

Appendices for COVID-19 Living Evidence Profile #2

(Version 5: 27 October 2021)

Appendix 1: Methodological details

We use a standard protocol for preparing living evidence profiles (LEP) to ensure that our approach to identifying research evidence as well as experiences from other countries and from Canadian provinces and territories are as systematic and transparent as possible in the time we were given to prepare the profile.

Identifying research evidence

For each LEP, we search our continually updated <u>inventory of best evidence syntheses</u> and <u>guide to key COVID-19 evidence sources</u> for:

- 1) guidelines (defined as providing recommendations or other normative statements derived from an explicit process for evidence synthesis);
- 2) full systematic reviews;
- 3) rapid reviews;
- 4) protocols for reviews or rapid reviews that are underway;
- 5) titles/questions for reviews that are being planned;
- 6) single studies (when no guidelines, systematic reviews or rapid reviews are identified);
- 7) opinion pieces
 - a. Explicit assessment of the pros and cons of an approach to renewal
 - b. Cited data and/or evidence that was explicitly used in deriving a suggested approach for renewal
 - c. Documented stakeholder-engagement process to elicit approaches for renewal
 - d. Endorsement of lessons learned by a formal group or a large, informal group of signatories to a statement related to renewal

For the first version of this LEP, we also searched Health Systems Evidence (www.healthsystemsevidence.org) and HealthEvidence (www.healthevidence.org), to identify any relevant evidence documents that might have relevance to the COVID-19 vaccine roll-out, but were produced before the pandemic, given that the other sources searched were specific to COVID-19. In Health Systems Evidence, we searched for overviews of systematic reviews, systematic reviews of effects, systematic reviews addressing other questions, and protocols for systematic reviews, that may provide insights about vaccine-delivery systems by searching for 'vaccine' using the filters for 'public health' (under health-system sectors). In HealthEvidence, we searched using the categories for 'Immunization' and 'Policy and Legislation' under the intervention strategy filter combined with 'Communicable Disease/Infection' category under the topic filter.

Each source for these documents is assigned to one team member who conducts hand searches (when a source contains a smaller number of documents) or keyword searches to identify potentially relevant documents. A final inclusion assessment is performed both by the person who did the initial screening and the lead author of the rapid evidence profile, with disagreements resolved by consensus or with the input of a third reviewer on the team. The team uses a dedicated virtual channel to discuss and iteratively refine inclusion/exclusion criteria throughout the process, which provides a running list of considerations that all members can consult during the first stages of assessment.

During this process we include published, pre-print and grey literature. We do not exclude documents based on the language of a document. However, we are not able to extract key findings from

documents that are written in languages other than Chinese, English, French or Spanish. We provide any documents that do not have content available in these languages in an appendix containing documents excluded at the final stages of reviewing.

Identifying experiences from other countries and from Canadian provinces and territories

For each LEP, we collectively decide on what countries to examine based on the question posed. For other countries we search relevant sources included in our continually updated guide to key COVID-19 evidence sources. These sources include government-response trackers that document national responses to the pandemic. In addition, we conduct searches of relevant government and ministry websites. In Canada, we search websites from relevant federal and provincial governments, ministries and agencies (e.g., Public Health Agency of Canada).

While we do not exclude countries based on language, where information is not available through the government-response trackers, we are unable to extract information about countries that do not use English, Chinese, French or Spanish as an official language.

Assessing relevance and quality of evidence

We assess the relevance of each included evidence document as being of high, moderate or low relevance to the question. We then use a colour gradient to reflect high (darkest blue) to low (lightest blue) relevance.

Two reviewers independently appraised the quality of the guidelines we identified as being highly relevant using AGREE II. We used three domains in the tool (stakeholder involvement, rigour of development and editorial independence) and classified guidelines as high quality if they were scored as 60% or higher across each of these domains.

Two reviewers independently appraise the methodological quality of systematic reviews and rapid reviews that are deemed to be highly relevant. Disagreements are resolved by consensus with a third reviewer if needed. AMSTAR rates overall methodological quality on a scale of 0 to 11, where 11/11 represents a review of the highest quality. High-quality reviews are those with scores of eight or higher out of a possible 11, medium-quality reviews are those with scores between four and seven, and lowquality reviews are those with scores less than four. It is important to note that the AMSTAR tool was developed to assess reviews focused on clinical interventions, so not all criteria apply to systematic reviews pertaining to health-system arrangements or to economic and social responses to COVID-19. Where the denominator is not 11, an aspect of the tool was considered not relevant by the raters. In comparing ratings, it is therefore important to keep both parts of the score (i.e., the numerator and denominator) in mind. For example, a review that scores 8/8 is generally of comparable quality to a review scoring 11/11; both ratings are considered 'high scores.' A high score signals that readers of the review can have a high level of confidence in its findings. A low score, on the other hand, does not mean that the review should be discarded, merely that less confidence can be placed in its findings and that the review needs to be examined closely to identify its limitations. (Lewin S, Oxman AD, Lavis JN, Fretheim A. SUPPORT Tools for evidence-informed health Policymaking (STP): 8. Deciding how much confidence to place in a systematic review. Health Research Policy and Systems 2009; 7 (Suppl1):S8.

Preparing the profile

Each included document is hyperlinked to its original source to facilitate easy retrieval. For all included guidelines, systematic reviews, rapid reviews and single studies (when included), we prepare a small number of bullet points that provide a brief summary of the key findings, which are used to summarize

key messages in the text. Protocols and titles/questions have their titles hyperlinked given that findings are not yet available. We then draft a brief summary that highlights the total number of different types of highly relevant documents identified (organized by document), as well as their key findings, date of last search (or date last updated or published), and methodological quality.

Appendix 2a: Key findings from <u>new</u> evidence documents that address the question, organized by document type and sorted by relevance to the question and COVID-19

Type of document	Relevance to question	Key findings	Recency or status
Guidelines			
Full systematic reviews	Promoting alternatives to long-term care	 The goal of this review was to assess the efficacy and accessibility of remotely delivered interventions to reduce burden and improve mood and quality of life of caregivers of people with dementia The interventions varied in their frameworks, components and delivery, and either used printed materials, telephone or video technologies suitable for caregivers who have difficulty accessing face-to-face services due to their own health problems or transport barriers In a comparison of experimental interventions with a control condition of information alone, the interventions may result in a slight reduction in caregiver burden and a slight improvement in depressive symptoms, but with little or no difference in caregiver health-related quality of life However, there was no significant difference when compared with usual treatment, waiting list, or attention control 	Published 4 January 2021
	 Renewing supports for residents (and their families and caregivers) and staff Engaging residents, families and caregivers in self-management, care choices, care delivery, and organizational and policy decision-making Supporting technology-enabled living among residents 	 The aim of this scoping review was to assess the impact of visitor restrictions on nursing-home residents and their families, as well as strategies and actions taken at nursing homes during the COVID-19 pandemic After conducting a thematic analysis of included studies, three categories were generated: 1) the impact of COVID-19 on older people living in nursing homes and their families, 2) procedures and frameworks of homes during and after lockdown, and 3) solutions and resources provided by health 	Published 25 June 2021

		professionals to connect nursing-home residents with their families Results highlighted that lockdowns and visitor restrictions had an impact on people with dementia who could not understand why their family members were no longer visiting them, and also how older people died in nursing homes with no relatives present for the bereavement process It also highlighted the need for more staff support to perform caregiver roles and family support in balancing work and caregiving responsibilities Procedures and frameworks studied for allowing visitations during and after lockdowns were developed based on the gravity of the situation at a nursing home, with variations in visit options and screening procedures based on varying situations To connect residents with their families, solutions identified were telephone, email, videocalls, or smartphone applications (apps) Proactive strategies for communication include assigning staff members as primary contacts for families to contact residents regularly and to stay informed about the residents' situation The authors recommend that further research be conducted on identifying useful resources to ensure suitable communication between nursing-home residents and their families during confinement periods, and identifying non-pharmaceutical interventions to address families' and residents'	
		periods, and identifying non-pharmaceutical interventions to address families' and residents' needs during the pandemic Source	
Rapid reviews	 Renewing supports for residents (and their families and caregivers) and staff (and volunteers) Engaging residents, families and caregivers in self-management, care choices, care delivery, and organizational and policy decision-making 	This report described effective or promising communication strategies for long-term care facilities for providing resident health updates to their families and other essential care partners during an infectious disease outbreak or a pandemic	Last updated 9 July 2021

Supporting technology-enabled living among residents	 One rapid review and three primary studies were identified from a limited literature search, all of which included an examination of communication strategies between long-term care facilities and essential care partners of residents Two strategies in particular were evaluated: 1) the use of a standardized tool used by clinicians that facilitated relaying information about the anticipated outcomes of COVID-19 positive residents to their families, and 2) the implementation of a communication plan led by social workers for all LTC staff to keep families informed during the severe acute respiratory syndrome (SARS) outbreak The studies described in this report recommended that effective communication strategies during an outbreak or pandemic should include reflective listening (i.e., careful listening to families' perspectives) by LTC staff, and regular communication using various platforms between care providers and families to help them manage expectations about possible outcomes for residents 	
Renewing supports for residents and staff Ensuring the safety and satisfaction of residents, staff and volunteers	 Interventions which aim to improve personal support worker well-being are key to improving their emotional health and resilience, as well as improving their retention Unregulated PSWs in LTC face challenges in the workplace which undermine well-being, job satisfaction and employee retention, often stemming from the work's emotional and physical demand, the long and unsocial hours of work, low pay, low status, lack of connections to professional organizations/bodies, etc. Summarized literature on interventions aimed at improving unregulated PSW well-being 	Last updated 9 July 2021

Protocols for reviews that are already underway	 Renewing supports for residents and staff Ensuring the safety and satisfaction of residents, staff and volunteers 	These interventions, ranging from self-compassion training to psycho-educational intervention, tend to have positive results for outcomes like compassion satisfaction, burnout, and perceived stress Source Effects of the COVID-19 pandemic on health and work life outcomes among front-line nursing home staff Source	Anticipated completion date 26 November 2021
Titles and questions for reviews being planned		Source	2021
Single studies	 Renewing delivery, financial and governance arrangements Improving safety and quality of care, and more generally improving quadruple-aim metrics Improving physical infrastructure Renewing supports for residents and staff Ensuring an adequate supply of staff Optimizing skill mix among staff Remunerating staff 	 This study describes the themes generated from a virtual town-hall meeting conducted in September 2020 on the impacts of the COVID-19 pandemic on the long-term care sector in Ontario, Canada The meeting was comprised of 130 attendees from five continents, and three themes were generated based on their prominence in lay press, scientific, and clinical discussions: Physical infrastructure, infection control and frail LTC residents, and staffing In terms of physical infrastructure, smaller, less-crowded homes were found to have had fewer and smaller outbreaks and to support better resident outcomes, making homes more resilient against infectious outbreaks These findings in turn should prompt policymakers to reimagine the physical infrastructure of LTC facilities in a post-pandemic world When reflecting on infection and frailty of LTC residents, meeting participants acknowledged the challenges in balancing public-health restrictions to reduce viral circulation in homes with the health impacts on residents of these restrictions Participants reflected on lessons learned from China's LTC sector response during the three 	Published 8 April 2021

• Paramine delivery forested and envergence	pandemic waves of 2020, and Italy's response during its first pandemic wave While China learned from the country's experience with SARS and had protocols for the prevention of communicable diseases in LTC homes in place that kept their death rates low, Italy experienced several challenges in preventing deaths due to a lack of preparedness to respond, including older buildings that hindered effective isolation, severe staff shortages in some homes, and a lack of standardized data about the LTC sector to inform appropriate policy responses In terms of staffing, the panellists acknowledged that additional staffing is required overall, but it must be complemented with full-time positions, equitable benefits (including paid sick leave), appropriate training, and mental health supports for staff It was also found that the lack of data that captures the complexity of LTC residents makes it challenging to create an ideal staffing model, and that there is minimal support for physicians on geriatric training and medicine The study concluded that the infrastructure of LTC homes should be scaled to promote optimal well-being of residents in addition to infection control, infection control and resident wellness are not mutually exclusive and are equally important, improving LTC resident outcomes requires more stable and well-supported staff, and the sector must be supported by a quality-assurance system that is based on standardized, comprehensive data that can be used to support broad communities of practice Source	Published 22
Renewing delivery, financial and governance arrangements	 This document describes how long-term care facilities in the U.S. were managed during the COVID-19 pandemic, and makes 	March 2021

- o Reforming approaches to stewardship for the long-term care sector
- Renewing supports for residents and staff
 - o Ensuring an adequate supply of staff
 - Ensuring the safety and satisfaction of residents, staff and volunteers
 - o Remunerating staff

- recommendations on how to improve on the implementation of COVID-19 related federal laws so that they can support LTC staff in an equitable way
- Staffing levels fell short of federal- and state-level staffing standards even before the pandemic, but COVID-19 excerbated this fact even more when staff were loss due to illness
- Despite the enactment of the federal Families First Coronavirus Response Act (FFCRA), which required 14 days paid sick leave for any COVID-19 related reasons, "presenteeism" of LTC staff (i.e., staff continued to work even after being exposed to or falling ill with COVID-19) continued to occur at significant levels
- Refusal of legislators, regulators and industry leaders to address the concerns of LTC staff about unsafe working conditions throughout the pandemic may have contributed to negative consequences in mitigating the spread of COVID-19
 - The Occupational Safety and Health Administration (OHSA) largely dismissed the complaints of LTC workers about workplace safety, and their enforcement activities were minimal
- Missteps were also identified when executive orders were issued to transfer recovering COVID-19 patients to LTC homes that lacked PPE, testing kits, adequate staff, and space for isolation
- In terms of data and enforcement, a report of the Office of Inspector General (OIG) in the U.S.
 Department of Health and Human Services revealed that there was a decrease in overall inspections and wide variation in homes that received an on-site survey
 - The OIG report concludes that more comprehensive data could be useful for creating

	more targeted federal and state funding to address staffing complaints, and that facilities that do receive funding should comply with established Conditions of Participation • Recommendations for action were provided for federal, state and local governments: • At the federal level, it was recommended that Congress should update the Nursing Home Reform Law to align it with recommendations for adequate staff-to-resident ratios, consider enacting legislation that will better align pandemic-related funding to improve quality and safety in nursing facilities, and the Centers for Medicare and Medicaid Services (CMS) should begin including race demographic data when collecting metrics from nursing homes • At the state level, legislators should pass or amend legislation that will ensure minimum standards for staffing levels in LTC homes, paid sick leave and protection for vulnerable groups that need to access paid sick leave, and requirements for all LTC employers to provide a minimum wage to all direct-care workers that aligns with expert recommendations • At the local level, cities and counties should pass or amend paid sick leave legislation that ensures that there is funding for community outreach to vulnerable populations and retaliation protection	
 Renewing delivery, financial and governance arrangements Supporting greater integration of long-term care with other sectors Reforming approaches to stewardship for the long-term care sector Renewing supports for residents and staff Ensuring an adequate supply of staff 	 This review provides both near- and long-term policy solutions to address systemic problems within the U.S. long-term services and supports (LTSS) structure amplified by the COVID-19 pandemic The review highlights that despite well-documented challenges with financing and delivering LTSS in the U.S., LTSS was largely omitted from U.S. healthcare-reform efforts, and little has changed 	Published June 2021

 Ensuring the safety and satisfaction of residents, staff and volunteers Optimizing skill mix among staff Supporting technology-enabled care by staff Remunerating staff 	over the past decade in the way that LTSS is delivered COVID-19 unveiled stark social inequalities, with its impacts falling significantly on older residents and front-line staff of LTSS facilities who were typically women that belonged to minority groups and earned low wages A total of seven near-term policy solutions were provided: Require uniform public reporting of all COVID-19 cases in LTSS settings Identify and support unpaid caregivers Improve protections for direct-care workers, including increased access to PPE and paid sick leave Increase coordination between LTSS agencies/providers and public-health departments Enhance collaboration across health, LTSS and public-health systems Reduce further barriers to telehealth in LTSS Provide incentives to care for vulnerable populations In terms of long-term reform, the authors suggested that the focus should be on comprehensive workforce development (e.g., standardized training, fair compensation), financing reform for the LTSS sector using a social-insurance approach, and creation of an age-friendly public health system Source	
 Promoting alternatives to long-term care Enhancing the breadth and intensity of homeand community-care services to delay or avoid entry to long-term care 	 This study identified the health-service experiences of frail home-care clients and their caregivers during the pandemic: There have been service cancellations due to different home-care workers being assigned to clients, care workers also working in nursing homes, and testing positive for COVID-19. 	Last updated July 2021

	 A key concern was having multiple care providers coming into a client's home. Modified access to home-care with infection control practices which increased client comfort During COVID-19, there has been an emotional and physical toll on home-care clients as many missed their care workers and found it lonely Clients also struggled to care for themselves safely. The impact of reduced services also increased the need for family caregiver support COVID-19 has deterred many home-care clients from going into LTC due to a desire for increased regulation and better conditions For some cases, passive remote monitoring technology (RMT) has declined in usage due to family members being more physically available during COVID-19 Some cases also showed an increase in utilization as caregivers could check on their family members while not having to be physically present and potentially spread COVID-19. Others showed there was no impact on RMT utilization. 	
 Renewing delivery, financial and governance arrangements Improving access to care Changing service-delivery models Renewing supports for residents and staff Ensuring an adequate supply of staff Optimizing skill mix among staff Supporting technology-enabled care by staff 	 The aim of this study was to describe the response of health systems to sudden changes in operations, using Advocate Aurora Health's (AAH) experience responding to the COVID-19 pandemic as a study case AAH is a not-for-profit health system in Illinois and Wisconsin, U.S., with 28 hospitals, over 500 sites of care, and 70 retail pharmacies A surge operations incident command team was formed to increase surge capacity to 100% and to delineate emergency management changes Under their direction, clinic visits transitioned to telehealth where possible, and tents were 	Published 31 March 2021

- constructed to manage volumes during emergencies

 O A centralized labour pool was also established and staffing needs were tracked for all in-patient, ambulatory, and retail pharmacy departments; job postings targeting retirees, technicians and
- In terms of pharmacy operation changes, automated dispensing capacity was expanded, curbside pickup was implemented at all retail pharmacies, and mail-order pharmacy services were offered

students were also issued

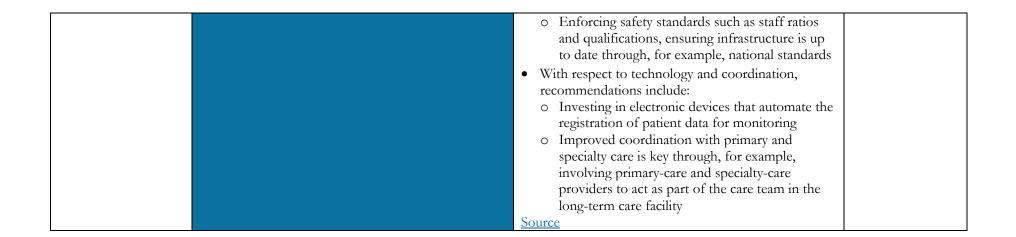

- To ensure supply-chain efficiency, inventory was increased, product allocations were maximized, items in high demand were purchased strategically, and use criteria for allocation of products to patients who would benefit the most were established
- System changes consisted of shuffling staff to respond to increased demand, centralizing highly used medications, and expediting the development of infrastructure to support electronic health records (EHR)
 - The pharmacy drug policy centre (DPC) team collaborated with doctors to create criteria for popular treatment options and pathways
- Communication consolidation strategies were also implemented:
 - The pharmacy cabinet met daily for an hour to discuss an agenda of system and resource updates as well as regulatory changes
 - Communication with the entire pharmacy department was streamlined to prevent frontline staff from becoming overwhelmed with updates and changes
 - o A daily planning call took place for pharmacy leadership teams and a coronavirus resource

		 page that addressed employee questions and concerns was developed On a national level, tight communications with the Illinois Council of Health-System Pharmacists and the Pharmacy Society of Wisconsin allowed for system pharmacy department concerns to be escalated to forum meetings of the American Society of Health-System Pharmacists (ASHP) To ensure well-being and resilience, the pharmacy leadership created a "buddy system" for leaders, redistributed workload, and provided consistent messaging An engagement survey completed after the first surge of COVID-19 cases in 2020 saw a significant increase in scores for timely, transparent, and useful communication as well as trust in senior leadership, when compared to the 2019 survey Evaluations of the response in this organization took place once management of the pandemic shifted from an acute response to a chronic approach 	
		history taking are being looked at as long-term options Source	
Opinion pieces	 Renewing delivery, financial and governance arrangements Altering funding arrangements Renewing supports for residents and staff Ensuring the safety and satisfaction of residents, staff and volunteers Remunerating staff 	 World social protection report form the International Labor Organization focuses on ways to rebuild our social protection systems following the COVID-19 pandemic The report points out the disproportionate effect that coverage gaps in long-term care have on women, who both make up a larger share of those who need care and are burdened with additional unpaid work caring for others that reduces their ability to participate in paid employment With respect to establishing sufficient social protection for employees, the report made the following recommendations: 	Published March 2021

	 Providing employees sickness benefits including during quarantine periods Ensuring sickness benefits are provided or guaranteed by government to address gaps in coverage and in select sectors, often those that are hardest hit Key principles for structuring sickness benefits include: Coverage for all through public measures Solidarity in financing through social insurance contributions or taxation Limiting waiting periods to access sickness benefits to less than three days Providing 45% to 60% of typical earnings Ensuring that sickness benefits also support care for dependents The report notes that working conditions in the long-term care sector need to improve for it to become attractive, and suggests ways in which other countries have used financial arrangements to drive improvements, including: Dedicated LTC schemes Top-up pension benefits and or expansion of scope of disability benefits LTC provision embedded within social health protection benefit package 	
 Renewing delivery, financial and governance arrangements Altering funding arrangements 	 An Organisation for Economic Cooperation and Development report on pricing long-term care for older persons found eight key lessons that may be applicable: Public investments in formal long-term care systems are important because of population aging, and declines in the availability of family caregivers, many of whom are women A separate funding stream may help ensure that long-term care funding is not diverted to other purposes 	Published 2021

	 Funding to long-term care should be linked with need and the care provided Where cost control is the primary objective and eligibility criteria are stringent, unmet needs may emerge Funding to LTC should be based on a secure reliable source that reduces any regional inequities which may be done by better coordination across different levels of government Price adjustments and add-on payments could be used more broadly to foster equity in provider payment Quality measures in long-term care may be important and should be an area for further policy development 	
Renewing supports for residents and staff Ensuring adequate supply of staff Ensuring the safety and satisfaction of residents, staff and volunteers Remunerating staff	 OECD report focuses on how to attract and retain care workers for the elderly Policies that have been successful in attracting more workers to the sector include: Supporting training programs for students or unemployed Providing financial support for training and guaranteed job entry Using public-image campaigns to change the perception of LTC jobs and the image of traditional LTC carers Policies to enhance retention include: Wage increases for LTC workers has been found to be related to greater recruitment, longer tenure and less turnover Resources to match wage increases such that they are not accompanied by increased workload and duties Collective agreements and unionization of care workers 	Published 2021

	 Development of coaching programs and workplace counselling services to promote prevention of accidents and burnouts Providing workers with greater flexibility and control can boost job satisfaction, and this can include promoting training and career trajectories Policies to improve productivity and outcomes for the money spent include: Better use of technologies to improve care coordination across home, institutional and hospital care settings, including assistive technology such as the use of alarms and sensors Task delegation between LTC workers such as training care workers to assist nurses with medicine management Investing in activities that help older adults to age well and retain their autonomy, including having rehabilitation and re-ablement embedded as part of the LTC needs, and placing a strong emphasis on prevention and healthy aging 	
 Renewing supports for residents and staff Ensuring adequate supply of staff Ensuring the safety and satisfaction of residents, staff and volunteers Remunerating staff 	 The OECD study examines the effects of the COVID-19 pandemic on the employees in long-term care homes The study highlights the need to invest heavily in human resources, fit-for-purpose technology, and improving the coordination with the rest of the health system to reduce risk and burnout among staff Recommendations to invest in human resources include: Increasing wages or providing bonuses for care workers Improving leadership within long-term care homes to empower employees 	Published 22 June 2020

Appendix 2b. Highly relevant evidence documents from previous versions of the LEP

Type of document	Relevance to question	Key findings	Recency or status
Guidelines developed using a robust process (e.g., GRADE)	Preventing infections Adhering to infection-prevention measures	 This guidance is intended for all care workers working in care homes in England and can also be applied to visitors or essential caregivers within the care-home setting This guidance provides a minimum standard on the use of personal protective equipment (PPE) and face masks, and covers what PPE to wear in three main scenarios: Providing direct personal care Other contact within two metres of anyone else Carrying out domestic duties or other activities For each scenario, the guidance describes the recommended items of PPE and sections on putting on and removing PPE, handling waste (including PPE), cleaning eye protection between uses, and aerosol-generating procedures (AGP) The guidance also provides detailed PPE recommendations for the following populations: Residents who are clinically extremely vulnerable Residents with learning disabilities, mental health problems, autism and dementia Residents who have been vaccinated Source (low-quality AGREE II rating; Public Health England) 	Last updated 9 June 2021
	Preventing infections Adjusting resident accommodations, shared spaces and common spaces	 The Public Health Agency of Canada issued guidance related to the ventilation and filtration considerations in long-term care homes Recommendations include using the highest-efficiency particular filter that the HVAC system is capable of handling, ensuring that the room has adequate air exchanges, and whenever possible 	Last updated 12 April 2021

	taking advantage of natural ventilation by opening windows If ventilation cannot be improved it is suggested that long-term care homes should put in place portable or ceiling fans and single-unit air conditions to circulate air within the room Alternatively, high-quality HEPA filters may also be used, however homes should ensure that they are recognized by a certified body Source (Public Health Agency of Canada)	
Preventing infections Vaccinating staff and residents	 The National Advisory Committee on Immunization is suggesting that key populations be prioritized, which includes those at high risk of severe illness and death due to advanced age or other high-risk conditions, and those who are most likely to transmit COVID-19 to those at high-risk of severe illness Other considerations including the reduction of health inequities and how to engage those are who systematically marginalized are being considered in the roll-out of the vaccine Source (Government of Canada) 	Published December 2020
Preventing infections Vaccinating staff and residents	 The priorities for the COVID-19 vaccination program should be the prevention of COVID-19 mortality and the protection of health and social-care staff and systems Secondary priorities should include vaccination of individuals at increased risk of hospitalization and increased risk of exposure, and to maintain resilience in essential services Based on the proposed guidelines, the order of priority of COVID-19 vaccinations begins with residents in a care home for older adults and their carers Immunization advice and communication programs should be tailored to mitigate inequalities. Specifically, programs should be 	Published 6 January 2021

	tailored to Black, Asian and minority ethnic groups who have higher rates of infection,	
	morbidity and mortality Source (Department of Health and Social Care,	
 Preventing infections Adhering to infection-prevention measures Restricting and screening staff and visitors Quarantine of exposed or potentially exposed residents Managing outbreaks Adhering to infection-control measures 	 Government of the United Kingdom) Long-term care homes are high-risk settings for the transmission of COVID-19 to and among residents and staff The following should be in place to prevent and control COVID-19 irrespective of whether infection has occurred: Ensure the existence of an infection prevention and control (IPC) focal point Implement standard IPC precautions for all residents In areas with known or suspected transmission of COVID-19 implement universal masking for all health workers, caregivers, professionals, visitors and residents Ensure physical distancing Ensure adequate ventilation Ensure adequate staffing levels and staff organization, appropriate working hours, and protection for staff from occupational risks The following are critical to ensure early detection of COVID-19: Implement symptom surveillance and/or regular laboratory testing of staff and residents Ensure appropriate management of exposure among health workers Expand testing to all staff and residents when a positive case of COVID-19 is identified Test residents upon admission or re-admission to long-term care homes in areas with community or cluster transmission When a resident is suspected or confirmed of having a COVID-19 case, the following should be implemented immediately: 	Last updated 8 January 2021

	 Follow specific procedures for environmental cleaning and disinfection, waste and laundry management Isolate suspected or confirmed cases of COVID-19 in single rooms or, if not possible, cohort residents with other cases Conduct careful clinical assessments of patients and include early treatment as appropriate and evaluation of resident transfer if needed Quarantine all contacts of confirmed cases of COVID-19 for 14 days 	
 Preventing infections Adhering to infection-prevention measures Restricting and screening staff and visitors Quarantining of exposed or potentially exposed residents and staff Testing of residents and staff Supporting staff and residents Renewing supports for residents and staff Engaging residents, families and caregivers in self-management, care choices, care delivery, and organizational and policy decision-making 	 This guidance is applicable to care-home residents across all four nations of the United Kingdom; the intended audience includes, but is not limited to, care-home staff, primary-care teams including general practitioners (GPs), community teams providing care for older people including Hospital At Home teams, hospital-discharge teams, and those providing advice on infection control to care homes This guidance covers the following issues about managing COVID-19 in a care home environment: Infection control Staff and resident testing Admissions to care homes Family visiting Diagnosing COVID-19 in care homes Management and treatment of COVID-19 in care homes Advance care planning End-of-life care Continuing routine healthcare Source (British Geriatrics Society) 	Last update 18 November 2020
 Preventing infections Adhering to infection-prevention measures 	This guideline is provided to assist public health authorities, residential-care services, healthcare	Last update 29 July 2020

 Restricting and screening staff and visitors Quarantining of exposed or potentially exposed residents and staff Testing of residents and staff Supporting staff and residents Managing outbreaks Adding or replacing administrators and staff Adhering to infection-control measures Renewing supports for residents and staff Ensuring an adequate supply of staff 	workers and carers by providing best practice information for the prevention and management of COVID-19 outbreaks in residential care homes in Australia This guideline presents a flowchart for COVID-19 management in RCF, which includes the following aspects: Develop a facility management plan (e.g., plan for a surge workforce) Vaccinate all residents and staff against influenza Infection control preparedness (e.g., staff training, early detection by screening and testing) Risk management for COVID-19 Manage a suspected or confirmed case of COVID-19 Manage a suspected outbreak of COVID-19 Manage a suspected outbreak of COVID-19 This guideline provides a COVID-19 outbreak preparedness checklist and a COVID-19 outbreak management checklist Standard precautions are a group of infection-prevention practices always used in healthcare settings and must be used in RCF with a suspected or confirmed COVID-19 outbreak, which consist of: Hand hygiene The use of appropriate personal protective equipment Respiratory hygiene and cough etiquette Regular cleaning of the environment and equipment Respiratory hygiene Diseases Network Australia)	Last updated 24
 Preventing infections Adhering to infection-prevention measures Restricting and screening staff and visitors 	 WHO provides 11 policy objectives to mitigate the impact of COVID-19 across long-term care: Include long-term care in all phases of the national response 	July 2020

 Quarantine of exposed or potentially exposed residents Contact tracing among staff and visitors Supporting staff and residents Managing outbreaks Adhering to infection-control measures Making additional spatial, service, screening, testing, isolation and support changes Transferring residents when their care needs exceed capacity in the home Renewing delivery, financial and governance arrangements Improving safety and quality of care, and more generally improving quadruple-aim metrics Changing service-delivery models Altering funding arrangements Adjusting governance arrangements Supporting greater integration of long-term care with other sectors Renewing supports for residents and staff Engaging residents, families and caregivers in self-management, care choices, care delivery and organizational and policy decision-making Supporting technology-enabled living among residents Ensuring an adequate supply of staff Ensuring the safety and satisfaction of staff and volunteers 	 Mobilize adequate funding for long-term care to respond to and recover from the pandemic Ensure effective monitoring and evaluation of the impact of COVID-19 on long-term care and ensure efficient information channelling between health and long-term care systems to optimize responses Secure staff and resources including adequate health workforce and health products Ensure the continuum and continuity of essential services for people receiving long-term care Ensure that infection prevention and control standards are implemented and adhered to in all long-term care settings Prioritize testing, contact tracing and monitoring of the spread of COVID-19 among people receiving and providing long-term care Provide support for family and voluntary caregivers Prioritize the psychosocial well-being of people receiving and providing long-term care Ensure smooth transition to the recovery phase Initiate steps for transformation of health and long-term care systems to appropriately integrate and ensure continuous, effective governance of long-term care services Source (World Health Organization) 	Last undated 14
 Preventing infection Adhering to infection-prevention measures Restricting and screening staff and visitors 	 In addition to general guidance related to education, sanitation, wearing of PPE, and self-monitoring for symptoms, guidance for long-term care homes and nursing homes in Indigenous communities emphasized: Notifying the First Nations and Inuit Health Branch regional medical officer, provincial or 	Last updated 14 April 2020

Preventing infection	Guidance for Centres for Medicare and Medicaid	Last updated 2
o Adhering to infection-prevention measures	emphasized:	April 2020
o Restricting and screening staff and visitors	Working with state and local health	
	departments to ensure stable supplies of PPE	
	o Symptoms screening for every individual who	
	enters the long-term care home;	
	o Ensure the proper wearing of PPE among staff	
	and increased PPE if COVID-19 transmission	
	occurs	
	Use separate staffing wherever possible and	
	designate a COVID-negative and COVID-	
	positive team	
	Source (Centres for Medicare and Medicaid)	
Managing outbreaks	This guideline from the Ontario Ministry of	
o Adhering to infection-control measures	Health provides guidance for public-health units	
 Making additional spatial, service, screening, 	on case, contact and outbreak management of all	
testing, isolation and support changes	confirmed and probable cases of COVID-19, and	
	also additional guidance for variants of concern	
	(VOC) positive cases	
	Although there are no changes to existing public	
	health measures or infection-prevention and	
	control measures when applied to new VOC,	
	more rigorous application of the measures is	
	recommended due to the increased risk of	
	transmission of VOC	
	Priority for screening and follow-up should be	
	given to high Priority Risk Settings for	
	Transmission, especially if the outbreak case is	
	suspected to be caused by a VOC	

	 A lower threshold for classifying contacts as high risk of exposure and requiring quarantine should be implemented in order to enhance the identification of contacts Case and contact follow-up should be prioritized when the case is identified as a VOC in order to, as much as possible, interrupt transmission to the community Asymptomatic testing should be enhanced High-risk exposure contacts should be tested immediately and quarantine for 14 days Contacts that test negative initially should be retested on or after day 10 of quarantine High-risk exposure contacts that develop symptoms should be managed as probable cases and be retested Household contacts of all symptomatic individuals are required to quarantine for 14 days (period of incubation) until the symptomatic person receives a negative COVID-19 test, and if the symptomatic individual is not tested, the period of incubation for all household contacts must start at the end of the symptomatic person's isolation period COVID-19 cases and contacts should be supported with isolation and quarantine measures, such as use of isolation facilities, food delivery services, and sick leave benefits Household contacts of symptomatic individuals should be counselled by publichealth units to stay home while the symptomatic individual is quarantining 	Published 29
 Managing outbreaks Adhering to infection-control measures (e.g., donning and doffing personal protective equipment) Making additional spatial, service, screening, testing, isolation and support changes 	This guideline from the American Geriatrics Society (AGS) provides recommendations for U.S. federal, state and local governments on decision-making for care of patients with COVID-19 in nursing homes (NH) and long-term care (LTC) homes	April 2020

- o Transferring residents when their care needs exceed capacity in the home
- Renewing delivery, financial and governance arrangements
 - o Improving access to care
- Renewing supports for residents and staff
 - o Ensuring an adequate supply of staff
 - o Remunerating staff

- Recommendations for the federal government include:
 - Using the full force of the Defense Production Act to increase production of personal protective equipment, testing kits, laboratory supplies, and supplies for symptom management and end-of-life care
 - Proactively monitoring the supply of medications and equipment used for patients at the end of life to prevent any future gaps in supply
 - Authorizing the Department of Defense to work with the federal and state governments to coordinate the delivery and sharing of scare resources within and across states, and to help prioritize congregate-living settings and home healthcare agencies so that they can get the resources they need
 - Building capacity, in collaboration with states, to provide hospital-level care in the home for patients with COVID-19 after hospital discharge
 - Ensuring access to paid leave for all health professionals and direct care workers on the front lines of the pandemic
 - Increasing payment to NHs caring for residents with COVID-19 and providing tax relief for NHs that provide paid family leave to homecare workers, and support staff caring for older adults and people with disabilities
- The AGS also recommends that the Centers for Disease Control (CDC) develop guidelines for transferring presumed or confirmed COVID-19positive residents from nursing homes to an emergency department
- Recommendation for state and local governments include:

Full systematic	• Panaving supports for racidants and staff	 Restricting the transfer of COVID-19-positive individuals to a NH unless the facility can safely and effectively isolate the patient from other residents and follows appropriate IPAC protocols, including the use of PPE by staff and residents Coordinating pandemic response planning with important stakeholders such as geriatrics health professionals, NH leadership teams, and hospice and palliative-care experts Collecting and using data to model hotspots, supply of beds, and PPE, and improve pandemic-response planning Including NHs in emergency personnel distribution deployment considerations to ensure adequate staffing According to the AGS, NHs should implement procedures to regularly screen NH staff for possible infection and ensure that they are trained in infection control, the use of PPE, and recognition of COVID-19 symptoms The review examined telehealth and telemedicine 	Literature last
reviews	 Renewing supports for residents and staff Supporting technology-enabled care by staff 	 The review examined telehealth and telemedicine modalities (e.g., video, asynchronous messages, and Bluetooth stethoscopes that maximize access to specialty care, care models, and improve patient outcomes The use of telehealth reduced emergency, hospital admissions and exposure to COVID-19, and improved processes (e.g., expedient access to specialists) for geriatrics, psychiatric, and palliative care Source (AMSTAR rating 5/9) 	searched October 2020
	Renewing delivery, financial and governance arrangements Altering funding arrangements	 The review discussed the development of public long-term care insurance (LTCI) and related challenges from 59 identified studies The authors described that there are benefits to LTCI such as improved physical health of the 	Literature last searched April 2020

	beneficiaries, reduced economic-welfare losses with members of families with disabilities (especially in Germany, Japan and South Korea), reduced length-of-stay and hospitalization costs (in China) • The sustainability and stability of LTCI financing and cultural practices should be considered when developing a LTCI Source (AMSTAR rating 5/9)	
Promoting alternatives to long-term care Enhancing the breadth and intensity of homeand community-care services to delay or avoid entry to long-term care	 The review described community-based housing models for older adults aging in place and summarized four themes and related considerations given that they may support physical and mental health and well-being, quality of life, and general satisfaction: Social relations (e.g., built environment such as close living units and shared spaces) Health and well-being (e.g., program offerings, social arrangements, availability of care services) Sense of self and autonomy (e.g., intentional design of housing models) Activity participation (e.g., on-site staff to support residents with their community and facilitating access) Source (AMSTAR rating 5/9) 	Literature last searched 2019
 Renewing supports for residents and staff Supporting technology-enabled care by staff 	 The review examined telehealth and telemedicine modalities (e.g., video, asynchronous messages, and Bluetooth stethoscopes that maximize access to specialty care, care models, and improve patient outcomes The use of telehealth reduced emergency, hospital admissions and exposure to COVID-19, and improved processes (e.g., expedient access to specialists) for geriatrics, psychiatric, and palliative care Source (AMSTAR rating 5/9) 	Literature last searched October 2020

 Renewing delivery, financial and governance arrangements Altering funding arrangements 	 The review discussed the development of public long-term care insurance (LTCI) and related challenges from 59 identified studies The authors described that there are benefits to LTCI such as improved physical health of the beneficiaries, reduced economic-welfare losses with members of families with disabilities (especially in Germany, Japan and South Korea), reduced length-of-stay and hospitalization costs (in China) The sustainability and stability of LTCI financing and cultural practices should be considered when developing a LTCI Source (AMSTAR rating 5/9) 	Literature last searched April 2020
Preventing infections Adhering to infection-prevention measures	 The review identified evidence on infection protection and control measures for adults aged 60 years and older in long-term care settings There were mixed results for increasing hand hygiene and personal protective equipment, and no significant results for social distancing The authors indicated that the absence or mixed evidence does not imply that these measures should not be employed during an outbreak Source (AMSTAR rating 3/9) 	Published 28 March 2020
Managing outbreaks Making additional spatial, service, screening, testing, isolation and support changes	 Residents of long-term care homes form a distinct vulnerable population with a single-facility attack rate of 45% and case fatality rate of 23% Of the cases in long-term care homes, 31% were asymptomatic Residents were identified as the index case in 58% of the outbreaks and a staff member in 42% These findings point to the importance of early identification using rapid diagnosis and identification of primary and secondary cases and close contacts once a case is identified Source (AMSTAR rating 9/11) 	Pre-print (Literature last searched 3 November 202

Managing outbreaks Making additional spatial, service, screening, testing, isolation and support changes	 Large outbreaks at long-term care homes shared the same genomic characteristics including a single-lineage rapid expansion This demonstrates that there is a very small number of introductions to the long-term care homes Genomic data can be used to estimate when an introduction into a long-term care facility likely took place Source (AMSTAR rating 5/9) 	Search last completed 26 January 2021
 Renewing delivery, financial and governance arrangements Altering funding arrangements Adjusting governance arrangements 	 For-profit ownership was not consistently associated with a higher probability of a COVID-19 outbreak, however there was evidence that these homes had worse outcomes for accumulative infections and mortality following an outbreak For-profit owned homes were also associated with shortages in personal protective equipment which may have contributed to increased infection and deaths Chain affiliation was correlated with an increased risk of outbreak, but was not found to be associated with higher rates of deaths or infections Source (AMSTAR rating 8/10) 	Search last completed 26 January 2021
 Renewing delivery, financial and governance arrangements Improving physical infrastructure Renewing supports for residents and staff Supporting technology-enabled care by staff 	 Health information technology (HIT) has been increasingly adopted by long-term care homes, but many homes do not employ systematic processes to implement HIT, under-invest in staff training, and lack necessary technology support and infrastructure No evidence was found to suggest that HIT increases staff turnover, and evidence about whether HIT affects staff productivity was mixed HIT may facilitate teamwork and communication, but does not appear to have an impact on quality of care or resident health outcomes 	Published 2018

	 In order for HIT to have an impact on productivity and quality of care, initial investments to train workforces and implement HIT systematically is necessary Policy incentives should be developed to encourage better preparation for HIT, develop supporting infrastructure, train staff to use HIT and engage LTC facility staff in the design and implementation of HIT Source (AMSTAR 3/9) 	
 Renewing delivery, financial and governance arrangements Altering funding arrangements 	 The review found that for-profit nursing homes have worse outcomes in both employee and client well-being compared to not-for-profit nursing homes Policymakers should weigh the benefits and drawbacks on the financial arrangement of long-term care homes (for-profit or non-for-profit) Source (AMSTAR rating 6/9) 	Literature last searched 2015
 Renewing delivery, financial and governance arrangements Improving physical infrastructure Renewing supports for residents and staff Ensuring an adequate supply of staff Ensuring safety and satisfaction of staff and volunteers 	 Studies found low-to-moderate levels of burnout, moderate levels of depersonalization, and moderate-to-high levels of personal accomplishment among staff in long-term care homes working with older adults with dementia An association was found between low staffing levels and increased job strain and emotional exhaustion A positive association was found between a poor work environment (both physical and cultural) and staff burnout and stress, however four studies found that perceived support from colleagues protected against burnout and stress Source (AMSTAR rating 4/10) 	Literature last searched 10 August 2017
 Renewing delivery, financial and governance arrangements Changing service-delivery models Renewing supports for residents and staff Optimizing skill mix among staff 	An increasing number of frail older adults are transferred from long-term care centres to hospitals to receive acute care, but these are often avoidable	Literature last searched 26 February 2019

	 The review identified five programs/interventions which all demonstrated a decrease in hospitalizations or emergency-department visits, including: Advance nurses within long-term care homes who can visit and manage patients with chronic diseases as well as complete assessments and monitor changes in health status INTERACT program which consists of seven tools aimed to prevent hospital admissions and focused on early management of conditions in the long-term care sector End-of-life supports including implementing a palliative-care framework and sets of tools to support good palliative care Implementing condition-specific pathways; Extended-care paramedics who respond to calls for acute issues in long-term care centres and who may be able to provide supports for residents without transferring them to hospital Source (AMSTAR 7/9) 	
 Renewing delivery, financial and governance arrangements Improving physical infrastructure Renewing supports for residents and staff Ensuring an adequate supply of staff 	 Long-term care facility characteristics such as non-profit status, rural homes and homes with a higher percentage of private rooms may be associated with higher quality of life One study suggested that Green House with individualized care had better quality of life than conventional long-term care homes No evidence suggested that the mix of Licensed Vocational Nurses, Registered Nurses and Licensed Practical Nurses and total nursing staff had no significant relationship with quality of life The limited evidence in this review does not allow strong conclusions, but raises questions about whether long-term care facility structure can improve resident quality of life Source (AMSTAR 4/9) 	Literature last searched 31 March 2012

Renewing supports for residents and staff Engaging residents, families and caregivers in self-management, care choices, care delivery, and organizational and policy decision-making	 Shared decision-making is a critical element of providing person-centred care People living with cognitive impairment often have the desire and ability to participate in shared decision-making about their everyday care, but their ability to contribute is frequently underestimated by staff Practical interventions to support shared decision-making were found to have good outcomes for persons living with cognitive impairments, although implementing these types of resources in extended-care environments such as long-term care homes would require care workers to be given the time and authority to develop the skills to use these types of aids Source (AMSTAR rating 8/11) 	Literature last searched October 2016
Renewing supports for residents and staff Engaging residents, families and caregivers in self-management, care choices, care delivery, and organizational and policy decision-making	 Family caregivers value their role in decision-making and want to maintain this role even when individuals are placed in a residential setting Time with staff and discussions with staff at a long-term care facility are critical to support effective participation of family in care decisions Family caregivers use a range of information and sources of information in their decision-making which includes both information provided by health professionals as well as the values, wishes and quality of life of the resident Source (AMSTAR rating 8/10) 	Literature last searched 2013
 Renewing supports for residents and staff Ensuring the safety and satisfaction of staff and volunteers Remunerating staff 	 The review examined factors that led to job satisfaction by nonprofessional nursing care providers in long-term care homes and were organized into individual factors and organizational factors Important individual factors were empowerment and autonomy at work, while organizational factors included facility resources (such as the 	Literature last searched 1 May 2013

	 equipment and supplies available for caring) and workload Interestingly, both satisfaction with salary/benefits and job performance were not associated with greater overall job satisfaction Source (AMSTAR rating 7/10) 	
 Renewing supports for residents and staff Ensuring an adequate supply of staff 	• No consistent evidence was found in examining the relationship between staffing levels and quality of care, with the exception of pressure ulcers, where across all included studied more staff led to fewer ulcers regardless of the staff member delivering care Source (AMSTAR rating 6/10)	Literature last searched April 2013
 Renewing supports for residents and staff Supporting technology-enabled care by staff 	 Facilitators associated with electronic health record (EHR) adoption in long-term care include: access and transfer of resident information, long-run cost savings, error reduction (largely in prescription errors and patient allergy alerts), clinical and administrative efficiency, user perceptions, facility characteristics, and staff retention Barriers to the implementation of EHRs include: initial investment cost; professional push-back on a new system; little training on the use of a new system; and a lack of time for implementation and understanding Source (AMSTAR rating 4/9) 	Literature last searched 2014
 Renewing supports for residents and staff Supporting technology-enabled care by staff 	 Long-term care (LTC) homes have slower adoption of electronic health records (EHRs) than other areas of the healthcare industry despite providing care to the fastest-growing group of the population EHRs demonstrated significant improvement in documenting and managing LTC homes and enhanced quality outcomes 	Literature last searched 24 April 2017

	Implementing EHRs in LTC homes can improve management of clinical documentation and facilitate better decision-making Source (AMSTAR rating 4/9)	
Promoting alternatives to long-term care Engaging residents, families and caregivers in shared decision-making about whether to enter long-term care	 The qualitative review found that making decisions related to when to enter a long-term care facility can be extremely challenging and were often centred on one of three reasons: concern for safety of the resident at home; reaching a breaking point in caregiving; and lacking the supports necessary for caregiving Hesitation about placing family members in long-term care often stemmed from guilt of abandonment and needing reassurance and validation about the decision Select interventions can help to facilitate discussions with people with dementia, their caregivers and their care teams to improve the decision-making experience, including dyadic counselling and the use of communication tools such as talking mats, however additional research is needed to identify others Source (AMSTAR rating 5/9) 	Literature last searched August 2018
Promoting alternatives to long-term care Enhancing the breadth and intensity of homeand community-care services to delay or avoid entry to long-term care	 Although most Canadians die in hospital, many prefer to die at home Factors associated with increased likelihood of home death included having multidisciplinary home palliative care, preference for home death and early referral to palliative care Knowledge of these determinants can inform care planning about the feasibility of dying in the preferred location among healthcare providers, family members and patients Early referral to palliative care and multidisciplinary home palliative-care teams may improve the likelihood of patients dying in their preferred location 	Literature last searched 2013

		Source AMSTAR (8/11)	
	Promoting alternatives to long-term care Enhancing the breadth and intensity of homeand community-care services to delay or avoid entry to long-term care	 Long-term care (LTC) facility residents generally have more physical and cognitive limitations than home and community-based services (HCBS) and assisted living (AL) care recipients There was insufficient and low-quality evidence to compare outcome trajectories of HCBS or AL care recipients Low-strength evidence suggested no differences in outcomes for physical function, mental health, cognition and mortality Low-strength evidence suggested that HCBS recipients experienced higher rates of certain harms, while LTC facility residents experienced higher rates of others Source (AMSTAR 9/10) 	Literature last searched March 2012
	 Promoting alternatives to long-term care Supporting technology-enabled care at home 	 The findings from the review suggest that older home-dwelling patients can benefit from virtual visits to enhance feelings of independence, social inclusion and medication compliance Service users found virtual visits satisfactory and can be used in combination with in-person visits to maintain care at home for longer, even among complex older adults Source (AMSTAR rating 5/9) 	Literature last searched April 2013
Rapid reviews	 Preventing infections Adhering to infection-prevention measures Adjusting resident accommodations, shared spaces and common spaces Adjusting service provision Restricting and screening staff and visitors Managing outbreaks Adhering to infection-control measures 	 This rapid review explored factors contributing to COVID-19 spread and mortality in nursing homes and provided an overview of the responses implemented to overcome COVID-19 challenges Based on the literature search, the factors that emerged related to COVID-19 spread and mortality are as follows: Resident-related factors, such as comorbidities, nutrition and cognition; Facility characteristics, such as physical space, occupancy and for-profit status; 	Literature last searched 31 January 2021

 Adhering to infe donning and dot equipment) Making addition testing, isolation 	ing administrators and staff ction-control measures (e.g., fing personal protective al spatial, service, screening, and support changes dents when their care needs n the home	Staffing characteristics such as staffing levels, staff-to-resident ratio, and staff multi-employment; Disease characteristics such as asymptomatic transmission; External factors such as community rates, availability of personal protective equipment, prevailing health and social care policies in terms of responses, identified themes included widespread testing, isolation and cohorting of residents, staff protection and support, promotion of residents' well-being, and technological nnovations This rapid review highlighted a number of weaknesses in the long-term care sector that contributed to poor outcomes, however it also dentified multiple responses that successfully mitigated some of the adverse impacts source (AMSTAR rating 2/9) The Oxford COVID-19 Evidence Service Team at the Centre for Evidence-Based Medicine dentified key infection control measures in the prevention of outbreaks in care homes, including: Hand hygiene (e.g., access to hand hygiene throughout facilities and adhering to four or more of the WHO multi-modal strategy) Environmental decontamination (e.g., daily cleaning of most-touched surfaces) Staff rotation (e.g., allocating staff to one facility) Visitors (e.g., restricting visitation to only emergency/critical cases) Testing (e.g., creating rapid testing) mplementation challenges included maintaining dequate staffing, supplies, potential negative consequences of restricting residents to their comes, and difficulty controlling movement for certain residents (e.g., with dementia)	Published 14 April 2021

	ng outbreaks	• This review explored the potential benefits, harms,	Published 23
	ing additional spatial, service, screening,	evidence, and implementation challenges for	March 2021
testin	ng, isolation and support change	routine asymptomatic COVID-19 screen testing	
		of long-term care staff in order to prevent long-	
		term care home COVID-19 outbreaks, and what	
		impact COVID-19 vaccination of long-term care	
		staff and residents has on the need for ongoing	
		screen testing for asymptomatic COVID-19	
		• It was found that currently there is no available	
		real-world evidence to either support or refute the	
		benefits of routine asymptomatic COVID-19	
		screen testing in the prevention of COVID-19	
		outbreaks in long-term care homes	
		• Given the high rates of protection of COVID-19	
		vaccines against symptomatic and asymptomatic	
		COVID-19 infection and symptoms,	
		asymptomatic routine screen testing may not be	
		beneficial enough to outweigh the harms and	
		challenges associated with ongoing screen testing	
		These harms and challenges include the following:	
		 Physical discomfort and injury from frequent 	
		nasopharyngeal swabbing	
		 Staff behaviour change associated with the 	
		knowledge that screen testing outcome is	
		negative	
		False-positive outcomes	
		Limited laboratory capacity due to increased	
		test turnaround	
		Rapid antigens tests can mitigate the high test	
		turnaround and costs, however these tests	
		require frequent testing by staff which can	
		exacerbate the current long-term care staff	
		shortages

 Managing outbreaks Making additional spatial, service, screening, testing, isolation and support changes Renewing delivery, financial and governance arrangements Supporting greater integration of long-term care with other sectors 	 This rapid review aimed to compare the impact of initial government policies on aged care homes between the U.K. and Australia during the first wave of attack of COVID-19 Both countries were found to put prioritized resources to hospitals over aged care homes during the first wave of attack and give lower priority for hospitalization of aged care-home residents (e.g., discharging without testing for COVID-19 or discouraging admissions) The public-health policy in Australia aiming towards earlier intervention with earlier national lockdown and more viral testing to prevent new cases might be associated with a lower fatality rate The initial policy in the U.K. focusing mainly on protecting resources for hospitals, and a delay in national lockdown intervention and lower viral testing rate, resulted in more lives lost in the aged care sector The policies of resource distribution and hospitalization can have detrimental effects on older aged care-home residents, but early lockdown and availability of viral testing to the public seem to have contributed to a lower absolute number of fatalities in this vulnerable population Source (AMSTAR rating 3/9) 	Published 2 March 2021
Managing outbreaks Transferring residents when their care needs exceed capacity in the home	 This rapid review discussed moving COVID-19-positive long-term care (LTC) residents to other settings Limited information was identified about moving measures and their effectiveness within the LTC sector Six jurisdictions (i.e., Ontario, British Columbia, Alberta, United States, Spain, and South Korea) have established moving measures for LTC homes that can be implemented if required 	Published 30 November 2020

	 As of August 2020, New South Wales (Australia) has not permitted moving of residents into hospitals The Government of Canada, the Royal Society of Canada, American Geriatrics Society, and Taiwan recommend transferring LTC residents to a hospital or other setting if isolation is not feasible in the event of a COVID-19 outbreak (Internal document; AMSTAR rating 0/9) 	
Renewing delivery, financial and governance arrangements Improving safety and quality of care and more generally improving quadruple-aim metrics	 Long-term care home (LTCH) inspections are generally supported by national or state-level legislation (i.e., Acts or regulations) and/or by a legal body (i.e., national government) Inspection approaches generally include an inspection guideline that is used by an inspecting body to assess whether LTCHs are complying with LTC legislative standards, and may include the following focus areas: Administration Resident services Human resources and Environment This rapid review also discussed the following aspects of LTCH inspections: Frequency of inspections Types of inspections Inspection timelines Methods/tools used in inspections Inspecting bodies Inspection process Post-inspection (Internal document; AMSTAR rating 0/9) 	Published 29 January 2021
 Renewing delivery, financial and governance arrangements Changing service-delivery models 	The review identified 366 peer-reviewed publications on optimal models of care and interventions that improve quality of life, quality of care, and health outcomes for residents living in long-term care homes	Published 10 June 2020

 Renewing delivery, financial and governance arrangements Changing service-delivery models Renewing supports for residents and staff Engaging residents, families and caregivers in self-management, care choices, care delivery, and organizational and policy decision-making 	 274 implementation-strategy studies described supporting multidisciplinary teams, targeting specific conditions or risk factors, or a combination of both The literature had more studies on dementia care, oral care, exercise/mobility, overall resident care, and optimal/appropriate medication use, with fewer studies on hearing care, vision care, and foot care 92 studies assessed healthcare service delivery studies, with 37 studies evaluating allied healthcare teams and 10 studies evaluating models of direct patient care There was limited information on interventions involving care aides and PSWs even though they are responsible for 90% of direct resident care Source (AMSTAR rating 5/9) This review reports on documentary and content analysis of international and country-specific guidance on palliative care in nursing homes in the context of COVID-19 Palliative-care themes that emerged from the guidance included end-of-life visits, advance-care planning, clinical decision-making. However, international documents lacked guidance specifically for palliative care and focused primarily on COVID-19 infection prevention and control This review highlights the lack of attention and recommendations on key aspects of palliative care, such as symptom management, staff education and support, and referral protocols Source (AMSTAR 7/9) 	Published 10 May 2020
Renewing supports for residents and staffOptimizing skill mix among staff	The rapid reviews aimed to produce research- based 'top tips' to respond to questions and concerns emerging from the care home sector in the early stages of the COVID-19 crisis in the	October 2020

	U.K., and complement emerging COVID-19 policy and practice guidelines Eight rapid reviews were conducted based on the following topics that arose from staff and managers in the first few weeks of the COVID-19 pandemic End-of-life care when staff are unsure what is best Hydration and COVID-19 Supporting families at a distance Supporting residents with dementia to stay in touch with families using video-calls Supporting residents who do not understand self-isolation and social distancing Using doll therapy to comfort people with dementia Using music to provide comfort and reassurance Supporting staff following deaths in care homes The above eight rapid reviews revealed gaps in research evidence, with research having a lot to say about what care homes should do and far less about how they should do it The complementary rapid-review of 18 government and expert guidance documents emphasized the magnitude of expectations and requirements for care-home staff and managers during the COVID-19 pandemic Care-home research needs to be multidisciplinary with engaging the staff to co-design and co-produce research and pathways based on their knowledge Source (AMSTAR rating 3/9)	
 Promoting alternatives to long-term care Enhancing the breadth and intensity of homeand community-care services to delay or avoid entry to long-term care 	There is limited available evidence on how primary care and community nursing services can adapt during a pandemic	Published 4 June 2020

		• Key findings included the need for consistent and timely communications of protocols and infection-prevention measures, need for psychosocial, financial, and emotional support, training and skills development, and debriefing with staff to ensure resilience Source (AMSTAR rating 3/9)	
Guidelines developed using some type of evidence synthesis and/or expert opinion	 Preventing infections Vaccinating staff and residents Adhering to infection-prevention measures Adjusting resident accommodations, shared spaces and common spaces Restricting and screening staff and visitors Quarantining of exposed or potentially exposed residents (within facility) and staff (at home) Testing of residents and staff Isolating suspected or confirmed cases among residents (within same or different facility) and staff (at home or in alternative settings like hotels) Contact tracing among staff and visitors Managing outbreaks Adhering to infection-control measures Making additional spatial, service, screening, testing, isolation and support changes Transferring residents when their care needs exceed capacity in the home 	 Recommendations included in this guideline for the prevention of COVID-19 infections in LTC homes were: Providing sufficient PPE for staff and residents as well as training on use of PPE Designation of a leader in each LTCF to support implementation of preventive measures Regularly testing staff (at least once using a rapid antigen test) Avoid overcrowding of residents in the homes Ensure adequate access to external consultation services for healthcare of residents Establish procedures for (re)admission of residents recuperating from COVID-19-related symptoms Implement measures to minimize the introduction of COVID-19 infection during visitations from relatives and caregivers, such as requiring the wearing of masks and testing visitors if local incidence is high (more than 50/100,000 per week) Develop procedures for residents who test positive for COVID-19 and/or display symptoms and for their contacts Have break rooms and changing rooms for staff Inform staff, residents and their relatives about vaccination and encourage them to consent to vaccination 	Published 15 January 2021

	 Recommendations for providing medical treatment for asymptomatic COVID-19 patients include: Isolating the patient for 10 days Providing counselling and social support Considering vitamin D and zinc replacement if needed Checking for vital signs and symptoms regularly Encouraging the patient to remain mobile, if possible, through physical exercises These recommendations also apply for medical treatment of symptomatic COIVD-19 patients, but with the following caveats: Following 10-day isolation, the patient must be symptom-free for at least two days in order to end isolation Providing medical treatment to address COVID-19 symptoms Checking regularly for indications for hospital admission and prepare all useful information for the admission in case needed 	
 Preventing infections Adhering to infection-prevention measures Quarantining of exposed or potentially exposed residents and staff Testing of residents and staff Isolating suspected or confirmed cases among residents and staff Managing outbreaks Adhering to infection-control measures 	 European Geriatric Medicine Society (EuGMS)'s guidance pulls from authors from different European countries with prior experience of COVID-19 outbreaks in long-term care homes and is aimed to provide expertise for long-term care prevention and transmission of COVID-19 The guidance is to be used alongside existing local, regional, or national recommendations, and outlines a list of measures that requires an assessment of the risk-benefit ratio on a case-bycase basis Recommendations include: Infection prevention and control focal points should be set up in every long-term care facility 	Published 3 November 2020

 Preventing infections Adjusting resident accommodation, shared spaces and common spaces 	 Residents, staff members and visitors should undergo routine testing, even those who are asymptomatic Isolation of those infected or have been in contact with those who are infected with COVID-19 A designated member of staff should be assigned to lead epidemic preparedness and response within the long-term care facility Enhanced traffic control bundling should be implemented which includes restricting entry to visitors during community outbreaks, assessing all 	Published June 2020
Preventing infections	 entrants for symptoms, and universal masking requirement for everyone within the facility The long-term care homes should designate transition zones, clean zones, and where necessary COVID-19-positive zones with checkpoints for hand disinfection between each zone No published primary or systematic reviews were 	Published April
 Adhering to infection-prevention measures Adjusting service provision 	 identified, but key recommendations came from government and international agencies All the guidelines described using single rooms when available, and then cohort patients with positive cases of COVID-19 into units, floor, or a wing Some guidelines described that patients with suspected COVID-19 cases should only be cohorted with other suspected cases 	2020
 Preventing infections Adhering to infection-prevention measures Restricting and screening staff and visitors Testing of residents and staff 	• The National Institute on Ageing (NIA) in Canada recommends an 'Iron Ring' set of collective actions that can be taken to protect long-term care home and retirement home residents during the COVID-19 pandemic:	Last updated 21 April 2020

 Isolating suspected or confirmed cases among residents (within same or different facility) and staff Supporting staff and residents 	 Restricting all non-essential visits in order to reduce the risk of introducing the coronavirus into the home Limiting movement of LTC care providers to one care setting wherever possible, and simultaneously introducing incentives to do so, such as top-ups on pay Requiring the use of appropriate personal protective equipment by care providers and residents and providing training to support its use Implementing testing and isolating procedures that include staff and residents who may be asymptomatic or have atypical presentations Implementing flexible admission and discharge policies for LTC settings to give residents and their families the flexibility to defer a placement offer, or leave and return to a care setting quickly based on what would best support their overall health and well-being The NIA encourages staff and family members to look for safe ways to engage with residents without entering the home, such as using tablets to communicate with residents or visiting residents through the window of their rooms This guideline reports on the uptake of the 'Iron Ring' guidance across Canadian provinces as of 21 April 2020 Source 	
 Preventing infections Adhering to infection-prevention measures Adjusting resident accommodations, shared spaces and common spaces Adjusting service provision 	 Recommendations provided in this guideline on physical distancing in long-term care homes and assisted living homes include: Avoid sofas and instead use individual chairs facing away from each other for seating, separated by a minimum of one metre Avoid shared activities within the same space, and if this is not possible residents and staff should perform hand hygiene before, during 	Published 31 March 2020

Managing outbreaks Making additional spatial, service, screening, testing, isolation and support changes	and after activities, with adequate spacing between residents Seating in tv/media lounges should be arranged in theatre style with maximum spacing between chairs (two metres on each side is ideal) Ensure that all congregate settings receive enhanced infection control cleaning and consider removing or replacing communal seating (e.g., benches) During mealtimes ensure that residents are distanced at least two metres apart and not facing each other, and when this is not possible consider tray service or providing meals in shifts with appropriate sanitization between residents Source (Vancouver Coastal Health Authority) Advance-care planning should be undertaken with residents who have been diagnosed with COVID-19 and should include discussions about preferences for mechanical ventilation, and prescriptions to support pain management in a palliative approach should be made in advance for the problems that may arise (including subcutaneous forms of prescription drugs as oral dosages may not be possible) Source	Last updated March 2020
 Preventing infections Restricting and screening staff and visitors Supporting staff and residents 	 This guidance document reviewed the emerging nursing-home visitor policies that have been issued in Canada's 10 provincial and three territorial governments as well as international policies and guidance for evidence-informed recommendations to support the re-opening of Canadian nursing homes There are six core principles and planning assumptions that were identified to be made to current and future guidelines: 	Published 3 August 2020

	 Policies should differentiate between family caregivers and general visitors Restricted access to visiting must balance the risks of COVID-19 infection with the risks of well-being and quality of life of the resident Visitor policies should prioritize equity Transparent, regular and accessible communication and direction of policies should be made by governments, public-health authorities and nursing homes Robust data related to re-opening should be collected and reported A feedback and rapid appeals mechanism should be implemented 	
 Renewing delivery, financial and governance arrangements Supporting greater integration of long-term care with other sectors 	 Guidance developed by National Health Service England, Public Health England and the Care Quality Commission (CQC) for a designation scheme of settings for people leaving hospital who have tested positive for COVID-19 and are being transferred to a care home, to be taken up by local authorities, clinical commissioning groups, care providers and people who utilize these services The new guidance requires the following: Every patient to receive a COVID-19 test result within 48 hours prior to discharge Those likely to be infectious with COVID-19 being discharged into a registered care-home setting should first be discharged into a designated setting 14-day period of isolation before moving into a care home from a designated setting Designated premises will need to have undergone an inspection by CQC Local authorities must ensure there are sufficient available designated settings Source (NHS England, Public Health England, and Care Quality Commission) 	Last updated 18 February 2021

	focus groups to elicit concerns, perspectives and experiences related to the COVID-19 testing and vaccination • The findings indicate that some staff are hesitant to receive the COVID-19 vaccine due to reasons including general concerns about safety and effectiveness related to the speed of vaccine development and lack of sufficient testing, personal concerns about pre-existing medical conditions, and lack of trust in government and the political landscape Source	
 Preventing infections Adjusting resident accommodations Adjusting service provision Isolating suspected or confirmed cases among residents and staff Supporting staff and residents 	 The study examined the experiences of staff working in nursing homes during the first wave of the COVID-19 pandemic in Wuhan The study highlighted five themes: difficulties faced by the nursing homes; psychological experience; services for older adults; prevention and management strategies; and strategies for public-health emergencies Difficulties faced by the nursing homes included a lack of epidemic preparedness, limited personal protective equipment, lack of experience with prevention and control, and a shortage of staff Psychological experiences of staff included pressure from many sources and the importance of team cooperation Service for older people included the importance of providing epidemic-prevention knowledge to residents, including traditional Chinese medicine healthcare, and coming up with additional supports to provide mental consolation such as painting in their own rooms Prevention and management strategies included establishing contingency plans, conducting health assessments to ensure ongoing monitoring of existing conditions, targeted training for management, medical workers and staff who work 	Published 15 April 2021

	 on institutional logistics, and immediately sending confirmed cases of COVID-19 to isolation Finally, strategies for public-health emergencies included ensuring greater space is available within nursing homes to allow for physical distancing, recruiting medical staff in addition to nursing assistants and managers, and the need for routine training and emergency drills during ordinary time to help clarify emergency measures 	
 Preventing infections Adhering to infection-prevention measures Adjusting service provision Restricting and screening staff and visitors Testing of residents and staff Managing outbreaks Making additional spatial, service, screening, testing, isolation and support changes 	 This study analyzed the long-term care policies implemented during the first wave of COVID-19 in five Canadian provinces: British Columbia, Ontario, Quebec, Alberta and Nova Scotia The authors compared when policies were implemented to the rates of COVID-19 cases and deaths among long-term care staff during the first wave Six policy mandates were identified across provinces: declaring a state of emergency; restricting non-essential visitors; mandating masks; restricting long-term care staff to working in one location; expanding testing to long-term care staff and residents; and deploying the Canadian Armed Forces to long-term care facilities The study highlights that approaches taken by some provinces helped to prevent the spread of COVID-19, but the delay of other provinces in enacting control and prevention measures resulted in increased rates of infection and deaths 	Published April 2021
 Preventing infections Adhering to infection-prevention measures Restricting and screening staff and visitors Testing of residents and staff Isolating suspected or confirmed cases among residents and staff Contact tracing among staff and visitors 	The authors conducted an observational cross- sectional study at a long-term skilled nursing facility (SNF) in Serrana, Sao Paulo State to examine its successful outbreak investigation, management, and control after a COVID-19 outbreak infected 18 residents and 12 healthcare workers	Published 23 March 2021

Managing outbreaks Making additional spatial, service, screening, testing, isolation and support changes	 Measures taken by the SNF included early identification and contact tracing, the use of personal protective equipment, cancellation of group activities, questionnaires for residents and staff on COVID-19 symptoms, daily screening, testing, and isolation of residents in separate rooms of a local hospital The authors highlighted the need for mass testing for all asymptomatic people in long-term care settings, as most of the residents and healthcare workers in the SNP were asymptomatic at the time of testing Long-term care settings should also engage in active surveillance by conducting frequent surveys assessing for symptoms of COVID-19, and early isolation of residents 	
 Renewing delivery, financial and governance arrangements Improving safety and quality of care, and more generally improving quadruple-aim metrics Renewing supports for residents and staff Ensuring the safety and satisfaction of staff and volunteers 	 This qualitative study investigated the experiences of staff and residents in nursing homes in Brussels, Belgium during COVID-19 to understand residents' psychosocial and mental health needs, and how prepared staff were to address them Residents reported a loss of social life, freedom, stimulation, autonomy, and experienced a cognitive and physical decline, all contributing to adverse mental health outcomes Staff felt unprepared to care for residents and address basic psychological needs due to a lack of information and communication, personal protective equipment and safety affecting perceptions of safety, and a re-organization of work leading to task-shifting and an increased workload The authors recommend that creative and preventive interventions are necessary to address the mental health needs of residents in tandem 	Published 26 March 2021

	with increased planning and support for staff to
	reduce levels of stress
 Preventing infections Adhering to infection-control measures 	 This study reports on whether employees of long-term care homes (LTCF) in Geneva, Switzerland were willing to change their infection prevention and control practices after playing a serious game, "Escape COVID-19", meant to induce behavioural change The game had a meaningful narrative that had the player go through steps that they would usually encounter during the workday and make decisions on IPAC behaviours that would affect other people in real life Participants were randomly allocated to either the control group or serious game group where the control group reviewed regular IPAC guidelines and the other group played the serious game; both groups completed a questionnaire after these activities The study found that the serious game was more successful than standard IPAC materials at convincing LTCF employees to adopt safer IPAC behaviours Factors underlying the willingness to change IPAC behaviour included the feeling of playing an important role in fighting the epidemic, the information given in the training materials, the probability of infecting a relative, and the obligation to follow procedures The most common reason for an employee not changing behaviour was because they were already
	following all of the guidelines Source
 Preventing infections Adhering to infection-prevention measures Adjusting resident accommodations 	Preventive measures put in place in a Taiwanese nursing home were found to reduce the risk of

 Restricting and screening staff and visitors Testing of residents and staff Contact tracing among staff and visitors 	respiratory tract infections in both nursing home residents and staff • Preventive measures included: before entering the facility (body temperature surveillance, wearing masks, symptom screening, and hand sanitizing); for entering wards (only nursing-home staff members and select family were allowed, regular hand sanitizing, and cleaning frequently touched surfaces every two hours); staff in wards (education on COVID-19, hand sanitizing before and after touching the patient, wearing PPE, keeping social distance when taking staff to dining table, cleaning office equipment, performing a COVID-19 test when symptoms were present); family member in wards (recording of personal contact information, wearing a mask in the facility, and refusing entry to those that have travelled abroad in the past 14 days); residents in wards (education on the importance of COVID-19, wearing masks within the facility, decreasing cluster activities, keeping safe distances at meal times, performing a COVID-19 test when residents had symptoms, transfer for medical visits was completed using specific vehicles and drivers) Source
Preventing infection Vaccinating staff and residents	 A cohort analysis of residents at long-term care homes in Connecticut found that partial vaccination with the Pfizer-BioNTech COVID-19 vaccine was 63% effective against infection Pre-existing immunity may strengthen the response to a single dose of COVID-19 vaccine Source
 Preventing infection Adhering to infection-prevention measures 	A three-component pilot infection, prevention and control assessment was conducted in long- term care homes in New York State during the pandemic

	 The assessment consisted of a screening tool, telephone checklist, and a COVID-19 video assessment Among 40 proactive assessments, 35% identified suspected or confirmed COVID-19 cases The COVIDeo assessment provided observations in 28% of the assessments that would have otherwise been missed, including PPE that was not easily accessible, redundant or improperly donned or stored, and specific challenges implementing infection, prevention and control measures among particular populations
 Preventing infections Testing of residents and staff Isolating suspected or confirmed cases among residents and staff Managing outbreaks Making additional spatial, service, screening, testing, isolation, and support changes Transferring residents when their care needs exceed capacity in the home 	 The importance of comprehensive polymerase chain reaction (PCR) testing in long-term care homes was highlighted in this study of a testing strategy applied in a 100-bed nursing facility in Japan during a COVID-19 outbreak in April 2020 Following the identification of the first positive case at the facility, two types of PCR testing were performed – comprehensive (facility-wide) tests and separate tests when residents and staff had a fever (≥37.5°C) – and multiple facility-wide antibody testing was also planned and implemented PCR-positive residents were isolated in a separate unit and those with severe conditions were transferred to hospitals Retesting was performed on all positive residents following isolation until all were PCR negative, and facility-wide antibody testing was subsequently implemented to confirm the termination of the COVID-19 outbreak Comprehensive PCR testing and separate testing of residents with fever enabled the identification of the centre of the outbreak in the facility, as well

Preventing infections Vaccinating staff and residents	as asymptomatic individuals, and proved to be effective at controlling the COVID-19 outbreak The study also suggests that antibody testing can be useful for tracing close contacts and confirming the termination of outbreaks Source This study presents findings on vaccine effectiveness (VE) of the first and second doses of the Pfizer-BioNTech mRNA vaccine on long-term care facility (LTCF) residents and front-line healthcare workers (HCW) in Denmark, both with no previous history of COVID-19 infection No significant VE was observed for LTCF residents between the first and second doses (median dose interval of 24 days), but VE increased to 52% from day 0-7 after the second dose and 64% from seven days after the second dose For HCWs, a moderate increase in VE was observed 14 days after the first dose (17%) and VE increased to 46% from 0-7 days after the second dose and 90% from seven days after the second dose (median dose interval of 25 days) Overall, the study found that two doses of the Pfizer-BioNTech vaccine provided protection from COVID-19 infection in both study groups, but more so in healthcare workers than in LTCF
	but more so in healthcare workers than in LTCF residents Source
 Preventing infections Vaccinating staff and residents 	 A study of staff in Liverpool long-term care homes found that the mean staff vaccination rate was 51.4% per home Commonly cited reasons for not receiving the vaccine were: concerns about the lack of vaccine research, staff being off-site during vaccination sessions, pregnancy and fertility concerns, and concerns about allergic reactions

	Suggested methods to combat hesitancy include providing evidence and literature to staff to dispel misinformation, as well as hosting meetings and one-on-one conversations with staff Source
 Preventing infections Adhering to infection-prevention measures Restricting and screening staff and visitors Renewing supports for residents and staff Ensuring an adequate supply of staff Optimizing skill mix among staff 	 A cross-sectional study was conducted among 484 nursing homes in 136 cities of 28 provinces in China to explore the adherence to the Ministry of Civil Affairs guidelines for COVID-19 prevention and control in nursing homes The implementation rates of COVID-19 prevention and control measures in nursing homes were moderate, with an average rate of 80.0% The average implementation rates for hygienic-behaviour management, access management, and environmental-disinfection management were 75.3%, 78.7%, and 79.9%, respectively The number of medical staff, education level of the manager, nursing home size, and establishment of quarantine room/unit were found to be positively associated with the total implementation rate Source
 Preventing infections Testing of residents and staff 	 This study evaluated current testing pathways in care homes and identified four main steps in testing: infection prevention, preparatory steps, swabbing procedure and management of residents Infection prevention was particularly challenging for mobile residents with cognitive impairment Swabbing and preparatory steps were resource-intensive, requiring additional staff resource Swabbing required flexibility and staff who were familiar to the resident Swab-based testing was found to be organizationally complex and resource-intensive in care homes

	D : (C
	Point-of-care tests could give care homes greater
	flexibility in person-centred ways

Preventing infections	Using a longitudinal design, this study evaluated
 Adhering to infection-prevention measures 	changes in social distancing restrictions
	implemented from June to August 2020, and the
	effect these restrictions had on weekly numbers of
	new COVID-19 cases, deaths and non-COVID-
	19 deaths in nursing homes nationally in the
	United States
	Results showed that strong social distancing
	measures were associated with lower weekly rates
	of new COVID-19 cases and related deaths
	among nursing home residents and staff in the
	period of June to September 2020

	 These associations were found to be larger for nursing homes that serve racial and ethnic minority residents Stronger state social distancing measures were associated with a slight increase in non-COVID-19 mortality rates, which may be an unintentional consequence of decreased social activities and interactions Source
Preventing infections Testing of residents and staff	 Since July 2020, the Israeli national protection program on long-term care homes ('senior shield') implemented routine, governmental funded, weekly, screening COVID-19 PCR testing of all LTCF healthcare workers This program was reported to substantially reduce outbreaks, hospitalizations and mortality in LTCFs at the national level This study indicated that routine weekly COVID-19 PCR testing of all LTCF employees may reduce national hospitalizations and mortality, and may help prevent national health systems from being overwhelmed
Preventing infections Supporting staff and residents	 This quantitative analysis found that nursing home resident outcomes worsened on a broad array of measures, including: Increased prevalence of depressive symptoms Increased share of residents with unplanned substantial weight loss Significant increases in episodes of incontinence Significant reductions in cognitive functioning The analyses showed that the pandemic had substantial impacts on nursing-home residents beyond the direct effects of morbidity and mortality, adversely affecting the physical and emotional well-being of residents

	Source
 Preventing infections Supporting staff and residents 	 This study found weight loss among both COVID-positive and COVID-negative residents in a nursing home population after a widespread COVID-19 outbreak Residents who were COVID-positive had both a larger absolute weight loss and trended toward a larger percentage weight loss The results suggested skilled nursing facilities should proactively address associated weight loss by implementing creative strategies and policies to ensure residents receive adequate mealtime support, symptom management, weight monitoring, and comprehensive nutrition assessments Source
 Preventing infections Supporting staff and residents 	 A cross-sectional study explored the consequences of COVID-19 measures on loneliness, mood, and behavioural problems in residents in Dutch long-term care facilities (LTCFs) This study found the well-being of older residents was severely affected during the COVID-19 measures High levels of loneliness, depression, and a significant exacerbation in mood and behavioural problems were reported in the six to 10 weeks after implementation of the visitor ban This study indicated that LTCFs should implement policies on allowing visitors and continuing daytime activities to achieve a better balance between physical safety and well-being
 Managing outbreaks Making additional spatial, service, screening, testing, isolation and support changes 	This study described a successful control of a COVID-19 outbreak in a nursing home by general screening and rigorous cohort isolation in Germany

Populies delivery for a six and a comment	This study indicated that the combination of general SARS-CoV-2 screening and consistent cohorting of residents who tested positive or negative proved to be a laborious but powerful approach to outbreak control Source Developed a new model of particle ages that
 Renewing delivery, financial and governance arrangements Improving physical infrastructure Supporting greater integration of long-term care with other sectors Renewing supports for residents and staff Engaging residents, families and caregivers in self-management, care choices, care delivery, and organizational and policy decision-making Ensuring adequate supply of staff 	 Developed a new model of nursing care that operates with 140-person homes each with private bedrooms and large cooking, dining and living areas The model uses a flat staffing model with a small group of universal workers as well as a few nurses who provide about an hour of care a day to residents Source
 Renewing delivery, financial and governance arrangements Changing service-delivery models Renewing supports for residents and staff Optimizing skill mix among staff 	 The need to improve coordination between long-term care homes and hospitals became clear during the COVID-19 pandemic In Madrid, the role of geriatric liaison was developed during the pandemic These staff members were responsible for the coordination of care between hospital and long-term care homes including by providing geriatrician visits to the home, telemedicine sessions, geriatric assessment in emergency rooms, and coordination with primary care and publichealth services coordination Source
Renewing supports for residents and staff Ensuring the safety and satisfaction of staff and volunteers	 Cross-sectional data from managers of long-term care homes found an association between the perceived pandemic-specific and general demands and intention to leave the profession The association was significantly stronger as the pandemic went on and a second survey was conducted Source

 Renewing supports for residents and staff Ensuring the safety and satisfaction of staff and volunteers 	 Interviews with staff at long-term care homes in the U.S. revealed a continued reliance on crisis standards for the use of personal protective equipment Administrators described the challenge of tracking and implementing confusing and contradictory guidance from different agencies Care providers described fear of infecting themselves and their families as well as feelings of burnout due to increased workloads, staffing shortages, and the emotional weight of caring for residents facing isolation, illness and death Staff described the presence or lack of communication from the care home as influencing their ability to work under the existing circumstances, as well as feelings of demoralization due to the negative media coverage on long-term care homes compared to the narrative surrounding hospitals
Renewing supports for residents and staff Optimizing skills mix among staff	 This study piloted service-learning projects largely driven by students in two nursing homes and a hospice agency in the United States, with the intent of improving the lives of older adults during the COVID-19 pandemic whilst continuing to educate clinical students Using an iterative process, the study identified the needs and capabilities of the educator and facility and set out the following volunteer initiatives that can provide mutually beneficial and safe opportunities for nursing-home residents and clinical students: Gardening and general grounds beautification Record transfer Resident biography (i.e., engaging with the home-care resident) Window entertainment (e.g., painting)

 Supportin residents 	oports for residents and staff g technology-enabled living among	 Volunteers visiting with residents of long-term care homes shifted their format to online platforms, which were decided upon based on the preference of the resident The shift was generally well received, though a few residents reported challenges hearing while others felt uncomfortable using the technology Source
	oports for residents and staff g skill mix among staff	 This qualitative study identified four categories relating to nurse practitioners' roles in optimizing resident care and supporting long-term care staff during the pandemic: Containing the spread of COVID-19 Stepping in where needed Supporting staff and families Establishing links between fragmented systems of care by acting as a liaison The study suggested that nurse practitioners embraced a multitude of roles in long-term care homes, which requires innovative models of care and prioritized tasks
	ternatives to long-term care g technology-enabled care at home	 This case study described a rapid response and treatment service for older people living in care homes in Berkshire West, and shared a story about service delivery Rapid-response services provide opportunities for older people living with frailty to remain in their own homes during an episode of deteriorating health The hospital-at-home model could offer short-term, targeted interventions at acute hospital level care that can provide a truly person-centred experience within the home

Appendix 3: Experiences related to supporting renewal in long-term care homes in other countries

Country	Overview of long-term care arrangements	Renewing delivery, financial and governance arrangement	Renewing supports for residents and staff	Promoting alternatives to long- term care
Australia	 Australia provides government-funded aged care services, including in-home care, residential care in aged care homes, and short-term care such as respite care Eligibility for government funded services is means tested, with privately funded care provided for those who are not eligible for government-funded services In addition, an income-tested Carer Payment program for caregivers who are providing constant care and are unable to be otherwise employed In addition, a carer allowance is provided to supplement for daily care to primary carers, regardless of income Home care is provided through the Commonwealth Home Support Program with subsidies being income-tested and may require copayments Services provided in home care include housework, basic care, physical activity and basic nursing 	 The introduction of AN-ACC (Australian National Aged Care Classification) will deliver a funding boost to increase the amount of front-line care to aged care residents The Australian Government announced a \$3.9 billion increase in funding to support the increase in front-line care Australia's aged care sector is undergoing reform through the Budget 2021-2022 Aged Care Reforms, within a five-year period to deliver reforms across five pillars: home care, residential aged care services and sustainability, residential aged care quality and safety, workforce, and governance With respect to governance arrangements, changes from the aged care reforms include: Establishing a National Aged Care Advisory council to provide expert advice to government 	 Changes to residential aged care facilities over the next five years include: Supplement of \$10 a day per resident Increase in care for each resident to 200 minutes per day including 40 minutes of registered-nurse time Registered nurse is on site for a minimum of 16 hours per day Introduction of additional monitoring compliance Put in place a single assessment for residential and home care Increased audits conducted by Aged Care Quality of long-term care facilities Changes to the workforce in long-term care as a result of the reforms include: Adding 13,000 new personal care workers over the next two years Opening 33,800 additional training places rolled out over two years for personal care workers 	 Changes to home care under the new aged care reforms includes: 40,000 more home-care packages Respite services for an addition 8,400 clients each year 500 local community care finders to support access to aged care supports Additional supports for informal carers Expanded palliative care supports to facilitate end-of-life care at home

Country	Overview of long-term care	Renewing delivery, financial	Renewing supports for residents and staff	Promoting alternatives to long-
	arrangements	 and governance arrangement Introduction of a new, values based Aged Care Act The reforms also include expanded capital infrastructure grants to improve access to better aged care services for First Nations people and those in rural and remote locations 	Expanding locum workforce capacity in regional and rural locations	term care
Germany	 Germany significantly modernized its long-term care system between 2015 and 2017, introducing compulsory long-term care insurance for the entire population Though private long-term care insurance does exist, both insurers use the same providers The social long-term care insurance (public) has been established under the umbrella of the statutory health insurance at a contribution rate of 2.55% of wages up to 4,350 euros a month The establishment of this new scheme significantly increased long-term care funding to more than 5 billion euros a year New regulations have also established a new definition of long-term care needs which now uses a gradient of five need levels and has 		 A scientifically based skill determination tool is currently being developed to ensure appropriate staffing levels for the management of medically complex cases among nursing-home residents The Ministry of Health announced an increase in the minimum wage for nursing assistance until April 2022 as well as increasing the vacation days that workers are legally entitled to at all long-term care facilities A 'care reserve' has been developed across federal states where people with care qualifications can register, including individuals who have qualified abroad, and may be called on to help reduce burnout among staff Those who do not have the necessary 	 Germany offers legal entitlement to a maximum number of respite care and short-term care days per year As of September 2020, family carers can receive support money for up to 20 paid days in situations where a gap in community care is experienced, an increase from the usual 10 days that are available A review of the Family Care Leave Act is being undertaken to include more flexibility for carers throughout the duration of the pandemic

Country	Overview of long-term care arrangements	Renewing delivery, financial and governance arrangement	Renewing supports for residents and staff	Promoting alternatives to long- term care
	significantly expanded the available supports at each level Collective wage agreements have also been reached with a new statutory minimum wage for people employed in long-term care Instruments of quality measurements and public report are in the process of being revised	and governance arrangement	qualifications to be put directly into care settings are eligible for a one-year care apprenticeship during which they are provided with a regulated training allowance O However, apprenticeships in long-term care homes remain unregulated	term care
Finland	 Municipalities are responsible for organizing health and social services Care for older adults is primarily offered at home Long-term care is allocated to those with the highest need of care, primarily for those with cognitive impairment The sector also uses short-term care with a focus on rehabilitation and movement back into individuals' homes or sheltered homes (e.g., rented units which provide additional support to residents) 	• Amendments to each the Act on the Status and Rights of Patients, the Health Care Act and the Health Insurance Act are being made to improve options for end-of-life care, particularly to avoid hospital admissions and focus instead on enabling care at the home or in non-urgent institutional settings	 Shortages of staff in home-care and long-term care settings have been temporarily addressed by reassigning employees from day care services to home care, or municipal employees with healthcare education or experience from the city division of education and culture Finland is putting in place new standards for nurse-client ratios, however challenges recruiting professionals continues to be a problem 	 Changes to the legislation focus on providing care in the home, including: Enhanced service housing and institutional care Option for convalescent phase at home which includes round-the-clock assistance Increases in flexible working time and temporary absences from work for family Establishment of a special care allowance that is a personal benefit of the deceased and is allocated to a close family member or friend providing care in the final days of life, and covers up to 30 working days
Netherlands	A significant reform to the long-term care system was conducted in 2015, the aim of which was to promote and support independent living		• In response to the pandemic, the Ministry of Health has increased health professionals; salaries who are in the bottom 60% of earnings by 1.5%; this is in addition to two 1,000 euro	Investments in e-health, smart devices and improved communication methods for clients at home to delay moving into long-term care

Country	Overview of long-term care	Renewing delivery, financial	Renewing supports for	Promoting alternatives to long-
	arrangements	and governance arrangement	residents and staff	term care
	 Governance of the long-term care system is divided into three acts: The Long-Term Care Act covers those who require 24-hour residential care, clients for which are assessed by a national governmental body The Social Support Act which is designed to support those who need additional help such as meal delivery and transportation The Health Insurance Act which governs the expanded role of health insurers in long-term care Financing of the system has two components, the compulsory health insurance policy and a co-payment based on income and wealth level Individuals can also opt for a personal budget whereby they can arrange their own care or support according to their preferences 		bonuses which were allocated to all healthcare workers during the pandemic • Given the staffing shortages during and following the pandemic, the Netherlands invested in a large IT platform that connects health providers and organizations in need of support with employees that have the necessary skills • An action plan for recruitment into the health sector, which covers until 2023, includes improving the attractiveness of the sector, improving working conditions and training opportunities, and working in a different way with great inter-sector cooperation	
New Zealand	 Funding for long-term care is based on patient need, age and means-testing Eligible individuals receive comprehensive services including medical care and home care as well as residential 	On 30 July 2020, the MOH announced seven workstreams to be undertaken as part of MOH's action plan for the recommendations of the Independent Review of COVID-19 Clusters in Aged	• As part of MOH's action plan for the recommendations of the Independent Review of COVID-19 Clusters in Aged Residential Care Facilities, workstreams are currently underway to better support

Appendix 5: Experiences related to supporting renewal in long-term care homes in Canadian provinces and territories

Province/territory	Overview of long-term care arrangements	Renewing delivery, financial and governance arrangement	Renewing supports for residents and staff	Promoting alternatives to long-term care
Pan-Canadian	 Long-term care is considered an extended healthcare service and falls within provincial or territorial jurisdiction According to the Canadian Institute for Health Information (CIHI), 54% of long-term care homes are privately owned and 46% publicly owned According to the 2016 census, almost 160,000 people lived in long-term care facilities in Canada 	• The Government of Canada is providing funding to provinces and territories through the Safe Long-term Care Fund, in addition to previous investments such as \$740 million to address immediate needs within long-term care, up to \$3 billion to increase wages of low-income essential workers, \$9.6 million to Healthcare Excellence Canada to support long- term care facilities, and \$3 billion investment over five years starting in 2022	None identified	None identified
British Columbia	 Long-term care services in British Columbia include 24-hour professional supervision and care for people with complex care needs British Columbia has 308 long-term care homes, of which 35% are publicly owned, 37% owned by private for-profit organizations, and 28% are owned by 	• In August 2021, the Government of Canada announced an agreement to provide British Columbia \$134 million to support the Safe Long-term Care initiative, where the funding will support creating additional single-bed long-term care rooms, improving ventilation and air quality, investing in mattresses and bed frames to reduce wound pressure injuries, purchasing easily	None identified	None identified

	private not-for-profit organizations • Accommodation costs to the resident are income-based up to 80% after tax, which could range from \$1,189 to \$3,444/month (as of 2020)	cleaned furniture, and investing in cleaning, food services, and medical supplies		
Alberta	 Long-term care facilities in Alberta are defined as providing services for individuals with complex, unpredictable needs who require 24-hour on-site registered nurse assessment and/or treatment Alberta has 186 long-term care homes, of which 46% are publicly owned, 27% are owned by private for-profit organizations, and 27% are owned by private not-for-profit organizations Accommodation costs to the resident range from \$1,743 to \$2,210/month (as of 2020) 	In May 2021, the Government of Alberta released findings on the facility-based continuing care review and plans to enhance public reporting, phasing out shared rooms, updating design guidelines and capital funding, and providing capital grant funding to support Indigenous groups In response to the Safe Restart Agreement, the Premier of Alberta promised that allocated funds will be used to increase staffing support, cover one-time pandemic preparedness costs, and support enhanced staffing, PPE, and cleaning supplies (September 2020)	• The Auditor General of Alberta's Status of Recommendations report from June 2021 recommended that Alberta Health Services should improve the monitoring activities for individual facility performances, develop a system that can verify adequate staff supply and that the basic needs of the residents are being met, and establish a mechanism to escalate compliance action for high-risk facilities	In May 2021, the Government of Alberta released findings on the facility-based continuing care review and plans to expand community care and services options to enable more people to stay at home
Saskatchewan	In Saskatchewan, options for people who can no longer live	The Ministry of Seniors and Rural and Remote Health directed the	Due to a <u>COVID-19</u> <u>vaccination policy</u> <u>implemented by a</u>	None identified

- independently, or need assistance to do so, include home care, personal care homes, and nursing homes
- o Individual homecare funding is provided by the Saskatchewan Health Authority (SHA) to eligible people who need additional support to stay independent at home
- o Personal care homes are privately-owned businesses that are licensed and monitored by the Saskatchewan Ministry of Health
- Nursing homes are operated by the SHA or a provider who has a contract with the SHA
- Personal care home fees are set by private businesses, but eligible lower-income seniors can apply for a Personal Care Home Benefit
- Residents of nursing care homes are charged a fee based on their annual reported income

- Saskatchewan Health Authority on 30 June 2021 to review the recent changes made to its policy on pharmacy procurement in all long-term care homes operated by the SHA
- o During the process of implementing the policy that aimed to improve consistency in procurement of medication, product delivery, after-hours access, and quality oversight, unintended consequences for local suppliers were identified
- On 28 July 2021, the
 Saskatchewan government
 announced the <u>addition of</u>
 nearly 250 specialized
 <u>long-term care beds in</u>
 Regina, along with 350
 standard long-term care
 <u>beds</u> that would follow
 - The specific bed distribution has yet to be finalized
- On 14 October 2021,

 <u>Saskatchewan Health</u>

 <u>Authority announced</u> that
 it would be taking over
 five Extendicare homes
 that provide approximately
 550 long-term care spaces
 between Regina, Saskatoon
 and Moose Jaw

- coalition of seniors' living operators in Canada, long-term care and retirement home staff of 18 homes in Saskatchewan owned by Extendicare and Revera who are not fully vaccinated as of 12 October 2021 will be placed on unpaid leave of absence
- Full vaccination will also be required for all new hires, agency personnel, and students working at these homes
- The operators indicated that the vaccination policy will enhance protection against COVID-19 for seniors in their care, other staff members who deliver care, essential caregivers, and visitors

	 The Saskatchewan Ministry of Health subsidized approximately 80% of the provincewide costs for long-term care Saskatchewan has a total of 161 care homes, with 74% being publicly owned, 5% being privately owned, and 21% being owned by private not- for-profit organizations 			
Manitoba	 Personal care services in Manitoba are provided for Manitobans who can no longer remain safely at home because of their healthcare needs The costs for personal care services are shared between Manitoba Health and the client who needs services The client's portion of the costs is a daily charge based on income Manitoba has a total of 125 long-term care homes, 57% of which are publicly owned, 14% privately owned, 	• A recent Angus Reid survey found that three-quarters of Canadians said that either significant changes (45%) or a total overhaul (31%) of the long-term care industry is needed • 73% of Manitoban respondents said that significant changes or a total overhaul is needed, while 6% of respondents said that few or no changes are needed • Three-in-five Manitoba residents said that the federal government should be directly involved in making changes and creating standards for the industry	The eligibility deadline for the Manitoba Pandemic Paid Sick Leave program that provides employers with up to \$600 per employee for COVID-19 related sick leave is 23 October 2021 to coincide with federal and other provincial program changes	On 1 October 2021, the Premier of Manitoba announced \$32 million in funding for significant expansion of the Bethesda Regional Health Centre as part of Manitoba's Clinical and Preventative Services Plan The investment will provide 23 additional acute beds, treatment for palliative and end- of-life care and other needs, six dialysis stations, and pharmacy upgrades that support the delivery of chemotherapy services The expansion will significantly reduce the need for Steinbach and the surrounding communities to travel

Nunavut	Nunavut has three long-term care homes, of which 100% are publicly owned	None identified	None identified	None identified

Appendix 6: Preventing and managing COVID-19, outbreaks of COVID-19, and supporting renewal in long-term care homes in Canadian provinces and territories

Province/ territory	Preventing infections	Managing outbreaks	Renewing delivery, financial and governance arrangement	Renewing supports for residents and staff	Promoting alternatives to long-term care
Pan-Canadian	 In May 2021, the federal government announced a \$750,000 repayable contribution to Tenera Care to support the roll-out of monitoring and contact tracing systems to long-term care homes In April 2021, additional guidance was released on ventilation and filtration to reduce aerosol transmission of COVID-19 in long-term care homes, which includes information on how to enhance and improve ventilation, and use of fans and single-unit air conditions in facilities where this is not possible In April 2021, the Public Health Agency of Canada released a second edition of the federal/provincial/territoria l public-health response plan for the ongoing management of COVID-19, which includes considerations for long-term care homes, such as: 	• The Government of Canada's interim guidance on the care of residents in long-term care homes during the COVID-19 stated that outbreakmanagement protocols should be in place with the following considerations: (i) long-term care homes should refer to jurisdictional authorities for definitions and directives on case reporting and outbreak management; (ii) a single confirmed case of COVID-19 in a resident or staff member is justification to apply outbreak measures to a unit or home; (iii) when an outbreak occurs, an emergency	 The federal government are investing \$99.4 million in 95 infrastructure projects to improve long-term care homes in Ontario The federal budget promised \$3 billion over the next five years to help provinces implement new standards for long-term care The long-term care task force's report identified five systemic issues at present in long-term care homes in Canada, and provided options of actions to deal with these issues The first identified issue was that in the last few decades, little societal priority and attention was put towards long-term care in Canada. Potential options to address this issue include creating a national agenda for older adults' care, including long-term care, with tracking mechanisms and launching a national campaign to fight ageism and promote discussions about healthy aging 	• The Royal Society of Canada's Covid-19 and the future of longterm care report stated that the following principles should be used to guide efforts to improve safety and quality of life for longterm care residents and staff: (i) quality of care in nursing homes is fundamental and intimately linked to quality of life; (ii) routine evaluation of performance must occur, including performance measures that are important to residents and families; (iii) funding for nursing homes must be tied to evaluating and monitoring of indicators of quality of care, resident quality of work life, and resident and family experiences; (iv) relationships must be	• In September 2020, the federal government's Speech from the Throne included a commitment to work with provinces and territories to establish national standards for long-term care, and to take strategic actions to help people stay in their homes longer

Province/ territory	Preventing infections	Managing outbreaks	Renewing delivery, financial and governance arrangement	Renewing supports for residents and staff	Promoting alternatives to long- term care
	 Updating the guidance for the clinical management of patients with moderate to severe COVID-19 and care of residents in long-term care; Optimizing testing platforms for healthcare and staff in long-term care facilities Providing a federal Safe Long-Term Care Fund, including carrying out infection-prevention and control readiness assessments, making improvements to ventilation and hiring and training additional staff In April 2020, Canada's Chief Science Advisor convened a task force to provide advice on infection prevention and improving outcomes for residents of long-term care homes The task force assembled a report, which identified priority areas for immediate attention and options aimed to ensure adequate care capacity in long-term care homes. They included: 1) 	operations team should be set up for the affected home, and other support with testing, personal protective equipment acquisition, staffing and communications should be obtained and; (iv) once a case has been identified contacts should be isolated and tested, and confirmed positive residents should be moved to single rooms or placed separately from suspected and negative residents	o The second identified issue was that long-term care residents are highly vulnerable, relatively voiceless and without strong advocacy. Potential options to address this issue include creating a national long-term care strategy that emphasizes person-centred, humane and holistic care, developing an older adult's bill of rights, and creating older-adult protection services o The third identified issue was that a fragmented continuum of care and heterogeneous operational models make it hard to provide equal and consistent access to services for older adults based on their care needs as they age. Potential options to address this issue include creating a policy framework to guide the development of standards for the structures, processes and outcomes of care for older adults in care homes, promoting healthy aging at the national level to ensure government investments are having the intended impact,	collaborative among stakeholders, homes and the input of people who live and work in the homes should be included; (v) home environments and plans, protocols and resources for delivering care must meet the complex medical and social needs of residents • The Royal Society of Canada also reported that long-term care workers must have full-time work with equitable pay and benefits including mental health supports • The "one workplace" policy that has been implemented in long-term care homes should be considered as a permanent policy • To further support residents, the Royal Society of Canada also stated that long-term care homes must include measures so

Waddell KA, Wilson MG, Bain T, Al-Khateeb S, Bhuiya A, Lavis JN. Appendices for COVID-19 living evidence profile #2 (version 2.5): What is known about supporting renewal in long-term care homes? Hamilton: McMaster Health Forum, 27 October 2021

The COVID-19 Evidence Network to support Decision-making (COVID-END) is supported by an investment from the Government of Canada through the Canadian Institutes of Health Research (CIHR). To help Canadian decision-makers as they respond to unprecedented challenges related to the COVID-19 pandemic, COVID-END in Canada is preparing rapid evidence responses like this one. The living evidence profile update is funded both by CIHR and by the Public Health Agency of Canada. The opinions, results, and conclusions are those of the evidence-synthesis team that prepared the rapid response, and are independent of the Government of Canada and CIHR. No endorsement by the Government of Canada or CIHR is intended or should be inferred.
