## Examining approaches to improve care transitions to long-term care facilities

**16 August 2024**

[MHF product code: REP 77]

## Appendix 1: Methodological details

We use a standard protocol for preparing rapid evidence profiles (REP) to ensure that our approach to identifying research evidence is as systematic and transparent as possible in the time we were given to prepare the profile.

### Engaging subject matter experts

At the beginning of each rapid evidence profile and throughout its development, we engage a subject matter expert, who helps us to scope the question and ensures relevant context is taken into account in the summary of the evidence.

### Identifying research evidence

For this REP, we searched Health Systems Evidence and PubMed for:

- 1) evidence syntheses
- 2) single studies.

We searched [Health Systems Evidence](#) using a sector filter for 'long-term care' combined with a search for (transition). In [PubMed](#), we used an open text search for (long\*term care OR "skilled nursing" OR "advanced nursing" OR "care home") AND (transition\*), combined with a date limit of the past five years. Links provide access to the full search strategy.

Each source for these documents is assigned to one team member who conducts hand searches (when a source contains a smaller number of documents) or keyword searches to identify potentially relevant documents. A final inclusion assessment is performed both by the person who did the initial screening and the lead author of the rapid evidence profile, with disagreements resolved by consensus or with the input of a third reviewer on the team. The team uses a dedicated virtual channel to discuss and iteratively refine inclusion/exclusion criteria throughout the process, which provides a running list of considerations that all members can consult during the first stages of assessment.

During this process we include published, pre-print, and grey literature. We do not exclude documents based on the language of a document. However, we are not able to extract key findings from documents that are written in languages other than Chinese, English, French, Portuguese, or Spanish. We provide any documents that do not have content available in these languages in an appendix containing documents excluded at the final stages of reviewing. We excluded documents that did not directly address the research questions and the relevant organizing framework.

### Assessing relevance and quality of evidence

We assess the relevance of each included evidence document as being of high, moderate or low relevance to the question.

Two reviewers independently appraised the quality of the guidelines we identified as being highly relevant using AGREE II. We used three domains in the tool (stakeholder involvement, rigour of development, and editorial independence) and classified guidelines as high quality if they were scored as 60% or higher across each of these domains.

Two reviewers independently appraise the methodological quality of evidence syntheses that are deemed to be highly relevant using the first version of the [AMSTAR](#) tool. Two reviewers independently appraise each synthesis, and disagreements are resolved by consensus with a third reviewer if needed. AMSTAR rates overall methodological quality on a scale of 0 to 11, where 11/11 represents a review of the highest quality. High-quality evidence syntheses are those with scores of eight or higher out of a possible 11, medium-quality evidence syntheses are those with scores between four and seven, and low-quality evidence syntheses are those with scores less than four. It is important to note that the AMSTAR tool was developed to assess evidence syntheses focused on clinical interventions, so not all criteria apply to those pertaining to health-system arrangements or implementation strategies. Furthermore, we apply the AMSTAR criteria to evidence syntheses addressing all types of questions, not just those addressing questions about effectiveness, and some of these evidence syntheses addressing other types of questions are syntheses of qualitative studies. While AMSTAR does not account for some of the key attributes of syntheses of qualitative studies, such as whether and how citizens and subject-matter experts were involved, researchers' competency, and how reflexivity was approached, it remains the best general quality-assessment tool of which we're aware. Where the denominator is not 11, an aspect of the tool was considered not relevant by the raters. In comparing ratings, it is therefore important to keep both parts of the score (i.e., the numerator and denominator) in mind. For example, an evidence synthesis that scores 8/8 is generally of comparable quality to another scoring 11/11; both ratings are considered 'high scores.' A high score signals that readers of the evidence synthesis can have a high level of confidence in its findings. A low score, on the other hand, does not mean that the evidence synthesis should be discarded, merely that less confidence can be placed in its findings and that it needs to be examined closely to identify its limitations. (Lewin S, Oxman AD, Lavis JN, Fretheim A. SUPPORT Tools for evidence-informed health Policymaking (STP): 8. Deciding how much confidence to place in a systematic review. *Health Research Policy and Systems* 2009; 7 (Suppl1):S8.)

Identifying experiences from other countries and from Canadian provinces and territories

For each REP, we work with the requestors and a subject matter expert to collectively decide on what countries (and/or states or provinces) to examine based on the question posed. For other countries, we searched relevant government and stakeholder websites including websites of the offices or departments responsible for Veterans' affairs and the websites of agencies and organizations responsible for delivering Veterans' health services. In Canada, a similar approach was used, searching the website of provincial and territorial ministries of health and their associated agencies and organizations. While we do not exclude content based on language. Where information is not available in English, Chinese, French, Portuguese, or Spanish, we attempt to use site-specific translation functions or Google translate. A full list of websites and organizations searched is available upon request.

Preparing the profile

Each included document is cited in the reference list at the end of the REP. For all included guidelines, evidence syntheses, and single studies (when included), we prepare a small number of bullet points that provide a summary of the key findings, which are used to summarize key messages in the text. Protocols and titles/questions have their titles hyperlinked, given that findings are not yet available.

We then draft a summary that highlights the key findings from all highly relevant documents (alongside their date of last search and methodological quality) as well as key findings from the jurisdictional scan.

## Appendix 2: Key findings from highly relevant evidence syntheses and single studies

Dimensions of the organizing framework	Health outcomes	Patient/caregiver experience	Provider experience	Costs
Changes to governance arrangements to improve the transition to long-term care	–	–	–	–
Changes to financial arrangements to improve the transition to long-term care	–	<ul style="list-style-type: none"> <li>One recent low-quality evidence synthesis found financial incentives for care coordination during transitions may be one approach to improve patient experience, but some adverse events have been reported and additional studies are needed (1)</li> <li>One recent medium-quality evidence synthesis found financial incentives focused on primary care coordination with health professionals working in long-term care may be an effective approach to ensure patient follow-up during a transition (2)</li> </ul>	–	–
Changes to delivery arrangements to improve the transition to long-term care	<ul style="list-style-type: none"> <li>One recent medium-quality evidence synthesis found that the application of person-centred care principles during transitions to long-term care (e.g., through personalization of care and environment, opportunities to choice and feedback) improved patient quality of life (3)</li> <li>One recent medium-quality evidence synthesis found involving pharmacist to provide medication reconciliation as part of the transition to long-term care reduced medication errors and discrepancies – which can be viewed as a proxy for health outcomes (4)</li> <li>One recent single study found improved mental health outcomes among individuals who were supported in their transition to long-term care through a patient checklist to identify social, physical, and cultural needs, clear information (including through diagrams and handouts) about what to expect on a typical day, understanding of where there is room for flexibility and patient</li> </ul>	<ul style="list-style-type: none"> <li>One recent low-quality evidence synthesis found ensuring communication among health professionals involved in a transition, smooth transfer of information and care responsibilities, and education and involvement of the patient and their family were all key to optimizing patient experience during a transition to long-term care (1)</li> <li>One older medium-quality evidence synthesis identified four principles for care for individuals with dementia during transitions to long-term-care including: <ul style="list-style-type: none"> <li>respecting the complexity and individual context of the transition</li> <li>seeking input from the person living with dementia about the transition (or supporting shared decision-making)</li> <li>encouraging regular social contact with friends and family</li> <li>providing support to integrate socially within the new long-term care setting (7)</li> </ul> </li> <li>One older medium-quality evidence synthesis found facilitators of positive transitions to long-term care homes include: <ul style="list-style-type: none"> <li>enhancing resilience through self-efficacy and continuation of one's faith, values, belief, and identity</li> <li>supporting connections and relationships with co-residents and staff, as well as between staff and the individual's family</li> <li>encouraging patients to make the space their own by including personal possessions and maintaining elements of choice (8)</li> </ul> </li> <li>Two older medium-quality evidence syntheses found carers' experience of transitions for family members was supported when caregivers were familiar with residential care staff, had easy access to their family member's information, participated in care decisions, and had begun planning for the transition early on (9; 10)</li> </ul>	–	–

Dimensions of the organizing framework	Health outcomes	Patient/caregiver experience	Provider experience	Costs
	<p>decision-making, and personalization of a resident's space (5)</p> <ul style="list-style-type: none"> <li>One recent single study found that the Health Optimization Program from Elders (HOPE), which included rehabilitation readiness assessments, patient and caregiver education, direct communication with providers during pre-discharge and post-discharge from hospital, resulted in lower rates of hospital readmission (6)</li> </ul>	<ul style="list-style-type: none"> <li>Three recent and one older single study found the use of the Residential Care Transition Module (which provides a 12-week intervention of six individually tailored one-hour sessions with a trained transition counsellor using education and therapeutic techniques) reduced stress, guilt and improved ability to support caring among caregivers of individuals with dementia; however, a fifth recent single study found no significant change in caregiver stress (11-15)</li> <li>One recent single study found having one-on-one relationships with staff and designing programming that reflects personal lifestyles and sustains meaningful relationships improves loneliness and social isolation following transitions (16)</li> <li>A recent single study found transitions were improved through ongoing communication between caregivers and long-term care providers and navigational supports (17)</li> <li>A recent single study found communication among providers and use of evidence-based models improved patient experience of transitions to long-term care (18)</li> </ul>

## Appendix 5: Details from the jurisdictional scan about approaches to improve the transition to long-term care

Jurisdiction	Policy approaches
<b>Canadian provinces and territories</b>	
British Columbia	<ul style="list-style-type: none"> <li>Family Caregivers of British Columbia published a <a href="#">Moving from Home to Facility</a> resource to support caregivers with a loved one transitioning to long-term care <ul style="list-style-type: none"> <li>An eligibility assessment will be conducted on the family member requiring assistance to determine whether they will be deemed eligible for residential care facilities, assisted living, or home care</li> <li>A preference for a specific residential care facilities can be stated, and the Long-Term Care Case Manager will support in the process for choosing a facility at the time of assessment and application</li> <li>It is recommended that in preparation for the transition to long-term care, families should: 1) prepare a list of questions to collect as much information as possible (e.g., staff, meals, hygiene, communication, activities, health care); and 2) contact the facilities and complete a tour with the family member who will be going into care</li> <li>Several resources are available on the Family Caregivers of British Columbia's Learning Centre to support the emotional preparation for transitioning to long-term care (e.g., <a href="#">Facility Placement: Coping with the Move</a>, <a href="#">Caregiving After Facility Placement</a>, <a href="#">Managing the Transition to Facility Placement</a>)</li> </ul> </li> <li>Alzheimer's Society of British Columbia has held webinars on transitioning to long-term care while living with dementia to provide strategies that can ease their transition and prepare them for their move to long-term care <ul style="list-style-type: none"> <li>Caregiver tips to help with adjusting to long-term care include: 1) familiarizing themselves with the facility to understand the staff, management, and residents; 2) be involved with care tasks, such as meals and grooming; 3) reassuring the family member in long-term care how much you care; and 4) attending care plan meetings with the resident's care team</li> <li>A list of <a href="#">resources</a> has been published to support resident's transition to long-term care</li> </ul> </li> <li>In British Columbia, eligible veterans for home and community care services will need to have their local health authority contact Veterans Affairs Canada for an eligibility assessment for federal benefits and arrange placement on the Veterans' priority access bed waitlist</li> <li><a href="#">Island Health</a> and <a href="#">Vancouver Coastal Health</a> have released long-term care access guides to help those residents moving into one of their facilities</li> <li><a href="#">Fraser Health</a> has released information on the transition from assisted living to long-term care, which occurs when a tenant's care needs increases beyond the capabilities of their provider <ul style="list-style-type: none"> <li>This transition consists of a Fraser Health assisted living clinician meeting with the tenant (and/or family) to review the long-term care placement process, ensure outcome scores match the level of care of the facility, and complete the referral process; clinicians will ensure that adequate care can be safely provided to the tenant/resident in the interim</li> </ul> </li> <li>Vancouver Coastal Health has a <a href="#">Transition Services Team</a> that supports older adults transferring from the hospital to the community; this includes a team of professionals that facilitates the process for clients needing residential care services</li> </ul>
Alberta	<ul style="list-style-type: none"> <li>Alberta residents seeking to obtain continuing care will be connected with a <a href="#">Case Manager</a> that will help support their transition to long-term care <ul style="list-style-type: none"> <li>A case manager will meet with the resident, and complete an assessment to determine their health care needs; if transitioning from the hospital setting, the assessment will be completed by a member of the healthcare team, such as Transition Services or the Discharge Coordinator</li> <li>Note that as care needs and transition through levels of care change, there is a possibility that the Case Manager may vary</li> </ul> </li> <li>Alberta Health Services published an information and decision-making <a href="#">guide</a> for patients and families moving into a continuing care home, which includes a section on preparing to move into long-term care</li> <li><a href="#">Transition Services</a> bridges the link between acute care patients and community-based services; can include patient transfer into different settings and the community</li> <li>Social Workers and Continuing Care Counsellors operating in some Alberta communities can offer <a href="#">social program</a> support regarding benefits, navigating the health system, and supporting the care journey of older adults in care settings</li> </ul>
Saskatchewan	<ul style="list-style-type: none"> <li>In Saskatchewan, the local health authority will assign an Assessor Coordinator/Client Care Coordinator for the family member requiring admission to a care home <ul style="list-style-type: none"> <li>The coordinator will be responsible for reviewing, determining, and approving the level of care required; will support in routinely assessing needs if placed on the waiting list</li> </ul> </li> </ul>

Jurisdiction	Policy approaches
Manitoba	<ul style="list-style-type: none"> <li>○ The Saskatchewan Health Quality Council released a resource <a href="#">guide</a> on High-Quality Care Transitions: A Guide to Improving Continuity of Care to describe a framework that can be used to help achieve seamless care transitions within the health systems for patients</li> <li>● Federal and provincial collaboration through: <ul style="list-style-type: none"> <li>○ <a href="#">Aging with Dignity Agreement</a> with around \$3 billion investment over five years (2023–24 to 2027–28) to support home and community care services and to support long-term care (LTC) workforce and by keeping residents safe with better quality of life</li> <li>○ <a href="#">Working Together Agreement</a> with around \$434 million over three years to improve healthcare and fix the damage of staffing shortages; under this agreement there is a plan to hire around 100 home care workers</li> </ul> </li> <li>● <a href="#">Winnipeg Regional Health Authority</a> (WRHA) has The WRHA's Long Term Care Access Centre (LTCAC) that is responsible for determining the eligibility for transitioning from home to LTC, maintaining waiting lists, ensuring the consumers' needs are met, and ensuring appropriate housings and LTC; this includes hosting an online resource <a href="#">page</a> with the required information</li> <li>● Similarly, Manitoba Health has the <a href="#">Aging in Place</a> website</li> </ul>
Ontario	<ul style="list-style-type: none"> <li>● Ontario residents who have applied to the province's <a href="#">Ontario Health atHome program</a> to access long-term care and are waiting for placement are eligible to receive community paramedicine for long-term care services that can help them to stay healthy at home and avoid emergency hospital visits <ul style="list-style-type: none"> <li>○ When a placement becomes available, the applicant will have 24 hours to accept or reject the offer that includes a move-in date and up to five days to move into the long-term care facility</li> <li>○ Ontario Health atHome provides information on their website on what documents and items new residents to long-term care will need for their upcoming move</li> </ul> </li> <li>● Ontario Health Quality has developed a number of resources, including <a href="#">a quality standard</a>, to support the transition of patients from hospital to home (including long-term care homes) <ul style="list-style-type: none"> <li>○ The quality standard emphasis: <ul style="list-style-type: none"> <li>▪ information sharing on admission with primary care and other care providers</li> <li>▪ comprehensive assessment of current and evolving health and social care needs</li> <li>▪ patient, family, and caregiver involvement in transition planning through the development of a written transition plan</li> <li>▪ transition plans to be shared with all relevant care providers</li> <li>▪ coordinated transitions through a named health care professional who is responsible for timely transition planning, coordination, and communication</li> <li>▪ medication review and reconciliation before leaving hospital, including a plan for how to access medications in the community</li> <li>▪ coordinated follow-up with their primary care provider that is booked before leaving the hospital</li> <li>▪ out-of-pocket costs and limited funded services are clearly explained to patients and caregivers and the healthcare team makes an effort to avoid unaffordable costs in the transition plan</li> </ul> </li> </ul> </li> <li>● The Alzheimer Society Toronto has developed <a href="#">a long-term care transition guide</a> that provides tips to support the move from home to long-term care at each stage of the process</li> <li>● The <a href="#">Veterans Care program at St. Joseph's Healthcare</a> Foundation's Parkwood Institute provides Veterans approved by Veterans Affairs Canada with several resources to help them transition to long-term care, including: <ul style="list-style-type: none"> <li>○ a call from their social work team to arrange for a bed in one of their care units and confirm the day and time of their move</li> <li>○ assigning a primary physician for their medical care</li> <li>○ advice and tips on what documents and supplies to bring with them</li> </ul> </li> <li>● <a href="#">On their first day</a>, Veterans at Parkwood Institute will meet the nurses and physician who will be caring for them and be asked about their health and daily routine; they are also provided with several care items, such as bedding, bedside furniture, and television and telephone service (for a fee)</li> <li>● <a href="#">Sunnybrook's Veterans Program</a> is the largest Veteran's care facility in Canada and supports eligible Veterans moving into long-term care by assigning them a care team who will assess their needs upon arrival to determine their routine and treatment plan and by providing new residents with information and resources (e.g., a <a href="#">Welcome Package</a>) to help prepare for the transition</li> </ul>
Quebec	<ul style="list-style-type: none"> <li>● The Réseau Universitaire Intégré en Santé et Services Sociaux (RUISSS) at Université Laval launched an initiative designed to improve the transition process for seniors moving from home to residential care</li> </ul>

Jurisdiction	Policy approaches
	<ul style="list-style-type: none"> <li>○ The <a href="#">PATlenTS</a> program aims to address common challenges faced during this transition by enhancing communication between healthcare providers and increasing support for families</li> <li>○ Key aspects of the PATlenTS program include: <ul style="list-style-type: none"> <li>▪ personalized care plans: tailoring care plans to meet the specific needs of each senior, ensuring a smoother transition and better alignment with their individual requirements</li> <li>▪ enhanced communication: improving the flow of information between various healthcare professionals involved in the senior's care to ensure coordinated and effective support</li> <li>▪ family support: offering additional resources and guidance to families to help them navigate the transition and make informed decisions about their loved one's care</li> </ul> </li> <li>○ Overall, the initiative focuses on optimizing the transition process to improve both the experience and outcomes for seniors entering residential care, reflecting a collaborative approach to enhancing care for aging populations</li> <li>● The Government of Canada will contribute nearly \$1.2 billion to support <a href="#">Quebec's five-year action plan</a>, aimed at helping individuals age with dignity while staying close to home and having access to home care or safe long-term care facilities by: <ul style="list-style-type: none"> <li>○ enhance access to home and community care: increase support for community groups and social economy organizations that provide home care services, and expand service hours for long-term, short-term, and palliative home care</li> <li>○ improve safety and quality of life in long-term care facilities: provide housing that meets seniors' needs for a better living environment, and support the development of seniors' homes and alternative housing options</li> </ul> </li> </ul>
New Brunswick	<ul style="list-style-type: none"> <li>● New Brunswick's <a href="#">Long Term Care</a> Program coordinates services for those exploring options such as remaining in home, caregiver supports, or attending residential services <ul style="list-style-type: none"> <li>○ Individuals 65 years or older who are medically stable and require long term services are eligible for this program</li> <li>○ Individuals must have an assessment of personal care, completed by a social worker</li> <li>○ A financial assessment is needed for those who cannot cover services, depending on their household income</li> </ul> </li> <li>● <a href="#">Self-managed support</a> provides flexibility for individuals requiring additional support, but do not wish to attend long-term care; it can be inferred that that this can be used to support the transition from home to long-term care <ul style="list-style-type: none"> <li>○ Individuals in this program are given a lump sum payment each month to hire their own services according to their unique needs (e.g., allied health professionals)</li> <li>○ Funds can be carried over within the same calendar year</li> <li>○ Family members, not residing in the residence, can be hired as caregivers</li> <li>○ Detailed records of all spending must be maintained</li> <li>○ A social worker reviews the plans each year to ensure appropriate spending</li> <li>○ Individuals admitted within the long-term care and disability support programs are eligible to apply</li> <li>○ Individuals are able to opt out of the program at any time and can still be eligible for long-term care later on</li> </ul> </li> <li>● <a href="#">Home first</a> is another program that can support independent living, and possibly be utilized to support transition to long-term care <ul style="list-style-type: none"> <li>○ This program includes an educational program on community services and healthy living</li> <li>○ Trained home first reviewers can assist with creating a personalized action plan</li> <li>○ Home repairs and adaptations may occur as a part of the program (e.g., bathroom grab bars or improved lighting), individuals may be eligible for a grant up to \$1,500</li> </ul> </li> <li>● The government of New Brunswick also offers specialized services like <a href="#">Memory Care Homes</a> and <a href="#">Nursing Homes</a>; however, minimal details on transition supports were identified <ul style="list-style-type: none"> <li>○ The website does offer tips on helpful questions to ask (e.g., menu or fee inquiries) and a list of available facilities</li> <li>○ A social worker from the long-term care program can help individuals identify their goals and figure out the most appropriate choice of care needs</li> <li>○ For nursing homes, individuals can select their preferred choice; however, due to long waiting lists individuals might have to move into an interim placement <ul style="list-style-type: none"> <li>▪ The placement must be 100 km or less from preferred residence</li> </ul> </li> </ul> </li> </ul>

Jurisdiction	Policy approaches
	<ul style="list-style-type: none"> <li>▪ If individuals decline either preferred or interim placement, they will be moved to the bottom of the waiting lists and may be charged a fee if residing in a hospital</li> <li>• A <a href="#">guide</a> is available to help family members select the most appropriate home for their loved ones <ul style="list-style-type: none"> <li>○ The guide includes information on the types of homes, the assessment process, and arranging visits</li> </ul> </li> </ul>
Nova Scotia	<ul style="list-style-type: none"> <li>• Nova Scotia has prepared a <a href="#">guide for transitioning into long-term care</a> <ul style="list-style-type: none"> <li>○ A care and placement coordinator are allocated to support the transition process</li> <li>○ A care coordinator can help individuals identify the most appropriate residence, seek other options (e.g., home management) as well as coordinate an assessment of needs</li> <li>○ A needs assessment includes health needs, physical needs, and safety concerns</li> <li>○ The care coordinator can provide a list of locations in the preferred community and help identify questions to address concerns</li> <li>○ Care coordinators can help complete financial applications for those who cannot afford long-term care services</li> <li>○ Individuals who must stay at a hospital must accept the first bed that is available; however, they can remain on a waitlist if it is not their preferred home</li> <li>○ The guide provides tips on the transition including preparing a joint bank account to facilitate payments, setting aside money for first accommodation, property management, personal care wishes, label personnel items, writing down key information about self, securing legal documents, and bringing medications/medical equipment</li> <li>○ Caregivers can support transition by helping move into home, bringing familiar objects, emotional support, staying informed, listening to your opinions, maintaining a sense of humour, and staying connected (e.g., in person or through internet)</li> </ul> </li> <li>• <a href="#">Caregivers Nova Scotia</a> provides a <a href="#">transition to care guide</a> <ul style="list-style-type: none"> <li>○ The website provides tips on which questions to ask and <a href="#">helpful personal accounts</a> of the transition process</li> <li>○ The guide advises caregivers to rest, handling difficult conversations with loved ones, and leaning on the supports of others</li> <li>○ Tips to handle negative comments include never dismissing negative comments, listening to emotion behind words, treating loved ones as equals, and illustrating progress of complaints</li> <li>○ Caregivers can support individuals by creating an at-home atmosphere using items from the loved one, family photos, holiday decorations, and fresh flowers</li> <li>○ Caregivers should familiarize themselves with long-term care policies, procedures, and staff</li> <li>○ Tips for successful visits include having a visiting schedule, including loved one's favourite activities (e.g., outing, stroll, sharing photos)</li> </ul> </li> </ul>
Prince Edward Island	<ul style="list-style-type: none"> <li>• A care coordinator is responsible for facilitating the transition to <a href="#">long-term care</a> services <ul style="list-style-type: none"> <li>○ Care coordinators can help discuss options, identify suitable residences, and navigate financial applications</li> </ul> </li> <li>• The <a href="#">Canada-Prince Edward Island Home and Community Care</a> states that cultural specialization should be include in long-term care facilities to ease the transition <ul style="list-style-type: none"> <li>○ Cultural specialization includes recognizing traditional holidays, offering traditional cuisine, and bilingual caregivers</li> </ul> </li> </ul>
Newfoundland and Labrador	<ul style="list-style-type: none"> <li>• The <a href="#">regional health authority</a> conducts an assessment to determine if an individual requires long-term personal care</li> <li>• No additional information on the transition process could be identified</li> </ul>
Yukon	<ul style="list-style-type: none"> <li>• The <a href="#">Government of Yukon</a> is enhancing the territory's healthcare system by increasing the number of long-term care rooms at Whistle Bend Place and adding more acute care beds at Whitehorse General Hospital <ul style="list-style-type: none"> <li>○ The Government of Yukon and the Yukon Hospital Corporation will reconfigure existing spaces to create 12 new long-term care rooms at Whistle Bend Place, which will free up an additional five acute care beds at the Whitehorse General Hospital's Thomson Centre; this initiative aims to increase the availability of long-term care rooms and acute care beds, thereby expanding both services in the Yukon</li> <li>○ In 2024–25, the Government of Yukon is investing \$6.3 million to cover the cost of increasing bed capacity in the territory</li> </ul> </li> <li>• The <a href="#">Aging in Place</a> action plan provides a path forward upon which the entire community will work together to promote, protect, and enhance the well-being of Yukon seniors and Elders <ul style="list-style-type: none"> <li>○ Four interconnected pillars form the basis of this plan: <ul style="list-style-type: none"> <li>▪ the goal of Pillar 1 is to work together to ensure that seniors maintain cultural, social, and recreational connectedness within their communities and that their contributions are valued</li> <li>▪ the goal of Pillar 2 is a future where seniors and Elders have access to a full continuum of housing options that are adequate, suitable, and affordable</li> </ul> </li> </ul> </li> </ul>

Jurisdiction	Policy approaches
	<ul style="list-style-type: none"> <li>▪ the goal of Pillar 3 is a Yukon where seniors and Elders have access to a range of transportation options that meet their needs</li> <li>▪ the goal of Pillar 4 is to ensure that seniors and Elders have access to a wide range of suitable programs and services that support their health, independence, and active participation in their community</li> <li>• The Government of Yukon has entered into a bilateral agreement with the Government of Canada, known as the <a href="#">Aging with Dignity Agreement</a> <ul style="list-style-type: none"> <li>○ Through the Aging with Dignity Agreement, the Government of Canada will provide close to \$12 million to support the Yukon's five-year action plan to help people living in the territory age with dignity close to home, with access to home care or care in a safe long-term care facility, including to: <ul style="list-style-type: none"> <li>▪ enhance workplace stability to provide clients with culturally safe, quality person-centred care in a psychologically safe environment</li> <li>▪ enhance supports for the education, health, and wellness of long-term care staff to improve infection prevention and control and adherence to long-term care standards</li> </ul> </li> </ul> </li> </ul>
Northwest Territories	<ul style="list-style-type: none"> <li>• The Government of the Northwest Territories has entered into a bilateral agreement with the Government of Canada, known as the <a href="#">Aging with Dignity Agreement</a></li> <li>• The Government of Northwest Territories Department of Health and Social Services will use the Aging with Dignity funding to support two activities regarding long-term care <ul style="list-style-type: none"> <li>○ Long-term care staffing standard: <ul style="list-style-type: none"> <li>▪ The long-term care standards mandate a minimum of 3.6 hours of direct care per resident per day in long-term care facilities to meet clinical staffing requirements</li> <li>▪ While some long-term care facilities in the NWT already meet this standard, others do not and will need additional resources to comply with the long-term care standard</li> <li>▪ Aging with Dignity funding from 2023–24 to 2027–28 will support this transition, including adopting a staffing ratio of 30% nursing to 70% Resident Care Aide and ensuring 24/7 Registered Nurse coverage</li> </ul> </li> <li>○ Territorial housekeeping specialist and furniture and equipment replacement: <ul style="list-style-type: none"> <li>▪ Infection prevention and control assessments in Northwest Territories long-term care facilities have revealed deficiencies such as a lack of standardized cleaning practice training and the need to replace worn equipment and furniture</li> <li>▪ Aging with Dignity funding from 2023–24 to 2024–25 will be allocated to establish a Territorial Housekeeping Specialist</li> <li>▪ The specialist will address deficiencies by developing and implementing housekeeping policies and standardized training</li> <li>▪ Additionally, the funding will support the replacement of long-term care equipment and furnishings to ensure infection prevention and control standards are met</li> </ul> </li> </ul> </li> </ul>
Nunavut	<ul style="list-style-type: none"> <li>• The Government of Nunavut has entered into a bilateral agreement with the Government of Canada, known as the <a href="#">Aging with Dignity Agreement</a> <ul style="list-style-type: none"> <li>○ Through the Aging with Dignity Agreement, the Government of Canada will provide over \$12 million to support Nunavut's five-year action plan to ensure aging with dignity close to home, with access to home care or care in safe long-term care facilities</li> <li>○ This funding will: <ul style="list-style-type: none"> <li>▪ Enable nurse practitioners to provide virtual care for long-term care facilities</li> <li>▪ Enhance long-term care standards by helping Nunavut meet new national standards through culturally appropriate care, providing Inuit-specific counselling for residents outside the territory, and addressing organizational challenges within the Home and Continuing Care Division facilities</li> </ul> </li> </ul> </li> </ul>
<b>Veteran-specific approaches in each of the Five Eyes countries</b>	
Australia	<ul style="list-style-type: none"> <li>• <a href="#">Coordinated Veterans' Care (CVC) Program</a>: <ul style="list-style-type: none"> <li>○ Provides proactive care coordination for Veteran Gold Card holders with chronic health conditions and Veteran White Card holders with chronic Department of Veterans' Affairs accepted mental health conditions</li> <li>○ Aims to improve participant quality of life and decrease the risk of unplanned hospitalization (e.g., through better management of chronic conditions)</li> <li>○ Involves a team-based approach, including the participant, their general practitioner, and a care coordinator (i.e., within a general practice setting)</li> </ul> </li> </ul>

Jurisdiction	Policy approaches
	<ul style="list-style-type: none"> <li>○ Develops a care plan to meet the health needs of the participant and manage ongoing care, which indirectly helps to improve transitions to long-term residential and nursing care when the time comes</li> <li>• The Department of Veterans' Affairs <a href="#">Residential Aged Care program</a> <ul style="list-style-type: none"> <li>○ Offers support for moving into residential aged care (e.g., retirement villages, government-funded aged care facilities)</li> <li>○ Provides guides to help through the process and find information on aged care services and supports (i.e., resources for a smooth transition)</li> </ul> </li> </ul>
Canada	<ul style="list-style-type: none"> <li>• Veterans Affairs Canada may provide financial support for those admitted to care in a community or contract bed through its <a href="#">long-term care program</a> <ul style="list-style-type: none"> <li>○ Contract beds are only available to WWII and Korean War veterans and are arranged between the federal government and provincial governments, health authorities, or institutions</li> <li>○ Community beds are available to provincial residents with no Veterans-specific priority access</li> <li>○ The conditions of qualification for financial assistance include a low income, a service-related disability, or a health-related need for long-term care</li> <li>○ As long-term care service is a provincial responsibility, Veterans must meet provincial eligibility for admission before being considered for federal funding support</li> </ul> </li> <li>• A generic <a href="#">guided support</a> program with a Veterans service agent is available to assist with coordinating services and supports, including the need for assistance complicated by health challenges</li> <li>• A report by <a href="#">Veterans Ombudsman</a> recommended a "Continuum of Care" program for a "single coordinated entry system" spanning home care, assisted living, and long-term care that is meant to help Veterans navigate through the different levels of care over time <ul style="list-style-type: none"> <li>○ No findings on whether this has been implemented</li> </ul> </li> <li>• As part of a short-term <a href="#">preferred admission beds initiative</a>, Veteran Affairs Canada arranged two-year agreements starting in 2016 with provincial partners to broaden eligibility and expedite access to long-term care beds for Veterans <ul style="list-style-type: none"> <li>○ These arrangements were limited to urban centres and only available in some provinces</li> </ul> </li> <li>• Uncertainties exist in Veteran Affairs Canada's constitutional authority to administer such a program, and it continues to fulfil its responsibility to the long-term care of veterans mostly in financial terms</li> </ul>
New Zealand	<ul style="list-style-type: none"> <li>• <a href="#">Veterans' Affairs' Social Rehabilitation</a> <ul style="list-style-type: none"> <li>○ Social Rehabilitation consists of various services tailored to meet individual needs, with an assessment to determine the best options</li> <li>○ The assessment also considers the needs of an individual's spouse, partner, child, dependent, or other support persons related to the support they provide</li> <li>○ Participation in Social Rehabilitation may be required based on the person's situation, but individuals can also apply voluntarily</li> <li>○ Depending on circumstances, Veterans may be eligible for services such as attendant care (e.g., personal assistance), childcare, home help (e.g., cleaning and cooking), home modification (e.g., wheelchair ramps), aids and appliances (e.g., mobility aids), other services, training for independence, and transport for independence</li> <li>○ All these supports indirectly help to improve transitions to long-term residential and nursing care when the time comes</li> </ul> </li> <li>• <a href="#">Veterans' Independence Programme</a> <ul style="list-style-type: none"> <li>○ The Veterans' Independence Programme provides services and support to Veterans with an accepted service-related injury or illness who struggle to perform activities necessary for independent living at home</li> <li>○ Eligibility includes Veterans with service-related injuries or illnesses who receive impairment compensation or War Disablement Pension</li> <li>○ Veterans' Affairs considers factors such as the Veteran's level of impairment, employment status, living alone, geographic location, access to services, existing support, and whether requested services overlap with social rehabilitation services</li> <li>○ Services provided under the Programme support activities necessary for independent living (e.g., shopping, meal preparation, housework) and include short-term attendant care, foot health maintenance, interior house cleaning, house and garden maintenance, home adaptations (e.g., ramps or rails), travel support, allowance for adaptive clothing, and personal medical alarms <ul style="list-style-type: none"> <li>▪ All these supports indirectly help to improve transitions to long-term residential and nursing care when the time comes</li> <li>▪ The program is currently <a href="#">suspended until March 2025</a> for new clients without a service-related health condition</li> </ul> </li> </ul> </li> <li>• <a href="#">Residential Care Subsidy</a> provided from Work and Income, an organization within the Ministry of Social Development <ul style="list-style-type: none"> <li>○ The Residential Care Subsidy is available for long-term residential care in hospitals or rest homes</li> </ul> </li> </ul>

Jurisdiction	Policy approaches
	<ul style="list-style-type: none"> <li>○ The subsidy helps with the cost of care, paid directly to the hospital or rest home by Health New Zealand – Te Whatu Ora</li> <li>○ Eligibility criteria include: <ul style="list-style-type: none"> <li>▪ aged 65 or older, or 50–64 and single with no dependent children</li> <li>▪ assessed as needing long-term residential care for an indefinite length of time</li> </ul> </li> <li>○ Receiving contracted care services</li> <li>○ Not eligible if under 50 and single <ul style="list-style-type: none"> <li>▪ The financial support helps veterans overcome the financial difficulty of transitioning to long-term residential or nursing care</li> </ul> </li> </ul>
United Kingdom	<ul style="list-style-type: none"> <li>• The <a href="#">Forces in Mind Trust Research Centre</a> indicated in their review of older Veterans in the United Kingdom that there is limited information about the needed supports for this population group, particularly around the use of care homes and support systems</li> <li>• The <a href="#">Aged Veterans Fund</a> had funded an initiative in 2016 called the Greater Manchester Armed Forces Families Integrated Health and Wellbeing, where it sought to create an integrated care model that involved improvements in transitions between services and care; however, there are no findings reported</li> <li>• The <a href="#">Age UK's Personalised Integrated Care program</a> brings together voluntary health and social organizations, where an older adult co-creates a care plan with a coordinator, engages with Age UK volunteers to help achieve goals, and meets with multidisciplinary teams in primary care settings.</li> </ul>
United States	<ul style="list-style-type: none"> <li>• Veterans in the U.S. are able to access assisted living, residential care and home health care through <a href="#">Veterans Affairs</a>, which offers a number of resources for Veterans interested in applying for these forms of care</li> </ul>
