crocodile is supposed to have incurred the vengeance of some one who has taken that form; those who kill crocodiles are supposed to take that form after death. Slightly different is the Malagasy view, which makes the crocodile the ally of the magician in his lifetime (v. Gennep, Tabou, p. 280). The Matabele hold that killing a crocodile is a serious crime, because its liver and entrails can be used as charms (Decle, Three Years, p. 153); so, too, in West Africa (Hutchinson, Impressions, p. 248); and in South America (Bancroft, iii. 390). On the other hand, some of the Bantu tribes—it is not clear whether the Bakuens alone or not (probably not; cf. Chapman, Travels, i. 46) —seem to regard the crocodile in another light. A man over whom a crocodile splashes water is excluded
ANIMALS
from the village, in other cases a man bitten by a crocodile (Merensky, Beiträge, p. 92; ZE i. 43); the dead crocodile is handed over to the doctors to make medicine of; if one is killed, the children cough, and a piacular sacrifice of a black sheep must be offered (Merensky, loc. cit.). In many places the crocodile is attacked only if it has already shown its hostility to man. The Antimerinas trace their descent from the crocodile, which, however, formerly wagged from on them, after which a treaty was made. If this is violated, notice is given in the district, and complaint is made to the offended party. If the crocodile tribe is called upon to hand over the offender, and to make matters more certain a baited hook is thrown into the water. On the following day the capture is hauled up, condemned to death, and executed on the spot. Therefore the persons present begin a lamentation; and the body is wrapped up in silk and buried with the ceremonies usual at the interment of a man. On its grave a tumult is raised (v. Gennep, Tabou, p. 251 ff.). The same precautions are taken and the body is recovered by a magician (Golden Bougâ, ii. 390 ff.). In the Philippines, offerings were made even when the islanders had no intention of attacking the animals (Marsden, Sumatra, p. 303). In North Arakan the ceremony of hitting the ears and beards when any animal belonging to a village has been killed by an alligator (JAI ii. 240). This is perhaps explained by the belief of the Philippine Tagalogs that any one killed becomes a deity, and is carried up by the rainbow (Marsden, Sumatra, p. 301). Connected possibly with the belief that crocodiles are a magician or his servant, is the Baso belief that a crocodile can seize the shadow of a passer-by and draw him into the water; it is believed to suck the blood of the men and animals thus captured, but not to injure them otherwise (Parker, cf. Dawson, Awest. Abor. p. 54, where the crows are represented as keeping the fire to themselves). Among the Algonquins the crow was held to have given man Indian knowledge of the 'power of the thunder-bird' (Quinn, 'The Indian Crow in America' in Mass. Hist. Soc. iii. 219). A Spanish expedition in California in 1602 reported that the Indians of Santa Catalina Island venerated two great black crows; but it seems probable that they were in reality buzzards (Bancroft, iii. 134), which are known to have been respected and venerated in California (Golden Bougâ, ii. 367). As a parallel fact may be quoted the keeping of ravens at Nimequen at public expense (Hone, Everyday Book, i. 44). The Ainu also keep crows, and reverence them (Frazer, Tot. p. 14). For Indian crow myths, etc., see Crooke, i. 166, ii. 243-245.

The name of the crow is sometimes tabu (Holzmaier, Oxtl. p. 41; cf. Wiedemann, Eksten, p. 492, for another form of respect). It is not killed in Victoria (Morgan, Life of Benj. cf. Abor. p. 25), New England (Williams, in Mass. Hist. Soc. iii. 219), among the Gilyaks (v. Schrenck, Reisen, iii. 437), parts of Europe (Folklore, xi. 240; New Voy., London, 1819, lv. 60), and North America (Pennant, Arcus, p. 246), the explanation given being that it contains the souls of the dead (Morgan, Parker; cf. Crooke, ii. 243). Connected possibly with the idea of the crow as a soul-animal, it is the belief that it brings the children (Germania, viii. 349; Pless, Kind, p. 12; Zts. d. Altertum, N.S. x. 11; cf. Anian, Lexicon, s. v. kowi̱gumovs, etc.). The crow is one of the birds which figure in the annual processions so commonly found in Europe (Schütze, Holst. Mitb. i. 165; J. des V. f. Meckl. Ges. ii. 123). As a symbol of water, it is compared to the turtle (cf. Long, Life of Benj. cited in Crooke, ii. 243). Connected with this is the idea that the crow song of the ancient Greeks (Athеnæus, viii. pp. 359, 360) was used in connexion with a similar ceremony may be regarded as certain. In some cases the crow is killed (Niedersecken, 172). The ceremony is probably connected with the idea of the expulsion of evils. Offerings are made to crows at funerals in India (Home and For. Miss. Res. 1839, p. 303).

As a bird of omen, the crow, raven, or rook is inauspicious (Dorman, Prim. Surv. p. 224; Purchas, ii. 1758; Billing's, i. 321; Zts. des V. f. Volksk. iii. 134; Wolf, Beiträge, i. 232; Henderson, Folklore of N. C. p. 20, etc.; the Talmudic tractate Shabbath, 67b). Occasionally it is the reverse (Autob. of Ka-hu-ge-ga-bowh, p. 48), especially at a funeral (Crooke, i. 243). The crow is specially associated
ANIMALS

with sorcerers in Australia (JAI xx. 90), America (Schoolcraft, Ind. Tr. iv. 491; Adair, Hist. pp. 173, 194), and Europe (Clouston, Folklore of Raven, p. 20). The Twanas hold that when a person is very sick the spirit of some evil animal, sent by a wizard, has entered into him and is eating away his life (Koels, Ten Years, p. 43). Ancient diviners sought to imbue themselves with the spirit of prophecy by eating the hearts of crows (Golden Bough, ii. 355); and raven broth in Denmark is held to confer the powers of a wizard on the person who tastes it (Clouston, loc. cit.). The crow is largely used in magical recipes (Folklore, xi. 255). A stone found in its nest is believed to confer invisibility (ELJ vii. 56; Alpenburg, Alpenmythen, p. 385). Both in India and Greece the brains of crows were regarded as specific against old age (Crooke, ii. 245; Golden Bough, ii. 355). For folk-tales of the crow see de Gubernatis, Zool. Myth. ii. 250-258, and Pauly-Wissowa, s.v. ‘Aberglaube,’ p. 76.

Cuckoo.—In various parts of Europe are performed ceremonies named after the cuckoo. At Pollern, near Thieux, was held, on August 21st, a cuckoo court; husbands whose wives deceived them had to appear, and at the end of the proceedings were married abruptly, thrown into the water (Düringsfeld, Col. belge, i. 115). In other parts the ceremony was in the middle of April (Rolland, Fasne, i. 91). At Stembert a man called the cuckoo was placed on a waggon, the last man of the village by his side; they were dragged through the village and the cuckoo was thrown into the water (Haron, Contrib. ix. ii.). With these customs we may perhaps connect a Harz custom of putting a cuckoo into a lamb; it was probably as a fertility charm (Prohle,HBsilder, p. 87), and the cuckoo dance at North Friesland marriages (Ausland, ivi. 810). In S.E. Russia at Whitsuntide, a pole is put up with a cuckoo upon it; round this a dance is performed (ib. lix. 137). The scavenger caste also worship cuckoos (ib. p. 380). A cuckoo tabu is very common in European folklore (Folklore, xi. 240), and in Madagascar (v. Genep, Tabou, p. 264). Like many others it was brought into connexion with the wild cow by leaping or running (Traditions pop. iii. 345). It is said to lay Easter eggs (Schw. Arch. i. 115), and ‘coco-mallard’ is one of the names given to ‘Blind Man’s Buff’ (Trad. pop., loc. cit.). The cuckoo is a bird of bad omen (Bööler-Kreutzwald, Elähen, 140; Russwurm, Eibovolk, sec. 338; Malvinsie, i. 454). It is connected with rain (Panzer, Beitrag, ii. 172; de Gubernatis, Zool. Myth. ii. 255). It is commonly believed that it is not a migrant, but winter comes when it sing (cf. de Gubernatis, loc. cit.). For cuckoo myths, beliefs, etc., see ZM lii. 298-299, and de Gubernatis, Zool. Myth. ii. 226-235.

Deer.—Tame deer were kept in Guatamala, which were held sacred by the inhabitants on the ground that their greatest god had visited them in that form (Bancroft, iii. 182). The natives of Nicaragua had a god whose name was that of the deer, but the animal was not regarded as a god; they explained it by saying that this god had to be invoked by those who hunted the deer (ib.). Deer are taboo in Sarawark, and both there and in California they are held to be the abode of souls of deceased ancestors (JAI xxxi. 187, 193; Bancroft, iii. 131). In West Africa an antelope is sacrificed annually (Ellis, Tshi-speaking Peoples, p. 224).

Especially in America, deer, moose, and elk were treated with great respect by hunters; their bones might not be given to the dogs, nor might their fat be dropped upon the fire, because the souls of the dead animals would know that they were not being properly treated and tell the others. In Hindoos the Indians preserved the bones till their house was quite encumbered, for they believed that otherwise they would not be able to take other deer. If a man were ill among the Chiquitos, the medicine-man would explain it by saying that he had thrown deer flesh away, and the soul of the deer had entered him and was killing him. The Tzentales and Kekchis offered copal to a dead deer before they ventured to skin it. Cherokee hunters ask pardon of the deer they kill, otherwise Little Deer, the chief of the deer tribe, who can never die or be wounded, would track the hunter by the blood drops and put the spirit of rheumatism into him. The Apache medicine-men resorted to certain caves, where they propitiated the animal gods whose progeny they intended to destroy. When the Thompson River Indians of British Columbia killed a deer, they thought the survivors were pleased if it was butchered cleanly and nicely; if a hunter had to leave some of the village to hunt, especially the head, so that it might not be contaminated by dogs and women. Venison was never brought in by the common door, because women used it; the head was never given to the oldest or the youngest, for this would make the deer wild (Golden Bough, ii. 406). The Eskimos of Hudson Bay believe that a white bear rules over the reindeer. They pray to him to send the deer, and assure him that they have been careful not to injure, kill, or frighten the deer; sea and sea-animal may not come in contact with one another (2nd Ann. Rep. Bur. Ethn., p. 595).

The deer is eaten by more than one tribe in connexion with the feast of new corn. Among the Delawares, venison and corn were provided, and divided into twelve parts, according to the number of the old men who took part in the ceremony; after they were eaten, the new corn was free to all; in the evening, venison was again eaten and the somnambulist burn not remain till the sun rose, nor might a bonfire be built; the deer burnt-offering was made with much ceremony once a year (Beatty, Journal, p. 84; cf. Rupp, History of Berks, p. 23, quoting a letter of W. Penn). The Housatunmus also had a deer feast, but it is not otherwise there is any mention of it in the writings (Hist. Memoirs, p. 10). Probably the deer was regarded as a form of the corn-spirit; for in Florida it was the custom to take as large a deer hide as could be procured, leave the horns on it, and at the end of February fill it with all manner of herbs and saw it together. They then proceeded to an open space and hung the skin upon a tree, turning the head to the east. A prayer was then offered to the sun, asking that these same fruits might be given (cf. de Gubernatis, loc. cit.). A Papago rain dance performed beneath a deer’s head stuck on a pole in the month of July may be similarly interpreted (ib.). A small deer figure largely in Malay and Indian folk-tales (Stokes, Fables).

Dog.—It can hardly be doubted that the dog is the oldest, as it is also the most widely spread of the domestic animals. It has been maintained (Ausland, 1881, p. 485) that man’s association with the dog was due in the first place to its being used as food. Though there is no reason to suppose that the religious factor entered into the causes which brought about its domestication, the food
theory seems less probable than the view that the dog made himself the companion of man, rather than that he was brought into subjection by the acts of man (cf. Much, *Heimat der Indogermanen*, 182–185). The dog is used as an article of food by a large number of peoples of low grades of culture, and sometimes by higher grades, e.g., the Chinese. It was used by the Andrians to keep a man in Europe for the pursuit of game, and is employed in a similar way all the world over at the present day. In some cases the breed has come into no way specialized thereby; but among the Bataks (Int. Arch. Ethnog. 1894, pp. 231), Indo-China (Am. *Q. Rev.* 3rd ser. i. 140), Kirghiz (Perternann, 1864, p. 185), New Guinea (Chalmers, p. 151), among the Kalangans of Java (Haffen, i. 258), and even in Europe (Liebrecht, p. 19; see also in general MacCulloch, 283 f.). In the Pomotl islands the first race of men are held to have been made into dogs (*Miss. Cath.* 1874, 243).

Especially in N. America the dog (coyote) figures in Creation myths (Bancroft, *p. a.*), and occasionally in Deluge myths (see ‘Deluge’). The Pottawatomies believe that in the moon is an old woman making a basket; the earth will be destroyed when it is finished; but a great dog ruins her work at intervals and then results an eclipse (Am. *Prop. Foi*, xi. 490). Among the Mongols, Mbowobis (Int. *Arch.* 1894, 147), Chiquitos (Tylor, i. 328), Chinese (Am. *Prop. Foi*, xxii. 335), etc., a similar association of the dog with eclipses is found. In Khrushchaks the dogs are attributed to Toulan dog, Kozel (Kracheninikov, i. 94). Classical mythology tells us of Cerberus (g. v.), who guards the entrance of the Infernal Regions (see Bloomfield, *Cerberus, the Dog of Hades*). In N. Borneo a fiery dog is held to watch at the gate of Paradise, and to lay claim to all virgins (Forster, ii. 239); the Massachusetts also believe that a dog watches the gate (Wood, p. 104); so, too, the Eskimos (Z*, 1872, 238) and the Iroquois the bridge by which souls had to pass (*Bez. des J.* 1836, 104).

York was visited by him so taken out to bring in wandering souls (B. Veda x. 10–12; Atharva Veda, vii. 1, 9); and these dogs, described as four-eyed (i.e. with two spots above the eyes), recur in the Ayestan dogs that guard the Chin Na Bridge, which descends from this world to the future life (*Vendidad*, ii. 9; *Sah. Dig.* xxxi. 5; cf. Scherman, *Materialien zur Geschichte der indischen Visionarliteratur*, pp. 127–130, and the references there given).

The Aztecs sacrified a red dog to carry the soul of the king across a deep stream (Bancroft, ii. 608), or announce his arrival (ib. iii. 538; cf. Ober, p. 320); in Louisiana they killed their sick and sent dogs on to make the announcement (Stoddart, P. 491).

The Tlaxcalans hold that a wer-man appears as a dog (Dav. *A. vii.* 122). In Béarn a great white wer-dog was believed to sit at cross roads (Wahlen, i. 330).

The Baschilange (Mitt. *A. Ges.* iv. 255) and Tonkinese (*Z. allg. Erdk.* i. 108) believe that human souls take up their abode in dogs.

Actual dog-worship is uncommon. The No-siris and others used a dog (W. R. Smith, p. 291). According to Raffles (i. 365), the Kalangans worship a red dog, and each family keeps one in the house; another authority says they have images of wood in the shape of dogs, which are worshipped, and burnt 100 days after the death of the owner. In the Kamchats two or four dogs are said to be worshipped at the festival called Khicha Puja (Wright, 39 ff.; other Indian cases see Crooke, ii. 218 ff.). The Yorubas have a demi-god, Aroni, god of the forest, with a dog’s head (Miss. *Cath.* 1884, 221). Among the Magi, Bactrians, Hrcanesians, and others the Harranians dogs were sacred, and held to be the brothers of the mystae (W. R. Smith, p. 291).

In ancient Egypt, dogs were commonly respected and mumified, in particular at Cynopolis (Strabo, 812). In ancient Persia the dog was held in the highest esteem, and most rare dogs were exacted for killing it (*Vendidad*, xii. 19–81; *Denkort*, viii. 23). It was employed, moreover, in the sogagd, ‘dog’s gaze’ of the Parsi funeral ceremony, in which a ‘brown four-eyed’ dog or a ‘white fox’ was led to the corpse three times, and was also led three times back over the road traversed by the corpse (Geiger, *Ostiranische Kultur*, 264–265; *Karaka, History of the Parsis*, i. 197; Jackson, *Persia Past and Present*, 389 f., 391 f.). The Bahhars say the dog is under the protection of Bak Gahri, god of thunder (*Miss. Cath.* 1894, 133). Sometimes only the use of dog’s flesh is prohibited. The dog is found as a totem in Alaska (Lisiansky, 196) and in West Africa (Ellis, *Tahi-sp.* p. 268); a dog-kin is found in Madagascar (V. Gennep, p. 254). In German New Guinea an offering of food is made to the spirit of a dog (*Nachr. K. W. land*, 1897, 88). Among the Ot Danums the bodies of dogs are buried near the houses, rice and salt are given them in the grave, and rice is strewn on the grave to induce the gods to send the souls to the dogheaven (Schwaner, 78). The Woguls lay the bodies of specially useful dogs in a small hut (Idea, p. 7).

In Egypt a family shaved clean when the dog died (Herod. ii. 96); and so, too, the owner among the Iroquois (W. H. Leenhouts, 1857, 442), which shaved themselves when a dog dies (Hispal, *Papras*, p. 6). The Tunguses take an oath by the dog, drinking its blood (Ideas, 45). The exposure of the dead dogs may spring from a similar idea; it is found among the Magi, Bactrians, Hrcanesians, and others (Spiegel, iii. 703), in Tibet (*J Trioz*, S.B. lxi. 212), Java (*Verh. Bat. Gen.* xxxix. 40), and Kamchatka (Kracheninikov, p. 139). Omens are frequently drawn from dogs (Crooke, ii. 222 f.; *Austral*, 1891, 91; 1894, 74; *Z. Ver. Kolok.*, iii. 134, etc.). The Kalangs drew a bridge at the floor, and if a dog’s footmarks are seen, judge that the ancestors are favourable to a marriage (*Tijd. T.L. V*. xxiv. 424).

Connected with the sanctity of the dog is its use in art; in Borneo it is a frequent tattoo pattern (*JAI* xxxv. 116). As might be expected, the dog is frequently sacrificed. The best known case is that of the Iroquois, who kill a white dog in January as a scapegoat; it is then burnt, and the ashes sprinkled at the door of every house; but there is some doubt as to the antiquity of the practice (Golden Bough, ii. 72, 109). Other authorities vary the details (Ontario Arch. Rep. 1898, 91; Sanborn, *Legends*, p. 7; *Miss. Her. xxv. 91*, etc.). Other dog-sacrifices are found among the Sacs and Foxes (*Miss. Her.* xxxi. 86), the Ottowas (Porro, *Mars*, 19), the Mayans at New Year (Bancroft, *p.* 249).
ANIMALS

703), and in the cacao plantations in May (ib. 692), in Honduras before war (ib. i. 723), etc. (see Bankcroft, passim). The Fugians offer dogs (Voice from S. Appalach., xiii. 211). In Asia, dog-sacrifice is found in China (Ann. Prop. Foi, xxxvii. 217), Aracan (Mitt. Cath. 1881, 69), Java (Med. Ned. Zend. xvi. 307), etc. Not the least of the perks done of a bitch are drowned (Globus, lxxxvi. 180). In Africa a dog is sacrificed by the Baghirmis (Barth, iii. 571; see also Int. Arch. i. 144, xvii. 135, for further references). In Greece the dog was regarded as unclean, but was used for ceremonies of purification in Boeotia; he is probably as the animal of Hecate, to whom the Argives offered a dog. The Spartan ephedi offered a young hound to the war-god (Farnell, Cults, ii. 507 n.). The Romans connected dogs with the Lares (Forrer, Röm. Fest. 101). They were sacrificed on April 25 (ib. p. 90), and in the Lupercalia (ib. pp. 313–314).

The dog is frequently used in magic. In Dahomey a dead dog is hung up as a protection against sorcery (Robertson, Notes on A. 321; Ellipt., Eve, 93). In Greece its flesh was used as medicine (Paus. iii. 250); so, too, among the Chukcheis (Sauer, Reise, 236). Among the Kimbundas its flesh is reserved for warriors (Magyar, Reisen, 309). The dog, more than any other animal, is thought to symbolize evil, and is sacrificed in the more uncertain import. In China a big dog is dressed like a man and carried round in a palanquin in times of drought (Ann. Prop. Foi, xxii. 355). The orang-dongus whip a black dog round the kampung in the hope of new moon. The rice season (Journ. Ind. Arch. ii. 692). The resemblance of the custom to the dog-whipping of the Carnaval, handed down as a popular custom here and there in England (Nicholson, Folklore, p. 22), suggests the origin of the serpent in Chinese (cf. Waling Dijkstra, p. 318). For Jewish beliefs concerning the dog see Kohler, JE iv. 631 f.

Dragons.—Although the dragon is usually associated with the peoples of East Asia, it is by no means unknown in Europe. Not only is the story of St. George and the dragon told (Hartland, Legend of Perseus, pass.), but we find in the Mahabharata the same legend of the fighting dragons as occurs in the Malay Peninsula (cf. Sket, Malay Magic, p. 304). In European folklore the dragon is found as the evil spirit in processions (Grande Encyclopédie, s.v. 'Dragon'), and there are many local dragon legends. Part of Anglesey is said to have been ravaged by a dragon; at last a champion tackled it, but his victory brought him no reward, for he killed it on the Sunday. In the Alps a dragon inhabits a tarn; if a stone is thrown in, rain will follow, however good the weather may be; for if it hits the dragon, its movements throw up so much spray that a mist appears from which the rain condenses (Jecklin, Vollst. i. 44). On Norse horses the dragon sometimes figures as a weather-vane or gable decoration. Germanic mythology abounds in stories of dragons, which inhabit air, water, and earth, bringing evil, more often in the form of animals spitting forth fire and venom, and guarding treasures (Meyer, Germanische Mythologie, 95–100). There is, moreover, an entire cycle of tales, exemplified in the story of Perseus and Andromeda, in which human sacrifices must be made, the dragon, who is usually slayed by the hero (MacCulloch, 381–400).

The association of the dragon with water is by no means confined to the West; in China the waterspout is regarded as a dragon, which is never seen completely, for its head or its tail is always invisible. The dragon and the tiger are at enmity, and if a tiger's bones are thrown into a 'dragon's well,' rain will follow within three days, for the animals fight, and when the dragon moves, rain falls (Doolittle, Social Life, ii. 264, i. 275). The great dragon lives in the sky, and the emperor is the earthly dragon (Gould, Mythical Monsters, p. 215; see pp. 215–257, 377–404). In Japan the dragon is associated not only with water but also with a variety of other things. The dragon produces nine young at a birth, each with different qualities; hence dragons are carved on bells, musical instruments, drinking vessels, weapons, books, chairs, and tables, according to the particular tastes of the different kinds of dragon. As a kind of omen of dangerous places, consequently it is put upon the gables of houses (Natur, 1878, p. 549). India, too, has its dragons; one used to lie in wait for boats or ships, hiding itself on a neighbouring mountain; a criminal obtained his life on condition of riding the country of the rest; he had human figures made, and the bodies filled with hooks, etc.; the dragon devoured them, and perished (Lettres éditées, xviii. 409; cf. Crooke, ii. 129–131). In the same way in the last century a dragon on the borders of Wales was said to have been induced to meet his fate by putting red flannel round a post on which sharp spikes were fixed. Tiamat is the cosmogonic dragon of Babylon (see BAB.-ASSYR. RELIGION).

Eagle.—The eagle is frequently respected, but, except in Australia, the respect does not seem to have risen to an actual cult. In many parts of Australia the eagle-hawk is one of the names of the phratry into which many tribes are divided; in Japan eagles are considered to be a devil; eagles, or birds of prey, are held in high esteem in the game laws of most countries; the eagle is the symbol of the United States; the eagle is also considered to be a symbol of the army (cf. Massignon, Les mitoyen de la croix, 19); the chieftain of the Itincui of Dalmatia is the eagle; the first sacrificial victim of the priests of the old Roman religion was an eagle; the Emperor Augustus sent a live eagle to his friend, Tiberius, as a token of his success; and Augustus, in his will, gave an eagle to the people of Rome as a symbol of the empire (Ann., 17, 44). The Apache think there are spirits of Divine origin in the eagle and other birds (Bancroft, iii. 132). The Ostiaks regard a tree as holy on which an eagle has nested (Latham, Russian Empire, p. 110). In the island of Taui, off New Guinea, a certain kind of eagle is taboo, but there are no totemic ideas connected with it (Zeit. Ethn. ii. xiv. 386, and pass.); the Osages would turn back from an expedition if an eagle were killed (Nuttall, Travels, p. 87). The Samoyeds account it a crime to kill an eagle, and if one is caught in a snare and drowned, they bury it in his deed and on Sunday. The Bosmans regard it as unlucky to kill an eagle (Wiss. Mitt. iv. 442). Some of the aboriginal Peruvians asserted their descent from eagles (Frazer, Tot. p. 5). The Buriats hold that the good spirits sent an eagle as shaman, to counteract the evil deeds of the bad spirits; the first human shaman was the son of the eagle and a Buriat woman (JAI xxiv. 64). The Zuñis, Dakotas, and others keep eagles for the sake of their feathers. The eagle is the totem of the Mokis (after the eagle has flown over them and asked for one of their young), and its feathers are used for ritual purposes; the body is buried in a cemetery, and it is believed that the soul of the eagle goes to the other eagles and returns again as an eagle (Globus, lxxvi. 172). The Hopi hunter purifies himself before going after eagles and makes an offering; one bird has a prayer-stick tied to its foot and is set free (Am. Anth., new ser., iii. 701). The Blackfoot hunter practises many tabus when he is on the hunt for eagles (Grinnell, Blackfoot Lodge Notes, 177). The Pimas connected the eagle with the Deluge; a bird warned one of their chief prophets, but the warning was disregarded, and only one man was saved (Smiths. Rep. 1871, p. 408). In Jabim, New Guinea, a blighting
ANIMALS

Influence on bananas is attributed to the eagle, and no one plants them when an osprey is in sight (Zts. Geog. Ges. Thir. xii. 95). Among the Ojib was the sailing of an eagle to and fro a good omen (Autob. of Kahgegabough, p. 48; for the egg see also de Gubernatis, Zool. Myth. ii. 195-197). The eagle is likewise important in Indo-Iranian mythology. It is associated with voda (especially cur. iv. 27) the eagle brings the sacred sōma (which see) to mankind (cf. Macdonell, Vedic Mythology, 111 f. and the references there given); while in the Avesta an eagle dwells on the ‘tree hight All’-Hua (Dina-i Yasht, xii. 172). In the midst of Kaua, the god Vouru-kasha (the Caspian), aided by his fellow (Dīnā-i Mainā-y Khraṭ, lxxii. 37-41). From the Avesta the eagle passes into Persian literature as the simūrgh, whence is developed the roc of the Arabian Nights. The feathers of the simūrgh, which dwells on Mount Kaf or Mount Albarz, form talismans for the heroes Tahmurf and Zal (Casartelli, in Compte rendu du congrès scientifique international des Catholiques, 1891, sec. vi. 79-87).

In classical mythology the eagle occupied an important place; it was to feed on monstrous birds, and Roman legions took up their winter quarters where there was an eagle's nest. The eagle is associated with Zeus and the lightning; its right wing was buried in fields and vineyards as a protection against hail. The eagle stone (devera) and parts of the eagle deal (Aegypt. Or. ii. 63). Among the Imerinas with fish-god, a figure probably was Vouru-icasha the Night. (Dina-i Yasht, vii. 103). The elephant was regarded as a sacred animal and a symbol of strength and wisdom (Zts. Geog. Ges. Thir. vii. 252). The hair on the end of the tail is hung at the entrance to the cattle-fold; the end of the ear and the trunk are cut off and buried, the tusks are taken out, and no use is made of the remainder (Kay, Travels, p. 138). According to another authority, excesses are made and the elephant is appealed to during the chase not to crush his pursuers (Lichtenstein, Travels, i. 264), and the tusks are sent to the king (ib. p. 270). The Hottentot hunter must sacrifice a sheep or some other small animal, and none but he may partake of its flesh; any one, on the other hand, may eat of the slain elephant (Zts. Geog. Ges. Thir. vi. 42). The Wanyamwezi seek to propitiate the dead elephant by burying his legs, and the Amazoxas inter with the end of the trunk a few of the articles worn by women and the latter might not look on them (Miss. Cath. 1874, 336). In N. Queensland a connexion between elks and a flood seems to exist (Lumboltz, Among Cannibals, p. 265); although the passage may also be interpreted to mean that those who eat elks have the gift of prophecy. This is regarded as a soul-animal; the Betelaeos believe that the lower classes pass into elks; when the body is thrown into the sacred lake, the first elk that takes a bite becomes the domicile of the soul (ib.). The elk is also a soul-animal among the Dogges (Wilken, Hut Animismi, p. 72) as well as in Caram (ib.), and in Europe (Wolf, Deutsche, i. 232, No. 594). Sacred elks were also known to the Greeks (Pauly-Wissowa, s.v. "Aal"); and the elk is a totem of the Mundari Kola of Bengal and of the Oraons (Crooke, ii. 255). Neither the son nor the descendant of a man is allowed to hunt c. (Dussaud, Histoire et religion des Nosaéria, p. 93). Elephant.—In Siam it is believed that a white elephant may contain the soul of a dead person, perhaps a Buddha; when one is taken, the captor is regarded, and the animal brought to the king to be kept ever afterwards, for he is sold. It is baptized and feted, and when it dies it is mourned for like a human being (Young, Kingdom of the Yellow Rave, p. 390 ff.). In Cambodia a white elephant is held to bring luck to the kingdom, and its capture is attended with numerous ceremonies (Mours, Cambodge, i. 101). In some parts of Indo-

China the reason given for the respect paid to it is that it has suffered much injury after its death; the whole village therefore fêtes it (Mouthot, Travels, i. 252; see also Bock, Temples and Elephants, p. 19 ff.). The cult of the white elephant is found also at Enares, south of Abyssinia; but in view of the frequent respect shown to this animal it is impossible to say in any proof of Indo-Chinese influence. They are regarded as the protectors of mankind, and any one who killed a white or light-coloured elephant would pay the penalty with his life (Int. Arch. xvii. 252). Among the Eskimo it is believed to be the abode of the souls of their ancestors (ib.). The elephant is regarded as a tutelary spirit in Sumatra (Tijdtschr. T. L. V. xxvi. 456). The name is sometimes tabu (Golden Bougl., i. 407). The hunting of the elephant is attended with numerous ceremonial observances. The Wakamis of East Africa prepare for the chase by passing a night with their wives on a kind of anti-hill, of which they believe that the female elephant makes its appearance. On the next day a dance is held, and they make certain marks on their forearms. The hunter buries the trunk and cuts off the end of the tail; the latter he rolls up in palm leaves and puts in his bag; until he next goes to the chase this bag must remain in his wife's care; she also has a right to purchase something with the proceeds of the sale of the ivory; if the hunter quarrelled with her, his next hunt would be unlucky (Miss. Cath. 1874, 44). The Amazoxas offer a sacrifice after killing an elephant (Shaw, Story of my Mission, p. 452); the hair on the end of the tail is hung at the entrance to the cattle-fold; the end of the ear and the trunk are cut off and buried, the tusks are taken out, and no use is made of the remainder (Kay, Travels, p. 138). According to another authority, excesses are made and the elephant is appealed to during the chase not to crush his pursuers (Lichtenstein, Travels, i. 264), and the tusks are sent to the king (ib. p. 270). The Hottentot hunter must sacrifice a sheep or some other small animal, and none but he may partake of its flesh; any one, on the other hand, may eat of the slain elephant (Zts. Geog. Ges. Thir. vi. 42). The Wanyamwezi seek to propitiate the dead elephant by burying his legs, and the Amazoxas inter with the end of the trunk a few of the articles worn by women and the latter might not look on them (Miss. Cath. 1874, 336). In N. Queensland a connexion between elks and a flood seems to exist (Lumboltz, Among Cannibals, p. 265); although the passage may also be interpreted to mean that those who eat elks have the gift of prophecy. This is regarded as a soul-animal; the Betelaeos believe that the lower classes pass into elks; when the body is thrown into the sacred lake, the first elk that takes a bite becomes the domicile of the soul (ib.). The elk is also a soul-animal among the Dogges (Wilken, Hut Animismi, p. 72) as well as in Caram (ib.), and in Europe (Wolf, Deutsche, i. 232, No. 594). Sacred elks were also known to the Greeks (Pauly-Wissowa, s.v. "Aal"); and the elk is a totem of the Mundari Kola of Bengal and of the Oraons (Crooke, ii. 255). Neither the son nor the descendant of a man is allowed to hunt c. (Dussaud, Histoire et religion des Nosaéria, p. 93). Elephant.—In Siam it is believed that a white elephant may contain the soul of a dead person, perhaps a Buddha; when one is taken, the captor is regarded, and the animal brought to the king to be kept ever afterwards, for he is sold. It is baptized and feted, and when it dies it is mourned for like a human being (Young, Kingdom of the Yellow Rave, p. 390 ff.). In Cambodia a white elephant is held to bring luck to the kingdom, and its capture is attended with numerous ceremonies (Mours, Cambodge, i. 101). In some parts of Indo-
intended for, at any rate regarded as, Artemis

Eurynome was depicted with a fish's tail (de Visser, Götter, p. 187; cf. Farnell, Cults, ii. 522), and there were sacred fish in the temples of Apollo and Aphrodite at Myra and Hierapolis, which raises a presumption of a fish cult (de Visser, pp. 177-178; cf. p. 439). Artemis is said to have had sacred fish in a pool at Askelon, which were fed daily and never eaten; according to another account, they were the food of the priests. From Xenophon (Anab. i. iv. 9) we learn that the fish of Chalus were regarded as gods; and Hyginus tells us that the Syrians looked on fish as holy, and abstained from eating them (EBI, x. v. 'Fish'); for fish tabus see W. R. Smith, p. 292 f.). In modern days fish are sometimes sacred in India, where they also play a considerable part in folklore, often serving as life-indexes. They likewise form the favourite food of bhûts (ghosts). Varuna rides on a fish, and Vishnu had a fish-avatâra (Crooke, i. 243, ii. 156, 253 f.). The 'Small People' of Cornwall hate the small of fish (Hunt, Popular Romances of the West, p. 109).

According to the Talmud, fish eaten in the month of Nisan are conducive to leprosy (Pessaḥim, 112b).

Iranian mythology likewise has the kara fish which guards the white höm (Yavšt, xiv. 29, xvi. 198, xxvii, xviii) as well as the 'ox-fish,' which is found in all seas, and whose cry makes 'all fish become pregnant, and all noxious water-creatures cast their young' (Bändakhsân, xix. 7).

Fish are kept in parts of Wales to guard orchards. Most of them will neither eat nor touch fish, giving as their reason that fish are snakes (Fritsch, Drei Jahre, p. 338).

Other fish tabus are found in various parts of Africa (Internat. Archiv für Ethnographie, xxii. 329; Fritsch, Drei Jahre, p. 338). Some tabus are said to be eat fish (Badger, The Nestorians and their Ritual, p. 117). In North Arakan fish may not be eaten at harvest time (JAI ii. 240), and pregnant women are forbidden in Servia (Globus, xxxii. 349), thus reversing the teaching of the Talmud, which especially recommends them to women in this condition (Kethabîm, 61a).

The economic importance of fish makes it natural that they should be protected by tabus.

In Peru sardines are said to have been worshipped in some region, skate in another, dogfish, in another. And so on, according to the species that was most plentiful (Golden Bough, ii. 410). Many tribes do not burn the bones of fish because they did the fish could not reach the dead (ib. Th. Inst. Ethnogr., p. 267). The Hawaiians make a special respect to the first salmon which they take, and many other tabus are observed (ib. p. 411 f.; for treatment of the first fish see also Sélîbîot, Folklore des Pêcheurs, pp. 131, 294, 296). In the Egyptian, sacrifices are still made to the melanurus (Walpole, Memoirs, p. 256; cf. Pliny, XXII. ii.). In other cases magical ceremonies are resorted to in order to secure a good catch. In the Queen Charlotte Islands the fish are strung on a rope with the heads of the chum and king, and are used as fish bait. In one tribe the fisherman is anointed with fish oil and a cloud of smoke is sent over the fire. The fisherman may not be mentioned, no noise may be made in the village, and women and children must remain at a distance from the fishers (Zts. Geogr. Ges. Thür. xii. 35).

In New Caledonia for one kind of fish appeal is directed to ancestral spirits in the sacred wood; offerings are made there, and when the men go into the water, the women extinguish all fires but one; then they perform a dance, and follow. For the sarine a stone wrapped in dried twigs is taken to the cemetery and put at the foot of a post and two sorcerers perform ceremonies (Misz. Cath. 1888, 239). In some countries a fish is sacrificed for success in fishing (Sélîbîot, op. cit. p. 116; Krussolf, Peuple Ziriane, p. 101).

The Ottawas held that the souls of the dead passed into fish (Loti in Jts. 1967, p. 12; cf. soul-animals, p. 493). In Japan the earthquake is explained as the result of the movements of a great fish in the sea or under the land (Natur, 1878, p. 561). In the Middle Ages the same explanation was advanced in Europe (More, Anzeiger, viii. 614). Fish are found as totems in South Africa (Fritsch, Eingeborenen, p. 153), Alaska (Trimmer, Yukon Terr. p. 109), and among the American Indians (Frazer, Tot. p. 4, etc.). Myths of fish descent are also found (ib. p. 6). For fish navas see de Gubernatis, Zool. Myth. ii. 331-355; for the crab, ib. pp. 354-359.

Fowl.—In Greek mythology both Zeus and Apollo had names connecting them with birds, but it is doubtful whether either of them can properly be termed a fly-god; for the appeal to the god was that he would keep flies from interfering with a sacrifice (Farnell, Cults, i. 45). It is equally uncertain whether Beezleebub, whose name is 'Blind Man's fly,' is a god in the connexion with them. In Africa, however, there seems to be a real fly-god. Flies are kept in a temple (Beecham, Ashante, p. 177). The Kal-
moks regard the fly as a soul-animal and never kill it (JAI i. 401). In the North Ghun it is said to be unlucky to kill the last flies, and any one who keeps one alive through the winter will receive a sum of money (Bartsch, Sagen, ii. 185).

In Greece the 'branzen fly' was one of the names of the Blind Man's fly who is the lowest of the totems and it is known as the 'Blind Fly' in Italy (Folklore, xi. 261) and North India (Panyâb NQ, iv. 199).

In the latter country it is a lucky omen for a fly to fall into the ink-well (Crooke, ii. 257). According to the Avesta (Vendidad, vii. 2, viii. 71), the demon of death assumes the shape of a fly. For Jewish legends concerning flies, see Krauss, JE v. 421 f.

Fowl.—The cock is one of the most important sacrificial victims (for Africa see Int. Arch. xvii. 145-148; and in Egypt, the sacred gazelle and vulture are valuable animals in many cases. In many of the Bantu tribes the men abstain from eating domestic fowls (JAI xix. 279). The Araucanian do not eat the domestic fowl, because they regard it as a transformed man (Bol. Inst. Geog. Argent. xv. 740).

In the same way the inhabitants of north Brazil eat turkeys (Globus, xxxiii. 78). A refusal to eat eggs is more widely found, but does not necessarily point to a taboo of the fowl; abstinence from milk in the same way does not imply a taboo of cattle.

The cock figures in spring ceremonies in Europe; in Schiermonnikoog a green branch is fastened at the top of the May-pole, and on it is hung a basket containing a live cock (NQ, 8th ser. x. 194). In the same way at Defynog boys put the figure of a cock at the top and carry it on the last day of May in the same way at Defynog boys put the figure of a cock at the top and carry it on the last day of May in the same way at Defynog boys put the figure of a cock at the top and carry it on the last day of May in the same way at Defynog boys put the figure of a cock at the top and carry it on the last day of May in the same way at Defynog boys put the figure of a cock at the top and carry it on the last day of May (Montgom. Coll. xvii. 298). The cock is one of the forms in which the corn-spirit is supposed to appear (Golden Bough, ii. 296). The cock is sometimes used in the excommunication of evil (ib. ii. 108). Modern Jews sacrifice a white cock on the eve of the Day of Atonement (ib. p. 109; cf. p. 25). We may probably interpret in the same sense the numerous European customs in which a cock or hen is hunted or beaten (Folklore, xi. 250, 251; BET xxxvii. 341); connected with these customs is the name of the 'blind hen' used in parts of Europe for 'Blind Man's Buff.' These customs frequently re-appear in wedding ceremonies, perhaps with the same meaning. The eating of a cock (Tradition, iv. 364; Anthropologie,
iii. 552; Bavaria, i. 390; Russische Revue, xii. 289, etc.) may be a fertility charm; and in like manner a cock and hen were brought before a bridal couple on their wedding day among the Jews of the Talmudic period (Gittin, 51a; for other Jewish beliefs concerning fowls see JE iv. 193, vi. 544). Occasionally a dance is performed in which fowls are frequently kept (cf. Rahlfs, p. 173; Delbrueck, Amtsber., p. 8, etc.). In many of the games with fowls the successful player is termed the 'king.'

Sometimes witches are believed to take the form of cocks, and, according to the Talmud, the demons have the form of fowls (Shulhan Arukh, i. 385). In Holland a cock, put in a vessel over the fire is burnt to ashes to overcome the devil (Globus, xxvii. 195). The cock scares demons and ghosts (cf. Hamlet, i. 1. 149–155), and witches are obliged to return from their Sabbath when the cock crows (cf. art. SATANISM).

It is universally held to be a bad omen for a hen to crow like a cock; the remedy is to kill it; sometimes it is also thrown over the house top. The crowing of a red cock is held in Germany to betoken that a fire will break out in the building on which it is heard; it is considered in China (Mactignon, Superstition, p. 43). The cock is used in various magical ceremonies in China. When a boy is named at the beginning of his sixth year, two priests push a cock backwards and forward with a wad of cotton (Zool. Garten, 1900, 70). On the coffin of a Chinaman whose body is being brought home is a white cock in a basket. One of the three souls is buried with the corpse, but has to be caught; it can find no rest till the grave is covered with earth; the cock is to show the soul the way back to the body (pp. 71). For folk-tales and myths of fowls see de Gubernatis, Zool. Myth. ii. 278–291.

Frog.—Dionysus had the surname of Besarassae, not, probably, because his worship coalesced with that of an earlier fox-deity, but because as lord of the vine he protects the vineyards against the little foxes (CLR x. 21). A fox-god was also known in America (Müller, Ureligion, p. 320). Among the Chiriguana Indians it seems to be a soul-animal (Lettres suivies i. 235). In Europe it is one of the forms of corn in which the corn-spirit appears (Golden Bough, ii. 253); it was also burnt in some of the annual fires. A fox tabu is found at Inishkea (Proc. R. Irish Acad. iii. 431).

The Ceravusia at Rome foxes were set on fire and hunted about the circus, but it seems probable that they were originally driven over the fields (Fowler, Rom. Fest. ii. 771); Liebrecht draws attention to the similarity between this custom and the incident in the Samson story (Zur Volksk. i. 261 ff.; Frazer, Paus. iv. 178). In Finnic mythology the aurora is known as the light of the fox (Grimm, Reinhart Fuch’s, p. xxxi). In China and among the Eskimos the fox is a wer-animal who appears in the shape of a beautiful woman and is worshiped (cf. Thoms.; Bollaert, Eskimosiche Sagen, Nos. 16, 18). The same belief exists in Japan, where some families are noted for their ownership of foxes (see „Possession,' above), and others refuse to intermarry with them on the ground of their supposed magical influence (Chamberlain, Things Jap., s.v. „Fox.’ The fox is the hero of a number of Japanese tales (Globus, xxi. 332).

In Schleswig-Holstein a procession with a fox in a basket takes place in summer, and presents and are collected (Schütte, Idiotikon, iii. 185). To the fox is sometimes ascribed the production of Easter eggs (Globus, xxxiv. 59). The name of the fox is sometimes tabu (Golden Bough ii. 454). As an ominous animal the Lithuanians regard it as insidious (Tettau und Tenme, Volksk. 329); but in Masurien and Siebenbiergen the opposite view is taken (Töppen, p. 77; Haltrich, viii. 4). For folk-tales and myths of the fox see de Gubernatis, Zool. Myth. ii. 121–142.

Frog, toad.—In more than one European country the frog and the toad are hardly, if at all, distinguished; they may therefore be treated together. That this confusion is found in the New World seems clear from the association of the toad with rain, which is often associated with water in Europe. In Ceylon the frog was held to be the undermost of the supporters of the earth; on its back was a turtle, then a serpent, then a giant; and he upheals the world (Miss. Her. 234). In Mexico the Chichas gave the frog a place among their divinities, and had an annual ceremony in connexion with the calendar, in which the frog figured (Bollaert, Researches, p. 49; Dorman, Prim. Sup. p. 256). Among the Araucanians of Chile the „land toad” was called the lord of the waters (ib.). In the mythology of the Iroquois it is told how all the water was originally collected in the body of a huge frog, by piercing which Loskehae formed rivers and lakes (Rel. des Jér. 1656, p. 102). A similar story is told by the American Indians in California, who tell that the Australian blacks have Deluge legends in which the Flood is caused by the bursting of a water-swallowing frog (Brough Smyth, i. 429, 477). Among the Wends the frog is believed to bring newborn children; with this the Sea Dayak belief that the goddess Salampandi takes the form of a frog; if a frog comes into a house, sacrifice is offered to it and it is released; Salampandi is held to make the children, and a frog is seen near a house when a child is born (BCAS, S.B. vii. 140; Schubnburg, Wend. Volkstum, i. 94).

In Boehmis, children are believed to hop about the meadows in the form of frogs (Pless, Kind, i. 12); with this may be connected the Brandenburg belief that a woman who digs up a toad will soon bear a child (Zts. Ver. Volksk. i. 189). A Shan tribe, the Wa, believes itself to be descended from tadpoles (Asiatique Rev., 3rd ser. i. 140). The Bahnars of Indo-China respect the frog, holding that one of their ancestors took that form (Miss. Cath. 1893, 140, 143), and in this shape he is believed to guard their fields. The Karens of Burma explain eclipses by saying that a frog is devouring the moon (ib. 877, 455).

We have seen that the frog is associated with water. Like the Araucanians, the Orinoco Indians held the frog to be the lord of the waters, and feared to kill it even when ordered to do so; they kept it under a pot and beat it in time of drought (Golden Bough ii. 103; Bianco, Conversion del Pirina, p. 63). The Newars of Nepal worship the frog, which is associated with the demi-god Nagas at the control of rain. A sacrifice of rice, ghi, and other objects is made to it in October (Golden Bough ii. 104; cf. Latham, i. 83, who says August). A woman is also said to have a frog in India, or a frog is hung with open mouth on a bamboo, to bring rain (Cooke, i. 73, ii. 256).

In Queensland, British Columbia, and Europe, frogs are also associated with the procuring of rain (GB, loc. cit.), and among the BHils (Bombay Gaz. ix. 1. 855, etc.) in the Malay Peninsula the swinging of a frog is said to have caused heavy rain and the destruction of a kampong (J.R.S., S.B. iii. 88). The toad is sometimes regarded as a tutelary deity in Europe (de Gubernatis, Zool. Myth. ii. 380), and in Bengal the Colubroidea are said to have no gods, but say, „The toad hears me” (Maclean, Twenty-five Years, p. 265). The Caribbs are recorded to have had idols in the form of toads (Sprague, Auswald, i. 43). In some parts of Germany the toad is regarded as a household genius (Zts. Ver. Volksk. i. 189; MS notes). With
ANIMALS

517

this compare the belief of the Roumanians that killing a frog or toad is an omen that the killer will murder his mother (Zts. Oest. Volksk. iii. 573). In accordance with this belief, the frog and toad are spared (Folklore, xi. 240, 241; Brandenburgia, viii. 410; Wiedemann, Elaten, 454; Ruszwurm, § 558, etc.). If his other hand, they are regarded as witches (FLJ v. 198; Haltrich, Zur Volksk. vii. 4; Müllenhof, Sagen, i. 212; Holzmaier, Oslolana, p. 37). Accordingly they are often killed (Zts. Ver. Volksk. i. 132; Rolland, Faune pop. iii. 491; cf. Der Wald, the belief of the Chocawas, who assigned to the king of the frogs and other aquatic animals the function of initiating the rain-makers (Miss. Reg. 1820, 408). We may put down to the same idea the belief of the Guaranis that if a frog enters a boat on the Amazon it will sink (As You Like It, ii. 131 f.); a similar belief is found in Germany (Germanica, vii. 435). For myths and folk-tales of the frog and toad, see de Gubernatis, Zool. Myth. ii. 371-379, 379-384.

Goat.—In Greek mythology the goat was associated at Argos with the cult of Hera; youths threw spears at a she-goat, and he who struck her got her as a prize (Farrn., Cults, i. 189), exactly as in modern Europe many animals are shot at, struck at, or otherwise chased by the sport (Folklore, viii. 25). The custom was explained by a myth that Hera had once fled to the woods and the animal revealed her hiding-place. The goat was usually a prohibited animal in the cult of Athena, but was once sacrificed to the deity. The head of the goat is mentioned by Shakespeare (As You Like It, ii. 131 f.) as a sacred animal. In Germany (Germanica, vii. 435) a similar belief is found in connection with the names of holy places (Faune pop. iii. 491); it is said to be the name of the goat in which the corn-spirit is supposed to appear (Golden Bough, ii. 211, 291). In the 17th cent. the Circassian Tatars offered a goat on St. Elias day, a date on which the breast is also offered in some parts. After proving the victim to be worthy, they drew its skin over its ears and hung it up for a time; the flesh was then cooked, and consumed by men and women together, and the skin laid to the skin, and the women left them to their brandy and devotions (Strauss, Reise, p. 116). In Africa the Bijagos are said to have the goat as their principal divinity; on the Massa River the goat is kept as a tetrarch by the divinity. It is still a taboo in Scotland and Bury (Golden Bough, ii. 407; Bastian, FBI). Sometimes, it is said, the goat is offered to the ‘god of the law’ which Soayx saw near Old Calabar (Afr. of West-Africa, i. 106).

The name of the goat is tabu in the Sunda Islands (Golden Bough, ii. 462). The animal itself is similarly hedged round in South Africa (Addison, Travels, 84), Madagascar (v. Gennep, Tabou, p. 238), and in West Africa (Int. Arch., loc. cit.). The goat is taboo to some of the Bechuana (Mackenzie, Daydream, 65 n.). ‘Bushmen’ in the text Bechuana divide the animals into two classes, that to look upon it would render them impure, as well as cause them undefined uneasiness; it does not, however, appear to be a totem. If a goat climbs on the roof of a house, it is feared at once, on account of the belief connected with the position of the ‘god of the law’ which Soayx saw near Old Calabar (Afr. of West-Africa, i. 106). The antipathy, therefore, depends on its association with wizards. The goat is an important sacrificial animal, especially in Africa (Int. Arch. xvii. 136). In Athens it was excluded from the Acropolis, but once a year it was driven in for a sacrifice (Golden Bough, ii. 314). Frazer conjectures that the goat was originally a representative of Athene.

From the Jewish custom of sending a goat into the wilderness laden with the sins of the people and art. (Ex. x. 10, 20) has been derived the name for the whole class of animated beings so employed in the expulsion of evils (Golden Bough, iii. 110 ff.). The goat itself is the animal employed by the Loos (Vial, Las Loos, p. 12) in West Africa (Burk, Niger, p. 182) and in Uganda (Ashe, Two Kings, 320). In Tibet a human scapegoat is dressed in a goat’s skin; he is kicked and cursed, and sent away after the people have confessed their sins (South Am. Miss. Mag. xiv. 112).

The Karens of Burma attribute eclipses to the fact that wild goats are eating the luminaries; they make a noise to drive them away (Miss. Cath. 1877, 455).

In Europe the goat appears in processions and...
other functions at Christmas, the Carnival, etc. (Mannhardt, *Antike Wald- u. Feldkulte*, 184 ff., 197). In Bohemia it is thrown from the church in September (Mannhardt, *Myth. Forsch.* 183 n.), but this apparent association with the harvest may be late; for in Wendish parts the date was July 25th (Kosche, *Charakter*, iv. 461). In Transylvania a sacrificed sow performed its mangled, prolactival, or fertility charm (Mannhardt, *Myth. Forsch.* 198).

For the same reason, perhaps, the goat is given to the parents of the bride in Bulgaria, where, as in the Upper Palatinate, it forms the recognized dish (Arch. vi. 129, Schönherr, 198). Among the Matabele of South Africa the husband gives the bridesmaids a goat to eat (*JAI* xxiii. 84). In the Voësies the younger sister who marries first must give her elder sister a white goat (*Melusine*, i. 454).

The goat is one of the names by which the 'blind man' in Blind Man's Buff is known (*Folklore*, i. 281). For myths and folk-tales of the goat see de Gubernatis, *Zool. Myth.* i. 401-428.

Goose.—The goose was one of the animals which were thrown into the well of the milk-hare (Klotz, *Kulturgeschichte*, iv. 324). The Norsemen also refused to eat it (*Life of Bede*, ch. xxxvii.). At Great Crosby it is still regarded as tabu (*Arch. Rev.* iii. 233). But, on the other hand, it is not infrequently eaten with more or less ceremony. The Michaelmas goose is certainly a custom in ancient agriculture, and is hunted and killed in various parts of Europe (*Folklore*, xi. 253; for ceremonial eating see p. 259). In China two red geese are given to the newly married; the explanation offered is that they are faithful to each other, as human beings should be (*Zool. Garten*, 1900, p. 76). The goose is also a gift to the newly married at Moscow (*Anthrop.* iv. 324); it has (see below) in some cases taken the place of the swan (see below). The Mandans and Minnetarees made their goose medicine; the dance was to remind the wild geese, which then prepared to migrate, that they had plenty of good food all the summer, and to entreat them to return to eat in the spring (*Bolier, Indians*, p. 143). There were sacred geese in the Capitou Melid in Greek temples (de Visser, *Gotter*, p. 175). In medieval times (see above), was associated with witches who frequently used these birds as vehicles to carry them to the Sabbat. For myths and folk-tales of the goose, swan, and duck, see de Gubernatis, *Zool. Myth.* iii. 207-211.

Hare.—Although the hare is one of the most important animals in the belief and practice of the uncivilized, it cannot be said that it is anywhere regarded as divine, unless it is among the Kal-maks, who call it Salykumuni (the Buddha), and say that on earth the hare allowed himself to be eaten by a starving man, and was in reward raised to the moon, where they profess to see him (Crooke, ii. 50). The connexion of the hare with the moon is also in the Capitou Melid in Greek temples (de Visser, *Gotter*, p. 175). In medieval times (see above), was associated with witches who frequently used these birds as vehicles to carry them to the Sabbat. For myths and folk-tales of the hare, see de Gubernatis, *Zool. Myth.* iii. 207-211.

*Other animals.* In a New England Flood legend the survivors took a hare with them to the mountain on which they found refuge, and learnt of the assaying of the waters by its non-return (*Josselyn, Account*, p. 134).

The name of the hare is frequently tabu (*Russwurm, Bibelvolk, § 358*; Holzmaier, *Ostslowa*, p. 105; *FLJ* v. 190; *Brit. Ass. Ethnog. Survey Rep.* [Toronto Meeting], 355; Grimm, *Deuts. Myth.* xxiv. 421; *Folklore*, xi. 240) or eat its flesh (*Lyde, Asian Mystery*., p. 191; Dussaud, *Hist. des Nostrais*, p. 93; *Globus*, xxxiii. 349; *Austral*, lviii, 58, etc.). There is a wide-spread belief that hare-lip is caused if a pregnant woman puts her foot in a hare's form.

Like many other animals, the hare is hunted annually at many places (*Folklore*, iii. 442, xi. 250; *Mem. Soc. Ant. France*, iv. 109; *Melusine*, i. 143; *Ons Volksleven*, viii. 25, and sometimes eaten ritually (*Folklore*, xi. 259). Sometimes the hare is offered to the parish priest (*Ann. Soc. Em. Flandre*, 5th ser. i. 436; *Folklore*, iii. 441 f.). The hare is more especially associated with Easter (*Folklore*, iii. 442), and is said on the Continent to be the Easter egg (Klotz, *Bello Cultiv.*). Although Easter eggs are not, however, of Scandinavian origin, they are a part of the customs of the peoples of Germany, and are mentioned in the *Arch. Volksh.* (i. 118). It is one of the animals in whose form cakes are made at Christmas (Bartsch, *Sagen*, ii. 227; Kolbe, *Hessische Volkskarten*, p. 7; Curtze, *Volkskultur*, p. 441). Among the Slavs hare-catching is a similar game to Blind Man's Buff (*Folklore*, iii. 442). It is said that children come from the hare's nest (Mannhardt, *Germ. Mythen*, p. 410). The hare is said to change its sex every year (Liebrecht, *Zur Volkskunde*, p. 362).

The hare is almost universally regarded as an unlucky animal; when a Kalmuk sees one, he utters a cry and strikes a blow in the air (*JAI* i. 401). The Hottentots kill it, though they do not eat it (*Zts. Geog. Geol. Thür.*, iv. 42). Its appearance in a village is thought to betoken fire, both in England and Germany (MS notes; Grommann, *Abegg*, 376; *Am Urquell*, iii. 107; *Zts. Ver. f. Volksh.*, x. 209). In Oesel it is sometimes of good omen (Holzmaier, p. 43). Probably the association of hares with witches is in part responsible for the hare's evil augury. In Gotland the so-called 'hale hare' is a bundle of rag and chips of wood; it is believed to cause cows to give bloody milk (*Globus*, xxxii. 47). On the other hand, hares' heads are found on the gables in the Tyrol, probably as a protection against witchcraft (*Hyle*, p. 156); a hare's foot is used against witchcraft (*Hone, Tablebook*, iii. 674). Among the American negroes, in like manner, a most lucky charm is the left hind foot of a rabbit caught jumping over a grave in the dark of the moon by a red-haired, cross-eyed negro. It is also to be noted that the rabbit is one of the chief figures in the folk-tales of the negroes of the southern United States, where he outwits 'Brer Wolf' and all other animals (*Harris, Uncle Remus, His Songs and His Sayings; Nights with Uncle Remus*, etc.). The hare is also believed to be assumed by the corn-spirit (*Golden Bough*, ii. 369). For myths and folk-tales of the hare see de Gubernatis, *Zool. Myth.* ii. 78-82.

*Hawk.—According to the Gallinomeros of California, the hawk flew in the coyote's face in the primeval darkness; apologies ensued, and the pair together made the sun, put it in its place, and set it on fire (*Bancroft*, iii. 85). According to the Yocuts, the hawk, crow, and duck were alone in the world, whirrington, *Mythos*, p. 193). In one aspect he is a culture hero, who teaches to the Indians the medicine dance and the arts of life; in another aspect he is a buffoon, who tries his magic art on various animals and falls ludicrously. In a New England Flood legend the survivors took a hare with them to the mountain.
aspect, by prefixing 'Balli' to its name; they always observe its movements with keen interest, and formally consult it before leaving home for distant parts. The rites are very elaborate, and, if successful, secure that the hawks which gave the omens serve as tutelary deities during absence. After a war expedition, pieces of the flesh of slain enemies are set out as a thank-offering to Balli Flaki for his guidance and protection. The hawk's aid is sought before agricultural operations are entered upon, and a wooden image of a hawk with its wings extended is put up before a new house. During the formal consultation of the hawk, women may not be present; but they keep in their sleeping-places wooden images with a few hawk's feathers in them, which serve magical purposes during illness. In this tribe the hawk seems to be regarded as a messenger of the Supreme God, Balli Penyalong; but the thanks seem to be offered to the birds exclusively. The Kaysans have gone some distance in anthropomorphizing the hawk, though they still retain the idea that it is the servant of the Supreme God; they appeal to it for help, but if they get no reply, they transfer their prayer to Laki Tenangan. The hawk-god, Laki Nho, is described as living in a hawk's nest, and the individual hawk is still of importance. Among the Sea Dayaks the hawk-god, Singalang Burong, has become completely anthropomorphized. He is the god of war, but they say that he never leaves his hawk-sacramentally, though most of his omens, they do not regard the hawk as his messenger. He is the god of omens, clearly developed from a divine hawk species, and, as such, is the ruler of the omen birds; a trace of his hawk-body is also found in India (Crooke, ii. 204), and the cult is not unknown at the present day (ib. p. 208). Koda Pen, the horse-god of the Gonds, is a shapeless stone, like the tiger-god of the Warakis (Halop, Papers, p. 54 n.). For the horse-god, whose name is derived from the word epos, 'horse'; there are also traces of a horse-god, Radiobus (Rev. Celt. xxi. 294). Of less specialized forms of horse-worship traces are to be found in Persia, where white horses were regarded as holy (Herod, i. 50), and Teutonic regions, where their use was restricted to kings, and they were kept in holy enclosures (Tacitus, Germ. 9, 10; Grimm, Dent. Myth., i. 653; Weinhold, Alts. Leben, p. 47). For the horse-god, a derivation from the word Prun, 'horse,' is suggested by the name of the river-god, Penyalong (Teutonia, ii.; de Geburtaniis, Zool. Myth. i. 290-296, 330-355). For superstitious see Pauli-Wissowa, s.v. 'Abergläube,' p. 70.

The horse or mare is one of the forms of the corn-spirit in Europe (Golden Bought, ii. 281), and the sacrifice of the October horse at Rome is usually connected with this idea (but cf. Fowler, Rom. Fest. pp. 248-249; see also Gruppe, Griechische Culte, p. 839 n.). A horse race was held, and the right-hand horse of the victorious Mars. Its head was cut off and adorned with a string of loaves, for which the inhabitants of two districts contended; its blood was caught and used to fumigate the flocks in the spring (Fowler, Rom. Fest. p. 241 f.; Goldschmidt, De Mars, p. 182). The head was fixed to the palace or the Mamilius tower. The custom of fixing horses' heads to buildings is still common, though it does not follow that we can explain the old custom on the same line; the modern explanation is usually that the skulls are intended to keep away evil influences (Trede, Heidenthum, iii. 210). A similar custom exists in Germany and other parts of Europe of carving animals' common horses, heads at the end of the gables (Petersen, Die Pferdewagen, Folklore, xi. 392, 437). The horse is regularly sacrificed in the Old World (Teutonia, ii. 90-148), especially in burial rites (ib. pp. 148-162). It is also offered in South America (S. Amer. Miss. Mag. xxviii. 38).

Processions in which a horse figures take place, commonly at Christmas, in Germany, France, and England (Teutonia, loc. cit.; Nore, Coutumes, pp. 70, 72, 70, 203, 205; RHR xxxviii. 3. 34). The interpretation of these customs is uncertain; the horse was often called a Men's spirit in ancient Persia; the term was brought into connexion with the Wodan in popular belief; a connexion with the corn-spirit has also been suggested; possibly they may be associated with a mid-winter festival of the expulsion of evils, of which other traces can be found (Pfanzer, Beitrag, i. 115 f.).
ANIMALS

At Whitsuntide it was the custom to hold a horse race (Mannhardt, Antike Wald- und Feldkulte, pass.), to which we find a Roman parallel in the October race; they may probably be brought into connexion with the cult of vegetation.

The horse is important as an ominous animal (Teutonia, ii. 15), and in modern folklore often serves as a particular from which horses suffer (Pless, Kind, i. 74). Some part of the magical importance of the horse-shoe is perhaps derived from the horse itself. In Wales and Ireland are found stories of the Midas ty fashionable in England (ib. 234).

Hyena.—One of the chief centres of the hyena-cult is the Wanika tribe of East Africa. One of the highest ranks of their secret society is that of the Fisi or hyenas, so called from the power of administering to suspects personating a cobra the deadly bite, before the practice of burial was introduced, devoured the bodies of the dead. It is held that a false oath by the hyena will cause the death of the perjurer. The Fisi also protect the fields from thieves by scaring them to the hyenas, which they do by making certain marks near the boundaries (Report on E. African Protectorate, 1897, p. 10 ff.). The Wanikas look upon the hyena as one of their ancestors, or as in some way connected with their origin and destiny. The death of one is an occasion of universal mourning, and a wake is held over it by the whole people, not by one clan only. It is a great crime to kill one, and even imitation of its voice entails payment of a fine (New, Life Wanderings, p. 188). Hyenas are tabu in Abyssinia and others having transformed themselves in the sight of other people (Tylor, Prim. Culture, i. 310); gold rings are said to be found in the ears of dead hyenas similar to those worn by the budas, who are workers in death and iron. Among the Mvula people in the Bambiana, and the Ewe to the west, a hyena's skin, or what is regarded as at the death of his wife (Mitt. d. Schutzg. v. 156). Among the Fjords the king has a right to the body of the leopard; people loot each other's towns when one is killed; and the killer has the right to appropriate any article outside a house or near a leopard. In the son of any dead leopard to the king (Dennett, Seven Years, p. 180). In Loango a common negro who kills a leopard, which is regarded as a prince, is, and must excuse himself by saying the leopard was a stranger; a prince's cap is put on the leopard's head, and dances are held in its honour. In olden times the capture of a leopard was often the occasion on which the king could leave his chibita (Bastian, Loango-Kuste, p. 243 ff; Int. Arch. xvii. 98). When a leopard is killed in Okowa, it is always respected and brought to the hunter's village. Representatives of neighbouring villages attend, and the gall-bladder is burnt coram populo; each person whips his hands down his arms to disavow guilt (Kingsley, Travels, p. 94). In Jabel Nuba, a hunter, on killing his first leopard, may not dress himself for several weeks; the skin belongs to the chief; the hunter's tabu is broken when the last novice to kill a lion has given him a slice of meat and received from him his shoes and the animal's skin or girdle, or if he loses his head during his training is over, has to put on the skin of a hyena, as a sign that the Amudhollozi have endowed him with the necessary powers (ib.). In ancient Arabia it was believed that, if a hyena trod on a man's shadow, it deprived him of the power of speech and motion; and that, if a dog, standing on a roof in the moonlight, cast a shadow on the ground and a hyena trod on it, the dog would be dragged from the roof as if a rope had been made fast to it (Golden Bough, ii. 287). In Talmudic belief (Babba Kamma, 16a), the male hyena goes through the stages of a bat, 'arapd, nettle, thistle, and demon, each lasting several years.

Leopard.—The cult of the leopard is widely distributed in West Africa. In Dahomey it is especially sacred to the royal family; it is also an Ewe totem. A man who kills a leopard is liable to be put to death; but usually he pays a fine and performs a propitiatory deed in North India it is a lucky omen for a horse and his rider to enter a field of sugar-cane while it is being sown (Crooke, ii. 207). The horse, like the bull, is a fertility animal (ib.). If a boy is put on a horse immediately after his birth, Mecklenburgers think that he has the power of curing various maladies from which horses suffer (Pless, Kind, i. 74).

The Bakwiris regard the leopard as possessed by evil spirits (Beitr. zur Kolonialpol. iii. 194). On the Gold Coast it is regarded as the abode of the spirits of the dead (Müller, Pets, p. 9; Dusia, SPIRITS [Mitt. Geogr. Ges. Thür., 18], which may endanger the life of the hunter or make him fire at a man in mistake for an animal. The hunter, when successful, announces his triumph to those who have killed a leopard previously; then a battle of grasshoppers on his mouth, and that he may not speak; his comrades tell the leopard why it was killed—because it had killed sheep; a drum gives the signal for an assembly; and the leopard is fastened to a post, its face to the sky, and carried round the town, its slayer behind it on the shoulders of another man; on their return the leopard is fastened to a tree, and the hunter is smeared with coloured earth, so as to look like a leopard. Thereupon they imitate a leopard's movements and voice; for nine days after the death of the leopard they have the right to kill all the hens they can catch. In the afternoon the body is cut up, and portions are sent to the chief of the village and others; the hunter retains the teeth, head, and claws (ib.). In Agome the hunter observes the same rites in anticipation as at the death of his wife (Mitt. d. Schutzg. v. 156). Among the Fjords the king has a right to the body of the leopard; people loot each other's towns when one is killed; and the killer has the right to appropriate any article outside a house or near a leopard to the king (Dennett, Seven Years, p. 180). In Loango a common negro who kills a leopard, which is regarded as a prince, is, and must excuse himself by saying the leopard was a stranger; a prince's cap is put on the leopard's head, and dances are held in its honour. In olden times the capture of a leopard was often the occasion on which the king could leave his chibita (Bastian, Loango-Kuste, p. 243 ff; Int. Arch. xvii. 98). When a leopard is killed in Okowa, it is always respected and brought to the hunter's village. Representatives of neighbouring villages attend, and the gall-bladder is burnt coram populo; each person whips his hands down his arms to disavow guilt (Kingsley, Travels, p. 94). In Jabel Nuba, a hunter, on killing his first leopard, may not dress himself for several weeks; the skin belongs to the chief; the hunter's tabu is broken when the last novice to kill a lion has given him a slice of meat and received from him his shoes and the animal's skin or girdle, or if he loses his head during his training is over, has to put on the skin of a hyena, as a sign that the Amudhollozi have endowed him with the necessary powers (ib.). In ancient Arabia it was believed that, if a hyena trod on a man's shadow, it deprived him of the power of speech and motion; and that, if a dog, standing on
Among the Yaos, leopards are among the animals whose figures are drawn on the ground at the initiation of girls (Macdonald, *Africana*, i. 131). The leopard is one of the forms assumed by wizards in West Africa (Wilson, *West Africa*, p. 398), among the Madis and Latuwas (Stuhlmann, *Mit Einen Taube*, p. 901), and the Drazu (Petit, *Arch. xvii.*). The Nubas believe that the spirit of a panther passes into the kudjur (‘priest’) when he gives an oracle; he sits upon a stool covered with panther skin and imitates the panther’s cry (von Hellwald, *Naturgeschicht. ii.*). In Calabar, on the other hand, the leopard is one of the animals whose images are placed in the streets at the Ndog, or purification festival, for evil spirits to pass into (Bastian, *Fetich*, p. 21 ff.). In South Africa the heart of the leopard was sometimes eaten to gain courage, and portions of the animal were scattered over the warriors by magicians (JAI xix. 282). Among the Fins a leopard-skin girdle was held to render them invisible (Du Chaillu, *Voy. et Av. p. 502*). Zulu warriors ate leopard flesh to make them brave, and a Zulu would sometimes give his children a leopard’s blood to drink, or its heart to eat, in order that they might become strong and courageous (Golden Bough, ii. 354). The gall of a leopard was worn as a charm, and in West Africa its whiskers are believed to have magical properties (Kingsley, *op. cit.* p. 543).

Lion. — In Egyptian mythology the tunnel through which the sun passed was supposed to have a dead lion or eagle placed at the doors of palaces and tombs to ward off evil spirits. There was a lion-god at Baalbek, and songs were sung when it devoured a calf. It was associated with Ra and Horus, and possibly with the dead lion that was intended as an abode for Ra (Budge, *Gods*, i. 390; Damascius, *Vit. Isid.* p. 203). There was a lion-headed goddess Sekhmet, and the Arabs had a lion-god Yaghuth (EBI iii. 2804). In modern Africa we find a lion-idol among the Balondas. It is made of grass covered with clay, and resembles a crocodile more than anything else; it is placed in the forest, and, in cases of sickness, prayers are offered and drums beaten before it (Livingstone, *South Africa*, pp. 292, 304). With its traditional position as king of the beasts, the lion occupies, however, an undistinguished place among the animals in savage belief and custom. It is regarded as the abode of the souls of the dead on the Congo and the Zam- bezi, and is associated with the lion-god between the Tsang and Mashonas (Bastian, *Loango-Kuste*, i. 224; Livingstone, *Zambesi*, p. 159; Baumann, *Massai-land*, p. 187; Brown, *On the S. A. Frontier*, p. 217; cf. Speke, *Journ. pp. 221, 222*). As a rule, it is the chief who is thus transformed; but among the Angonis there is a universal desire to be transformed into a lion after death (ZE xxxii. 199). The name-tabu is not by any means uncommon; the Arabs call the lion *Abu-I-Abbas*; the negroes of Angola call it *Nyaka*; both Benga and Mbuti avoid using its proper name (Golden Bough, ii. 456); the Hottentots avoid using its name on a hunting expedition, and call it *gei gab* (‘great brother’). In South Africa the same ceremonies are gone through by the slayer of a lion as of a leopard or a monkey (see below). Another account says that the hunter is secluded for four days, purified, brought back, and feasted (Lichtenstein, *Travels*, i. 231). In East Africa the dead lion is brought before the king, who does homage to it, prostrating himself on the ground and rubbing his face on its muzzle (Becker, *Vie en Afrique*, ii. 298, 305). Among the Fulahs the killer of a lioness is made prisoner, and women come out to meet the party; the lioness is carried on a bier covered with white cloth. The hunter must be released by the chiefs of the village when he pleads, in reply to the charge that he has killed a sovereign, that it was an enemy (Gray and Dockard, *Travels*, p. 143). The lion is one of the animals whose shape is said to be assumed by wizards; this belief is found on the Zambesi (Livingstone, *Zambesi*, p. 169), where a certain drink is said to have the power of transforming them; among the Tumbukas, men and women wander about smeared with white clay, and are held to have the power of assuming the shape of lions (Elmslie, *Among the Wild Ngoni*, p. 74); the Bushmen say that the lion can change itself into a man (Lloyd, *Short Account*, p. 20). In Greek cult a lioness was led in a procession at Syracuse in honour of Artemis (Farnell, *Cults*, ii. 432). The lion is used in magic to give courage (Golden Bough, ii. 354, 356; JAI xix. 282). It figures in Masai fables, where it is outwitted by the mongoose (Hollis, *Masai*, p. 198), and among the Bushmen (Lloyd, loc. cit.). In Hottentot stories it is outwitted by the jackal (Blek, *Reynard*, p. 5); in another story the lion thinks itself wiser than its mother, and is killed by a man (ib. p. 67). In like manner, in an Indian tale, first found in the Syrian Bible (Benley, *Panchatantra*, i. 179 ff.), and widely borrowed, appearing even in Tibet (O’Connor, *Folk-Tales from Tibet*, pp. 51-55), the lion is outwitted by the hare. For lion myths see de Gubernatis, *Cost. Myths of Greece*, i. 153.

Lizard. —Of lizard myths unconnected with any cult or tabu there are but few, the best known and most widely distributed being the Bantu account of the origin of death; according to this, the chameleon was the only living creature that he was to live, the lizard some time after with a contrary message; the chameleon dwaddled on its way, and as a result man is subject to death (Kid, *Essential Kafir*, p. 76). In the Sandwich Islands lizards are believed to form part of the food of the soul which goes with the body after death (Miss. Cath. 1880, p. 626), while in Zoroastranism the lizard forms part of the food of the damned (*Bundahishn*, xxvii. 48). In the Malay Peninsula the Oran small flying lizard is the emissary of the great flying serpent which guards each man’s life-stone; they cause the souls of the newborn to enter their bodies. They can change at will into crocodiles, and cause the death of any one whose life-stone is buried (ZE xcviii. 57). It is believed by the people with the same myth about Moko (Gill, *Myths*, p. 239). The Maoris tell a story according to which the first of their race was drawn out of the water at the Creation by a lizard (Gerland, *Sidus*, p. 257). In South Australia the lizard is believed to have divided the sexes; it is a so-called sex-totem, the men destroying the female and the women the male lizards (Frazer, *Tot.* p. 52). Stories of lizard births are told in Indonesia and New Guinea (Wilken, *Het en Beeld*, i. 187; *Zendelingsoer*, 1891, p. 20). In New Zealand, Yap, and the Banks Islands, the lizard is regarded as the residence of the souls of the dead (Shortland, p. 93; cf. JAI x. 298, 297, xix. 120; Hermens, *Siducerumin*, p. 92; Codrington, *Melanesians*, p. 180; cf. *Future Life*, above).

The main areas of lizard-cult are Polynesia (Wilken in *Bijdragen T.L.V.* 6th ser. vol. v. p. 498 ff.) and West Africa (*Int. Arch.* xvii. 112). The evidence in the latter case is, however, unsatisfactory; Dalheim is mentioned as one of the habits of the cult, but Ellis (*Ewe-speaking Peoples*) does not notice it. In Bonney, however, there appears to have been a practice of rescuing lizards which were in danger (Bastian, *Bilder*, p. 160); and Crowther
is said to have abolished the worship of the lizard-god (*Globus*, x. 285, xii. 256). An old writer describes a custom of bringing food to a lizard-god; it seems to have been the sacred animal of a secret society (Pruneau de Pommegre in Cuhn's *Sammlungen*). On the other side of Africa the tribal god of the Shilluks is said to appear in the form of a lizard (Katze, p. 426). In Polynesia respect for the lizard was widespread. In New Zealand, according to one account (but cf. Shortland, p. 93), it was regarded as an incarnation of Tangaloa, the heaven-god; a green lizard was more especially associated with him, and its habits of coming out and basking in the sun (Dieffenbach, *Travels*, ii. 116; Wilken, *loc. cit.*); so, too, in Samoa (*Globus*, lxxiv. 256 ff.). In the Hervey Islands, Tongaiti or Matarau (the night-heaven) was likewise identified with a spotted lizard, which comes out at night (Gill, *Myths*, p. 10). In Samoa not only family gods but general deities assumed lizard form, among them Le Sa, Pili, and Samaui (Turner, *Samoa*, pp. 44, 40, 72). An idol in lizard form, or rather a house-god, is reported from Easter Island. In the society of older wolves, and *Ass.* ii. 49. Moko, the king of the lizards, is recognized all over Polynesia (Gill, *Myths*, p. 229). In Micronesia lizard-worship was found in the shape of a cult of the dead. Lizards were kept in special enclosures, and the lids of their cages were fastened with a bunch of heath and laurel to the top of a high tree in honour of the magpie (*Mem. Soc. Antiqu.* viii. 451). For myths and folk-tales of the magpie see de Gubernatis, *Zool. Myth.* ii. 385-387.

Magpie.—It is held to be unlucky to kill the magpie (*Folklore*, xi. 241), but in Sweden it is the custom to rob its nest on May day and carry the eggs or young round the village (Lloyd, *Peasant Life*, p. 237). Its habits are not very satisfactory evidence could be quoted with regard to them (Int. *Arch.* xvii. 131) until the publication of Mr. Stow's collection (Native Races of South Africa, pp. 531, 533), from which it seems abundantly clear that Cag was sometimes conceived of in the form of a child, sometimes under the form of the caterpillar, *nogo* (see 'Cult' above). It seems clear that the Hottentots regarded the insect as auspicious (Merckens, *Beitrage*, p. 86), and worshipped it on that account; the whites call it the 'Hottentot god'; they abstain from injuring it (Schön, *Deutsch. Sp. Africa*, p. 101). Among the Tambukas, certain insects, among which is the mantis, are supposed to give residence to ancestral souls (Elmslie, *Wild Nyomi*, p. 71). In the Bismarck Archipelago there are two exogamous tribes of which one is named after the mantis (*JAL* xx. 38).

Monkey.—Even if it was not a common savage truth to believe in the descent of man from one of the lower animals, the resemblance between human beings and monkeys would be sufficiently strong to suggest such a tale. Consequently we find not only that man is regarded as an evolved monkey, but also that the monkey is explained as a degraded man (Taylor, *Prim. Cult.*, i. 370 ff.; *Mes. Cath.* 581, 97; *Spix*, i. 229; *Deutsche Geogr.* iii. 290). The lizard is omenous, also as the familiar of the wizard. The lizard is especially ominous in India (Pandian, *Indian Village Folk*, p. 130; *Asiatic Researches*, 1857); and the lizard of *Betjeman* (Pachara) sacrifice a lizard (*Culcutta Rev.* lxxviii. 296). The lizard is frequently employed in magic, sometimes as a love-charm (*Austral*, li. 912), or curtural charm (Jones and Kroph, *Folktales*, xli.), or for luck (Rolland, *Folktales*, li. 129). A lizard buried alive under a threshold is a protection against a whirlwind, whilst its tail is a *Gousse* (*Culcutta*, viii. 22; Müllenhof, *Sagen*, i. 212), but elsewhere it is regarded as maleficient in this position (Roehholt, *Deutscher Glaube*, ii. 167). In Made- gascar the lizard is buried to cure fever (v. Gennep, *Tabou*, p. 271). In Tripoli the sight of a lizard is held to cause women to bear speckled children (*Globus*, xxxiv. 27). Connected doubtless with its magical qualities is the widespread use of the lizard as an art motif (*Publ. Kgl. Mus. Dresden*, vii. 14; *Bastian Festschrift*, p. 167). In classical antiquity the lizard was used in medicine (Pauli-Wissowa, s.v. 'Aberglaube'). For myths and folk-tales of the lizard see de Gubernatis, *Zool. Myth.* ii. 385-387.
Togo, Africa, where the inhabitants of a village daily put meals for their benefit. The Kunamas and Bareas are also said to worship them (Int. Arch. xvii. 93). At Porto Novo, where twins are not killed, they are believed to have as tutelary spirits a kind which animates small monkeys; such children may not eat monkey meat (J. Arch. Cact. 1884, 266). Among the Hottentots the name of the monkey is tabu at the hunter (Zts. Geog. Geol. Thir. vi. 41). The Nkomis do not eat gorilla meat, and give three reasons: first, that their fathers did not; second, that the gorilla has no tail; and third, that it drinks the blood of the dead (Miss. Cact. 1894, 601). There is an ape tabu among the Bataas (Tijdshr. T. L. V. xxi. 209). Among the Maxurunas a young mother may eat no ape meat (Spix, iii. 1188); and this tabu is extended to all the women on the island of Nias (Tijdshr. xxvi. 282). In many cases the respect for the monkey is based on the belief that it is the abode of a human soul (Int. Arch. xvii. 93; Home and For. Miss. Rec. 1889, 302; v. Gennep, Tabou, p. 221); sometimes it is believed that a man who kills a monkey is turned into one after death (Hutchinson, Impressions, p. 163); the sacrosanct monkey is affirmed to be so only to certain families (Bastian, Bilder, pp. 145, 160). In Madagascar the babankotto is hunted out of the bush, and in some parts the natives will not kill it or trap it (v. Gennep, Tabou, p. 214); the Betiomarakas bury dead monkeys, and call the babankotto their grandfather, holding it to be the abode of the souls of the dead (ib. p. 221). A similar belief is held among the Bastus of the Asmat district (Casalis, Tijdschr. Nieuw Oost. 1913). In many cases a myth is told to account for the respect shown by the Malagasy (ib. pp. 217-220). Among the Basutos the monkey is a totem (Casalis, The Basutos, p. 221); Arbousset and Daumas, p. 92; Folklore, xv. 112). Among the Betiomarakas Eakimos is a baboon who has to sacrifice a sheep or goat and hang the lowest vertebra round his neck, or he will suffer from bum-bago (Zts. Geog. Geol. Thir. vi. 42). The Tucuacas of Brazil wear a monkey mask in some of their ceremonies (Spix and Martius, iii. 1188). In China a monkey is regarded as lucky in a stable—to keep away sickness (Zool. Garten, which includes an offering to the king of the monkeys is performed to cure stomach ailments (Zool. Garten. Est. Geol. xxi. 9). For myths, etc., of the monkey see de Gubernatis, Zool. Myth., ii. 97-119.

Mouse. — The mouse was especially associated with Apollo Smintheus; in his temple at Hamaxitus a golden statue of this god, and mice were actually kept in the temple (de Visser, Götter, pp. 158, 178, 181). Various stories were told to account for this association of the animal with the god, none of which is necessarily true. We need not assume that there was originally a mouse-cult at Hamaxitus; the association of Apollo and the mouse may be late. If the god was appealed to, as god of day, to drive away the mice, which come in the night, his statue might well symbolize his conquest of them by putting the figure of a mouse beneath his plume, and raising the belief that he was the god of mice; then the custom of keeping mice in the temple. It does not seem necessary to regard Apollo as an anthropomorphized mouse, any more than Dionysus as a transformed fox, because he was known as Bacchus. (For a discussion of the question, and of myths of mice gnawing bow-strings, etc., see C. B. vi. 14, etc.; Grohmann, Apollo Smintheus.) The Dakotan explanation of the waning of the mouse is caught out of captivity (Riggs, D. Grammar, p. 165). The Chipewiyans attribute a flood to the mouse having taken some of the bag in which the heat was stored, in order to mend his shoes, thus causing the snow to melt (Petitot, Traditions, p. 376). According to a Hucul myth, the mouse gnawed a hole in Noah's ark, and is unclean (Kaindl, p. 95). According to the Haidas, the mouse contains the soul of a dead man; in every one's stomach are numbers of mice, the souls of his deceased relatives (JAI xxi. 21). In Germanic belief, in like fashion, the soul assumes the form of a mouse, and in this form may come forth from a sleeper's mouth (Meyer, German. Myth. p. 64). In Celebes the fanonan soul is believed to turn into a mouse and eat the rice; the soul of a suicide is especially dangerous; if the rice is not eaten, they take away its soul (Med. Ned. Zend. xliii. 221, 223). The name of the mouse is tabu in parts of Europe (Golden Bough, i. 455). The Huculas hold that it is unlucky for a girl to kill a mouse (Kaindl, p. 73); and in India it is a sin to kill rats, which, if troublesome, must be induced to cease molestations by promises of sweetmeats (Campbell, Spirit Base of Belief and Custom, p. 267). In Bohemia a white mouse should not be killed; it should be taken out of the house and fed, otherwise luck will desert the house and other mice increase in numbers (Grohmann, Abergl, No. 405). Sometimes spells are used to keep down the number of mice (Golden Bough, ii. 424); sometimes the same result is aimed at by casting out the mouse, or burning it (Ibid. xxvi. 240). Elsewhere one or two mice are caught and worshipped, while the others are burnt; or four pairs of mice are married and set adrift, in the idea that this will cause the other mice to go away (Abergl). In Babylonia, a mouse must be thrust alive into a tree trunk, to prevent them from paralyzing the sheep or ravaging the lands (Hone, Tablebook, iv. 468). The belief that a shrew dies when it reaches a path is found among the Huculas (Golden Bough, ii. 427). Another custom is found in Greece (Paula-Wissowa, s. v. Aberglaube, p. 80). The ‘blind mouse’ is a common name for 'Blind Man's Biff.' A mouse mask is used in an Austrian ceremony (Folklore, xi. 261, 263). Mice are an omen of death; they leave the house at the death of the master (Rochholz, D. Glauben, i. 173, i. 157). Near Flensburg a white mouse is a death omen; in Wendish districts it is a good omen (M S. notes). (For a discussion of the Mouse as a figure of Bingen von Malstatt, Zur Völkskunde, p. 1 f.). Mice figure in the mythology of the Kamchatchans, and are represented as playing many tricks on the stupid deity Kutka (Steller, Kamtsch. p. 255). The mouse is an evil animal in Zoroastrianism, and the killing of one mouse is equal in merit to slain thousands (Visser, Dar, xiii. 9; cf. Plutarch, de Invitio et Oidio). In Jewish folk-belief eating anything gnawed by a mouse causes loss of memory; whence cats, which eat mice, do not remember their masters (Horayoth, 1b). For mouse myths and folk-tales see de Gubernatis, Zool. Myth., ii. 65-72.

Owl. — Although the owl is ominous in many parts of the world, it does not seem to figure largely in mythology. The Kalmucks have a saga connected to the owl's head, which is believed to resemble the story of Bruce's escape. From time they are said to wear a plume of owl's feathers on their heads, and reverence the white owl. Whenever they celebrate any great festival, according to another account, they wear coloured owls' feathers. The Woguls are said to have had a wooden owl to which they fastened the legs of a natural one (Strahlenberg, Het. Geo. Desc. p. 434). The owl was respected in Lithuania (Glóbus, liii. 66) and amongst the Monacites (Vogel, xi. 214), and is not killed by the Maccus of British Guiana, as being the familiar of the evil spirit (Waterton, Wanderings, p. 223). Some of the S. E. Bantsus will not even touch it, probably on account of its association with sorcerers (Fleming, Southern Africa, p. 265).
Among the Bechuanas it is regarded as a great calamity if an owl rests on a house, and the witch-doctor is sent for at once; he scrambles up to the place where it has perched, and purifies it with his charms (Mackenzie, Ten Years, p. 392). In the same way the appearance of an owl in the Capitol demanded that this jackal—purified with white and sulphur (Hopf, Orakelalter, p. 101). According to the Talmud, it is unlucky to dream of an owl (JE ix. 452); while in Germanic folk-lore witches and cruel stepmothers appear in the form of this bird (Meyer, German. Myth. p. 112). The owl is importantly associated with the thirteenth month, and its cry may not be imitated, because it can bewitch (Batchelor, p. 409); the eagle-owl is regarded as a mediator, and is worshipped on the chase; its head and beak are worn at feasts (ib. p. 413); these owls are kept in cages, like the bear, and killed (ib. p. 414); they are regarded as unlucky, and the barn-owl may not be eaten (ib. pp. 424, 428). Many American tribes associated the owl with the dead; the bridge over which the dead had to pass in the Ojibwa belief was known as the ‘owl bridge’ (Bell, P. of Am. ii. p. 296). The barn-owl is a so-called sex-totem (Golden Bough, iii. 415). The Chinese offer owl’s flesh roasted in oil when they dig up the phytopallace actinaeum, whose properties are believed to be those of the mandrake. The Chinese hogs are associated with the method of purifying its soul (T’oung Pao, vi. 342). The Burias keep an owl, or hang up the skin of one, to protect children against evil spirits (Globus, ii. 252). It is one of the animals hunted in Europe (Folklore, xi. 250). Owls are frequently associated with magicians; the Zulus believe that they are sent by wizards (JAI xx. 115); among the Yorubas the owl is the messenger of sorcerers, who gather at the foot of a tree and send owls out to kill people; if one gets into a house, the inmates try to catch it and break its claws and wings, believing that this injures the sorcerer (Miss. Cath. 1884, 240). The Ojibwas believe that within three days after the burial of a man the evil spirit comes in the form of an owl, shooting out fire from his beak, and takes out the heart of the dead man; they endeavour to drive it away before it effects its purpose (Manitoulin, p. 49). Among the Pawnees, on the other hand, the owl is the chief of the night, when it gives both aid and protection (2 RBEW ii. 108). The Greeks professed the owl as the badge of their profession (Brinton, Myth., p. 128), and in Brazil the appearance of an owl is accounted a proof of its connexion with supernatural beings (Martius, Zur Ethn. p. 78). In the Malay peninsula the owl is one of the messengers of the pontianak (Degbie, Malay Pen., p. 484). In Madagascar the Anterimases give the name lolo (‘owl’) to the souls of sorcerers (v. Gennep, Tabou, p. 262). Slightly different is the Californian belief that the great white owl is an evil spirit, on which account the student in its frequent form of a black, to appease it (Cont. Am. Éta., i. 143), or, more probably, as a counterpart, just as in Garenganze the use of a whistle made of the windpipe of the horned night-bird is held to avert the ill-luck it brings (Armit, Garenganze, p. 238). On the same principle, possibly, the owl is frequently seen nailed to the barn or stable door.

The owl is sometimes used in magic. If its heart and right foot are laid on a sleeping person, it is said that he confesses all he has done. If an owl’s liver is hung on a tree, all the birds collect under it (Wolf, Beiträge, i. 252). Sometimes, in spite of its character as a bird of ill omen, it is regarded as bringing good fortune. If it flies into a grove of hickory (W. H. Log., loc. cit.), its cry frees from fever, and its feathers bring peaceful slumber (Globus, iii. 271). Its appearance near a house where a pregnant woman is expected a easy delivery, among the Wenda (Haupt, Volksleider, ii. 258); or the birth of a boy, or other good fortune, in Dalmatia (Wiss. Mitt. aus Bosnien, vi. 593). In Athens, as the bird of Athenes, it was auspicious (Paus. Wissowa, s. v. ‘Aberglaube,’ p. 70). In India the owl’s death is an apotropaic sign, that is, it is supposed to have a preventive and curative value. Among the Hindoos a recent case loses cause of memory. On the other hand, eating the eyeballs of an owl gives the power of seeing in the dark, while, if an owl is fed with meat all night by a naked man, the latter acquires magic powers. Nevertheless the owl is a bird of bad omen among the Aztecs (I. 277). However, it is not so in the mythology of the owl see de Gubernatis, Zool. Myth. ii. 244-250.

Peacock.—Peacock-worship has often been attributed to the Yezidis. The latest account is that given by J. W. Crowfoot (Man, 1901, No. 129), who got his information from an Armenian. It appears that the Malik Tā’ūs (‘King Peacock’) is shaped like a bird; it has a hole in the middle of its back with a lid to it. It is brought by the head of the village, wrapped in linen, and filled with water. The priest kisses it, and by its means the whole flock is tricked into following the bird. When the peacock comes to the beak, the others following his example. Five bronze images are sent round continually, and every Yezidi must visit the figure three times a year. An equation, Tā’ūs=Tammuz, has been proposed, while the other name, giving the figure of the plant, is an equation, Tammuz worship, the peacock coming in through a piece of folk etymology, though the Yezidis themselves hold that ‘Malik Tā’ūs revealed himself in the form of a handsome youth with a peacock’s tail when he appeared in a vision before Sheikh Aa’di, the prophet of the faith’ (Jackson, Persia, Past and Present, p. 12). Elsewhere in Asia Minor the peacock is regarded as the embodiment of evil (Man, loc. cit.; JAI xx. 270). According to a Javanese (Muhammadan) myth, the peacock was guardian at the gate of Paradise and ate the devil, thus conveying him within the gate (Med. Ned. Zend. xxxii. 237 ff.). On the other hand, in Kutch the peacock may neither be caught nor annoyed (Ais. Geogr. Ges. Thür. xv. 58). In Europe, peacocks’ feathers are considered unlucky; their use is prohibited in church by a canon of the Lateran, which is somewhat remarkable since the peacock is associated with the Virgin Mary, and is the emblem of the Virgin Mary in Eastern and Western churches. In Greek religion the bird was associated with Hera and was kept in her temple (de Visser, Gött., p. 175). In India the peacock is the totem of the Jats and Khandhas, and in the Panjáb snake-demons. In Egypt they were stuffed as peacocks’ feathers in a pipe. The feathers of the bird are also thought to have cured the sick to scare disease-demons, and are tied on the ankles to cure wounds (Crooke, ii. 45, 150, 233, 250). For the mythology of the peacock see de Gubernatis, Zool. Myth. ii. 329-329.

Pig.—The pig is the most important sacrifice animal of Oceanica, and is also a frequent victim in Africa (Int. Arch. xvii. 145). Its flesh is taboo to Muhammadans and Jews generally, to the males of S. African Bantu (JAI xix. 279). It is a sacred animal in Egypt (Golden Bough, ii. 285; RHR xxxviii. 530). There are good grounds for supposing that the cult of Demeter was in part developed from that of a porciform corn-spirit (GB, p. 290). It is possible to explain features of the myths and cult of Atis and Adonis in a similar way (ib. p. 304), and Frazer has maintained the same of Osiris (ib. p. 310). Pigs were taboo in Egypt, and swine-herds might not enter a temple; but once a year pigs were sacrificed to Aries (ib. p. 305). The Harranians abstained from pork (Dussaud, Hist. des Nègres, i. 350). This may once a year (Chwolson, Die Sbstab., ii. 42). The Jews ate it secretly as a religious rite (Is 65 6o). Pigs were worshipped in Crete (de Visser, Gött., p. 101). (For Greek facts see JHS xiv. 152-154). There is some reason for connecting the Celtic Ceridwen with the pig; in modern Welsh folklore
the pig figures as a bugbear for children, and is believed to appear at Allhallows (RHR, loc. cit.). In European folklore we find the pig hunted at certain times (Folklore, xi. 232), there is a story of a pig ancestor in Wales (ib. 234), and the grunting of pigs is imitated during an eclipse of the moon (Panzer, Beitr. ii. 313). The pig is regarded as lucky in the towns of Germany, but its original aura was unsuspectingly. In Gaul, on the other hand, it has long been regarded as of good omen (Holznajer, Oslaniana, p. 43). In Germanic mythology the pig is associated especially with storms, and, as a fertility animal, with the harvest-time (Meyer, Germ. Myth. pp. 102 f., 286 f.). In Celebes the pig supports the earth, and causes an earthquake when he rests against a tree (Journ. Ind. Arch. ii. 837). The pig is sacrificed in India to propitiate the chowra-goddess and other disease-demons, as well as to certain sainted dead, and to ghosts to prevent them from molesting the living (Crooke, i. 126, 137, 197, 200, 206 ii. 58). In Zoroastrism the form of the boar is one of those assumed by Verethragna, the god of victory (Yasti, xiv. 15). For the cosmogonic boar see Erman, p. 357.

Pigeon.—Various species of pigeons are tabu in Madagascar (v. Gennep, Tabou, p. 266), India (Crooke, ii. 246), and Europe (Folklore, xl. 341; Ausland, i. 1016, etc.). They are sometimes kept in houses for supposed purifying purposes (ib. 357), but are elsewhere considered unlucky (Rev. des Trad. pop. v. 601; Wiss. Mitt. aus Bosnien, 1891). In Albania a pigeon is said to be blessed annually by the descent of two doves (Hobhouse, Folklore, p. 290). At Befou, in the South of Germany, putridable materials is run along a line in the Cathedral at Easter (Folklore, xvi. 182; cf. Trede, Heidenthum, iii. 211; de Gubernatis, Zool. Myth. p. 671; Dürenfeld, Cal. Belg. p. 351). In Sambia it is carried in procession (Vander Beirog, iv. 90). In Hohenzollern-Hechingen a nest with a living pigeon in it is put on a post at Carnival; a mock contest takes place, and the bird is finally carried off amid the lamentations of the people that ‘the bird’ is stolen and thrown into the water, and the bird is solemnly set at liberty (Mannhardt, Myth. Forsch. p. 134). Among the Brāhmās of Bombay two pigeons are brought to the bride and bridgroom on the second of the wedding day, and these are in no way harmed, but are smoothed with feathers (Bolmey, Gas. x. 16). Pigeons are also given or eaten in European marriage customs (Baumgarten, Die komischen Mysterien, p. 312; Anthropologie, ii. 423, n. 1; Schönwerth, Aus der Oberpfalz, i. 125; Vaugesius, Hist. de l’Aigle, p. 583, n. 110). The pigeon is of good omen in Königsberg (Am Uerquell, i. 123) and Russia (Erman, Archiv, p. 629), but forebodes fire in Styria (Zts. Oest. Volksk. iii. 12), and are very frequently a death (Kehrein, Volkspr. p. 289; Gregor, Pfarrj. p. 372, etc.). Dead doves are sometimes held to take the form of doves (Meyer, Germ. Myth. p. 683; cf. the use of the dove in modern funeral-pieces). In Greece the dove was associated with the cult of Aphrodite, and doves were kept in her temples (de Visser, p. 173). Similarly pigeons are attached to the shrines of Sakhi Sarwar in the Panjâb (Crooke, i. 299) and of Shâkîr Pashâ in Khotan (Stein, Sand-buried Ruins of Khotan, pp. 179–180; For the mythology of the dove see Gubernatis, Zool. Myth. ii. 297–306). There is no proof that the priestesses of Zens at Dodona were ever called ‘doves’ in the historical period; nor were dove-ores known. Possibly Sophocles refers to some vague tradition when he speaks of the two doves through which the oak spoke to Heracles (Farnell, Cults, i. 38 n., 39 n.).

Quail.—The quail is one of the birds in Germany which it is unlucky to kill (Wuttke, D. Aberg. p. 163; Strackerjan, Aberg. p. 45). In the Louden it is held to protect the house against lightning (ib.). It is also tabu in Madagascar (v. Gennep, Tabou, p. 267). In Hungary it is an accursed bird (Jones and Kroop, Folktales, p. 1). It is one of the forms assigned to the corn-spirit in Silesia (Peter, Volekstam. ii. 268), and is eaten by a newly married couple in Lithuania (Riiger, Sen. xii. 268). In France the hearts of two quails are held to ensure the happiness of a married couple, if the husband carries that of the male, the wife that of the female (Rolland, Faune, ii. 543). Among the Greeks the quail was used in a game in which the players struck it at blindfold, exactly as the cock and other birds and mammals are used in Europe at the present day (Pollux, Onomastikon, iv. 190). The quail was sacrificed by the Phœnicians at its return in the spring, and they explained the festival as a commemoration of the resurrection of Heracles (Athen. ix. 47); possibly the first quail was killed—a practice to which there are many European analogues. In Greek mythology Artemis seems to have been very familiar with the quail (Farnell, Cults, ii. 433; she was called Ortygia, which is also a place name). For the quail in mythology see de Gubernatis, Zool. Myth. ii. 276–279.

Seal.—Among the Eskimos, women stop work when a seal is taken, until it is cut up; when a ground seal is killed, they stop work for three days (5th Ann. Rep. Bum. Ethn. p. 595). The heads of seals and other marine animals are kept (ib. 8th Rep. p. 434). A pig of comestible seal is sometimes killed for fish magic before they go seal fishing. A large stone is rolled into the court to represent the sea; small stones do duty for the waves, and little packets of herbs for the seals. A kind of boat of birch bark is made and drawn along the sand; the object of the ceremony is to invite the seals to let themselves be taken (Sébiliot, Folklore, p. 125). In the west of Ireland and the islands of north-western Scotland there are certain people who believe themselves to be the abode of seals; they do not refuse to injure them (Folklore, xi. 232; Orkney and Shetland Folklore, pp. 170–189). The same belief is found in the Faroes (Antiquarisk Tidsskrift, 1892, p. 191). A local legend records that the branch of the Phænix’s army, which was lost in the Red Sea (Annales, Faroese, xvi. 14). In the island of Rügen it is believed that the seal is descended from drowned human beings (Folklore, xi. 235). Among the Kwakilutu the chief group of dancer societies is that of the seal (Report of United States National Museum, 1895, p. 419).

Serpent.—(For serpent-worship proper see separate article). The serpent is respected among many peoples who do not worship it in the sense of offering prayer or sacrifice to the deity. It is in South Africa and Madagascar the Malagasy regard serpents as objects of pity rather than of veneration (v. Gennep, Tabou, p. 278), holding them to be the abode of dead men’s souls. But the Antimerinas had a serpent idol, which worshippers carried serpents (ib. p. 276); in the case of the Betsileo it is difficult to say whether we have to do with serpent-worship or not; they regard the fanany as the re-incarnation of a deified ancestor, making it offerings of blood, and even tend it in an enclosure (ib. p. 277). If these attentions are offered it without arrius esse a and solely because it is one of the kin, we are hardly entitled to regard them as worship, which rather implies that an offering is not strictly disinterested.
Among the Zulus the souls of the dead are said to take up their abode in serpents, termed idhlozi (pl. amadhlozi). Various forms of the belief are recorded; according to one, the serpent form is assumed only by an ancestor who wishes to approach a kraal; another version, but slightly different, says that only the serpents which from time to time are found in the many kraals are amadhlozi; a third authority says that the soul is not bound, as in some of the Malagasy beliefs, to the single soul-animal, but is incarnate in all the species, like the animal-gods of Samoa; a fourth account, probably the oldest, makes the soul take the form of the animal of the living (living. Arch. xxvi. 121; Man, 1904, No. 115; Golden Bough, iii. 409, etc.). As in Madagascar, different species of snakes are the abodes of different classes of men, one for chiefs, another for the common people, another for women (Arch., loc. cit.). Among the Masai, on the other hand, the difference of species marks a difference in the family of the deceased (Hollis, The Masai, p. 307). In Europe, the form of the serpent, like that of the mouse (see above) is assumed by no race but the Jews (Meyer, Germ. Myth, p. 637 f.). The serpent is respected over a large part of East Africa, sometimes as an ancestor of the tribe, sometimes as the soul-animal of deceased ancestors (Arch., loc. cit.). Many of the tribes in New Caledonia make serpents their sacred reason in giving for this (Patouillet, Trois Anes, p. 113). In North America they were respected (Brinton, Myths, p. 129). In South America the Airicos believe themselves to be descended from serpents (Tirado, Estudos, p. 31; for other stories of descent see J. M'Lenan, Studies, 2nd series, p. 628). Serpents are respected over a large part of Europe, especially those which live in or near human dwellings—probably as a survival of ancestor-worship. In like manner, harmless snakes are tutelary household divinities in the Panjāb hills (Crooke, ii. 141 f.). The name of the serpent is also frequently tabu (Bödeer-Kreutzwalt, p. 120; Lloyd, Peasant Life, p. 230; Tradition, 149; Asiat. Observer, 1821, p. 12, etc.). It is only rarely that ceremonies of purification are prescribed for the killer of a serpent; the Aməxoa custom prescribed that the killer of a boa had to lie in running water for weeks together; during this time no animal could be slaughtered; fishes and snakes of the salt or fresh water should not be eaten, and the cattle-fold (Kay, Travels, p. 341). On the other hand, certain precautions are to be taken in Japan; if the head of the snake is not crushed when it is killed, more will come to take its place (Matt, d. Ges. Natur u. Volkerk. Ostas, xv. 282). In Bombay it is believed that barrenness is the penalty for killing a snake (Crooke, i. 226), while in Germanic mythology such an act causes the child of the house to waste away (Meyer, loc. cit.).

The snake is commonly associated with water (see above), and said to reside in water-holes, rivers, etc. (Salvado, Memoirs, p. 260; Merensky, Beiträge, p. 126; Philip, Researches, ii. 117; Church Mss. Rec. xiv. 30; Strahlenberg, Das N. v. Thl, p. 420; Brinton, Myths, p. 130, etc.). For many the snake is a guardian of water (see above). Snakes are likewise guardians of treasure in folklore generally (Crooke, i. 143-146). Mythical serpent-monsters are also found as earth-carriers (see 'Earth-Carrier'), or destroyers of the human race (Matt. d. Schutzgeb. xiii. 45); or Creator (see 'Creator'). In Chile one of the Deluge myths (Medina, Aborigines, p. 28 ff.), and the Micmacs place two on the road followed by the souls of the dead (Rand, Legends, p. 233); the Hurons made a monster-serpent the source of all maladies (Rel. des. Am., 1675, p. 75), and for the natives of Victoria the serpent Mindi is the cause of death (Parker, Aborigines, p. 25); for the Aruntas the Magellanic clouds are the teeth of a gigantic serpent, and silence is to be preserved when they are visible (R.G.S.A., S. Aust. Br. ii. 36). In America, according to Brinton, the serpent is often associated with the lightning (Myths, p. 135). Mention should also be made of the 'snake-dances' of the Hopis, which are probably expressions of clan totemism, not of ophiotrophia (ib. BBEW 963 ff.). In South America, serpents are held to be the chief food of the dead (Spix and Martius, ii. 69 ff.). A good deal of local lore has gathered round the serpent in Europe. A king is their ruler (Awatla, liii. 1031; Globus, iv. 333, etc.), and wears a crown which is coveted for its magical properties; the king is often white, and the skeleton of the white snake makes its possessor the owner of a familiar spirit (ib. xxvi. 208). There is a stone in the snake's nest which draws poisons out of a man's body (Jecklin, Volkstum, i. 163; cf. Crooke, i. 141 f.). In Hindu belief serpents have their heads jewelled of marvellous properties (see Crooke, i. 141). The snake understands the language of birds (Russwurm, Eibowolk, § 357), or of the raven (ib. § 400). If a snake is hung up head downwards, it will rain (FLJ v. 91; Wuttko, Volksbegrift, § 153). Snakes were regarded as benefactors in Europe; even Irish cattle have the gift of killing the snakes in the meadows where they are (Northumb. Folkl. F. L. S. p. 8). The snakes know a root by which they bring themselves to be killed (Lepechin, Reise, ii. 105). The belief in the snake as the king of serpents is also found among the American Indians (Brinton, Myths, p. 137). Folklore likewise knows of many cases of the union of serpents with human beings (MacCulloch, 255-256, 264-267). In the ancient world the serpent was associated with leechcraft (see DISEASE and SERPENT). In the same idea is found in Madagascar (Arch. xvii. 124), and also among the American Indians, perhaps because the snake is in America so often associated with the magician, who is also the leech (Brinton, Myths, pp. 133, 129). The snake is sometimes held to be unlucky (Globus, lix. 72), but is more often welcomed as the 'Hausgeist.' A snake shot out of a gun is a charm against witchcraft (Liebrecht, Zur Volksk. p. 332; Müllenhoff, Sagen, p. 229); and a Huáculan hunter carries a piece of snake to attract game (ib. § 400). If a first snake should be killed for luck (FLR i. 8). In Bulgaria and France the killing of a snake is a good work, probably because the snake is regarded as the incarnation of a witch (Stranze, Die Bulgaren, p. 34; Rolland, Pays, iii. 36). Snakes are burnt in the midsummer fire (Athenaeum, 1869, July 24; Jones and Kropf, Fokktales, p. lix). In North America the Aissouans and other sects of fanatics eat serpents annually or at intervals during the wet season (ib. p. 356; Denon, Travels, i. 300; Pliny, HN vii. 22, xxv., xxv. x., xxvii. iii.); Pauanas, IV. iv. etc.; cf. Bancroft, i. 429.

The serpent is commonly associated with good omens; so among the South African Bantu (Miss. Cath. 1896, 371; Merensky, Beiträge, p. 130), in Arabia (Nolde, Inneraрабien, p. 96), and in medievial Europe (Panzer, Beitrag, ii. 259). In Albania it is unlucky before sunrise and after sunset (Rodd, Customs, p. 158). In Silesia it is held to be lucky, but its appearance is a warning of misfortune (ib.); and in Peter, Volkstum, i. 33). In Suffolk it is a death omen (Suffolk Folklore, F. L. S. p. 32). On the other hand, there is an elaborate table of omens drawn by the Zoroastrians from the appearance of a snake on each of the thirty days of the month (Al-Biruni, Chronology of Ancient Nations,
ANIMALS

tr. Sachau, p. 218) ; so, too, in Norway, when it crawls across the road (Liebrecht, Zur Volkskunde, p. 326). In Zoroastrianism the serpent is a most evil creature, and to be killed (Vendidad, xiv. 5 ; Herodotus, i. 140) ; it was formed by Ahriman (Bündahishh, iii. 15). A similar horror of the serpent exists in Armenia (Alegian, Armenischer Volksbrauch, p. 30). For the serpent, see, further, de Gubernatis, Zool. Mythol. pp. 339-419, Pauly-Wissowa, s.v. Aberglaube, p. 77, and JE xi. 203.

Shark.—In New Calabar the shark is regarded as a god (Gbellion, xii. 283). Sharks are sometimes regarded as enchanted men (Wilson, Western Africa, p. 161). The shark was formerly protected by a death penalty inflicted on the killer of one, but this was subsequently abolished by a religious revolution (Batian, Bilder, p. 160). Shark-worship is said to have existed in Hushine (Montgomery, Journal, i. 245). In the Solomon Islands the shark is addressed as 'grandfather' (Zts. Ges. Ges. Thür. x. 34). Sharks were worshipped in the Sandwich Islands ; and if a man who adored them happened to have a child still-born, he endeavoured to lodge its soul in the body of a shark. In order to do this he flung the body into the sea, performing various ceremonies at the same time. There were also a number of priest-sharks rubbed their bodies night and morning with salt and water to give them a scaly appearance (Golden Bought, ii. 432). In New Georgia the shark is 'sacred', because it eats men. It may not be touched in Rabiana, but the edge of it may be killed but not eaten (JAJ xxvi. 386). Sharks are very often the form in which dying people announce their intention of re-appearing ; offerings are made to them. In Siaa small coconut trees are reserved for the sharks, into which sharks may also use the trees. Other men will join them sometimes and ask for coconuts with the voice of a shark-ghost (Golden Bought, ii. 434-435).

Sheep.—In Greek cult the ram was connected with Zeus ; at Eleusis and elsewhere its fleece was used in rites of purification (Farnell, Cults, i. 65 ; Smith, Rel. Sem. 474). As a substitute for the eldest son of the Athamantids, a ram was offered (Farnell, i. 94). A prayer for rain was offered to Zeus over the Pelian byrds with ram skins (ib. p. 95). Zeus Ammon is derived from Egypt (ib.). In the cult of Artemis the sheep was sometimes tabeaud (ib. ii. 431). In a sheep-offering to Aphrodite in Cyprus the worshippers wore the skin (W. R. Smith, p. 414). Aphrodite is represented on the ram (From the ram, p. 484). Although the sheep is one of the most important sacrificial animals (Int. Arch. xvii. 139, for Africa), it is only in Egypt that we find a sheep-god proper. Amon was the god of Thebes ; his worshippers held rams to be sacred, and would not sacrifice them. At the annual festival of the god a ram was, however, slain, and the image of the god was clothed in the skin ; they mourned over the body and buried it in a sacred tomb. Amon is represented as a ram. The object is, Golden Bought, i. 261. It may be remarked that the Nilotic tribes the Madis practise an annual sacrifice of a lamb, possibly as a means of expelling the evils which have accumulated. They are sad before the ceremony, and show great joy when it is over. They assemble by a stone circle, and the lamb is led four times round the people, who pluck off bits of its fleece as it passes and put them in their hair; the lamb is then killed on the stones and its blood sprinkled four times over the people. It is then applied to each person individually. As each rises to go away, he or she places a leaf on the circle of stones. The ceremony is observed on a small scale at other times, particularly when trouble comes upon a family ; it is also practised on joyful occasions, such as the return of a son after a long absence (Proc. R. S. Edin. xii. 336). The picaresque sacrifice of a ram is occasionally found in European folklore ; near Maubeuge a ram is killed by one of the squires of the neighbourhood, and is believed to be laden with the sins of the people (Rolland, Faune, v. 206). But more commonly the sacrifice is performed without any specific reason being given for the ceremony. It is a common practice in Bohemia, Hungary, and other districts for a ram to be thrown from the church tower in the autumn in order to procure a good harvest in the following year (Mannhardt, Myth. Forsch. 139 n.). In Finland a lamb which has not been born since the spring is killed in the autumn ; it must be slaughtered without using a knife, and no bones must be broken. When it is served up, water, which probably has taken the place of blood, is sprinkled over the threshold, and a portion of the meal offered to the house-spirits and the trees which will serve as May-poles in the following year (Boëler-Kreutzwald, Der Ehrenberg, Geb. p. 87). In East and Central Europe a lamb is commonly sacrificed at Easter or rather later, the day chosen being usually April 24th (Globus, xxvi. 155, xxx. 93, xii. 71, etc. ; cf. Golden Bought, ii. 438). In West Europe there are traces of a similar custom ; at the time of the shamans, real and of wood, were on sale without the gate on the Friday before Whitsun tide ; children received them as presents, and they were eventually consumed by the family (Schildt, Schleswig-Holst. Ind. Alterth., iii. 7) ; they were brought as presents to the schoolmasters (Jahrb. f. Sch.-Holst. x. 29). In Virgen, a lamb is taken in procession on the Friday after Easter to a mountain-chapel and subsequently sold (Zts. Ver. Volksk. v. 235). The sheep and ram figures at Becot, which are sometimes identified as the souls of the dead, may also serve as a symbol of the sacred animals, as certain tribes, on certain occasions, sacrificed a lamb or sheep as 'Morgengabe' (Anthropologie, ii. 357 ; Holderness, New Russia,
The Gallas take an oath by the sheep (Pinkerton, Africa, i. 8). Spider—In the Creation myth of the Sias there was only one being in the lower world, the spider Susstintannako; he caused men, animals, etc., to come into existence, and divided them into clans (Jbth Ann. Rep. Brit. Ethi, 1889-1890, p. 20 f.). By killing them with fire he represents the 'medicine' power of the earth (Zts. RBEW p. 11). According to the Tetons, Ikto, the spider, was the first being in this world who attained maturity. He was the first to use human speech, and is more cunning. All the men are born kindred, and he commands them. In their myths the spider is deceived by the rabbit (Dorsey, Siouan Cults, p. 472). The Tetons pray to grey spiders. When they are going on a journey, they kill a spider if they see one, and pray; it is unlucky to let it pass or to kill it in silence. They tell it that the Thunder-beings killed it (16th Ann. Rep. Bur. Ethn. p. 479). In the mythology of the Akwapim, Anansi, the spider, is a sort of demi-god; he races the cat for the privilege of marrying the desired; hence that the spider and the cat are enemies (Petersmann Mit., 1856, 466; Frobinius, Weltanschauung, p. 294). Many of these myths are now found in the West Indies (P. C. Smith, Anansi Stories from Jamaica). The Adjahdurrahe believe the islands to which they have given an name, 'swan-maiden stories' (see 'Myths' above), but perhaps the most famous are those found by Wuttke, Occ. Ethn. (10th vi. 229). In a Kayowe myth, 'Old Spider' escapes the flood and is concerned with the early history of the human race (Ausland, 1890, 901). For the Flatheads the residence of their grandparents, the spiders, was in the clouds. Both in Australia (Howitt, Native Races, p. 338) and in America the spider's web is a means of getting to the sky (Trs. Ethn. Soc. iv. 306). The Cherokee told how the spider brought fire on its web, but was captured before it reached the earth (Foster, Sequoyah, p. 241). It is held in several parts of the world to kill the spider (Folklore, 1911). In Tuscany it is the custom to kill a spider seen in the morning (Andreu, Ethn. Par. p. 8). It is also killed in Poland (Trad. iv. 355). The Southern Slavs use it in magic; a girl takes a spider and shuts it up, calling on it to show her the destined lover, and promising to set it free if it does so, and if not, to kill it (Krauss, Sittte, p. 173).

There is a curious diversity in the omens given by spiders; in Ditsmarschen a black spider is a sign of good fortune (Oedr., i. 7). A spider in the evening is lucky, in the morning unlucky (ib. p. 64). In Stettin the reverse is the case (Balt. Studien, xxxii. 189). In Jewish folklore the spider is hated (JE vi. 607). For other spider omens see John of Salisbury, i. 13; Wolf, Beitr. ii. 457; Meier, Sagen, p. 221; Birlinger, 119, etc. For the spider in folk-tales see de Gebhardt, Zool. Myth. ii. 161-164.

Stork—The stork was sacred in ancient Egypt. The killer of one was punished as though he were a murderer (de Vries, Götter, p. 157). It enjoys the same respect wherever it is found in Europe. It is also respected in Egypt (Globus, lix. 257) and in Morocco (Clarke, Travels, iii. 34 n.) where it is said to be a hospital for sick storks and a fund for burying dead ones. The stork is commonly said to bring the children. Its presence brings luck to the house; in particular, it is a safeguard against the danger of fire; its efficacy is discounted by the stork's supposed practice of removing its nest from a house that is shortly to be burned down. Occasionally the stork, however, is thought to bring bad luck (Wiedemann, Ehren, p. 545), for one is not to touch one of the family who is a head of cattle dies. So, too, in Bohemia, a stork settling on the roof, or twelve storks circling over a house, means fire (Grohmann, Abergel. Nos. 438, 439; cf. Meyer, Germ. Myth. p. 110). For other omens and beliefs see Globus, xxxiv. The stork is one of the migrants which must be greeted when they appear in the spring; the house-stork must learn all that has happened in his absence. In other countries he is a man (Zts. deutsche Phil. i. 345). In spite of the sacrosanctity of the stork, it is used in magic (ib.; Grohmann, Abergel. No. 434), and its gall cures a scorpion's bite in Jewish folk-belief (JE xi. 559). For the stork in folk-tales see de Gebhardt, Zool. Myth. ii. 261-262.

Swallow—There seems to have existed a custom in ancient Greece of carrying a swallow round from house to house, singing a song (Atheneus viii. pp. 359, 360). Swallow songs sung at the appearance of the bird in spring are very common in Europe. The Kuhn and Seno legend has given it an name, 'Interview of the swan', and it has been found the swallow carried round in modern Greece, a wooden bird in a cylinder, and a song is sung (Rodd, Custom and Lore, p. 136; cf. p. 271). In Macedonia the wooden swallow is encircled with leaves. Eggs are collected and riddles are asked, the answer to which is 'swallow' (Bent, Cycloides, p. 434). The same practice prevails in Bulgaria and Little Russia, and the songs refer to the advent of spring (Miladinov, Bulgarski narodno pesni, p. 622).

The swallow is everywhere regarded as a sacred bird, it is unlucky to kill it (Kaindl, Husulen, p. 104; Stracke, Jochmann, Abergel. p. 45; Globus, xil. 325; Brit. Antiq. Ethnog. Surv. Scot. Nos. 379-383; Alvarez, Folklore, i. 224, etc.); it may not be touched in modern times (ib. 494 f.; FLR i. 8). In the West of Scotland, however, it is feared as having a drop of the bird's blood in its veins (Napier, Folklore, p. 112). Its presence is still regarded as lucky (KEW xi. 209; Roeholz, D. Glaube, i. 107). In spite of its sacred character, it is used in magic; in Bohemia the blood of the first swallow drives away freckles (Wuttke, D. Abergel. 1599, p. 159). The first swallow is important in other respects: it has long been the custom to draw omens from it (Pliny, HN xxx. 25; Hoffmann's Fundgrube f. Ges. d. Spr. u. Lit. i. 325, and many modern instances; Bartsch, Sagen, ii. 172; Germania, xix. 319). As a rule it is a sign of good omen; the bird is called 'hunting' by the Georgians, it means a death in the family if a young swallow is thrown outside at the nest (Zts. Ver. Volksk. x. 209). A swallow in a room is a death omen (Erman, Archiv, p. 628). For other omens see Grohmann, Abergel. Nos. 496, 504, etc. Swallows are sold in Paris and elsewhere and set free by the purchasers (Rolland, France, lii. 321; Rev. des Trad. Pop. iv. 229). A similar custom exists in Japan, and is especially practised at funerals (MS note). For the swallow see also Pauly-Wissowa, a. v. 'Aberglaube', p. 79.

Swan—In the opinion of the Old Testament, the goose has supplanted the swan in mythology to some extent; but the opposite view seems nearer the truth. Perhaps the same applies to the duck. In European folklore the swan is most prominent in a class of Marchen, to which it has given a name, — swan-maiden stories (see 'Myths' above), — but
in Picardy we find the duck taking the place of the swan (Romania, viii. 256). It may be noted that the subjects of transformation are not necessarily female (ib. ; cf. Mannhardt, Germ. Mythen, pp. 378–379).

The swan is important in the religion of N. Africa (cf. Cochran’s Pod. Journey, i. 163.; Ger. Reiseberichten, p. 282). Among the Tatras a man who catches a swan passes it on to his next neighbour and receives in return his best horse; its new possessor passes it on, and so on, until it is no longer presentable, when it is let loose (Castrén, Vorüberungen, p. 290). The oath by the swan was well known in the Middle Ages. In Moscow a swan is sometimes given to the newly married, who alone, in the opinion of the common people, have a right to eat it (Rev. des Trad. Pop. iv. 324). In Germanic folklore the swan is associated with the Norns, who sometimes assume its form (Meyer, Germ. Myth. p. 168). Its cry foretells a thaw, and it is pre-eminently a bird of prophecy, often of coming ill (ib. p. 112).

Thunderbird.—Wide-spread over the American continent is the belief in a great bird as the cause of thunder, which also figures in the Creation myths of some tribes, notably the Chipewyans, as the being which brought the world from beneath the waters (ib., Voyage, p. 256; Dick, op. cit., Oregon, p. 102). The Hare-skin Indians describe it as a gigantic bird which dwells in winter in the land of the dead in the West-South-West, together with migratory birds and animals. When the warm weather comes, it returns with the ghosts in its train. When it shakes its tailfeathers, it makes the thunder, and the flash of its eyes is the lightning. It causes death; it is an evil deity (Féroud, Traditions, p. 350). The Iroquois believed that Orendichaio controlled rain, wind, and thunder. The thunder they conceived as a man in the form of a turkey (?); the heaven was his palace, and he retired there in good weather; when it thundered he was cornering snakes and other ‘oki’ objects; he caused lightning by opening his wings (Ibid. des Jés. 1636, p. 114; for other references see Bancroft, vol. iii. passim ; Schoolcraft, Indian Tribes, etc.). In Vancouver Island the Absts call the thunderbird Tootooch; his wings may be seen, his form felt, the world is disturbed. Once there were four such birds, but Quaahtel, their great deity, drowned the rest in the sea (Sproat, Scenes, pp. 177, 213). The Dakotah say that the old bird begins the thunder, but the young bird, on seeing and dozing, changes it to wise and good, and kills no one (Tylor, Prim. Cult. 3. i. 383).

In Central America we find the bird Voc associated with Hurakan, the god of the tempest (Brasseur de Bourbourg, Popol Vuh, p. 71). In South America the idea is found among the Brazilians (Müller, Am. Urrel, pp. 222, 271; but see also Ehrenreich, Myth. und Legend. d. südamer. Urvölker, p. 15). The same conception is found in West Africa among the Ewe-speaking peoples. K. Kromhout, however, forms the tiger as a flying god, who paralyses the nature of a bird; his name means bird ‘that throws out fire.’ He casts the lightning from the midst of the black cloud; the thunder is caused by the flapping of his wings. Various ideas of the same order are found among the Basutos. The Zuuls think a brown bird is found at the spot where the lightning strikes; the Amapondos say that the bird causes the lightning by spitting out fire; according to the Bom-vanas, the bird sets its own fat on fire and causes the thunder. The Tsetse flies its wings; the female bird causes loud, cracking thunder, the male distant, rumbling sounds. In Natal they hold that a white bird is the cause of the lightning (Kidd, Essential Kafr, p. 120 f.; cf. Mofat, South Africa, p. 338; Cassalis, Barots, p. 266; Callaway, Religion of Amasuli, p. 119).

The conception of the thunderbird is also found in the Hervey Islands (Ellis, Researches, ii. 417; Williams, Enterprises, p. 93), and the Marshall Islands (Mitt. d. Schutzgeb. i. 66), and the Karens have a similar idea (ib. p. 212).

Thunder.—A myth of descent from a tiger ancestor is found among the Blulis and Rajputs (Crooke, ii. 211). It is associated with Siva and Durgā, but tiger-worship proper is confined to wilder tribes; in Nepal the tiger festival is known as Bagh Jatra, and the worshippers dance disguised as tigers (ib. p. 212). The tiger is likewise worshipped by the Santals (ib. p. 213), while in Mirzapur, Bagheswar, the tiger-god, is located in a bira tree, and is said to take human form at night and call people by name; those who answer fall sick (ib. i. 256 f., ii. 78).

The Waralis worship Waghia (‘lord of tigers’), a shapeless stone smeared with red lead and ghī, which is held to protect them from tigers (Home and For. Miss. Rec. 1853, 303; Ch. of Free Ch. vii. 259).

In Hanoi a tiger-god is worshipped; a shrine contains an image of a tiger (XI. Cong. Orient. ii. 294); and a tiger-god is also found in Manchuria (Miss. Cath. 1885, 239).

The tiger is represented in Sumatra as one of the souls of the dead (Marsden, p. 292; Junghuhn, Battländer, p. 308), and a name-tau is practised. A like custom is found in Sunda (Tijdachr. T. L. V. vi. 50) and parts of India, where the souls of those who have devours sit on his head (Crooke, ii. 211). For other cases of name-tau see Frazer, Golden Bough, ii. 457.

The hunting of the tiger is naturally attended with much ceremony. The Sumatrans attack tigers only when necessity compels, wounded, or in self-defence. The Menangkabauers try to catch them alive in order to beg their forgiveness before killing them; they show them other marks of respect; no one will use a path that has been antrodden for more than a year; at night they will not walk one behind another or knock the sparks off a firebrand (Golden Bough, ii. 303 f.).

The people of Mandeling have a tiger clan which honours the tracks of a tiger, and claims to be spared by it; when a tiger has been killed, the words ‘be not burned’ are written on it. When the Battas have killed a tiger they bring its corpse to the village with great ceremony; people of the tiger clan make offerings to it; a priest then explains why it has been killed, and begs the spirit of the tiger to show them the correct use of the tiger, so that it may not be angry and do harm; after this a dance is held, and most of the body is buried, only those parts being saved which are useful in medicine; in particular, the whiskers are burnt off at an early stage, so that they may not be used as poison (Golden Bough, ii. 304; Tijdachr. xxxiv. 172). Connected with the atonement for the death of a tiger is the Indian belief that a garden where a tiger has been killed loses its fertility (Crooke, ii. 213). Not once the tiger is known to be dangerous to kill a tiger, but being killed by one also has its peril; the ‘tiger ghost’ is worshipped (Crooke, p. 213).

Among the Garrows a man who has been killed by a tiger is believed to appear in a dream and tell his relatives to change their names (Mission Life, N. S. x. 290). In the South Aracan the ceremony of ‘ya,’ or tabu, is strictly enforced when any one has been killed by a tiger (JAI ii. 240). Connectet with tiger-worship is the practice of taking an oath by it. The Juangs, Hos, and Sants are all sworn to a tiger (Miss. Cath. 1897, 369; Crooke, loc. cit.). Among the Gonds, two men, believed to be possessed by Bāgheswar, appear at marriage ceremonies and fall upon a kid with their teeth (Crooke, ii. 218).
Besides being the abode of the soul of a dead man, a tiger may be the temporary or permanent form of a living human being. In India a root is said to effect the transformation, and another root is the antidote (Crooke, ii. 216). In Central Java the power of transformation is hereditary, but the wer-tiger is held to be friendly, especially if his friend, in human form, carries with him the root of the wili plant. The variant of this belief which makes the tiger the soul of a dead, not a living man, see Tijdsehr. xii. 568. The belief in the wer-tiger is also found in the Malay peninsula (Skeat, Malay Magic, p. 109). It derives from the practice of burying the dead with the tiger's mane (see Crooke, op. cit.).

Closely connected with the wer-tiger is the familiar of the wizard in tiger form. A connecting link is found in the Thana belief that mediums are possessed by a tiger spirit (Bombay Gaz. xiii. i. 188). The Binas of Johore believe that every pawang has a tiger subject to him, which is immortal (Journ. Ind. Arch. i. 276, 277). The Malays believe that the soul of the dead wizard enters the body of a tiger; the corpse is put in the forest and supplied with rice and water for seven days, after which the body is burned, and the result of an ancient compact made by the pawang's ancestors, is effected. If the son of the pawang wishes to succeed his father, he must perform a ceremony to secure his soul (Newbold, ii. 294). The tiger is too large to be taken to the grave: in North India and Korea it is eaten in order to gain courage (Golden Bought, ii. 366). In India the fangs, claws, and whisks are used in love charms and as propylactics against possession, especially in the case of young children (Crooke, ii. 214 f.). The whiskers are regarded as poisonous (Sumatra (Tijdsehr. loc. cit.) and in India (Crooke, loc. cit.). Tiger's flesh is burnt to keep blight from the crops (ib.). Some Dayaks keep a tiger's skull in the head-house; to move it is said to cause heavy rain, and to touch it is punished by death by lightning, while its complete removal would cause the death of all the Dayaks (JRAS, S.B. No. 5, p. 199).

Corresponding to lycanthropy in Europe, there is in India a pathological condition in which the sufferer believes that he has turned into a tiger (Sprengel, Auswahld, iii. 27). The Garrows say that the mania is connected with a certain drug, which is laid on the forehead. The wer-tiger bares his teeth, tears out the ear-rings of his ears, and then wanders about, avoiding all human society. In about fourteen days the mania begins to subside. Although fits of this kind are not attributed to witches in India, the patients are said to be seen with 'their eyes glaring red, their hair dishevelled and bristled, while their heads are often turned round in a strange convulsive manner.' On the nights of such fits they are believed to go abroad and ride on tigers (Malcolm, Memoir of Central India, ii. 212). It seems, therefore, not improbable that the fit in question is of the same nature.

Tortoise, turtle.—Both in Asia (Miss. Herald, xviii. 385; cf. Bastian, Bilder, p. 356; Crooke, i. 255) and in America the turtle is one of the mythical animals which the world rests on. In the Iroquois myth the world was at first covered with water, and when Aataensic fell from heaven, the animals held a conference to decide how she was to be received, and the turtle caught her on his back, and then stood on the earth, and was raised up by water-fowl; so the earth was formed (21st Ann. Rep. Bur. Ethn. p. 180, etc.). The turtle is an important Iroquois totem, and the clan traces its descent from a turtle that threw off its shell (Tot. p. 3). In like manner the totem is a tortoise of the Mandari Kols, and is also worshipped and sacrificed elsewhere in India (Crooke, loc. cit.). In Zoroastrianism, on the other hand, the tortoise was an evil creature, and consequently was to be killed (Vendidad, xiv. 5). A turtle tabu exists in Madagascar (v. Gennep, Tabou, p. 289), Java (Tijdsehr. T.V.L. E. iii. 573), and Pomotu (Bowings in the Pacific, p. 243); and the Kwasas were not allowed to lift a small wattled tortoise by its forelegs, as there should be a flood (Journ. Am. Folklore, viii. 130). The turtle was sacrificed in Pomotu (Miss. Cath. 1874, 378). The Zunis have the turtle as one of their totems. Sometimes they send to fetch turtles with great ceremony, and apparently each family receives one; the day after the turtle is killed, its flesh and bones deposited in the little river, and its shell made into a dance rattle. The object of the ceremony is obscure; Frazer suggests that the dead are fetched in the form of turtles and sent back to spirit-land; it seems very probable that the turtle is killed in order that it may be a messenger; but it does not seem that the ceremony is performed only by the turtle clan; how, therefore, the kinship terms applied to it are merely complimentary it is impossible to say (Golden Bought, ii. 271 f.). It seems, therefore, that the tabu is in no sense a taboo, and that it was not in magic, but in the idea of the turtle being the soul of a dead man, that the ceremony was performed; for it was not believed that the turtle lived again, but it was agreed that the turtle was the soul of a dead man, and that its flesh was thrown into the river in order to return him to his soul. If these tabus are not observed, the turtles leave the shore (v. Gennep, Tabou, p. 287). In the islands of Torres Straits many magical ceremonies were performed to prepare a canoe for turtle-fishing. There were many tabus connected with this affair, chiefly on the character of the fisherman; turtle dances were also performed to ensure success in the fishing (Camb. Univ. Exp. Reports, vol. v. pp. 196, 207, 271, 330-336). For the myths and folk-tales of the tortoise see de Gubernatis, Zool. Myth. ii. 93-95, 360-370.

Whale.—The Tongans regard the whale as the abode of certain deities, and never kill it; when they chance to come near one, they offer it scented oil or kava (Prim. Cult. i. 232). Among the Haidas the fin-backed whale is tabu, on the following ground that a dead man's soul sometimes enters it (JAJ xxi. 20). As a rule, however, the whale, like other large mammals, is feared but not exactly worshipped. In Madagascar they have a certain veneration for it, and have a special ritual for the whale-fishery; before any whale is killed the captain and wife submit to a certain number of tabus, of which chastity is one: the man remains in his hut and fasts regularly; in his absence his wife does the same. After various magical ceremonies, the boat is covered with branches by the magicians, the fishers sing supplications to the old whales, which they do not pursue, to give them their young ones. After bringing the whale to land, the canoe backs away from the shore and then returns at full speed, the haupeens in the bow; they harpoon the animal again, and are then seduced and carried to their huts, where, as a part of the ceremonies, their continence at once comes to an end; the whale is then cut up, and preparations for a feast are made; the carcass is decorated with necklaces, and one of the fishers makes a long prayer or address. Thereupon the whale is divided, and each hut receives a portion (v. Gennep, Tabou, p. 254 f.).

In preparation for the whale fishing the Aleutians celebrate a festival; after killing a number of whales they carry a wooden image of a whale into a hut with loud shouts, and cover it up so that no light can get in; then they bring it out again and shout together, 'The whale has fed into the sea' (Krack-eninnikov, ii. 215). The Kaniguitews consider whales to be in communication with evil spirits,
and fear them. They seem to have expiated the death of the whale as the Ainus do that of the bear. Whalers were initiated and lived in a special village; dead whales were buried in caves, and were regarded as tutelary divinities; they were placed in positions resembling those which they took during the chase of the whale; offerings were made to them; it was believed that if a man put a piece of slate at the entrance to the cave the dead whale would prepare a spearhead (Bouv. d'Anth. ii. 679–80). On the island of Thack whales were tabu during the fishing season; before it began, they searched for eagles' feathers, bears' hair, etc., as talismans; when the season was over, they hid their fishing implements in the mountain caves with the dead bodies; they stole the bodies of successful fishermen, some said as talismans, others in order to prepare poison from them (Lisiansky, Voyage, pp. 174, 209). In Vancouver Island whale-fishers are carefully selected; for months before the fishery they abstain from their usual food, practise continence, wash three times a day, reden their bodies, etc. Any accident during the fishery is put down to a violation of these tabus, and punishment is inflicted (Sproat, Savage Life, p. 227). The whole of the village shares in the proceeds of the whale, and in some cases an additional portion is paid to the slaughterman. A whale dance is performed at Cape Flattery (Swan, Indians, p. 70). In Nootka Sound a feast is held after the whale fishery, and the chief, before distributing the portions to the guests, performs a sort of communion, during which he imitates the blowing of a whale (de Saussure, New Voyages, ix.; Rogudefueil, p. 34). The great chiefs are buried in a special hut, which contains eight images of whales made of wood and placed in a line; after the bodies have been buried, they dig their way up, take off the heads, and place them on the backs of these images; the reason given is that it is done in memory of their skill in throwing the harpoon; but it has more probably a magical intention.

When a whale is caught, the chief goes to the hut to offer some of its blubber to his ancestors and return thanks to the sun (?); after the festival mentioned above, the chief carves a wooden whale and puts it before the shed (16, p. 102). The Eskimos of Greenland put this during their winter fishery, because the whale cannot endure dirtiness; if they were dirty clothes or some one took part in the chase who had touched a dead body, the whale would escape (Laharbe, xvi. 206; Egede, p. 18). The whale also in Norse folklore occurs during its winter fishery, because it is sacred, and is even associated with the dragon of Midgard (Meyer, German. Myth, p. 112 f.). Among the Yagans the initiants are bound to abstain from certain parts of the whale (South Am. Miss. Mag. iii. 117). In South Africa the Xosa make images of whales on the ground, at the initiation of young men (Macdonald, Africana, i. 131). The Anti-merina believe that earthquakes are due to whales (v. Gennep, Tabou, p. 257). The belief survives probably in the superstition that the whale supports the world.

The Russians attribute a deluge to the death of one of the four whales (Berl. Leseskabinett, 1844, p. 210). On the Gold Coast the stranding of a whale is regarded as a presage of great misfortunes (Reclus, xii. 438). A story resembling that of Jonah and the whale is a fairly wide-spread myth (Tylor, Prim. Cult., i. 359). For the Dog-Rib Indians the swallowing of a man, and his escape through being drawn out by his skin's side-lace, form the Introduction to a Deluge myth; the whale in his wrath raised great waves and inundated the earth (Petitot, Traditions, p. 319). The same incident of the swallowing is found among the Haidas and other tribes of the North-West Coast (Am. Ant. xi. 298, p. 370; Swan, N. W. Coast, p. 68). One of the incidents of Maniboosh's career is the victory over a monster who has swallowed him (Schoolcraft, Algic Researches, i. 138). At Eromanga a story is told of a man who fell into the water and was swallowed by a whale, but escaped because his ear-rings pricked the inside of the monster (Murray, Missions, p. 180; Turner, Nineteen Years, p. 496). The same incident is found in the Paumotu archipelago (Misz. Cath. 1884, 343). The Bechuana attribute the destruction of all save one woman to a monster whom they call Titan, which swallows them (Casalla, Langue Sechuana, p. 97). Among the Warangis of East Africa it is a snake which comes out of the sea (Mitt. d. Schutzgeb. xiii. 45).

Wolf.—Outside Europe, where the wer-wolf figures prominently in the popular belief of many countries, the wolf is, from a mythological point of view, comparatively unimportant. The Thilinkets have a god, Kahanukh, whose name means 'wolf'; he is the head of the wolf phraternity (Bancroft, iii. 115). It has, nevertheless, been denied that Kahanukh the god has anything to do with the wolf (JAF xxviii. p. 144). These tribes are, however, stated to have a kind of image which they preserve with great care, as a talisman (608). A wolf's head is sometimes exchanged for a piece of a wolf's head (Miss. Herald, 1829, p. 306). This may, on the other hand, refer to the individual's tutelary deity; for it is a common practice to carry an image of the manitou (Frazier, Tot. p. 54).

In Europe the wolf was especially associated by the Greeks with Apollo, who was called Ainos (Frazier, Pasus. i. xix. 3). Probably the wolf was originally worshipped or received offerings, as was the case among the Letts (Golden Bough, ii. 429); the cult was probably aided by that of Apollo, and it was supposed that he received his title from having exterminated wolves (ib.). Many stories connected Apollo with the wolf, some possibly due to a misunderstanding of his epithet aureipontis (Uliad, iv. 101, 119), probably meaning 'twilight-born' (Meyer, Handb. der griech. Etymologie, iv. 519), but interpreted by popular etymology as 'wolf-born.' In Delphi was a bronze image of a wolf; this was explained as the emblem of a holy robe of clothes for the wolf fishery, because Apollo protected the sacred wolf (Casalis, Langue Sechuana, p. 97). The wolf is said to have been sired by Aries, and is said to have been killed by a canibalistic feast, in which it was believed to result in transformation into wolves; according to a later legend, one portion of the human flesh was served up among the other sacrificial dishes, and the eater was believed to become a wer-wolf (Lang, Myth, etc., ii. 263). At Rome the wolf was associated with Mars, and the Lupercalia is sometimes interpreted as a wolf-festival; if the Luperci were wolf-priests, it is probable due to the connexion of the wolf with Mars and the wolf cave (Fowler, Rom. Fest. pp. 310–321).

The Kamtchatkans celebrated a wolf festival and related an aetiological myth (Krachennikow, p. 129). When the Koriaks have killed a wolf, they dress one of their number in its skin and dance round him, as they do round the bear, saying that it was a Russian who killed him (Golden Bough, ii. 997); the Tunguses kill a wolf with fear (Erman, Archiv, xi. 26). When the Kwakwinl Indians of British Columbia see a wolf, they lay it on a blanket and wait over the body; each person must eat four morsels of its heart. They bury it and give away the weapon with which it was killed. They believe that killing
a wolf causes scarcity of game (Golden Bough, ii. 396). In the same way in ancient Athens any one who killed a wolf had to bury it by subscription (ib.). Possibly the Cree custom of painting the faces of young wolves with vermilion or red ochre is a propitiatory ceremony (Heare, Northern Ocean, p. 363), for there is a prohibition of killing wolves in Norway, where, according to the author, the women and men of the tribe, in the course of the ceremony, repeatedly observed (ib. p. 243). A neighbouring tribe, the Chipewyans, forbade women to touch a wolf skin (Dunn, Oregon, p. 106). It is very common to use another name for the wolf than the ordinary German story of the Wolf (Rolf, p. 333; Rollin, Fauves, ii. 185, ii. 118; FLJ vii. 55, etc.). The Romans regarded the wolf as unclean, and purified the city with water and sulphur if a wolf got into the Capitol or the temple of Jupiter (de Gubernatis, p. 229).

The wolf is frequently found among the tutelary animals of the dancing or secret societies of North America. The Nootkas relate that wolves once took away a chief's son and tried to kill him; failing to do so, they became his friends, and ordered him on his return home to initiate the other members into the rites of the society, which they taught him. In the ceremony a pack of wolves, i.e. men with wolf masks, appears and carries off the novice; next day they bring him back apparently dead, and the society has to revive him (Golden Bough, iii. 434 ff.). Similar associations are recorded in the U.S. National Museum, 1895, 477-479), and among the Dakotas, by whom parts of the animal are used in magic, though they may not kill it (except, probably, at initiation), or eat it, or even step over or on it (Frazier, Tot, p. 60; cf. Schurz, Altertumsklassen, p. 164; and for these societies in general, pp. 150, 390 ff.). In connexion with these societies may be mentioned a curious confraternity that existed in Normandy till late in the last century. A prominent part in the midsummer ceremonies was taken by the Brotherhood of the Lupine Wolf and its chief; they ran round the fire hand in hand, and had to capture (while belaboured by the man selected for the headship, to which was attached the right of dressing the Wolf, in the following year (Golden Bough, iii. 289).

The corn-spirit is believed to take the form of a wolf (Golden Bough, ii. 264 ff.), and the binder of the last sheaf is sometimes called ‘the wolf.’ The wolf also appears at Christmas in Poland (ib. 266), and in Christmas in Nurk, along the Wolf- und Feldkulte, p. 323). In Norse mythology witches and giantesses ride on wolves yoked with serpents (Meyer, Germ. Myth, p. 142), while the demonic Fenrir-wolf is too well known to require more than passing mention here. In Zoroastrianism wolves rank as most evil animals (Yasna, ix. 18), and should be killed (Vendidad, xvii. 65). A wolf must be seen by a man before it spits him, or evil results will follow (Yasna, ix. 21)—a belief which has parallels in classical lore and in modern Europe (Darmesteter, Etudes iraniennes, ii. 244).

In Armenia, in like manner, wolves are even more evil than serpents, and numerous charms are used against them (Abeghian, Armen. Volksgaende, 114-118).

As the last dangerous animal to survive in many parts of Europe, the wolf has given its name to the group of beliefs based on the idea of the temporary or permanent transformation of living men into wolves or other animals (see Lycanthropy). The people of the Caucasus say, after a wolf has been killed, and the meat put on joints thereupon they acquire wolfish tendencies, and devour children. At times she puts off the wolf skin, and if any one can burn it the woman vanishes in smoke (Haxthansen, Transkaukasien, i. 329). For wolves in general see Tylor, Prim. Cult. ii. 312; Hertz, Der Werwolf; Baring-Gould, Book of Werewolves. A very similar belief is found in Armenia (Abeghian, op. cit. 116-118). As an ominous animal the wolf is commonly auspicious. For myths and folk-tales of the wolf see de Gubernatis, Zool. Myth. ii. 142-143. For the wolf see also Pauly-Wissowa, s.v. ‘Abergläube,’ p. 81.

Wren.—All over Europe the wren is called the ‘king of the birds’ (Golden Bough, ii. 442), and a German story of the Wolf (Folklore, xi. 290; NRF xxxviii. 230; NQ, 8th ser. x. 492, xi. 177, 297; Croker, Researches in the S. of Ireland, p. 233) at Christmas or somewhat later. In the Isle of Man the bird was killed on the night of Dec. 24, and fastened, with its wings extended, to a long pole. The following day it was then carried to the churchyard and finally taken in procession to the churchyard and buried. The feathers were distributed, and certain lines sung which seem to indicate that the wren was formerly boiled and eaten. In Ireland and Wales the bird was sometimes carried round alive. In France the successful hunter received the title of ‘King (Golden Bough, ii. 445). In Limousin the roi de la Triere was named, whereupon he had to strip naked and throw himself into the water. He then took a wren upon his wrist and proceeded into the town, where he stripped the bird of its feathers and scattered them in the air; finally, the wren was handed over to the representative of a squire (Tradition, iv. 106). Thereupon a wooden wren was attached to a high post and shot at; if it was not hit, a fine had to be paid. In Berry the newly married took a wren on a perch to the squire; it was put on a waggon drawn by oxen (ib. p. 364; Rolland, Faune, ii. 297). At Entraignes the wren had to be set free (ib.). It is probable that these ceremonies are connected with a former annual expulsions of evil; in Kamatohka a similar ceremony is performed in connexion with an annual festival (Krachenminikow, p. 147); a small bird is captured in the forest, roasted, and tasted, and the remainder is burnt, and the ashes are scattered as incense.

The wren is considered of good omen in Japan (Chamberlain, Kojiki, p. 241 n.), and among the Ainus (Batchelor, p. 439); in the Isle of Man fishermen take one to sea (Rolland, Faune, ii. 295), and it is used in the Tyrol folk-medicine (Ieyl, p. 139). Among the Karas the wren is believed to be able to cause rain (Miss. Cath. 1888, 261). In Australia the emu wren is a ‘sex totem’ (Golden Bough, iii. 416); near Tanganyika it seems to be a totem (Miss. Cath. 1885, 361). Both in Europe (Ann. Phil. Chrét. iii. 148) and in the Philippines (ib., p. 53) the wren is said to have brought fire from heaven or elsewhere. The wrens of one brood are said to be re-united on Christmas night (Ann. Phil. Chrét. i. 1). A song of the wren figures in the Pawnee Hako-ceremony (Bill RB EW ii. 191).
ANIIMISM. — Definition and Scope. — In the language of philosophy, Animism is the doctrine which places the source of mental and even physical life in an external fact, in some external power, of the body. From the point of view of the history of religious, the term is taken, in a wider sense, to denote the belief in the existence of spiritual beings, some attached to bodies of which they constitute the real personality (soul), others without necessary connexion with a determinate body (spirit). For convenience in treating the subject, it will be of advantage to study Animism separately under the following three forms: — (i.) Worship of the sun, the stars, the moon, etc., festing itself above all as worship of the dead (Neo-Necrolatry); (ii.) worship of spiritual beings who are not associated in a permanent way with certain bodies or objects (Spiritism); (iii.) worship of spiritual beings who direct the permanent or periodic, more or less periodically recurring phenomena of nature (Naturalism).

Animism in the sense just stated represents an attempt to explain in a rational way all the facts of the Universe. It is the religion and the philosophy of all non-civilized peoples. The "Ashtus or Zuīlis," writes Mr. Frank Cushings, "suppose the sun, moon, stars, and sea, in all their phenomena and elements, and all inanimate objects as well as plants, animals, and men, to belong to one great system of all-connected, and of degrees of relationship which seem to be determined largely, if not wholly, by the doctrine of Karma, which is generally held by the Zulus of West Africa. So that, if a man killed a man, a dog, a sheep, or a bird, he would not repay, save by the same way your Table of contents

visible garb, any more than the personality of a man was conceived of apart from his body. But it cannot have been long before a new inference made its presence felt. The experience of dreams led men to the conclusion that their ego was different from their body, that it could separate itself from the latter—temporarily during sleep, finally at death—and yet remain, as one of the possible native abilities of human beings, being asked by a traveller whether he believed that his yambo could quit his body, replied: 'It must be so; for, when I sleep, I go to distant places, I see distant people, I even speak and act as if I were dead.' (Howitt, 'On some Australian Beliefs' in JAF, vol. xiii. [1884] p. 189.)

i. Necrolatry.—It will of course be understood that, in employing the terms 'soul,' 'spirit,' 'personality,' we do not mean to attribute to savages any notion of immortal entities, such as is arrived at by making abstraction successively of all the properties of matter except force. The soul is to them simply a being of a more subtle essence, generally invisible but not always intangible, subject, perhaps, to various wishes to measure to all the limitations of human beings, but endowed at the same time with mysterious faculties.

Hitherto no people has been met with which does not believe in the existence and survival of a soul, or which does not admit the possibility of their intervention in the affairs of the living, and which does not seek to enter into relations with them by processes which are everywhere closely analogous—either by offering to them anything of which they were fond during their lifetime, or by applying to them the methods resorted to by sorcery in order to avert or to control superhuman powers. The assertions of some authors to the contrary effect are due to incomplete observation, hasty generalization, or misunderstanding of the sense of the terms employed.

The souls of living beings are generally believed to be the pale and vague image of the body itself. It is the double, as it appears in dreams. Sometimes the soul is assimilated to the shadow cast by the body (the shades of poetical language), or to its reflection in water. At other times we find it confounded with the breath (Lat. anima, Gr. ἀρνίος, Skr. pātra, Heb. רוח = 'breath,' 'wind'), or with the beats of the heart and lungs. Thus it may have a special name or be attributed to it, borrowed from living beings or what are viewed as such: birds, serpents, insects, ignes fatui, meteors, wreaths of vapour, etc. There are peoples who imagine that man possesses a plurality of souls, each with its distinct rôle.

Souls, it is supposed, may feel the counter-stroke of wounds inflicted upon the body or of diseases which attack it. Again, the same body may become successively the seat of a number of souls, the same soul may inhabit in turn various bodies. Hence the magical processes, not uncommon among non-civilized peoples, whereby it is sought to replace the original soul by a superior one; and the custom, observed among some savage races, of divining at the moment of death, the moment he shows the first signs of mental or physical decay, the personage—sorcerer, chief, or king—who it concerns the tribe to preserve in the full possession of his faculties. This soul is thought to pass yet unimpaired into the body of his successor.

What becomes of the double after death? In general it is supposed to continue to haunt the corpse as long as any part of it remains, or to frequent the vicinity of the tomb. At times the notion of survival is limited to the more or less vivid recollection retained of the deceased.

'Ask the negro,' writes Du Chaillu (TTE, p. 308), 'there is the spirit of his great-grandfather, he says he does not know; it is done. Ask him about the spirits of his father or brother who died yesterday, this year, or last year, and you get the same answer. Thus the theory of retribution finds room by the side of the theory of continuation, and probably succeeds to it.'

At the end of a certain period, or as the result of certain rites, the soul, as is sometimes held, reincarnates itself; or, more frequently, it is believed to take its departure to another world—successively, in forests and meadows; at the summit of a mountain, above the vault of heaven, in the stars, etc. There it leads a vague, colourless, miserable existence (this is the peculiar quality of subterranean abodes, Sheol or Hades); or, it may be, an existence moulded more or less closely upon the earthly life, each shade retaining his rank and his circumstances.

But, even upon this hypothesis of another abode, the soul is still supposed to intervene in the affairs of the living, especially when the deceased turns turn legislator or lawgiver to take vengeance upon his enemies. Hence the importance assumed by Ancestor-worship, a practice which has played so large a part, as has been shown by Herbert Spencer, in the consolidation of families and the origin of races, in the fear of ghosts, in filial affection, and in the desire to preserve for the family the benefits of paternal protection. Once it is admitted that death does not interrupt the relations between men, it is logical to suppose that a father after his decease will retain a prejudice in favour of his descendants, and will seek to add to their welfare and to protect them against dangers at home or abroad. The children, for their part, in order to preserve his favour, will have to continue to show him the consideration he demanded in his lifetime: they must also maintain the organization of the family and assure the permanence of the home, so that this cult may never be interrupted.

By the side of ancestors, and at times above them, a place comes to be taken by the nanes of illustrious personages who have profoudly impressed the popular imagination—chiefs, sorcerers, conquerors, heroes, legislators, and reputed founders of the tribe or the city.

The worship of ancestors sometimes includes the belief that all the members of a tribe are descended from some individual who is held to have possessed the form of an animal or, more rarely, of a plant. This involves certain relations of consanguinity with all the representatives of this species. See Totemism.

The notion that the lot of souls in the future life is regulated by their conduct in the present life belongs to a more advanced stage in the evolution of religious ideas. Its appearance and development can be traced in the majority of historical religions. The first stage is to accept the principle that souls have awarded to them a better or worse existence according as they have or have not, during their sojourn on earth, deserved the favour of the superhuman powers. The last stage is reached when it is supposed that, upon the analogy of what happens in well ordered societies, the lot of the soul is made the subject of a formally conducted process of judgment, where good and evil actions are weighed in the balance, and the happiness or suffering of the deceased is decided. This favourite titles to future rendering to the gods, pious actions, sacrifices: afterwards they are services rendered to the community which it is the aim of the gods to protect. Thus the theory of retribution finds room by the side of the theory of continuation, and probably succeeds to it. But
even this method of regulating the destiny of souls after death does not exclude such an eventuality as their temporary return to earth and entrance into relations with the living.

ii. Spiritism.—Once a start has been made by attributing to all living beings, and even to a great many inanimate objects, a mental equipment which differs from a man's own merely in the degree of activity and power, it is a logical inference that souls may, in their turn, separate themselves temporarily from their bodies, and, if the latter be dissolved, may survive them. These souls assume, in rule, the physiognomy of a double, or a form appropriate to their function, but always chosen so as to imply movement and life. Moreover, at this stage of intellectual development, man will cherish a belief in the existence, as independent agents, of a multitude of analogous souls proceeding from beings and objects which he has not known. These souls, from the very circumstance that they have lost their connexion with particular bodies, acquire a fitness for assuming all aspects and performing all offices.

Such is the origin of spirits, to whose agency are finally attributed all phenomena which men can neither explain by natural causes nor set down to the account of some supernatural being with functions exactly defined. The most benighted savages, even when they have no idea of the distinction between natural and supernatural, perceive quite clearly that certain events are due to causes whose connexion with life is bewitched. They do not need to wait till a Newton came to reveal the law of gravitation, in order to convince themselves that, if an apple detached from a tree falls to the ground, there is nothing in this phenomenon but what is natural and capable of being foreseen. But everything that strikes them as unusual and unexpected—and this category includes the great majority of phenomena—seems to them due to the action of invisible powers acting through mysterious processes. These powers bear, amongst all non-civilized peoples, a generic name which corresponds in their respective languages to our term 'spirits.'

The disembodied spirits may introduce themselves into the body of a man, thus to invade the body of a man, they take the place of his personality, or at least introduce disorders; to them are attributed the phenomena of possession, inspiration, second sight, intoxication, disease. All these things are explanations assigned diseases either to the entrance of a spirit into the body, or to wounds inflicted by a spirit from outside, or to the removal of the soul by a malevolent spirit. When spirits penetrate into a material object, they make it the vehicle or the organ of their own personality, and thus transform it into a fetish. The fetish differs from the amulet (or the talisman) in that the latter owes its efficacy to a property transmitted from without, whereas the fetish itself always owes its value to the presence of its spirit.

When one begins to introduce something like order amongst the superhuman powers, spirits are grouped in classes according to the sphere which they inhabit or the function which they discharge. Thus we have spirits of the air, of the under world, of the waters, of fire, of plants, of flocks, etc. The physical form attributed to them is generally one borrowed from living animate beings, but enriched with fantastic features.

The souls of natural objects endowed with the character of permanence or of periodicity (such as the sky, the earth, the heavenly bodies, the elements, vegetation, etc.) often tend to assume a special importance. They are, none the less, regarded as distinct from their visible garb, and likewise have a proper physical form assigned to them, which is ordinarily the human form or that of one of the higher animals. The genius so conceived of may temporarily leave their domain and even intervene in a number of affairs that have no connexion with their original function. They are thus led to employ the spirits of men, of ancestors and upon that of ordinary spirits. When we look at them from another side, we note that, while the majority of spirits are regarded as malevolent, and are dreaded and treated accordingly, the genius of Nature sometimes ill-natured and at other times propitious, like the phenomena over which they preside; and hence they tend to awake in their worshippers a mingled sentiment of fear and of affection, corresponding to this double aspect of their nature. We frequently note a disposition to exaggerate their benevolent side, and, above all, their power by the use of flatteries, unconscious or deliberate, which in the end are brought forward as the expression of the truth. Certain genius tend thus to outstrip the other human powers, and to become man's allies in his conflict with the hostile forces of Nature.

To the above differentiation in the conception of souls there corresponds a certain variety in the forms of cult. Being of foreign origin—homage—predominate in the relations with the higher rank of the Divine Powers; on the other hand, it is acts of conjuration—evocation, incantation, exorcism—that are employed by preference with the spirits of the earth. This explains why magic is the ordinary companion of Spiritism. Where the evolution of religion has developed neither veneration for the forces of Nature nor the worship of Ancestors, the cult consists almost exclusively—in the case of the aborigines, the Australians, the natives of Siberia and South America, etc.—of processes intended to avert or to subjugate the superhuman powers. Among these peoples the conception of the world as a domain abandoned to the caprices of arbitrary and malevolent wills makes of religion a reign of terror, weighing constantly upon the life of the savage, and barring all progress. On the other hand, where Animism develops into polytheism, it may be viewed as a mechanism leading to making the Divine Power the supreme agent who seeks order in nature and the good of humanity.

The subject will be more fully dealt with under Soul and Spirit.

Godet d'Avileva.

ANNAM (Popular Religion).—A characteristic of the Annamese is the multiplicity and variety of their cults. Ignorance of the sciences, of the arts, of philosophy, by conviction, they are only indifferently versed in the three great religions of foreign origin that prevail in their country—Chinese Buddhism (Phât gido), which is celebrated in the pagoda (chúa); Confucianism (Nhô gido), in the temples of the educated (ôn miêu, ôn chi); and Taoism (Thô' tinh, thô' c'ac bo), in the palace (phu' dên). These are official cults, practised especially by the upper classes and the learned.

So also the cult of the Sky and the Earth, which allows no other celebrant than the sovereign, and the cult of the ruling Emperor receive from the Annamese only subordinate veneration. We shall not describe these cults, which are all of Chinese importation, but refer the reader to art. CHINA.
The masses retain their preference for ancestor-worship (thọ ếng bđ lòng), which the head of the family offers in a reserved part of the house (nhà tô); for the Genii and Spirits of all kinds, which are invoked in the chapels (miệt); and for the numerous magical performances (phế thudát), which have come from China, from India, and from the island and such of the Inland Provinces as are simply autochthonous. No one has yet succeeded in finally deciding what belongs to each of these various influences. They all co-operate in perpetuating the old animistic beliefs, which have remained very deep-rooted in Annam as elsewhere.

1. Animism.—To the inhabitant of Annam life is a universal phenomenon; it is the common possession not only of men and animals, but also of things—stones, plants, stars, and of the elements—earth, fire, water, wind, etc.

To all he gives a sex and a rank. The sun is male; the moon, his wife, is female; the stars send good fortune and bad from on high. Then some animals have been anthropomorphized or even given a human shape; and all at the same time reverence for them; e.g. in Annam they always speak of 'Sir Tiger' (Ong Cọp). Hence that worship, which is so strange, of the whale, the dolphin, and the tiger, Annamites not only admit that life is common to all existing things, but conceive of that life as not isolated, but as collective; they see it in groups, not in individuals. This difficulty in conceiving individualism is one which is not confined to the Annamites. It exists in almost all primitive races, and still continues among those of slow-development, as in China, for example, where the idea of collective solidarity, the conception in groups, has legal consequences. When a crime is committed in China, not only is the guilty one punished, but his forefathers, his descendants, his parents, his friends, and even his neighbours. In the collection of taxes, the upper classes in the community are always responsible to the treasury for the general crowd.

In addition to these two ideas of universality and collectivity of life, the Annamites believe in the contingency and permeability of beings who do not form distinct categories, but can pass from one genus or species to another under certain conditions; so effective and time. Hence theriomorphism and totemism.

The elephant was born from the star aó Quang, the rabbit from the moon. A fox at the age of fifty years can change into an old woman; a hundred years into a lovely maiden, very dangerous to her lovers; at a thousand years of age, if he happens to find in a cemetery a human skull which fits his head, may become a spectre, or a being similar to the Hindu pây; Sows can go the length of changing into courtesans.

The fish after a thousand years becomes a dragon, the rat at the end, hundred years a bat, and the bat after another hundred years a swallow. Any one who can catch it at the time of metamorphosis and eat its flesh becomes immortal. Tigers' hairs may give birth to worms. Even plants are capable of similar transformation: the chudl tree (a kind of banana), on reaching a thousand years of age, becomes a goat. The people maintain that a banyan tree (Ficus indica, Linnaeus) which grew within the precincts of a temple near Hanoi, on being cut down, became transformed into a blue buffalo. The ngl-dông (Eleococcus serrulata, Linnaeus) has the power to change itself at night into a ghost with a buffalo's head.

These transformations, possible to plants and animals, are still more so to supernatural beings, as it is even to man. The fetishes (bô tin, nght), for instance, often take the shape of butterflies, the genii of men and monkeys. The mother of an Annamite of the Trán dynasty (1380-1402) appeared in the form of a large cock crowing on the air near Hanoi, and as she passed to her mother was being offered. Some sorcerers have a still more extraordinary gift: certain of them can eat swarms of bees from grains of rice, with which they fill their mouths and which then blow out forcibly into the air: others ride on a simple shovel of water: they can cast their faces into a donkey and then change back into its original state.

In this reciprocal and continuous intermingling of the life of all beings, pairing cannot be determined or limited by species. The legend of the founding of Cố-loa tells of the union of a maiden with a white cock. Dinh-bọ-Lành, at one time a drover in the Ninh-binh mountains, who founded the national Annamite dynasty in the 10th cent., is said to have been the son of a woman and an ox. These totemic legends enable us to understand such names as the Fox clan, the Dragon clan, the clan of the Red Sparrow-hawks, assumed in semi-historical times by the tribes among which Annam was divided. The Annals state that, down to the 14th cent., the kings of Annam tatuéd their bodies with the representations of a dragon, in allusion to their legendary origin.

For a similar reason, but with a more practical object, the inhabitants of fishing villages used to tons themselves with the figure of a crocodile in order to establish their relationship with the numerous crocodiles of their shores, and to be spared by them. Others in the same way used to adorn their bodies with a serpent, in order to avoid being bitten by those formidable reptiles.

Union was possible not only between men and animals, but also between human beings and supernatural beings, genii, or vampires, especially as vampires often assume the appearance of men, to be better able to deceive the women they wish to possess. O-lô, a famous personage at the court of the Hanoi kings, the legends affirm, than the genius of the Ma-la or life of Si-Doang, Annamite ambassador to the court of China.

The phenomenon of conception, in the popular beliefs of the Annamites, not only does not always presuppose the union of species of the two parents, but can even be accomplished without sexual intercourse between them. Nearly all the heroes of the semi-historical period in Annam are sons of miraculous fertilization. The mother of the assassin of king Dinh-Tên-Hoang, who ascended the throne in 968, became pregnant after dreaming that she was swallowing the moon. Another king was born from a fresh egg that his mother had taken from a swallow's nest and eaten. The legends abound with analogous cases in which fertilization is due to spring-water, the touch of a handkerchief, the tail of a star, etc.

Another result of this absence of limits to beings and things is that everything that resembles a certain individual, in however small a degree, may at a given moment be regarded as the individual, and undergo the treatment that was to befall him. Here we come upon the spells often practised by the Annamite sorcerers. The effigy of the person whom they wish to see dead. By analogous reasoning, they burn at the graves paper representations or even merely a list of all the objects (clothing, furniture, jewels, houses, etc.) that the dead man is supposed to take away with him.

Similarly, any particular condition is transmissable by contact, without regard to the person's own will. That is why a person who wants to avoid all misfortune has to keep constantly in the shade. A pregnant woman must be careful not to accept betel-pellets from a woman who has already had a miscarriage, under penalty of abortion. She must not eat double bananas if she does not want to give birth to twins. A person carrying straw that avoid passing a field of rice in blossom; the rice would change to straw. They believe also in the contagion of death, and several parts of the funeral ceremony aim specially at guarding them from it.

Lost in the thicket of those considerations, the one who surrounds him, haunted by the terrible and manifold forms that that life can take to destroy him, the Annamites live constantly on the defensive. If he tries by sacrifices and offerings to gain the favour of the good spirits, he has first to appease the malignant ones, under whatever form they appear, and to foresee, and consequently to
at id, all the misfortunes which may befall him. Hence the cults of the good and evil genii, of certain animals and of souls, the belief in magic and presentiments, and a whole series of prophylactic ceremonies before each important event in life, especially the marriage, and death.

2. Good Spirits.—In the belief of the good spirits is Ngô-ro-u'o (Tonkin), the one-footed spirit, whose worship, the Annamese, asserts, was brought from Nam-quan in China to Tonkin by a Taoist priest. He flourishes chiefly in Nghè-An, but he has worshippers throughout the peninsula of Tonkin. Dóc-Quôc, the other spirit, assumes the form of a warrior of noble bearing, brandishing an axe in his only hand, which is always represented in profile. His body, cut in two lengthwise, rests on a single foot. A prayer taken from the ritual of the spirit praises his merits thus: 'The one-footed Spirit has only one eye and only one foot, but he is swift as lightning and sees all that happens in the world. He sees afar the evil spirits who bring plague, ruin, and misfortune. He calls to his aid the millions of celestial soldiers. He protects and avenges men. Tigers and demons dread him. He sends good or bad weather as he chooses, makes the sun to shine or the rain to fall, and cures all diseases.'

When hunters catch an animal in their nets, they kill it and then pull off a part of its left ear, which they bury in the spot where the animal was caught, as an offering to the Spirit of the soil (Thọ Trân). Then the prey is flayed and dismembered. Its heart, cut up into small pieces, is cooked on burning coals. These pieces are then laid on broad leaves on the ground; and the chief of the hunters, protrasting himself four times, informs Thọ Trân that such and such a band of men from such and such a place has lately undergone the deprivation of depriving of him of such and such an animal. The animal is then divided among all the hunters.

In fields of eatable or market-garden plants (cucumbers, water-melons, etc.), they often erect a miniature chapel of straw to the Lord of the earth (Thọ Chù). In this way the field is placed under the protection of the spirit; and thieves are far more afraid to come near it, for it is Thọ Chù, and not the owner, that they dread having anything to do with.

For the same purpose of protection, travellers, on leaving the river for the sea, make offerings of gill paper at the mouth of the river, in order to secure the favour of the sea-spirits. Those who travel by land throw them at the turnings of the road to avoid accidents, especially the teeth of the tiger.

There are also female spirits (chu' vi), who inhabit forests, springs, thickets, and certain trees. At their head is the five great spirits (ngu roi), among whom are the evil genii (ghi), and other smaller genii, who, according to the Annamese, inhabit all space. They include the whole of the Ma and the Qui, evil spirits or devils, hobgoblins, vampires, and ghosts, which are constantly adding to their number by flying from the millions of the wandering souls of the dead.

Physical and moral pain, epidemics, ruin, and accidents come from them. There is the Spirit of Choilers, of Small-pox, of Bad Luck, etc. It is for this reason that the Annamese seek by every means to appease them, and are far more concerned about them than about the good spirits.

For, whereas the good spirits harm human beings only when they are offended or slandered by them,
the evil spirits are incessantly trying to work mischief. They can be disarmed only by means of sacrifices, or rendered harmless by the protection of the good spirits.

In the first rank we must place the worship rendered to the spirits of the autochthones (chu' ngu), the original possessors of the soil, which wander about in the tombs, or descents, of their dead, and prevent them from being raised from the dead. They are supposed to live on offerings which they demand, and are said to cause misfortunes to the living. Hence, in order to placate them, the Annamese offer sacrifices. The owner of a house will place a little flowered bit of lamb and a fish and a small cake in front of the thresholds of the house, and then, raising his voice, will call on the spirits to accept the offerings with which they are invited to fill the house with prosperity.

The Ma-trot-trot, or souls of behelden persons, are the cause of whirlwinds. The Annamese scare these demons away by calling out ‘Chem! Chem!’ (‘Behold you!’).

The Ma-thän-vong, or souls of those who have hanged themselves, try to entice to another attempt at suicide those who have been saved when attempting to hang themselves. For these the charm is broken by cutting the strings which hold the rope. If this precaution has been omitted, the danger may still be obviated by a ceremony in which a Ma-thän-vong is represented with a rope in his hand. They burn this little figure, and then the rope of the hanged man is cut in pieces.

The Com-tda, or imaginations, are especially fond of tormenting young children, in whom they cause frights, convulsions, head eruptions, etc. Twelve in number, they each rule an hour of the day. An offering of twelve red handkerchiefs, twelve mirrors, and twelve fans, under some large stone, and the child is under a banana leaf, wards off their evil influence. Amulet, such as tigers' claws, vultures' vertebra, or a tiger's skull, hung above the children's cradles, drive away the Com-tda.

The Méc-chön dwell in trees, and continue to live in them even when their dwelling-place has been cut down and used as material for building houses. These demons, lying down on people when asleep, give them nightmares.

It is well to beware also of the Ma-dan, gigantic ghosts of buffaloes and elephants, and especially the Côn-kém, or abandoned souls, who, having died a violent death, return to torment the living. They are appeased by offerings of leaves of imitation gold or silver, or counterfeit bank-notes. The wandering souls which have not had burial take shelter by ‘millions and tens of millions’ in the shade of shrubs and trees. At night they come in crowds to attack people passing on their way, and they send misfortune to those who forget them. So large is their number and so sad their lot, that small temples of wood or bamboo are erected for them, or small stone altars, sometimes formed simply by a stone at the foot of a tree. The individual whose business is in danger tries to gain the favour of these miserable souls by oblations, which almost always consist of paper representations of bars of gold or silver, paper shoes, and rice. The rice is scattered broadcast to the four cardinal points, while the offerer says: ‘This is for the miserable souls who wander among the clouds, at the mercy of the winds, and whose bodies have rotted in the sun, and who have been drowned, and who have been offered water. Let each single grain of rice produce one hundred. Let each hundred produce ten thousand, and let the wandering souls be satisfied.’

The souls then hasten forward under the supervision of two spirits, one of which notices them by ringing a bell, while the other, sword in hand, sees to the just division of the rice among the hungry souls.

4. Animal-worship.—From their ancient animal-cult the Annamese have retained some forms of worship, as well as a veneration born of fear, for a certain number of animals. The animal most dreaded is Ông Cáp, a type of respect equivalent *
to ‘Sir Tiger.’ This awe-inspiring feline is worshipped in many places, and has special priests or sorcerers, the thây-dông. Small stone temples are erected to him, provided with two altars, the one a little back and on the top of the other. On the lower one a huge lamp burns in honour of the spirit who is the real ‘Lord.’ At the foot of this altar, Ong Cop is painted on a screen, seated, with bristling whiskers and sparkling eyes. Sometimes the temple has nothing on its altar except a stone tiger.

The thây-dông, by means of a medium called dông, enter into communication with the spirits, and in their name exorcise, cure, give advice for the success of such and such a matter, etc.

This tiger, although so greatly respected, is nevertheless, in practical life, hunted with great keenness; and the Annamese, while eagerly pursuing it, from fear of being devoured by it, are careful to honour it and to speak of it with the most reverential fear. Among them fear or horror is often expressed by such exclamations as: ‘O cop,’ ‘Tiger’s ghost!’ ‘Cop loi,’ ‘The tiger is coming!’ etc.

To excuse the unreasonable conduct of this, they imagine two kinds of tigers: those which feed on human flesh, and are always on the lookout for slaughter, and which men should kill mercilessly; and the real tigers, creatures which are endowed with supernatural powers, have a horror of human flesh, and live in solitude at the foot of the mountains.

Being devoured by a tiger implies predestination or heredity. Predestination would come from a misdeed committed in a former existence, and which they would call an unreasonableness which was never in view. They are afraid of this, for the length of time of nearly all magical occurrences among the Annamese.

They have a very great regard also for Ong Voi, ‘Sir Elephant,’ who is considered as strong as he is modest, and for Con trâm nu’cô, ‘the water buffalo,’ a fabulous animal which causes the waters to divide before it. If the person who holds a hair of this buffalo can cross a river, he is safe.

The dolphin (Că nui’cô, Că voi) is very much revered, especially by the maritime population. He is believed to save shipwrecked sailors by carrying them on his back. They also give him the title of Ong, ‘Grandfather,’ My Lord, ‘The Venerable.’ They make use of a periphrasis to announce his death, or say that he is dead and has received the official name of ‘Spirit with the jade scales.’

The dead body of a dolphin encountered at sea is a presage of good fortune. It is taken ashore and buried with ceremony. The captain of the vessel that discovers it becomes the ‘son of the dolphin,’ conducts the obsequies, and wears the prescribed mourning. The bones of the dolphin, exhumed after three months and ten days, are laid in a sanctuary, this being a great honour, and the property for the whole village. Every boat, during its voyages, is on the lookout for the death of a dolphin. After the death of a Chine’s tombs may give the idea of their to a less fortunate village. The transference takes place with solemn rites, after the consent of the dolphin has been obtained by ceremony with sacrifices.

Ong Ty, ‘Sir Rat,’ is invoked both by farmers, that he may not devour the rice which is being sown, and by sailors, that he may not gnaw their boat of woven bamboo.

Ong Tôm, ‘Sir Silk-Worm,’ is treated with the greatest deference during its breeding; in order to counteract the great mortality of its species. To Ong Chá, ‘Sir Stag,’ the peasants offer sacrifices, and beg of him not to devastate the fields of rice which they have planted in a newly-cleared corner of a forest, since normally the stag has every right to regard this very place as his home.

Ong Chang, ‘Sir Wild Buffalo,’ is implored in the same way to spare the harvests.

The serpent is the object of a worship equal to the fear which they inspire. They and the tigers are the great animal powers dreaded by the Annamese.

To meet a serpent is a bad omen and the serpent, they must be careful not to cut off its head with a knife, since it would escape and pursue them. So also, when holding a serpent by the tail, they must not let it wriggle itself in the air, for feet would immediately grow on it. Pythons’ fat (con tram) makes a very good depurative.

Certain milli-peds have in their mouths a bright stone, the possession of which renders a person invulnerable to serpents.

The leech is the symbol of immortality, because it is indestructible. When killed it lives again; when cut in pieces it multiplies; if it has been dried, it becomes reanimated whenever it is put into water; if it is burnt, from its moltened substance a crowd of young leeches. There is only one way of getting rid of it, to put it into a box along with some honey; then it disappears. There is reason to beware of the leech; for, if put into a person’s ear, it creeps into the brain, multiplies in it, and devours it.

Pigeons have the gift of reading the future and foreseeing misfortune. When a pigeon is seen by a hunter, the hunt is sure to be unsuccessful.

The little gecko, or calling lizard (Hemidactylus maurusa), which also causes a serious wound that may be cured by drinking the blood which exudes from a black cat’s tail, the end of which has been cut off. When cooked, the skink is an excellent remedy for asthma and guillain (mumps) in pigs.

A mad dog inflicts bites which are fatal, unless one manages to pull the head of the dog out of its wound. After that, the bitten man’s head; then he may recover.

Certain vegetables, material of the sea and even the elements, require reverential treatment, for they may be receptacles of a mysterious power.

When a junk or a house is built, the sorcerer is sent for before it is occupied, and he exorcises the spirits which might still be dwelling in the pieces of wood and might bring misfortune.

Before putting a new junk into the water, the sailors sacrifice to Ong Hô Bô, ‘Lord of the River.’ If, during their voyage, they notice in the middle of the water a tree trunk which might knock against and capsize their vessel, they immediately sacrifice to Ong Gô, ‘Sir Tree-trunk.’ They treat Ong Thọ, ‘Sir Wind,’ which, with equal consideration for the sailor, may be sent, or at least called, to the man’s head; then he may recover.

Aerolites (đen sa), or meteoric stones, are the objects of great reverence. They are supposed to be intimately associated with lightning. They fall at each beginning of a thunder-peak, sink into the ground, and after three months and ten days I come out of it again.

The possession of a dry stick is a guarantee of good luck. Aerolites chase away the evil spirits, which are terrified at their fall, and which at each peak of thunder run to take shelter under the hat or umbrella of the people they meet. According to them, every peal of thunder the Annamese take care to raise their hats or umbrellas a little to guard against their intrusion.

Aerolite powder mixed with water keeps children safe from evil spirits. In smallpox it ensures regular and favourable suppuration.

The skull of a male (more especially of a child or a youth) who has been struck by lightning, which afterwards had formulas recited over it, becomes a useful charm, and even a very good medium.

5. Priest-sorcery.—Beliefs so numerous and so entangled produce very complicated cults. All the various kinds of spirits have different requirements, and in order to secure their favour it is necessary to be fully aware of what they desire and of the offerings which they prefer. The common people are quite at a loss among their numerous charms, magical songs, exorcisms, and sacrifices. Hence arises a body of special priest-sorcerers among the Annamese.

The most numerous class is that of the thây phám thây, the masters of amulets and purificatory

* Needless to say, the virulence of the hemidactyl is a fable, and the skink seldom bites.

† The length of time of nearly all magical occurrences among the Annamese.
waters,' who have no regular temples, and who, when they go home, take their altar and the cult-objects with them. Some of them are the celebra-
tants in temples erected by individuals. They officiate there at certain anniversaries, or when a person is imploiring the intervention of the spirit of these temples.

If they are persons of a higher order, the th'dy-phap or th'dy-dông, practise only in their homes. Having a very numerous clientèle, they are often able to build stone temples in which to officiate, and which are their own property. They are assisted by a dày, or chief priest, and a th'nx, or their foot. On the latter are invoked the spirit and the petitioner; for hypnotism, real or feigned, plays the chief rôle in these ceremonies. All these sorcerers derive their power from certain good or evil spirits, to which they have dedicated themselves, and which, after being raised, remain in direct communication with them, possessing them and speaking through their voices. The sorcerers can not only command the spirits, but are also able to influence the normal order of occurrences in nature. They raise the dead, cast love-spells, and send telepathic suggestions to persons whom they wish to employ against others. They can instantaneously change the nature of beings and substances, transform a savoury dish into fish, or change a dog into a cock; they can send diseases, defects, or pains to whomsoever they choose.

They can also employ their power to do good. It is they who cure illnesses, exorcise people possessed and houses haunted by demons, cause rain to fall or to cease, and find out treasures. They do not require a formal amount of power, when any one is annoyed by the spite of a sorcerer, the only thing to do is to set a more powerful sorcerer against him.

The sorcerers still manufacture love philtres and talismans, for ensuring a return of some one who or parted with a garment belonging to the person by whom they wish to be loved. Some sorcerers are regular spell doctors, who perform their spells in public (nh'mng-nha).

They then make the call th'dy-ngat, and have great skill in killing, causing illness, and inspiring love or hatred. They secretly cultivate the tumbaga trees, or their flowers, or in some isolated place, and then go and choose the one that they need at the appointed hour. While uprooting it, they recite incantations over it, informing it of the cruel design to be accomplished and of the hour at which it is to take place. Then, either directly or by means of a third person, who in most cases knows nothing about the part which they are making him play, they endeavor to bring the least particle of ngat into contact with the enemy whom they wish to harm. The latter is immediately stricken by a disease, and may die unless he happens to get the better of it, or unless the hatred of the avenger does not go the length of death. Only another sorcerer can cure him.

A popular superstition claims that these th'dy-ngat are not the only cause of the sufferings of the people; that there are in existence some families of professional poisoners, who, on various pretenses, slip into their houses and poison their provisions, especially the water. These persons poison from filial piety, because one of their ancestors poisoned somebody. His descendant must imitate him at least once a year, to satisfy his spirit. If they did not succeed, they would have to sacrifice one of their own kin. That is the reason why, when their odious practices have achieved the slightest success, they sacrifice a child at their turn. In order to fulfill their duty, and account for this fear, the Annamese take great care that strangers do not get near the family provisions, especially the Jars where they keep the water.

6. Fortune-telling.—The Annamese have also fortune-tellers (th'dy-bôi), who are nearly always blind, and rather poorly remunerated. They cast nativities by means of copper coins, whose position, heads or tails, determines the prediction.

In the temples the divining logs and rods may be interrogated. The logs are two pieces of lacquered wood, like coteledons, which give an affirmative answer when both fall on the same side, and a negative if the other way.

The rods, about thirty in number, have figures in Chinese characters, which, on being referred to a horoscope, give the reply of destiny. Other oracle books are read by means of these signs.

The Annamese practise chiromancy, physiognomy, and phrenology. Several fortune-tellers, instead of examining the hand of the querist, obtain their prognostications from a cock's or hen's foot. One acts all the lines to the invoked spirit and the petitioner; for hypnotism, real or feigned, plays the chief role in these ceremonies. All these sorcerers derive their power from certain good or evil spirits, to which they have dedicated themselves, and which, after being raised, remain in direct communication with them, possessing them and speaking through their voices. The sorcerers can only commands the spirits, but are also able to influence the normal order of occurrences in nature. They raise the dead, cast love-spells, and send telepathic suggestions to persons whom they wish to employ against others. They can instantaneously change the nature of beings and substances, transform a savoury dish into fish, or change a dog into a cock; they can send diseases, defects, or pains to whomsoever they choose.

They can also employ their power to do good. It is they who cure illnesses, exorcise people possessed and houses haunted by demons, cause rain to fall or to cease, and find out treasures. They do not require a formal amount of power, when any one is annoyed by the spite of a sorcerer, the only thing to do is to set a more powerful sorcerer against him.

The sorcerers still manufacture love philtres and talismans, for ensuring a return of some one who or parted with a garment belonging to the person by whom they wish to be loved. Some sorcerers are regular spell doctors, who perform their spells in public (nh'mng-nha).

They then make the call th'dy-ngat, and have great skill in killing, causing illness, and inspiring love or hatred. They secretly cultivate the tumbaga trees, or their flowers, or in some isolated place, and then go and choose the one that they need at the appointed hour. While uprooting it, they recite incantations over it, informing it of the cruel design to be accomplished and of the hour at which it is to take place. Then, either directly or by means of a third person, who in most cases knows nothing about the part which they are making him play, they endeavor to bring the least particle of ngat into contact with the enemy whom they wish to harm. The latter is immediately stricken by a disease, and may die unless he happens to get the better of it, or unless the hatred of the avenger does not go the length of death. Only another sorcerer can cure him.

A popular superstition claims that these th'dy-ngat are not the only cause of the sufferings of the people; that there are in existence some families of professional poisoners, who, on various pretenses, slip into their houses and poison their provisions, especially the water. These persons poison from filial piety, because one of their ancestors poisoned somebody. His descendant must imitate him at least once a year, to satisfy his spirit. If they did not succeed, they would have to sacrifice one of their own kin. That is the reason why, when their odious practices have achieved the slightest success, they sacrifice a child at their turn. In order to fulfill their duty, and account for this fear, the Annamese take great care that strangers do not get near the family provisions, especially the Jars where they keep the water.

6. Fortune-telling.—The Annamese have also fortune-tellers (th'dy-bôi), who are nearly always blind, and rather poorly remunerated. They cast nativities by means of copper coins, whose position, heads or tails, determines the prediction.

In the temples the divining logs and rods may be
The doctor and the sorcerer attend the invalid in turn, and it is not the former that is most listened to. The people try to prevent misfortune and its visitations by amulets and sacrifices to the spirits. If these precautions fail, they have recourse to the doctor (and they do not pay him unless he succeeds in curing the patient); and in grave cases they nearly always call in the sorcerer instead.

The two most terrible diseases that the Annamese have to do with are cholera and smallpox. Quite spiritual taliations are needed against the demon of cholera, whose wiles and sorceries are held to be insufficient. The frightful rapidity of the disease does not allow of lengthy therapeutics.

Smallpox, which is even more frequent, is perhaps broadest still more. It is never spoken of except in periphrases, and its postulates receive the reverential designation of 'Ong.' Smallpox is attributed to evil spirits, and especially to the souls of persons who have already died of smallpox (Con ma đâu). The latter are responsible for appearing as the people when the mild cases are due to predestination. Whenever a sick person is attacked by smallpox, he is isolated, not from fear of contagion, but from fear of the evil spirits which have taken possession of the invalid. Nevertheless, if the child is a victim, the father and mother never leave him alone, and they surround him with a net to prevent the approach of the Con ma đâu.

When the disease takes a serious turn, many of the physicians abandon their patients, not so much, perhaps, to avoid attempting an impossible task, as to be safe from the anger of the Con ma đâu. In fact, one of their proverbs says: 'If you cure smallpox, it will have its revenge; if you endeavour to the passes of the curer.' It is believed that the children of doctors die from the smallpox from which their father has saved others.

During times of epidemic, if a family has already lost a child from smallpox, they are afraid that he will come and take away his surviving brothers and sisters, and they sacrifice at his grave to prevent him from leaving it. Amulets and witchcraft are the only cures for smallpox.

Of the house of the illness they place under the bed of the smallpox patient a têr, a fish with a smooth green skin, of the sardine genus, which is believed to become impregnated with the smallpox until it stiffs with it.

In order that the erythematous stage may pass quickly into the putulant, and to favour the further formation of crusts, the patient eats shrimps and crabs. On the other hand, when desquamation has set in, he eats fish with scales in order to hasten the process. Yams are prescribed for it, for would change into a multitude of worms in the softened liver and lungs of the patient.

So also, if the smallpox patient wishes to prevent a relapse when convalescent, he must avoid walking barefooted on damp dung.

Lastly, when smallpox (or any other epidemic) is raging, everybody sacrifices to the crowd of malevolent spirits known by the generic name of quan-sơn, the primary cause of all ills. For these sacrifices, at the beginning of the hot season, when the death-rate is highest, they manufacture or buy paper figures representing a demon whom they wish to be saved, and burn them in the village square. The offerings intended to appease the evil spirits are placed in little paper boats, which they send off at the edge of the water.

9. Birth.—The Annamese, who are a very prolific race, are anxious to have numerous posterity. They try above all to avoid miscarriages, still-born children, and infant mortality. In their eyes still-born or prematurely born children are special spirits in short successive incarnations, denoted by the name of Con lơn ('entering life'). The mother of a Con lơn is considered contagious. No young woman would accept a betel-pellet from her. They speak of her as 'the demoness a.'

Successive miscarriages are believed to be re-in-
carnations of the same spirit. In order to get rid of this evil influence, when a woman who has had one or more miscarriages is about to be confined again, a young dog is killed and cut in three pieces, which are buried under the woman's bed; and with the blood of the dog amulets are traced, which are taken to the future mother.

The evil spirit which presides at these premature deaths is called Me con rankh, 'the mother of abor-
tions.' It is represented in the form of a woman in white, sitting in a tree, where she rocks her children.

To drive away this demon from the body of the pregnant woman, they exorcize it. For this purpose they make two small figures representing a mother and child. They place the mother on a bed, and burn them, after the sorcerer has adjured the evil spirit with threats no longer to torment the family which is performing the exorcism.

When a woman is pregnant, there is a very simple way of determining beforehand the sex of the child. Some one calls the woman, and she turns to reply. If she turns to the left, a boy will be born; if she turns to the right, a girl.

At the time of confinement the woman is subjected to a special diet of dried salted food, and a fire (hut bô) is kept burning under the bed—a custom which is common to all the Indo-Chinese. They invoke the twelve goddesses of birth and other deities.

If the parturient woman is in danger, the father prostrates himself and entreats the child to be born. Immediately after the birth the young mother is tranquiled by being led by the natives who have been attending her, and then fumigations and washings take place.

The part of the umbilical cord that is close to the section is preserved. It is, according to the Annamese, a powerful fabri-
cate for the use of children. These authorizes the name of the child from the fact that it prohibits from entering the house women whose confinement have been difficult or followed by accidents, and who might bring bad fortune.

Thirty days after the birth, during which the mother has been isolated, all the things belonging to her are burnt.

Various ceremonies then take place, with offerings of fowls, bananas, rice, etc., to thank the goddesses of birth, and afterwards to give fluent speech to the child. They take special care not to pronounce any words of evil omen, as, e.g., speaking of illnesses, among others of thrush, for fear of giving it to the child. They also avoid frying anything in the house. That would cause blisters on the mother and the newly-born child.

As it is not quite customary to enter the room where the mother and the child are lying, each member of the family, in order that the child may make his acquaintance and not cry on seeing him, dips a part of his coat in a little water, which is given to the child to drink.

Towards the end of the first month after the birth, they sacrifice to the birth-goddesses and give the child a name. As far as possible, this name must never have belonged to any member of the father's or the mother's family. The rice that is offered on this occasion is tinted in five colours: white, black, red, blue, and yellow. Each of the invited guests presents a gift to the child.

The child that sucks the milk of a pregnant woman soon dies (of mesenteric atrophy), because that milk is supposed not to have reached its maturity.

It is supposed that, on awakening in the morning, a person's bite is venomous, though it ceases to be poisonous when the vapours which cause the venom have passed away. In order to avoid such a bite, the Annamese mother does not suckle her infant until it cries.

When a child remains sickly and difficult to bring up, to baffle the evil spirits which are tormenting it, the parents pretend to sell it either to the spirit of the hearth or to the Buddha, and they throw it to the Buddhist bronze. It then receives another name and is resold to its parents, as if it were a strange child.

When the child is one year old, a fresh sacrifice to the birth-goddesses takes place. Then they
spread out playthings and tools before the child. From his choice they infer his future aptitudes.

When a child less than a year old sneezes, they call him ‘Com de’ (rice and fish!). The same cry is raised when he fails to laugh, as if to help in his need. When a child is subject to hiscough, they stick on his forehead the end of a betel-leaf bitten off by the teeth.

When a child is taken away, they make a stroke or a cross on his forehead with a cinder from the hearth, so that the spirit of the hearth may protect him from the evil influence during the journey.

When they cannot take a child under seven years of age away on the journey, they stick a little wax on his head in order that he may not regret his parents.

20. Marriage.—Marriage does not admit of so many magical rites. But when a marriage has been arranged and presents exchanged, the engaged couple consider themselves as married; and if one of them were to die, the other would wear mourning.

Misconduct of the girl before her marriage is strictly forbidden. In case of pregnancy, she is compelled to name her seducer. If he denies his guilt, he is retained until the birth of the child. An official proof by blood then takes place, which is called rich man. They link one of the infant's fingers with one of the suspected person's, make a stroke in each, and catch the blood in a vessel. If the two kinds of blood form two separate clots, the accused is declared innocent; if they mix, he is guilty, and receives punishment.

21. Death.—Funerals are as complicated as they are long and expensive. That is why certain families are not able to celebrate them until five or six months after the death, and are obliged to inter their dead provisionally.

The funeral rites include the putting on of mourning garments and the beginning of the lamentation. At the head of the funeral procession which conducts the dead man to his last resting-place walks the bonze; next come men bearing white streamers, on which are inscribed the virtues and the name of the deceased; next, under the shade of a large umbrella, the hearse of the soul, a small winding-sheet which is supposed to contain the soul, sometimes replaced by the tableau of the deceased; then, in grand funerals, a puppet, dressed in beautiful clothes, representing the dead, and of all the hearse, followed by the family and friends. All along the road they throw gold and silver papers representing money, to attract the attention of the evil spirits and secure an uninterrupted passage. The coffin, after being taken into the grave, is not covered with earth until the sorcerer has ascertained, by means of a compass, the best orientation for it. A lengthy and pompous sacrifice, which only the rich can afford, terminates the ceremony.

Fresh sacrifices take place after seven weeks, then after a hundred days, one year, two years, and twenty-seven months after the death. About three years after the death, the corpse is exhumed in order that its bones may be enclosed in the regular tomb, after which there is an anniversary sacrifice in which they burn a copy of the imperial diploma conferring a posthumous title, and a new ceremony, of Buddhist origin, called the great fast or deliverance of the souls, which will obtain for the deceased the remission of all his sins. The sacrifice concludes with offerings to the wandering and hungry souls.

ANTOINE CARATON.

ANNIHILATION.—It has been a matter of dispute whether anything once brought into existence can ever be utterly annihilated. That possibility being conceded, whether this fate is in store for the souls of the impotent wickeds. Of these questions the first is purely theoretic and academic, appealing only to the interest of the few; the second, like other eschatological problems, has been keenly and widely debated. It is a remarkable example of the divergence in point of view between East and West, that the destiny which in the one hemisphere has been propounded as the final reward of virtue should in the other be regarded as the extremest penalty of wickedness. Where the theory of annihilation has found favour with Christian believers, its acceptance has usually been due rather to a recoil from the thought of the eternal duration of future punishment, than to the influence of philosophical and theological arguments which can be urged on its behalf. Distracted between an equal reluctance to accept the eternity of hell or to admit the universal salvation of all men, some thinkers have found a way out of their difficulty by questioning the truth of the exclusive alternative between eternal blessedness and eternal woe hereafter. Thus they have been led to examine a third possibility, viz. the complete extinction of the wickeds. The discussion of the problem belongs to that region of thought where both philosophy and theology have a claim to be heard. Whether the nature of the soul is such that the cessation of its existence is conceivable, is a question which cannot be argued except upon a basis of philosophical principles; what may be the bearing of the teaching of the Bible and of the commonly received tradition of the Church upon the point can be determined only by exegesis and by study of the history of dogma.

1. The question stated.—Obviously, the controversy concerning annihilation, so understood, arises only among those who are at least agreed as to the fact of survival after death. It is legitimate, therefore, at the outset to dismiss from consideration those theories which represent death as being of necessity the end of individual being. We are not here concerned to rebut the opinions of the materialist, who holds life to be a function of matter, or of the pantheist, for whom death is the moment of the re-absorption of the individual life into the common fund of existence. Still less do we accept the agreement as to survival after death, whether in a partaking of the ways, according as men accept or reject the view that the life so prolonged is destined to continue for ever. That it must so continue is the opinion of believers in the natural immortality of the soul. Nor must those who hold this view be accused of making an extravagant claim on behalf of human nature, as though they maintained the soul's independent and absolute immortality. Admitting that the life of the soul, though prolonged to infinity, must ultimately reach its end, the prominent power of God, they contend that this relation of dependence is outside the bounds of time, and everlasting. By the annihilationist, on the other hand, the opinion of the soul's natural immortality, even in this restricted and legitimate sense, is considered a dangerous error, the root out of
which has grown a false eschatology. In place of the conception of an immortal life belonging essentially and inalienably to the soul, he would substitute that of an existence naturally destined to extinction, except under certain specified conditions. Upon this denial of the soul's natural immortality his whole system, from the assumption of the law of development to the conclusion of the Phaedo, must be considered as founded on a positive crede and ready to give an account of it, he justly claims that, logically, the *omnes pro bandi* as to immortality lies rather with those who affirm than with himself who denies that doctrine.

2. The natural immortality of the soul is the question.---This is not the place in which to state at any length or with any completeness the arguments for the immortality of the soul. It will be sufficient if we so far indicate the grounds of belief as to render intelligible the objections which have been urged on the other side. Undoubtedly, the strongest force working in favour of a general acceptance of the belief in natural immortality has been the dominant influence of Platonism in the earlier stages of the development of Christian doctrine, "Our creeds," it has been said, "are the formulae of victorious Platonism." And though that statement may stand in need of some qualification, yet it is true in the main of the belief in immortality taught in the Phaedo which has become the accepted tenet of the Church. Moreover, it is remarkable how comparatively insignificant are the additions which have been made to Plato's argument since it was first constructed by his pupils, and even by the great modern, who has attempted to prove the immortality of man—Plato down to Franklin and Hume. Whately appears to us to have failed completely in his attempt to prove 'that the natural immortality of man is discoverable by reason. That the natural immortality of man is discoverable by reason may be denied on the ground that it has not been discovered or, if it is necessarily, it would be easy to multiply quotations to the same effect.

There is a living principle in man which cannot be affected by bodily death, such as a presence of the kind from which few but declared materialists would dissent. That this living principle will manifest itself in a prolongation of the individual life is a conclusion for which there is a large measure of philosophical precedent, though not direct demonstration or proof. That the life so prolonged will continue for ever is a tenable hypothesis, but it cannot be presented as an inference from universally admitted premises. Hence, in the absence of any proof of the conviction of natural immortality, theories of annihilation may be justly supposed to be untenable.

3. Arguments for annihilation.---The hypothesis of annihilation has in its favour the following considerations.---(a) Cosmological. If the souls of the wicked are eventually to be annihilated, then the process of creation and redemption may be represented as destined to issue in unqualified success. When all that is evil shall have been finally removed, nothing will remain but light and love; whereas every theory of everlasting punishment involves the admission that a shadow of impene-trable darkness will hang for ever over a portion of the universe.

It was maintained by some medieval theologians that the existence of this shadow would intensify by contrast the enjoyments of the light by the saved. 1 A more plausible objection is perhaps drawn from the suggestion of such a reason for the everlasting duration of misery, and indeed takes precisely the opposite line, holding that the happiness of the saved could not be completed unless the other members of their race were suffering (cf. Rothe, *Dogmatik, p. 48*). Even though evil be regarded as positive and hateful, stripped of all its capacity for assimilation, and, yet its continued existence would seem to constitute a protest against the Divine fact of infinite justice and immutability, the yearning of the soul for justice and the yearning of the soul for the exercise of its capacity in these respects, the yearning of the soul for the exercise of its capacity in these respects, the yearning of the soul for the exercise of its capacity in these respects, the yearning of the soul for the exercise of its capacity in these respects.

(b) Psychologica. The further argument in the same direction is derived from the nature of the soul. In so far as the soul can be regarded as the Jab of the body, the corruption of the body would be a corruption of the soul. But the required certainty is not forthcoming. However firmly convinced the student may be in his own mind of the fact of human immortality, he must nevertheless admit that, technically, the philosophic proof of the doctrine is far from reaching the standard of demonstration. The history of human thought enforces the admission. Even among the immediate inheritors of the Platonic tradition there were many who, the most not the least, held to an annihilation theory and carried no conviction. Still less was the tenet of individual immortality acceptable to Peripatetics, Stoics, or Epicureans. And, as in ancient times the world remained unconvinced, so to-day the doctrine of individual immortality, however combined and expanded, is by no means universally admitted.

If we take the arguments in the order given above, we shall find that each in turn has been subjected to damaging criticisms. Energy (it is retorted) cannot indeed be destroyed, but it may be disipated. What reason, therefore, have we for thinking that the force which underlies the individual life will be exempt from the general law of dissipation? If the premises of the idealist philosophy be conceded, there are, doubtless, a legitimate inference to the existence of an immortal element in the human spirit, but that conclusion does not decide the question of the individuality of the soul. Even the admission of the kinship of the soul with the Divine Being is consistent with the denial of individual immortality. The ethical principle which the injustices and inequalities of the present life shall be rectified in the future—certainly by far the most powerful influence in inducing the belief in immortality—is not, however, the case by the conception of a survival not necessarily endless. In truth, writes Lord Macaulay, "all the philosophers, ancient and modern, who have attempted to prove the immortality of man—from Plato down to Franklin and Hume, Whately appears to us to have failed completely in his attempt to prove that the natural immortality of man is discoverable by reason. That the natural immortality of man is discoverable by reason may be denied on the ground that it has not been discovered or, if it is necessarily, it would be easy to multiply quotations to the same effect. That there is a living principle in man which cannot be affected by bodily death, such as a presence of the kind from which few but declared materialists would dissent. That this living principle will manifest itself in a prolongation of the individual life is a conclusion for which there is a large measure of philosophical precedent, though not direct demonstration or proof. That the life so prolonged will continue for ever is a tenable hypothesis, but it cannot be presented as an inference from universally admitted premises. Hence, in the absence of any proof of the conviction of natural immortality, theories of annihilation may be justly supposed to be untenable. When all that is evil shall have been finally removed, nothing will remain but light and love; whereas every theory of everlasting punishment involves the admission that a shadow of impene-trable darkness will hang for ever over a portion of the universe.

1 Thomas Aquinas, *Summa*, III, sup. xxiv. 1.

soul and its relation to moral evil. All evil is self-contradictory, and therefore tends to be self-destructive. The wicked soul is not only at enmity with others, but divided against itself. And if the doctrine of natural immortality be abandoned, what is there to prevent the internal discord from accomplishing the work of disintegration, and even of total dissipation of the individual being? That evil is in its essence negative rather than positive, has been a widely accepted theory. It would seem to suggest the conclusion that the soul which identifies itself with this principle of non-being is less than alive, until it passes out of existence altogether. Sin, it has been said, may be regarded as a 'poison to which the vital forces of the soul must in the end give way by passing into sheer extinction' (cf. Gladstone, Studies Subsidiary to Butler, 1896, p. 218).

(c) Practical. So strong is the tendency towards Pragmatism at the present day, that little objection is raised when the acceptance of a theory is justified by an appeal to its supposed beneficial effects upon practice. To judgments of value, as distinguished from judgments of fact, it is assigned special validity of their own. In accordance with these principles, annihilationists have pointed to the influence of their doctrine upon the moral life of man. The prospect of annihilation for the wicked, and eternal life for the righteous, provides (they say) a positive incentive to holiness, and to the fears of mankind. Nothing can be a greater inducement to moral effort than the hope of acquiring an immortality otherwise unattainable; nothing a greater deterrent than the threatened doom of total extinction. If capital punishment upon earth arose in the highest degree the fears of the criminal, the thought of an execution in which soul as well as body shall be involved in a common destruction is sufficient to appall the most indifferent and the most hardened.

4. Counter arguments.—Counter considerations to the above arguments are not wanting, and have been brought forward with effect by critics of the theory. (a) Whatever plausibility there may be in the argument that sinners must cease to exist in order that the final state of the universe may be altogether holy, is greatly lessened by reflection on the obvious truth of our profound ignorance with regard to the whole problem of evil. Where the mystery is so impenetrable, it is well to remember that any inference must be hazardous in the extreme. And, after all, the ultimate and inexplicable riddle of the world lies in the present fact of evil rather than in the questions concerning its origin and its end. If we cannot reach even an inkling of the solution of the mystery of evil, present though it be before our eyes and lodged in our own hearts, we are in no position to indulge in rash speculations as to the mode of its introduction into the universe, and the likelihood of its final evanescence. Our complete ignorance is never a very acceptable conclusion to any argument, yet along this line we can arrive at no other result.

(b) Nor, again, does the argument from the nature of the soul produce conviction. Advocates of the theory of annihilation are too apt to confuse absence of proof with proof to the contrary. Right as they may be in questioning the demonstrative cogency of the commonly received arguments for the immortality of the soul, they go beyond the mark in thereupon assuming its mortality. The positive arguments which can be produced to prove that the soul is subject to decay are at best conjectural. Ultimately they depend upon the assumption that the nature of the soul is complex, and therefore capable of disintegration. And that assumption is as much an unproved hypothesis as is the contrary theory of the soul's indisceptibility.

(c) Lastly, the utilitarian arguments in favour of annihilation suffer from the weakness inherent in all considerations of that type. In spite of the stress which Pragmatists lay on the will to believe and on the credit due to judgments of value, it still remains true that the claims of the pure reason in speculation cannot be disregarded with impunity. A strong sense of the beneficial effects which will follow from a given belief may properly lead the inquirer to a diligent search for arguments point- ing the way; but unless he does this with an obligation of finding them. Hence, though it be admitted that threatenings of hell-fire and never-ending torments belong to a stage of theological thought now outgrown, and have ceased to exercise a deterrent effect upon sinners; and though it be granted that a crude presentation of the theory of universal restoration may deaden the conscience and encourage a lamentable slackness of moral effort; and though it were true that an obvious way of avoiding these opposite dangers might be found in the adoption of a denial, would a denial, yet such a case would still be lacking in solid support. And, indeed, whatever be thought of the first two admissions, it cannot be denied that the last of the three is dubious in the extreme. Even where temporal interests only are concerned, it cannot escape our notice that the argument to calculate correctly the deterrent effects of different punishments. A fortiori must it be a hopeless task to discover the comparative deterrent effects of the fear of eternal punishment and the fear of death.

5. Annihilation and Biblical eschatology.—In the literature of annihilation a great deal of space is devoted to the examination of passages of Scripture supposed to bear more or less directly upon the subject. In this article no attempt will be made to deal with particular passages and texts; it will be sufficient to point out why neither in the NT nor in the NT can we expect to find an explicit negative or affirmative answer to questions as to natural immortality. The gradual emergence of the hope of a future life among the Jews has formed the subject of prolonged and minute study, leading to some generally accepted results. Belief in a future life, beginning in the OT, is little more than a dim and uncertain hope, developed under the stress of national suffering and disaster until it succeeded in establishing itself as an integral part of the national creed. Long as the process was, yet the course the issue of the soul's natural immortality seems never to have been raised.

Nor is this surprising, when the conditions under which the belief grew up are recognized. Belief in immortality did not supersede a definitely formulated view of the contrary, a belief in the soul's mortality. In early times the Israelites had shared the common Semitic conception of the desire of man after death. They had looked forward, not to annihilation, but to a shadowy existence in Sheol. It is maintained by Dr. Young Davies (Critical History of the Earth) that the gradual development of their monothestic religion actually deepened the fear of death among them. The conception is less paradoxical than it appears at first view. to be a blessing of communion with God to be confined to this life, the more highly they came to rate their earthly lot, the more highly they feared death. In the OT the statistics of human life are a warning, not of destruction, of purposelessness, of darkness, and of emptiness. This gloomy view of death was still current among the Jews in the time of Christ, and we find little pressed to its logical conclusion in the doctrine of the resurrection. Yet life in Sheol, however bare of all that makes life desirable, was better than nothingness.

Except in the latest books of the OT canon, where we may already trace the influence of Greek
thought at work, the possibility of complete annihilation is not contemplated in the OT. Hence, though it is true that in the OT there is no declaration of belief in the soul's natural immortality, yet it is equally true that there is no counter declaration of its possible extinction. The question was raised in Exodus, but not die entirely had not yet been asked. To attempt to find in the language of the writers of the OT a definite 'yes' or 'no' is to be guilty of an anachronism.

In the NT the situation is somewhat different. Contact with Greek thought and with the prevalent skepticism of the heathen world had by this time familiarized Jewish thinkers with the philosophic aspect of the problem. So far there is no reason why any NT writer should not deal with the question of the nature of the soul's life, and with the possibility of its death. In some Apocalyp-ptic writings of earlier date than the Christian era, the annihilation of the enemies of Israel is foretold as one of the events of the last days (cf. Enoch xxxviii, 5, 6, Apoc. Bar. i. xii. 4-6; Charles, op. cit. pp. 240, 265). But in the NT the indications as to the ultimate fate of the wicked are of doubtful interpretation.

Apostles and Evangelists were concerned primarily not with the theory of human destinies, but with the practical task of propagating the faith. In their preoccupation with the least likely occupying a prominent place; but the time for any discussion of the presuppositions of Christian eschatology had not yet arrived. It was enough for them to insist on the glorious certainty of eternal life through Jesus Christ, and on the inevitable penalty of the coexistence hereafter in the language of the NT: 'The extreme they make use must not be treated as though it were deliberately chosen in view of possible differences of opinion as to the nature of the future life of the wicked.

When due allowance is made for the inexactitude of popular language, it will appear that the NT no less than the OT leaves the question of the soul's mortality altogether underdetermined. On the one hand, the expression 'immortal soul' is notably absent, and, so far as it goes, this is evidence of the absence of the idea from the cycle of primitive Christian conceptions. On the other hand, the words 'death' and 'destruction', freely employed in the NT to describe the fate of the wicked, cannot carry the weight of inference which the annihilationists desire to place upon them.

E. White's book, Life in Christ, affords an example of the attempt to draw evidence for the doctrine of annihilation in the language of the NT. Of this work, J. Agar Beet, who himself makes an emphatic protest against the rigid enforcement of the traditional doctrine, sums up his criticism as follows: 'Thus fails, in my view, Mr. White's main argument. The language and able work I find no provision for the ultimate extinction of the wicked except that contained in the plain meaning of two Greek words (ανιψιήνυμι, ανιψι- ηνυμου). And that this is their plain meaning, i.e. the only one they fairly admit, is disproved by their use in classical Greek and in the Greek Bible (The Last Things, p. 290). Neither for nor against annihilation is the language of Scripture explicit beyond the reach of controversy.

Annihilation and Patristic eschatology. — The eschatological thought of the Early Fathers was influenced alike by the ideas which Christianity inherited from Judaism, and by conceptions as to the life and nature of the soul generally current in the ancient world. This difficulty which they experienced in harmonizing conceptions gathered from different sources into one consistent view, reveals itself in the occasional ambiguity of their language on this matter. They do not speak with unequivocal clearness as to the natural immortality of the soul. On the contrary, they were encouraged that keen sense of the value of individual existence which made the Greeks turn with abhorrence from the thought of extinction.

Yet, notwithstanding the force of this feeling against extinction, the denial of its possibility contained in the Platonic doctrine of the soul's natural immortality did not find general acceptance. It was rejected, for example, by Justin Martyr (Trag. v.), by Tatian (ad Graecos, xi.), by Theophilus of Antioch (ad graecos, xi.), and by Irenaeus, who in his Against Heresies (IV. ii. xix.). The balance of authority inclined strongly towards the doctrine of natural immortality and must not therefore be taken to be identical with an assertion of belief in the eventual extinction of wicked souls. This explanation, however, will not hold good in every case. In Arnobius, for example, there is no possibility of misunderstanding. He is unmistakably an annihilationist.

It is remarkable how closely Arnobius anticipates many of the modern arguments, insisting on the ethical value of his theory, and maintaining that the doctrine of an ineradicable immortality, no less than the supposed prospect of immediate extinction, is repugnant to the Christian idea of life and death (cf. Arnob. Adv. Christian. I. 15). The rejection which he foresees is to be the inevitable result of the punishment which these beings will suffer (ibid. 35: 'Non possumus esse semper bonus, quia quem se non possumus esse nescimus'). The rejection which he foresees is to be the inevitable result of the punishment which these beings will suffer (ibid. 35: 'Non possumus esse semper bonus, quia quem se non possumus esse nescimus'). The employment of the words 'et mihi et suis'; and so the denial of the possibility of annihilation.

In later centuries, the Schoolmen discussed the abstract question whether it is conceivable that anything should pass absolutely out of existence. Thus Aquinas answered: 'In his argument, briefly recapitulated, is as follows: In theory it is possible that God should annihilate His creatures, i.e. these souls, in punishment of their actions, or in the doing of their own self-destruction. As He brought them into existence under no compulsion, but by the free act of His will, so might He by a similar free act reduce them again to nothingness if He so pleased, in which case it is clear that He, the source of life, could directly cause the death of anything; but insusceptibly as the creature continues in existence only through the Divine concomitance, that support would be equivalent in effect to an act of annihilation. Having thus conceded the possibility of annihilation, he denies that it takes place in fact, on the following grounds: No natural process can end in annihilation; for in the case of material things the component parts will still continue in existence after the disintegration of the composite whole; and as to immaterial beings, 'in eis non est potestas ad non esse.' Further, the idea of a miraculous act of annihilation is rejected on the ground that the object of a miracle is to manifest the divine grace, and the divine good is performed either by the maintenance of things in life than by their annihilation (Summa, c. v, 8, 15).

These metaphysical considerations, abstruse as they sound, bring out the real difficulty of introducing the conception of a Divine act of annihilation into a consistent and coherent view of the universe. At the same time there were other and more direct arguments by which the Schoolmen were led to a belief in the survival of the soul. To them it appeared that the truth was sufficiently indicated, if not asserted, in Scripture. Inspired writers (so they contended) would not have asserted the survival of the soul after separation from the body so nonconformably, if that survival had been due not to the nature of the soul, but to some miraculous interposition (cf. Suarez, Anima, i. x. 9). The balance of authority inclined strongly towards the doctrine of natural immor-
tality. At the 5th Lateran Council in 1513 A.D. Leo X. condemned in set terms the opinion of the mortality of the soul, and at the same time strictly commanded all and sundry philosophers, in their public lectures at the universities and elsewhere, to rebut and disprove that opinion. It was not until the crisis of the Reformation had broken through the superstition, that a theory of annihilation, not unlike that which had been expounded by Arnobius, was once again suggested and defended.

8. Annihilation in post-Reformation thought.—In no matter, as in so much else, Spinoza displays his originality and independence. His writings reveal a marked change of opinion in the course of his life. In the Cogit. Metaphys. he had upheld the doctrine of the soul's immortality on the ground that the soul being a 'substantia' could not pass away. In the treatise, de Deo, etc., he takes up a different position, affirming that the destiny of the soul will be determined by her decision between alternative courses. She may unite herself either with the body of which she is the idea, or with God; but either existence involves that which is unchangeable will confer upon her the privilege of immortality (de Deo, etc. II. xxiii., Suppl. 209, 211). It is obvious," writes Dr. Martineau, that the doctrine of immortality is the same in the soul as substance, but depending on the direction of its love, passes from the necessary and universal to the contingent and partial."

The influence of Hobbes was also making itself felt in the same direction. However little credit he deserves for sincerity, he is a doctrine not apparent in Scripture. In his denial of the natural immortality of the soul:

"That the soul of man is in its own nature eternal and a living creature independent of the body, or that any mere man is immortal otherwise than by the resurrection in the last day, except Knox and Elias, is a doctrine not apparent in Scripture." (Works, Lond. 1838, vol. iii. p. 443.)

On the ground of a careful examination into the various Biblical passages bearing on the subject, he sums up in favour of a theory of the annihilation of the wicked.

"Though there be many places that affirm everlasting fire and torments into which men may be cast successively one after the other world lasts, yet I find none so affirm there shall be an eternal life therein of any individual person, but to the contrary an everlasting death which is the second death.

Whereby it is evident there is that to have a second death of every one that shall be condemned at the day of judgment, after which he shall die no more:" (ib. p. 451.)

Loss of the soul as well as being, under present conditions, subject to the law of death. In the short treatise, On the Reasonableness of Christianity, which exercised so profound an influence on the course of religious speculation in the next generation, he begins by insisting that the consequence of the Fall of man was to reduce him to the condition of mortality, the death-penalty involving the destruction of both body and soul. Through Christ alone is the doom reversed, and man becomes capable of immortality. Those who obey His precepts and imitate His example are delivered from death, and rewarded with the gift of life; and life and death are interpreted in their plain meaning of existence and non-existence. Thus Locke, in his attempt to recover the original simplicity and to free it from the gross excesses of theology, substitutes a doctrine of annihilation for the traditional doctrine of inherent immortality. Moreover, he seems to feel no doubt of his success in discovering evidence of the truth in the words of Scripture. His opinion gave occasion to some controversy on the point at the beginning of the 18th century."

But the question of the particular fate in store for the wicked was soon lost sight of in the interest of the wider discussion between Deists and orthodox as to the essence of Christianity. It was not until the middle of the 19th cent. that the topic came again into prominence. From that time forward the doctrine of annihilation has formed the underlying presupposition of all theories of conditional immortality, and guesses have been hazarded as to the nature of the process which will end in this result. While some writers have imagined a bare continuance of existence together with a loss of consciousness, others have attempted the more thorough hypothesis of entire extinction. Some, again, have assumed a future interposition of the Divine power in a sudden act of annihilation, others have preferred the idea of a gradual dilapidation of the soul. And the various theories about annihilation have been put forward with very various degrees of confidence. Cautious thinkers, like W. E. Gladstone and J. Agar Beet, have not ventured beyond the assertion that the Christian revelation certifies indeed the finality of the punishment of the wicked, but not the precise duration of the pains of the lost. More eager advocates have believed that they can find positive proof of their theories in reason and Scripture (see art. Conditional Immortality).

9. Impossibility of a union with Buddhist doctrine of Nirvana.—Between the theory which we have been considering and the Buddhist doctrine of Nirvana there is some superficial resemblance. Both involve the conception of annihilation; both assert survival after death together with the possibility of ultimate extinction, the total loss of individual existence. But the resemblance is more apparent than real, and affords little help in the elucidation of the problem. Things which are entirely heterogeneous not only cannot be compared, but cannot even be contrasted. And the difference between Christian and Buddhist religious conceptions amounts to heterogeneity. The two systems are committed to radically opposite interpretations of the universe, the one looking for a solution of all problems in the knowledge of God, the other ignoring His existence; the one regarding life as the great boon every increase of which is to be welcomed, the other as the great evil in deliverance from which the reward of virtue will be found. When views about God, the world, and the self are thus essentially different, the true relation of comparison can be established by the mere fact that in East and West alike some sort of annihilation of the individual is contemplated. Comparative Religion is a fascinating study, but it is well to remember that the religious conceptions of different nations are often inconceivable; and, even when similar terms are used, the underlying ideas may be very far from coincident. This is notably the case with the respective eschatologies of Christianity and Buddhism. See Nirvana.

10. Conclusions.—Metaphysical and ontological considerations must of necessity enter into any estimate of the theory of annihilation, although it is notorious that the present age is impatient and distrustful of abstract reasoning. Arguments based upon the supposed unity and simplicity of the soul carry less weight to-day than when the methods of philosophy were in more general use and favour. This is perhaps one of the reasons why the theory of annihilation has rapidly acquired a considerable popularity. Owing to the temper of the age, the philosphic difficulties have been insufficiently recognized. It is not easy to deny the contention that the doctrine of annihilation tends to a Principle naturally Mortal, 1708; reply by John Norris Philosophical Discourse, etc., 1708.
ANointing.

Introduction (A. E. Crawley), p. 549.

Buddhist.—See Abhiseka.

Christian.—See Unction.

ANointing. — 1. Unction,* anointing with oil, is a minor act of ritual, which possesses, however, considerable significance for the history of sacramental religion. Its forms correspond generally to the practical purposes for which, in early culture, animal and vegetable fats and oils were largely employed, while in both principle and practice it has connexions with painting and dress, decoration and disguise, nutrition and medicine, illumination and the various uses of water and blood. 2. The application of unguents to the skin and the hair has obtained, as a daily cosmetic practice, in most, if not all, sections of the human race, from the Tasmanians to the ancient Greeks and Romans. The unguents, in both secular and sacred uses, from crude animal fat to elaborate and costly perfumed vegetable oils. Among the lower races, animal fats are employed, frequently in combination with ochre, occasionally with such substances as charcoal, soot, and ashes. Higher stages of culture prefer vegetable oils, with gums, balsams, vegetable pastes and powders, such as turmeric, sandal and mustard, sawdust and flour, or the sap and pollen of plants, some of which are occasionally unguents. Perfumed unguents were usually prepared in the form of ointments. Lastly, the term ‘unguent’ is in most languages made to include, by analogy, such substances as blood, saliva, honey, mud, pitch, and tar. (See art. Blood. For anointing with blood see H. C. Trumbull, The Blood Covenant [1887].) 3. Anointing usually follows washing or bathing, and completes the toilet of the skin. The action of oil is to produce a sensation of comfort and well-being. Some peoples regard it as connected to the sun, to the arts, to life, to living beings, to death. Others tie it to religious practices, to the use of sacred objects, to the performance of ceremonies, to the performance of rites, to the performance of actions. As such, it is an exceptional interpolation discontinuous from the rest of the Divine action upon the created world, and therefore ex hypothesis not admitting of explanation. But the hypothesis of Divine interpositions becomes less and less acceptable as men realize, alike in the kingdoms of nature and of grace, the presence and action of the unchanging God. Hence, for the most part, preference has been given to that theory of gradual annihilation which has been under discussion. It is a solution of the problem which has commended itself to many; it may even widen the acceptance in the future; but even its advocates will admit that the difficulties involved in it deserve to be more fully faced and met than has yet been done.

Ethnic.—See Introduction.

Hindu.—See Unction.

Semitic (M. Jastrow), p. 555.

The supply of the muscles and joints. The Australian aborigines relieve the languor consequent on a long and tiresome journey by rubbing the limbs with grease (W. E. Roth, Ethnological Studies among the North-West Central Queensland Aborigines [1897], 114, 162). Oil closes the pores of the skin, and partially represses perspiration; hence the use of ungents by the Greeks and Romans before exercise, and after the bath which followed. Similarly, the Hindu anoints himself before bathing. In extremes of heat and cold these properties have an increased value, and anointing is almost a necessary of life in very hot and very cold climates. Being a bad conductor, oil protects the skin against the sun, and also prevents the escape of body heat. It is a useful emollient for burnt or chapped skin, and a valuable food for the nerves.

4. The cosmetic use soon acquired aesthetic associations. The gloss produced by oil has itself an aesthetic value, which is heightened by the addition of coloured substances. Of the majority of early peoples it may be said that grease and ochre constitute their wardrobe. The use of ungents as the vehicles of perfumes became a luxury among the Persians, the Greeks, and Romans, while among early peoples generally it is a common practice on both ordinary and ceremonial occasions, the object being to render the person attractive. Thus the natives of West Africa grease the body, and powder it over with scented unguents, and when on the Slave Coast, ‘magical’ unguents, supplied by the priests, are employed for such purposes as the borrowing of money and the obtaining of a woman’s favour. Swahili women use fragrant ungents in order to render themselves attractive. Similarly, Homer describes how Hera, when desiring to obtain a favour from Zeus, cleansed her skin with ambrosia and anointed herself with fragrant oil. In the isles of Torres Straits, the boys, at the close of initiation, are rubbed with a pungent scented

* The etymological identifications will be met with in dictionaries, of Eng. sales, etc., and Lat. salus, etc., and of Lat. unguis, etc. or Gr. éyes, etc. are unfounded. F. W. Oheimm in his Die Säulen der Morgen- and Abendlande (1879) has caused the etymology of “anointing” in Indo-European and Semitic languages.
substance, which has the property of exciting the female sex. The Ewe-speaking peoples of West Africa scent the bride with ivy, and make her skin red with the bark of the to-tree (F. Ratzel, The History of Mankind [Eng. tr.], ii. 397, iii. 108; A. B. Ellis, The Ewe-speaking Peoples, 94, 150; Velten, Sitten und Gepflogenheiten der Sukaha, 212; Homer, H. ii. 170 f.; A. C. Haddon in JA F. xix. 412).

5. Anointing thus stands for physical refreshment, well-being, and personal attractiveness. It is, therefore, naturally regarded as being essential on festal occasions. Anointing in the sacred, decorative, and medicinal sense is, according to the principle of rubbing himself with grease and ochre, especially at times when ceremonies are being performed. Among the ancient Egyptians, Greeks, and Romans, unguents, as representing the completion of festal attire, were offered to guests. In the Homeric age, bathing and anointing formed an indispensable part of welcome. The use of anointing as a mark of honour naturally ensues. Thus, when a Cerameic warrior has taken his first head, he is anointed with fragrant oil by the young women of the tribe (Spencer-Gillitine, The British Museum, 425; W. R. Smith, 238; Homer, Od. iii. 466, viii. 454; J. G. F. Riedel, De stubik-en broscharigie Bassen tussen Selbedes en Papua, 118).

Parallel to the cosmetic use of fats and oils is their application to food—eggs, and as dressing; to utensils, weapons, furniture, and adornments, as a lubricant, preservative, or polish; and to perishable substances as a preservative (E. F. im Thurn, The Indians of Guiana, 314; K. Langloh Parker, The Euahlayi Tribe [1905], 125; Roth, op. cit. 102).

6. In the magical-religious sphere a further principle makes its appearance. In addition to their cosmetic, sanative, decorative, and other merits, unguents now develop a more potent, though not specifically distinct, virtue. The principle may be put thus: according to psychical and organic matter, and, to some extent, inorganic also, is instinct with a Divine force or vital essence. The chief centres of this are sacred persons, objects, and places; later, the gods and their temples. This essence, with its gifts of life or strength, and magical or supernatural power, is transmissible by various methods, primarily contact. Inasmuch as its most obvious and convenient source is the flesh and blood of men and animals, the most direct method of assimilation is provided by eating and drinking; but an equally certain method is external application—a method which, in the form of anointing, is peculiarly adapted to the case of fats and oil. Anointing is thus based upon the same sacramental principle as the practice of eating the flesh and drinking the blood of sacred persons and animals. The Divine life is transmitted, and communion with the sacred source attained, by anointing the worshipper with the sacred essence. Fat is the most primitive unguent, and, as a popular early thought, as a very important seat of life. Ideas of sacralness are perhaps implicit even in its ordinary use, inasmuch as it is animal-substance. (Ernest Crawley, The Mystical Rose [1902], passim, and Apuleius, L. A. E. [1900] 110, 223; W. R. Smith, 383). Where the idea of the sacralness of animal life has been developed to an extreme, as amongst the Hindus, animal fat is tabooed.

To take illustrations: the Arabs of East Africa anoint themselves with lion’s fat, in order to acquire courage. The Andamanese pour melon pig’s fat over children to render them more impervious to any arrows. W. R. Smith collects the fat of certain animals, which they believe to possess great virtue. It is kept in special receptacles; ‘a small portion is given to persons who return home safely after a lengthened absence. . . . The chief makes use of it as an unguent for his body.’ The fat of the human body possesses a proportionately higher sanctity and potency. It is especially

the fat of the emu which is regarded as possessing this vital force (Becker, La Vie en Afrique, ii. 395; E. H. Man, The Andaman Islands, 68; C. J. Anderson, Lake Ngami, 236).

7. There are two further considerations to be taken into account in treating of the origin of anointing. Sacred fat, in the first place, may be regarded as too holy, and therefore too dangerous, to be eaten. External application is a safer method of assimilating its virtues. In the second place, neither fat nor ‘dressings’ are taken merely as preservatives of utensils, weapons, furniture, and adornments; they are also employed as weapons, strong; sick persons are rubbed with it in order to obtain health and strength. In India a prevalent superstition relates that the supernatural virtues of medicines are derived from the fat of boys murdered for the purpose. Grease made from the fat of a corpse is a potent charm among the Almei, B. Smyth, Aboriginals of Victoria, i. 202; J. A. F. xxiv. 175; G. Lumboltz, Among Cannibals, 272; J. Dawson, The Australians, L. II. 384. It is regarded as a peculiar requisite in the curing process, in the medical practice of the Papuans, and is used in the preparation of magical potions, and in the making of ordinary medicine. It is used as a charm, and to provide protection against witchcraft. Amongst these, one is the belief that a man may drive away a spirit by rubbing himself with it; when he has rubbed himself in this way, he is invulnerable in battle.

In the third place, the superstition may be that a man may obtain his kidney-fat with which to anoint himself. It is believed that the virtues of the dead body are mixed into the body by anointing, in order to make it available to the regular practice throughout Australia to use for this purpose the fat of slain enemies. These natives also employ their weapons strong; sick persons are rubbed with it in order to obtain health and strength. In India it is a prevalent superstition to regard the fat of boys murdered for the purpose as a charm. Grease made from the fat of a corpse is a potent charm among the Almei, B. Smyth, Aboriginals of Victoria, i. 202; J. A. F. xxiv. 175; G. Lumboltz, Among Cannibals, 272; J. Dawson, The Australians, L. II. 384. It is regarded as a peculiar requisite in the curing process, in the medical practice of the Papuans, and is used in the preparation of magical potions, and in the making of ordinary medicine. It is used as a charm, and to provide protection against witchcraft. Amongst these, one is the belief that a man may drive away a spirit by rubbing himself with it; when he has rubbed himself in this way, he is invulnerable in battle.

In the fourth place, a person who has been in a ‘sick’ state is rubbed with fat derived from a sick person, and the grease which with which his body is rubbed (K. Langloh Parker, The Euahlayi Tribe [1905], 125; Roth, op. cit. 102).
The shamans of Asiatic Russia charm the blubber, reinder-fat, or bear's grease with which the body of a patient is anointed. So, more definitely, the Melanesian medicine-man imparts mana, magical or spiritual force, to the unguentointments; for, on the other hand, the most powerful unguent in the Chinese pharmacopoeia owes its virtues to gold-leaf. Gold is considered to be the most perfect form of matter, and this unguent transmits life to the human body. The unguent employed by the priests of ancient Mexico, when sacrificing on the mountains or in caves, contained narcotics and poisons. It was supposed to remove the sense of fear, and certainly soothed pain. It was used in the treatment of the sick, and was known as 'the divine physic.' The holy oil of Ceram Laut may be manufactured only by a boy and a girl who are virgins. A priest superintends and repeats formularies over the oil. The Amboynean offer oil to the gods. What is left over is returned, and now possesses Divine virgites. It is used to anoint sick and sound alike, and is believed to confer all manner of blessings (V. M. Mikhailovskii in JAIT xxv. 98; R. H. Codrington, The Melanesians, 198 f.; J. J. M. de Groot, The Religions of the Pacific, iv. 399; B. Rassen, De heidense en kroesharige Rassen tuschen Selbes en Papua, 179; F. Valentijn, Oud en nieuw Oost-Indien, iii. 10). To return to magical ideas, variations are made by the practising the anointing the weapon which dealt the wound; in the East Indian custom, whereby fruits and stones are smeared with oil, and prayer is made that the bullets may rebound from the warriors as rain rain upon a penitential sealth oil; and the Australian superstitions connected with bone-pointing. Here it is possible for the user of the magical weapon to release his victim from the wailing sickness he has brought upon him, if he rubs the apparatus or his own body with grease, in some cases giving what is left of the unguent to the sick man. On the principle of sympathy, a mother will grease her own body daily while her son is recovering from circumcision (J. G. Frazer, G. M. H., V. 178; Nederlandsch Aardrijkskundig Genootschap (1890); 805; Langlois Parker, op. cit. 32; Spencer-Gillen, 466, also 250).

The anointing of the dead is based on the principle that, as the Chinese say, the dead man 'may die for the living in a new way for the living for the care of cares.' Africa, North America, and the Fiji and Tonga Islands supply typical examples of the custom. The corpse is washed, oiled, and dressed in fine clothes ('J. J. M. de Groot, op. cit. i. 6, 20; P. Ratze, The History of Mankind, i. 328; Williams and Calvert, Fiji and the Fijians, i. 188; J. Adair, History of the North American Indians, 181). The ancient Egyptians, Greeks, and Romans thus prepared their dead for the last rites. The Egyptians and Greeks poured perfumed oils over the ashes and the tomb. At the annual commemoration of those who fell at Platea, the Archon washed the grave-stones with water and anointed them with oil. The Greeks placed in the tomb vessels (Mevoth containing unguents for the use of the dead. The Kingsmill Islanders, like many other peoples, preserved the skulls of dead relatives. These were oiled and garlanded; food was offered to them as if they were alive (Wilkinson, iii. 363; Servius on Virgil, Aen. v. 219, 243; H. de Lueth, 11; Schmbaur, C. R. Alterthumer, i. 595, 600; Wilkes, U.S. Exploring Expedition, 556). The pious afficiton shown in such customs is elsewhere very commonly developed into practices which aim at a closer union with the departed. Thus in Australia we find a prevalent custom among mourners of anointing themselves with oil made from the decomposing fat of the corpse. This practice has typical examples in the Dutch East Indies, Africa, and North America. The Creek Indians anoint themselves with oil mingled with the ashes of the dead; a curious custom obtains in the Aru Islands of the Dutch East Indies. As soon as a man is dead, his widow runs round to the houses of all his friends and smears the doors with oil (Spencer-Gillen, 293; Riedel, op. cit. 308; First Report BE, 145, 155; Riedel, 288). The Catholic rite of Extreme Unction doubtless derives from the general principle of anointing the sick; but, apart from such customs, there would seem to be no definite elsewhere of the practice of unction immediately before death.

10. It will be convenient at this point to draw out the connexion between ceremonial anointing and the principles of tabo. In the first place, grease, oil, and fat are convenient vehicles for the application of ashes, charcoal, and other marks of mourning, and of the red paint that denotes such persons as the shedder of blood and the menstruous woman. Such a sanctity, however, is not possessed by the anointing of unctious with holy oil, and girt with pandanus-leaves. Galla warriors on returning home are 'washed' by the women with soap and water, anointed with oil, and girt with pandanus-leaves. Gailla warriors on returning home are 'washed' by the women with...
fat and butter, and their faces are painted red and white (R. Parkinson in Internat. Archiv für Ethnographie, x. 117; F. Paulitsche, Ethnographie Nordost-Africana, 258). Before starting, the chief anointed the candidate with stored oil, and the ceremony is repeated on his return. The Australian who smears his enemy with sickness by the use of magic is known from the curse by raising the magical weapon in water or by rubbing it with fat. Similarly, as noted above, the operator may produce this result by greasing his prey. The connection with water and slaughter supplies remarkable cases of this form of affectation. In Ceram Laut, when a man has been viewed as the chief anointed the feet of the aggrieved person with oil. It is a death ceremony.

The man then raises the warcry and rouses the people. In inland South Africa, among the Central Australians, anointing is rubbed with grease and decorated. On her return, her husband removes the decorations and rubs her back with grease. The Fijians observed an elaborate ritual for the son of a chief after slaying his first man. He was anointed from head to foot with red turmeric and oil. For three days he lived in isolation with seven other youths, anointed and dressed like him.

They were forbidden to lie down, or sleep, or change their clothes, or enter a house where there was a woman (F. Stutt-mann, Mit Einem Pascha 35.2. Von Afrika, 89; Roth, op. cit., 157; Riedel, op. cit., 188; Spencer-Gillen, 469-468; Williams and Calvert, op. cit. i. 66). In the cases cited above many principles of early thought may be discerned. It is sufficient to note that war is a holy state, and that it must be inaugurated and con-

12. The removal of tabu coincides with the renewal of normal life and normal sanctity, and anointing is employed here no less regularly than for the inauguration of a highly sacred state. Thus mourners are anointed, as in Australia and New Guinea, when they are released from sorrow. Throughout Africa it is the custom to anoint the mother with fat and oil shortly after child-birth. The practice is common throughout the world, after sickness generally, with women after the monthly period, and with children after the cervix takes on a puckery. The practice in the last instance often takes a peculiar form. In Australia, for instance, and the Andamanas, a boy is made free of a forbidden food by the process of having fat rubbed over his face and body. The child is then fed with thickened gruel. [J. M. Lock.[587], 241; J. BEW, 146; Maclean, Compendium of Kafir Laws and Customs, 94, 99; G. Macdonald, Africana, i. 129; Dennett, Folklore of the Fjord, 137; Spencer-Gillen, 386; E. H. Man in J. A. 125, 118, vii. 456, 191.]

13. Passing now to cases of consecration proper, we find anointing used to inaugurate periodic sacredness, as in rites corresponding to baptism and confirmation, in marriage and in worship. The custom is said to have originated in the practice of applying a custom of wide extension that the newborn child should be rubbed with oil (Roth, op. cit. 183; Ratzel, ii. 286; Williams and Calvert, i. 175; Caron's 'Japan' in Pinkerton's Voyages and Travels, vii 636; Ellis, Youba-speaking Peoples, 141). This practice soon becomes ceremonial, and suggests baptismal analogies. The Ovahero ceremonial of naming the child combines so many principles that it may stand for a typical summary. The rite takes place in the house of the sacred fire, and is performed in a spirit of high excitement. The chief anoints the body with water and spices this over the bodies of mother and child. Then he addresses the ancestors thus: 'To you a child is born in your village; may the village never come to an end.' He then lays some fat over a vessel, puts upon it, and rubs it over his hands. He next rubs more fat in his hands, spars water upon it. Then he anoints the woman. In doing this he crosses his arms, so as to touch with his right hand his left hand, and with his left hand, and with his right. The process is repeated with the child. Finally he gives it a name, while touching its forehead with his own (E. Dannert in South African Folklore Journal, ii. 67). At the anointing of boys and girls as a preliminary to the ceremonies observed at puberty is of wide extension; it is most prominent in Australia and Africa. In Central Australia the candidate is rubbed with grease at various times during the pro-

tracted ceremonial. At the circumcision festival of the Masai the boys were allowed to gorge themselves with beef. They rubbed the fat over their bodies, much as a Dayak rubs himself with the hoof of a pig, or as a carnivorous animal fasted for a

(c) In the ceremony of marriage we find typical examples of anointing. The Central Australian, for a few days after receiving his wife, rubs himself with grease and oil. Before marriage the Angola bride is anointed with oil from head to foot, and until she is handed over to her husband is treated like a queen. The custom is frequent in Africa, and occurs in Fiji. The Malays anoint both bride and bridegroom. In that amounts to a ceremony of re-marriage, performed after the birth of the first child, the Basuto pair are anointed by a medicine-man with a mixture of roots and oil. In Australia we find the custom of anointing pregnant women (Spennemann, 35, 606; G. Tama, The Portuguese Possessions in South-West Africa [Eng. tr.], i. 175; Williams and Calvert, i. 169; Skeat, 385; ZE [1877] 78).

(d) As a preliminary to worship, anointing is frequently incumbent on the people, more frequently the priests. Among the Greeks, those who consulted the oracle of Trophius were washed and anointed with oil. When a native of the Slave Coast worships the guardian spirit who resides in his head, he rubs his head with oil; the priests anoint themselves before entering the house of the deity. The priests of Mexico and Central America were anointed from head to foot with a sacred unguent, which was also applied to the images of the gods. Returning to Greece, we learn that in the feast of Dionysus the men who carried the sacred bull to the temple were anointed with oil. Similarly, the Lupercoli at Rome were anointed and garlanded. An interesting side-light on the theory of anointing reaches us from Fiji and the Dutch East Indies. At shamanistic ceremonies the person into whom the god is to enter is anointed with fragrant oil, by way of rendering him attractive to the deity (Pausanias, vili. 19, 2; ix. 39, 7; Ellis, Youba-speaking Peoples, 126, also Evon-speaking Peoples, 76; Acoza, History of the Indies, ii. 384; Bancroft, Native Peoples, Inst. i. 21. 45; G. A. Wilken, Het Shamansisme bij de Volken van den Indischen Archipel, 479 f.; Williams and Calvert, op. cit. i. 224).

14. For the special consecration of priests, anointing is a not uncommon piece of ritual, obtaining in various parts of the world. The Shore Coast of Africa provides a typical case. The candidate's body is smeared with a decoction of herbs. Then the priests who officiate anoint his head with a 'mystical unguent,' and ask the god to accept him. If he is accepted, he is 'extolled' to the god by them. A new cloth is put upon the ordained novice, and a new name conferred. Among the Burin the priest is anointed with blood of a kid. In North America, among the Okikasaw, the candidate fasted for some time, and was anointed with a bath and unction with bear's grease. The Totecs and Totonacs of Central America consecrated their pontiffs with an unguent made of india-rubber oil and children's blood. For the anointing of their chief they employed the unguent used at the enthronement of their temporal monarch. The priests of ancient Egypt were consecrated with holy oil poured upon the head (Ellis, The Evon-speaking Peoples, 145 f., J. A. xxiv. 418; Adair, 125; Bancroft, ii. 214, 433, ii. 201; Wilkinson, iii. 360).

15. The anointing of kings, with which Semitie
and Christian custom has familiarized the world, is a spectacular rite of rare occurrence outside the sphere of Hebrew tradition. It is found, however, in a more or less perfect form among the ancient Egyptians, the Aztecs, and the Hindus ancient and modern. The Pharaoh was anointed after invested with the sacred robes. The monuments give representations of the ceremony, and in the Tell el-Amarna letters the king of Cyprus sends to the king of Egypt a flask of good oil to pour on his head, now that you have ascended the throne of your kingdom. The Aztec ceremony of royal unction preceded coronation. The king-elect went in procession to the temple of Huizilopochtli. After paying homage to the god, he was anointed throughout his whole body by the high priest, and sprinkled with holy water. He was then clothed in ceremonial robes, and about his neck was hung a gourd containing powerful remedies against soreness, disease, and treason. The unguent used was the black oil with which the priests anointed their own bodies and the images of the gods. Its name is variously given, uli, or ole, and its chief constituent was india-rubber juice. The Quichés and Cakchiquels bathed the king at his coronation, and anointed his body with perfumes. Candidates for the priesthood, the priest of the Aztecs, were anointed with the same sacerdotal unction (Wilkinson, iii. 360; W. M. Finders Petrie, Syria and Egypt from the Tell el-Amarna Letters, 45; H. Winckler, The Tell el-Amarna Letters (Eng. tr.), 87). The anointing of kings and priests combines several principles, and is not to be explained on one separate line of development. It is, in the first place, a part of the festal dress essential on such occasions (W. K. Smither, Aphrodisian, 453). Secondly, we have the various ideas connected with consecration,—the transmission of sanctity, power, and new life (ib. 338 f.), on the one hand; and, on the other, the ‘hedging’ of a dedicated person with sacredness, for his protection and the performance of his office.

16. The anointing of sacrifice and offering, the altar and the temple, and the sacred apparatus generally, supplies many details of ritual which fall into the main lines of religious function, while giving prominence to such as are more closely connected with worship. The human sacrifices of the ancient Albanians of the Caucasus, of the Aztecs, and of the people of Timor, were anointed, as their slain victim, with fragrant oil, to be offered as a sacrifice to the sacred monsters. In the remarkable human sacrifice of the Khonds, the Mersah was anointed with oil, gai, and turmeric, and adorned with flowers. He received his bath with oil and flour. It is not easy to distinguish from adoration. Every one who could touch the oil on the victim’s body and rubbed it on his own head. The oil was regarded as possessing the same virtue as his flesh and blood conferred on the fields (Strabo, ii. 4. 7; Bancroft, iii. 333; Veth, Het eiland Timor, 21; S. C. Macpherson, Memorials of Service in India, 118; J. Campbell, Wild Tribes of Khandistan, 54 f., 112). The custom of ‘dressing’ offerings with oil was regular in the worship of the ancient Greeks. When the West Africans anoint an animal they sprinkle it with palm-oil by way of attracting the spirits. At the festival of the New Fruits among the Creek Indians, the priest took some of each sort and smeared them with oil before offering them to the spirit of fire. The people of Gilgit drench with wine, oil, and blood the branch of the sacred cedar used in their agricultural ceremonies. Similarly the Malays, in their ceremony of bringing home the Soul of the Rice, and the Javanese, in the Marriage of the Rice Bride, anoint the rice with oil (Schumann, ii. 298; Pansianas, ii. 7); A. B. Ellis, The Yoruba-speaking Peoples, 155; Adair, 96; Biddulph, Tribes of the Hindu Kush, 106; Skeat, op. cit. 235; Veth, Java, i. 524).

The natives of Celebes on great occasions anoint the flag and other emblems of state. The Santalas anoint their candidates for the harvest-home. The Shans of Indo-China and the natives of Celebes purify with water and anoint with oil the plough used in their ceremonial ploughing of the rice-fields (G. K. Niemann in Bijdragen voor de Taal-Land- en Volkenkunde van Nederlandsch Indië, xxxviii. 2, 270; W. Crooke, op. cit. ii. 308; E. Aymonier in RHR xxiv. 272; B. F. Matthes, Bijdragen tot de Ethnologie van Zuid-Selbela, 93).

When we pass to cases more definitely representative of worship, we find development of the ideas: first, that the sacred life immanent in the sacred symbol or image needs periodical renewing; and, secondly, that the spirit connected therewith requires conciliation; anointing the sacred object with fragrant oils brings man into union with the deity. When the Wawamba of Central Africa or the Australian of Queensland anoints his sacred stone with fat when asking it for rain, we may infer that the sacred object is supposed to be consumed and rendered gracious by the cosmic virtues of anointment. Similarly the Central Australians rub their churinga with fat and ochre whenever they examine them. The churinga is supposed to have human feelings, and the process of anointing purifies and renders it more approachable. Stuhlmann, op. cit. 654; Roth, op. cit. 158; Spencer-Gillett*, 255, 265, 270, also*, 161). Here the use of grease for utensils combines with cosmetic anointing. In many cases it is natural to find these ideas merging in the notion of feeding the divine object; but it would be incorrect to derive the anointing of sacred stones from the practice of feeding the god. The custom of smearing blood upon sacred symbols and images is of wide extent, and is a metaphorical pouring of the blood into the mouth of an image. The practical primitive mind does not confuse anointing with nutrition, though well aware that the two are allied. As illustrating the extension of the custom, last case has to do with the Yakobos of the southeast. The Greeks and Romans washed, anointed, and garlanded their sacred stones. The ognok of Delphi was periodically anointed and wrapped in wool (Schumann, ii. 296; Lenian, Aes. 80; Apuleius, Flor. i. 1; Minucius Felix, Octav. iii.; Pausianas, x. 24, and J. G. Frazer, Commentay on Pausanias, v. 354 f.). The Malayans anoint sacred stones with fat or oil or the blood of victims. The Wakamsa near-had anoints a rock in order to turn it in a direction, by the medium of a backbone of a wild boar, through a difficult pass (J. Shiree, History of Madagascar, 305; ZE x. 384). This combination of nutrition and anunction is found among the Kesi Islanders; every family here possesses a sacred black stone, and to obtain success in war or trade a man anoints this with oil and offer fruits to it. In Celebes, sacred images, apparatus, and buildings are smeared with oil by worshippers. The ancient Egyptians anointed the statues of the gods, applying the unguent with the little finger of the left hand. The Arvaiu in animal images, they sprinkle it with palm-oil by way of attracting the spirits. At the festival of the New Fruits among the Creek Indians, the priest took some of each sort and smeared them with oil before offering them to the spirit of fire. The people of Gilgit
ANointing (Hindu)—Among the Veddahs of Ceylon, the priest anointed the throats of the worshippers. The religion of ancient Greece provides a curious instance of the meeting of the practical and the religious spheres. The old temple-statues of the gods, made of wood, were rubbed with oil to preserve them from decay, while to preserve the magnificient creations of gold and ivory, such as those of the Temple of Minerva at Rome, it was rubbed into pipes throughout the statue (Kiedel, op. cit. 223; Mathes, op. cit. 94; Wilkinson, op. cit. iii. 361; CIL vi. 9797; Firmicus, de Errore, 23; Faustusianus, v. 11, and Frazer's Com. ad loc.).

The principle of communion with the deity by means of anointing the sacred symbol or the worshipper himself is more apparent in the elementary stages of worship. The Assiniboins, we are told, venerate the bear, and try to keep on good terms with him. They pray to him when they wish to be successful in a bear-hunt, and so to secure a good supply of bear's flesh to eat and of the bear's grease with which they are always anointed. The natives of Central Australia, at the Initiation ceremony for maintaining the supply of oil and grease of this animal, anoint and anoint their bodies with the fat. In order to obtain success in hunting eumos, they rub themselves with stones supposed to be parts of that animal. Similarly, before eating snakes they rub their hands with their fat. At a higher stage of development we find the West African negro anointing that part of his own body where his guardian spirit resides (de Smet, Western Missions and Missionaries, 139; Spencer-Gillen, 206, also, 192, 235; Ellis, Formulse-speaking Peoples, 126).—Edw.}

The oil of anointing, as we have seen, transmits the sacredness latent within it in either of two directions—to the worshipper or to the god. When we look at the controlling source of its virtue, the potentially sacred substance of the human body, and compare the earliest forms of consecration, we see that the theory of anointing leads us back to pre-theistic and even pre-fetishistic times. The elementary stages of dedication illustrate the less common direction of anointing, in which the worshipper or the priest confers sanctity instead of receiving it. The dedication, more or less informal, of sacred buildings and apparatus by anointing obtained in Egypt, Greece, and Italy; it is remarkably prominent in India, ancient and modern, but does not appear to have to anywhere else. This is, of course, connected with the use of oil for tools, utensils, and furniture, but also has associations with fetishistic methods of making gods (Crawley, The Tree of Life, A Study of Religion (1905), 252). The ritual of renewing the sacred vigour of a sacred symbol has already been referred to; here we note the original induction. Thus every man on the Gold Coast makes for himself a suhman, or tutelary deity. When he has made it, he anoints it with water. Among the Batakas the guru inducts a spirit into the fetish with various ceremonies, chief among which is the application of a vegetable unguent (Ellis, Tshi-speaking Peoples, 100 f.; Hagen in Tijds. v. Totaal- Land- en Volkenk. van Ned. Indie, xxviii. 525; Mathes, op. cit. 94). But many Central Australian, rubbing a newly made curings with fat, is an unconscious exponent of the embryonic stage of consecration by anointing.

In its latest developments anointing passes into the theological metaphor of quasi-doctrinal import. Spiritual union carries with it from the sacramental to the ethical-religious plane the various gifts of consecration, leaving in its course such traces of mysticism as the White Ointment from the Tree of Life, found in the baptismal formula of the Ophites, and Justin's adaptation of Plato's fancy, to the effect that the Creator im-

pressed the Soul of the Universe upon it as an union in the form of a x (Justin, Apol. i. 60; Plato, Timaeus, 36).

In conclusion, the history of anointing in its connexion with religion shows that of all sacramental media the sacred unguent is the most spiritual, and that from beginning to end function is the least material of all purely physical modes of assimilating the Divine. Its characteristic is soul.

A. E. CRAWLEY.
and washed. Girls, on arriving at puberty, are decorated and anointed with oil, or oil and turmeric (haridrā). Brāhmaṇ boys, on investiture with the thread, are similarly anointed with oil and haridrā.* The ceremony of gātra-haridrā is performed during the preliminary marriage-rite on the wedding-day. Bride and bridegroom are anointed with oil and turmeric. The 'sandalwood stone,' which they have to touch with their feet, is rubbed with oil. The bride's brother smears the hands of the bride with ghi, and sprinkles parched rice upon them. rice. Yānadi wedding the mothers of the contracting parties anoint them with oil, turmeric, and sandal-paste. They then bathe and put on new clothes. Among the Kannādiyāns the village barber sprinkles ghi over the heads of the bridal pair, who afterwards take an oil bath. For the sīndārān, sandal-paste, oil, or vermillion are chiefly used. Oil or paste is a common medium for sacred marks.

After death, the body is washed and anointed with sandal-paste, oil, and turmeric, or ghi. In some cases the chief mourner touches each aper- ture of the body with his lips, repeats a mantra, and pours ghi on each. The forehead of a dying man is anointed with possible oil, smears with the sacred sand of the Gangas. At the burial of the urn the chief mourner anoints himself with ghi. At the ordination of a Buddhist priest, his hair is touched with oil before being cut.† The impor-tant ceremony of abhiseka (wh. see), the royal baptism or consecration, is in principle a form of anointing; the holy water, with its numerous in- gredients, consecrates rather by infusion of divine force than by lustration. This rite was celebrated towards the close of the protracted ceremonies of the rājakṣit. The proper time for its celebration was the new moon after the full moon of Phālguṇa, i.e. about the end of March. Eighteen ingredients were necessary, the chief being the water of the sacred river Sarasvatī. The others included ghi, milk, cow-dung, honey, sugar, sandal-water, perfumes, earths, turmeric, and rice-meal. The adhvaryu mixed them from eighteen pitchers in a bucket of udambara wood, repeating a mantra at every stage, e.g., 'O honeyed water, whom the Dakṣa, the mighty one, thou begetter of kings, thou enlivener, with thee Mitra and Varuna were consecrated, and Indra was freed from his enemies; I take thee.' 'O water, thou art naturally a giver of kingdoms, grant a king to the king.' (naming the king), 'O honeyed and divine ones, mix with each other for the strength and vigour of our Yajamāna.' The king, after a preliminary sprinkling, put on a bathing-dress; the inner garment of which was steeped in ghi, and took his seat on a stool covered with a tiger-skin, facing the east, and, as the pouring commenced, raised his arms. On his head was a rose-head of gold, through which the sacred liquid was to spread in a shower. The contents of the vessel were transferred to four ; these adhvaryu, the Brāhmaṇ priest, a kṣatriya, and a vaigāya poured in turn over the head of the king from their respective positions. Mantras were recited, such as—

Devās, may you free him from all his enemies, and enable him to discharge the highest duties of the kṣatriya... .

At the close the Brāhmaṇ said, 'Know ye that he has this day become your king; of us Brāhmaṇas Ṛṣaya is the king.' Notwithstanding the prayers to 'the divine Quickeners,' the belief that the gods consecrated the king, and that through the rite he was filled with divine force. The essence of water is vigour; this and the vitalizing essence of all the ingredients of the sacred liquid enter into him. One mantra states that he is sprinkled with priestly dignity.† The hair of the king was not to be cut until a year had elapsed. Three forms of abhiseka are mentioned—abhiseka for kings, pārābhiseka for superiors, and abhi-bhiseka for emperors. According to the Varāha Purāṇa, a man may perform the ceremony on himself in a simplified form: 'He who pours saum- nam seed and water on his head from a right-hand end Śanaka destroys all the sins of his life. A modified form of abhiseka is still employed at the coronation of Rājās. In Assa, for instance, the water for the ceremony is taken from nine holy places, and is mingled with the juices of plants. A similar account is given of coronation in Mysore. In Rājputāna the ceremony is unctio rather than baptism. A mixture of sandal-paste and water is the unguent employed, and a little of this is placed on the forehead with the middle finger of the right hand. The royal jewels are then tied on.†

As in Vedic times, the Brāhmaṇ washes and anoints himself with oil or ghi before performing religious duties. The insti-tutor of a ceremony also anoints himself. On the festival Sanbrānti it is the custom for every one to take a bath, in which rubbing the body with oil forms a conspicuous feature. In the nirvīdhapakobhanda rite the tree from which the sacrificial post was to be cut was anointed, and the vidhi after being rubbed with oil and turmeric and washed, was anointed with ghi just before the sacrifice. In the Yagṛa sacrifice the ram is rubbed with oil, bathed, covered with akavatas, and garlanded. At the Durgā-pūjā festival a plantain tree is bathed and anointed with several kinds of scented oils.

The consecration of buildings by means of a ritual is a well-developed feature of Hindu ritual. There is a ceremony analogous to the laying of foundation-stones, in which a piece of consecrated and anointed, being thereby animated, the spirit of the god Vāstupurusha, who becomes the tutelary deity of the house. Again, when the principal entrance is put up, the woodwork is anointed with sandal-oil, and the same ceremony is performed over the ridge-plate and the well, and for the house generally, when first entered.

The images of the gods in the temples are bathed, anointed, and dressed by the priests daily. Un- guents for this purpose (vilepana) are one of the 'essential offerings' presented by worshippers. Sacred stones are also anointed and decorated; and the worshippers of Śiva anoint the linga.

The principle of consecration is carried out in the Hindu ritual of anointing, while the allied principles of decoration and purification are fully recognized.†

A. E. CRAWLEY.

ANOINTING (Semitio).—If we find traces of anointing among the Arabs in pre-Islamic days, 1 Rājendralal Mitra, ii. 3, 37 ff., 46 ff.

we must perforce assume that, though still clinging by force of habit and tradition to rites and practices that fall within the category of primitive religious customs, resting upon distinctly primitive beliefs, they had advanced beyond these beliefs sufficiently to cause the rise among them of the longing to come into direct touch—not merely through the mediation of a special body of officers—with the higher powers. A custom of this kind is vouched for in the pre-Islamic period in connexion with the visit to the old sanctuary at Mecca, known as the Ka'ba, when the worshippers, in some cases, anointed their own person some of the sanctity associated with the deities of the place, rubbed their hands over the images of the gods (Wellhausen, Reste Arab. Held, p. 105) or pressed themselves against the edifice itself. Although no unguent which we commonly associate with anointing appears to have been employed, it is significant that the verb used to express this pressing (takārūb) comes from the stem that in both Heb. and Assyrian embodies the idea of offering; while the rubbing (takārū) is a stem that in the generic term for anointing, and in the form mšrāḥ (Messiah) becomes one of the most significant terms in the religious nomenclature of both Judaism and Christianity.

The anointing of the gods or of sacred objects, as, e.g., the 'black stone' at the Ka'ba, is included, the ancient Semites do not appear to have gone further than to symbolize in these rites of pressing and rubbing the desire to reach out to the sanctity associated with images or objects. The use of wine and oil belongs to a still later stage of religious custom, and, when they are met with in ancient Arabia, are probably due to external influences. On the other hand, the antiquity of the blood-rite as a ceremony, used in covenanting, being vouchèd for (Trumbull, Blood Covenant, ch. i.), some of the uses to which blood is put in the sacrificial ritual of the ancient Semites may properly be classed under the category of anointing. To be sure, the custom of pouring or rubbing the blood of a sacrificial animal over sacred stones on which the slaughtering is done, is not looked upon as a species of anointing, for the purpose of the act is to symbolize that the deity, represented by the stone, or supposed to reside in it, has actually by the act become invested with an odour of sanctity even as the vital element (Wellhausen, loc. p. 113). However, in the ancient Semitic method of covenanting by dipping the hands in blood (Trumbull, l.c. ch. i.) a union of the contracting parties is symbolized, and if the deity is introduced into the act by rubbing the blood also over his symbol—whatever it may be—it is with the view of making the deity a party to the covenant, and in so far the thought of a direct union with the deity—a blood relationship—is present. Yet even here a direct transfer of that odour of sanctity to the altar stones does not appear to take place, as would be involved in anointing, viewed as a religious rite. It is significant, as Wellhausen (l.c. p. 99) points out, that the 'black stone' of the Ka'ba is not smeared with blood, for it may be supposed that the communion with the deity had its decided limitations among the ancient Semites, so that the sprinkling of blood over the door-posts and lintels, or the threshold of a dwelling, and such other practices as those noted by Doughty as survivals of primitive religion among the inhabitants of Syria and Arabia, in which the blood is rubbed or sprinkled on animals or fields or newly erected or newly occupied dwellings as a protection against demons or in, more positive terms, 'for a blessing' (Curtis, Primitive Semitic Religion To-Day, ch. xv.; Doughty, Arabia Deserta, i. pp. 136 and 498, ii. p. 109, etc.), are not to be interpreted as anything more than the placing of the objects in question under the control of the gods invoked through the sacrificial animal. The use of blood in the Hebrew ritual, such as the sprinkling over the worshippers (Ex 21:5), or over the altar (Ex 29:24), or for which Robertson Smith (Rel. of Sem. p. 344) may be consulted, embodies the same general idea.

Considerations of this nature lead us to the conclusion that the prominent rôle played by anointing among the Hebrews, with the application of unguents to vessels as well as to persons invested with sanctity, as priests and kings, is an expression of considerably advanced religious beliefs, in which the symbolic transfer of qualities associated with the Divine essence enters as a prominent factor. That this use of unguents in religious rites represents the transfer to the sphere of religion of originally secular rites, marking the adornment of one's person, may be granted; but this view, so brilliantly set forth by Robertson Smith (l.c. p. 232 ff.), must not blind us to the fact that, in addition to the desire to show honour to sacred objects or persons was intended. The act was meant actually to symbolize the sanctity bound up with such objects and persons, and was to be considered as a symbol with power. The use of oil and wine as unguents—both symbols of luxury accompanying a more advanced culture—seems at all times to have been bound up with anointing among the Hebrews as among the other nations of antiquity, and is practised to this day in the Roman and Greek Churches for the consecration of sacred edifices. We have in this way instances of the anointing of altars, as, e.g., the stone at Bethel (Ge 28:20 35:1); and, incidentally, it may be noted that the reference to oil, which a wanderer like Jacob could hardly have carried with him, indicates the projection of a late custom into the remote past. A similar projection is to be seen in the statement that the furniture of the Tabernacle and the Tabernacle itself were anointed with oil (Ex 29:40). Similarly, the high priest was anointed with oil, sprinkled and poured on his head (Lv 8:10), while in the case of the ordinary priests, the oil was only sprinkled on them (Lv 8:10). The anointing of kings represented the formal inauguration of the person that was invested with a Divine power as a sacred one among the Hebrews. We have explicit references to such anointing in the case of Saul (1 S 10:1), David (1 S 16:13, 2 S 2:19), Solomon (1 K 1:40, Joash (2 K 11:19), Jehoahaz (2 K 23:20), and we may therefore assume that the rite was a general one from the beginnings of kingship among the Hebrews. That the act indicated, besides the purely formal investiture, the actual transfer of Divine powers to the person anointed, may be concluded from the explicit statement in connexion with the anointing of Saul by Samuel: 'the high priest of Jehovah rested with the anointed one; so in the case of David (1 S 16:21). Correspondingly, the Divine Spirit leaves Saul (v. 14) as an indication that he is no longer in touch with the Divine Essence, i.e. is deposed from his sacred office.

In the further spiritualization of the fundamental idea underlying the rite of anointing, namely, the transfer of sacred or Divine qualities to an object or individual, the propitiations are naturally viewed as the 'anointed ones' (Ps 18:2), even though the ceremony itself was performed, except possibly in the single instance of Elisah, and even in this case the order given to Elijah to perform it (1 K 19:14) may be intended only as a metaphor to indicate the transfer of the Divine Spirit to Elisah. The metaphorical application is clear in the case of Cyrus, who is called the
ANSELM OF CANTERBURY

‘anointed’ of the Lord, to indicate that he acts in accordance with the Divine quality with which he is imbued. The same interpretation is to be put upon the appellation ‘anointed’ employed in a late Psalm (103:1). From this it was a natural step to designate Israel as the chosen people of Jehovah, as the ‘anointed’ one (Ps 89:17, 38; Is 43:1, 19; Hab 3:18, etc.), in which case ‘anointed’ has become a synonym for holy, i.e. endowed with the holy Essence. The final stage is reached in the doctrine of the Messiah as the ‘anointed’ one to bring salvation to His people and to manifest the presence of the Divine quality. In Christianity, Jesus becomes the ‘Messiah por excellens’ (Gr. Xpárhoi), while Jewish theology in rejecting Jesus as the Redeemer of mankind was gradually led to abandon the doctrine of a personal Messiah, and to accept in its stead the outlook towards a Messianic age. The association of anointing with the Divine Spirit passed over into the Christian Church, which, to emphasize the descent of the Holy Spirit on all believers (2 Co 1:21, 1 Jr 4:4, 27). It implied the practice of anointing with oil in conjunction with the rites of baptism and confirmation.

As yet no traces of anointing as a religious rite have been found in Babylonia and Assyria, though this might be accounted for by the fact that concomitant, as coming across the rite in cuneiform documents, especially for those periods when kingship and Divinity were in close union, as appears to have been the case in the days of Sargon, and during the reign of the dynasty of Ashurnasirpal (c. 880-750 v.C.). An early record is in Latin, to 4200 B.C. In later times we have the pronounced tendency towards the secularization of the office of royalty, with a concomitant centralization of Divine prerogatives in the priesthood; and it would appear that the priests likewise liked to carry on the practice of anointing the king, under the influence of the late Bab.-Assyr. conception, became a distinctively secular one, connecting itself with that of a lay-judge rather than with that of a priest-king. As for anointing as a secular rite among the Semites, there is every reason to believe that its origin is bound up with the use of unguents as medicinal remedies. In the medical prescriptions preserved on the cuneiform tablets of Asurbanipal’s library, copied from originals that probably date from as early as 2500 B.C., there occur a good many recipes for unguents applied for the skin are mentioned. The frequent mention of unguents as remedial agents, both in the OT and NT (Is 1:4, Ezk 16:8, Lk 10:43, Mk 6:44, and especially Ja 2:4), points in the same direction, and forms the foundation of the liberal sacramental character of Extreme Unction, and the Greek and (previous to 1553) Anglican anointing of the sick. The cleansing qualities of unguents appear also to have been recognized at an early period in Babylonia, as well as their power in the prevention of diseases of the skin, so common in hot and moist climates. The use of unguents thus became at once a part of the toilet and an adornment of the person, like dress and ornaments. With the increase of luxury, especially highly scented oils were used, and as a natural corollary to this stage of the custom, anointing became a symbol of prosperity (Ps 23:5), while the general tendency in mourning rites to return to the customs of an earlier age led to the view that anointing was not appropriate during the period of lamentation for the dead, and that it was discontinued at such times. In the Semitic Orient popular customs are apt to become hardened into ceremonial obligations, and thus the anointing of a guest takes its place as a ceremony of great importance, the royal custom of crowning the victorious. The account of Mary’s anointing Jesus with precious nard is an illustration of the observance of the ceremony down to a late period. Anointing oneself before paying ceremonial visits falls under the same category (Lu 7:46).

LITERATURE.—Besides the references in this art. see the Hebrew Archaeologists of Benzing and Nowack, and the literature in Hastings’ DB, s.v. ‘Anointing,’ The Anointing of Bethel by A. Smythe Palmer (1899), pt. iii., ‘The Anointing,’ with some references to literature on the subject.

MORRIS JASTROW, JR.

ANSELM OF CANTERBURY.

I. Life.—Anselm was born of noble parents at Aosta (not Grossan) in 1033. After a sheltered youth spent in study, on the death of his mother he deserted his studies. In 1055, after years of wandering settled in 1059 at the abbey of Bec in Normandy, newly founded (1059) by the saintly Helvira. There Anselm was then at the zenith of his power, and in 1060, on the death of his father, Anselm took the cowl, and became Lanfranc removed to Caen (1063). Anselm was elected by his successor as prior. The fame of Bec as a school grew greater still. Anselm’s genius as a teacher was remarkable; his gentle methods mark an epoch in pedagogic spec. (Edm. Vita, l., c. 10, 11, 22). On the death of Helvira (1078) the reluctant Anselm was appointed abbot. One result of his election was the far-reaching reform of the observance of hospitality, and anointing with vast estates in England, and Anselm’s journeys in their interest brought him into touch with both the Conqueror and William II., and endeared him to the whole nation. On the death of Lanfranc (May 28, 1086) all men looked to Anselm as his successor. But during his long residence at Bec he had acquired no adherence, and after some delay he appointed him archi-abbey of Canterbury. In 1091 he was accused of corruption, the ‘furious bull,’ already repentant of his penitence, discovered that the ‘weak old sheep’ (Ead. H. H. N. 53) was worth less than his match. Anselm insisted on the restitution to Canterbury of all the possessions of Urban II, (already recognized in Normandy) as the true pope. To this last William II., who had taken advantage of an anti-pope (Clement III.) to seize Peter’s penance for himself, was driven to a verbal consent by Anselm’s threat of retiring to Bec. At last Anselm was enthroned (25th Sept. 1093), doing homage for his successions, a matter of interest in view of later disputes. The question of the recognition of Urban was, however, not really settled, and the position of the king, under the influence of the late Bab.-Assyr. conception, became a distinctively secular one, connecting itself with that of a lay-judge rather than with that of a priest-king. As for anointing as a secular rite among the Semites, there is every reason to believe that its origin is bound up with the use of unguents as medicinal remedies. The medical prescriptions preserved on the cuneiform tablets of Ashurbanipal’s library, copied from originals that probably date from as early as 2500 B.C., or 5100, in which scented oils are mentioned. The frequent mention of unguents as remedial agents, both in the OT and NT (Is 1:4, Ezk 16:8, Lk 10:43, Mk 6:44, and especially Ja 2:4), points in the same direction, and forms the foundation of the liberal sacramental character of Extreme Unction, and the Greek and (previous to 1553) Anglican anointing of the sick. The cleansing qualities of unguents appear also to have been recognized at an early period in Babylonia, as well as their power in the prevention of diseases of the skin, so common in hot and moist climates. The use of unguents thus became at once a part of the toilet and an adornment of the person, like dress and ornaments. With the increase of luxury, especially highly scented oils were used, and as a natural corollary to this stage of the custom, anointing became a symbol of prosperity (Ps 23:5), while the general tendency in mourning rites to return to the customs of an earlier age led to the view that anointing was not appropriate during the period of lamentation for the dead, and that it was discontinued at such times. In the Semitic Orient popular customs are apt to become hardened into ceremonial obligations, and thus the anointing of a guest takes its place as a ceremony of great importance, the royal custom of crowning the victorious. The account of Mary’s anointing Jesus with precious nard is an illustration of the observance of the ceremony down to a late period. Anointing oneself before paying ceremonial visits falls under the same category (Lu 7:46).

Before the peace was made, Anselm had returned to England (Aug. 1100), and was received with enthusiasm by king and people. But he had come home to die, and on his way back gradually faded away, kept alive by his desire to write a treatise on the on the soul. On Wednesday, 4th May, 1109, he fell asleep. His canonization, a suit for which had been begun by Becket in 1163 (Hist. Bocket, Jr., v. 30, was deferred, through the troubles over Bec’s observance of the Observance of the (Conv. Conc. iii. 641). One of the ironies of history, it was then the work of the profligate pope Alexander VI. But Anselm had al-
ready been enrolled by a greater than Alexander among the immortals (Dante, Par. xii., last lines). His feast day is April 21 (Acta Sanct., s.v.).

2. Character and place in history.—In character Anselm was a true saint, whose mingled sanctity and sagacity, gentleness and firmness, tenderness and austerity, acted as a charm on all who came under him from the rudest braggards (Ead. HN 89), the conqueror (Vita, i. 31), and Duke Roger's Apulian Saracens included (Vita, ii. 33), to the most obstinate novice (Vita, i. 10) or the pious saint. He possessed that personal magnetism involuntarily associated in the Middle Ages with miraculous gifts (Eadmer, Descript. Miraculorum (R.S.), 425 ff.).

His unfeigned humility in all circumstances was the natural result of that mystical detachment which gives abiding interest to his writings.

Anselm's place in the ecclesiastical history of England cannot be exaggerated. Hitherto England had been loosely connected with Rome, and as a Church had possessed her own customs and a considerable degree of independence. This independence Conqueror Edward deposed and prepared to continue, as we see from his famous letter of 1076, in reply to Hildebrand (Freeman, Norman Conquest, iv. 433). The Conqueror insisted on the complete subordination of Church to State; the modern congo de desir, which took with him, the subject powers of compulsion were limited by his pleasure; papal letters could not be received unless they had first obtained his sanction (cf. Eadmer, HN i. 9). That William i.'s successors could not maintain his position was due to the stand taken by Anselm. This Italian of Aosta, by the force of his piety, character, and learning, succeeded in imposing upon the English Church the ideals of Hildebrand, and bringing the Church in England into close relation with the Church abroad. In many aspects the Reformation was but the rude undoing of his work and a return by the Tudors to the policy maintained by the Conqueror.

3. Writings and place as a thinker and theologian.—Anselm's writings may be classified as follows:

(i.) Four books of Epistles.—These letters (over 400 in all) are proof of a wide correspondence, and of the singular regard in which Anselm was held as a director of souls by all sorts and classes. We are rich for the details of his life and for their revelation of his character, there is scarcely a reference in them to the stirring events of the day—another sign of his philosophic detachment of soul.

(ii.) Devotional and Hymnary.—Of these the most important are his Orations (Migne, PL clxvi. 835 ff.) and Meditations (ib. 710 ff.). This last has singular charm; Anselm's mystic communings with his own soul breathing throughout a passionate love for Christ (cf. Med. xii. and xiii., both worth reading).

(iii.) Poetical.—That he wrote certain hymns for canonical hours may be reasonably accepted. Much also may be said for assigning to him the Mariale, a poem in honour of the Virgin sometimes attributed to St. Bernard, and commonly known as the Prayer of St. Casimir of Poland (Rigg, Anselm, 97-105; first published in full by Rasey, Lond. 1888). But neither in the Carmen de Contemptu Mundi (Migne, PL clvii. 687 ff.), with its amazing indifference to quantities, nor in several rude poems on the Virgin attributed to him (ib. 1055 ff.), is there any evidence of his authorship save some late and vague traditions.

That he had the Italian's passion for the Virgin is, however, clear from his Orationes (cf. Rigg, 490; Migne, PL clxvi. 942 ff.).

(iv.) Theological and Philosophical.—Of these the most important are—

(a) Monologion de Divinitatis Essentia.—In this work, written about 1070, when still prior at Bec (Epp. iv. 108), he gives the famous so-called a priori proof of the existence of God which has thence its way into most theological treatises. It is really an application of the Platonic Ideas to the demonstration of God's existence by a logical argument from the particular to the universal. In the world of experience we are confronted by transitory imperfect phenomena which inevitably lead the mind upward toward an eternal necessary perfect Being. Our recognition of goodness, for instance, in pheno- mena which are but in a sense 'good,' which is good per se, and which must be the final cause causans, the supreme objective reality in whom our 'ideas' inheres. Thus the existence of God is implicit in ordinary experience.

The criticism of this argument, which rests on certain Realist presuppositions, would take us too far into philosophical discussions. But we may point out here a criticism that applies to all Anselm's works—his extreme anxiety to satisfy reason ('credo ut intelligam,' Proslog, c. 1 fn.; cf. Our Deus, i. 25, that answer of Boase). Anselm in this is akin, though with a difference, to Abelard rather than Bernard (see Anselm, iv. 14, for further discussion of this). He attempts to establish on philosophical grounds that the Trinity is the Incarnation of God, the soul of the fabled isles of the Blest does not possess their existence (c. 6). Anselm replied briefly in his Liber Apologeticus that there is all the difference of the idea of the Summatum Cognitabile, or eternal necessary idea, and any particular empirical things which had a beginning, and will have an end (c. 9); contingent existence as such contradicts the idea of the Summatum Cognitabile, which cannot be conceived save as existing.

The after history of those theological arguments of Anselm belongs to the history of philosophy. They were too Platonic to be accepted by the Aristotelian schoolmen, with the exception of Duns Scotus (c. Sent. D. ii. 2.), who developed them in various forms in the systems of Descartes, Spinoza, Leibniz, and Hegel. Their most effective critic is Kant (Pure Reason, i. (2) iii. (4)). Anselm's obligations to Augustine are also most clear (e.g. de Trin. viii. c. 3).

(b) De Fide Trinitatis,—An answer to Roscellin's denial of universals as 'empty words,' was composed in 1098 at Schiavi. Roscellin's denial led him practically to the choice between Sabellianism and Tritheism; for the Trinity is itself a universal in respect of its comprehension therein of a threefold personality. Anselm meets Roscellin by pointing out that it is a fallacy to suppose the universal and the individual to be repugnant inter se. Those who care for ingenious similitudes to the doctrine of the Trinity will find, in words that remind us of the Athanasian Creed, a parallel between a 'fountain, river, and lake,' each of which may be called the Nile (c. 8).

(d) To one great doctrine of the modern Roman Church Anselm gave a powerful impulse in his de Conceptu Veritatis, evidence of his work (c. 19), as well as in the Cur Deus (ii. 16), these were argued for the graveness of the entire sanctification of the Virgin before she conceived of the Holy Ghost. Between this and the doctrine of the Immaculate Conception there is but a step, which he himself may have taken in his last thought (see the tractate of
his nephew on the matter. Mansi, PL clxxv, 299). According to Mansi (xxv. 299), Anselm inaugurated in England the Feast of the immaculate Conception (cf. Raguey, ii. 243-7). In this treatise (cc. 25-28) Anselm defends most rigorously the damnation of all unGodly children—a logical deduction from his views on original sin. (c) de Veritate. A short work which reminds the student of Malebranche. Truth is the accurate perception of the archetypal ideas in the mind of God.

(f) de Libero Arbitrio.—Mere freedom is not the power of choosing between alternatives, but of persevering in righteousness for its own sake (c. 13)—a doctrine afterwards more fully developed in Kant's Metaphysic of Ethics. It is of importance to notice that Anselm points out that original sin need not involve total depravity. Man is still left in possession of an impaired but real 'natural' freedom (c. 3) and the power of will to govern motives (cc. 6, 8).

Our Deus Homo (begun in 1094, finished in 1098).—In this most important of his works, which marks an epoch in the development of doctrines of the Atonement, Anselm destroyed once for all (i. 7) the old conception of a ransom paid to the devil. (This theory, propounded by Origen (in Matt. xvii. 27) and developed later by Sts. Gregory (Lat. 'Filioque') and Gregory the Great (Adam 48) was developed by Gregory of Nyssa, Ambrose, and Augustine (de Lib. Arbit. iii. 10), and dominated the Church from Gregory the Great to Anselm.) In place of this he substitutes a conflict between the goodness and justice of God, familiar in all forensic ideas of the Atonement, and which reminds the student of Roman doctrines of læse majestat. The defects of this theory (which may be described in brief as the interpretation of the relationship between God and man in terms of the Roman Law) are far from being new: Anselm—of Teutonic law Anselm would know nothing—, in addition to its tendency to destroy, as in much current theology, the essential ethical unity of the Godhead, lies in the essential opposition between God and the external world which it posits, leading to the idea of arbitrariness on the part of God, and the absence on the part of the individual of his own personality as an essential factor. This last, we may remark, is a common defect of the Realism of the Roman School, which Anselm could not accept. The Pauline mystical conception of union with the risen Christ (Rom. vi. esp. v. 5) is left out of consideration. This is the more remarkable, inasmuch as the Pauline idea was then already strong in theology, or it may be Anselm's easy-going thought, if he could have freed himself from juridical bondage. But instead we have the superabundant payment by Christ, the substituted Christ, the substituted man, of a debt due from man to the justice of God (i. 12, 28), which debt man, by reason of his original sin, cannot discharge. The keynote of the treatise is thus the paradox 'man must, man cannot' (i. 6; 'quant satisfactionem nemo potest facere nisi Deus, nec debet nisi homo; necesse est ut ex faciat Deus Homo'). Anselm's theory of the Incarnation In this treatise is far from satisfactory. In his anxiety to avoid conceptions now known as kensian, he limits the sufferings of Christ to his human nature (i. 8: 'Divinam naturam asservavit impossibile'). The digression on the atonement from among men of the number of the angels who have fallen (cc. 16-19) is characteristically medieval.

(h) de Processione Spiritus Sancti.—This great work, the outlines of which were given at Buri and projected shortly afterwards in the main on lines traced out by St. Augustine's de Trinitate. The unity of God is absolute save so far as limited by His threefold Personality. The procession of the Holy Ghost from the Son ('Filioque') is more consonant with this absolute unity than the Greek doctrine, which renders the co-inherence in the unity of the Godhead of the Three Persons (see esp. c. 29).

LITERATURE.—(1) LIFE OF ANSELM: We are primarily dependent on his Letters (in Migne, PL, see below) and his secretary Eadmer's Historia Novorum et de Vita Anselmi, one of the most conscientious records (best ed. Roll's Series, 1884, to which all references have been given; or in Migne, PL). Of other sources, the most important is Migne, Anselmi de Canterbury (1986), especially valuable for the philosophy; Martin R. Stake's St. Anselm (2 vols. 1883) is a good storehouse of facts, far fromjudicial in tone, and full of length with Anselm in his Norman Conquest, and more fully on his William Rufus. For the general relation of Malb. to Anselm's position as a theologian, see Dean Church, St. Anselm (1st ed. 1672, often reprinted), may be commended. Of foreign works the best perhaps is Ch. de Remusat, St. Anselme (2nd ed. 1868). Raguey's Eadmer (1892) and S. Anselme (1891), and Tredwell's ed. (1911) are also of service. The Life of Anselm by Dean Hook, Archbishop of Canterbury (1869-70), is a valuable juristic caricature. Dean Stephens's account, England Church, vol. 3 (1901), is judicious and sympathetic.

(2) EDITIONS.—The first complete edition was that of Gerberon (Paris, 1751), still often quoted. The earliest dated annotated ed. would appear to be at Nuremberg, 1494. The only complete save for Eadmer (see above), are now superseded by that of Migne (1883). PL civil, and, including Eadmer and many extra authors, is still in use. There are many more recent ed. of the Deus Homo.

(3) REVIEWS OF THE PHILOSOPHY OF ANSELM ARE MANY. The student should consult Ueberweg, etc. Attention may also be drawn to Grenier's contention that Anselm owed much to the Teutonic law conception of the justice of God, and to his spontaneous justice.

ANTEDILUVIANS.—The term 'antediluvian' (Lat. ante diluvium) was formerly applied to men or races who lived before the Flood, the latter being regarded as a Deluge universal in extent, and destroying all law familiar to men. But the term also came to be used by some ethnologists to describe certain races which were believed to have survived the Deluge, the latter being supposed by them to be concerned only with a single race of men, those descended from Adam. This pre-Adamite theory, as it was called, found many advocates during last century. Thus George Catlin referred the American Indian tribe to an antediluvian genus or family called An- delgian. Like Sesostris American immanentists, like Erastian A. B. Harnack, History of Dogma, iii. 342, 352. H. B. WORKMAN.
that man becomes mortal (319; cf. Ro 5:12, 1 Co 15:21). On the other hand, 322"M (J) seems to imply that
man was naturally mortal, and that mortality
could be acquired; but this passage does not accord
with 32-17, which speaks only of one forbidden tree,
and is probably a separate tradition incorporated
with J (see Oxf. Hex., ad loc.).

The primitive industries are tillage (323), and also
pasturage (4:3 J). According to J, pasturage and
the nomad life were first introduced by Jabol, the
son of Lamech (v. 29). The same generation
witnessed the invention of musical instruments, and
the art of smelting brass and iron (vv. 21-22). The
art of building, on the other hand, is primitive, the
first to build a city being Cain (v. 17).

The attitude of the antediluvians towards
religion and morality is more difficult to
determine, and here again differences between J and
J', and even between different sections of J', show
themselves. The statement that in the time of
Enoch man began to call on the name of Jahweh (4:26 J')
is hardly consistent with the story of Cain and
Abel (J'). 4:16 is too ambiguous to help us
much. The story of the origin of the Nephilim from
the natural union of the 'sons of God' and the
daughters of men (6:1-4), in its present connexion
with 6:5-8, appears to be a reason for the de-
pravity and violence which were the cause of
the Deluge. But it is at least possible that this
story was originally quite independent of the Deluge
story, and that the latter belongs to a later cycle
of traditions (J'), inconsistent, as it obviously is, with
4:21 (see Oxf. Hex. and art. DELUGE). If so,
the term 'antediluvian' is not strictly applicable so
far as J, as distinguished from J', is concerned.

The names of the antediluvians according to J
(+J') are Adam, Seth, Enosh (4:25-26 J'), Cain,
(ABEL), Enoch, Irad, Methusael, Methuselah, Lamech
(ADAM and ZILLAH), Jabol, Jabal, and Tubal-Cain
(4:18-24 J). Of these Abel dies childless; Adam and
Zillah are the wives of Lamech; Jabol, Jabel, and
Tubal-Cain are Lamech's three sons. The rest
appear in two genealogical lines, (1) Adam—Enosh,
(2) Cain (the elder son of Adam)—Lamech, who is the
seventh in the line.

The antediluvians of P. — The first were made
out of nothing by a direct fiat of God, in His
image and after His likeness, male and female
simultaneously (Gn 1:27, 578; v 18; were appointed
the lords of creation (1:28, 9); and were vegetarians
till after the Deluge (1:25-29). The names of the ante-
diluvians are given in one line only (Gn 5:1). Their
relation with those of J best can be seen by the
following table:

<table>
<thead>
<tr>
<th>P (5)</th>
<th>J (+J')</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adam</td>
<td>Adam</td>
</tr>
<tr>
<td>Seth</td>
<td>Seth</td>
</tr>
<tr>
<td>Enosh</td>
<td>Enoch</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Kenan (5)</th>
<th>Mahalalel (5)</th>
<th>Jared (7)</th>
<th>Enoch</th>
</tr>
</thead>
<tbody>
<tr>
<td>(5:7)</td>
<td>(5:7)</td>
<td>(5:7)</td>
<td>(Adam)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Methushelah (6)</th>
<th>Lamech</th>
</tr>
</thead>
<tbody>
<tr>
<td>(6:18)</td>
<td>(Lamech)</td>
</tr>
<tr>
<td>(5:13, 17)</td>
<td>(Lamech)</td>
</tr>
<tr>
<td>(5:8)</td>
<td>(Lamech)</td>
</tr>
</tbody>
</table>

A comparison of these lists makes it evident
that P has combined the two lists of names (J (+J'),
merely transposing the names of Mahalalel and Enoch.
The changes in the form of the names are no more
than can be found in other parallel lists, and were
probably due originally to copying errors. P has
ignored the tradition that Cain was a son of Adam.
Of these antediluvians, Seth is described as
begotten in Adam's likeness and his image, implying
that the Divine nature of Adam is reproduced in
his offspring (5:7, 13). Of Enoch it is said that
he 'walked with God: and was not;' for God took
him (5:24), meaning probably that he was translated
(for the first phrase cf. 5:6, where it is used of
Noah). From this it has been inferred that there
is a hint of the translation of Noah comparable to
that of Sittnapist in the Sumerian Deluge story
(see DELUGE).

There is no trace given of the progress of
civilization, or any suggestion of a physical difference
before and after the Deluge, except that the age of
man, which, but for Enoch, had been on an
average about 900 years, began to decline rapidly.

2. The Babylonian antediluvians [see Fragn. of
i. (2); Driver's Gen. in loc.]. Berossus agrees with P
in giving (1) 10 antediluvians, and (2) these in
one line. (3) Some writers, especially Hommel,
and Sayce, have found a further agreement in the
meaning of some of the names occupying the same
place in the two records. Thus, in their opinion,
Amelon = Bab. amiltu = man = Enosh (phew), and
Ammonen = Bab. ummnus = 'artificer' = Kenan
(ppy) 'smith.' A more probable identification is
that of Evedoracus or Edoranchus for Enoch.
Evedoracus is believed to be another form of
Enmeduranki, a legendary king of Sippar, a town
sacred to the sun-god. This god called Evedoracus
to intercede with himself, taught him secrets of
earth and heaven, and instructed him in astronomy,
and thus he became the mythical ancestor of
diviners. This identification is confirmed by the
335 years of Enoch's life, which, though having no
parallel in Berossus, appear to have some
connexion with the 365 days of the solar year. (4)
A further point of contact lies in the fact that the
sum of the reigns of the Babylonian antediluvians
amounts to 452,000 years. If a soss (a period of
5 years) be substituted for a week in the Bible
record, the period before the Deluge in the latter,
1556 years, will agree with the Babylonian (see
Opper, Art. Chronology in J. E. Driver, Genesis,
pp. 78-81).

On the other hand, it is difficult to reconcile this
probable connexion of Berossus and P with the
obvious derivation of the latter from J (+J').
The difficulty may be got over on the supposition
that P indeed took his list of names from J (+J'),
and altered the position of Enoch to agree with
that in the list of Bab. antediluvians; that the
agreement of the number 10, if it existed in the
Babylonian traditions of P's time, is a
coincidence; and, further, that P derived his data
of the world's history from a Babylonian tradition,
dividing the time among the antediluvians
according to a method of his own. It must be
admitted that apart from Enoch the identifications of
the names are ingenious rather than convincing. It
must also be borne in mind that Berossus may very
probably have himself departed from ancient
Babylonian tradition by substituting a soss for a
week, and possibly even the number 10 for an earlier
7. The translation of the 7th name of P as
Gn 5:4 (like that of Sittnapisti, the Sumerian Deluge
hero), suggests the possibility that according
to ancient tradition there were only 7 antediluvians,
the last being Enoch = Lamech = Noah = Sittnapisti.

3. Antediluvians in the mythological systems of
other races. — It is not necessary to say much
concerning these. It may suffice to remark that,
whereas among Semitic peoples the antediluvians
are, if indeed somewhat super-normal, at least
human beings, among many other races they are
rarely described as men, more frequently as
monsters, and not infrequently as ape-like creatures
(Andree, Die Flutagen, § 6). In a Fiji
legend two races were destroyed by the Deluge,
one consisting of women only, the other of men
with dog's tails (Andree, § 37). The Quiché Indians of Guatemala have a curious story connected with the origin of the cibe. Men were first made of clay, but they had neither speech nor intelligence, and were destroyed by a flood of water. Then the gods made another race, the men of wood and the women of earth. These terms we speak, but only in a senseless fashion, and were destroyed by a storm of burning resin and an earthquake, except a few who became wild asses. The third time men were made of white and yellow maize, and were so perfectly man-like that it is said they were afraid of the gods. They therefore took away some of their higher qualities, and they became normal men (Andree, § 73). See, further, DELUGE.

ANTHROPOLOGY.

[R. MUNRO].

Definition and scope.—Anthropology ("the science of man; from ἀνθρώπος, 'man,' and λόγος, 'discourse'), in the modern acceptation of the term, treats more particularly of man's origin and place in the animal kingdom; his development as an individual (Ontogeny) and as a race (Phylogeny); the physical and mental changes he has undergone during his career on the globe; his next departure in the organic world; the organization of an animal; and finally, the development of articulate speech and the principles of religion, ethics, altruism, and sociology, which, at the present time, constitute the great landmarks of human civilization. The claims of Anthropology to be recognized as a separate science were for some time successfully opposed on the ground that the phenomena bearing on the history of mankind were already fully dealt with under the sciences of Biology, Anatomy, Physiology, Psychology, Zoology, Ethnology, etc. But the startling discoveries made in the collateral sciences of Geology, Paleontology, and pre-historic Archeology, about the beginning of the second half of last century, which culminated shortly after the publication of Darwin's Origin of Species (1859) in the general acceptance by scientific men of the theory of organic evolution, conclusively proved that there were ample materials in this new field of research which were by no means covered by any of these sciences. While, therefore, Anthropology may be justly regarded as comprising all the elements of a comprehensive monograph on mankind—all that they are, or have been, or may have done, since their genome first came into existence—practically it is restricted to an investigation of the earlier stages of humanity, leaving the details of its later phases to be worked out by these other sciences, on the principle of the division of labour. But, even in this limited field of Anthropology, its remaining materials, which are rapidly increasing in number and variety, present a greater attraction to the philosophic mind than those of any other department of speculative knowledge, because they are so impregnated with human interest that it is felt, if they were not intimately affecting one's own origin and pedigree.

In order to present a brief but reasoned summary of the conclusions to be derived from a study of so fascinating a science, it becomes almost necessary to arrange its scattered materials along certain well-defined lines of investigation, which may be thus categorically stated: (1) Man's physical characteristics; (2) his fossil remains; (3) his handicraft products; (4) his mental superiority over other animals; (5) his social evolution; (6) and, lastly, other concluding remarks.

I. MAN'S PHYSICAL CHARACTERISTICS.—So long as the Hominidae were believed to occupy a higher platform in the organic world than other animals, in virtue of specially created endowments, no one thought of looking for evidence of man's origin and history in the obscure vistas of pre-historic times. The long-cherished traditions and myths which had gathered around the problem left little room for any other hypothesis than that man's appearance on the field of life, as a fully equipped human being, was the last and crowning achievement of a long series of creative acts which brought the present world-drama into existence. But to eliminate man altogether from the processes of organic evolution is not only a unwarranted assumption, but is unsupported by any evidence that can be characterized as scientific. No fair-minded person who is conversant with the close anatomical and physiological resemblances between the structural details of our nearest allies of the anthropoid apes—every bone, muscle, nerve, and blood-vessel being virtually the same—and the striking analogy between the complex mechanism of their organs of sense, can seriously deny that they are the closest relatives on the path of descent of man. The causes of variation which evolved the typical Negrito and Caucasian from one common ancestor were quite adequate to evolve that ancestor from the anthropoid stock in the Tertiary period.

The striking analogy between the structure of man and that of the nearest of the anthropoid apes becomes still more apparent when we consider the phenomena of the fetal life of animals. Not only does the human embryo start from an ovule similar to, and indistinguishable from, that of many other animals, but its subsequent changes follow on precisely the same lines. All the homologous organs in full grown animals, as the wing of a bird, the flipper of a seal, and the hand of man, are developed from the same fundamental parts of the embryo.

"It is," says Professor Huxley (Collected Essays, vol. vii. p. 99), "only quite in the later stages of development that the young human being presents marked differences from the anthropoid ape, while the latter departs as much from the dog in its development as the man does."

Starting as the last assertion may appear to be, it is demonstrably true, and it alone appears to me sufficient to place beyond all doubt the structural unity of man with the rest of the animal world, and more particularly and closely with the apes."

The Illustrous von Baer, who first directed special attention to the importance of embryology, formulated a law to the effect that structural differentiation in fetal development was from a general to a special type. Haeckel, looking at the same phenomena from a different standpoint, came to the conclusion that the development of the
individual is a recapitulation of the historic evolution of the race. If this astounding generalization be true, the study of embryology should supply the anthropologist with a method of reaching the goal of his inquiry, by making the progressive stages of man's development the subject of experimental illustrations within the precincts of the laboratory. But greater progress is made in this special branch of morphological research, we have few data to guide us in forming precise conclusions on the subject. Meantime, it may be remarked, that, if embryology is as conservative of evidence as other organic processes, it would be expected that, in course of passing through a series of progressive increments, some of the minor links would ultimately drop out altogether. Nature is full of short cuts. As a parallel instance in ordinary life may be cited the instinct which leads the chaffinch, being, in general, to alight on a vertical post or occasionally to meet with, in the human body. Such organs as canine teeth, the coccyx, inter- and supra-condyloid foramina of the humerus, the cœcum and appendix vermiformis, fibrous traces of various muscles, etc., are apparently useless in the human economy, while their homologues in other animals have well-defined functions assigned to them. But, indeed, the homologous structure of the entire human body is utterly inexplicable on any other hypothesis.

'Thus we can understand,' writes Mr. Darwin, 'how it has come to pass that man and all other vertebrate animals have been, through the same early stages of development, and why they retain certain rudiments in common. Consequently, we ought frankly to admit their community as a fact, and to take any other view is to admit that our own structure, and that of all the animals around us, is a mere snare to entrap our judgment. This conclusion is all the more strengthened, if we look to the members of the whole animal series and consider the evidence derived for classification, their geographical distribution and geological succession' (Descent of Man, p. 26).

If but the races of mankind are so closely related both in structure and mode of development to the anthropoid apes, what, it may be asked, are the essential characters which differentiate them as to make the latter? Flower and Lydekker, in Mammals Living and Extinct (p. 740), thus answer the question:

'The distinctions between the Hominidae and Simidae are chiefly in the brain and of brain-case as compared with the facial portion of the skull, smaller development of the canine teeth of the males, complete adaptation of the structure of the vertebral column to the vertical position, greater length of the lower as compared with the upper extremities, of greater length of the upper, or giant toe, with almost complete absence of the power of bringing it to projection to the other four toes. The last feature, together with the length of the canine teeth, is perhaps the most marked and easily defined distinction that can be drawn between the two groups.

Of the above distinctions it will be seen, from various passages in this article, that we have assigned the chief place to the erect attitude, because its attainment was the means of setting the fore-limbs for the development of their higher habits as tool-making organs, which constitute the true starting-point of humanity. Throughout the animal kingdom there are many morphological changes which strike one as remarkable instances of the adaptation of special means to special ends, such, for example, as the evolution of the fore-limbs into fins and wings so as to make them suitable for locomotion in the different media of water and air. But nature's operations will be searched in vain for a series of phenomena comparable to those which ushered man on the field of life as a skilled craftsman. The preliminary step in this great event was the attainment of the erect attitude which to this day distinguishes him from all other vertebrates. This divergence from the anthropoid group in human form occurred sometime in the Tertiary period, and was finally completed by the adjustment of certain muscles and bones so as to balance the upper part of the body on the spinal column, and facilitate bipedal locomotion, which henceforth became man's normal mode of progression.

The organic changes involved in the transformation from the semi-erect attitude of monkeys to that of man cannot be regarded as a very arduous piece of work; so that the assumption of bipedal locomotion, and the differentiation of the hands and feet, would have been effected in a comparatively short period. It was, however, very different with mental evolution, as the formation of brain substance in response to the progressive stimuli of nature. The manipulation of objects is a many-speed process—a process which has no limits, and indeed is still in operation. Hence, the time requisite to complete the former, or transition, period in the evolution of man is by no means comparable, in point of duration, to the long ages which elapsed since he became a tool-maker. The evolutionary stages of organic life often run in grooves, and may be long or short in proportion to the facility afforded by the exciting causes in the environment and the benefits conferred by the change. Moreover, it is probable that the attainment of the erect attitude, together with its attendant morphological changes, was completed within a comparatively small area on the globe, so that the chances of finding the fossil remains of a typical specimen of the human races native to this early period are extremely small. On the other hand, the probability of discovering erect beings, with crania in all grades of development, from a slightly changed simian type up to that of civilized man, is enormously greater, not only because of the great length of time since they came into existence, but also because of their increased numbers and wide distribution on the globe. Whatever may have been the precise circumstances which induced the first anthropoid animals to resort to bipedal locomotion, the habit soon became hereditary; and it has continued ever since to be one of the most distinguishing characteristics of man.

It will be observed that the angle which the axis of the spine of a vertebrate animal makes with the axis of its supporting limbs varies from 90° to zero. In man alone this angle reaches the vanishing point, because the vertebral axis has actually come to coincide with the vertical direction of the two lower limbs, which in his case exclusively support the body. This erect attitude is not only peculiar to man, but the ultimate goal of all improvements in the advance of vertebrate life, since the bilateral parts of the body are nicely balanced on the spinal column and the two posterior limbs. It is, therefore, the most conspicuous physiological line of demarcation that exists between man and the lower animals. Moreover, it was indirectly the means of profoundly affecting the subsequent career of mankind on the globe; for the appropriation of the fore-limbs to manipulative purposes virtually inaugurated a new phase of existence, in which intelligence and mechanical skill became henceforth the dominating factors. The co-operation of these two factors was the starting-point of the long series of inventions and ingenious methods by
Anthropology

which mankind have gradually worked out the elements of modern civilization and acquired dominion over all other animals.

Linnaeus, in his Systema Naturae, described the genus Homo as comprising four primary varieties, viz. Negro, Mongolian, Caucasian, and American, all of which are connected by numerous intermediate forms. To these Blumenbach added the Malay, as a fifth variety. On the other hand, Cuvier reduced them to three, viz. Caucasian, Mongolian, and Ethiopian,—a classification adhered to by M. Verneuil in his Races Humaines. The description of these various races of mankind, their relation to each other and distribution on the globe, form the special domain of Ethnology and Ethnography (wh. see). For precise details of the anatomical changes consequent on the attainment of the erect attitude, readers are also referred to special works on the subject (see Memoirs of John Goodison, 1868, vol. i. pp. 207-280).

With regard to Cuvier's division of the Primates into quadrumana and anthropoid, it may be observed that he is quite partially accurate; for, although anatomically the four limbs of the former are truly prehensile organs, yet the upper two are decidedly more adapted as hands than the lower. Even in the apes the distinction between hands and feet had already begun to be marked; and the difference between the upper and lower limbs has greatly widened in two opposite directions, the former becoming exclusively adapted for prehension and manual purposes, and the latter as exclusively adapted for locomotion.

II. SOME REMAINS OF FOSSIL MAN.—With the completion of the bodily changes involved in the attainment of the erect attitude, the evolution of the present human form, with the exception of some remarkable modifications in the cranium, facial bones, and probably the larynx, was practically completed. As soon as bipedal locomotion became the ordinary mode of existence, there was no apparent reason why the component characters of the lower limbs should be sensibly affected by any subsequent increase in the quantity or quality of brain-matter. For example, the femur, which had hitherto supported the entire weight of the body, would not be in the least degree affected by the nature of the component ingredients of that load. It would, however, be very different with the brain-case and its attachments. For, by the substitution of manual habits in lieu of those of self-defense, the subsequent well-being of these novel bipeds became absolutely dependent on their skill in converting the laws and forces of their environment into useful mechanical appliances. And thereby Dr. Eugene Verneuil recognized the intellectual faculties were the true source of such inventions, no doubt a premium would be put on useful discoveries. In this way strong motives for the production of more perfect weapons, tools, and other appliances were constantly coming within the scope of their daily avocations, the result of which would be a progressive increase in intelligence and a corresponding increase in brain substance. Now, according to the well-established doctrine of the erect attitude of brain function and the additional brain molecules and cells thus acquired had their seat of growth for the most part somewhere in the cerebral hemispheres, which lie well within the anterior portion of the brain-case. The mere mechanical effect of this increment to the physical organ of the head could not be to increase the weight of the anterior half of the head, and so to upset its finely equilibrated position on the top of the spinal column. But, as any interference with the free and easy rotatory movements of the head would manifestly be disadvantageous to the individual in the struggle of life, it became necessary to counteract the influence of this disturbing element by the action of some other concurrent morphological process, which would not be prejudicial to the general well-being of the human economy. This object was partly attained by a retrocession, or contraction, of the facial bones, especially the jaw-bones, towards the central axis of the spinal column, and partly by a backward shifting of the cerebrum over the cerebellum. As the gradual forming up of the cranial cavity progressed pari passu with those cranial alterations, we have, in the facial angle of Camper, a rough mechanical means of estimating the progress of mental development during the period of man's existence as a human being, i.e., since he attained the erect attitude.

One of the results of this retrocession of the facial bones was the gradual contraction of the alveolar borders of the jaws, thereby diminishing the space allotted to the teeth,—a fact which plausibly accounts for some of the peculiarities differentiating the older fossil jaws from modern specimens. Thus, in the dentition of the former, the last, or third, molar is the largest, whereas in the latter it is the smallest. Now, but among some European races the last lower molar (wisdom) teeth make their appearance at a later date in the individual's life than in early prehistoric times (a fact which has also been noted in a few Negloitic specimens), so that the so-called wisdom teeth seem to be one of the vestigial organs. It is interesting to note that this shortening of the dental portion of the human jaw attracted the attention of Darwin, who, however, attributed it to "civilized men habitually feeding on soft, cooked food, and thus using their jaws less."

Another peculiarity of civilized races is the greater prominence of the chin, a feature which may also be due to the contraction of the alveolar ridges, and the more upright setting of the incisor teeth in their sockets. But, because may have been, there can be no doubt that the gradual formation of the chin has had a striking parallelism with the progressive stages in man's intellectual development ever since he started on his human career.

The evidence on which these views are founded consists of a few fossil skulls and other portions of human skeletons (necessarily fragmentary owing to the ordinary processes of decay). A short description will now be given of one or two of the more interesting specimens.

(1) Java skull.—Perhaps the oldest and most controverted of such remains are a calvaria, two molar teeth, and a left femur, found in 1801-1892 by Dr. Eugene Verneuil and Dr. Dubois in a layer of soil on the island of Java. After comparing these bones with the corresponding parts of other human skeletons, both fossil and modern, and of some anthropoid apes, Dr. Dubois published, in 1894, a very complete memoir on the subject, with descriptive details and photogravures of each bone. In this memoir (Pithecanthropus erectus: eine menschliche Uebergangsform aus Java, Batavia, 1894) he assigns these remains to an animal having an erect attitude of brain function, and a brain-case of mixed characters, partly simian and partly human, to which he gave the name Pithecanthropus erectus. Unfortunately these bones, though found in the same horizontal strata, were not close together,—the skull-cap being 15 metres from the femur,—and consequently there is room for the belief that they did not belong to the same individual. Expert opinion was greatly divided as to the conclusions to be derived from these relics. Most of the anatomists who critically examined the femur pronounced it human, and the late Prof. Virey being almost alone in maintaining that it might have belonged to one of the anthropoid apes. As to the two molar teeth, there was so much difference of opinion among specialists,—some regarding them as
simian and others as human—that it is quite unnecessary to advance any further proof of their intermediate character. But the ‘bone of contention,’ *par excellence*, was the *calvaria*, with regard to which some twenty experts of various nationalities ranged themselves into three groups, according as they held it to be human, simian, or a transien form (see Munro, *Prehistoric Problems*, pp. 155–168).

The following is a brief description of its prominent characters:—External surface generally smooth and without any marked ridges; sutures almost entirely obliterated. The keel-shaped in the line of the frontal suture; *giabella*, supra-orbital ridges, and occipital protuberance strikingly prominent; cranial vault depressed, and on section (antero-posterior) showing an arch intermediate between that of the anthropoid apes and that of an average European man. Its general dimensions may be thus abbreviated:

| Antero-posterior diameter (max.) | 185 mm. |
| Transverse diameter | 130 '' |
| Height in the parietal region (max.) | 82 |
| Cephalic index | 70 |

Estimated cranial capacity (Huxley) : 1000 c.c.

The specially interesting features of the Java *calvaria* are its estimated small cranial capacity, the great prominence of the supra-orbital ridges and the occipital protuberance, and its remarkably low and retracting forehead. In the absence of the facial bones, we can only surmise that, to be in keeping with the above simian characters, the individual who owned this skull presented a highly prognathic appearance, something approaching to that of *Hylobates*, to which Dr. Dubois compares it. But whatever views may be held as to the anthropological value of this *calvaria*, the femur found in the same stratum conclusively proves that there had then been in existence a being of the genus *Homo* which had assumed the erect attitude as its normal mode of progression, i.e. at a time prior to the advent of that great landmark in the physical history of the northern hemisphere known as the Glacial period.

(2) Neanderthal skull. — In 1857, Prof. Schaaffhausen and Dr. Fuhrrott published an account of a skull found, the year before, in the cave of Pfedhofen, situated at the entrance to a small ravine called Neanderthal, on the right bank of the river Düsseldorf. The cave has long been quarried away, but its dimensions are reported to have been about 16 feet in length, 11 feet in breadth, and 8 feet in height. On its uneven floor lay a mass of consolidated mud, about 5 feet in depth, without stalagmitic deposits, but sparingly mixed with rounded fragments of chert. On this deposit being removed, the human bones in question were discovered. No other animal remains, with the exception of a bear’s teeth of which neither the position nor character was determined, were found in the cave.

The Neanderthal human remains, especially the skull, presented such remarkable peculiarities that, when they were first exhibited at a scientific meeting at Bonn, doubts were expressed by several naturalists as to whether they were really human. The limb-bones were characterized by great thickness, with unusual development of the elevations and depressions for the attachment of muscles, and the ribs had a slightly rounded shape and abrupt curvature—all characters indicating great muscular power. The left humerus was more slender than the right—a fact which suggested the idea that these two did not belong to the same individual; but this peculiarity was referred to have been the result of an injury during lifetime. The cranium, which was of great size and thickness, was characterized by a long elliptical shape, a low retreating forehead, excessive development of the frontal sinuses, and a great projection of the occipital region. The sutures were nearly obliterated, and the line of the frontal suture was marked by a slight ridge. Its dimensions were as follows:

| Antero-posterior diameter (max.) | 200 mm. |
| Transverse | 144 |
| Frontal (min.) | 106 |
| Frontal (max.) | 132 |
| Cephalic index | 72 |

Estimated cranial capacity (Huxley) : 1350 c.c.

With regard to this skull, Professor Huxley, writing in 1863, says:

‘There can be no doubt that, as Professor Schaaffhausen and Mr. Busk have stated, this skull is the most brutal of all known human skulls, resembling those of the apes not only in the prodigious development of the superciliary prominences and the forward extension of the orbits, but still more in the depressed form of the brain-case, in the straightness of the squamous suture, and in the complete retreat of the occiput forward and upward, from the superior occipital ridges’ (Levey’s *Antiquity of Man*, p. 56).

Here also, as was the case with the Java *calvaria*, we have no means, owing to the absence of the facial bones, of judging of the degree of prognathism of this very pronounced pithecoide specimen of humanity.

(3) Les Hommes de Spy. — In 1886 two human skeletons were found deep buried in undisturbed debris at the entrance to a grotto called Belchaneaux-Roches, at Spy-sur-l’Oiseau, in the province of Namur, Belgium. The interior of the grotto had been examined more than once, but in front of it there was a terrace, projecting 13 yards, which had not been previously excavated. It was in this terrace that MM. Lohest and de Fuydt made excavations which unearthed these skeletons. The outer skeleton was found at a distance of 26 feet from the entrance to the cave, under a mass of rubbish 12½ feet in depth and composed of four distinct strata, none of which appeared to have been hitherto broken through. It lay on the right side, across the axis of the cave, with the hand resting on the lower jaw, and the head towards the east. The other was 8 feet nearer the present entrance to the cave, but its position was not determined with so much accuracy as the former. Associated with these skeletons were worked flints of the type known as Moustérien, and some animal remains representing the following fauna:

- Rhinoceros tiborchinicus (abundant).
- Equus caballinus (very abundant).
- Cerbus elephas (rare).
- Cerbus tarandus (very rare).
- Bos primigenius (pretty abundant).
- Elephas primigenius (abundant).
- Ureus spelaeus (rare).
- Meles fagani (rare).
- Hyena spelaeus (abundant).

Immediately over the skeletons was a hardened layer composed of chippings of ivory and flint, pieces of charcoal, and some angular stones of the surrounding limestone rock. Above this there was a reddish deposit containing remains of the same fauna, but the worked objects indicated a decided advance in civilization—saws and borers of flint, together with needles, bone points of bone and ivory. Above this was a bed of yellow clay, in which were still found bones of the mammoth and various flint implements; and lastly, a mass of clay and fallen rocks, without relics of any kind.

The osteological characters of one of the Spy crania correspond in a remarkable degree with those of the Neanderthal skull, as may be seen from the following measurements by Professor Fraipont (Congrès international d’Anthropologie et d’Archéologie préhistoriques, Paris 1889, p. 233):

<table>
<thead>
<tr>
<th>Neanderthal</th>
<th>Spy</th>
</tr>
</thead>

As regards the great development of the super-
eliminal prominences, the low retreating forehead, and the depressed and elongated form of the cranium, both these skulls present a more brutal appearance than any human skull known up to the time of the Java discovery.

According to M. Fraipont, the entire anatomical characters of the Spy skeleton are in harmony with the same lowness of type shown by the skull. The jaws are deep and powerful, the chin slopes away from the teeth downwards and backwards, while the teeth and alveolar border have a striking prognathic appearance. The last molar teeth are not smaller than those immediately in front of them. The long bones are materially different from those of the normal Belgians of the present day, being generally shorter and stouter.

It is, however, only just to note that the pithe-canoid characters of the other Spy skull appear to be less pronounced, the cranial vault being more lofty and the cephalic index at least 74.

It has already been surmised that the individuals to whom the Java and Neanderthal skulls belonged had the prognathous profile which greatly strengthens the inference as to the two former.

(4) Naulette jaw.—Among isolated cranial bones occasionally discovered, the lower jaw, being merely attached to the skull by muscular and ligamentary tissue, is most frequently met with. Perhaps the most instructive of these fossil jaws is the Naulette mâchoire, discovered in 1885, in the Trou de la Naulette, by M. E. Dupont, Director of the R. N. H. Museum at Brussels. The cave known under the above name is situated on the left bank of the river Leese, near Dinant, and contained much débris and remains of the Quaternary fauna, among them being this jaw, at a depth of 4-60 metres beneath its final or modern floor. Though in a fragmentary condition, it presents characters which strongly differentiate it from the corresponding bone in modern civilized man. Its characteristics, according to M. Dupont (L'Homme pendant les âges de la Pierre, p. 99), may be thus stated:

(a) Its small height, in proportion to the thickness of the body, gives it an exceptionally stump appearance.
(b) The chin, instead of projecting forwards, slopes backwards; and the 'genial tubercules' (apophyse génien) on its inner surface are wanting.
(c) The posterior molars are larger than the others, and present the appearance of having five roots, as shown by the size of the sockets, all the teeth being absent from the mandible when discovered.

Dr. Broca came to the conclusion that the Naulette jaw, in its anatomical characters, approached the simian type more than any previously known.

"Nous sommes autorisés à conclure," he writes, 'que cette mâchoire, dont l'antiquité prodigieuse remonte au temps du mammoth, est de tous les restes humains que l'on connaît jusqu'ici, celui qui se rapproche le plus du type des singes' (Congrès International, etc., Paris, 1867, p. 49).

With respect to the retreating slope of the chin and the character of the teeth, he consulted the two skulls who owned the Naulette jaw held an intermediate place between man and the anthropoid apes; and in support of this view he exhibited a sketch of a number of human mandibles showing a regular upward gradation from the extremely sloping chin of a chimpanzee up to that of a modern Parisian (ib. p. 599). These facts go far to establish the generalization that, as men advanced in intelligence, the prognathism which they inherited from their simian-like ancestors became gradually smaller, until the face assumed the almost straight and classic profile of modern times. This view is further strengthened by evidence derived from a comparison between the skulls of modern civilized people and those of the lower races still inhabiting the globe. This method of inquiry has yielded some striking results as regards the degree of gnathism and frontal development which they respectively exhibit. The extent of this difference is well illustrated by Professor Owen (Comparative Anatomy, vol. ii. pp. 598, 599), in a comparison which he makes between the cranium of a native Australian and that of a well-formed European, from which it will at once be seen that the former has a low retreating forehead and a highly prognathic profile. The characters of the European skull, which present a very marked contrast to the former, are thus described by the Professor:

"In more intellectual races the cranial cavity is relatively larger, especially lofty and wider. The fore-parts of the upper and lower jaws, concomitantly with this, are less produced, and the contour descends more vertically from the longer and more prominent nasals. The ascending rami of the mandible are more pronounced. The malar is less protuberant, and the mastoid more." (5) That other crania supposed to be of great antiquity have been recorded whose anatomical features do not correspond much satisfactorily with the views so well as do those of the Java, Neanderthal, and Spy specimens, need not cause any surprise, considering the difficulty which sometimes occurs in correctly estimating their antiquity. Thus, the so-called famous skull of Crâne de l'âge de la Pierre, long regarded as originally belonging to one of the hunter-artists of the late Palaeolithic period, shows a decided approach in all its characters to the normal type of civilized man. Its cephalic index is 73-9 and its capacity 1500 c.c. The height of its original owner was 1'82 metres. The lower jaw has a large ascending rami, behind which, on both sides, the third molar is partly hidden. These two teeth are also smaller than the other molars, being in this respect more like those of the Neolithic and modern races. For these reasons, as well as for the fact that the Cromagnon skeletons were found on the surface of the Palaeolithic débris of the rock shelter of Cromagnon, some anthropologists maintain that the skulls belonged to the Neolithic period. But between the latest phase of the life of the Palaeolithic artists of middle Europe and the earlier Neolithic people there was probably no great interval of time. Although the Cromagnon human remains were lying over the true culture débris of the Moustérien period, the amount of superincumbent talus under which the skeletons lay shows that they could not have been much later than the transition period. Moreover, there are other human remains with regard to which no doubt has been raised, such as the skulls of Chancelade and Lauverie Basse, both found in the Dordogne district, which show equally advanced cranial characters.

(6) The recent discovery of two skeletons in the Grotte des Enfants near Mentone, which Dr. Verneau describes as belonging to a race intermediate between the Neanderthaloid and Cromagnon races, marks an important addition to fossil craniology. They belonged to a young man and an old female of normal stature, and lay on a level layer at a depth of 7'72 metres. The cephalic index of the former was 69-72 and of the latter 68-58, and both have prominent negroid jaws. But the interesting feature of the discoveries in this cave was that, a little more than 2 ft.
higher up in the débris, another skeleton of the Cromagnon type was found, measuring 6 ft. 3 in. in height and with a cephalic index of 76-29 (L'Anthropologie, vol. xiii. pp. 561-583). That these two distinct races should be thus brought nearly on the same chronological horizon by no means discredit Dr. Verneaux's theory, as it is not improbable that, kept hidden away, individuals of an older and lower race still survived in Europe. In corroboration of this we have the record of two skulls, of a distinctly negroid type, having been found among Neolithic remains in British Guiana, and even accepting the Cromagnon race, whose skulls indicate a great stride in mental capacity over those of Spy and Neanderthal, as belonging to the latest phase of the Reindeer period in France, it does not appear to the present writer that they disclose a greater brain-case than would be expected of a people who displayed such artistic feeling and mechanical skill as the authors of the art gallery of the Reindeer period (see § III.).

(7) Some forty or fifty human skulls, more or less imperfect, and supposed to date back to Quaternary times, have been recorded up to this date from as many different localities throughout Europe, occasionally in alluvial deposits, but more frequently in the accumulated débris of caves and rock shelters. Some years ago (Graecia Ethnica, 1873-1879), MM. H. and E. de Mortillet and M. Magnier have fully examined all the remains then known, and classified them under the names of the localities where the most typical specimens were found. Among dolichocephalic, or long-headed, they described two distinct races, one represented by a portion of a catarrh found at Canstadt and the other by the skull of the old man of Cromagnon. The brachycephalic, or broad-headed, were made to represent four races, under the generic designation of Purfoss, the name of a cave in the valley of the Lesse, thus:

1. The race of Canstadt, Cephalic index, 72
2. The race of Cromagnon, 78-76
   (i.) Purfoss, 79-31
   (ii.) Sister Valley, 81-39
   (iii.) Furfooz, 82-93
   (iv.) La Truchère, 84-56

It was subsequently ascertained that these Purfoss skulls were the osseous remains of Neolithic interments, which shows both the difficulty and the danger of making chronological classifications on imperfectly observed data.

As the outcome of this short review of fossil craniology, perhaps the most important outstanding feature is that the three skulls above described as typical examples are all dolichocephalic. The race of Cromagnon was, in all probability, separated from the Neanderthal and Spy troglodytes by an interval of time which can be only approximately measured by the duration of the larger part of the Glacial period. The appearance of brachycephalic races in Central Europe only at the beginning of the Neolithic period is an ethnological problem not yet satisfactorily explained. It has been abundantly proved, by the contents of dolmens and other sepulchral tombs, that two races, the dolichocephalic and the other brachycephalic, lived contemporaneously with each other in the South of France (RAuth, 1873; Matériaux pour l'histoire primitive et naturelle de l'homme, vol. xii. 1877, etc.). From the remains in the province of Perpignan, investigated and described by Baron de Born (Archéologie Préhistorique), the two races seemed to have more or less ceded. From the amalgamation of these varied races the highly mixed populations of modern Europe can be readily accounted for; but whether the brachycephalic were developed from the dolichocephalic people at an earlier period still remains a controverted problem. These passing glimpses of the early races of man in Europe support the hypothesis that two peoples widely separated had come into contact in Southern France, and perhaps elsewhere in Europe, at the close of the Reindeer period. Of these the dolichocephalic appear to have been long indigenous to the locality, and were descendants of the Palaeolithic men whose skeletons were found in the caves of Spy and Neanderthal.

III. MAN AS A TOOL-MAKER. — Man may be differentiated from all other animals by the fact that he is a skillful tool-maker. This gives him a great variety of objects which he largely utilizes instead of the organs of offence and defence with which nature originally endowed him. In lieu of the specially developed teeth, claws, horns, hoofs, etc., used more or less for these purposes by other animals, man has provided himself with a multiplicity of knives, axes, swords, spears, arrows, guns, etc., through the instrumentality of which his self-preservation is more efficiently maintained.

(1) Looking at the accumulated products of man's mechanical ingenuity, which have been gathered on the highways and byways of his primeval life, from an archaeological standpoint, there can be no doubt that they are characterized by successive increments of improvement, both in technique and material stages capable of leading to the most perfect appliances of modern times. That, during the transition period, broken pieces of wood and natural stones would be used as missiles, without being fashioned into any particular shape, was, it is assumed, as a corollary to the theory that man passed from a state of existence in which tool-making was unknown; also that, in the course of time, such missiles would give place to stones so simply worked as not to be readily distinguished from the accidental operations of nature. Objects which come under this category are named eoliths (ión 'dawn,' and ιθος, 'stone'). They are recorded as having been found among gravels on chalk plateaux in various parts of the South England, notably on the Kent plateau. Mr. Read, who figured some of these eoliths in his Guide to the Antiquities of the Stone Age in the British Museum, thus refers to them (p. 10):

"It is not the province of this Guide to enter into the arguments which have been brought forward for the artificial character of Eoliths, but it may be said that, whether their claims can be substantiated or not, the existence of implements of a ruder kind than those of the drift is in itself not improbable. For no invention reaches perfection suddenly, and each stage of advancement is attained by an infinitely slow progress from the simple to the more complex. The majority of the drift implements are clearly something more than the first efforts of an unpractised hand; the contrary, signs of a comparatively long development, and it may be fairly argued that their ruder prototypes must exist somewhere. It was only to be expected that they should have escaped notice for a longer time than the typical Palaeoliths, if only because they europeans are more difficult to distinguish from naturally fractured flints."

(2) The recognition, even among anthropological savants, that some peculiarly shaped flints, now known as paleoliths, were manufactured by man and used as implements, is scarcely half a century old. A fine pear-shaped flint of this type was found along with an elephant's tooth at Gray's Inn Lane, London, about the end of the 17th century, but, though described in the Sloane Catalogue and preserved in the British Museum, its true significance became known only when Sir W. Franks pointed out its identity with those found in the Valley of the Somme (Ancient Stone Implements, p. 521). Also, as early as 1797, Mr. John Frere, F.R.S., described to the Society of Antiquaries some flint 'weapons' found, associated with the bones of extinct animals, at a depth of 12 feet in
brick-earth at Hoxne, in Suffolk. He was so much struck with the situation that he gave a precise account of the circumstances, and he regarded the implements as belonging to "a very remote period indeed, even beyond that of the present world." (Archaeologia, vol. xii. p. 204). Mr. Frere presented specimens of the Hoxne implements to the Museum of the Society; yet here they lay, unheeded and unsuggestive, till 1859, when Sir John Evans, on his return from Amiens and Abbeville, recognized them as similar to those in the collection of M. Boucher de Perthes. The discovery of the flint "implements," associated with bones and teeth of extinct animals, beneath a thick continuous sheet of stalagmite, was so much the more striking as the examination of the stalagmitic deposits by Mr. Godwin-Austen, F.G.S., in 1840, and by Mr. Pengelly, F.R.S., in 1846, had not shown any trace of a human habitation in the Hoxne gravel. Mr. MacEnery, who asserted that he found in it "implements" strictly analogous to those associated with bones of the extinct mammals, had little chance of being accepted.

(3) It was about the beginning of the second quarter of last century that Kent's Cavern, near Torquay, first became a subject of archaeological interest, owing to the researches of the Rev. J. MacEnery, who asserted that he found in it flint "implements," associated with bones and teeth of extinct animals, beneath a thick continuous sheet of stalagmite. But the legitimate inference from these facts, viz. that man was contemporary with these animals and lived before the deposition of the stalagmite, had little chance of being accepted when opposed by the teaching and authority of so famous a geologist as Dr. Buckland, author of Reliquiae Diluvianae and of the Bridgewater Treatise on Geology and Mineralogy.

The facts on which Mr. MacEnery based his conclusions were verified by fresh excavations made by Mr. Pengelly, F.R.S., in 1846, and subsequently by a committee appointed by the Torquay Natural History Society, contributed to 1848. Papers embodying the results of these investigations were read at the Geological Society of London and at the meeting of the British Association in 1847. But, according to the late Mr. Pengelly, F.R.S., the reception given to another of his investigations was not encouraging, and the inconvenient conclusions arrived at were given to an apathetic, unbelieving world.

(4) Another discovery of a similar character was the Windmill-Hill Cavern at Brixham, explored in 1858, under the auspices of a committee appointed by the Royal and Geological Societies of London. The first paper on the result of this investigation was read by Mr. Pengelly in September 1858, at the meeting of the British Association. Mr. Pengelly then announced that eight flint tools had already been found in various parts of the cavern, all of them in situ, indistinguishable from bones of mammals, at depths varying from 9 to 42 inches in the cave-earth, on the floor of stalagmites, or lying on the ground. They were thick, having within it and on it relics of the lion, hyena, bear, mammoth, rhinoceros, and reindeer. "This paper," says Mr. Pengelly, "produced a decided 'awakening,' besides indirect results of the highest importance." (5) The discovery by M. Boucher de Perthes of rude flint implements, associated with bones of the mammoth and other extinct animals, in the ancient gravel beds of the valley of the Somme, at various levels considerably above the present highest flood-marks of the river, equally failed to attract scientific attention. An account of his researches, under the title Antiquités Célestes et Antédiluviennes, was published in 1847, but for upwards of ten years it lay absolutely unheeded. Nor can there be any doubt that the ultimate recognition of the importance of his discoveries was one of the indirect results of the less sceptical tone prevalent in scientific circles in Britain in consequence of the exploration of the Brixham Cavern just referred to.

Excluding the esoliths as too controversial a subject to be discussed in this brief review, it would appear that certain flint implements found at various depths in the higher gravels of our present river systems are the oldest evidence of man's handiwork in Europe. These gravels had been left high and dry long before the rivers had excavated the winding valleys at the bottom of which they now flow. The Hoxne implement, above referred to, is a typical specimen of what are known as the French archaeologists as the "coups de poing," probably the earliest type of hand-implement known, which came to be widely imitated among the earlier races of mankind. Implements of the coup de poing type vary considerably both in form and size, the degree of variability being, however, strictly compatible with their function as hand-tools. They have been discovered in widely separated localities in Europe, Asia, and Africa; and nearly all possess the peculiarity of being made by chipping a nodule so as to convert it into a suitable hand-tool—the flakes struck off being apparently of no use.

The original manufacturers of these Palaeolithic tools are supposed to have entered Europe from Asia at a time when there was easy communication between the two continents by several land bridges across the basin of the Mediterranean. The climate being sub-tropical, these naked nomads appear to have inhabited the wooded banks of the rivers, living off fruits and nuts and the small wild animals that fed on the advent of the Glacial period forced them to take shelter in caves and to protect their bodies by skins of animals. It is difficult to realize how much the severe climate which then prevailed contributed to the improvement of the physical and mental attributes. Perhaps the most obliging energy of the Palaeolithic age was that which enabled to adapt their mode of life to the changing conditions of the environment—for the adage that necessity is the mother of invention is truly applicable to the Palaeolithic age. The natural food productions of a warm climate gradually disappeared, until finally there was little left but wild animals,—mammoth, reindeer, chamois, horse, bison, etc.—many of which came from arctic regions. To procure necessary food and clothing in these circumstances greatly taxed the skill and resources of the inhabitants. The difficulty was ultimately solved by the manufacture of special weapons of the chase, with which they successfully attacked the larger wild animals which then occurred in great abounding. Other tools which were employed by these Palaeolithic people were for hunting and for the collection of fruits and nuts. The "apotheosis" of the Palaeolithic age is the flint "implement," which was manufactured with great skill and much care. It was the practical necessity of a warm climate that caused the Palaeolithic people finally to emerge from this singular contest with the forces of nature, they were physically and mentally better than ever equipped for the exigencies of life. A greater power of physical endurance, improved reasoning faculties, an assemblage of tools adapted for all kinds of mechanical work, and some experience of the advantage of housing and clothing, may be claimed among the nomads of the Palaeolithic age.

Of the kind of life which these early people of Europe led we have remarkably precise evidence in the food-refuse, and the lost, broken, and worn-out implements, weapons, and ornaments which have been discovered by excavating the caves and rock-shelters. These early people had made their homes in the caves and rock-shelters, and the implements, weapons, and ornaments which have been discovered by excavating the caves and rock-shelters have been held to be evidence of their skill in the art of producing them for teleological purposes. After some experience, it was found that a skilled workman could produce a flake of any required size and
shape. By subjecting these flakes to secondary chipping, implements of great variety and efficiency were in the course of time abundantly produced. This was indeed an important step of advance in flint industry, evidence of which is to be found in the fact that henceforth flakes were the useful products, while the residuary core was rejected as useless. Flints found in the early and inhabited caves of France and Belgium, such as Mousterian and Spy, show that secondary flaking was already in progress—thus proving that their habitation was later than the formation of the river-drift gravels containing waste. The careful inspection of the handiwork of these troglodytes, it will be seen that it is characterized by a gradual development from simple to more complete forms. Implements, tools, and weapons were slowly but surely made more efficient, thus evidencing on the part of their manufacturers a progressive knowledge of mechanial principles. Art and ornament, too, had taken deep root among these primitive hunters, and before the end of their civilization they evinced a remarkable artistic talent, which they transmitted to their children.

Hence G. de Mortillet classified their industrial remains in chronological sequence into Moustriens, Solutriens, and Magdaleniens,—a nomenclature which he founded upon the names of the most typical stations then explored. The earliest of the Palaeolithic industries was Le Moustier, situated on the right bank of the Vezère (Dordogne). During its habitation by man the climate was cold and damp, and among the contemporary fauna were the mammoth, woolly rhinoceros, cave-bear, and musk-ox. The special features of the industrial remains of this period were the scarcity of the coup de poing—which was so characteristic of the older river-drift deposits—and the splitting up of flints into smaller implements, such as scrapers, trimmed flakes, etc. The next typical station in ascending order was the open-air encampment of Soltré (Saône-et-Loire).

The stage of culture here disclosed was characterized by great perfection in the art of manufacturing flint implements, especially spear- and lance-heads in which the bent blade and leaf, and the socket, were made of horn and bone re used by the inhabitants as food. The climate was mild and dry, the great glaciers were on the wane, and the rhinoceros seems to have disappeared from the scene. The implements at Le Moustier were the so-called Moustrie, characterized by the abundance of objects made of bone and horn, the development of a remarkable artistic talent, the predominance of a northern climate and fauna, and the extinction of the mammoth towards the close of the period.

The civilization thus developed represents the outcome of a system of human economy founded on the application of natural laws to mechanical purposes, but little affected by the personal religion or ethics. The mysteries of the supernatural had not then been formulated into the concrete ideas of gods and demons. The notions of good and evil, right and wrong, were still dominated by the cosmic law that might is right. Neither gloomy forebodings nor qualms of conscience had much influence on the conduct of these people. Their philosophical and sentimental speculations, if they had any, centred exclusively on the habits of the animals they hunted, and on the strategic means by which they could be waylaid and captured. During this time they made great progress in the manufacture of mechanical appliances, as shown by the number of flint implements—spear-throwers, scrapers, etc.—with which they made needles, pins, ornaments, weapons, and other objects, including the so-called bâtons de com-

mandement. Upon the whole, it would appear as if their minds were engrossed with the chase and its exciting scenes and incidents, for the relics of their domestic economy indicate little more than the art of roasting or broiling the flesh of the captured animals, and of converting their skins into garments. Possibly some remarkable pebbles, abundantly found in the debris, may have been used as 'pot-boilers,' but a few stone mortars, which occasionally turned up, would seem to have been used only for mixing colouring matter to paint their bodies. Of agriculture, the rearing of domestic animals, the art of fishing, and the manufacture of pottery, they appear to have been absolutely ignorant. But yet, in an environment of such primitive resources and limited culture associations, these wild hunters developed a genuine taste for art, and cultivated its principles so effectually that they have bequeathed to us an art gallery of over 400 pieces of sculpture and engraving, many of them being so true to their original models that they bear a favourable comparison with analogous works of the present day. They adorned the walls of the caverns frequented with incised outlines of the neighbouring fauna, and made actual colour-paintings of them in black and ochre, or in one of these colours.

The other characteristic feature in the lives of these people was that they lived exclusively on the produce of the chase, for without agricultural and pastoral avocations they could do little else than organize daily hunting and fishing expeditions. During the later stages of Palaeolithic civilization their principal prey consisted of reindeer and horses, which then roamed in large herds throughout Western Europe, and thus rendered them more liable to be ambushed, trapped, or speared by their wily enemies. The weapons used by these hunters were harpoons, generally made of reindeer-horn; spear- and lance-heads of flint; and short daggers the typical weapon of the age. It was generally agreed that with these weapons they would take the initiative in attacking the hyena, lion, or cave-bear, except in self-defence. That, however, these formidable creatures were occasionally captured by them, is suggested by the fact that their canine teeth were highly prized and used as personal ornaments, or as mementoes of their prowess in the chase.

When the physical conditions which called these human accomplishers into existence passed away, and the peculiar fauna of the Clactonian disappeared from the lowlands of Central Europe,—some by extinction, and others by emigration to more northern regions or to the elevated mountains in the neighbourhood—we find the inhabitants of these old hunting grounds in possession of new and altogether different kinds of food. Finding the produce of the chase becoming so scarce and precarious that it was no longer possible to live a roaming life, now gathering fruits and seeds, now hunting with the bow and arrows, and finally the way of cultivating special plants and cereals, and rearing certain animals in a state of domestication. Whether this new departure was a direct sequence of the highly developed intelligence of the Palaeolithic people of Europe, or was derived from new immigrants into the country, is a
debatable question. At any rate, it was eminently successful, and may be regarded as the starting point of Neolithic civilization. In the course of time these Neolithic people cultivated a variety of fruits, wheat, barley, and other cereals; they reared oxen, pigs, sheep, goats, horses, and dogs; they became skilled in the ceramic art, and in the manufacture of cloth by spinning and weaving wool and fibrous textures; the flint industry continued much the same as in the later stages of the Palaeolithic period, but in addition to chipping they now graver stone implements so as to give them a sharp cutting edge; in hunting the forest fauna of the period they used, besides spears, lances, and daggers, the bow and arrow; they built houses, for both the living and the dead—thus showing that religion had become an active and governing power among them. But of the artistic taste and skill of their predecessors they had scarcely a vestige, and what they did by way of ornament consisted mainly of a few scratches, arranged in a simple geometrical pattern. The fundamental principles of the two civilizations are really so divergent that the Neolithic can hardly be regarded as a direct development from that of the Palaeolithic period in Europe, although there are several instances on which there characteristic remains were chronologically superimposed, without any apparent break in continuity, as at Campigny, Relhaic, Mast-D'Azil, etc. The probability is that, while the reindeer-hunters were in existence, people beyond the area, possibly of the same stock, were passing through the evolutionary stages which connected the two civilizations.

IV. MAN'S MENTAL ENDOWMENTS.—The great supreme mental manifestations over those of all other animals is too patent to be called in question by any serious worker in the field of anthropology. Indeed, according to some eminent psychologists, the gap between them cannot be bridged over by the doctrine of organic evolution. On the other hand, evolutionists in general believe that it is explicable on the ordinary principles of physiology and psychology. If, then, it is to be held that man, like other animals, is a product of his environment, it may well be asked why, and by what means, he has so far out-distanced all other beings in the struggle of life. The attempt to minimize this remarkable disparity between man and brute has not met with much success. Among the pessimists who fail to recognize the vast gap that exists between man and the brute, Mr. Alfred Wallace, F.R.S., has been a typical representative. Anti-Darwinians have no object in discussing this question, their argument being that no speculation founded on materialism can account for it. Accordingly, various hypotheses have been formulated by way of explaining this psychological enigma, which will now be noticed.

That there is a physical stratum, common to man and some of the higher mammals, which brings them both within the domain of organic evolution, has already been advanced in these pages; and may be regarded as the basis of some controversy. This being so, we have to investigate the two following propositions: (1) What are the mental faculties common to both? and (2) What psychological phenomena are peculiar to man? On these problems Mr. G. J. Romanes writes thus:

'If we have regard to Emotions as these occur in the brute, we cannot fail to be struck by the broad fact that the area of phenomena which are so nearly co-extensive with those which is covered by the emotional faculties of man. In my previous works I have given what I consider unquestionable evidence of analogous emotions, which I here name the order of their appearance through the psychological scale—fear, surprise, affection, sympathy, curiosity, jealousy, anger, pleasure, sympathy, emulation, pride, resentment, emotion of the beautiful, grief, hate, cruelty, benevolence, revenge, rage, shame, contempt, asceticism, emotion of the ludicrous.

Now, this list exhausts all the human emotions, with the exception of those which refer to religion, moral sense, and perception of the sublime. Therefore I think we are fully entitled to conclude that, so far as emotions are concerned, it cannot be said that the last of animal psychology rate any difficulties against the theory of descent. On the other hand, the emotional life of animals is so strikingly similar to the emotional life of man—and especially now that we think the similarity ought fairly to be taken as direct evidence of a gentle continuity between them' (Mental Evolution in Man, p. 7).

Similarly, Mr. Romanes deals with Instinct, Volition, and Intellect, and strongly argues that there is only a difference of degree between their respective manifestations in man and other animals. So far as for these views of Mr. Romanes are concerned, they are shared by the leading psychologists; but at this stage a serious divergence of opinion crops up among them, some holding that the principles of evolution are inadequate to account for the origin and working of the higher faculties of man. But these dissentients are seldom in agreement as to the precise nature of their objections. The eminent French anthropologist, Professor de Quatrefages, regarded man's entire organization, physical and mental, with the exception of the faculties of conscience and religion, as the work of evolution. Others extend the range of their objections so as to include the intellectual faculties. Mr. St. George Mivart, while denying that the principles of evolution are applicable to man, makes the following admissions as to the resemblance between the mental actions of men and animals:

1. I have no wish to ignore the marvellous powers of animals, or the resemblance of their actions to those of men; I can reasonably deny that many of them have feelings, emotions, and sense-perceptions similar to our own; that they exercise voluntary motion, and perform actions grouped in complex ways for definite ends; that they to a certain extent learn by experience, and combine perceptions and reminiscences so as to draw practical inferences, directly apprehending objects standing in different relations one to another, so that, in a sense, they may be said to apprehend combinations of ideas, without hesitation, even apparently, after a conflict of desires, with what looks like choice or volition: and such animals as the dog will not only exhibit the most marvellous fidelity and affection, but will also manifest evident signs of shame, which may seem the outcome of incipient moral perceptions. It is no great wonder, then, that so many persons little given to patient and careful introspection, should fail to perceive any radical distinction between a nature thus gifted and the intellectual nature of man' (President Address at Biological Section, British Association, 1870).

Professor Huxley thus expresses his views on this phase of the question:

'1. I have endeavored to show that no absolute structural line of demarcation, wider than that between the animals which immediately succeed us in the scale of animal world and ourselves; and I may add the expression of my belief that the attempt to draw a psychical distinction is frustrated by our present stage of research and investigation, that of intellect begin to germinate in lower forms of life. At the same time, so one is more strongly impressed with the vastness of the gulf between civilized man and the brute; or is more certain that whether from them or not, he is assuredly not of them. No one is less disposed to think lightly of the present dignity, or despairingly of the future hopes, of the only consciously intelligent denizen of this world' (Man's Place in Nature, p. 109).

On the other hand, Mr. Alfred Wallace, F.R.S., who holds such a distinguished position in this special field of research, has promulgated a most remarkable theory. This careful investigator, an ardent supporter of Darwin's views of the development of man in his civilized capacity, is also and a powerful advocate of their adequacy to bring about the evolution of the entire organic world, even including man up to a certain stage, believes that the cosmic forces are insufficient to account for the development of man in his civilized capacity.

Outside the Cosmic Theory. 'Natural selection,' he writes, 'could only have endowed savage man with a brain a few degrees superior to that of the brute, whereas he actually possesses a brain that of a philosopher' (Natural Selection and Tropical Nature, p. 207).

The present writer has elsewhere made the following comments on Mr. Wallace's position with regard to the application of the doctrine of evolution to man:

'This deficiency in the organic forces of nature he exalts to
supply by calling in the guiding influence of a "superior intelligence." In defending this hypothesis he means some intelligence that has a "modern cultivated mind," sometimes interlaced between it and Deity. But as this is a pure supposition, unsupported by any evidence, and merely a matter of personal conviction, it is hard to discuss it further. I will just, en passant, ask Mr. Wallace why he dispenses with this "superior intelligence" in the early stages of man's evolution, and only reserves it to give, as it were, the final touches to humanity? (Prehistoric Problems, p. 103).

That mind in its higher psychical manifestations has often been looked upon as a spiritual essence, which can exist independently of its only known physical supports, cannot be the result of astronomical or mechanical laws, when it is considered how ignorant we are of the machinery of thought—how the pleasing abstractions of the poet, the fascinating creations of the novelist, and the profound speculations of the man of genius come forth as from a hidden cavern without exciting any suspicion of having behind them not only a physical equivalent of brain matter, but also a laboratory in which thoughts are evolved. It is this marvellous power of volitional reflection in summoning ideas from the mind, and putting up in the relations into which the brain is divided, and utilizing them for other and nobler purposes than mere animalities, that gives a prima facie plausibility to this theory. From this point of view abstract reasoning, imagination, conception, idealization, machinery, etc., may be regarded as by-products of mental operations which are due to the ordinary reasoning faculties, and which have their chief stimuli in the external environment.

Leaving, however, the field of speculation aside, and reverting to the opinions of the four eminent authorities quoted above, it is manifest that they all recognize the magnitude of the psychological gulf which separates humanity from the rest of the animal world. Nor does Professor Huxley himself give any clear ideas as to how it is to be bridged over—certainly it has never been shown that this is possible on the Darwinian principle of the 'survival of the fittest.'

Such were some of the leading opinions on this particular phase of the evolution theory, as applied to man, when presented in a somewhat simplified form to the subject in his Presidential address to the Anthropological Section of the British Association in 1893. In that address (Prehistoric Problems, ch. ii.) he advocated the hypothesis that one of the most important products, and the most distinctly human development of man was the conversion of the upper limbs into true hands. From the first moment that the being recognized the advantage of using a club or a stone in attacking his prey, or defending himself from his enemies, the direct incentives to a higher brain-development came into existence. He would soon learn by experience that a particular form of club or stone was more suitable for his purposes; and if the desiderated object was not to be found among the natural materials of the place, he must find a substitute and search it out and manufacture it. Certain kinds of stone would be readily recognized as better adapted for cutting purposes than others, and he would soon learn to select his materials accordingly. If these were to be found only in a special locality, he would visit that special locality whenever the prized material was needed. Nor is it an unwarrantable stretch of imagination to suppose that circumstances would lead him to lay up a store for future use. The possession of a primitive weapon was a new departure in the career of man, and every repetition of such acts became an effective object-lesson, and an ever-accumulating training-force for further progress. The occupation of these primitive tool-makers, once fairly in operation, afforded frequent opportunity of comparing the merits and demerits of their respective mechanical products—thus supplying a fruitful medium for the development of abstract reasoning. In this way the function of the hand and the function of the brain became intimately correlated, the joint result of their long-continued action being a larger brain, greater intelligence, and a highly specialized manipulative organ than were ever before seen among the products of the organic world.

That there is an amount of cortex cerebri in the human subject, corresponding to his greater mental power, is manifestly not the result of the size of the human brain, relatively to the rest of the body, is enormously greater than in any other animal. According to Sir William Turner, the cranial capacity of an average European is about 1500 c.c., while that of the gorilla, which is a larger animal, does not exceed 590 c.c. (Journ. Anat. and Physiology, vol. xxix. p. 436). That the largest portion of this increase in the substance of the human brain is to be correlated with the higher mental powers of man, as cause and effect, is only to be expected. Mr. Wallace, in his opinion, can there be any doubt that its chief stimulus, at least in the earlier stages of human development, was the function of the hand. That subsequently there were other powerful factors working in the same direction is not difficult to see from the following remarks on articulate speech.

Next to the invention of mechanical appliances, the use of articulate speech was, undoubtedly, the most potent factor in the mental evolution of man, especially when conjoined with its later development, the art of writing. By articulate speech is meant the faculty of uniformly associating certain words or sounds with definite ideas, so that these ideas can be understood by those previously instructed in the process. Of course, the members of a family or tribe would be conversant with it from birth. Spoken language is virtually an extension, or rather a concentration, of the power which many of the more intelligent animals possess, in common with the Homoidea, of giving expression to emotions by means of vocal sounds, grimaces, and gestures. The acquisition of full human speech was, unquestionably, the result of slow growth; for there is no known race, however low and savage, but it has an articulate speech, which, however, may be simple and melodious, and means, which serves the speaker as a sort of code to the language of the world he lives in, taking in every subject he thinks about, and enabling him to say what he thinks about it.' (Tylor, Anthropology, p. 132).

Of the importance of articulate speech in the intellectual and social development of man it is unnecessary to produce detailed evidence, as its elaboration must have proceeded pari passu with the higher development of the brain almost since the first movements of a human embryo. 'A train of thought,' writes Mr. Darwin, 'can no more be carried on without the aid of words, whether spoken or silent, than a long calculation without the use of figures or symbols.'

As to the stage in the evolution of man to which articulate speech is to be assigned, there is little agreement among anthropologists. Darwin regarded it as having an early origin in the stem line of humanity, while Romans made it subsequent to the art of manufacturing flint implements.

"For my part," says Professor D. J. Cunningham, in his Presidential address to the Anthropological Section of the British Association, Glasgow, 1891, I would say that the first words uttered expressive of an external object marked a new era in the history of our early progenitors. At this point the simian or brute-like stage in their developmental career came to an
end, and the human dynasty, endowed with all its intellectual
possibilities, began.'

Professor Haeckel, in describing the evolutionary
stage of Pithecanthropus erectus, thus writes:

"The brain is considerably enlarged. Presumably it is still
driven, so-called articulate speech; this is indicated by the
fact that children have to learn the language of their parents,
and the whole process of articulate phlogopit shows that it
impossible to reduce the chief human languages to anything
like one common origin" (Last Link, Lond. 1898, p. 72).

One of the latest contributions on the subject is from
the pen of Professor D. J. Cunningham (Huxley Lecture, 1902), who thus expresses him-
self:

"I have already hinted that by the study of the early con-
densation of the cerebral cortex in man, information may be
attained regarding the evolution of human societies. We can
see that the bulging of the area in the human cerebral
regions occurs very early—somewhere about the middle or end of the
sixth month. The portion of cortex devoted to speech assumes
shape much later. Indeed, it does not appear until shortly before
the end of the first year of infancy. This might be considered to give some
basis of support to Dr. Munro's plea that man attained the
erect attitude and that the arm was set free for the develop-
ment of its higher functions, before articulate speech was ever
used.

There are two well-attested general observations which
appear to throw some light on this obscure point, viz. —(1) that none of the apes of the present
day have even the rudiments of articulate speech; and
(2) that the so-called articulate speech of man, as
practised at any rate by certain present-day civilised
men, is well developed among all the Hominidae.

The present writer's interpretation of these facts is
that the origin of articulate speech was subsequent to the
separation of the genus Homo from the apes of the
Simia stem, but prior to the development of the
races of mankind—a view which places it subse-
quent to the attainment of the erect posture and the
development of the human hand.

V. MAN'S SOCIAL EVOLUTION.—It has now been
amply shown that, from whatever standpoint we
contemplate the great drama of human life, it
stands forth as a unique development in the
organic world. Starting, possibly as early as the
Miocene period, with a progenitor of its own
race, with a will and a capacity to use its
means, the Hominidae of to-day, have gradually forged
their way into what is virtually a new world—the
world of ethics and moral responsibility. Almost
from the very first, it was evident that the chief
means of this advance were manipulative methods, with latent capabilities which (as
we can now realize) were tantamount to a new force in
the organic world, viz. the art of manufacturing tools and using them for the advancement of their
own welfare. Like some ancient races of man, unlike the creasutres around them, who were largely at the mercy of a
fickle environment, these implement-using animals
soon learned to accommodate themselves to all its
vicissitudes. With a knowledge of the use of fire,
the skill to manufacture garments, and, ultimately,
the art to construct houses, they braved the
rigours of frost and snow with comparative
impunity. As they became more and more
conversant with the laws and forces of nature and
their own power over them, they laid a usurping
hand on the powers of Cosmic evolution itself, the
cultivation of selected plants and animals, and the
destruction of others which were found unsuit-
able for their own purposes.

The far-reaching consequences of securing food
supply, that from nursery and the domestica-
tion of animals, led to more social and sedentary
habits. The appearance of large communities con-
current with the development of various trades and
professions was but a matter of time, the outcome of which is an epoch without
name in commerce. Already the greater portion of
the earth capable of being cultivated is con-
verted into gardens and fields, whose choice pro-
ductions are readily conveyed to all the chief
towns of the civilized nations of the globe. Flesh
diet is everywhere abundant, but it is no longer
necessary to hunt the animals in their primeval
haunts. Skin-coats, dug-out canoes, and the coup
de poing are now lineally represented by woven
fabrics, Atlantic ligners, and Long Toms.

Concurrently with the far-reaching inroads into the
secret arcana of nature, these skilled artisans became religiousists as well as legislators,
and founded social institutions and laws for the
maintenance of a rapidly increasing population. In the
course of their long sojourn on earth, they no
shortsightedly overcame before they succeeded in establishing the great landmarks of
civilization as they now present themselves to us,
not only in works of art, architecture, engineer-
ing; electricity, etc., but in constructive philology,
religion, ethics, altruism, and the sense of honour,
all of which may be said to be still in process of
development, though their sources reach far back
into pre-historic times.

Some of the lower animals have accompanied
man so far on the road to reasoning intelligence
as to be able to associate certain natural results
with their natural causes, as crows do when they
keep at a safe distance from a man with a gun.
But none has ever reached the stage of being able
to reason out to be desired effect. Man not only sows the seed, but
waters the field; the fickle environment refuses the seasonal showers. No other animal in
a state of nature has attempted to do anything
comparable to this simple act of practical ratiocin-
ation.

It is probable that religion came first to the
front as a modifying influence to the stern decree
of the survival of the fittest. Some grounds for
this suggestion may be seen in the readiness with
which the early races of mankind identified the
obscure forces of nature with supernatural spirits
which they were believed to have control over human
destinies, and were, therefore, worshipped as gods
or demons; and in the prevalence among savages
of magic and fetichism. But such polytheistic
notions, as well as the pretended art of magicians
to control the so-called supernatural agencies, are
rapidly giving way to the precise methods of
the scientific research of the ages. Many of the
people, of course, there is little evidence in support of the belief, advocated by
some, that religion was practised by the Paleo-

"It is only in the far future that man will be able to
comprehend the true nature of his own being and
the forces that govern his destiny."

The Neolithic times its prevailing influence throughout Europe
is attested by a whole series of memorials of the
dead— ossuaries, chambered graves, cairns, cists,
urns, etc. That the Neolithic people believed in
a life beyond the grave somewhat similar to the
present may be inferred from the character of the
grave-goods,—vessels with food and drink,
implements, weapons, favourite wives and animals,
often being buried along with the body.

Next to religion in importance, if not also in chronological sequence, comes the moral
faculty, or conscience, which regulates judicial and
ethical actions. Its position in psychology may be
aptly compared to that of instinct in the organic
world,—the psychical being that their sudden
appearances are to be the outcome of an impulse
rather than a deliberate act of ratiocination.
The most rational explanation of this peculiarity,
in both conscience and instinct, is that the su-
cessive increments of reasoning on which their respective injunctions were originally founded have more or less lapsed in the course of time.

But perhaps the most important formula which has hitherto emanated from the laboratory of ethics is altruism (which see), which may be described as a product of conscience and the conscience is an outgrowth of human nature. The object in its primary sense is the relief of suffering humanity, and for this purpose it has received the support of the civilized world. Many regard the motives of all such good deeds as having been instilled into the conscience by a remote or forgotten father, or a remote and necessary assumption; for in the accumulated deliberations of wise men during long ages we have an adequate pabulum for its birth and maturation. But whether heaven-born or earth-born, altruism has become a doctrine in human civilization. So long as the laws of our wisest Solons are liable to error, and the environment contains a residuum of unexplained forces, there will be a certain proportion of failures among yearly births, whose fate may be mitigated only by a more civilized life, the care of the blind, the lame, the poor, the friendless, and, in short, all who are ushered into the world without the means of successfully entering on the struggle of life. Our original interference with methods by which the savage community under the most imperfect sanitary arrangements, has greatly increased the number of such wastrels. Hence their immediate relief, so far as that is possible, is a moral obligation on all who derive benefit from the social government under which they have inherited or acquired wealth, position, and influence, possibly without any effort on their part. On this phase of the subject there is a conflict between the methods of this social community and those of the ethical code of humanity. The influence of the one is directed to the survival of the fittest; that of the other to ‘the fitting of as many as possible to survive.’ The former has left man with the garb and qualities of a savage; the latter has endowed him with mental culture, the refinement of civilization, and moral responsibility for his actions towards his fellow-creatures.

VI. CONCLUDING REMARKS.—The Hominids of the present day not only possess more highly developed brains than those of their early ancestors, but they also derive some advantages in their struggle from the accumulated experiences of their predecessors in the form of all sorts of mechanical inventions, organized institutions for scientific research, altruistic laws, and other ethical enactments acquired as results of their progressive culture. Thus they at once start on a higher rung in the ladder of human life. It is by these means that they have come to hold such a predominating position in the organic world; and it is through the general diffusion of such attainments that further progress can only be made by more urgent reforms by way of rectifying past mistakes and safe-guarding the future interests of the race, may be mentioned the eradication of obsolete doctrines and pernicious superstitions, the enforcement of just and equitable laws, the prevention of crime, the popularization of scientific methods, and especially strict attention to sanitary improvements.

There is, however, a limit to human powers over the laws of environment, for occasion-ally the most conscientious and capable communities find themselves helpless amidst the operations of nature itself. But yet it is in this direction alone that prospects of future betterment lie.

From various data advanced in the previous sections, it seems clear that there are two distinct lines on which investigations into the past history of mankind may be profitably conducted. The first relates to man as a biological entity, and comprises, in addition to his ontogenetic and phylogenetic development, a few fragments of skeletons of his predecessors which by some fortuitous circumstances have to this day resisted the disintegrating forces of nature. This department is generally known as Physiological Anthropology. The evidential materials to be gathered along the second line of research consist of the remains of man’s handicraft works, which, being simply preserved impressions of his skill in the different stages of culture through which he has passed, may be characterized as being essentially archæological. The successive modifications which these respective materials have undergone during a long series of ages, though different in kind, are found to bear a decided ratio to the progress of human intelligence. Thus, taking the human skull at the starting-point of humanity as comparable to that of one of the higher apes, we know, as a matter of fact, that during the onward march of time it has undergone some striking changes, both in form and capacity, before reaching the normal type of modern civilized human brain."

LITERTURE.—Owing to the number of works more or less bearing on the natural history of man, all that can be attempted here is to make as judicious a selection as possible. For a complete survey of the subject see:

Anthropomorphism. — Generally, and perhaps always in the past, man has believed that there are powers other and greater than he. He has felt it not only desirable, but possible, to enter into communication with them; that is to say, he has taken it as a fact that they can understand him when he addresses himself to them; that he can more or less understand them; that he can win their sympathy and assistance, if he sets about doing so in the right way. Further, he has believed at some times that these powers possess the shape of man; at other times, that their shape is that of beasts or of plants; at others, that they are visible in and as the sun, moon, or stars, or audible in the storm, the earthquake, or the thunder; that they have been supposed in all stages of human development, from that of the Fuegians to that of the ancient Greeks, to possess human form is a truth which needs neither demonstration nor illustration. Indeed, X said which Ares over went to to the gods length, whether in jest or earnest, of supposing that cattle, lions, and horses, were they able, would make the gods in their own likeness. It is also obvious that deities originally theriomorphic tended to become anthropomorphic: the Egyptian gods which have gained human bodies and limbs, but retained their animal heads, are an obvious instance of this tendency. And the human form given by Greek sculptors to Helios suffices to show that nature powers, if not originally conceived in human form, lend eventually a human likeness. It is also obvious that deities originally theriomorphic tended to become anthropomorphic in the narrower place; anthropomorphism is in some cases preceded by theriomorphism, but theriomorphism is never generated out of anthropomorphism.

We may then, perhaps, assume that there was a pre-anthropomorphic stage in the history of religion. But if we make that assumption, we can do so only by limiting the term ‘anthropomorphism’ to the sense in which it means that deities have bodies and limbs like those of men, and by excluding from the content of the term the sense in which it implies that deities have thoughts, emotions, and wills like those of men, though transcending them. Further, it may be said that to limit the meaning of the term to the first of the two senses which may be put upon it is to break, or rather to ignore, the continuity which is characteristic of—indeed, essential to—evolution in all its forms, whether evolution of religion or of anything else; whereas, by including in the meaning of the term the second sense as well as the first, we are enabled to grasp the principle which underlies and runs through the whole evolution of the idea of God.

2. Psychological anthropomorphism. — From this point of view, then, man has always ascribed, and does now ascribe, to Deity thought, emotion, and will. He may originally have worshipped animals, or even stones and trees, as the fetish worship he does; but if he did so, it was because he ascribed to those objects thought, emotion, and will; and the characteristics so ascribed were none the less human because they were ascribed to the deity in a transcendent degree. In the next stage of evolution, not only did aniconic objects of worship become iconic, not only did pictures and statues of the gods in human form supplement, and more or less drive out, the stones and trees which were the object of the older cult, but the very conception of the god, as it existed in the mind of the worshipper, became more and more definitely human—and did not in the process become more divine, as the example of Ares and Aphrodite in Homer shows. Homer will address the god as a deity, but his idea of the god is that of a man or an animal: but though religion in this stage becomes iconoclastic, and ceases to be anthropomorphic in the narrower of the two senses of the word, it continues to believe, in this stage as in the previous stages, in a personal deity. In this stage of evolution the same impulse that leads religious minds to deny that the deity can be conceived in any bodily form, leads also to the conclusion that some human virtues cannot be ascribed to a deity: thus it would be degrading, if it were not unmeaning, to ascribe to deity the temperance or the courage possessed by men. In the third stage of evolution the same process is repeated, with the result that the broader of the two senses of the word, or the ‘anthropomorphic’ stage becomes again a necessary stage in the evolution of the idea of God. It was, indeed, so continued in one of the arguments considered in Cicero’s De natura deorum (II. 3), where it is argued that knowledge of good and evil cannot be ascribed to a good God, for he who can do no evil requires no such knowledge; and in the same way reason cannot be ascribed to Him—or shall we assign reason which makes dark things plain? But to a god nothing can be dark. In modern times the same feeling finds expression in the doctrine that the cause of all things is the Unknowable, to which we are not warranted in ascribing thought, emotion, or will. If we seek to ascribe all things to the Unknowable, we reverse precisely the second stage of the ideal process of evolution. In the interests of clear thinking, therefore, we must abstain from so ascribing them. Power, indeed, must be assigned to this Unknowable cause—but not personality. The anthropomorphism which has characterized religion from the beginning charac-
terizes it to the end. In the progress of human thoughts, anthropomorphism tends gradually to be sloughed off; at first, indeed, the tendency is to provide the gods more and more definitely and precisely with human limbs and bodies; but that tendency is eventually defeated by its own realization—when fully realized, it becomes intolerable, as it then is doomed. Next, the tendency is for religion to insist on investing the deity with the mental and moral qualities of man; and that tendency too—on this theory—eventually reveals its own inner and essential self-contradiction. In this, however, anthropomorphism, comes to be felt untenable and intolerable, religion, in any ordinary sense of the word, becomes impossible.

3. Origin of anthropomorphism.—Looked at from the point of view of evolution, the fate of the belief in anthropomorphism was determined from the beginning. If it is seen in the end to be logically incoherent and impossible, it is so because it has carried within itself the seed of its own destruction from the very beginning. We have already argued, on the one hand, that it is fundamentally rational in order to see its want of validity. The tendency to personify objects is exhibited by children—and even by animals—at play. Such personification, indeed, in the case of both children and dogs, may be a case in which the very problem is insurmountable; and the terror may be removed when the object personified is shown not to be a living thing. The same tendency is shown by the African negro, who, starting out on some business, happens to have his attention arrested by some object, say a bright pebble, and, immediately associating it with the business he is engaged on, picks it up as a fetish, regarding it as a personality which has the power, if properly treated, of understanding what he wants and of giving him assistance. The same tendency to personify objects and to associate them with the fortunes of the man who discovers their personality, will account for the fact that an object thus personified by the father of a family or the most influential member of a clan comes to receive the worship of the whole family or clan, and thus becomes not a personal fetish but a family god or a tribal god; and may possibly survive and eventually become a national god. But the African negro may find out that he gets no benefit from the object he has picked up; and then, though he may cast it away as not being really a fetish, still he usually keeps it, even though he pays it no worship, because it may perhaps after all turn out to be an operative fetish. In the same way, amongst the African negroes and elsewhere, we find traces of gods who, though the names and the memory of them linger on, receive no worship, because they are no longer believed to do good or evil. The belief in such gods, and in such fetishes, evidently has a lessening tendency: but the tendency to personify objects of sense or objects of thought—which is found in animals and children as well as in savages, is the origin of anthropomorphism, which is puerile therefore in character as well as in origin. The evolution of the idea of God, it is argued, is simply the process by which a childish error is developed slowly to its fullest extent, and now that its inherent inconsistencies and self-contradictions are coming to be fully recognized, is being cast off. It is a case in which the psychological 'projection of the self' into the world is made the basis of an attempt to explain all things, and is ultimately found to afford no explanation which is satisfactory, morally or intellectually, of the not-self.

4. The method of science.—From this point of view, the not-self, the world around us, must be accepted on its own terms, so to speak, and must be studied objectively; we must not make the mistake of assuming it to be the expression of a subject's reason or will. We must not assume its ways to be our ways or to be explicable by them or by analogy with them. We must take them as they are and study them as they are given, without presuppositions and without assumption. This is the world, we assume, the method that of science, the objective method. So we shall escape from the error of foisting on the facts an anthropomorphic explanation which they will not tolerate.

Now, the object of science is to understand the world; and it may fairly be said that any attempt to explain the world assumes the course of the world to be explicable. It is assumed not only that the course of things is or may be to some extent intelligible to the human reason, but also that it is rational. This is the reason that presents itself to science is attacked by science with the firm conviction that there is a solution. Such a problem is a challenge to science; and the challenge is never declined on the ground that the problems are insoluble. On the contrary, the challenge is accepted, and the problems presented to the science of the world are continually being solved. The course of the world is continually being exhibited by science as more and more intelligible; and science is perpetually being confirmed in its fundamental assumption of the rationality of things. The world becomes more and more intelligible, on the assumption that the reason of things and the reason in things is intelligible to the human reason.

5. Objective rationality.—Are we then to say that science also is anthropomorphic, or are we to deny it? In the one case we shall say that science, like religion, starts from the human reason, and persists in measuring everything by it and interpreting everything in conformity with it. In that case, if we adopt this anthropomorphic system, it eventually breaks down in the hands of religion, and proves in the long run to be but a puerile 'projection of the self' into the external world, then the anthropomorphism of science, its assumption of a preconceived and recognized human reason—to into things, may, like the anthropomorphism of religion, pass muster for a while, but eventually must be found untenable and intolerable. Indeed, it may be said, science as well as religion has already come to that pass. It is vain to deny the possibility that being may be rational only in a very narrow sphere, and that it might some day turn towards us another side, about which we could build no structure of connected and practical thought (Höfding, The Problems of Philosophy, p. 114). Not only is it not necessarily valid at all—the want of validity has merely grown more and more patent. That is to say, the origin, as well as the history, of the belief shows that it has no validity; the tendency to personify objects of sense or objects of thought—which is found in animals and children as well as in savages, is the origin of anthropomorphism, which is puerile therefore in character as well as in origin. The evolution of the idea of God, it is argued, is simply the process by which a childish error is developed slowly to its fullest extent, and now that its inherent inconsistencies and self-contradictions are coming to be fully recognized, is being cast off. It is a case in which the psychological 'projection of the self' into the world is made the basis of an attempt to explain all things, and is ultimately found to afford no explanation which is satisfactory, morally or intellectually, of the not-self.
lating that the world is intelligible to man is not
guilty of anthropomorphism; it does not assume
that the reason which it strives to understand
is human, and it does not make the reason which it
finds. But even so—granted, that is, that to some
extent, as far as it has gone, science finds in things
a reason which it does not put there—the possibility
remains that Being may any day turn to us another
side, displaying no reason, but irrationality. The
possibility indeed remains, but science scouts it
or systematically ignores it; or, perhaps we may
rather say, faith in science forbids us to acknowledge
it. No unsolved problem in science is admitted to
be insoluble. In other words, if the rationality of
things, so far as it has been discovered by science,
is a fact and not an assumption, still it is an
assumption so far as it has not yet been discovered.
It is not, of course, discredited by the fact that it
is an assumption, for we must begin with an
assumption—by assuming either that things are or
that they are not, or that they partly are and
partly are not, rational. And the assumption that
things will continue to reveal a reason which,
though it is not man's, is intelligible to man, is at
any rate harmonious with the discoveries which
science has thus far made, even though it be an
assumption rather than an explanation.

But, granting that we make the assumption and
show the faith which science demands, we have
only got thus far, viz., that the power which dis-
plays itself in things is rational in the sense that
it is logical. But, how, and indeed whether, it is
to get this, for science aims at nothing more:
its position is that things are logically comprehen-
sible; its coherence is a logical coherence which it
finds in things and does not put into them. Even
things which, we think, it that reason is not, can
be, and we know, in a mind, and that a mind must be
self-conscious, the utmost that we can get out of
science, or hold to be implied by science, is that
there is a self-conscious mind whose power acts
logically; and even if we grant that there is
nothing anthropomorphic in this,—on the ground
that the reason and logic in things are found in
them and not imputed to them by science—still
the mind or power thus revealed as superhuman
is not self-evident, nor altogether logical, nor
revealed as moral, or as recking aught of man.
Its laws extend to, just as its rain descends on,
the unjust and the just alike; and science affords not
the slightest ground for holding that the ultimate
winds which we discover favours the just rather
than the unjust. If, then, man can discover and does discover in
things a logic and a reason which he does not put
there, if the logic and reason so found are objective,
and are not created by him, are not images of his
own making,—are not, in a word, pieces of anthropo-
morphism,—can we go further and discover in man's
experience anything else which is similarly given
to him and not created by him? The fact that
a thing is comprehensible by man is no proof that
it is the work of man's reason, if it is merely
logically intelligible to man's reason, is found in
things by science,—which looks only for logic and reason,—
can man and does man, when he looks for more,
find more than mere reason? Does science exhaust
objectivity, or does the realm of objectivity include
other things than reason? Is man's experience of
the universe that it discloses reason alone to him?
Man's experience has been that he has found some-
thing more in it than a reason partially intelligible
to him, and next, that things in it function in
which awakes in him a sense of gratitude, of duty,
of awe, and of fear.

But the experience in which these workings of
this power are thus disclosed or felt is distinguish-
able, if not distinct, from the experience, or from
the aspect of experience, of which science is the
interpretation or the expression. Whether we term
the aspect of experience with which science has to
do sense-experience or experience of the physical
or the external world, it is, however defined, at any
rate marked off from the rest of man's experience,
just as being but a part and not the whole of human
experience. Or, if we go so far as to say there is
nothing in human experience which may not be
investigated scientifically, we still indicate by the
adverb 'scientifically' that the point of view of
science is only one point of view, and that the full
aspect of reality which science confronts is not the
only aspect which human experience presents to
man. One and the same set of facts, for instance,
may be viewed psychologically by science, may be
pronounced valid or not valid from the point of
view of logic, may be estimated right or wrong
from the standpoint of morality, holy or sinful in
the eyes of religion. The scientific aspect is not the
only aspect of our experience. The scientific is not
the whole account of that experience.

6. Ethical qualities.—If, then, the reason which
science finds in things is not the creation of science,
is not made after the image of human reason, and
is not put into things by science, but is found in
them and is found to be just as it is in the
man, then the same experience, which when studied
by science reveals a reason which is not man's,
may, when regarded in its entirety, or even when
regarded from other points of view than that of
science, reveals more, or may even than the
logical rationality. It may disclose ethical quali-
ties. It may disclose qualities, in the apprehen-
sion of which by the heart, and not merely by the
intellect, religion consists. Whether it does, as a
matter of objective fact, disclose such qualities is
not the question now before us for discussion.
The point is that, in thus interrogating experience, we
are no more guilty of anthropomorphism than is
science when it interrogates experience. The ques-
tion is, what, in what man, is that which is dis-
covered in science, is what experience discloses when interrogated.

Science discovers in things the operations of a reason
which is not human reason; religion discovers in
the experience of man the operations of a power
whose ways are not the ways of science. Above all,
religion discovers the operations of a personal power.
The personalism of that power is only partially dis-
closed in those of its operations with which science
concerns itself; and it is disclosed only partially,
because science is concerned with only a partial
aspect of its operations. Even when we attempt
to view its operations from a more comprehensive
point of view than science pretends to offer, the
conception we then form of it is, doubtless, shaped
to some extent by our human limitations, and may,
that, nay, has itself been already, partially disclos-
ed limitations. Of course, every apprehension must,
whether to whatever extent, be so shaped, but it does
not follow from this that nothing is apprehended.
A thing to be misapprehended, even, must be ap-
prehended; and, to be apprehended, it must be there.
Will it, then, be said: Granting heartily that it
must be there, still it can be apprehended only by
being anthropomorphized? The statement, then,
is, first, that the power is not personal or spiritual;
and, next, that there is in the immensity of the human
mind, it can only appear, or be conceived, as per-
sonal. In other words, the religious experience
of God as a person is alleged to be not experience, but
an interpretation of experience—a false interpreta-
tion, and an interpretation which, from the nature
ANTHROPOMORPHISM

of the case, must be false. What, then, are the grounds on which we can say, a priori, that this interpretation, if it is an interpretation, must be false? They can only be that we know something which proves that it is false; that we know, to start with, that the power is not personal. But that is precisely what we do not know; that is precisely the very reason why it is that, on the one side, is that in religious experience God is known as personal. If, on the other side, that is denied, then the dispute is as to the nature of religious experience, and the dispute can be settled only by reference to that experience; it cannot be settled by assuming the point at issue, by begging the question. The question, then, becomes whether the personality of God is a fact of experience, or an inference—possibly a false inference—from experience. Now, those who have not had a given experience—for instance, a blind man who has not had experience of colour—are, obviously, on unsafe ground if they allege that other people have not had that experience, e.g., of colour, but have had some other experience, e.g., such as touch, while the man also who has not drawn the inference that they see. No blind man is, of course, so foolish as to argue in this way. He accepts the fact that sighted persons are blessed with an experience which he has not; he may be unable to form any idea of what the sensation of colour is, but he is not necessarily to be excluded from it, and the inference that they see. He might be—perhaps does not mean, or at least might be—false from experience, but an inference—a false inference—from experience.

7. Testimony of experience. We are, then, thrown back upon the necessity of interrogating experience, of asking what is found there. A person who is not accustomed to a microscope will not see what is undoubtedly to be seen through it; and we cannot accept the fact that he sees nothing as proof that nothing is to be seen. So, too, in the interrogation of religious experience we must accept what is found there, and not deny that it is objectively there because of some of us fail to see it. The position that religion rests on the existence of God as a fact given in experience, and can only be reached by a process of inference, which may or may not be correct, is a position which this article assumes and has not to prove; here we have to consider simply in what sense, if any, religion is anthropomorphic. Now it is undeniable that the existence and the personality of God may have been, and in many or most of the stages of religious development have been, anthropomorphized: He has been pictured in human form, as indeed also in animal form; and, even when this misrepresentation has been cast aside, He has been depicted as having passions which are specifically human. But though this is perfectly true, it is equally true, and philosophically more important, that this process of anthropomorphization has also been conducted by the highest religious minds and is to be found in the personality of God as revealed in the religious consciousness; and its incompatibility, when thus pointed out, has been recognized by others as true to the facts of that religious consciousness. Thus, as a matter of historic fact, it appears that anthropomorphism has been, and is recognized to be, a limit and a hindrance to the comprehensive and realization of the personality of God as revealed in the religious consciousness. That being so, the attempt to exhibit anthropomorphism as a producing condition of this Personality is manifestly at variance with the facts; it is not a producing condition, but a distortion of the personality of God. That the distortion should be greatest in the case of mature minds and the lowest forms of religion is a point which it is easy to recognize, and the recognition of which is compatible with—indeed assumes—the recognition that there is something there to start with which can be distorted, that is to say, anthropomorphized. That misinterpretation precedes recognition of the facts as they really are is illustrated by the history of science quite as fully as by the history of religion. But that the facts were not there, at the beginning, to be recognized is a notion which neither science nor religion can take up. If it be said that science, starting from things as they appeared to the mind of primitive man, has eventually come back to pronounce them very different from what they then appeared, it is an objection to that science; it cannot be settled by assuming the point at issue, by begging the question. Yet, too, the growth of religion would have been impossible if there had not been at least one fact—the personality of God—which it not merely started from, but to which it constantly returns, and in which, properly understood, it finds its constant touchstone of truth. From this point of view, the proper understanding of the personality of God is a test of religious truth; and that personality is not to be found in the forms that long are interpreted on the analogy of human personality—so long, that is, as it is interpreted anthropomorphically. So long as it is thus interpreted, or rather misinterpreted, the limitations of the finite are necessarily, and self-contradictorily, imposed on the Infinite. Thus escape from the self-contradiction is possible only so far as we reverse the process, and recognize, with Lotze, that perfect Personality is in God only; to all finite minds there is allotted but a pale copy thereof. When that is recognized, anthropomorphization is seen for what it is—a misinterpretation of what is given in consciousness, leading necessarily, if slowly, to the assertion that God is not revealed in consciousness for what He is, but is given either for what He is not—the Unknown—or is not given at all.

It may perhaps be said that human knowledge, to be human, must be contained in human minds, and, being so contained, it must be shaped by that which contains it; in fine, that in admitting it to be human we are ascribing it to be anthropomorphic; in denying it to be anthropomorphic we are denying that it can be known to man. Thus, whatever knowledge is poured into human minds must be shaped by the mould into which it is poured, and so must be anthropomorphic. But this argument is based on the false notion that the shape is shaped before anything is poured into it, and that the shape is purely human. It fails to consider the possibility that the vessel is plastic, and may be shaped in part by that which is put into it; and that consequently, even if the vessel is human, it may take a form more or less divine, if that which informs it be divine. It tacitly assumes that man makes God in his own image; or, at any rate, that man cannot possibly, under any circumstances, in the perspiration of his eyes or aspiration, mould himself on the image of God: all he can do is to conform to the image of God in his own image. But the assumption that man can shape the facts with which he comes in contact, but cannot in the least be shaped by them, is one which will scarcely bear examination. The facts cannot, of course, shape him if they are unsubstantial; but if they are unsubstantial, neither can be shaped by them. Scepticism at once emerges from this line of argument; it starts by crying of the facts, 'They are naught! They are naught!' And as long as it continues to do so, it is condemned to immobility.

But if we use the metaphor of the vessel,—whether it be a vessel of clay or of skin, whether it shapes or is shaped—we should remember that it is a metaphor; and if we cannot speak without metaphors, we may at least vary them. We speak
of rising above ourselves, and a fact, fortunately, is expressed thereby: in morality and in religion we may rise above ourselves, even as, from the metaphysical point of view, we may ‘transcend self.’ These facts, or rather the metaphorical expression of them, may serve to remind us that we do not merely receive facts and shape them into our own likeness, but that we go forth into a world of reality and there encounter things which we have not made, which are not in our likeness, but on which we may model ourselves.

8. Testimony of feeling. We have considered the question of anthropomorphism thus far, rather from the point of view of knowledge than of feeling. But no answer will afford permanent satisfaction which appeals to knowledge only and not to feeling. Practically, the question is one of feeling rather than of knowledge; it is: Are we to doubt the goodness and love of God, and to suppose that it is by the fallacy of anthropomorphism that we ascribe them to Him? To that question the only answer is that we do not doubt God’s love; we know it. But the ‘knowledge’ is not purely or primarily or essentially intellectual; and if it be said that then His love is not a matter of knowledge but of feeling, the simple and sufficient reply is: How else is love to be felt if it were not modelled of knowledge? It might be a matter of inference; and the inference would be subject to examination, and therefore to doubt. It might be represented as an inference from the love of man for God, and so as anthropomorphic, an hypothesis on which human experience was modelled. But an essential quality of it—without which it would not be what it is—is that it is experienced as His, and not as something which remains as it is, whether ascribed to Him or not. As a fact of experience, it may be characterized as an appeal to our sense of those who experience it, that our love is a response to His, and that it is His which calls forth ours. It is so felt. Beyond that, or behind it, it does not seem possible to go. Feelings, after all, are facts.

9. Testimony of action. Feeling and knowledge issue in action. Omniscent love must, from the religious point of view, be the source from which all God’s actions flow. From the religious point of view, therefore, nothing can be ascribed to Him save that which issues from such a source. Human actions have other sources assigned to them; and anthropomorphism is exhibited when actions are ascribed to God, or to the gods, which cannot without self-contradiction be imputed to a love that is omniscient. Human actions proceeding from the human mind are inessential characteristics of anthropomorphism—more essentially indeed than are human parts. The gods of Greece were as anthropomorphic in their passions and actions as in their forms; and only in their forms were they typical of human beings at their best. The cowardice of Ares, the incontinence of Aphrodite, the lusts of Zeus, were doubtless a bequest to Greek civilization from barbarous or savage times; and they were a damnosa hereditas. If the bequest was made to those who were impelled thereunto, if the obedience, by most of those who were born to it, the reason doubtless was that the philosophy summed up in the sentence, ‘Man is the measure of all things”—νὰ τῶν μὲν τῶν ἄθρων—was characteristically Greek: even the gods were made in man’s image, and they did not do credit to it. Xenophanes spoke bitterly when he said that the gods of men were anthropomorphic, just as the gods of animals, if animals believed in gods, would be theriomorphic. He failed to note, apparently, that theriomorphism goes back to the anthropomorphic, but revert to theriomorphism and to bestial conduct. Where a plurality of gods is believed in, the gods are necessarily conceived as objects, as items in the world of objects, and therefore as limited and circumscribed in their action and reaction. The action of any one of them is liable to be frustrated by the action of the rest; and behind and over-topping them all there tends to rise the vague figure of destiny or fate, to which all are subject; omnipotence cannot remain in the hands of any god; to find anthropomorphism were a fallacy which infected religion alone, the position of those who see in religion nothing but that fallacy would be stronger than it is. On reflection, however, it is manifest that religion, as well as science, has that fallacy to contend with; in the animistic period of man’s history, the tendency is to account for the action and behaviour of all—even inanimate—things by the assumption that their action is anthropomorphic, and to influence their behaviour by proceedings based on that assumption. Only when that assumption is discounted or ignored does it become possible to study the interaction of things scientifically—rerum cognoscere causas—to discover in them a reason not modelled on man’s, though intelligible to it, provided that we reject the fallacy of anthropomorphizing their action. Religion, also, as well as science, has to throw off the fallacious tendency to anthropomorphize God’s action. It is only according to an anthropomorphic picture incapable of rejecting the fallacy. Monothelism escapes from it only by degrees; not only is vengeance the Lord’s, but the worshipper may pray Him of His goodness to ‘slay mine enemies.’ The tendency to assume that God’s ways are as our ways is the essence of anthropomorphism. To yield to the tendency and to follow it out to its logical extreme is to make God after man’s own image. Science, by studying its facts objectively, is enabled to proceed in the right way in that religion succeeds in making the same escape only where it similarly renounces the a priori method of interpreting God’s action, and further renounces the desire to utilize it as a means to make man’s will be done. Religion rises for the first time clear of anthropomorphism when the prayer goes up from the heart, ‘Thy will be done.’ Then, and not till then, does the will of God become a fact presented to the religious consciousness, a fact which for the religious mind possesses as much validity as the facts of science, the latter being as studied by science, and for the non-religious mind is as meaningless as for the non-mathematical mind a mathematical formula is. The difference may be illustrated by contrasting the petition, ‘Slay me the enemies of the Lord,’ with the same petition in our enemies: the former is properly addressed to an anthropomorphic god; the latter could only proceed from a very God, and be accepted as of objective validity only by a religious mind. The fact that religion is not anthropomorphic is shown by the way in which the Christian revelation set as ideals before mankind lines of action (such as humility, love of enemies) which were paradoxical and foolish in the eyes of the world, though wise and to us their value was not to be appreciated till sixty years or more after they were suggested were to do God’s will, to be like unto Him, to be pure even as He. Should it be objected that this is the only way in which the Christian revelation was not received by the religious minds to the precept of loving our enemies, we may use another illustration: the command to give your coat also to him who takes your coat, and even your cloak; that is one which cannot be justified on the principles of any non-religious system of ethics, and is one which is not accepted as valid by common sense: it is one which no anthropomorphic deity could self-consistently give. The very design of the command is couched are, of course, intelligible to all; the value of the command is for the non-religious mind naught; only for him to whom it is revealed as God’s will, as the course of action
which will be followed by him so far as God's will operates through him, does it become an objective fact for the same reason that it is an objective fact for the same reason that the facts of science have for the scientific mind. It is not that the same thing is presented to the religious and the non-religious mind and produces different effects in the two cases: it is that the way in which the one is introduced and rejected by the other, and that for him who accepts it all things become new—God is no longer anthropomorphic. To allege that religion is necessarily belief in an anthropomorphic god is to close our eyes to the fact that on the point on which faith of particular sects turns, viz. the love of God, only a hypothesis, merely phanastic is the reason why reason, whether the reason proclaimed by science or the love proclaimed by religion. The reason thus projected is human on the reason, the love, human love. We may have soared for a while into the clouds, but the end of anthropomorphism all the time was round our feet, and brings us back to the facts we started from, —there they are just as they were when we started. We never have got clear of human limitations, never have lost ourselves in the Divine Love. We may have lost sight of self; but we come down to earth, and recognize that it was the self who imagined that self was transcended or lost. We have simply seen ourselves, our form, our human project, projected to the clouds: if, after all, it is merely an assumption —and not the only possible assumption—that reason and love, because they occur in man, are limited to man. It may equally well be that reason and love are not limited to man, but revealed to him. And the question then becomes one of fact, whether such a self-lost experience is experienced. As a question of fact and of feeling, it can be answered only by experience and with reference to the experience. Those who have not some experience which give any answer to it; those who have it need make none. Experience excludes hypothesis.

ANTICHRIST.—1. The name ἄντιχριστος occurs for the first time in Christian literature (1 Jn 2:18, 2). The ideas which are associated with this name, in particular the conception of a God-opposing tyrant and ruler of the last times, reach back with certainty to the most flourishing period of the Apocalyptic literature. It is most likely that they have their deeper roots not in definite historical phenomena and experiences, but in a mythical and speculative idea, namely, the idea of the battle of God with the devil at the end of the world.

This conception seems to have arisen in the Persian eschatology (the battle of Ahura Mazda with Angra Mainyu; cf. Bousset, *Judentum*, 238 ff.), and to have passed from this source into the Jewish Apocalyptic literature. The opposition between the Messiah and the one soul, who is introduced under the names Beelzebul, *Mazda*, or *Tuntas*, is the chief leading ideas of the Jewish source of the Testaments of the Twelve Patriarchs, which undoubtedly arose in the Maccabean period. Even here Beliar appears as the enemy of the last times. It is said of the Messiah (Levi 1894) : ‘And Beelzebul will be bound by him, and he will give his children power to trample on his enemies in the same way, the description of the last great battle in *Assumpt.* (No. 109) begins as follows: ‘And then will His (God’s) enemies be gathered together, and they shall be brought to naught.’ The same thought is also to be found in the Gospels (Lk 11:20, Mt 12:24, Jn 14:19, 28, Revelation 12:7); *Assumpt.* 201-3, 7-16; Bousset, *Judentum*, 238 ff., 385 ff.)

It is very likely that ‘Antichrist’ is originally nothing else than the incarnate devil, and that the idea of the battle of God with a human opponent, in which all devilish wickedness would become incarnate, arose under the influence of definite historical conditions.

2. In fact it is very probable that the roots of the conception of Antichrist are even more widespread than this. We shall see that the conception of the battle of God with the devil was closely interwoven with related mythological fancies regarding the battle of God with a dragon-like monster.

Traces of these ideas, which probably come from the Babylonian battle of Marduk with Tiamat, are already to be found in all parts of the OT (cf. Dn 12, 18). In this way the figure of Antichrist and the monster of chaos are combined into one (cf. Rev 12). Thus we need not be surprised if the figure of the devil incarnate, the persecutor of Antichrist, and here the two stand at the edges of the same myth, the figure of the mythical monster, and manifests a ghastly superhuman character which cannot possibly be explained from the fantastic historical situations of the separate predictions. Thus even in Dn 8 the figure of Antichrist is depicted with the superhuman features of the monstrous dragon, as where we read that a little horn raised itself against the host of heaven and cast down some of them to the ground. In the same way Pompey in the 2nd century B.C., the conqueror of the Greeks, is described as the dragon of Chaos, whom God destroyed because he rose up against him. It is also a significant fact that Antichrist in a series of later passages receives the name which in the other sources (Test. *Patriarch* etc.) was applied to the devil—Beliar (see *Ps. 29* in all probability originally a god of the under-world); cf. *2 Co 11:14* (of *Assumes*. i. 28), *Saphon*, ii. 33, *Libyca*, ii. 167.

3. The idea of Antichrist itself can be traced back to the 2nd cent. B.C., and appears first of all in the Book of Daniel in the Maccabean age. The historical figure whose features have in the first place been attributed to Antichrist is the Syrio-Jewish Antichrist IV. *Epiphanes*, the persecutor of the Jews. In particular, the representations of Dn 7:1-8, 14-18, have been of lasting influence. That Antichrist (‘the king of the North,’ 114) will appear as a mighty king with great armies, that he will destroy three kings (the three horns, 7-9), that Edomites, Moabites, and Ammonites are to be spared by him (114), that Libyans and Cushites will follow in his train (119), that he will persecute the saints (72), that he will reign 42 years (786) etc., that he is to be set up in the Temple the ‘abomination of desolation’ (39 *Athenar* τῆς ἐμφάντωσεν, 89 ἐν 121)—all this belongs, from this time onward, to the standing requirements of the Antichrist picture that had predicted by ‘Daniel’ did not come, but his book received a place in the canon; and thus the faithful still expected the fulfillment of his predictions in the future, and handed them on from generation to generation. In this process ‘Antichrist’ came to be separated from the historical figure of Antiochus IV., and became the type of the God-opposing tyrant who was discovered now in this and now in that historical character.

To the author of the Psalms of Solomon (140) to Pompey, the captor of Jerusalem, the blasphemers of the sanctuary of God that is the Divine adversary, the ‘dragon’ of the last times; and his destruction is celebrated in triumphant strains by the writer as a great act of his God (22). In the *Assumption of Moses* (ch. 3) a remarkable prophetic picture of the cruel tyrant is
outlined; and, if minutely examined, it seems to be a figure possessing the mixed features of Antiochus Epiphanes and Nero the Great.

In the Roman period the character of the Emperor Caligula (a.d. 37–41) influenced the history of the legend. The fearful triumphs of Caligula, embittered by the revolt of the Jews at Jannia, gave the order to the governor Petronius to erect his statue in the Temple, recalled ahere the prophecy of Daniel. The small Jewish Apocalypse, adopted to a large extent in Mk 13 and Mt 24 and interwoven with words of Christ, may date from this time. In the same way the attempt has been widely made to find in Rev 18 a source belonging to this time, chiefly for the revelation of Rome. Secure connection with Rome actually makes up number 616; and several manuscripts of Rev 18 preserve this number (instead of 666). Then we shall see later how the expectation of Antichrist was carried over to the person of Nero.

Finally, in 4 Es 9, too, we find in quite general terms attention called to the last hostile tyrant of the last times: "regnabit, quem non speravit" (cf. the Syriac Apoc. Bar. 40).

4. Christianity took over from Judaism this whole cycle of ideas, and we meet with numerous traces of these conceptions in the NT. In the eschatological chapters (Mk 13, Mt 24) we have, in all likelihood, as has already been indicated, a small apocalypse of Antichrist, interwoven with words of Jesus, if we are entitled to interpret the βασιλεύς τῆς ἡμέρας τῶν ἐχθρόνων (Mt 24:4, Mk 13:9), which stands in the position of an interlude. In particular, the predictions of the Revelation of John borrow their fundamental tone from the fancies regarding Antichrist. The eleventh chapter, with its prediction of the beast rising from the abyss (11:3), i.e., a beast, surrounded by great armies, appears in Jerusalem and kills the witnesses of God, is entirely on the lines of Jewish Apocalyptic prophecy. Finally, if the beast, who is called up by the devil (Rev 13:1), who rises out of the sea, is regarded as representing the Roman empire, or more particularly a Roman ruler, we have here, too, the character of the Antichrist, the God-opposing tyrant, preserved.

5. A strongly marked transformation of the whole idea, from a specifically Christian standpoint, is indicated by the discussion in 2 Th 2, which the present writer, in spite of renewed and energetic opposition on the part of the Rwe (TU, new ser. Is. 2), prefers to ascribe to St. Paul himself. Of course, too, the idea as Jewish Apocalyptic thought forms the fundamental conception, as is proved by the names (2 Th 2:8; 2 Th 2:10; τὸν αρχηγὸν τοῦ ἡμέρας, perhaps Beliar; cf. the OT הָגַּדֹּל, or ἀρχιερεῖον, as well as by the phrase, as the Son of Man, which, on the other hand, the Antichrist is no longer the God-opposing tyrant, but a seductive agency, which works by signs and wonders, and seeks to obtain Divine worship. Antichrist here is a false Messiah, a prophet who, if he is assumed, will call forth the faith of those Jews who have rejected the true Messiah (2 Th 2:10–12). At the same time the idea is raised still further into the realm of the superhuman (2 Th 2:8, ἀπωλείαν ἄγαν, ὧν ἦτο θεός). Antichrist, as this false one is called for the first time in a real and proper sense regarded as the opponent of the true Messiah. By means of the latter his destruction shall be accomplished, and this is described in 2 Th 2:9 in the words of Is 11' (καὶ ἐν πατρίῳ διὰ χειρὸς ἄνθρωπος ... ὁ πρῶτος αὐτοῦ ἔγερσιν). The Targum on the passage, too, interprets the word "one" as Antichrist. A remarkably puzzling trait is the 'sitting' of the ἀρχηγὸς τῆς ἡμέρας in the temple of God—probably, as we saw above, a reminiscence from the time of Caligula. But this trait is left to the prophetic picture of the seductive personality. If, finally, the enigmatic reference to a power which still keeps the appearance of Antichrist in check (τὸ κατάγων, δὲ κατίχθων) be correctly interpreted as referring to the Roman empire, then the separation of the idea of Antichrist from the political tendency, which up to this time adhered to it, comes more clearly to the front. Accordingly the significant change, which 2 Thess. has effected in the idea of Antichrist, consists in this, that here out of the God-opposing tyrant the seductive adversary of the last times has been developed, so that, while the original idea led to the proclamation of the Roman empire or of a Roman emperor as Antichrist (Revelation of John), here the figure of the ἀρχιερεῖον obtains a non-political, purely ideal significance. In this process of re-moulding, which has become of world-historical importance, the genius of St. Paul is in all probability manifested, or in any case the genius of youthful Christianity, freeing itself from Judaism and placing its foot in the world of the Roman empire.

This new conception seems to have found acceptance in wide-spread Christian circles. The author of the Fourth Gospel, too, appears to give expression to the thought that the Jews, because they have not believed on the true Christ, who was sent by God, will place their faith in the false Messiah, who will come forward in his own name (5:18).

From this point of view we are enabled to understand how, in the Epistles of John, Antichrist is connected with the Great Deceiver, and how in general the appearance of false teaching is thought of as one of the signs of the last time—the crowning point of Satanic malice (1 Ti 4:1, 2 Ti 3:1, 2 P 3:3).

6. But this anti-Jewish conception, which corresponded better with the position of Christianity in the Roman State, was prevented from obtaining any hold in the Jewish world by the political situation. This was due to the acceptance in wide circles of a remarkable combination of the Antichrist legend with the popular expectation of the return of Nero, prevalent originally among the heathen masses. Not here, however, the rumour that he was not dead, but was still alive, or that after his death he would re-appear (Sueton. Nero, 57; Tacitus, Hist. ii. 8). As Nero had stood in friendly relations to the Parthians in his lifetime (Sueton. 47, 57), the report was now circulated that he had fled to them, and would return with a Parthian army to take vengeance on Rome. Deceivers made use of the rumour to appear under the mask of Nero. Such an one came forward in 62 as the new Nero (Tacitus, Hist. ii. 8–9; Dio Cassius, liv. 9; Zonaras, xi. 15), and a second appeared under Titus (Zonaras, xi. 12; probably also Sueton. 57). Even in 100 A.D. the belief that Nero was still alive was held by many (cf. Bousset, 70. 411 ff.; Charles, Ascension of Isaiah, i. 11). This popular heathen belief was now adopted first of all by the Jewish Apocalyptic writers. While the author of the 4th (Jewish) Sibyl (79 A.D.) takes it over simply without any special tendency (v. 137–139), the author of the 5th Sibyl (v. 138 of Rev 17) (Bousset, 414–415) expects the return of Nero with the Parthians to take vengeance on Rome, because she had shed the blood of the saints (17', destruction of Jerusalem [1]; καὶ εἰς τὸ ἀνάβασιν τῶν μαρτυρῶν Ἰωάννου is a later addition). In the 5th Sibyl, which
ANTICHRIST

for the most part (with the exception of vv. 1–51) was written by a Jewish writer at the end of the 1st cent. (J. Geltken, "Komp. u. Entstehungszeit der Urs. Sibyll., "TV, new ser. vii. i, p. 22 ff.), the subject of the return of Nero is mentioned by the author no fewer than three times (137–164, 214–227, 361–385). Here the figure of Nero is already transformed into a ghostly demon; his return and the terrible war, which will then convulse the world, will be the beginning of the last end. The Christian as well as the Jewish Apocalyptic thought possessed the figure of the Nero, and on this soil the figure of Antichrist was quite identified with that of Antichrist. Then we have to take into account the additional circumstance that the longer the period from the death of Nero became, the less could a simple return of the living Nero be expected, and the more did the expectation of his return from the under world grow. In this way, too, his figure became more and more hellish and ghostly: the relation to the Parthians is lost sight of, and instead of an adversary of Rome he becomes an opponent of God and Christ.

In the small apocalypse in the Asc. Is. 29p., which dates, from the second, or perhaps only from the third, decade of the 2nd cent. (Harnack, Chronol. der altchristl. Lit. i. 573), we clearly see the final combination of two figures originally quite foreign to each other, when we read that Beliar, the king of this world, will descend from the firmament in the form of a man, who is depicted as the matricidal tyrant Nero. The beginning of the 5th Sibylline (vv. 1–51), too, probably a Jewish composition inserted by the reductor in the time of Marcus Aurelius, identifies Nero with Antichrist (pp. 28–34 in Bousset’s readers of the Sibylline on the Revelation in the age of Diocletian, still knows the relation of the writing to the legend of Nero (Bousset, 33 ff.). The apologist Commodian, who probably did not write his Carmen apocolyticum till the beginning of the 4th cent. (A. Harnack, Chronol. ii. 433–442), is acquainted with two figures of Antichrist, one of which he still identifies with Nero redivivus.

7. But even in the 2nd cent. the legend of Nero lost its influence on the picture of Antichrist. In the same degree the anti-Jewish conceptions borrowed from 2 Thess. 2, which was free from historical and political limitations, gained the upper hand. On the ground of exegetical combinations, in particular, under the influence of a renewed use of the prophecies of Daniel, and by the help of other traditions—here the combination with the idea of a world-configuration, which also in all probability arose from the Persian apocalyptic, is specially to be mentioned—the conception was filled out in detail, and it exhibited in all its particulars a remarkable persistency.

Antichrist is to come from the tribe of Dan (cf. Rev 7?); also Basset conformed the same view (ibid.). Antichrist shall appear in Jerusalem as a mighty ruler, subdue three rulers, assemble the armies of the world around him, perform signs and wonders, and demand Divine worship. Elijah and Enoch, who both appear as witnesses against him, shall be subdued and slain. The Jews shall believe on him, and he shall rebuild the Temple. He shall persecute those among the Jews who refuse him their faith. He shall even devour the nations; however, shall be saved by the grace of God (the angel). He will put his seal upon his faithful, so that only he who bears this seal shall be free to buy and sell in the last time (cf. Rev 13:17). Finally, the time of the Antichrist shall overtake him, from which he will not be able to save his followers; then the last he shall be subdued as the great antichrist, and the general configuration follows. These are the ever recurring features of this picture of the future, which continues to persist throughout the centuries (cf. the proofs in detail, Bousset, Antichrist).

The same ideas are already to be found in broad outlines in the eschatological portions of Hermes Trismegistos and in Hippolytus (de Antichristo et de Mitis). In times of political excitement and of internal disturbances, men were always turned aresh to the prophecy regarding Antichrist. The external features of the prophecy change, and in the different historical prophecies come to prominence under the ground the prediction of Antichrist, connected with no definite time, remains pretty much unchanged. Thus we find in the beginning of the Thessalonican Bousset, lately edited by Rahmani, an apocalypse of the time of Decius, although it has undergone a later redaction (Harnack, Chronol. ii. 314 ff.). In this work the description of the external appearance of Antichrist is of interest (cf. also the Copitc and the Jewish Apocalypses of Elyiush; see below). The time of Aurelian and Gallienus, with its embittered struggles between the Romans and the Persians as well as between the Roman emperors and the Parthians, seems to have given a new significance to the prophecy.

From this time, in all probability, dates the Jewish Apocalypse of Elyiush, which is preserved to us in Hebrew, and in the Latin translation, which, if Buttenweiser’s conjectures are correct (Die Apocalypsen, Leipzig, 1897) are correct, Odesnat of Palmyra appears as Antichrist. In the same period, we find the prophecy of the 13th Sibyl, which ends in a glorification of Odesnat, but does not belong to the Antichrist predictions of the Sibylline (cf. Bousset, 325). Finally, it seems as if the text of the 3d Sibyl was still in use, and was preserved in the 3d Sibyline, v. 63 ff., and at the end of the 2d Sibyline, belong to these circumstances (Bousset, PReB xviii. 572 ff.). Finally, it seems as if the text of the 3d Sibyl was still in use, and was preserved in the 3d Sibyline, v. 63 ff., and at the end of the 2d Sibyline, belong to these circumstances (Bousset, PReB xviii. 572 ff.).

Lactantius in the 4th cent., who represents the Antichrist legend in an original and interesting form, which shows a certain amount of contact, on the one hand, with the Jewish Apocalypse of Elyiush, which has just been mentioned, and on the other hand, with the Carmen apocolyticum of Commodian (belonging to the first decades of the 4th cent.).

8. A new turn in the history of the legend is represented by the so-called Tiburtine Sibylline. By means of the investigations, which all point to the same conclusion, undertaken by Sackur (Sibyll. Texte und Forschungen, p. 114 ff.), by Kamper (Die deutsche Kaiseridee, p. 18 ff.), of Antichrist, it has been ascertained that the Tiburtine Sibylline, which appears in various editions and revisions of the Middle Ages, goes back to an original document which was composed in the 4th century. Since Basset published a Wisdom of Sibyl (cf. ibid.) we have evidence derived from Ethiopian and Arabic sources, which in itself is closely connected with the Tiburtina, but is enlarged by predictions which go down to the date of the sons of Harun al-Rashid, it has become still more easy to re-construct the original of the old Tiburtina. This Sibylline, dating from the 4th cent., and celebrating the Emperor Constans as the last ruler, is of importance, because in it occurs for the first time the prophecy which, who burned emperor Nero, and in the 5th cent., who burned emperor Antichrist, shall obtain dominion over the whole world, and at the end of his reign shall march to Antioch and lay down his crown on Golgotha. From this time onwards the last ruler of the world before Antichrist becomes a standing requisite of the legend. In the same period, Commodian’s prophecy in Latin under the name of Eprihus (Isidore), which probably dates from the 4th cent., and which has been published by Caspari (Briefe und Abhandlungen, 1890, pp. 208 ff., 428 ff.), this change in the legend is also already indicated: "Christian-...or imperium traditur Deo et patri" (oh. 5).

There are, besides, quite a number of writings on Antichrist which have been handed down to us under Euphrasius’s name, as, e.g., a δομος εις την αναστασιν του Αντιχριστου (Arsamane, ii. 229–230, iii. 154–147), related treatises are to be found among
Antinomianism 581

... the book of the Apocalypse is closely bound up with the 
... the Apocalypse, the Sibyl, and finally the later Syrac Apocalypse of Ezra (Bouisset, Antichrist, 45 ff.). In the age of Islam we have also a curious and rare work, the Apocalyptic literature, probably to a large extent caused by the Christian prophetic writings. One of the most interesting of the writings here to be indicated is the Jewish history of Daniel which is handed down in the Persian tongue (Merx, Archeologie zur Erbahrung des AT, i). Alongside of this work there is a series of other writings: the Mysteries of Simon-mono-theist, the Micro-Mystica, the Signs of the Messiah, the Book of Zerubbabel, etc. (cf. Buttenschow, Neo-Apocalyptic Jewish literature, 1911).

9. This whole type of prophecies came to the West of pseudo-Methodius, which was early translated into Latin. The Tiburtini, too, with its numerous recensions, accompanying the history of the German emperors, plays a special role. Finally, great influence was exerted by the Latin missionary monk monk Gerberga: de Ortu et Tempore Antichristi (cf. Sackur, Sibyll. Texte und Forschungen, ii.). Then the legend of Antichrist passed through its classical period in the West, in which it even made history. Since the beginning of the 2nd Christian millennium a strong increase in the eschatological direction can be observed. This was intensified by the excitement which was produced in the lands of the West by the Crusades. All these fantastic expectations were focused on the person and activity of the abbot Joachim of Flora (end of 12th cent.); in particular, the intellectual movements which he originated found ready acceptance in the Franciscan order, and the whole movement was under the influence of the Franciscans who were inclined to form an opposition. Thus the time came when people saw Antichrist, or the fore-runner of Antichrist, in every ecclesiastical, political, national, or social opponent, and the catch-word ‘Antichrist’ sounded on all sides: in the stomach of the Pope, even the Papacy, Quills and Ghilleblines, opposing Franciscans and the Papacy, between heretics and the Church, reformatory social movements and the ruling powers opposed to them (Reformatio Sigismund, Onus Ecclesiae of Berthold of Chiemsee); in sculpture and painting (e.g. cf. Signorelli’s picture in the cathedral of Orvieto), in lyric, epic, and dramatic poetry (cf. esp. the Ludus de Antichristo, ed. W. Meyer), the motives were supplied by the prophecy of Antichrist. In particular, the belief that the Pope of Rome was Antichrist (antichristus minor, mysticus), became of world-wide historical importance. This view was assiduously cultivated by the Franciscans of the opposition, who had remained true to the original spirit of poverty. From them it was passed on over to the pre-Reformation sects; the Bohemians Milić of Krensis (Libellus de Antichristo) and Matthias of Janow are connected with them in a way which can quite easily be traced. Wyclif and his follower Michael Purvey (the probable author of the work edited by Luther (1529), Com. in Apocalypse in antequam annos editae), as well as Huss on the other side, are firmly convinced of the anti-Christian nature of the Papacy.

In a particularly instructive monograph, H. Preuss has shown how important a rôle the idea of Antichrist played in the age of Luther among the widest classes of the people—how the idea gradually came to stand for the idea that the Pope of Rome was the incarnate Antichrist, and how this conviction led him to more knowledge of the opposition, to a reference to Luther in the Papacy, and filled his soul with all the passion and remorselessness of battle. Thus in the Articles of Schmalkald, which were composed by the ancient ‘Papists’ with Daniel-apocalyptic, Bouisset, Antichrist, 41 ff.), which, in the period of the Latin Empire, directs the restoration of the OT king of the Jews (Laws, xx. 296 ff.). In the regions of the East which were ruled over by Islam, the age of Islam and the Crusades was exceedingly productive of prophecies of Antichrist. To this period belong the Apocalypses which are contained in the so-called Liber Clementiae divinae, the Apocalypse of the Arabic, and probably also the Syriac tongue (Bouisset, Antichrist, 45 ff.), the Coptic (14th) Vision of Daniel (1435) (Viole’s edition of the Codex Alexandrinus, Oxford, 1800) also the above-mentioned Ethio-Asian Wisdom of the Sibyl, and finally the later Syrac Apocalypse of Ezra (Bouisset, Antichrist, 45 ff.). In the age of Islam we have also a revival of Jewish Apocalyptic literature, probably to a large extent caused by the Christian prophetic writings. One of the most interesting of the writings here to be indicated is the Jewish history of Daniel which is handed down in the Persian tongue (Merx, Archiv zur Erfahrung des AT, i). Alongside of this work there is a series of other writings: the Mysteries of Simon-monist, the Micromystica, the Signs of the Messiah, the Book of Zerubabel, etc. (cf. Buttenhose, Neo-Apocalyptic Jewish literature, 1911).

Antinomianism.—Antinomianism (griech. ‘against,’ and σύν, ‘law’), as a distinct theological phenomenon, originated historically in the 14th century (1429–1568), who was an early condottiero of Luther in the Reformation. It is the counterpart of modern political anarchism, being directed towards the destruction of the Moral Law of the OT in the
ANTINOMIES

interest of the new freedom of Christians and the testimony of the spirit. Antinomianism, as John Wesley defined it, is the doctrine that 'makes void the Law through faith,' Christians are free from the Law. The Law primarily referred to was the Law of Moses. Agricola denied that Christians overrule their own interpretation of this text, even to the Decalogue.

In its widest sense the term is used to designate the doctrines of extreme fanatics who deny subjection to any law other than the subjective caprices of the empirical individual, though this individual is revealed in the word and inward witness of the Holy Spirit. It is uncertain just how far Agricola went towards this wider capriciousness of the individual. For we get from history the usual exaggerations of theological controversies, when we read the debates between Luther and Agricola on the subject. Agricola began, and intended to remain, true to the great Reformation principle of justification through faith alone, without works. It was the fear of work-righteousness that led him to argue against the Moral Law—at least that of Deceit. He wishes to establish the Roman Catholic doctrine of good works, or work-righteousness, on some distinctively gospel principle. After making a secret propaganda for some ten years, he maintained, in a pamphlet written in 1537, that such works are indifferent, and that a man is saved by faith alone without any regard to his moral character. He said: 'Art thou steeped in sin, an adulterer or a thief? If thou believest, thou art in salvation. All who follow Moses must go to the devil. To the gallows with Moses.'

It was then that Luther characterized the teaching as being antinomian, and identified it, in principle, with the anarchoomnianism of the Anabaptists. Agricola retracted and was reconciled with Luther, but the controversy was carried on by others. One of the followers of Agricola, a certain Amsdorff, said that good works imperilled salvation. Agricola claimed that he was only expounding the teachings of Luther and Melanchthon. Indeed we find Luther (Werke, v. 203) saying: 'We do not wish to see or hear Moses. For Moses was given to the Jews, not to us Gentiles and Christians. We have our Gospel and New Testament. They wish to make Jews of us through Moses, but they shall not.' And Martin Luther to Jacob Augusti (Luther's Apology, p. 127): 'It must be admitted that the Decalogue is abrogated.' But the controversy with Agricola was only the occasion for Luther to give the definite term antinomianism to a view far older than the German Reformation. This view showed itself even in NT times. Luther himself characterized the Epistle of St. James as 'an epistle of straw,' because of its emphasis upon good works. Then we find the Apostles (Rom 13:6; Eph 2:9) warning Christians against perversion of their doctrine. Paul even speaks of the man whose soul and body are things indifferent to the spirit. Hence, soul and body might wallow in licentiousness without detracting from the salvation of the spirit. Thus we find with Augustine the most frank and definite statement of Antinomianism in its widest and most immoral form.

A tract of Augustine (contra adversarium legis et prophetarum) seems to indicate the existence of Antinomianism in the 4th century. There are traces of it to be found during the Middle Ages. It comes out strongly among the Anabaptists of Germany and Holland. During the Commonwealth, it existed in England among the high Calvinists. These argued that, if a man was elected and predestined to salvation, no power in heaven or on earth could prevent it; and hence, no matter what the moral conduct of a man might be, his salvation was sure if he was one of the elect. If actions of such a man were not sinful, and he had no occasion to confess his sins or to break them off by repentance. Saltmarsh, Cromwell's chaplain, was among these sectaries. But they never became an independent sect. Antinomianism existed in England both in the Church of England and among the Dissenters. Again, it appeared in England among the followers of John Wesley, who made earnest protest against it. This gave occasion for John Fletcher to write a strong book, entitled Checks to Antinomianism.

It is not in place to carry the discussion of this term beyond its proper theological role. We may only add that the principle of the thing—opposition to law—is found in every sphere of the organized or institutional activities of humanity. All who advocate the subjection of the family, the State, or the Church, are antinomians. All moral sophists are antinomians. All who pervert the principle that 'the end justifies the means,' into a disregard for established moral laws, so that some of the lowest and most licentious desires are attained, are antinomians. And every individual who pleads special exemption from obedience to the common law of morality is an antinomian.

We may cite Epiphanius, the seneschal of the Gnostic Carpo- crates, as one of the lowest types of antinomians. He died at the age of seventeen from the effects of debauchery, after having written a work on Righteousness, in which he advocated the most generous principle—'Follow your own nature, against all established laws.'

J. MACBRIDE STERRETT.

ANTINOMIES.—Kant first introduced this term into philosophy. (Lectiones, 1st ed. 1777) although the conception for which it stands had been used by the Eleatics, by Plato (Phaedo, 102; Rep. 523; Parmenides, 135) and by Aristotle. With Kant an antinomy is the unavoidable contradiction into which reason falls when it seeks to satisfy its necessary demand for the unity of the world as a whole. This is the subject-matter of Rational Cosmology. We can never perceive or conceive the world as a whole. But we are compelled to think it. The conflict then is—the world as we know it under the categories of the understanding, and the idea under which we think it by the reason. Reason goes beyond the limits of a possible experience, and is met with a flat contradiction the moment it attempts to construe the unconditioned totality in terms of the conditioned, or the world of possible experience. In this knowable world, every phenomenon is determined in relation to other phenomena ad infinitum, not ad infinitum. Hence no determination can be complete and final. But the idea of reason demands this very completeness and finality. This is the conflict of the understanding (Verstand) which knows and Reason (Vernunft) which thinks. Reason says, 'If the conditioned is given, then the whole sum of conditions, and therefore the absolutely unconditioned, must be given likewise.' But, as Kant limits knowledge to the synthesis of the under-
standing, he turns to it to prove the idea of reason. But it is limited to the conditioned, and therefore can never reach to knowledge of the unconditioned. An unconditioned condition is absurd. And yet this is what reason demands.

The idea of reason is too large for the capacity of the knowing understanding; and the definite knowledge of the understanding is too small for the idea of the reason. Hence the hopeless back and forth swing between the dicta on laws of the two faculties.

Kant gives four antinomies of pairs of theses and antitheses.

The first is the antinomy of quantity. Two mutually exclusive propositions can be proved with equal force in regard to the quantity of the world:

I. **Thesis.** The world had a beginning.
   In time, and is limited also with regard to space.

II. **Antithesis.** The world had no beginning, and has no limits in space, but is infinite in respect to both time and space.

He then shows that the denial of either member of both the thesis and the antithesis involves an absurdity.

The second is the antinomy of quality, and relates to the divisibility of matter.

III. **Thesis.** Every composite substance in the world consists of simple parts, and nothing exists anywhere but the simple or what is composed of it.

IV. **Antithesis.** No composite thing in the world consists of simple parts, and there exists nowhere in the world anything simple.

Here the same reductio ad absurdum is applied to both the thesis and the antithesis. First two antinomies are styled the mathematical, as considering the world quantitatively and qualitatively. The next two he styles dynamical, as considering the world, not as a total of dead things, but as consisting of things dynamically and organically related to each other.

The first of these is the antinomy of relation, dealing chiefly with the relation of causality.

V. **Thesis.** Causality, according to the laws of nature, is not the only cause in the world; and in all the phenomena of the world can be deduced, in order to account for these phenomena, it is necessary to admit another cause, that of freedom.

Here, again, Kant reasoning is to the absurdity of the opposite of both thesis and antithesis. For the thesis it is argued that without free causality there is no vera causa, but everything is merely an effect, and not even that, unless it presupposes a vera causa which can never be found in any member of the causal series. For the antithesis it is argued that if free causality be allowed, then it must itself be held to be uncursed, and thus contradict the law of causality—that everything must have a cause.

VI. **Antithesis.** There is no freedom, but everything in the world takes place entirely according to the laws of nature.

Thus are considered the antinomies of quantity, quality, relation, and causality.

VII. **Thesis.** Knowledge, according to the Critique of Pure Reason, is an immanent thing, and the mind cannot know anything, but what it can have an immediate intuition of, and that is occasion, and necessity to the subject-matter of science.

Hegel (Encyclopaedia, § 81) blames Kant for his small list of antinomies. He holds that antinomies ‘appear in all objects of every kind, in all representations, conceptions, and ideas.’ It is this view that is the vital element of the dialectic, forcing thought onward to ever higher and more concrete forms till it reaches the Absolute Idea in which all contradictions are resolved.

The true and positive meaning of the antinomies is this: that every actual thing involves a coexistence of contrary elements. Consequently, to know, or in other words to comprehend, an object is equivalent to being conscious of it as a unified group of contrary elements. Hegel's whole Logic is an exhibition of the antinomical dialectic of all finite thought, in its indwelling tendency to absolute and final thought, as 'the life and soul of scientific progress, the dynamism which alone gives an image of connexion and necessity to the subject-matter of science'.

Of every thing and every conception we say it is and it is not, because it is more than what it is in its unmediated form. With more
identity, $A=A$, there can be no progress. But nothing in the world is mere identity:

'Thing in itself is one soul of being mingled with another soul of being.'

The truth of any thing or thought is always a unity of identity and difference, of thesis and antithesis. Synthesis is the truth of both. But all finite syntheses develop antinomies on the way to the ultimate synthesis of thought and reality, where antinomies are no more.

J. MACBRIDE STERRETT.

ANTIOCHENE THEOLOGY.

[J. H. SRAWLEY].

The title 'Antiochene Fathers' is generally applied to a school of Church teachers, all connected with Antioch, whose activity covers the latter half of the 4th and the first half of the 5th century. Its most famous representatives were Diodorus, bishop of Tarsus († 394); John Chrysostom, bishop of Constantinople († 407); Theophilus, bishop of Mopsuestia († 429), and Theodoret, bishop of Cyrillus († 457). But the theology of these Fathers has its roots in an earlier period, and reproduces the traditions of a school of Christian learning at Antioch, the history and characteristics of which form a necessary introduction to a study of the later writers.

I. THE SCHOOL OF ANTIOCH: HISTORICAL AND CHARACTERISTICS.—The city of Antioch, founded by the Seleucid kings and made by them the capital of their dominions, was the metropolis of the East and the third city of the Roman Empire. It was a centre of Greek life and culture, and was noted for its pursuit of art and literature. The Church of Antioch had played an important part in the early spread of Christianity, and from early times had been the centre of important movements in the region of thought. It was the home of the early Gnostics, Menander and Saturnilus, while the writings of Theophilus, bishop of Antioch, in the latter years of Marcus Aurelius and under Commodus, attracted the notice of the West, and show that the attention of the Church had been directed to the statement and defense of Christian truth. The earliest reference to anything like an organized Christian school of instruction occurs in connexion with the condemnation of the heresy of Paul of Samosata in the year 369. At the council of Bishops, which met at Antioch in that year and condemned Paul, the latter's teaching was exposed by Malchion, a presbyter, who was the head of a school of Greek learning at Antioch. From Eusebius' description (HE vii. 29) it has been argued that the Church of Antioch already possessed some institution resembling the Catechetical School of Alexandria, in which sacred learning was combined with secular studies, and the pursuit of rhetoric and dialectic. There is no place (πετρουστω των ε' 'Αρχαγγέλων θανατωρίων διατηρούσι προστετω) for the teaching of Paul himself is representative of a distinct school of thought at Antioch it is difficult to say, but there are features in it which are reproduced in the later Antiochene theologians (e.g. his appeal to the historical Christ and his rejection of metaphysics. See below, II. 6).

It is, however, in the time of Lucian († 311-312), the presbyter and martyr, that the school of Antioch begins to come clearly into light. He is said to have studied in the schools of Edessa and at Cæsarea. From the latter he probably acquired that interest in Biblical studies which was due to the influence of Origen, and for which the school of Lucian was also celebrated. In conjunction with Dorotheus, who combined knowledge of Hebrew with Greek learning (Euseb. HE vii. 32), he completed a revision of the LXX, and to him also been attributed the early Syrian revision of the text of the NT (see these see Swete, Introd. to OT in Greek, p. 81 f.; Westcott and Hort, Introd. to NT in Greek, p. 138). There is also extant a fragment of his Commentary on the Book of Job (Routh, Rel. Sacr. iv. p. 71 f.). But equally important with the Biblical labours of Lucian was the influence exerted by his Christology of the Eastern Church. In what way he was connected with Paul of Samosata is uncertain (see, however, Harnack, Pref. xx., art. 'Lucian der Märtyrer'); but the influence of Paul's teaching upon him is unmistakable, and he contested the Alexandrian method of interpretation, and, while affirming the need of insight into the inner spiritual
ANTIOCHENE THEOLOGY

meaning of Scripture, he asserted the importance of grammatical and historical methods of exegesis. Lastly, Diodorus' importance consists in the fact that he was the inspirer and teacher of the two most famous representatives of the school of Antioch — Theodore and Chrysostom. Theodore, bishop of Antioch († 429), developed on bold and original lines the teaching of his master Diodorus. As an independent thinker and systematic theologian he was the greatest of the Antiochenes. His theology contains a fully thought out system, embracing the nature and destiny of man and the Person and work of Christ. He has points of contact with the Pelagians in his teaching on sin and the Fall, free-will and grace; and in his Christology he was the immediate precursor of Nestorius. No less important were his contributions to the study of Scripture. In his subjective criticism of the Canon of Scripture, his insistence on the primary meaning of OT prophecy, and his endeavour to bring out the full historical meaning of Scripture, he represents the climax of Antiochene teaching.

Three other representatives of the school of Antioch during the period of its greatest fame call for notice, though none of them carried out so far as Theodore his endeavours.

Polychronius, bishop of Apamea († c. 430), and brother of Theodore, exhibits in his commentaries on the OT the traditions of Antiochene exegesis. John Chrysostom, bishop of Constantinople († 407), was a progressive disciple of Polychronius, and shows the influence of his Antiochene training alike in his doctrinal teaching and in his exposition of Scripture, though in both respects he was in closer accord than Diodorus or Theodore with the Antiochene tradition of his theology. It was, however, the popular teacher and preacher rather than the exact theologian, and his commentaries on Scripture, which are marked by profound insight into human nature, are the work of a homilist rather than a critical student.
